HISTORY OF PHILADELPHIA.

CHAPTER XXVIII.

MANNERS AND CUSTOMS, 1700–1800.

PENN'S CITY—DURING THE REVOLUTION—THE AMERICAN CITY.

WHAT would have been William Penn's amazement if, on his leaving Philadelphia, in 1701, he could have had a vision of the future; if he had been told that three-quarters of the new century would barely have elapsed when the bells of that city would ring their joyful peals in honor of the birth of a nation, and "proclaim liberty throughout the land to all the inhabitants thereof;" if, peering still farther into that mysterious future, he had seen that nation, standing a giant amidst its elders, a living example of the blessings of freedom? But Penn, however far-sighted, had no such vision. Neither can we, even in this wonderful progressive age, pierce the veil of futurity and read what changes another century shall bring. The past alone is ours, and if, looking into that past, we see, with the mind's eye, the City of Brotherly Love as it was when its founder left it, never to return, and then turn to the Philadelphia of to-day, the contrast will be almost as great a matter of wonder to us as the vision would have been to Penn.

And yet the origin of Philadelphia is not hidden in the mist of ages, like that of the ancient cities of the Old World; it is not legendary, we need not accept uncertain facts from tradition, although more than two centuries have passed away since the first white man's cabin was built on the shore of the Delaware, and our fathers were participators in the struggle for liberty to which we owe our being as a nation. We should be too familiar with our history to wonder at it. But the rapidity of the changes that occurred in the last century has done the work of ages. Old landmarks have been swept off, records destroyed, the chain of events broken, so to speak. So busy, so hurried is life in our day, that we scarcely note the changes that take place around us. It must be the historian's task to collect the scattered material ere it is lost, to restore the missing links of facts ere they are disfigured by tradition, and by his pen-pictures of the past to attach a new interest to objects and sites amidst which we live unmindful of the memories they awake.

Philadelphia, at the beginning of the eighteenth century, was an object of curious interest to the stranger. Its green meadows, blooming gardens, and noble forest-trees endowed it with a sylvan beauty which the lover of nature, the seeker of peaceful rest, must have found very attractive, while the practical observer could not but be struck with the bustling activity which already reigned about its wharves, its mills and shops, and the hopeful, contented air of its inhabitants.

The first few years of the eighteenth century did not bring much change in the mode of life or the costume of the Philadelphians, but they brought much improvement in the general appearance of the city. Many new houses were built, of brick, and generally two or three stories high. Some of these houses had a balcony, usually a front porch,—a feature of vast importance in house-building, for it became customary for the ladies of the family in pleasant weather to sit on the porch, after the labor of the day was over, and spend the evening in social converse. In those early days, and for a long time after, the young ladies of Philadelphia did not think it disgraceful to help in the housework; a few, having a large retinue of servants, and being gifted with artistic tastes, devoted themselves to painting, or did fancy needle-work; none were positively idle. But when the sun went down they were dressed and ready for the porch-parade; there neighbors came for a chat about those engrossing subjects, dress and housekeeping; friends called, and beaux strutted by in powdered wigs, swords, square-cut coats, tights, and silk stockings, running the gauntlet of all those bright eyes in order to lift the three-cornered hat to some particular fair one, and to dream about the sweet smile received in return.

If we are to believe the old chroniclers, love-making was a very tame affair then. The "girl of the period" did not yet exist, though the "dude" might, under another name; young ladies received company with their mammas, and the bashful lover, in the presence of the old folks, had to resort to tender glances and softly-whispered vows. Marriages were ordered promulgated by affixing the intentions of the parties on the court-house and meeting-house doors, and when the act was solemnized, they were required [by law] to have at least twelve subscribing witnesses. But true love laughs at shackles and bolts, the poet says; and Watson's "Annals" tells us the history of the elope-

ment (in 1707) of Col. Coxe with Sarah Eckley, a Friend and wealthy heiress. The funny part of the story is that the runaway couple, hastening through the Jersey woods in the night-time, met the chaplain of Lord Cornbury, the then Governor of New Jersey, and prevailed upon him to marry them, then and there, by fire-light.

The wedding entertainments must have been more of a nuisance than a pleasure, either for the parents or the young couple. They were inspired by a conception of unbounded hospitality, very common at that time. Even the Quakers accepted them with good grace until the evil consequences of too free drinking on those occasions compelled them to counsel more moderation. There was feasting during a whole day, and for the two following days punch was dealt out *ad libitum* to all comers. The gentlemen invited to partake of these libations were received by the groom on the first floor; then they ascended to the second floor, where they found the bride surrounded by her bridesmaids, and every one of the said gentlemen, be they one hundred, kissed the bride, so says the chronicle. It is to be hoped that the gentle bridesmaids took pity on the poor bride, and out of sheer generosity offered themselves in sacrifice to share the attentions of those gallant gentlemen.

On Second Street, corner of Norris Alley, was a commodious house, known as the Slate-roof House, and built before 1700 by James Porteus for Samuel Carpenter, who sold it to Penn. A very full description of this house, as well as of the house of Edward Shippen, first mayor of Philadelphia, of whom it was said that "he was distinguished for three great things,—the biggest person, the biggest house, and the biggest coach,"—has been given in the notes to pages 158, 159. The same notes contain biographical sketches of Shippen and Samuel Carpenter. We may add here that the last-named worthy citizen, who did so much toward building up the young city, left a numerous posterity. The Carpenter family of New Jersey are his descendants in the male line, while the female line is represented by the Whartons, Fishbournes, Merediths, Clymers, and Reads, all of Philadelphia.

A substantial brick building had been erected by Robert Turner so far back as 1685, at the northeast corner of Front and Arch Streets. A little later, he built, near the other, on Front Street, a large brick house, three stories high, "besides a good large brick cellar under it, of two bricks and a half thickness in the wall."

Robert Turner, in his letter describing his buildings, goes on to speak of the brick houses of Arthur Cook, William Frampton, John Wheeler, Samuel Carpenter, John Test, and others, all which houses, he says, have balconies.

William Frampton, Samuel Carpenter, and Robert Turner had established wharves under Penn's patent. Turner's patent was for Mount wharf, below Arch Street; Carpenter's for Carpenter's wharf, between Walnut and Dock Streets; and Frampton's for the lower wharf, between Dock and Spruce Streets.

The conditions of these patents are interesting as showing how Penn endeavored to preserve the bank on the east side of Front Street from being built upon; and also as indicating how King Street, afterward Water Street, was established. After reciting that permission is granted to "erect a wharf or quay, and to build houses thereon, for ye better improvement of ye place, as well as for his own particular profit," the deed provides that the said grantee,

"his heirs and assigns, do and shall in convenient time leave and make a sufficient cartway under and along by ye front of ye said banke, thirty foot wide, for ye common use of all persons in ye daytime; and also to make and erect convenient stairs, or other access, from ye water to ye said wharf, and from ye said wharf to ye street, by ye name of lower wharf, and to keep them in repair—to be for ye common use of all persons forever. Provided, also, that ye said William Frampton, his heirs and assigns, do not erect or raise any buildings above four feet above ye top of ye said banke, unless hereafter any person shall have privilege to build higher," etc.

JOSHUA CARPENTER'S MANSION, CHESTNUT STREET WEST OF SIXTH.
[From an old drawing in Philadelphia Library.]

Joshua Carpenter, the brother of Samuel, built a fine mansion on Chestnut Street, between Sixth and Seventh Streets—at the time a rural spot, remote from what was known as "the city," and where a citizen might have his country-seat. The grounds were beautifully laid out, and the fruit-trees and garden shrubbery for a long time attracted visitors. Many associations are connected with this house. Governor

Digitized by Google

Thomas occupied those premises from 1738 to 1747. We are told by Watson that the Governor's amiable lady endeared herself to the young folks by indulging the pretty misses with bouquets and nosegays on May-day, and permitting the boys to help themselves from her fine cherry-trees.

There at one time lived with her father, Dr. Graeme, the celebrated Mrs. Ferguson, the poetess. Mrs. Ferguson was the granddaughter of Sir William Keith.

The Carpenter mansion changed hands several times; in 1761 it belonged to John Ross, attorney-at-law, who sold it to John Smith. In 1774 it became the property of Col. John Dickinson, who made great alterations to it, causing a new front, in modern style, to be made, facing on Chestnut Street. It then passed into the hands of Gen. Philemon Dickinson. During the war of Independence it was used as a military hospital. It was subsequently fitted up in magnificent style, and became the residence of the Chevalier de Luzerne, who gave there a brilliant entertainment, with fire-works, in honor of the birth of the Dauphin of France. In 1779 it was occupied by Monsieur Gerard, the French ambassador. Finally, it became the property and residence of Judge Tilghman, who sold it to the Arcade Company in 1826.

At the southwest corner of Third and Chestnut Streets was the magnificent mansion known as Clarke Hall. It was the property of William Clarke, of Lewes, a wealthy lawyer, who had been one of the members of the original Council of the Governor in 1682–83, and collector of customs in 1692. Mr. Clarke bought the lot from Thomas Rouse, in 1694, and erected upon it a fine brick house, with a double front, two stories high, with a hipped roof. It was then considered the largest house in town, and its fine garden was much admired. In 1704, Mr. Clarke conveyed his property to his son, William Clarke, Jr., on the occasion of the latter's approaching marriage with Rebecca Curtis, of Barbadoes. Young Clarke does not seem to have inherited his father's prudence and good management of his affairs, for in 1718 the Assembly of Pennsylvania directed that the house and lot at the corner of Third and Chestnut Streets should be vested in Charles Read and other trustees, and sold for the benefit of the creditors of William Clarke, Sr., and William Clarke, Jr. The property was conveyed to Andrew Hamilton by Anthony Houston, who had purchased it from the trustees. But the Privy Council repealed the act of the Assembly providing for the sale of Clarke Hall. Suit was entered in the High Court of Chancery, in England, by the representatives of William Clarke, Jr. After long delays the case was decided against Andrew Hamilton. He had died pending the suit, and his son, James Hamilton, bought up the rights of the claimants, and sold Clarke Hall to Israel Pemberton in 1745.

In 1701, Charles Read, merchant, purchased from Letitia Penn part of the large lot granted to her by William Penn four months previous. The piece sold was at the southwest corner of Front and Market Streets, measuring twenty-five feet front on the former by one hundred feet depth on the latter. It was considered the best piece in the Letitia lot. Mr. Read built a house on the corner, two stories high, with a high gable forming a third story, with a low garret-room above. A heavy eave from the second story and gables timbered and squared near the apex, gave this house a very quaint appearance.[1] Mr. Read died in 1737, and two years later his widow sold the property to Israel Pemberton, who lived in it until he bought Clarke Hall. After his death it became the property of his son John. In 1754 a public coffee-house was established on the premises, which thereafter was always known as the London Coffee-House. The want of a central coffee-house for the benefit of the merchants and traders had long been felt, and this one was established by subscription; the trustees, George O'Neill, William Grant, William Fisher, and Joseph Richardson, intrusted the management to William Bradford, who had been the first promoter of the enterprise.

The success of the enterprise very soon demonstrated how much the want of such a place had been felt by the better class of people, who objected to frequenting noisy taverns. Merchants met at the Coffee-House and transacted business over a cup of the fragrant beverage; the Governor and most of the high officials became regular *habitués*; ship captains hastened to bring there their budget of news, and strangers of distinction were brought to the Coffee-House to form the acquaintance of leading men. It became the great auction mart, public vendues of horses, carriages, and even of slaves, being held under the large shed which extended from the house to the gutter on both front sides.

Many exciting scenes took place in front of this popular resort during the troublous times which were the prelude to the Revolution. In 1765 bonfires were made of stamped parchment and of a Barbadoes paper bearing a stamp. In 1766, Capt. Wise, of the brig "Minerva," having brought from England the news of the repeal of the Stamp Act, was escorted to the Coffee-House amid the huzzas of an enthusiastic crowd and there treated to a huge bowl of punch, in which he drank "Prosperity to America." It was there, also, an indignant crowd burned in effigy Thomas Hutchinson, Governor of Massachusetts, and

[1] Charles Read was a person of considerable importance in the young province. Logan writes of him to Penn in 1702, in relation to some transactions in which he had acted as appraiser, that he took him, "with the most here, to be a truly honest man." He held several important offices. He was a Common Councilman in 1716; alderman, 1726; and mayor of the city, 1726–27. He was sheriff of the county, 1729–31; justice of the peace in 1718 until his death; clerk of the Court of Quarter Sessions and Orphans' Court for some time before his death; member of the Governor's Council, 1733; and judge of admiralty under the king, appointed 1735. All these were highly important positions, showing that Mr. Read was a man of most excellent character, trustworthy in all respects.—*Westcott's "Historic Mansions."*

Alexander Wedderburn, British solicitor-general, who had grossly insulted Dr. Franklin before the Privy Council. There, at last, on the 8th of July, 1776, when the Declaration of Independence had been publicly read, the king's arms, taken down from the chamber of the Supreme Court, were carried in procession and burned in the middle of the street, amid the cheers of the crowd.

If we have been led to speak at some length of the old houses of Philadelphia, we must not overlook the fact that from the beginning the spiritual needs of her citizens were provided for. A history of her churches fills an entire chapter of this book. We shall merely mention here such as were in existence during the period of which we are describing the manners and customs.

The Friends, naturally, since they were the most numerous, had several meeting-houses, the oldest being the Centre Square Meeting, erected in 1685. The Lutheran Swedes, after worshiping for several years in an old square block-house, attended service after 1700 in their beautiful church of Gloria Dei. The Church of England congregation had Christ Church erected in 1702. Previous to this date they had another church, the exact locality of which is not known, although there is proof that it existed since 1696.

The Presbyterians and the Baptists, after meeting together for worship in a small store, separated. The Presbyterians erected their first church in 1704. The Baptists had a small wooden building on Second Street from 1707 to 1731, when they pulled it down and built a brick church.

Catholics, by the laws of England, were not permitted to hold public worship, and the oldest chapel known to have been built by them was erected in 1753, in Willing's Alley. The first Lutheran Church was built in 1743 on Fifth Street. There was a large immigration of Germans,—forty thousand between 1701 and 1725. Many Swiss came over, settling first near Germantown, then at Pequea, in Lancaster County. These immigrants, like the first settlers at Germantown, included a good many Mennonites. In 1708 this sect had a church at Germantown, with fifty-two members, Rev. Jacob Godtschalk, pastor.[1]

The Moravian Church at the corner of Race and Bread Streets was built in 1742. The Methodist Church is of a later period. The first German Reformed Church was built on Race Street, near Fourth Street, in 1747.

It will be seen from the above list that the men of all denominations who came here to seek entire freedom of conscience and liberty of worship were not disappointed.

But however prosperous the condition of the new city, its people soon became aware that even in this land of plenty, of which Pastorius said, "God has made of a desert an inclosed garden, and the plantation about it a fruitful field," there could be suffering, and that "the poor ye shall always have among ye" is no vain prediction. They built a poorhouse on a green meadow extending from Spruce to Pine Street, and from Third to Fourth Street. This substantial, and, for the time, vast building also served the purpose of an asylum for the insane and a hospital. A large piazza ran round its four sides. The grounds were handsome, with many fine shade-trees. Altogether it was a noble charity.

Another admirable foundation was the Quaker almshouse, on the south side of Walnut Street, between Third and Fourth Streets, which was erected, according to tradition, on ground given to the society by John Martin in 1713, upon condition that they would support him for the remainder of his days.

If Philadelphia had numerous churches for her God-fearing citizens and almshouses to shelter the poor and the sick, she had also to provide quarters for a class of persons less worthy of sympathy. With the increase of population there came an increase of crimes and disorders. Not that the character of her citizens had undergone a regretable change, but because England emptied her jails upon the colony, and the title of redemptioner was a cloak under which many an evil-doer left his country "for his country's good," to prey upon the peace-loving community of Friends. For many years offenders were confined in "hired prisons," that is, in private houses, whose owners were paid to take care of the prisoners. An anecdote is told illustrative of the simplicity of these obliging jailers. In 1692, William Bradford, the printer, and John Macomb were implicated in the quarrels of George Keith with the Friends (no very grave offense), and were sent to prison for refusing to give security. The jailer, Patrick Robinson, after some time, granted them "the favor to go home, and, as they were still prisoners, when they wished to petition for their trial at the next sessions, they then went to the prison to write and sign it there; but it happened the jailer was gone abroad and had the key with him. So, as they could not get in, they signed

[1] William Rittenhouse, Harman Casderp, Martin Kolb, Isaac Van Centern, Conrad Johnson, Henry Cassel, and their wives, Harman Taylor, John Key, Peter Caernects, Paul Klumpkes, Arnold Van Fossen, John Kolb, Wynant Bowman, John Gorgas, Cornelius Classen, Arnold Koster, Mary Tuynen, Helena Key, Gertrude Conners, Mary Van Tossen, Barbara Kolb, Anna Bowman, Margaret Huberts, Mary Sullen, Elizabeth Husters, Margaret Tuysen, Altien Revenstock, John Nise, Hans Nise, John Lensen, Isaac Jacobs, Jacob Isaacs, Hendrick Sellen, John Connerts, Peter Keyser, Herman Koster, Christopher Zimmermann, Sarah Van Centern, Civilia Connerts, Altien Tuysen, Catharine Casselberg, Civilia Von Fossen. "Branches from this church were established at Skippack, Conestoga, Great Swamp, and Manatawny before and about 1726, and they had added as ministers Henry Kolb, Martin Kolb, Claes Johnson, Michael Ziegler, John Gorgas, John Conerads, Claus Rittinghousen, Hans Burgwaltzer, Christian Herr, Benedict Hirschy, Martin Beer, Johannes Bowman, Velte Clemer, Daniel Langanecker, and Jacob Beghtly." (Westcott's "History," which seldom overlooks any of these minutiæ of local history, and is very full in its details, nearly seventy-five chapters being devoted to the subjects treated of in this single chapter.)

that paper in the entry or porch." As early as 1685 the subject of building a prison was discussed, and Samuel Carpenter, H. Murray, and Nathaniel Allen reported to the Court of Quarter Sessions that they had treated with workmen and advised with Andrew Griscomb, carpenter, and William Hudson, bricklayer, about the form and dimensions. The project, however, was not carried out until 1695, when the prison was built on High Street. It must have been a very poor affair, for as early as 1702 the grand jury presented it as a common nuisance. The new prison, at the southwest corner of Third and High Streets, for the construction of which an act had been passed in 1718, was finished in 1723, when the old building was torn down and the material sold. The whipping-post, pillory, and stocks were on High Street, in front of the market, and on the eastern side of Third Street.

STOCKS.

The building fronting on Third Street was for criminals. It was called the workhouse. Labor was deemed the best antidote to vice, and all offenders were put to work. The building fronting on High Street was called the debtor's jail. There the unfortunates who could not satisfy their creditors lingered until they could find persons *to sell themselves unto for a term of years to pay the same* (*i.e.*, their debts), *and redeem their bodies.* This custom of selling men for debt only applied to single men; married men stayed in jail. Such was the fate of "imprudent" debtors. Fraud sent men to the pillory and the workhouse. The last remembered exhibition of the kind was that of a genteel storekeeper, who, to build up his sinking credit, had made too free with other people's names. He was exposed in the pillory, where the populace pelted him with eggs, and, to conclude, had his ears clipped by the sheriff.

Whipping was the usual punishment for larceny and for felonious assaults. In 1743, a black man, brought up to the whipping-post to receive punishment, took out his knife and cut his throat before the officers could interfere.

Murder, house-breaking, horse-stealing, and counterfeiting were punished by hanging. A case of burning at the stake is reported as having taken place at New Castle in 1731. Catherine Bevan was sentenced to be *burned alive* for the murder of her husband, and Peter Murphy, the servant, who assisted her in the commission of the crime, to be hanged. In order to mitigate the sufferings of the wretched woman, it was designed to strangle her before the flames reached her, by pulling on a rope fastened round her neck, but the flames leaping suddenly from the pile, burned the rope, which broke, and she fell struggling into the fire.

We are horrified at the recital of these barbarous customs, but we should remember that the spirit of the laws of Pennsylvania was the same as governed the laws of England. The home government insisted upon the execution of the existing laws, and saw with jealous eyes any attempt at making new ones, even the civil laws necessary for the proper administration of the colony. Jonathan Dickinson, in 1715, writes that "our laws are mostly come back repealed, among which was our law of courts, and manner of giving evidence, whereupon we have no courts nor judicial proceedings these two years past." Isaac Norris also writes, "Things among us pretty well. Nothing very violent yet, but in civil affairs all stop. We have no courts, no justice administered, and every man does what is right in his own eyes."

On High Street, since called Market Street, there stood a mast supporting the great town bell. At the ringing of the bell the people assembled to listen to the royal and provincial proclamations, city ordinances, etc., which were read aloud by the town-crier, or beadle, from a stand at the foot of the mast. In 1707 a court-house was erected on this site. It was a grand edifice for the time, and the early Philadelphians, who called it the "Great Towne-House," or the "Guild Hall," were very proud of it. Beside the assessments and fines devoted to that purpose, many worthy citizens contributed, by voluntary gifts of money, to the expense of its erection. The first permanent market-house was built in 1710, adjoining the court-house, from which it extended to about halfway to Third Street.

It is pleasant to look over the records of the City Council and to study the patriarchal way in which the city was governed. A republican simplicity pervades the acts of the city fathers; a republican spirit, far ahead of the age, seems to have inspired many of the measures adopted for the common good. We are apt to think of Philadelphia, even then, as of an American city, forgetting that a long and bloody revolution had to intervene ere it would have any right to that name. The Philadelphians were unconsciously making the apprenticeship of self-government.

The office of mayor was no sinecure in those days. It was held for one year, and the Council, under the charter, elected one of their number to serve as mayor. Far from coveting this honor, the good Philadelphians often made strenuous objections to having it thrust upon them, preferring even to pay a fine,—it varied from twenty to thirty pounds as the city grew, and with it the cares of the office. Thus, in 1704, Alderman Griffith Jones is elected mayor, and prays that the fine of twenty pounds laid upon him for refusing to accept of the mayoralty the last year may be remitted him. In 1706, Alderman Story is fined twenty pounds for refusing the mayoralty. In 1745, Alderman Taylor was fined thirty pounds for refusing to serve. The Council then elected Joseph Turner, who also refused,

and was fined thirty pounds. The mayor and aldermen, after passing ordinances, gave their personal attention to having them carried out. They were, in every sense of the word, public servants. The mayor, once a month, "went the rounds to the respective bread-makers in this city," weighed the bread, and seized all such as was found deficient in weight. He had many other as arduous duties to perform.

Until the year 1746, it was the custom for mayors upon their retirement from office to give an entertainment to the gentlemen of the corporation. In that year the retiring mayor, James Hamilton, represented to the board that he intended in lieu thereof to give a sum of money equal, at least, to the sums usually expended on such occasions, to be laid in something permanently useful to the city. His donation was one hundred and fifty pounds. This wise and liberal precedent was followed by most of the mayors who succeeded him.

In 1747, William Attwood, retiring mayor, represented to the board that "the time of election of a mayor for the ensuing year is at hand, and of late years it has been a difficulty to find persons willing to serve in that office, by reason of the great trouble which attends the faithful execution of it." Upon his motion it was ordered that one hundred pounds per annum should be paid to the mayor, out of the corporation stock, for three years to come.

OLD WATCHMAN.

The city had its beadle, constables, and public whipper. The beadle rang the bell and made proclamation of the ordinances. The constables, in addition to their customary offices, superintended for a long time the duties of watchmen. In 1713, William Hill, the city beadle, getting dissatisfied for some cause not put on record, broke his bell in a fit of passion, and swore that he would no longer serve. When he became cooler (sober?), however, he repented his folly and expressed deep sorrow, pledging himself to future good behavior. The good aldermen forgave him his offense, and continued him in office. Who paid for the cracked bell is not on record.

The name of one of Philadelphia's public whippers has been handed down to posterity. It was Daniel Pettitoe, who exercised his calling in 1753.

Taverns there were, in which a good deal of hard drinking was done in the Old England fashion, and brawls were frequent in consequence. The watch carried lanterns on their rounds, for there were no street lamps in those days. The young gallants were wont to go walking round on moonlit nights, stopping now and then to chat with the fair ones sitting on the porches (flirting would be the word nowadays), and as they could not do this on dark nights, they went by the name of *lunarians*.

This "porch amusement" was, of course, enjoyable only in the summer. In winter the company was received in the sitting-room, which might as well be styled the living-room, for the many purposes it served. They dined in it, and sometimes slept in it. The high-backed settee which graced one of its corners revealed a bed when the top was turned down,—a somewhat rough invention from which our modern sofa-bedstead has descended. The furniture and general arrangement of the room was of the simplest kind; settees with stiff high backs, one or two large tables of pine or of maple, a high, deep chest of drawers containing the wearing apparel of the family, and a corner cupboard in which the plate and china were displayed, constituted a very satisfactory set of parlor furniture in the early part of the eighteenth century,—sofas and sideboards were not yet in use, nor were carpets. The floor was sanded, the walls whitewashed, and the wide mantel of the open fireplace was of wood. The windows admitted light through small panes set in leaden frames. A few small pictures painted on glass, and a looking-glass with a small carved border, adorned the walls.

Wealthier people had damask-covered couches instead of settees, and their furniture was of oak or mahogany, but in the same plain, stiff style. They used china cups and saucers, delf-ware from England, and massive silver waiters, bowls, and tankards. Plated ware was unknown, and those who could not afford the "real article" were content to use pewter plates and dishes. Not a few ate from wooden trenchers. Lamps were scarcely known. Dipped candles in brass candlesticks gave sufficient light at night.

Carpets were introduced about the middle of the eighteenth century, and their use, for some time, was far from general. They were made to cover the centre of the floor, the chairs and tables not resting on, but around it. Paper-hangings came in a little earlier, and, in 1769, we see that Plunket Fleeson first manufactured paper-hangings and *papier-maché* mouldings at the corner of Fourth and Chestnut Streets.

Mr. Watson, in his "Annals," gives an extract from a letter of Mrs. Benjamin Franklin, written in 1765, to her husband, then in Europe, which shows that house-furnishing had taken a wide stride, at least among the higher classes. The letter is a minute description of their new house just then erected in Franklin Court. Here is the extract: "In the room down-stairs is the *sideboard*, which is very handsome

WILLIAM PENN'S SILVER TEA SERVICE.

and plain, with two tables made to suit it, and a dozen of chairs also. The chairs are plain horse-hair, and look as well as Paduasoy, and are admired by all. The little south room I have *papered*, as the walls were much soiled. In this room is a carpet I bought cheap for its goodness, and *nearly new*. The *large carpet* is in the blue room. In the parlor is a *Scotch carpet*, which has had much fault found with it. Your time-piece stands in *one corner*, which is, I am told, *all wrong*,—but I say we shall have all these *as they should be* when you come home. If you could meet with a *Turkey carpet* I should like it; but if not, I shall be very easy, for as to these things I have become quite indifferent *at this time*. In the north room, where we sit, we have a small *Scotch carpet*, the small book-case, brother John's picture, and one of the king and queen. In the room for our friends we have the Earl of Bute hung up, and a glass. May I desire you to remember drinking-*glasses*, and a *large* table-cloth or two; also a pair of silver canisters. The closet-doors *in your room* have been framed *for glasses*, unknown to me; I shall send you an account of the *panes* required. I shall also send the measures of the fire-places and *the pier of glass*. The chimneys do well, and I have baked *in the oven*, and found it is good. The room we call yours has in it a desk,—the *harmonica* made like a desk,—a large chest with all the writings, the boxes of glasses for music and for the electricity, and all your clothes. The pictures are not put up, as I do not like to *drive nails*, lest they should not be right. The blue room has the *harmonica* and the *harpsicord*, the gilt sconce, a card-table, a set of tea china, the worked chairs and screen, a very handsome stand for the *tea-kettle* to stand on, and the ornamental china. The paper of this room has lost much of *its bloom* by pasting up. The curtains are not yet made. The south room is my sleeping-room with my Susannah, where we have a bed without curtains, a chest of drawers, a table, a glass, and old walnut chairs, and some of our family pictures. I have taken all *the dead letters* [meaning those he had as Postmaster-General] and the papers that were in the garret, with the books not taken by Billy [his son, W. Franklin, at Burlington], and had them boxed and barreled up, and put in the south garret to await your return. Sally has the south room up two pair of stairs, having therein a bed, bureau, table, glass, and the picture,—a trunk *and books*,—but *these* you can't have any notion of!"

Mrs. Franklin's house was furnished in better style than the primitive "sitting-room" we have described, but such improvements were not to be found everywhere. The tastes of the people were simple, and it was a long time before they thought of luxury in their homes. What did it matter? They enjoyed health, they wanted none of the necessaries of life; food was abundant and wholesome, clothes did not change in style and color with every change of season, their amusements were of the simplest kind. Those bare walls resounded with as much genuine merriment as the brilliant parlors of our day. True

CREAM POT PRESENTED TO HENRY HILL BY BENJAMIN FRANKLIN.
Motto, "Keep bright the chain."

love-vows were whispered on that rustic porch or under the noble tree that sheltered the roof. The old people sitting in the chimney-corner planned and schemed as much as papas and mammas of modern times do about their children's future.

Hospitality and good feeling reigned. The large pine table often groaned under the weight of the viands spread out in welcome of some friendly guests.

The punch-bowl was a fixture even in the Quaker's house, and it was not deemed a crime to enjoy a social glass. We may even admit that our old citizens were hard drinkers, which is far from meaning that they were drunkards. They were sensible enough to distinguish use from abuse, and temperance societies had not yet been invented.

The dress of the early Philadelphians was necessarily simple, made of strong and coarse material that could resist the hard usage to which it was put. Men could not hew trees, build houses, and drive the plow in velvet coats and satin breeches, nor could their wives and daughters bake and scrub and sweep with their hair "frizzed, crisped, and tortured into wreaths and borders, and underpropped with forks, wires, etc.," and flounced and furbelowed gowns. Coarse cloth and deerskins for the men, linseys and worsted for the women, were of every-day use; the "Sunday-go-to-meeting" clothes were carefully preserved in the huge chest of drawers that contained the family apparel. There was little difference between the dress of the Quakers and that of the remainder of the people. The former's adoption at a later date of a more formal costume of sober color was an effort to resist the extravagances of fashion, which had penetrated into the far-distant colony, making its belles and beaux a distorted counterfeit of the beruffled and gilded courtiers of Queen Anne's or George I.'s times.

But fashion is a mighty ruler, against which it is useless to rebel. The greatest men, thinkers, poets, philosophers, and soldiers have bowed to her decrees, and made themselves appear ridiculous to please "*Monsieur Tout le Monde*," as the Frenchman said. As for the dear ladies, whom they wish to please is a mystery, for have they not, from the oldest time to the present day, often accepted the most unbecoming styles of dress and *coiffures*, despite of the protest of their male admirers? They must have a more laudable object than exciting admiration, and their apparent fickleness of taste conceals, perhaps, a charitable desire to comfort such of their sisters to whom nature has not vouchsafed perfect symmetry of form or feature. Some woman of high rank has very large feet, and to conceal them she wears a long dress; immediately the prettiest little feet hide themselves; a lady of the British court had one of her beautiful shoulders disfigured by a wart; she concealed the unpleasant blemish by means of a small patch of black sticking-plaster; soon black patches were seen on every woman's shoulders; thence they crept to the face, and were seen cut in most fantastic shapes on the chin, the cheeks, the forehead; the tip of the nose was the only place respected. An *infanta* of Spain had the misfortune of being born with one hip higher than the other; to conceal this defect a garment symmetrically distended by wires was invented, and, forthwith all the ladies wore hoops. Louis XIV., of France, whose neck was not of the straightest, introduced the large wig, with curls descending half-way down the back and covering the shoulders; the men, as a matter of course, adopted the cumbersome head-gear. The women were loath to conceal their shoulders, so, after a time, they found a means of making quite as extravagant a display of their hair: they built it up in an immense pyramid, so high at one time that a woman's face seemed to be placed in the middle of her body. A lady of diminutive stature finding that this upper structure was disproportionate to her size, had wooden heels, six inches high, adapted to her shoes; all the women learned to walk on their toes, and the tall ones looked like giantesses. An old magazine publishes the doleful tale of a gentleman who, having married a well-proportioned lady, discovered, when she appeared in *déshabille*, that he was wedded to a dwarf. That old rake, the Duke de Richelieu, the fit companion of the dissolute Louis XV., having grown gray, was the first to use powder over his hoary locks, and for fifty years all Europe powdered the hair with flour or starch. Even the soldiers had to be in the fashion, and some curious economist once made the calculation that inasmuch as the military forces of England and the colonies were, including cavalry, infantry, militia, and fencibles, two hundred and fifty thousand, and each man used a pound of flour per week, the quantity consumed in this way was six thousand five hundred tons per annum; capable of sustaining fifty thousand persons on bread, and producing three million fifty-nine thousand three hundred and fifty-three quartern loaves!

As we have had occasion to remark, the fashions were slow in changing in Pennsylvania during the early part of the eighteenth century, and Addison could not have said of the ladies of Philadelphia as he did of the London belles,—"There is not so variable a thing in nature as a lady's head-dress. Within my own memory I have known it rise and fall above thirty degrees. About ten years ago it shot up to a very great height, insomuch that the female part of our species were much taller than the men. The women were of such enormous stature that we appeared as grasshoppers before them. At present the whole sex is in a manner diminished and sunk into a race of beauties that seems almost another species. I remember several ladies who were once very near seven feet high that at present want some inches of five. How they came to be thus curtailed I cannot learn. Whether the whole sex be at present under any penance which we know nothing of, or whether they have cast their head-dresses in order to surprise us with something of that kind which shall be entirely new; or whether some of the tallest of the sex, being too cunning for the rest, have contrived the method to make themselves sizable, is still a secret, though I find most are of opinion they are at present like trees, new lopped and pruned, that will certainly sprout up and flourish with greater heads than be-

fore." This was before the time of powdered heads; when this fashion did come, the ladies' head-dresses rose to a greater height than before.

Let us picture a fashionable couple walking in the streets of Philadelphia in 1712. The lady trips lightly on her dainty little feet cased in satin slippers. Her flounced silk petticoat is so distended by the recently-introduced hoops that it is a mystery how she can pass through an ordinary-sized doorway; her tightly-laced stomacher is richly ornamented with gold braid; the sleeves are short, but edged with wide point-lace, which falls in graceful folds near to the slender wrists. Her hair, no longer propped up by wires and cushions, drops in natural curls upon her neck. A light silk hood of the then fashionable cherry color protects her head. The useful parasol was not yet known, but she carries a pretty fan, which, when folded, is round like a marshal's baton.

The gentleman walks by her side, but is precluded from offering her the support of his arm by the amplitude of her skirts, and of his own as well, for his square-cut coat of lavender silk is stiffened out at the skirts with wire and buckram; it is opened so as to show the long-flapped waistcoat with wide pockets wherein to carry the snuff-box and the bonbonnière. The sleeves are short with large rounded cuffs; his gold-fringed gloves are hidden in his good-sized muff. A point-lace cravat protects his neck, and over his tie-wig he wears a dainty little cocked hat trimmed with gold lace. His feet are encased in square-toed shoes with small silver buckles. His partridge-silk stockings reach above the knee, where they meet his light-blue silk breeches.

At a respectful distance behind come the gentleman's valet and the lady's maid. He wears a black hat, a brown-colored coat, a striped waistcoat with brass buttons, leather breeches, and worsted stockings, stout shoes with brass buckles. The abigail's dress is of huckaback, made short, the skirts not so distended as those of her mistress, yet are puffed out in humble imitation of the fashion. A bright apron and silk neckerchief and a neat cap give a touch of smartness to the plain costume.

Here come a worthy tradesman and his buxom wife. His coat, of stout gray cloth, is trimmed with black. His gray waistcoat half conceals his serviceable leather breeches; worsted stockings and leather shoes protect his legs and feet. The good dame by his side has put on her chintz dress, and though the material is not as costly as that worn by the fine lady before her, it is made up in the fashionable style, and the indispensable hoops add to the natural rotundity of the wearer. A peculiarity in her costume is the check apron that spreads down from her stomacher, concealing the bright petticoat.

This simplicity of apparel was the rule, the costly style previously described the exception. Very ordinary material was still used among our citizens, and articles of clothing were considered so valuable as to be in many instances special objects of bequest. Henry Furnis, who died in 1701, bequeathed to one of his daughters his leather coat, leather waistcoat, his black hat and cap. To another daughter he left his blue waistcoat, leather breeches, and muslin neck-cloth; and to another daughter a new drugget coat.

Gunner Swanson, the Swede, who died in 1702, bequeathed "deer-skins dressed" and "not dressed." John Budd in 1704 devised his "beaver hat" to his brother. Peter Baynton in 1710 made special devises of a remnant of plush, two and a half yards, plate buttons suitable for breeches, his best hat, "a frieze coat without buttons on or to be put on it," one large waistcoat without buttons, and woolen hose. A runaway servant is advertised as having worn at the time of his departure a green silk handkerchief about his neck, a broad-brimmed hat, a brown-colored coat, mixed kersey jacket with horn buttons, leather breeches, and worsted stockings.

This disregard for the behests of fashion could not last, however. The Friends were alarmed. Although in the early days they had not been averse to bright colors, they advocated a still greater simplicity in apparel and customs when they saw the fashionable follies of Europe penetrating into the quiet colony. It was too late, however, to stem the current. They had lost much of their influence; new social elements had given a character to the community, and all they could do was to endeavor to protect the young people of their sect from the contamination of these worldly ways, so much at variance with their own ideas and principles.

In 1726 the following testimony was borne against female vanities by women who were not vain:

"From Woman Ffriends at the Yearly Meeting held at Burlington the 21st of the Seventh month, 1726, to Woman Ffriends at the several Quarterly and Monthly Meetings belonging to the same,

"Greeting:

"*Dear and well-beloved Sisters*: A weighty concern coming upon many ffaithful ffriends at this meeting in relation to divers undue liberties that are too frequently taken by some that walk among us and are accounted of us, we are willing, in the pure love of Truth which hath mercifully visited our souls, tenderly to caution and advise our ffriends against those things which we think inconsistent with our ancient Christian testimony of plainness in apparel, &c., some of which we think proper to particularise.

"As first, that immodest fashion of hooped petticoats, or the imitation of them, either by something put into their petticoats to make them set full, or wearing more than is necessary, or any other imitation whatsoever, which we take to be but a branch springing from the same corrupt root of pride. And also that none of our ffriends accustom themselves to wear the gowns with superfluous folds behind, but plain and decent; nor go without aprons; nor to wear superfluous gathers or plaits in their caps or pinners; nor to wear their heads dressed high behind; neither to cut or lay their hair on their forehead or temples.

"And that ffriends be careful to avoid wearing striped shoes, or red or white heeled shoes or clogs; or shoes trimmed with gaudy colors.

"Likewise that all ffriends be careful to avoid all superfluity of furniture in their houses, and as much as may be to refrain using gaudy flowers or striped callicoes and stuffs.

"And also that no ffriends use that irreverent practice of taking snuff, or handing snuff-boxes one to the other in meetings.

"Also that ffriends avoid the unnecessary use of fans in meetings, lest it divert the mind from the more inward and spiritual exercise which all ought to be concerned in.

"And also that ffriends do not accustom themselves to go with bare breasts or bare necks.

"There is likewise a tender concern upon our minds to recommend unto all ffriends the constant use of the plain language, &c., being a branch of our ancient Christian testimony, for which many of our worthy Elders underwent deep sufferings in their day, as they likewise did because they could not give the common salutations by bowing and cringing of the body, which we earnestly desire ffriends may be careful to avoid.

"And we further tenderly advise and exhort that all ffriends be careful to maintain love and unity, and to watch against whisperings and evil surmisings one against another; and to keep in humility, that nothing be done through strife or vain glory; and that those who are concerned to take an oversight over the flock, do it not as lords over God's heritage, but as servants to the churches.

"Dear Sisters, these things we solemnly recommend to your careful notice, in a degree of that divine love which hath graciously manifested itself for the redemption of a remnant from the vain conversation, custom and ffashions that are in the world, that we might be unto the Lord a chosen generation, a royal priesthood, an holy nation, a peculiar people, showing forth the praises of Him who hath called us out of darkness into his marvelous light. That we may all walk as children of the light and of the day is the earnest desire of our souls.

"We conclude with the salutation of unfeigned love, your ffriends and sisters.

"Signed on behalf and by order of the said meeting, by

"HANNAH HILL."

The Quakers had partially laid aside the wig, but the day had not come when men were to see the absurdity of wearing other men's hair instead of their own. Light hair for periwigs is advertised by Oliver Galtry, periwig-maker, in High Street, near the market, in 1722; and George Sheed, periwig-maker, in Front Street, advertises in 1726 that he buys all sorts of light and gray hair. A murderer who escaped from New York is advertised as having worn a bob-wig, a sad-colored stuff coat trimmed with silver, and a flowered silk waistcoat and breeches.

The wigs held their own until after the return of Braddock's broken army. The hair was then allowed to grow, and was either plaited or clubbed behind, or it was worn in a black silk bag, adorned with a large black rose. From this it dwindled down to the queer little "pigtail," which, not many years past, could be seen bobbing up and down on the high coat-collar of some old gentlemen of the last generation.

Stiff high-back chairs and settees, a stiff style of dress,—for the hooped petticoat and wired coat-skirt carry with them no idea of graceful ease,—must have given the manners a tendency to stiffness. The stately minuet was, very appropriately, the fashionable dance of the day, at least among what was called "the politer classes;" the "common people," that is, the great social body not comprised in that upper-tendom, did not follow the fashions so closely, and enjoyed merrier dances, the favorite among which was "hip-sesaw."

Notwithstanding those distinctions of classes which sound oddly to our republican ears when we forget that the Philadelphia of which we speak was not a republican city, every tradition attests the fact that the most cordial relations existed between those classes. William Fishbourne, in his manuscript narrative, says, "For many years there subsisted a good concord and benevolent disposition among the people of all denominations, each delighting to be reciprocally helpful and kind in acts of friendship for one another." Mr. Watson, writing in 1842, says he has often heard aged persons say that decent citizens had a universal speaking acquaintance with each other, and everybody promptly recognized a stranger in the streets. The hospitality of the early settlers was proverbial, and Mr. Kalm, who was here in 1748, expressed his surprise "at the universal freedom with which travelers were everywhere accustomed to leap over the hedges and take the fruit from the orchards, even while the owners were looking on, without refusal."

It is evident that the social prejudices of Old England had been considerably softened by the necessities of colonial life. Mutual helpfulness was natural and unavoidable when none could feel perfectly independent of the others; besides, the great majority of the early settlers were Quakers, or, as their other name implies, *friends*, the simplicity of whose religion did not admit of differences of rank and birth, or, at least, with whom these differences could not affect social relations. Yet these prejudices did exist, although the hereditary gentlemen were not domineering as in England, nor were the tradesmen cringing and submissive. In a new country every one must needs contribute to the common prosperity; labor is always honorable, and the honest laborer feels that he is as good as any other man. But while they possessed the dignity of manhood, the tradesmen of olden times were not ashamed of their calling; they did not try to ape the manners or copy the dress of their employers, or, as the Englishman would say, of their betters. They had no foolish pride; they formed a class of society, a useful class; they were content with the knowledge of their own worth, and did not care what imaginary barriers separated them from other classes. They went about their daily work as carpenters, masons, blacksmiths, etc., clad in garments suited to their occupations,—strong buckskin breeches, check shirts, and flannel jackets, generally protected by the large leather apron from their breasts to below their knees. Their wives and children wore plain clothes; their homes were simple and comfortable, and saw as much mirth and genuine happiness as the homes of the wealthy. They were free from that bane of the modern poor man's home,—the desire for show, the craving for outward appearances of prosperity beyond their reach. It is such men, the bone and sinew of the country, together with the hardy tillers of the soil, who have fought her battles, secured her liberty, and founded her prosperity.

Tradition does not mention the antagonism between labor and capital,—the cloud that darkens the horizon of the republic in our day. It is true that in that golden age capital was not selfish, labor was not covetous.

The tradesmen of Philadelphia, with a view to check any attempt to encroach upon their rights by

those who claimed a superiority of rank, had formed a union under the name of "The Leather Apron Club." In 1728, Benjamin Franklin, then a young printer, twenty-two years of age, gave that name to an association which he and ten others formed for the purpose of mutual improvement. They attempted to establish a library of their own, and to this attempt, which partially failed as originally conceived, grew that most admirable of Philadelphia institutions, the library. The very interesting history of the Philadelphia Library being given in another chapter of this work, we have merely mentioned it to note the fact that, with one or two exceptions, the founders of Franklin's Leather Apron Club were tradesmen, and that all rose to distinction, several occupying places of honor and trust in the service of their country.

There were few hired servants in those days; menial labor was done by black slaves and German and Irish redemptioners. Slavery was not repugnant to our forefathers' notions of justice; it was admitted even by the Quakers. But the slaves of Philadelphia were happy; harsh treatment was not countenanced by public opinion. Servants were regarded as forming an integral part of the family, and proper attention paid to their comforts.

Peter Kalm, the Swedish traveler, already quoted, who came to Philadelphia in 1748, seems to have thoroughly investigated the question of servants. He says that there were two classes of white servants: the first were quite free to serve by the year. They could even leave their masters before the expiration of the twelve months; but in that case they were in danger of losing their wages. A man-servant, having some abilities, got between sixteen and twenty pounds in Pennsylvania currency. This was in Philadelphia; the wages were not so good in the country. A maid-servant received eight or ten pounds a year. These servants had to buy their own clothes. The second class consisted of such persons as came annually from Germany, England, and other countries for the purpose of settling in the colony. Some were flying from oppression, others from religious persecution, but most of them were too poor to pay the six or eight pounds sterling required for their passage. They agreed with the captain that they would suffer themselves to be sold for a few years on their arrival. Very old people made arrangements to sell their children, in order to secure their own passage. Some could pay part of the passage-money, and were sold only for a short time. Some of the Germans, although having the means to pay their way, preferred to suffer themselves to be sold with a view that during their servitude they might gain some knowledge of the language of the country and have time to decide what pursuits would be most advantageous. The average price of these servants was fourteen pounds for four years' servitude. The master was bound to feed and clothe his servant, and to present him with a new suit of clothes at the end of his term of servitude. The English and Irish commonly sold themselves for four years, but the Germans frequently agreed with the captain to pay him a certain sum of money for a certain number of persons, and, on their arrival in America, they tried to get a man to pay their passage for them, giving him in return one or several of their children to serve for a certain number of years. If the demand was brisk, they were thus able to make their bargain with the highest bidder.

The purchase of black slaves involved too great an outlay of capital to be as general as that of white servants, and they were not held in large number by any one master.

The amusements of the young people of Philadelphia were, for many years, of the simplest and most innocent kind. Riding, swimming, and skating afforded pleasant out-door sport. "Going to meeting," although it may not be classed as an amusement, was certainly a pious recreation for the young Quakers and Quakeresses. It interrupted the monotony and seclusion of the domestic circle. The immigration of more worldly persons, in sufficient numbers to counterbalance the influence of the Friends, introduced hitherto unheard-of gayeties among them.

Yearly Meeting, in 1716, advised Friends against "going to or being in any way concerned in plays, games, lotteries, music, and dancing." In 1719 advice was given "that such be dealt with as run races, either on horseback or on foot, laying wagers, or use any gaming or needless and vain sports and pastimes, for our time passeth swiftly away, and our pleasure and delight ought to be in the law of the Lord."

In 1722 was advertised the exhibition of "the Czar of Muscovia's country-seat, with its gardens, walks, fountains, fish-ponds, and fish that swim." It was to be seen at the house of Oliver Galtery, the periwig-maker, in Market Street, near the court-house. In 1724 the first rope-dancer that astonished the young town held forth upon Society Hill, and made his announcement as follows:

"By permission of his Excellency Sir William Keith, Bart., Governor of the province of Pennsylvania, this is to give notice to all gentlemen and ladies and others, that there is newly arrived to this place the famous performance of roap-dancing, which is performed to the admiration of all beholders.

"1st. By a little boy of seven years old, who dances and capers upon the strait roap, to the wonder of all spectators.

"2d. By a woman who dances a corant and jigg upon the roape, which she performs as well as any dancing-master does upon the ground.

"3d. She dances with baskets upon her feet and iron fetters upon her legs.

"4th. She walks upon the roap with a wheelbarrow before her.

"5th. You will see various performances on the slack roap.

"6thly. You are entertained with the comical humour of your old friend, Pickle Herring.

"The whole concluding with a woman turning round with a swift motion, with seven or eight swords' points at her eyes, mouth, and brest, for a quarter of an hour together, to the admiration of all that behold the performance.

"There will also be several other diverting performances on the stage, too large here to mention.

"The above performances to be seen at the new booth on Society Hill,

to begin on Thursday next and last the term of twenty days, and no longer.

"The price on the stage, 3s.; in the pit, 2s.; in gallery, 1s. 6d.

"To begin exactly at 7 o'clock in the evening."

In 1726, Matthew Garrigues, at the sign of Prince Eugene, in Second Street, advertised for sale "a new billiard-table," certainly the first of which we have any account in the province.

Small shows now, from time to time, made their appearance. In 1727, "The Lion, King of Beasts," was advertised to be exhibited in Water Street. Admission for each person, one shilling. In April, 1737, there was exhibited at the Indian King Tavern, on Market Street, a cat having one head, eight legs, two tails, and from the breast down two bodies. This monstrous production was considered a curiosity worthy of special attention. In 1739 there was exhibited at Clark's Tavern, sign of the Coach and Horses, Chestnut Street, between Fifth and Sixth, a mechanical contrivance of moving figures, representing Joseph's Dream, Joseph in Egypt, etc. In 1744, something of the same kind, but more fanciful in the performances of the various figures shown, the whole moving by clock-work, was exhibited at the Crooked Billet Tavern, on King [Water] Street. In the same year there was exhibited at the Indian King, in Market Street, "a beautiful creature, but surprising fierce, called a leopard." In the same year the following advertisement appeared:

"To be seen at the house of John Saunders, huntsman, the upper part of Second Street, a strange and surprising creature called a mouse [moose], about the bigness of a horse. It has a face like a mouse, ears like an ass, neck and back like a camel, hind parts like a horse, tail like a rabbit, and feet like a heifer. It was lately brought to town, and came four hundred miles, and is so fine limbed that it can jump six feet high. Price to men, sixpence, and threepence to children."

In 1740 the camel was exhibited. In 1742 there was a magic-lantern exhibition; in 1745 a camera-obscura; in 1749, some curious shell-work and a philosophical machine.

But these shows were harmless amusements; a greater shock was given to Quaker propriety on the 31st of August, 1738, when the following advertisement appeared in the *Pennsylvania Mercury*:

"This is to give notice that Theobald Hackett, dancing-master (lately come from England and Ireland), has opened a DANCING-SCHOOL in this city, at the house wherein Mr. Brownell lately lived, in Second Street, where he will give due attendance and teach all sorts of fashionable English and French dances, after the newest and politest manner practiced in *London*, *Dublin*, and *Paris*, and will give all young ladies, gentlemen, and children (that please to learn of him) the most graceful carriage in dancing, and genteel behavior in company, that can possibly be given by any dancing-master whatever."

Whether as a consequence of a visit of this Terpsichorean professor to the city, or from the increase of persons who understood dancing, it cannot now be known, but it is certain that as early as 1740 a dancing assembly was formed in the city, and also an association for musical purposes. They had a room for the holding of parties and balls. This appears from the account of the conduct of Mr. Seward, the friend and companion of Whitefield, who attempted to close that saloon during the preaching of the latter. In 1748 the members of the dancing assembly were as follows: Alexander Hamilton, Thomas Lawrence, Jr., John Wallace, Phineas Bond, Charles Willing, Joseph Shippen, Samuel McCall, Jr., George McCall, Edward Jones, Samuel McCall, Sr., Redmond Conyngham, Joseph Sims, Thomas Lawrence, Sr., David McIlvaine, John Wilcocks, Charles Stedman, John Kid, William Bingham, Buckridge Sims, James Hamilton, Ro. Mackinet, William Allen, Archibald McCall, Joseph Turner, Thomas Hopkinson, Richard Peters, John Swift, John Kearsley, William Plumsted, Andrew Elliot, James Burd, Adam Thompson, Alexander Stedman, Patrick Baird, John Sober, David Franks, John Inglis, Ninian Wiseheart, Abram Taylor, James Trotter, Samson Levy, Lynford Lardner, Richard Hill, Jr., Benjamin Price, John Francis, William McIlvaine, William Humphreys, William Peters, James Polyceen, William Franklin, Henry Harrison, John Hewston, David Boiles, Thomas White, John Lawrence, Thomas Graeme, John Cottenham, John Moland, and William Cozzens.

In this year the dancing assembly was under the direction of John Inglis, Lynford Lardner, John Wallace, and John Swift. The subscription was forty shillings.

Gentlemanly accomplishments were looked after during this period. In 1742 there appeared this notification:

"These are to give notice to all gentlemen who desire to learn the true method and art of defense of the small-sword in its greatest perfection, and extraordinarily quick and speedy, with all the guards, parades, thrusts, and lessons thereunto belonging fully described, and also the best rule for playing against artists or others with blunts or sharps, that they may be taught the same by me, Richard Kyenall, professor and master of the said art, who is to be spoken with at Dr. Richard Farmer's, in Second Street.

"*Note.*—He teaches gentlemen either in private or public, by the month or the whole."

In 1746 one Kennet advertised to teach the arts and accomplishments of dancing and the use of the small-sword.

This notice elicited, in a succeeding newspaper, an indignant article, signed by Samuel Foulk, in which he said, "I was surprised at his audacity and brazen impudence in giving those detestable vices those high encomiums. They be proved so far from accomplishments that they are diabolical."

In 1749 the following advertisement appeared in the public journals:

"John Beals, music-master, from London, at his house in Fourth Street, near to Chestnut, joining to Mr. Linton, collar-maker, teaches the violin, hautboy, German flute, common flute, and dulcimer, by note. Mr. Beales likewise attends young ladies or others that may desire it at their houses. He likewise produces music for balls or other entertainments."

All this might be borne, but in the same year, 1749, an event happened which was well calculated to fill with alarm and sorrow the bosoms of the worthy Friends. A theatrical company made its first appearance in Philadelphia. In John Smith's manuscript

journal is given the following entry, under date of Sixth month (August) 22, 1749:

"Joseph Morris and I happened in at Peacock Bigger's and drank tea there, and his daughter being one of the company who were going to hear the tragedy of 'Cato' acted, it occasioned some conversation, in which I expressed my sorrow that anything of the kind was encouraged."

Where this company performed is not known. It might have been at the store-house in Water Street near Pine, afterward occupied by Hallam's company, to whom the introduction of the drama in this country, in 1752, has been erroneously assigned. That these comedians must have lingered here several months is shown by the following representation, made to the Common Council on the 8th of January, 1750:

"The Recorder reported that certain persons had lately taken upon them to act plays in this city, and, as he was informed, intended to make a frequent practice thereof, which, it was to be feared, would be attended with very mischievous effects, such as the encouragement of idleness and drawing great sums of money from weak and inconsiderate persons, who are apt to be fond of such kind of entertainment, though the performance be ever so mean and contemptible. Whereupon the Board unanimously requested the magistrates to take the most effectual measures for suppressing this disorder, by sending for the actors and binding them to their good behavior, or by such other means as they should think proper."

Possibly the action of the magistrates produced the flight of these sons of Thespis from the city. The *New York Gazette* of the 26th of February, 1750, contains the following:

"Last week arrived here a company of comedians from Philadelphia, who we hear have taken a convenient room for their purpose in one of the buildings lately belonging to the Hon. Rip Van Dam, Esq., deceased, in Nassau Street, where they intend to perform as long as the season lasts, provided they meet with suitable encouragement."

This company was under the management of —— Murray and Thomas Kean. They remained in New York over a year, and the casts of the plays performed by them during that period were published in the New York papers.

Society in 1750 was certainly more lively than in the earlier part of the century. Dancing was freely indulged in, although not countenanced by the Friends. Entertainments were frequently given, at which conviviality sometimes exceeded the bounds. The use of strong drinks, justifiable in the case of the first settlers as intended to counteract the effect of exposure to the inclemencies of the seasons and hard out-door work, had become widespread, and habitual intoxication was not uncommon. It became necessary to check this fatal practice; but it was no easy matter to impress upon the people the evil consequences of a long-contracted habit that had become hurtful only because it had been carried to excess. Friends, with their usual thoughtfulness, were the first to move in this matter. They did so cautiously, yet denouncing the evil and adopting repressive measures so far as the members of their own society were concerned. In 1726 Yearly Meeting adopted strong resolutions against the practice of giving liquor to persons present at public vendue, which had the effect of exciting bidders and creating an incautious rivalry between them, thereby stimulating them to offer much higher prices than the goods were worth. The Yearly Meeting determined that members of their profession who indulged in this practice should be dealt with. In 1743 a petition was sent to the Assembly from Chester County complaining of this same practice of giving liquor at public vendue,—

"the excessive drinking of which frequently produced swearing, quarreling, and other scandalous enormities, and, moreover, was often the cause that poor people gave extravagant prices for unnecessary things, whereby families were much oppressed, and sometimes ruined."

In 1736 Yearly Meeting repeated its advice against the frequent use of drams, or other strong drink, in families or elsewhere, and particularly to be cautious of giving them to children, and thereby accustoming them to the habit of drinking such strong liquors. In 1738 it was resolved to caution Friends against the "*too frequent* use of strong liquors." This advice was repeated in 1749 and 1750. In the *Pennsylvania Gazette* of 1733 are some remarks upon dram-drinking, caused by the fact that a woman had been found dead from the use of liquor.

These remarks of the *Gazette* give us a correct notion of what sort of a breakfast the good dames used to eat, and describe the consequences of tippling in a most graphic manner. Says the *Gazette*,—

"It is now become the practice of some otherwise discreet women, instead of a draught of beer and toast, or a chunk of bread and cheese, or a wooden noggin of good porridge and bread, as our good old English custom is, or milk and bread boiled, or tea and bread and butter, or milk, or milk coffee, &c., they must have their two or three drams in the morning, by which, as I believe, their appetite for wholesome food is taken away, and their minds stupefied, so that they have no longer that prudent care for their family to manage well the business of their station, nor that regard for reputation which good women ought to have. And though they find their husbands' affairs every day going backward, through their negligence, and themselves want necessaries; though there be no bread in the house, and the children almost barefoot this cold weather, yet, as if drinking rum were part of their religious worship, they never fail their constant daily sacrifice."

This was a sad state of society, and the wonder is how the Philadelphians ever succeeded in shaking off the incubus of drink. They were in a fair way of becoming a community of sots.

In 1729 the *Weekly Mercury* said that on the 1st, 2d, and 3d nights of October, in the previous year,—that being about election time,—there was drank and thrown away, in and about the city, four thousand five hundred gallons of common beer.

Drunkenness was attacked and defended in verse, the following having been published March 21, 1734:

"This town would quickly be reclaimed
If drams no more had vent,
And all the sorts that could be named
To *Strombolo* were sent.

"If none did *tiff* or *Sampson* mix,
And *punch* were quite rejected,
And all the *rum* thrown into Styx,
The work would be perfected.

"For brewers' skill is mostly such,
Their art is so divine,
Scarce any one would drink too much,
Except a goat or swine.
"Yours, R. W."

A reply, March 28, 1734, was as follows:

"ANSWER TO 'R. W.'

"This town would quickly be reclaimed
If every man was wise,
Or (be a lesser number named)
The persons who advise.

"To tell of Strombolo and Styx,
But not the way to either,
We still shall tiff and Sampson mix—
Drams, punch, and rum together.

"Pray, since the brewers' art divine,
And beer so much surpasses,
Bid them a faithful skill to join,
And to reject molasses.
"W. R."

Edward Shippen, in a letter written to his son Edward, afterward chief justice, gives a feeling picture of the habits of the young men of that period. After noting particularly the fact that himself and his son Joseph did their work at Lancaster "without tasting a drop of strong liquor, confining their drinking in the evening to a little wine after eating a light supper," and recommending this practice most affectionately to Edward, he goes on to say,—

"It is too common a thing for young men, when they first appear upon the stage of action, to aim at grandeur and politeness. They delight to see their friends (often falsely so called) frequently at their houses, and to entertain them in a genteel manner. The friends are pleased with this, and bring other acquaintances with them to dine, etc. Then, afterwards, they sit at table two or three hours tippling of wine and punch, which, rendering the company unfit for any business, a walk to the Bowling Green or billiard-table is proposed and consented to; and on their return from thence in the evening, instead of being calm and cool, and having the pleasure of reflecting upon a well-spent day, either for the advantage of their family or of both, they are become so stupid that they don't know what to do with themselves, but either go to a tavern or to one or other of their houses to drink away care till the clock strikes twelve; and then, being quite devils and quite beasts, they stagger away home to snore and groan by the sides of their innocent young wives, who deserve ten thousand better things at their hands, and all this after the poor young things have been moping at home and bemoaning themselves of their hard fate, and crying out one hundred times in an evening, 'Well, if these be the pleasures of matrimony, would to heaven that we had remained under our parents' roof!' But, to return, when they have wallowed in their beds until about eleven o'clock next morning, they then raise their unclean bodies in order to act the same part over again. Can any rational creature excuse such behavior to God, to his wife and family, or even to himself?"

There were already many taverns in those days,—not such coffee- and chocolate-houses as they had in London, where the most famous literary and political clubs held their meetings, and which were frequented by fashionable men, who sought the society of the wits,—such places as the "Chapter Coffee-House," where Dr. Buchan, Sir Richard Phillips, Alexander Chalmers, Dr. Busby, and other celebrities met, or the immortal "Button's Coffee-House," the headquarters of the Spectator's Club, where Addison, Steele, Pope, Ambrose Phillips, and others could be found enjoying social converse, and criticising the vices and follies of their time. Philadelphia could not yet boast of such places of resort, although it had long possessed establishments yclept "coffee-houses," a name that indicated a claim of superiority over the taverns, but whose frequenters called oftener for liquors, malt and spirituous, than for the fragrant Arabian berry or the nutritious bean of the cocoa-bush.

The old taverns of Philadelphia were certainly not all objectionable; many were quiet, respectable houses, where people arriving in the city might obtain refreshments, or a citizen might enter to have a social glass and chat with an acquaintance; but many, too many, perhaps, were bacchanalian resorts, frequented by dissipated young bloods and, often, by very bad characters. It is not to be wondered at that the practice of hard drinking prevailed to such an extent, and if we have dwelt at some length on this subject it is not that the vice was peculiar to this community; far from such being the case, it is a matter of congratulation that our forefathers should have succeeded in resisting and finally eradicating a practice which was generally accepted in England at the time. Drunkenness and profligacy of the worst kind prevailed in the higher ranks of society in the old country; the former was checked before it had destroyed the manhood of the colonists, the importation of the latter was a failure, if ever attempted, and though our grandmothers may have imitated the extravagance in dress of the court ladies, they never imitated their morals.

Weddings were occasions for feasting and frivolity, and the drinking on such occasions was often excessive. The practice was discountenanced by prudent parents and by Friends generally. Thomas Chalkley, in his journal for 1725, notes the fact that he went home after attending a marriage at Horsham, at which Governor Keith was present, without going to the marriage dinner, "being sensible that great companies and preparations at weddings were growing inconveniences among us, which I was conscientiously concerned to discourage."

As early as 1716, the Yearly Meeting had advised that Friends everywhere avoid all extraordinary provisions at their marriages; and also, "as much as may be, *avoid inviting those who are not Friends or that will not be under our discipline.*" In 1720, Yearly Meeting scented a new danger: with an increasing population representing a diversity of creeds, the social circle had become very much mixed; the Friends could not hold themselves aloof from the rest of the people, however much they might differ on religious questions; now, many a pretty Quaker girl had won the heart of some gay gentleman, and a sober-minded young Friend was not always proof against the blandishments of some worldly beauty. The meeting solemnly advised against marriages between Friends and such as were not of that persuasion. That patriarchal body furthermore recommended that all con-

cerned "take care, at the houses or places where they go to or are at, after the meeting is over, that no reproach arise or occasion be given by any intemperate or immoderate feasting or drinking, or by any unseemly, wanton discourse or actions, but that all behave with such modesty and propriety as becomes a people fearing God."

A great abuse and evil of the burial customs at this time was in feasting, eating, and drinking among the persons attending on these occasions. This custom prevailed in England. When a person of high rank died the body was kept for several days "lying in state" for the public and their neighbors to come and look at it, and also to give time for the relatives who lived at a great distance to make the journey and be present at the funeral. These visitors had to be entertained, and in course of time what had been a matter of necessity became a general custom, and there was an entertainment at every funeral, be the deceased ever so obscure. The Yearly Meeting admitted that at some burials where people may come from a long distance there may be occasion for refreshments, but recommended that these may be taken in moderation. Friends, when they attended the burials of those not in communion with them, were advised to keep themselves and their children from going with the dead into their worship houses. They were instructed by the Concord Monthly Meeting in 1729 to desist from such "idolatrous practices" as putting names and dates upon coffins.

The English practice of burying by torchlight, satirized by Pope as a vain ostentation in the lines,—

> "When Hopkins dies, a thousand lights attend
> The wretch, who, living, saved a candle's end,"

was never general in Philadelphia. A few such funerals, however, are on record. The interment took place in Christ Church. Robert Asheton, recorder of the city, was buried in that way in 1727. In 1734, Lady Gordon also had the honors of a torchlight funeral.

The order of march at funerals in Philadelphia was as follows: The parson walked before the bearers, and if the deceased was a woman the ladies walked in procession next to the mourners, and the gentlemen followed after them. But this order was reversed if the deceased was a man, and the gentlemen preceded the ladies.[1] Samuel Keimer, in 1728, describes in elegiac verses the funeral of Aquila Rose, a printer, a poet, keeper of the ferry at High Street, Schuylkill, and clerk of the Assembly, a much lamented young man. The description is graphic, if not of the highest order of poetry:

> "His corpse attended was by friends so soon—
> From seven at morn till one o'clock at noon;
> By master-printers carried to his grave,
> Our *city printer* such an honor gave.
> A worthy merchant did the *widow* lead,
> And then both mounted on a stately steed.
> Next *preachers, common council, aldermen;*
> A *judge* and *sherif* graced the solemn train;
> Nor failed our *treasurer* in respect to come,
> Nor stayed the *keeper of the rolls* at home.
> Our aged *postmaster* here now appears,
> Who had not walked so far for twice twelve years;
> With merchants, shopkeepers, the young and old—
> A numerous throng, not very easy told.
> The *keeper of the seal* did on him wait:
> Thus was he carried, like a king—in state;
> And, what still adds a further lustre to't,
> Some rode well mounted, others walked afoot.[2]
> Church folks, dissenters, here with one accord,
> Their kind attendance readily afford.
> To show their love, each differing sect agree
> To grace his funeral with his company;
> And what was yet more grateful, people cried.
> Beloved he lived, see how beloved he died!
>
> "When to the crowded meeting he was bore
> I wept so long till I could weep no more;
> While *beauteous* LIGHTFOOT did, like *Noah's* dove,
> Sweetly declare God's *universal love,*
> His words like balm (or drops of honey) laid
> To heal those wounds grief in my heart had made.
> Three other preachers did their task fulfill,—
> The loving *Chalkley* and the lowly *Hill.*
> The famous *Langdale* did the sermons end
> For this our highly honored, worthy friend."

In 1748, "burial biscuit" is advertised for sale by a baker in the city, a proof that the feasting at funerals, so much inveighed against by Yearly Meeting, was as strong as ever, and even inspired the genius of speculation. To have "burial biscuits" to dip in their wine probably intensified the grief of the dear departed's friends. In fact, the chronicler in attempting to describe the manners and customs of the early Philadelphians must be continually drawing the line of distinction between the Friends and the remainder of the community. The former had their peculiar views about everything, and these views were sometimes greatly at variance with not only the accepted code of English society, but with the laws of the land. In the early days of the province the preponderance of the Friends was such that the settlement was in almost every respect a Quaker community; but in time the character of the immigration which steadily swelled the numbers of the city population changed. It was no longer the poor and the persecuted who fled to Philadelphia; the glowing reports of the prosperity of the colony, published in Europe, attracted many people, merchants with ample means, men of rank and of culture, who brought their families to this new Garden of Eden, adventurers who expected to make their fortunes in that wonderful *El-*

[1] This custom was not, as some writers believe, peculiar to Philadelphia. It prevailed (and may still prevail) in New Orleans, at least at the funeral of women, the ladies not attending the funerals of men.

[2] The names of some of the dignitaries who officiated on this occasion were as follows:

Master-printers—Andrew Bradford, Samuel Keimer, and Jacob Taylor.

City printer—Andrew Bradford.

Sheriff—Owen Roberts.

Treasurer of the province—Samuel Preston.

Postmaster—Henry Flower.

Keeper of the rolls—Robert Asheton.

Keeper of the seal—James Logan.

dorado. The ideas and habits brought by these newcomers could not but clash with the unostentatious quiet ways of the Friends. Their moral and religious views were different. What some deemed innocent pleasures the others condemned as sinful practices. Too much freedom on the one side, too much restraint on the other, created social antagonism. Time alone could effect the desirable fusion, and its work was slow. When, therefore, we describe customs that do not agree with the principles of Quakerism as set forth in the actions of their meetings, it must be understood that these customs were not followed by the Friends. On the other hand, it is clear that the decisions of the meetings could not be binding on the other denominations. Yet it must be confessed that if the Friends showed unnecessary opposition to many harmless practices, they never failed to oppose and condemn that which was really hurtful and immoral. Their influence checked many a vice, their seriousness was a counterpoise to the frivolity of those who obeyed the worldly code brought from Europe. The happy result of this struggle for the good, was that in little more than half a century society in Philadelphia had reached that happy medium between extravagant frivolity and exaggerated seriousness which has stamped it indelibly with the mark of true gentility, and left it to this day without a superior.

But we must go back to the early days. Yearly Meeting adverted again and again to the pomp and extravagance introduced in funeral ceremonies. The practice of Friends was to take the body from the residence to the grave, where it was interred amid profound silence. After the burial the company adjourned to the adjoining meeting-house, where there was speaking and praying. This silent parting with the dead, witnessed in an English burying-ground, inspired Miss Lucy Collins with the following very appropriate lines:

"ON SILENT FUNERALS.

"When expectation anxious wishing
Eloquence of words to hear,
The solemn pause of awful silence
Mortifies the itching ear.

"As such, perhaps, the great Dispenser
Sees it best to deal with man,
The depth of whose unerring counsel
Human wisdom cannot scan.

"The striking scene of death before us,
What can more *instruction* plead?
Since 'tis a road we all must follow,
'Tis a path that none evade.

"Though learned phrase and flowery language
Please the proud, exalted part,
Yet deeply searching home reflection
Can alone amend the heart."

In 1729 the meeting resolved against "the vanity and superstition of erecting monuments and entombing the dead with singular notes or marks of distinction, which is but worldly pomp and grandeur, for no encomium nor pompous interment can add worth to the deceased." It ordered the erection of tombstones over the graves of Friends to be stopped, and the tombstones already so placed to be removed. This order not having been generally obeyed, the meeting, in 1731, ordered the overseer to remove the tombstones so remaining.

As a closing remark to the not over-gay subject of funerals and tombstones, we will note here that the custom of issuing special invitations to persons to attend funerals prevailed, and such importance was attached to this mark of respect to be paid the dead, that funerals were delayed if the parties invited did not arrive at the time appointed. Yearly Meeting very properly condemned such delays. The cards of invitation to funerals had deep mourning borders and other emblems of death. They were imported from London.

Marriages between relatives were disapproved, and the question gave rise to much perplexity. In 1731 it was determined that Yearly Meeting would not proceed to prohibit marriages in degrees of affinity and consanguinity allowable by the laws of England. But this minute did not give satisfaction, the Burlington Monthly Meeting declaring that they had lately been exercised "with sundry marriages, to wit, one person marrying two sisters, etc., by persons professing truth." A committee of fourteen Friends was appointed in the succeeding year to consider the matter. In 1733 the committee made its report, condemning not only marriage with a sister-in-law, but with a wife's first cousin. The meeting did not think proper to prohibit marriages, "further than a man may not marry his wife's sister," but in 1739 a resolution was adopted against the marriage of a man with his wife's first cousin.

Courtship among the Quakers was a very solemn business. Before declaring himself, before he had a chance of winning the regard of the object of his affections, the lover must speak to her parents and obtain their permission to sue for her hand. This permission granted, he came "a courting;" that is, he must strive by his grave demeanor and solid conversation to make an impression on the fair one. While he strove to show his sentiments by these means he could not have the faintest idea of what were those of his *inamorata* toward him, unless a soft glance from her downcast eyes told the story. He could not, like other young men in worldly sphere, whisper his vows during a moonlight ramble, or squeeze her dainty fingers while crossing hands at the dance. The only pleasures they participated in together were eating and drinking and going to meeting. Such a thing as a pair of lovers going anywhere unattended by a chaperon was unheard of. They must make love in presence of witnesses. The chaperons, it is to be supposed, were often obligingly deaf and blind, for the young people generally came to a perfect understanding.

As the Friends ignored all frivolous pleasures, they

made up for this deprivation by the more substantial enjoyments of the table. Every Monthly, Quarterly, and Yearly Meeting brought to the city considerable numbers of Friends who had to be entertained, and during their stay dinners and tea-parties were numerous. It is probable that the pleasure of meeting for social converse, more than the love of good cheer, constituted the principal attraction of these love-feasts.

The city during the first half of the eighteenth century had considerably improved in appearance. Peter Kalm testified to this in his description of Philadelphia in 1748, by the following remarks:

"All the streets except two which are nearest to the river run in a straight line and make right angles at the intersections. Some are paved, others are not, and it seems less necessary since the ground is sandy, and therefore soon absorbs the wet. But in most of the streets is a pavement of flags, a fathom or more broad, laid before the houses, and posts put on the outside three or four fathoms asunder. Under the roofs are gutters, which are carefully connected with pipes, and by this means those who walk under them when it rains, or when the snow melts, need not fear being wetted by the dropping from the roofs.

"The houses make a good appearance, are frequently several stories high, and built either of bricks or of stone; but the former are more commonly used, since bricks are made before the town and are well burnt. The stone which has been employed in the building of other houses is a mixture of black or gray glimmer. Very good lime is burnt everywhere hereabouts for masonry.

* * * * * * * * * * *

"The houses are covered with shingles. The wood for this purpose is taken from the *Cupressus thyoides*, Linn., a tree which the Swedes here call the white juniper tree, and the English the white cedar. The wood is very light, rots less than any other, and for that reason is good for roofs, for it is not too heavy for the walls and will serve for forty or fifty years together.

* * * * * * * * * * *

"The good and clear water in Philadelphia is likewise one of its advantages. For though there are no fountains in the town yet, there is a well in every house and several in the streets, all which afford excellent water for boiling, drinking, washing, and other uses. The water is commonly met with at the depth of forty feet. The water of the river Delaware is likewise good."

A more particular description of some of the buildings erected just before or soon after Mr. Kalm's visit will not be without interest.

A very remarkable building was the frame house of Benjamin Loxley, at the southeast corner of Little Dock and Second Streets. The construction was peculiar. Across the whole front was a large balcony sustained by the walls of the room below, and above this balcony the roof continued from the main portion of the house, and was sustained by very large carved cantalivers. Thus protected from sun and rain, and commanding a good view of the street, the balcony made an excellent rostrum. Watson says that when Whitefield first visited Philadelphia he preached from the balcony of Loxley's house to a very large congregation which had assembled in the street below, and wherever they could obtain a place for hearing. According to this version the Loxley house must have been built between 1725 and 1750, but Mr. Westcott, in his "Historic Mansions and Buildings of Philadelphia," shows that the lot upon which this house was built was conveyed by George Clymer to Benjamin Loxley on the 20th of April, 1759. The building known as the Loxley House, therefore, could only have been erected subsequent to that date, and Whitefield must have preached from it on his sixth or seventh visit to America.

Immediately opposite this house was a spring, called Bathsheba's Bath and Bower. This title has been curiously accounted for by the statement that the person who fitted up the spring was named Bathsheba Bowers. It is stated that she built a small house near the spring, furnished it with table and cups, and threw in the additional attraction of a library of books.

Loxley was a carpenter, and in 1744 resided on Arch Street, between Third and Fourth. In 1751 he had bought two lots on the south side of Spruce Street, between Front and Second, on which he erected houses and cut through a court, afterward known as Loxley Court. He subsequently made other purchases, which made him the owner of the greater part of the square between Front and Second and Union and Spruce Streets.

On the north side of Chestnut Street, between Third and Fourth Streets, stood another peculiar-looking house. It was built by David Brientnall, who lived in another house, where he kept his store, at the southwest corner of Hudson's Alley. The house on Chestnut Street was built of stone, two stories high, with a gable attic. There was a pent-roof over the first story, and the eaves were extended over the second story, pent-roof fashion, for a considerable distance from the cornice. The gable was flattened in front, in the style of the church of St. Michael's, Fifth and Cherry Streets. This house was occupied for a long time by an invalid officer from Barbadoes. After Brientnall's death, in 1731, his widow moved into this house, where she kept a tavern at the sign of the Hen and Chickens. Subsequently it became the residence of Anthony Benezet, who died in it in 1784. It became quite noted as the Benezet House. An engraving of it was made by Strickland, the architect, and published in the *Portfolio* of 1818.

On Third Street, some distance below Walnut, was the elegant mansion built in 1746 for Charles Willing, merchant, who was a member of the City Council, and afterward mayor. It was constructed by John Palmer, bricklayer, after the model of the homestead buildings of the Willing family at Bristol, England. The door-posts and pediments were of Bath stone, imported from England, ready for immediate use. In front of this house two fine buttonwood-trees were planted in 1749 by Thomas Willing and John Palmer. They grew luxuriantly, and are still remembered by our older citizens. The survivor of these trees was cut down when the Pennsylvania Railroad Company erected its office upon the premises of the Willing mansion, about the year 1857. Charles Willing was brought to America in 1728 by his father, Thomas Willing, who established him in business in the same year.

One of the handsomest dwellings in the city was that of Charles Norris, erected in 1750, in Chestnut Street, between Fourth and Fifth. The following complete description of it is from the pen of the late Charles A. Poulson:

"It was a spacious and very commodious dwelling, and in its palmy days was said to be esteemed one of great elegance and splendor. The main house was sixty feet front, and its ground-floor consisted of four rooms, which were intersected by a wide hall running through its centre to a cross entry at the foot of the spacious staircase, with doors opening into the piazzas on the east and west sides. The stairway, which entirely occupied the middle section of the building, was a fine-grained, highly-polished wild-cherry wood, so dark and well kept as to be taken for mahogany. It was lighted by windows in every story, and its flat roof, surrounded by a balcony, gave to the whole building an uncommon appearance. Beyond it was a small room, formerly of much comfort, in which a fire was kept up in winter, as well as in the parlor, where the housekeeper used to sit. Adjoining to this room, on the east, was a large kitchen, with a spacious fireplace. In the rear of the kitchen and housekeeper's room, and facing the south, was the green-house, which contained the best collection of exotics in the province at that period. It was well contrived, for the entrance into its stove was in the corner of the kitchen chimney, and a few chunks of hickory-wood put into it at bedtime prevented any danger from the cold. The hot-house (for the mansion had a pretty little one) was the first of the kind in our city, where excellent pineapples were raised. It was heated in like manner from the chimney of the wash-house,—a detached building to the east, where was a large copper boiler, oven, and other accommodations for a large family.

CHARLES NORRIS' MANSION.
[From an old drawing in Philadelphia Library.]

"The mansion-house was three stories high, and above-stairs contained chambers and light closets most convenient and pleasant, besides a large drawing-room, whose strong and substantial furniture, brightly rubbed, and Turkey carpets (when carpets were yet a luxury not everywhere to be seen) were often greatly admired; and to this enumeration of rooms of all description may be added that of an excellent laundry over the kitchen, and an airy apartment with deep shelves to dry herbs, which were cultivated in ample quantities in the garden, and used to be given away to the sick in winter. Indeed, it was the only place at that time in the city where they could be had, and the applications were often numerous, and the ability to answer them was a great pleasure to the kind and charitable ladies of the household. The cellars and vaults under the house were excellent, and by a contrivance in hydraulics water was introduced into the cellar designed for a dairy, and also carried by leaden pipes to the flat roof of the eastern piazza, and to that on the top of the house, where were cisterns lined with lead to receive the water in case of fire. It furnished more lead than any house in town to make bullets to repel the enemy during the Revolutionary war. The whole house, with its balconies and piazzas, was in its appearance altogether singular, and in its days of splendor, with its ample lot extending to Fifth Street, and garden undiminished, was really a beautiful habitation.

"The garden yet remains to be described,—a spot of elegance and floral beauty. It was laid out in square parterres and beds, regularly intersected by graveled and grass walks and alleys, yet some of the latter were so completely hid by the trees by which they were bordered as to be secluded and rural. A green bank, with flights of stone steps, led the way into the garden, and a profusion of beautiful flowers and shrubs first met the view. The western part was more irregular, and contained on a high dry spot, facing the south, and defended from the north by a high board fence, the hot-beds and seed-house, and led to a very shaded walk reaching to the extremity of the grounds, with vines, covering the fence, of the finest sort of grapes, and hid on the other side from the rest of the garden by a continuation of espaliers of the finest kind and in the most flourishing condition, and this walk opened into a little spot, separated by a slight railing, and through this a path led to a gate opening into the yard of a cottage, which was the residence of the gardener. It was a charming little retirement, and so secluded and quiet that it might have been thought to belong to a remote village, although the fence of its inclosure fronted on Fifth Street.

"The garden was plentifully stocked with the finest fruits. An old Swiss gardener was employed in it for over a quarter of a century, and one of the peculiarities of the family was the long time that the same faces composed its household. The coachman lived there as long as the gardener, for in fifty years the family had but two."

Another fine house, not unlike the Willing mansion in general appearance, was erected in 1745–46, by Edward Shippen, son of Joseph Shippen, on the west side of Fourth Street, below Walnut. It was of brick, three stories in height, forty-two feet front, and forty-four feet deep. A grand house for the time. The doorway in the centre was of stone; the steps, in the form of a truncated pyramid, were of soapstone, and the bricks were black and red. Mr. Shippen lived in this house from the time it was erected until very near the time of his death, in 1806, during which period he had been president of the Court of Common Pleas and Quarter Sessions of the city and county of Philadelphia under the proprietary government, and an associate justice of the Supreme Court, and chief justice under the commonwealth. A sad memory is attached to this house. There, on the 8th of April, 1779, a large assembly of friends and relations met to witness the nuptials of Judge Shippen's sixth child and fifth daughter, Margaret, to a brave and honored soldier of the United States, one who stood high in the esteem of his brother-officers and of his chief. The bride was the leading belle of fashionable society. Warm were the congratulations of the guests upon the bright future that awaited the young couple. Mockery of human wisdom! The man whose alliance was to bring additional lustre to one of the most distinguished families of Philadelphia was Gen. Benedict Arnold, and ere long the venerable Judge Shippen bowed his head in shame, for his son-in-law was a traitor to his native land, alone in his infamy, the only American officer of high rank who betrayed the

Digitized by Google

cause of liberty during the long struggle and terrible ordeal of the Revolution.

On Chestnut Street, between Fifth and Sixth, was, in an unfinished condition at that time, the State-House, commenced in 1732. Part of the building was occupied by the Assembly in 1736, but the whole was not finished till the end of 1744.

THE EDWARD SHIPPEN MANSION.

On the west side of Fourth Street, south of Mulberry Street, was the Academy. It was erected as a house of public worship, to contain also a charity school, in 1740, for a mixed congregation under the celebrated preacher, George Whitefield. It was used for these purposes until the year 1749, when, owing to the efforts of Benjamin Franklin, it was purchased, and converted into an academy, with the condition of partitioning off and reserving to the use of itinerants a preaching-hall therein forever. In 1753 the Academy had already attained great repute. It had, according to a manuscript letter from Richard Peters to Thomas Penn, quoted by Watson, sixty-five boys from the neighboring colonies.

Boarding-schools for young ladies were not known at that time. The girls were taught in common with the boys, and their instruction was, for a long time, confined to the elementary branches facetiously designated as the three R's; but they were instructed in the ornamental branches specially intended for their sex,—embroidery, music, drawing, etc. A teacher of the name of Horton first started the idea of a separate school for girls, and proposed to teach them grammar, geography, and other branches of learning. The pretentious names of "academies," "seminaries," "lyceums," etc., were not given to private institutions until after the year 1770. A Mr. Griscom was the first to advertise a private academy. Misses' boarding-schools came into existence toward the time of the Revolution. The old English system of flogging prevailed in all the schools. The boys were made to strip off their jackets and the girls to take off their stays, the better to feel the blows dealt with a leather strap.

An amusing anecdote of John Todd, the schoolmaster, is told in the "Annals." This old gentleman seems to have brought the art of flogging to perfection and to have found a certain delight in inflicting that punishment. Holding firmly the victim horsed across his knee, he would lay on measured strokes, asking after each other stroke, "Does it hurt?" "Oh! yes, master!" the writhing culprit would whimper. "Then I'll make it hurt thee more, intolerable being. Nothing in nature is able to prevail upon thee but my strap." He had one boy named George Fudge, who usually wore leather breeches, with which he put strap and master at defiance. He seized him one day and, after giving him a sound thrashing, inquired, almost breathless with rage, "Does it not hurt?" To his discomfiture and the astonishment of the quaking scholars, Fudge cried out, "No! Hurray for leather crackers!" The irate Todd flung him sprawling on the floor, with these parting words, "Intolerable being! Get out of my school. Nothing in nature is able to prevail upon thee, not even my strap."

There were several handsome country-houses in the neighborhood of the city. Mr. Logan's house, on the Germantown road above Nicetown, was built in 1728, and received the name of Stenton. It was a plain two-story brick building, with a pent-roof and attics, sufficiently spacious to insure ease and elegance. Mrs. Sarah Butler Wister, in the sketch of Deborah Logan, in "Worthy Women of our First Century," gives the following charming description of Stenton: "Round the house there was the quiet stir and movement of a country-place, with its large gardens full of old-fashioned flowers and fruits, its poultry-yard, and stables. The latter were connected with the house by an underground passage, which led to a concealed staircase and a door under the roof, like the 'priest's escape' in some old English country-seats. . . . The offices surrounded the main building, connected with it by brick courts and covered ways. They were all at the back, and so disposed as to enhance the picturesque and dignified air of the old mansion, the interior of which is as curious to modern eyes as it is imposing. One enters by a brick hall, opposite to which is the magnificent double staircase, while right and left are lofty rooms covered with fine old-fashioned wood-work, in some of them the wainscot being carried up to the ceiling above the chimney-place, which in all the apartments was a vast opening set round with blue and white sculptured tiles of the most grotesque devices. There are corner cupboards, and in some of the rooms cupboards in arched niches over the mantel-pieces, capital show-cases for the rare china and magnificent old silver which adorned the dinner-table on state occasions. Half of the front of the house in the second story was taken up by one large, finely-lighted room, the library of the book-loving masters of the place."

Says Mr. Westcott, in "Historic Mansions," "The

Google

grounds were adorned with fine old trees. A splendid avenue of hemlocks—which legend would only be satisfied with declaring were planted by William Penn, although the poor man was dead years before Stenton was built—led up to the house. The Wingohocking meandered through the plantation, lighting up the landscape with brightness wherever its placid surface was seen. Stenton was a house for the living, but the affection which the owners had for it connected with the estate in time a last resting-place for the dead. The family graveyard is romantically situated, surrounded with old trees and with all the accessories of a spot to be picked out as a beautiful garden of the dead."

After Stenton was built, it was first occupied as a summer residence, but in time it became Mr. Logan's permanent dwelling until the time of his death, in 1751.[1] Stenton then passed into the hands of the eldest son, William, who was born on the place. He had been brought up to trade, but he now gave it up and removed to the family seat. He was a member of the Governor's Council in 1747. William Logan imitated his father in hospitality toward the Indians and in public exertions on their behalf. He divided his time between the pursuit of agriculture and traveling. He was in England during the war of the Revolution, and took no part in the great struggle. He died in 1776.

Before we leave Stenton let us note that it was there Thomas Godfrey, glazier,—already mentioned in these pages as one of the original members of the junto founded by Franklin, under the name of the "Leather Apron Club,"—discovered the principle upon which he constructed his improvement on Davis' quadrant (this improved quadrant superseded the other, and has scarcely been improved upon since). This discovery, like most all great discoveries, was due to accident. A piece of broken glass, which had fallen in such a manner as to reflect the sun, engaged Mr. Godfrey's attention while he was at work. To his philosophic mind—for he was no common glazier, but made optics and mathematics his study—this was a revelation. Quitting his work he hastened to Mr. Logan's library, and taking down a volume of Newton, he began to search its pages for a confirmation of his own theory. Mr. Logan coming in while he was thus engaged, Godfrey told him of the incident and explained to him the improved instrument he had in his mind. Mr. Logan understood at once the value of the discovery, and warmly encouraged Godfrey to put it in shape. Godfrey's quadrant was first tried in Delaware Bay by Joshua Fisher, of Lewes, and afterward at sea, but another, in the mean time, had pirated the invention, described it before the Royal Society in London, and succeeded in affixing his name to it. Few who handle "Hadley's" quadrant are aware of the fact that its real inventor was Thomas Godfrey, the Philadelphia glazier.

THOMAS GODFREY'S HOUSE, GERMANTOWN.
[From an old drawing in Philadelphia Library.]

Another elegant and spacious country-house was Bush Hill, erected in 1740 by Andrew Hamilton, the celebrated lawyer and member of the Assembly, on a tract, portion of Springettsbury Manor, which he had purchased from the Penns some years previous. Mr. Hamilton did not live long after erecting this mansion, and at his death it went to his eldest son, James Hamilton, who was subsequently Governor of the province. After the Governor's death, Bush Hill does not seem to have been occupied by any member of the family. John Adams when he was Vice-President of the United States (1790) lived in it for two or three years. In 1793, when the yellow fever was raging in Philadelphia, the mansion was unoccupied. William Hamilton (Jr.), the owner, being in Europe, it was taken possession of by the city and used as a yellow-fever hospital. The citizens' committee fearing a return of the epidemic, leased the property in 1795 from Mr. Hamilton for twenty-five hundred dollars. The Bush Hill estate was finally sold by the Hamilton family some time after the Revolution to a company of speculators in real estate, but the speculation proved a bad one, and the property went back to the Hamiltons. The house became a tavern and place of resort of some reputation at one time. It was burned down about the year 1808. The solid old walls stood the fiery ordeal, and Isaac Macauley, who bought the property, used them in fitting up an oil-cloth and floor-cloth manufactory. It was used for this purpose until 1871. In 1875 the old building was finally torn down and new houses erected upon the site, which was then on the north side of

[1] A full notice of Mr. Logan's life has been given at page 161.

Buttonwood Street, between Seventeenth and Eighteenth.

The first Andrew Hamilton had purchased from Stephen Jackson a large piece of ground in Blockley township, west of the Schuylkill, near and south of Market Street, and extending down to the Nanganesy (or Mill) Creek. He devised this property to his son Andrew, who, dying six years afterward, devised it to his son William Hamilton. This property was called The Woodlands. There was a comfortable house on it, which was torn down some time before the Revolution, and a magnificent mansion built upon the site. The following description of the Woodlands mansion, written in 1830, will be read with interest:

"The building embraces three different orders of architecture, but the Doric prevails. The north trace is ornamented in the front with six Ionic pilasters, and on each side is a pavilion; the south front has a magnificent portico, twenty-four feet in height, supported by six stately Tuscan columns. The vestibule at the north entrance is sixteen feet in diameter, from which a corridor leads on the east side to an elegant dining-room of an oval figure, the length of which is thirty feet and on the breadth twenty-two. Another corridor on the west side leads to the library, a square room with two bows, thirty by eighteen. In the library are many fine specimens of art, among which are several family portraits by eminent British and American artists. With these rooms communicate two others of smaller size, decorated with the works of several of the ancient painters from the Italian, Dutch, and Flemish schools, many of which pieces are of great merit. The grounds are in extent about ten acres, and contain a variety of indigenous and exotic trees and plants, chosen for their foliage or fragrance, and the scene is diversified by land and water in a very tasteful manner. A winding walk leads through the shrubberies and copses. At one spot there is a charming prospect of the city, at another a large expanse of water is visible. At the descent is seen a creek, overhung with rocky fragments and shaded by the gloom of the forest. Ascending from thence, the greenhouse appears in view, the front of which, including the hot-house on each side, measures one hundred and forty feet, and contains nearly ten thousand plants. There is surely no city on the continent in whose vicinity more beautiful country-seats can be found than in the vicinity of Philadelphia, and among these The Woodlands are conspicuous for their taste and elegance. The admirers of rural beauty may here find many objects to arrest their curiosity and to invite their observation."

Michaux, who visited Philadelphia in 1802, speaks of The Woodlands in this manner: "The absence of Mr. W. Hamilton deprived me of the pleasure of seeing him; notwithstanding, I went into his magnificent garden, situate upon the borders of the Schuylkill, about four miles from Philadelphia. His collection of exotics is immense, and remarkable for plants from New Holland, all the trees and shrubs of the United States, at least those that could stand the winter at Philadelphia after having once removed from their native soil; in short, it would be impossible to find a more agreeable situation than the residence of Mr. W. Hamilton."

Griswold speaks of The Woodlands as "a very charming spot," and says, "Mr. William Hamilton, who built the house and decorated the grounds, was a man of great taste in such matters, and embellished his beautiful mansion with such paintings and other works of art as were attainable in that day. His table was the frequent resort of artists and *bons vivants*."

In Blockley township, on the west bank of the Schuylkill, William Peters bought a piece of ground from Ruth Jones, widow of Daniel Jones, in 1742, and built thereon a small stone house. He made this property his residence, and named it Belmont. The situation was beautiful, the property embracing an island in the Schuylkill River, and running from the western bank out beyond the New Ford road, subsequently known as the Monument road. Some years later, the exact date is not known, the large mansion on the north, adjoining the small stone house, was built. Mr. Keyser, in "Fairmount Park," says of Belmont, "Its principal characteristics are a broad hall and small dormitories, small window-glass, and heavy sashes, highly ornamented, and high, wooden mantel-pieces, a comfortable dining-room, and open fireplaces. One of these, in the hall, is still used; the panel over it formerly held a landscape; the coat-of-arms of the family remains perfect on the ceiling. Other ornamental devices about the mansion are recognizable as belonging to that early period. The roof has been raised; the third story and piazza are modern. A library which adjoined the main house has also been removed since the judge's time. The date of the erection of the main out-building is fixed by a monogram, 'T. W. P., 1745,' cut on a slab set in the wall." The grounds are admirable, and contain some of the most superb trees in this country. The French traveler, Chastellux, designates Belmont as a "tasty little box in the most charming spot nature could embellish." Mr. Peters conveyed Belmont to his son Richard, who was born on the place in the first year of its occupancy. Richard Peters attained great fame as a patriot and as a judge of the United States District Court in Pennsylvania. After Judge Peters' death Belmont remained in possession of the family until the enlargement of Fairmount Park, when it came into the possession of the city of Philadelphia.

The description of so many mansions and fine houses erected during the first half of the eighteenth century may enable us to form an idea of the growth of Philadelphia, of increased wealth, introducing greater luxury in the mode of life of the inhabitants. Difficulties have been vanquished, fortunes have been made, society is no longer what it was at the departure of Penn; it has become more worldly; taste is more refined; the various elements of which the community was composed are more closely mingled, giving it a new character.

Especially toward the close of the half-century has the progress been marked. A traveler returning to England after a tour in America, writes to the *London Magazine* in 1749:

"It almost surpasses belief (when we consider that there were scarce any houses there about ninety years ago) the great extent of the city of Philadelphia, in Pennsylvania. This hath, besides many others of near its length, one street of above a mile long, and the buildings as close together as in most places in London. There were built last year, between dwelling-houses, warehouses, and store-houses, about one hundred and twenty. The prodigious increase is not to be wondered at

when we consider that there arrive in this city yearly between three and five thousand Irish and Germans,—the most notable artificers of these staying generally in this city, and the peasants retiring to the country. Such is the plenty of provisions here that I have reckoned eighty carcasses of beef on one market-day,—they having two of a week. I have likewise numbered sixty country wagons in town on the same market-day."

The City of Brotherly Love continues to attract attention in Europe, and in 1759 we have another testimonial to its steady progress, in a notice which appeared in the "Grand Magazine of Universal Intelligence," published in London. The following is an extract from the article in question:

"The two principal streets of the city are each one hundred feet wide, and most of the houses have a small garden and orchard; while several canals are cut from the river, equally pleasant and useful. The wharves are spacious and well laid out, the principal being two hundred feet wide, and to this a vessel of two hundred tons may lay her broadside. A great number of vessels have been built here, twenty having been upon the stocks at one time. The inhabitants are said to be at present about thirteen thousand.

"Philadelphia has a great number of very wealthy merchants,—which is not at all surprising when we consider the great trade it carries on with the English, French, Spanish, Dutch, etc. Vast quantities of produce are brought down the Delaware and Schuylkill,—the former being navigable more than two hundred miles above Philadelphia, and the latter about one hundred. The Dutch employ nine thousand wagons, each drawn by four horses, in bringing the produce of their farms to market. In the year 1749 three hundred and three vessels entered inward, and two hundred and ninety cleared outward."

Let us take an inside view of the city which already attracted the attention and elicited the praise of travelers. Notwithstanding that, at an early period, narrow footwalks of brick had been laid in the principal thoroughfares, the beds of the streets had been left unpaved, or, where their miry and broken condition impeded travel, they were filled with pebbles. These improvements were generally made by the parties most interested, who would subscribe a sum sufficient to pay for the work. A general effort to have the streets paved was not made until 1761. A lottery was the means adopted to raise the necessary funds. There are frequent instances in the early history of the city of these lotteries organized for some object of public interest. The practice was not considered as a species of gambling; it was a voluntary tax, with a prospect of a profitable return for some of the lucky ones. The wealthy citizens subscribed freely, and every one used his influence to aid in the prompt sale of the tickets. The act for "regulating, pitching, paving, and cleansing the streets, lanes, and alleys, etc., within the settled parts of Philadelphia," was passed in 1762. The laborers employed on this work of paving were not very experienced, it seems, for one Purdon, a British soldier, related to John Purdon, store-keeper in Front Street, seeing how clumsily the men worked, offered to show them how to do it. He was a skilled pavior, and his services became so much in demand that the city officials obtained his release from the army by paying a substitute to fill his place.

Curb-stones were not in use previous to 1786. Until that time the gutters were protected by short posts placed at intervals. The dirty condition of the streets was a cause of frequent complaint. In 1765, Robert Erwin is made "a scavenger for seeing the streets cleansed once a week." What would Erwin ask to undertake the job to-day? It is not on record that he made a fortune out of street dirt, but neither can we find any complaint that he did not keep the streets clean.

Next to cleaning the streets comes the question of lighting them at night and protecting their inhabitants. For a long time the belated citizen, unless he carried a lantern, had no other light to guide his steps and save him from tumbling in mud-holes than that which shone feebly through the smoke-dimmed panes of some tavern-window. A few street-lamps were then put up, owned by private citizens, who, finding it troublesome to attend to them, met in consultation and agreed to pay a man a certain monthly sum (each three shillings and ninepence, says John Smith in his manuscript journal) to light them nightly. Thus was the first lamp-lighter commissioned. In 1750 the grand jury reiterated their oft-made representations as to the dirty condition of the streets and the necessity of lighting them. An act providing for the lighting of the streets was passed the following year, and the *Gazette* of October 3d (1751) announced that "on Monday last the streets began to be illuminated with lamps according to the act."

The appointment of the first watchman appears on the minutes as follows:

"July 1, 1700. It was unanimouslie agreed and assented to by ye Gov'r and Council that ——— be appointed, and is hereby authorized and empowered, to go round ye town with a small bell in ye night time, to give notice of ye time of the night and the weather, and if anie disorders or danger happen by fire or otherwise in the night time to acquaint the constables thereof."

The practice in the early times was for the Council to assign the duties of constables to certain citizens for a stated period. They were fined if they refused to act. No distinction was made in the selection, rich and poor, eminent or obscure, all were liable to be designated. The constables were charged to notify the grand jury of the nuisances occurring in their several wards, and to nominate the watchmen. The names of such men as Joseph Shippen, Abram Carpenter, George Claypole, and Henry Preston appear in 1706 as fined five pounds "for neglect to serve as constables." In 1704, "Gyles Green and William Morris are presented as not serving their tour of duty as watchmen when nominated thereto." In 1742 the inconvenience of this system was admitted, and the grand jury represented the need of a stated watch and watch-house. Very little was done, however, for in 1749 the grand jury insists strongly upon the fact that the five or six men employed as nightly watchmen, and who go their rounds in company, are a poor protection for so great a city, containing from two to three thousand houses and fifteen thousand inhabitants. The watch was thereupon increased.

That the city had remained so long with so few

guardians, and these private citizens, who did duty for the common good, is the best evidence of the orderly character of the young community. It was only when its population was swelled by the thousands who flocked to her shores yearly that we hear of thefts and robberies, of midnight brawls and debauchery, requiring a greater repressive force. And even then, how favorably it will compare with the great British metropolis! London, in 1736, had only one thousand street-lamps, and those were only lighted in the winter months. Her few watchmen were, for the most part, feeble old men, with just strength enough left to sing out in wheezing voice the time of night and state of the weather, but totally incapable of arresting or terrifying the evil-doer. Very few of the streets were paved, and great water-spouts projecting from the roofs of the houses made foot travel impossible when it rained. As late as 1744 the streets of London were so unsafe that the lord mayor and aldermen went to the king with an address setting forth the terrible grievances of the inhabitants, who were terrified, robbed, and wounded in the streets, even "at such times as were deemed heretofore hours of security," and that the officers of justice have been shot, some dangerously wounded, and others murdered, in attempting to discharge their duty by apprehending the offenders.

The shade-trees that embellished the streets of Philadelphia in those days were the buttonwood and the willow. The Lombardy poplar was introduced from Europe in 1786–87 by William Hamilton. While the grounds of some of the great mansions we have described could boast of rare flowers and shrubbery, the gardens in the city—almost every house had its garden—were bright only with the simple old-time favorites so neglected in these days of horticultural wonders,—the lilac, the rose, the snow-ball, the lily, the pink and tulip; above which the solemn sunflower and rank hollyhock lifted their tall heads. Morning-glories and gourd-vines climbed over the porch or shaded the summer arbor. Every house, generally, had its well. Public pumps were not numerous for some years. In 1744 the Union Fire Company offered five pounds reward for the apprehension of the persons "who stole the nozles from High Street and other streets." There were no public clocks to be consulted on the streets, but sun-dials were affixed to the walls of many houses for general convenience, as few people carried watches then. Mr. Watson mentions as still existing (in 1842) a large dial against a house (formerly the residence of Anthony Morris) on the north side of Pine Street, opposite Friends' meeting-house; another on South Second Street, and another on the north side of High Street, four or five doors west of Second Street.

Stores were quite numerous, and the goods offered for sale in great variety. Merchants generally resided on the premises in which they had their stores, and their wives and daughters often assisted them in the counting-room. The retail trade was for the most part in the hands of women. The old European practice of overhanging signs, bearing some device symbolic of the owner's trade, or often some fanciful name having not the slightest connection with it, had always prevailed. It was carried on to such an extent as to become a positive nuisance. In 1769 the setting up of signs, boards, poles, or other devices, extending from the house into the street, as well as the maintaining of all such signs, after the 1st of January, 1770, was prohibited, under penalty of a fine of five pounds.[1] An exception was made in favor of innkeepers.

[1] A list of these signs, many of which are whimsical in conceit, has been compiled by Mr. Westcott in his "History of Philadelphia." We insert it here as a historical curiosity:

1751.—Henry Flowers, watchmaker, sign of Dial, Second Street, between Chestnut and Blackhorse Alley; Yellow Key, Market Street, end of Jersey Market, Glover Hunt, ironmonger; Three Brass Cocks, Samuel Powell, brass-founder, Third Street, near Race; Handsaw and Crown, Solomon Fussell, opposite Christ Church; Hand and Shears, William Askin, Chestnut Street, near Second; Dish, C. Bradford, pewterer, Second and Arch Streets; Half-Moon, opposite Jersey Market, Peter Petridge, screen-maker; Sugar Loaf, Front and Catharine, John White; Mortar and Dove, Second Street; Sugar Loaf, Water, above Market, Capt. James Child; Tent, Thomas Lawrence, upholsterer, Second, opposite Church Alley; Three Bells, Thomas Gregory, brass-founder, Second, opposite Church; Thomas Say and Isaac Bartram, Three Bolt-heads, Second, above Arch; Founders' Arms, Second, near Market, John Smith and John Winters, who advertised to cast bells for churches, also brass mortars, mortar-pieces, cohorns, field-pieces, etc.; Cock, Second Street, Robert Mathews; Cradle and Coffin, Walnut Street, Samuel Williams, joiner; Lock and Key, Arch Street, William Rush, hardware; Sugar Loaf and Saddle-tree, Strawberry Alley, John Carl, saddle-tree-maker; Still and Golden Teakettle, Front, below Market, James Halden; Sloop, John Aris, Water, near Chestnut; Beaver, Samuel Howell, Chestnut, corner Strawberry Alley, dry-goods; White Stays, Second, near Market, John Aitkinson, stay-maker.

1752.—Blue Heart, Second, opposite Black Horse Alley, Joseph Maull, shears-maker; Ring and Dove, Charles Dutens, near Indian King, Market Street; Paracelsus' Head, Fourth Street; Hearse, Second, opposite Christ Church, John Nice.

1753.—Crown and Canister, Second, below Market, dry-goods; Bible and Crown, Third Street, Stephen J. Potts; Hand and Brush, Second Street, Henry Barbasin, scourer; Star, Market Street, Ann Redmond, dry-goods; Pestle and Mortar, opposite Presbyterian Meeting-House, Market Street, William Chancellor, druggist.

1754.—Sash Window, First [Front] Street, opposite the green pump, a little above the sign of the Queen of Hungary, George Brooks, glazier, plumber, and painter; Lamp and Crown, Second, near the Court-House, James Wagstaff, lamp-maker.

1756.—Royal Bed, corner Second and Chestnut, Edward Weyman; Crown and Cushion, Front and Chestnut, James White and Thomas Lawrence, upholsterers; Black Boy and Trumpet, William Forrest; Scrutoire, near New Market wharf, Society Hill, Francis Trimball, chairmaker; Golden Ball, Christopher Marshall, Strawberry and Chestnut, druggist.

1758.—Scythe, Fourth and Market, Whitehead and Jonathan Humphries, hardware; Black Bear, Second, above Race, James Caufman; Spinning Wheel, Market Street; Bell and Looking-glass, Chestnut Street, John Elliott; Fountain, Market Street, dry-goods; Key, Market Street, Wagstaff & Hunt, mustard-makers; Saddlers' Arms, Germantown; Three Bibles, John Bleakley, Market Street, opposite shambles, books, etc.; Golden Teakettle, Front Street; Gold-headed Cane, Second, below Walnut, Josiah Sherrard, sells bear-skins and hardware; Bottle and Three Bolt-heads, Second, above Arch, Say & Bartram, drugs; Teakettle and Canister, Benjamin Harbeson.

1759.—Spread Eagle, Arch, near Third; Hand and Earring, Chestnut Street, Austin Macknon, jeweler; Blue Lion, Water, above Arch, John Ross, has a servant-girl for sale; Dutch Fan, upper end of Market, between Fourth and Fifth, Adam Akert, wire-worker; Knapsack, Chestnut Street, opposite Charles Norris' house, Martin Brand, knapsack-maker;

Some of the old advertisements will enlighten us as to the choice the ladies had in dress-stuffs, though few, probably, can tell what the strange names mean. Articles for gentlemen were kept in the same stores.

Peter Turner, a merchant, advertised, in 1738, that he had for sale "broadcloth, kerseys, grograms, taffetas, harabines, sooloots, grassetts, poplins, chinus (chintz), fox curtains, belladine silks, fine sleeve-buttons, set in silver, and English periwigs." Other merchants advertised cotton romals, penascas, double and single sleetas, broad and narrow cadis, damask Florells, wove worsted patterns for breeches, women's and children's stays, garlix, watered barrogans, striped ducapes, mantuas, cherryderries, silk dunnadars, shaggyareen, seletius, chex, bunts, chelloes, satin-quilted petticoats.

Alexander Miller advertised, in 1739, that at his store, the sign of the Wig, in Second Street, were to be sold "A choice parcel of cawls, ribbons, roses, and fans, after the newest fashion, and likewise a large parcel of the best hard silk, where all gentlemen and others may be supplied with all sorts of periwigs after the best fashion now used in England, and at reasonable prices."

In 1745, Mary Cahill, who lived in Front Street, below Chestnut, advertised that she had for sale gentlemen's velvet and leather caps, and ladies' and children's caps, mantlets, pilareens, black bags, roses for gentlemen's wigs, and turbans for negroes.

Matthews & Charlton advertised, in 1744, that they sold "tyes, bobs, majors, spencers, fox-tails or twists, and perrukes of English hair." In the same year there was for sale, at the house of John Sanders, sign of "The Huntsman," in the Northern Liberties, "men's New Market stiff crown black velvet jockey-caps, with or without capes."

There was not any material change in the style of

Hand and Pen, Race, between Front and Second, Peter Thompson, India, China, and Madeira wine; Bell and Candlestick, upper end of Second Street, Dan. King, founder.

1760.—Pipe, Market Street, McLaughlin & Lane, drugs; Prussian Hussar, Levi Marks, tailor.

1762.—Comb-maker, Strawberry Alley, Christopher Angier, maker of combs, powder-horns, and spoons; Blue Ointment Pot, Second, below George Tavern, Luke Scanlon, drugs; Crown and Cushion, next door to London Coffee-House, Blanche White; Bible and Heart, Second Street, corner of Black Horse Alley, Andrew Stuart, printer; Sickle and Steel-yard, opposite the market, John Hendricks, cutter; Anchor and Hope, Martin Ashburn, late tavern-keeper, now baker, Poole's Bridge; Blackamoor, tobacconist, manufacturer of "fine pig-tail for gentlemen and ladies;" Case Knife, Timothy Matlack, Market, near Fourth, hardware; Piece of Reed, Market, west of Sixth, George Leacher, reed-maker; Golden Pestle, Second, between Market and Chestnut, Isaac Smith and Robert Harris succeed McLean & Stuart; Crown and Pearl, Ed. Milnes, goldsmith, Second, near Chestnut; Coach, Second near Walnut, James Chapman, barber; English Hunting Saddle, north side Market, fourth door above new printing-office, John Young, Jr., saddler; Golden Bell and Three Cocks, Front, between Market and Arch, James Smith, brass-founder; Hat and Crown; Bakers' Arms, Northern Liberties, Martin Noll, baker; Æsop in the Shades, Walnut Street; Three Nuns, Robert Lever's, Third Street, dry-goods; James Rivington, bookseller, corner Market and Front, opposite Coffee-House; Crown and Anvil, Second, near Spruce, Ben. Armitage; Ship, Thomas Harper, Strawberry Alley; Mariner, Crooked Billet wharf, James Mease; Crown, Ring and Parrot, Front Street, Samuel Alford; Fifty-six Pound Weight, Chestnut, opposite Three Tun Tavern, De Normandy and Pierce; Blue Anchor and Orange Tree, Front, near German; Three Reapers, Third Street, Edward Morris; Ship and Castle, Front, near Market, Anthony Hull; Bible, Second, between Arch and Race, Zachariah Poulson, bookbinder; Hat and Feather, Second Street, opposite the Royal George, John Drinker, dry-goods.

1764.—Indian and Pipe, Second and Race; Whittington and his Cat, Third Street, Southwark; Three Crown Sugar Loaves, Second, above Arch, David Shaffer; Two Green Canisters, Second, opposite Baptist meeting-house, grocery; Breeches and Gloves, Second, above Market, George Cooper.

1765.—Mariner, Front, near Drawbridge, Richard Harrison, schoolmaster; Ship in Distress, Water Street, Southwark, John Middleton; Long Plane and Handsaw, Hezekiah Niles, Church Alley; Boot and Spatterdash, Front Street, near the Drawbridge, Alexander Rutherford, shoemaker; Blue Hand, Race Street, between Front and Second, Everard Boulton, dyer; Architect, Chestnut, between Second and Third, James Lamb, carpenter; Hand-in-Hand, west side of Second, between Race and Vine, Daniel Mause, hosier; Blue Tea Canister, Second, above Arch, Theodore Meminger; Teakettle, Still, and Showboard, Second, below Black Horse Alley, James Haldane, coppersmith; Breeches and Broadaxe, Front Street, near Poole's Hill, Anthony Woodcock, deerskin breeches and gloves; Unicorn and Mortar, Market, between Front and Second, John Sparhawk, druggist; Lamb and Star, Alexander Smith, tailor, Front, opposite Pewter Platter Alley; Gilt Sickle, Second, above the church, Samuel Wheeler, cutler; Grindstone, Front, above Race, William Rusk, iron-monger; Hand and Watch, Front, below Spruce, Samuel May and Richard Clarke, watchmakers; Three Wise Men of the East, Market, between Sixth and Seventh; Bible and Crown, Chestnut Street, William Woodhouse, books; Swift's Head, Front, between Chestnut and Walnut, John Dean, books; Hand and Box Iron, Spruce Street, near the new chapel, Alice Williams, late from London, does up and clear starches; Rainbow and Dove, Walnut Street, Thomas Littlewood, silk scourer; Hadley's Quadrant, Front, between Chestnut and Walnut, Benjamin Condey, mathematical instruments; Seven Stars, White Horse Alley, Abel Gibbon, breeches-maker, washes and mends breeches; Lime-Tree, Front, opposite Coombs' Alley, Abraham Smith, fruiterer; Naked Boy, Second, between Market and Chestnut, George Bartram, broadcloth; Snuff Bottle, Water Street, between Market and Arch, Kearney & Gilbert; Gentleman and Lady, Norris Alley, Levi Marks, tailor and habit-maker; Circulating Library, Second, between Race and Vine, Lewis Nicola; Carpenters' Arms, Third, above the jail, Samuel Caruthers, hardware; Dog and Golden Kettle, Arch Street; Green Frying-Pan, Market Street, opposite the shambles, Dave Deshler, hardware; Chinese Balcony, Front, near Chestnut, Philip Wilson; Golden Slipper, Strawberry Alley, William Ross, from Scotland, shoe-store; Boerhave's Head, Second, near Walnut, Dr. Samuel Orm, druggist; Gold Laced Hat in Hand, Front Street, Richard Swann; Bell and Looking-Glass, Walnut, near Third, John Elliott; Bible and Heart, William Evett, Second, between Market and Arch; Crown and Shoe, Fourth, above Market, Richard Dickinson, silk and stuff shoemaker; Scythe, Sickle, and Branding Iron, Second, above Market, Samuel Wheeler; Golden Eagle, Chestnut, Ben. Randolph, carving, cabinet-ware, and wooden buttons; Blue Bonnet, Chestnut, between Front and Second, Henry Marks, starch-maker; Boerhaave's Head, Second and Walnut, Duffield & Delany, druggists; Trowel and Hammer, Second, below Walnut, Ab'm Wayne, dry-goods; Golden Lion, corner Second and Chestnut, John Carnan, jeweler; Golden Fleece's Head, Second, below Carter's Alley, George Bartram, woolen draper; Three Wise Men, Market, above Sixth, Tobias Rodolph; Crown and Tassel, Front, below Arch, George Ritchie, upholsterer; Golden Cup and Crown, Front, above the Drawbridge, Thomas Shields; West's Head, Second, near Walnut, Robt. Kennedy, pictures and prints; Golden Ball, Second, between Chestnut and Walnut, Thomas Douglas, dry-goods; Green Lamp, Chestnut, near Second, Eleanor Fitzgerald & Co., milliners.

1772.—Rising Sun, Second, below Market, William Smith, apothecary; German Flute and Hautboy, Second, above Vine, Jacob Anthony, turner; Highland Man and Bear, Second Street.

1773.—Lock, Jack, and Bell, Second, between Walnut and Chestnut, Alex. White Smith; Bell and Dragon, North Market, between Second and Third, Speakman & Carter; Golden Rose, Ludwick Kuhn, Arch Street; Golden Pelican, Second, above Arch, a distillery and a patent medicine store, Theodore Meminger; Hog, corner Second and Chestnut, John Hanna.

furniture in use at the beginning of the century. Yet it became more complete, as with increased prosperity there naturally came a desire to increase the comforts of home. Even without facts to support it, the inference drawn must be correct. Home, and especially an American home, is the dominion of woman, there she reigns supreme. It is her taste which adorns it and makes it pleasant to behold, it is her love and her cheerful spirit which make it a haven of rest for ever-busy, plodding, tired man. Can we admit that those merchants and tradesmen whose fortunes rose with the growing prosperity of Philadelphia were content to hoard their money or add to their lands without giving their wives and daughters the enjoyments of those elegancies and comforts which must add to the happiness of the family circle? Granted that the tastes of the people were simple, that they were not inclined to show or extravagance, when with an increased trade the importation of manufactured wares obtained larger proportions, and that was easily procured in the city stores which had been hitherto rare and difficult to obtain, the ladies were not deprived of their rights, and, while the younger and unmarried might be eager to price "grograms and taffetas," or even look at "cherryderries, shaggyareen, and chelloes," the worthy matron insisted upon having a good sofa for her parlor, and a large sideboard on which to display her newly-acquired glassware and her solid service of plate,—a present from the good husband on the anniversary of their marriage day,—or in which to secure the china or delfware,—the pewter having been exiled to the kitchen regions. Paper "for the lining of rooms" was advertised by Charles Hargrave in 1745. Paper-hangings and *papier-maché* work was manufactured in Philadelphia in 1769 (as we have had occasion to remark); it is likely that between 1750 and 1760 there were a large number of houses where wall-paper had taken the place of the primitive whitewash. Carpets, introduced in 1750, did not come so speedily in general use; but then they were expensive articles, and not very common in English households. Curtains of richer material, mantel-glasses and candelabra made their appearance in the parlor. Low bedsteads, of solid, carved mahogany, found their way to the chamber, although they did not supersede, to any extent, the popular beds long in use.

If there was an improvement in the furnishing of the average citizen's home, the wealthier Philadelphians, who erected splendid mansions and took such pains to beautify their grounds, could not do otherwise than buy furniture that would harmonize with the general arrangement of their houses. To the common paper-hanging they preferred wainscoting with some hard wood. Mr. Kalm says he saw in 1748, in Fair Hill, the country-seat of Mr. Norris,—one of the members of the Assembly,—a parlor wainscoted with boards of red cedar, which looked very well at the beginning, but was then quite faded and shabby. It was to be replaced with mahogany. The elaborately-carved and gilded furniture of Queen Anne's time, which remained so long in fashion, must have been in keeping with the grandeur of some of those Philadelphia mansions, and among the relics of olden time preserved in some of our families may be found some of the curious little tables, cabinets, and clock-cases made of pieces of different kinds of wood and called "marketry," or more properly *marquetterie*, from the name of the ingenious inventor, the Frenchman Marquette.

One decided improvement introduced in most of the houses, to the great comfort of the family, was the Franklin stove, which revolutionized the time-honored but objectionable method of warming the houses by means of open fireplaces. Dr. Franklin's invention, made in 1742, was an open stove, the plates of which had passages or air-chambers between them, through which the air circulated, diffusing a greater amount of heat in the room, with a positive saving of fuel. Robert Grace cast some plates for it, and Franklin wrote and published a pamphlet entitled "An Account of the New Pennsylvania Fireplaces wherein their Construction is particularly explained," etc. About the same time, there was a sort of stove made like a square box, which was set in the side of the kitchen fireplace, passing through the wall, so as to present the back end in the adjoining room, and was known as the German stove. They were made by Christopher Sauer, of Germantown. It is not known which of the two stoves was first invented, but Franklin's was decidedly the better one, and it became generally adopted.

There were no very material changes in the ladies' dresses, the hoop still maintaining its hold, as also the furbelows; the robe was made low in front, the upper part of the stomacher and the short sleeves edged with point-lace. Aprons were in fashion, and were worn sometimes long and at other times short, exposing the richly embroidered petticoat. Capuchin hoods were in style. But the greatest change was in the dressing of the hair. The simple and elegant *coiffure* of natural curls, already described, was in vogue only a few years. The old style of building up the hair in a high pyramid suddenly reappeared with still more exaggerated proportions. The hair was carried up over wire frameworks, stiffened with pomade sprinkled with powder, and formed a bewildering edifice adorned with curls, flowers, and feathers. Sometimes a sort of a little hat was perched on the apex of this wondrous structure. How our grandmothers ever had the patience to sit three or four hours under the manipulations of the hair-dresser, and how they could move, walk, and dance with such a load on their cranium, is the wonder of their granddaughters. Jewels—rich bracelets, necklaces, and chains—were much worn. It was the fashion for a lady to carry a costly gold snuff-box with a looking-glass inside the lid; as she opened the box to take or offer

a pinch, she could cast a surreptitious glance at her fair visage and see if her rouge was not coming off, and if her "beauty-spots," *i.e.*, patches, were still in the right places.

Satire often attempted to check the extravagances of fashion, but with little success. So it has been in all times, and a very thick volume might be made with the thankless advice given, in verse alone, by well-meaning men to the adorable creatures who read, smiled, and forthwith went to have a consultation with their dress-maker or their *modiste* about the latest style of dress or the coming bonnet. During the troubles that culminated in the Revolution, strenuous efforts were made to discourage the use of foreign manufactures. The ladies were appealed to, and for a time their patriotism was equal to the greatest sacrifices; yet during the Revolutionary period we shall hear many complaints of their extravagance. Enthusiasm and perseverance are very different virtues.

The following lines appeared in Bradford's *Journal* (Dec. 3, 1767):

"AN ADDRESS TO THE LADIES.

"Young ladies in town and those that live round,
Let a friend at this season advise you;
Since money's so scarce and times growing worse,
Strange things may soon hap and surprise you.
First, then, throw aside your high top-knots of pride;
Wear none but your own country linen;
Of economy boast—let your pride be the most
To show clothes of your own make and spinning.
What if homespun, they say, is not quite so gay
As brocades, yet be not in a passion;
For when once 'tis known this is much worn in town,
One and all will cry out 'tis the fashion!
And as one all will agree that you'll not married be
To such as will wear London fact'ry;
But at first refuse—tell 'em such do you choose
As encourage our own manufactory.
No more ribbons wear, nor in rich dress appear;
Love your country much more than fine things.
Begin without passion—'twill soon be the fashion
To grace your smooth locks with twine strings.
Throw aside your *Bohea* and your *Green Hyson tea*,
And in all things with a new fashion duty;
Procure a good store of the choice *Labradore;*
For there'll soon be enough here to suit ye.
These do without fear, and to all you'll appear
Fair, charming, true, lovely, and clear.
Tho' the times remain darkish, young men may be sparkish,
And love you much stronger than ever."

A Philadelphian, in 1769, sends to the *Penny Post* the following:

"RECEIPT FOR A MODERN DRESS.

"Pin a small bugle cap on as big as a crown;
Smout it off with a ribbon *vulgo dict* à pompon.
Let your powder be gray; and braid up your hair
Like the mane of a colt to be sold at a fair.
A short pair of jumps half an ell from your chin,
To make you appear like one just lying-in.
Before, for your breastpin, a stomacher bib on;
Ragout it with cutlers of silver and ribbon.
Your neck and your shoulders both naked should be—
Was it not for Vandyke blown with *chesa de free?*
Let your gown be a black, blue, yellow, or green,
And frizzle your elbows with ruffles sixteen.
Furl off your lawn aprons with flounces in rows;
Puff and pucker up knots in your arms and your toes;
Make your petticoats short, that a hoop eight yards wide
May decently show how your garters are tied:
With fringes of netting your dickey cabob;
On slippers of velvet set gold *à la daube*.
But mount on French heels when you go to a dance—
'Twas the fashion in England and likewise in France."

But let us not anticipate. The period of which we were speaking was one of peace and security. We were describing the dress of the ladies; they but copied the fashions of English society, with moderation doubtless, and, to the eternal honor of their womanhood, they did not copy its vices. Rev. Andrew Burnaby, who visited Philadelphia between 1759 and 1760, was very favorably impressed with our belles. Here is what he said,—

"The women are exceedingly handsome and polite. They are naturally sprightly and fond of pleasure, and, upon the whole, are much more agreeable and accomplished than the men. Since their intercourse with the English officers they are greatly improved, and, without flattery, many of them would not make bad figures even in the first assemblies in Europe. Their amusements are principally dancing in the winter, and in the summer forming parties of pleasure upon the Schuylkill and in the country. There is a society of sixteen ladies and as many gentlemen, called the Fishing Company, who meet once in a fortnight upon the Schuylkill. They have a very pleasant room erected in a romantic situation on the banks of that river, where they generally dine and drink tea. There are several pretty walks around it, and some wild and rugged rocks, which, together with the water and fine groves that adorn the banks, form a most beautiful and picturesque scene. There are boats and fishing-tackle of all sorts, and the company divert themselves with walking, fishing, going upon the water, dancing, singing, or conversing, just as they please. The ladies wear a uniform, and they appear with great ease and advantage from the neatness and simplicity of it. The first and most distinguished people of the colony are of this society, and it is very advantageous to a stranger to be introduced to it, as he thereby gets acquainted with the best and most respectable company in Philadelphia. In winter, when there is snow on the ground, it is usual to make what they call sleighing-parties, or to go upon it in sledges."[1]

When we read of the polished society of those days, of their elegant dresses, their jewels and laces and inimitable fashions, we cannot help thinking of one or two things which they did not have, things the poorest woman of our day could not do without. Tooth-brushes, until quite recently, were unknown, and the fairest lady rubbed her teeth with a rag, which, *horresco referens*, she dipped in snuff! Then they had no knowledge of ice-cream or soda-water, the former not having been introduced in Philadelphia until 1800 by a Mr. Bosio, who made a fortune, and the latter being a still more modern invention. A queer omission of the progress of the age was that they had no visiting or blank cards. Invitations to a ball or party were printed or written on the backs of playing-cards. All of which did not hinder the people from enjoying life. They were very fond of dancing, at least those who were not restrained by religious scruples. The City Assembly, established in 1748, had kept up its organization. It held its

[1] Mr. Westcott, in his "History of Philadelphia," says in regard to these impressions of travel of Mr. Burnaby, "As there is nothing in the minutes of 'The Colony on the Schuylkill' or Fort St. David's Fishing Company to show that ladies were associate members, the club alluded to by Mr. Burnaby is probably the Mount Regale Fishing Company."

meetings for some time at Hamilton's wharf, on the south side of the draw-bridge, and subsequently at the Freemason's Hall, Lodge Alley. The following-named ladies, belonging to the fashionable society of the time, were invited to grace with their presence a ball given by the Assembly in 1757:

Mrs. Allen, Mrs. Taylor, Mrs. Hamilton, Mrs. Brotherson, Mrs. Inglis, Mrs. Jeykell, Mrs. Franks, Mrs. Lydia McCall, Sr., Mrs. Samuel McCall, Mrs. Samuel McCall, Jr., Mrs. Swift, Mrs. Sims, Mrs. Willcocks, Mrs. Lawrence, Sr., Mrs. Lawrence, Jr., Mrs. Robertson, Mrs. Francis, Mrs. Greame, Mrs. Joseph Shippen, Mrs. Dolgreen, Mrs. Phineas Bond, Mrs. Burd, Mrs. Charles Steedman, Mrs. Thomas White, Mrs. Johnes, Mrs. Warren, Mrs. Oswald, Mrs. Thomas Bond, Mrs. Davey, Mrs. William Humphreys, Mrs. Pennery, Mrs. Henry Harrison, Mrs. Bingham, Mrs. Clymer, Mrs. Wallace, Mrs. Ellis, Mrs. Alexander Steadman, Mrs. Hopkinson, Mrs. Hockley, Mrs. Marks, Miss Mollie Francis, Miss Betty Francis, Miss Osborn, Miss Sober, Miss Mollie Lawrence, Miss Kitty Lawrence, Mrs. George Smith, Miss Nancy Hickman, Miss Sallie Hunlock, Miss Peggy Harding, Miss Mollie McCall, Miss Peggy McCall, Miss Lardner, Miss Betty Blumstead, Miss Rebecca Davis, Miss Jennie Greame, Miss Nellie McCall, Miss Randolph, Miss Sophia White, Mrs. Venables, Miss Hyatt, Miss Betty Clifton, Miss Mollie Dick, Miss Fannie Jeykell, Miss Fannie Marks, Miss Peggy Oswald, Miss Betty Oswald, Miss Sallie Woodrop, Miss Mollie Oswald, Mrs. Willing, Miss Nancy Willing, Miss Dolly Willing, Mrs. McIlvaine, Miss Betty Gryden, Miss Sallie Fishbourne, Miss Furnell, Miss Isabella Cairnie, Miss Pennyfather, Miss Jennie Richardson, Mrs. Reily, Mrs. Graydon, Mrs. Ross, Mrs. Peter Bard, Mrs. Franklin, Miss Lucy De Normandie, Miss Phebe Winecoop, Mrs. Harkly.

Dancing-masters visited Philadelphia occasionally, giving the gay people an opportunity to learn the latest fashionable dance. In 1761, John Walsh advertised that he taught "dancing in all its parts, after the most elegant tastes, together with a masquerade and a Spanish fandango, much in esteem." He declared that "he had the honor to perform before the Vice-King in Peru, with a royal bounty; also with satisfaction in France, Italy, Chili, etc." His school-room was in Videll's Alley, "but he was to be spoke with" at Mrs. Harper's, in Spruce Street. In 1763 John Baptiste Tyol advertised in the month of August that he had just come to town, and as soon as he could obtain a convenient room, and the weather became a little cooler, he intended opening a dancing-school. In order to make his merits known he stated that he had performed one year at the King's Opera-House, Haymarket; two years at the Theatre Royal, at Drury Lane, under Mr. Garrick; three years at the Dublin Theatre, and in several of the cities of Germany, France, Portugal, and Italy. He added, "As he learns that a regular prudent dancing-master is much wanted here, he flatters himself that he will be able to meet the due encouragement of the public."

Signor Sodi opened his dancing-school on Chestnut Street, back of the Fountain Tavern. He announced that he taught "rigadoons, paspies, etc.," all new French dances. In 1770 a Signor Gualda advertised a concert and ball at the Freemason's Lodge, admission ten shillings, with the singular proviso, "If any lady or gentleman chooses to go away after the concert, the porter will return him one-half a crown."

Much attention also was paid to music, principally of a sacred character. In 1752, Robert Coe modestly announced that, "conceiving himself capable of teaching to play on that agreeable instrument, the German flute," he offered to do so for fifteen shillings entrance, and the same amount per month. He was to be found in "Third Street, being the next door but one above Mr. Joseph Fox's." But the worthy musician has two strings to his bow, for he lets it be known that he also draws bills, bonds, leases, etc., at the house next door to the Horse and Groom, in Strawberry Alley. In 1759, Francis Alberti advertised that he taught the violin "in the best manner and neatest style according to the new Italian method. By the subscriber, an Italian born." In 1764, John Schneider, a German, offered to "teach gentlemen to play on the French horn." A concert of musical glasses, in 1765, was a great success. The singers of Hallam and Douglass' company, Mr. Wools, Miss Wainwright, Miss Hallam, Mr. Wall, Miss Cheer, and others, occasionally gave concerts. They contributed not a little to increase the taste for music. The mandolin was the favorite instrument then, and Mr. Wall, of the theatre company, gave special lessons on this instrument.

Signor Gualda, in 1770, gave a "concert of vocal and instrumental music, solos, and concertos on various instruments, the favorite mandolin not excepted."

The organ was introduced at the College and Academy a few years after it was built. Philip Fyring manufactured organs for Christ Church and other churches as early as 1762.

While on the theme of music, we will note that the first piano, in all probability, that was built in this country, was made by John Behrent, in Third Street (opposite Coates' burying-ground, below Brown Street). He advertised in 1775 that he had "just finished an extraordinary instrument by the name of the piano-forte, made of mahogany, being of the nature of a harpsichord, with hammers and several changes."

Duels, so frequent in England at that time, were of very rare occurrence in Philadelphia, yet a few did take place. In 1721, Solomon Fry, mariner, and Francis Jones fought with swords, and both were wounded. In 1750, Thomas Crosse and Hugh Davy fought also with swords, and Davy was wounded. It is not surprising, therefore, that some attention should have been given to the art of fencing. All gentlemen who desired to be known as fashionable and polite members of society learned the use of the sword. Fencing-masters, therefore, found occupation in Philadelphia as well as dancing-masters, although they were not at first received with favor, as we have shown in the history of the first part of the eighteenth century. They were tolerated, however, even then, and at a later day met with no opposition. In 1756, Richard Lyneall, professor of the small-sword and self-defense, notified the public that he was to be seen at the Tun Tavern, in Walnut Street. In 1763, John De Florette, fencing-master at the Prince of Orange, in

Second Street, notified the public that he taught the broadsword, backsword, spaderoon, and dagger. But this worthy Frenchman, not content with enumerating the weapons in the use of which he was skilled, added some advice to the young Philadelphians on the importance of a knowledge of fencing. "Young men without it have to put up with insults of the grossest nature, and much to their dishonor, whereas, were they masters of self-defense, they would be able to resent it in a genteel manner."

The gentlemen's costume suffered a few alterations, and those for the better. The coat—no longer of velvet, silk, or satin, except for full-dress, but of strong cloth—was square cut, with some simple trimming and black lining; the long-flapped waistcoat descending very low, and the stockings drawn very high over the knee; large hanging cuffs to the coat-sleeves, and lace ruffles. The skirts of the coat much less distended with wire; stockings of blue or scarlet silk; square-toed, short-quartered shoes, with high red heels and small buckles. All wore wigs, but of smaller size than before. The small three-cornered hat was laced with gold or silver galloon, and sometimes trimmed with feathers.

Old advertisements will again assist us. Here is one relative to wigs:

In 1760, Charles Eustace, peruke-maker, Walnut Street, between Front and Second, advertised that "gentlemen may be completely furnished with bag wigs of the neatest fashion, or of whatsoever fashion they choose; also scratch wigs and scratch bob wigs, cut wigs and long gristle-dress wigs, and all others, as gentlemen may choose."

Another, dated 1759, gives an idea of the uniforms of the Pennsylvania troops; it refers to deserters from various commands. Deserters from Col. John Armstrong's battalion, First Pennsylvania Regiment, were described as having worn green regimental coats, faced with red, red waistcoats, and buckskin breeches. Capt. John Singleton's company of the Pennsylvania new levies had green regimentals; while Capt. James Armstrong's company, Pennsylvania Regiment of Foot, were advertised as wearing blue regimentals.

In 1752 there appeared the advertisement of the first undertaker, James Humphries, in Second Street, one door below the Baptist Church. He also announced that he had got a variety of mourning. In 1753 a rival establishment was started by John Nice, opposite the Baptist Church. A new business in connection with funerals was inaugurated in 1766; Lydia Darragh, opposite the Golden Fleece, in Second Street, advertised that she was prepared "to lay out the dead,—a service greatly wanted, as she understands."

Very few Philadelphians kept a carriage in the olden time, and even hired vehicles were scarce; traveling was done principally on horseback. Mr. Watson, in his "Annals," mentions—besides William Penn's "coach" and "calash," alluded to in the latter's letters to Logan—some of the oldest of these vehicles. He says that in 1761 there were only thirty-eight private carriages in Philadelphia; William Allen, the chief justice, the Widow Lawrence, and Widow Martin were the only owners of coaches. William Peters and Thomas Willing owned the only two landaus. There were eighteen chariots enumerated, of which the proprietor and the Governor had each of them one. Fifteen chairs concluded the enumeration. He says that according to the recollections of James Reed, who died in 1793, at an advanced age, there were only eight four-wheeled carriages kept in all the province; they were: coaches, the Governor's (Gordon), Jonathan Dickinson's, Issac Norris', Andrew Hamilton's, Anthony Palmer's; four-wheeled chairs, drawn by two horses, James Logan's (Stenton), David Lloyd's (Chester), Lawrence Growden's (Bucks). Mrs. Shoemaker (aged ninety-five) told Mr. Watson that pleasure-carriages were very rare in her youth. She remembered that her grandfather had one, and that he used to say he was almost ashamed to appear abroad in it, although it was only a one-horse chair, lest he should be thought effeminate and proud. She remembered old Richard Wistar had one also. When she was about twenty, Charles Willing, merchant, brought a calash coach with him from England. This and Judge William Allen's were the only ones she had ever seen.

In the manuscript of Du Simitiere he has preserved an enumeration of the persons, eighty-four in number, who kept carriages in Philadelphia in 1772. Four or five of these persons owned two carriages.[1] In the

---

[1] The *American Historical Record*, vol. ii., 1873, publishes this list of carriage-owners, furnished by a New Jersey correspondent. We quote what follows, from the introductory remarks: "This list, like the famous Roll of Battle Abbey, has been tampered with, the name of 'Tench Francis' being inserted in a different hand and darker ink than that of the original transcriber, and a strange hand in lead pencil has written opposite this name, 'added by J. F. F.' Watson gives 'eighty-four,' meaning the number of names, as we have shown above, and his manuscript Annals were finished in 1842. As 'Tench Francis' makes eighty-*five*, it will be seen that it was inserted since that date. It was noticeable he is set down for a 'coach' and one 'chariot, or post wagon.' A 'coach' was a special distinction in those days; the list mentions eight only out of the eighty-four owners of other vehicles, and could hardly have been overlooked by the observant Du Simitiere."

We condense the list, which is in tabular form in the *Record*. Richard Penn, Governor, all sorts; James Hamilton, one chariot; William Allen, chief justice, one coach and one chariot; Dr. Graeme, one chariot; John Dickinson, lawyer, one chariot; Benjamin Chew, recorder of Philadelphia, lawyer, one coach, one chariot; Joseph Galloway, Speaker of the Assembly, lawyer, one chariot; John Ross, lawyer, one chariot; Joseph Reed, lawyer, one chariot; Thomas Willing, merchant, one coach; John Lawrence; Thomas Lawrence, city vendue master; Edward Shippen, Jr., Lynford Lardner, uncle to the Governor; Richard Peters, D D., rector of Christ Church, Philadelphia; Robert Morris, merchant; Archd. McCall, merchant; Samuel Neave, merchant; William West, merchant; Capt. Isaac Cox, merchant; William Moore, merchant; Capt. Samuel Mifflin, merchant; Daniel Rundle, merchant; David Franks, merchant,—each one chariot; Daniel Benezet, Samuel Smith, Samuel Purviance, Henry Kepple, merchant,—each one coach-wagon; Henry Kepple, Jr., one chariot; James Craig, merchant and ship-chandler; Andrew Hodge, merchant and ship bread-baker,—each one coach-wagon; John Cadwalader, all sorts; William Straker, merchant; Capt. Williams, of the Engineers; Reynold Keen, Andrew Duche,

year 1794 the number of pleasure-carriages taxed was 847, to wit: 83 coaches, 157 coachees, 35 chariots, 22 phaetons, 80 light wagons, and 520 chairs and sulkies.

The carriage used by Gen. Washington while President, and which had been imported for Governor Richard Penn, was the most splendid ever seen in the city. It was very large and heavy, and was drawn by four horses. A correspondent of Mr. Watson gives some facts about this vehicle, as seen by him in his youth, and, later, when it was a desecrated and forgotten relic of the past: "It was of cream color, with much more of gilded carvings in the frame than is since used. Its strongest attractions were the relief ornaments on the panels, they being painted medallion pictures of playing cupids or naked children. That carriage I afterward saw in 1804–5 in my store-yard at New Orleans, where it lay an outcast in the weather, the result of a bad speculation in a certain Doctor Young, who had bought it at public sale, took it out to New Orleans for sale, and could find no one to buy it, where all were content with plain volantes. A far better speculation would have been to have taken it to the Marquis of Lansdown or other admirers of Washington in England." "It became in time," adds Mr. Watson, in a foot-note, "a kind of out-house, in which fowls roosted; and in the great battle of New Orleans it stood between the combatants, and was greatly shot-ridden. Its gooseneck crane has been laid aside for me."

Old advertisements will give us some information about vehicles for hire. In 1728, Thomas Skelton advertises in the *Gazette* that he has got "a four-wheeled chaise, on Chestnut Street, to be hired." He affixes prices, to wit: "For four persons to Germantown, 12 shillings and 6 pence; to Frankford, 10 shillings; and to Gray's Ferry, 7 shillings and 6 pence to 10 shillings."

In 1746, Abram Carpenter, a cooper, in Dock Street, near the Golden Fleece, calls in the assistance of his muse to tempt his customers with the following announcement:

"Two handsome chairs,
With very good geers,
With horses, or without,
To carry friends about.

"Likewise, saddle-horses, if gentlemen please,
To carry them handsomely, much at their ease,
Is to be hired by Abram Carpenter, cooper,
Well known as a very good cask-cooper."

Robert Robson, in 1759, advertised that he had "removed from Coombs' Alley to the sign of the Horse and Groom, at the corner of the fourteen houses in Fifth Street, above Sassafras, where gentlemen may be supplied with horses and chairs by the day or journey, and horses taken in to be kept by the night, day, or year. Said Robson will ride express for any who are pleased to employ him, who may depend on what they trust to his care. N.B.—Good pasturing." [1]

The fact of there being but little demand for carriages did not deter an adventurous coach- and harness-maker from London and Bristol, named William Welsh, from trying his fortunes in Philadelphia. He advertised, in 1759, that he had set up the coach-making business in Market Street, and proceeded to dazzle the minds of the simple citizens by informing them that he had "the honor of being coachmaker to his royal Highness the Duke of Cumberland, her royal Highness the Princess Amelia, and the Prince of Hesse-Cassel, with dukes and lords of the first rank, together with the right worshipful John Clement, Lord Mayor of London and City Corporation, in building the state coach, which had cost fifteen hundred pounds sterling, and which had given great satisfaction."

History does not say that the good Philadelphians were induced to vie with those illustrious personages in the gorgeousness of their equipage, but the observant Mr. Watson informs us that "merchants and professional gentlemen were quite content to keep a one-horse chair. These had none of the present trappings of silver-plate, nor were the chair-bodies varnished; plain paint alone adorned them, and brass rings and buckles were all the ornaments found on the harness; the chairs were without springs, on leather bands, such as could now (1842) be made for fifty dollars." The ex-coachmaker to many Highnesses must have been highly disgusted with his American customers when he found them so easily contented.

Before we close our record of events in "Penn's City" and pass to the more exciting scenes of the Revolutionary period, mention should be made of certain houses erected during the third quarter of the century, and to which is attached some historic interest owing to the part taken in the Revolution

Sam. Powel, Dr. Thomas Bond, Dr. Phineas Bond, Dr. John Redman,—each one chariot; Capt. Edward Stiles; Widow Masters, mother to the Governor's lady,—each one coach; "added by J. F. F.," Tench Francis, merchant, one coach and one chariot; Joseph Sims, merchant, one coach-wagon; Widow Harrison, Widow Montgomery, Peggy Oswald,—each one chariot. September, carriages making for the following: Steinmetz, Morton,—each one chariot; Peter Turner, Daniel Benezet, William Logan, James Logan, Israel Pemberton,—each one chariot; James Pemberton, merchant, one coach-wagon and one chariot; John Pemberton, preacher, one chariot; Joseph Pemberton, merchant, one coach; Dr. Samuel Preston Moore and Henry Hill, Madeira merchant,—each one chariot; Joseph Fox; Hugh Roberts, iron-monger; Samuel Shoemaker, merchant; Joshua Howell, merchant; Reese Meredith, merchant; Abel James, merchant; Henry Drinker, Thomas Clifford, John Reynell, merchants,—each one coach-wagon; Joseph Wharton, commonly called Duke Wharton, one coach-wagon and one chariot; Thomas Wharton, Joseph Wharton, Jr., and Jacob Lewis, merchants; Samuel Morris; Richard Wistar, glass and button-maker; Samuel Emlen, Jr., preacher; James Bringhurst, carpenter; Samuel Noble, John Mifflin, Anthony Morris, Joshua Fisher, Widow Greenleaf,—each one coach-wagon; George Emlen, Jr., merchant; and Elizabeth Norris,—each one chariot. ("Chariots" or "post-chaises" are the same vehicle.)

[1] "The fourteen houses," usually called "the fourteen chimneys," stood west of Fifth Street, above Race, and had their fronts on Sassafras Alley. These houses, when first erected, were out of town,—a settlement by themselves. There was no obstruction between them and Fifth Street, and as a landmark they were well known.

either by the men who built them, or by those who afterward lived in them.

At the northeast corner of Third and Pine Streets stood a large house of peculiar aspect, erected by Anthony Duché. It was three stories high, with a roof addition, somewhat like a modern mansard, decorated with urns and a railing; it had a centre building and two small wings with gables in front. A central dormer-window, decorated with scrolls, assimilated with the gables on either side. This house was occupied as a military hospital when the British troops came to Philadelphia after Braddock's defeat. Mr. Duché gave this house to his son, Rev. Jacob Duché, after the latter was made rector of Christ Church and St. Peter's. It afterward became the property of Chief Justice McKean.

The fine house built by William Masters, some time before 1761, on the south side of Market Street, between Fifth and Sixth, was destined to acquire historic fame as the residence of George Washington while he was President of the United States. From that time it was designated as "The Washington Mansion." This property was conveyed by William Masters' widow to her daughter Mary, on the occasion of her marriage with Richard Penn. The young couple lived in it until their departure for Europe, in 1775. When the British troops entered Philadelphia, Gen. Howe took possession of Richard Penn's mansion. He made it his headquarters until the evacuation in 1778. Benedict Arnold coming to take command of Philadelphia as military governor, took possession of the premises just vacated by Howe. He occupied them until July, 1780, when he left the city. The Sieur John Holker, consul-general of France, was the next occupant. The mansion was burned down in 1780, but the stout old walls remained standing. Robert Morris then obtained a lease of the grounds, and caused the house to be rebuilt and repaired. He occupied it until the removal of the seat of the Federal government from New York to Philadelphia. Mr. Morris then gave up the use of the mansion to President Washington. The mansion was occupied by Mr. Adams when he became President. It was subsequently turned into a hotel, and, finally, was torn down and three stores erected on the site.

Richard Rush, in his "Reminiscences," gives his boyhood recollection of the mansion, as he saw it between 1790 and 1800, in these words, "It was a large double house; few, if any, equal to it are at present in Philadelphia. The brick of the house was, even in my time, dark with age; and two ancient lamp-posts, furnished with large lamps, which stood in front, marked it, in conjunction with the whole external aspect, as the abode of opulence and respectability before he became its august tenant. No market-house then stood on the street. To the east a brick wall, six or seven feet high, ran well on toward Fifth Street, until it met other houses (the first house, believed to be now 514 and 516, also owned by Robert Morris, as I find, was occupied by Gen. Stewart); the wall inclosed a garden, which was shaded by lofty old trees, and ran back to what is now Minor Street, where the stables stood. To the west no building adjoined it, the nearest house in that direction being at the corner of Sixth and Market, where lived Robert Morris."

On Third Street, between Willing's Alley and Spruce Street, were two houses built by Thomas Willing. One of these houses was occupied by his son-in-law, Col. William Byrd, of Westover, Va. In 1758, of the two Virginia regiments in the British service, one was commanded by Col. Byrd, the other by Col. Washington, of Mount Vernon. This house subsequently belonged to Andrew Allen and Chief Justice Chew. John Adams, describing the house which he visited in the chief justice's time, said, "We were shown into a grand entry and staircase, and into an elegant and most magnificent chamber, until dinner."

The other house which Mr. Willing erected for his daughter Elizabeth, wife of Samuel Powell, Mr. Adams speaks of as "a splendid seat."

Benjamin Franklin, before he went to Europe in 1764, built a house on his lot on Market Street between Third and Fourth. It is the house Mrs. Franklin had just moved into when she wrote to her husband the letter already quoted, about furnishing the "new house." About 1785, when he was elected President of Pennsylvania, Franklin erected a new wing to his house, which was three stories high. The first story was a large apartment designed for the meetings of the Philosophical Society. His library was in the second story, and the third story was occupied as lodging-rooms. Franklin thought that he had effected some improvements. He said,—

"None of the woodwork of one room communicates with the woodwork of any other room, and all the floors and even the steps of the stairs are plastered close to the boards, besides the plastering on the laths under the joists. There are also trap-doors to go out upon the roof, so that one may go out and wet the shingles in case of a neighboring fire. But, indeed, I think the staircases should be stone and the floors tiled, as in Paris, and the roofs either tiled or slated."

In 1765 Edward Penington erected a handsome house, built of red and black bricks, the prevailing taste at the time, on a large lot which he owned at the corner of Crown and Race Streets. The house with its stables and extensive back buildings occupied the ground to Fifth Street. During the Revolution this house became the headquarters of Lieut.-Col. Henry Johnson, of the Twenty-eighth Regiment, British Regulars, afterward brigadier-general, who was defeated by Wayne at Stony Point.

A very fine stately dwelling was erected in 1773, by John Lawrence, on the northeast corner of Sixth and Chestnut Streets, which was subsequently occupied first by Hon. Robert R. Livingston, and last by Peter S. Du Ponceau.

John Cadwalader's house on the west side of Second Street, below Spruce, was one of the largest dwelling-

houses in the city. It had extensive grounds and gardens extending to Third Street. Graydon relates that in the early part of the Revolution the "Silk Stocking Company," so called, commanded by John Cadwalader, being about seventy strong, rendezvoused at his house, "where capacious demijohns of Madeira were constantly set out in the yard, where we formed for our refreshment before marching out to exercise. The ample fortune of Mr. Cadwalader had enabled him to fill his cellars with the choicest liquors; and it must be admitted that he dealt them out with the most gentlemanly liberality."

John Cadwalader was immensely wealthy, and kept a very large establishment. He was the only man in Philadelphia, in 1772, besides the Governor, Richard Penn, who kept "all sorts" of carriages.

Archibald McCall, probably about 1762–63, when he married Judith Kemble, built a fine house at the northeast corner of Second and Union Streets. He was the leading East India merchant of his day, and a citizen of great influence.

In 1761, John Stamper, an English merchant, purchased from the proprietaries, Thomas and Richard Penn, the whole front on Pine Street, from Second to Third, being four hundred and sixty feet in width by one hundred and two feet in depth, for and in consideration of eleven hundred pounds sterling, and a yearly quit-rent of five shillings. Mr. Stamper was a member of the Common Council and an alderman, and in 1750 mayor of the city. He resided on Second Street. He bought forty feet of ground south of the original grant from the Penns. This made his lot one hundred and forty-two feet deep, to an alley which was called after him, Stamper's Alley. On this large piece of ground he commenced making various improvements. On the Pine Street lot he erected, some time before the Revolution, a fine three-story brick house, which was formerly No. 50, and which, in 1884, was No. 224. It was distinguished by its red- and blue-glazed brick, its ancient columnar doorway, and its low steps. The cornice and dormer-windows were fine specimens of old-fashioned woodwork. The interior of the house was finished, according to the taste of the ante-Revolutionary times, with elaborate paneling, wainscoting, surbases, heavy doors, etc., which still remain. The stable and coach-house in Stamper's Alley are also still standing.

At the southeast corner of Pine and Third Streets he built a castellated mansion for his son, Joseph Stamper, on the occasion of the latter's marriage with Miss Sarah Maddox, granddaughter of Joshua Maddox, one of the justices of the province. This property was subsequently bought by Dr. Philip Sing Physick, who erected a row of houses on the site.

John Stamper had two daughters; one of these, Mary Stamper, married William Bingham, and was the mother of William Bingham, Jr., afterward senator of the United States. The other daughter, Hannah Stamper, married the Rev. Robert Blackwell. The mansion on Pine Street, first described, passed into their possession and became their residence. Dr. Blackwell, on the occasion of the marriage of his only daughter, Rebecca Harrison Blackwell, with George Willing, built for her, on the west end of this lot, a fine house, which, in 1884, was No. 238 Pine Street. This house was one of the handsomest in the then new style, with chimneys against the sides, and folding doors between the parlors. In 1773, Dr. Blackwell built another house, corner of Pine and Second Streets. In this house, at the time of the Revolution, boarded Elias Boudinot, LL.D., who was a member of Congress, and at one time presided over that body. He was also commissary-general of prisoners during the Revolutionary war, and director of the mint under President Washington. His generous bequest of lands bordering on the Susquehanna River to the city of Philadelphia, in trust for the purpose of supplying poor housekeepers with fuel, has placed his name among those of public benefactors never to be forgotten.

The house erected by William Logan, the son of James Logan, at the northwest corner of Second Street and Lodge Alley (now Gothic Street), some time between 1750 and 1760, had interesting recollections attached to it. At William Logan's death, in 1772, he devised this property to his son Charles Logan.[1] It was to this house that John Smith, when he married William Logan's sister, Hannah, took his bride during the honeymoon. It was here, also, that David Franks, merchant,—a wealthy Hebrew converted to Christianity,—lived during the Revolution with his daughter, Polly, a famous beauty and wit.[2] In this house, it is said, Dr. James Rush was born in March, 1786.

North of William Logan's house, and separated from it by a garden (long since obliterated and built upon), was a spacious mansion built in the best style by James Pemberton, merchant, the brother of Israel Pemberton. It was built some time before the Revolution. Mr. Pemberton lived in it until his death. For many years the Lehigh Coal and Navigation Company have occupied this house as an office.

Many old houses remain, whose appearance pro-

[1] Charles Logan, by deed executed in 1790, conveyed the house to James Smith. After James Logan, the younger, sold the old homestead to the Bank of Pennsylvania, he removed to the house formerly his brother's, which he bought of Smith in 1798. It was conveyed by James Logan to Joshua Fisher in 1805. The executors of the latter, after his death, sold this house to William Lehman, William Smith, and Samuel Smith, copartners as druggists, who changed it into a store. It was occupied for that purpose for many years by Lehman & Smiths, William Lehman, A. S. & E. Roberts, and others. The house is still standing, so changed by business alterations and abused by the progress of time that few will suppose, from its present appearance, that it ever could have been the abode of wealth, taste, and influence.—*Westcott's History of Philadelphia.*

[2] Another daughter married one of the Hamiltons of The Woodlands. Franks was commissary of British prisoners during the early part of the Revolutionary war, but was suspected of secretly leaning to the British cause, was deprived of his office in 1778, and was ordered, in 1780, to depart from the State.—*Ibid.*

claims them of ante-Revolution construction. Some have their story well known by the descendants of the old Philadelphians. Others are a puzzle; their former tenants have passed away from the earth, and their very origin is a mystery.

About 1767 it was the fashion for ladies to wear their hair hanging loose about the head, and especially over the forehead, much in the hideous style which has prevailed since a few years past under the name of "bangs." This fashion was the occasion of an epigrammatic quarrel in the columns of a New York paper. A cynical bachelor made bold to write as follows:

"TO THE LADIES ON THE PRESENT FASHION OF NOT DRESSING THEIR HEADS:

"With hair so long, so lank, so sleek,
Which not a comb composes,
Why do you hide your brow and cheek
And hardly spare your noses?
Say, ye, in whom each worth appears
Adorned by all the graces,
What makes you thus, my pretty dears,
Ashamed to show your faces?"

"A Miss" promptly answered in the next issue of the paper,—

"Presumptuous man, to slander prone!
Whose verse thy name disgraces;
What Demon whispered we were grown
Ashamed to show our Faces?
In perfect pity to mankind
We veiled us for a season;
Unmask, my Girls! he'll quickly find
That *Pity* was the Reason."

"A Boy" (he must have been an old one) dared to reply to the Miss,—

"The veteran Hunks all covered with scars,
Long battered and wounded in Venus' wars,
When her charms proved deficient to win her a lover,
Her—conscience—then bids the good dame to give over,
So our Chloes, with foreheads too low or too high,
Or covered with Wrinkles that tell something nigh,
Well knowing the consequence if they reveal them,
The good-natured Creatures,—in Pity conceal them."

The "Boy" had the last word, but the ladies continued to consult their own taste or convenience, in New York as well as in Philadelphia. No argument could avail with the goddess Fashion.

The practice of importing "indented servants" continued in force, and although we find in the newspapers of the time (1768–69) communications attacking and defending the enslaving of negroes, there seems to have been no objection to reducing white men to temporary slavery. Such advertisements as the following were not uncommon: "Just imported in the Brigantine . . . from Bristol a parcel of healthy, likely men and women, indented servants, among which are Blacksmiths, Cutlers, House-carpenters, Painters and Glaziers, Bakers, Turners, Husbandmen, and Labourers." This was no longer the scum of the streets and jails of London shipped to America by the authorities as a safe means of riddance. Here we have honest artisans selling themselves voluntarily into servitude in order to get to the new land of promise. What a sad comment on the condition of the working-classes in England! These poor fellows could be transferred by one master to another, and sold like common goods or chattel, until the term of their indentures had expired. But there were cases when the master, not the servant, deserved sympathy. The thieves and rascals of every grade, who came over under compulsion, or animated by the hope that they would find in Philadelphia a new field for their nefarious practices, gave no end of trouble to the unfortunate citizen who had invested his money in them; they were continually running away, and they generally carried off all they could lay their hands on. One fellow is advertised as runaway for the seventeenth time. A remarkable fact is that the negro slaves did not run away. Another, resulting from the perusal of hundreds of advertisements, is that *nine-tenths* of the runaway servants are described as being disfigured by the smallpox, which gives a faint idea of the ravages made by that dread disease before Jenner discovered vaccination.

All runaways were not criminals, however; some, probably, found servitude more irksome and unbearable than they had imagined, and impelled by a mad desire for liberty, made their escape and became liable to punishment for breaking their indentures. Of this class, we will charitably suppose, was the unfortunate "schoolmaster" (?), William Fetherson by name, who ran away from some place in Maryland, and was believed to have gone to Philadelphia. The description of this "schoolmaster abroad" is a picture in itself. He had on an old blue broadcloth coat and vest with yellow buttons, leather breeches, half-worn, with several patches above the knees, a white sheeting-linen shirt, and an old black silk handkerchief round his neck, yarn stockings, stout leather shoes, a half-worn castor hat, and a great-coat scorched on the left side, with a slit on the right foreskirt.

Advertising in verse was frequent at that time, and we cannot resist the temptation of giving here one of these quaint conceits. It appeared in the *Pennsylvania Chronicle*, and is somewhat prolix in style:

"THREE POUNDS REWARD.

"In Seventeen Hundred and Sixty-eight,
Of a runaway servant I'll relate;
In the Eighth month the twenty-first,
Which is commonly called August.
He from his master ran away,
It being on a Sabbath-day;
Some particulars I will relate:
The first his hair is dark and strait,
His eyes and visage both are dark,
And the smallpox hath left his mark;
He has a hobble in his walk,
And a mutter in his talk;
His age I don't hardly know,
But I believe near thirty-two;
An Englishman both born and bred,
And a barber is by trade;

William Tyler was his name,
But I have heard he changed the same;
About five feet six inches high,
And very apt to swear and lie.
He has been much used to the sea,
And had a shot went thro' one knee,
Which makes that leg less than the t'other;
By his account when got that scar,
He was on board a man-of-war;
In divers places he has been,
And great part of the world hath seen;
A scholar good, and for his clothes
They homespun are, as I suppose;
An old felt hat and bearskin vest,
With a striped ditto, when he's drest,
And good strong shoes, with strings to tie,
Which he is apt to tread awry;
He takes tobacco and strong drink,
When he can get 'em, I do think.
Whoever secures said servant-man,
And sends him home soon as they can,
Shall receive the above reward,
Which I will pay upon my word,
With charges all that may accrue,
Which shall be paid as soon as due;
In Bradford township where I dwell,
And so my name I think to tell,
Therefore in print I'll let it stand,
Which you may see at your right hand.
"JOHN TOWNSEND."

Old advertisements are sometimes very amusing, but they are oftener positively useful as furnishing the most certain data about events. They are more precise even than personal recollections. Mr. Watson, in his "Annals of Philadelphia," speaks of Dr. Le Mayeur, dentist, who proposed, in 1784, to transplant teeth, and remarks, "This was quite a novelty in Philadelphia, the present care of the teeth was ill understood then. He had, however, great success in Philadelphia, and went off with a great deal of our patricians' money. Several respectable ladies had them implanted. I remember some curious anecdotes of some cases. One of the Meschianza belles had such teeth. They were, in some cases, two months before they could eat with them. . . . Dr. Baker, who preceded Le Mayeur, was the first person ever known as a dentist in Philadelphia." We cannot say how long before Le Mayeur Dr. Baker practiced, but inserting false teeth could not have been so great a novelty in 1784, since, in 1769, "Mr. Hamilton, surgeon-dentist and operator for the teeth from London," announced that he "displaces all superfluous teeth and stumps with the greatest ease and safety, and makes and sets in artificial teeth from one single tooth to a whole set, in so nice a manner that they cannot be distinguished from natural; therefore, those ladies and gentlemen who have had the misfortune of losing their teeth, have now an opportunity of having *natural* or artificial put in with dispatch and secrecy, and in such a manner as to be of real use, ornament, and service for many years, without giving the least pain to the patient."

In 1768-69 several firms advertise tooth-brushes and complete sets of instruments for cleaning the teeth. In fact articles for the toilet for both sexes, fancy articles, carved ivories, and all those expensive trifles invented by the ingenuity of the London and Paris artisans to tempt the wealthy, could be found in as great variety then as they may be now in our most fashionable stores. As much may be said of dress-goods of every kind. A few of the goods with strange, puzzling names still remained on the list, but we feel more at home when we read of the Mechlin and Brussels laces, gauzes, cambrics, lawns, mulmuls, jaconets, scarfs, trimmings, fringes, gimps, ribbons, and the usual variety of fans, gloves, and mitts for sale by the leading "milliners" of that time, Mrs. Symonds, in Chestnut Street, and Mrs. Ann Pearson, in Second Street. We learn from the advertisements of those ladies that ladies' satin riding-hats, with feathers or gold and silver bands and buttons, were fashionable; also stomachers, with Italian and French breast-flowers. We glean the information that the ladies wore rich shades or cloaks of all colors, stuff shoes, and toed and silk-tied clogs for wet weather, and we make the astounding discovery that the "chip" hats and bonnets of our day were worn on the streets of Philadelphia in 1768. Gentlemen could buy at the milliner's silk gloves, velvet morning-caps, and silk and satin bags for their "queues."

Louis Duchateau, the French peruke-maker and hair-cutter, at Mr. Lortie's, in Third Street, informs the ladies that "he makes different sorts of handsome *frizets*, which imitate nature and may be set on with very little trouble;" while Mrs. Holliday, wife of Joseph Holliday, "Taylor, from London," in Arch Street, offers them her "new-invented curious compound, which will, in half a minute, take out by the roots the hair which grows too low on the forehead, etc., or round the mouth; it forms the eyebrows that are too large into a curious arch." This compound is perfectly "innocent," and "may be used on children under twenty months old."

Broadcloths were to be had in such variety of colors as to please the most fastidious taste,—scarlet, crimson, blue, green, drab, black, white, buff, brown, light colored, and rose colored. Francis Hopkinson, on Walnut Street, kept a fine stock of them and of *cassimeres*, "a new-invented manufacture for summer." Roger Bowman, on Second Street, had a fine assortment of these cloths. He also sold books. Very few merchants could confine themselves to one specialty. Thus, one would see, in the same store, dolls, cutlery, gunpowder and snuff, looking-glasses and gloves, sugars, claret, and brocaded silks. The merchant dealt especially in one leading article, and this designated his business; thus, a dry-goods merchant might have for sale a consignment of wines, and a hardware merchant one of laces and ribbons. The millinery and retail dry-goods stores where the ladies dealt had less of this general assortment system, yet there was scarcely a store in another line that did not have dry-goods of some kind for sale. For their silks

and velvets, their hats and cloaks and fans, they went to one or two well-known establishments; but for cottons and calicoes, which were getting to be quite common, and for chintz, they could go into almost any retail store.[1]

When their dresses got soiled or faded, and economy forbade buying another, Mathews & Perrin, the London dyers and scourers, "cleaned, dyed, and dressed all manner of silks and velvets," they scoured rich brocades and beautified the colors to look as well as new. They also cleaned and dyed scarlet cloaks and "all manner of men's cloaths."

There were several bookstores with shelves well filled with the works of the best authors. John Sparhawk & Thomas Anderson, who kept the London Bookstore, on Market Street, near the London Coffee-House, had a very large stock of books, besides fancy stationery and mathematical instruments; so had Samuel Taylor, the stationer and bookbinder, at the corner of Market and Water Streets, but many people preferred going to Robert Bell, bookseller and auctioneer, at the sign of the Sugar Loaf, Market Street near the river, for at his vendue "the intrinsic merit and excellence of each book" was "rationally expatiated upon with truth and propriety; also, the extrinsic or original value properly demonstrated for the satisfaction of seller and buyer."

Here are the prices of a few books sold by Bell: "History of Rasselas," 2 vols. complete in one, bound and lettered, six shillings; the same in blue paper, four shillings. "The Traveller," to which are added "True Beauty" and the "Adventures of Tom Dreadnought," one shilling. The additional volume to the "Letters of the Right Honorable Lady Mary Wortley Montagu," with several poems, and her celebrated "Defence of Marriage," and a frontispiece of the "Female Traveller," in the Turkish dress, two shillings.

Theodore Memminger, Second Street above Arch, kept a variety of musical instruments for sale. So did John Gualdo, in Front Street, near the Bank meeting-house. He had violins, German flutes, guitars, mandolins, spinets, clavichords, etc. He had, besides, in his house, a German gentleman who taught to play on the violin, violoncello, and French horn, and, "likewise, a servant boy who copied music, so that the customer who wished a particular piece could have a copy made, without being compelled to buy the book in which it occurred." It seems that sheet music was not sold then.

There were two dancing-masters, the Italian Tioli, and the Frenchman Foy. Both were also fencing-masters, and taught the use of the small-sword. A drawing-school, recently opened by J. Smithers, several grammar-schools, and a boarding-school, in Second Street, a little below Walnut Street, kept by Mrs. Sarah Wilson, "where young ladies may be educated in a genteel manner, and pains taken to teach them in regard to their behavior, on reasonable terms. They may be taught all sorts of fine work, viz., working on catgut or flowering muslin, sattin stitch, queen stitch, ten stitch, cross-stitch, open work, crowning, embroidering curtains or chairs, writing, and cyphering. Likewise wax work in all its several branches, never, as yet, particularly taught here; also how to take profiles in wax, and to make wax flowers and fruit, and pin-baskets." Indeed, if some

[1] Here is a list, as complete as it could be compiled, of the firms doing business in Philadelphia on the 1st of January, 1770. Dry goods, etc.,—Philip Benezet, corner of Market and Third Streets; Roger Bowman, Second Street; Francis Hopkinson, Walnut Street, between Fourth and Fifth Streets; Westmore & Batchelor, Second Street, above Market; John Kaighn, same block; Alexander Bartram, sign of the naked boy (specialty, hosiery and broadcloths); Joseph Carson, Second Street; Daniel and John Benezet, and Thomas Bartow, corner of Arch and Second Streets; Williams & Eldridge, Front Street; Cadwallader and Samuel C. Morris (also large stock of jewelry), Chestnut Street; Peter Wikoff, Front Street; John Fullerton, Chestnut Street; William Bell, corner Chestnut and Second Streets; David Sproat & Co., Front Street; William Adcock, Second Street; Semple & Buchanan, Front Street; Samuel Smith, Water Street, above Arch; James Rose, Second Street; Lewis Nicola, Market Street. East India goods, etc.,—James Budden, Front Street; Samuel Pleasants, Water Street; John Willday, Second Street; Abraham Usher, Front Street; Gibson & Asheton, Market Street; Benjamin Rawle, Water Street; Stacy Hepburn, Water Street; Joseph and George A. Morris; Stephen Collins, Second Street; James Gordon, Third Street; David Deshler, Market Street; Robert Strettel Jones, Arch Street; John and Clement Biddle, Market Street; Randle Mitchell, Water Street; Williams & Taylor, Second Street; Curtis Clay, Water Street; Mifflin & Dean, Front Street. Groceries, etc.,—Neave & Harman, Second Street; Charles Wharton, near Drawbridge; Isaac Gray, Chestnut Street; William Richards, Water Street; Samuel Garrigues, corner Second and Walnut Streets; Robert Levers, Chestnut Street; Benjamin Gibbs, Front Street; Hubley & Graff, Front Street; Henry Barnhold, Second Street; Benedict Dorsey, Third Street; Baldwin & Gilbert, Front Street; John Roman, Market Street. Drugs, etc.,—Christophers & Charles Marshall, Chestnut Street; Robert Bass, Market Street; Richard Tidmarsh, Second Street; Nathaniel and John Tweedy, Market Street; Samuel Duffield, Second Street; John Day, Second Street; Duffield & Delaney, corner Second and Walnut Streets. Hardware, chinaware, etc.,—Benjamin Davis, Third Street; Kearney & Gilbert, Water Street; John and Peter Chevalier, Water Street; Jonathan Zane, Second Street; James Cooke, Race Street; Samuel Sansom, Jr., Front Street; Howard & Bartram, Front Street; Timothy Barret, Arch Street. Hay, seeds, etc.,—Daniel Grant and William Ball, both on Market Street; John Lownes, Third Street. Sugars and molasses,—Edward Pennington, Market Street; Thomas West, Market Street; John W. Hoffman, Second Street; Josiah Hewes, Chestnut Street; Samuel & Charles Massey, Water Street; Harris Drayton, Water Street. Wines, etc.,—Hollingsworth & Rudolph, below the Drawbridge; James Emerson, Market Street; William Forbes, Water Street. Boulting cloth,—Robert & Nathaniel Lewis, near the Drawbridge; Daniel Williams, Chestnut Street. Brewery,—Anthony Morris, Jr. Bottled beer, etc.,—Timothy Marlack, Fourth Street. Ship chandlers,—Thomas Clifford & Son. Mast-maker,—Jonathan Hanson, near Penrose's wharf. Sail-maker,—J. W. Annis, Joshua Fisher's wharf. Sickles and scythes,—W. Dawson, Market Street; James Hendricks, Market Street. Sail-cloth, etc.,—John Bringhurst, Walnut Street. Iron castings,—Michael Hillegas. Manufacturers of chocolate,—Mrs. Crathorne, in Letitia Court, and Benjamin Jackson. Jewelers,—William Bartram, Front Street; John Baily, corner Front and Chestnut. Haberdashery and millinery,—E. White, Chestnut Street. Staymaker,—Fred Oblowskii, Race Street. Shoemakers' tools and goods,—Robert Loosely, Walnut Street. Locksmith and bell-hanger,—Alexander Smith, Second Street. Turner and joiner,—John Elmslee, Second Street. Engraver on metals,—James Smithers, Third Street. Vendue stores,—James Kinnear, Front Street; Footman & Jeyes, Second Street; Joseph Hart, Southwark. Brush-makers,—Elliot & Stapleton, Second Street. Saddlery,—William Todd, Arch Street. Coals,—John Flanagan. Carver and gilder,—James Reynolds. Assorted merchandise,—John Elliott, Walnut Street; Joseph Wood, Market Street; John Smith, Second Street; William Craig, Second Street.

of our modern schools would substitute a few of good dame Wilson's ornamental branches for as many of the "scientific branches" they claim to teach, the modern young lady would not lose by the exchange.

Paul Fooks, notary and tabellion public for the French and Spanish languages, professor and sworn interpreter for the same, draws up writings, letters, powers of attorney, contracts, and accounts, agreeable to the forms and usages of those respective countries; but modest Elizabeth Murphy simply announces herself as a French teacher, and proposes to give lessons from seven to nine in the morning, so as to not interfere with the children going to school.

The amusements offered to the people, in addition to Hallam's American Theatre, which gave regular performances, were frequent displays of fire-works and several shows, among others the following:

In February, 1768, a view of Jerusalem was exhibited at the sign of the Buck, on Second Street. The advertisement says, "It is an artful piece of statuary, representing the city of Jerusalem, the temple of Solomon, his royal throne, all the noted houses, hills, and towers; likewise the sufferings of our Saviour, from the garden of Gethsemane to the hill of Golgotha, all which is exhibited in the most natural manner." The price of admission to this "moral show" was one shilling for grown persons and sixpence for children.

In the same year, on Third Street, opposite Mr. Pemberton's garden, there was a wax-work exhibition representing "the judgment of Paris on Mount Ida, when he assigned the golden apple to Venus. Tickets, 1*s.*, children, 6*d.*"

Some months later Adam Crycer (from the king of Prussia's dominions in Germany) gave an exhibition of sleight-of-hand, at the sign of the Sorrel Horse, near the academy, to the great delight and awe of the boys, who looked upon him as a wizard.

A "person who professes to teach how to read with propriety any author in the English language," announced, in March, 1769, that he would read, at the academy, "Summer," a poem (by the author of "The Seasons"); tickets, five shillings. He states that proposals would be shortly published for the reading of Milton's "Paradise Lost," by subscription. This pioneer of elocutionists did not receive proper encouragement.

A much larger number of people went to see the two white oxen exhibited by Edward Barret. They were "the largest and weightiest ever known in America, raised by Mr. Adam Guier, on Carpenter's Island, near the city, and by him sold to the present proprietor for one hundred pounds currency."

Robert Tuckniss, on Market Street, gave his attention to hat-making. Isaac Heston, on the same street, painted coaches, chairs, etc. There were two watch and clock-makers on Front Street; Burrows Downdey's shop, above the draw-bridge, and James Wood, at the corner of Chestnut Street. The latter claimed to manufacture clocks "as good as those imported from England." Joseph Holliday, in Arch Street, Richard Humphreys, in Third Street, near Market, and Thomas Howell, on Third Street, near Chestnut Street, did the tailoring business. William Richards makes a specialty of breeches-making.

John Robertson, a journeyman barber, of a poetic turn, gets off the following epigram:

"Midas, we read, with wond'rous art of old,
Whate'er he touch'd at once transform'd to gold;
This modern statesmen can reverse with ease,
Touch them with gold, they'll change to what you please."

Thomas Affleck was a cabinet-maker on Second Street, and Robert Moon, a chair- and cabinet-maker on Front Street. We have no description of the goods they manufactured. The public vendue of Capt. James Ross' effects (December, 1768) may give us some idea of the furniture in use in most of the houses of the medium class. There were sold mahogany and walnut bureaus, dining-, dressing-, and tea-tables, one eight-day clock, walnut, leather-, worsted-bottom, and windsor chairs, feather-beds, bedsteads and bedstead-curtains, window-curtains, pictures, chest of drawers and floor-carpetings, also a very neat jack and sundry other kitchen furniture. Samuel Williams, joiner, on Fourth Street, sign of the Indian Queen, advertises a large quantity of joiner's stuff. He manufactures chests of drawers, desks, tables, chairs, bedsteads, sackings, cradles, and coffins. Joseph Wood, on Market Street, John Smith, on Second Street, and several others had for sale "Scotch carpetting," and Daniel Gibbs, on Front Street, sold "Wilton carpets." "Stamped paper-hangings for rooms" could be had at William Craig's, on Second Street, and James Reynolds, on Front Street, "imported paper-hangings with *papier-maché* borders." Ceiling ornaments and brackets, looking-glasses of all sizes, from a pocket-glass to the largest pier or mantel-glass, could be purchased at John Elliott's, while Alexander Bartram's stock of "china, delph and earthenware, stoneware and flint-glassware" was of the largest. The housekeeper, therefore, found no difficulty in furnishing her home in the most elaborate or the simplest style according to her taste and means. House-rent was not very high. A two-story brick house and kitchen situate on the west side of Second Street, and well situated for a retail shop, rented for thirty-five pounds per annum; a wooden dwelling-house on Elm Street, for six pounds per annum; a three-story brick house, with a lot extending from Front Street to Water Street, between Spruce and Pine Streets, rented for forty pounds per annum. This was a comfortable house with convenient cellar kitchen, double closets to each room, and neatly plastered garrets. The staircases and the rooms on the first floor were neatly papered, from which we infer that paper-hangings, as well as carpets, were getting into general use. From the description of quite a number of town and country

houses, it appears that the custom was to paper the lower or best rooms; where the parlor was in the second story, it and the staircase walls were papered.

There was in those days a quaint custom of turning off marriage notices with some remark complimentary to the bride. It must have been embarrassing to the editor when he had a batch of these notices to write for the same issue of his paper. Here are a few specimens: Married, "Mr. Samuel Shaw, merchant, to Miss McCullough, daughter of the late Capt. McCullough; and Mr. Thomas Patterson to Miss Brockden, daughter of Charles Brockden, Esq., both amiable young ladies with handsome fortunes." "James Allen, Esq., to Miss Betsey Lawrence, only daughter of John Lawrence, Esq., late mayor of this city, a young lady of distinguished merit, beauty, and fortune." "Mr. Levi Hollingsworth to Miss Hannah Paschall, daughter of Mr. Stephen Paschall, a young lady whose amiable disposition and eminent mental accomplishments adds dignity to her agreeable person." Rev. Mr. John Patterson was married to Miss Mercy Story, "a young lady with all the natural and acquired endowments which adorn the fair sex." A more simple announcement is made of an exchange of brides between Pennsylvania and Maryland, viz., "Joseph Shippen, Jr., secretary to his honor the Governor, was married in Philadelphia to Miss Jenny Galloway, of Maryland; and John Cadwalader, merchant, of Philadelphia, was married in Maryland to Miss Betsey Lloyd, daughter of the Hon. Edward Lloyd, of that province." The marriage of Mr. Bradford, printer, to Miss Polly Fisher, "an amiable young lady," brought out the following remark from the *Pennsylvania Chronicle*: "Mr. Bradford was genteelly dressed on the happy occasion in the manufactures of this country, *an example well worthy of imitation*." The same paper on another occasion says, "The following article of hymeneal intelligence came *so well recommended* that we cannot refuse it a place in the *Chronicle*. Last Wednesday evening was married Capt. Williams to Miss Esther Deers, a lady not more remarkable for the agreeableness of her person than her prudent conduct and amiable manners." Paid, 5*s*.

Husbands sometimes advertised their wives, as they do now. Mrs. Catherine Redman would not submit tamely to such treatment from her "inhuman" husband. She replies, and informs the public that his charges against her proceed from the advice of his pretended friends, "added to the chimeras of his stupidly jealous and infatuated noddle!"

Mary Nelson advertises a dishonest Irishman. She does not say in what relation the "villian" who stole her Pompadour chintz stood to her:

"FORTY SHILLINGS REWARD.

"Last Wednesday morn, at break of day,
From Philadelphia run away,
An Irishman, nam'd John McKeoghn,
To fraud and imposition prone;
About five feet five inches high,
Can curse and swear as well as lie;
How old he is I can't engage,
But forty-five is near his age;
He came (as all reports agree)
From Belfast town in sixty-three,
On board the 'Culloden,' a ship
Commanded by McLean that trip;
Speaks like a Scotchman, very broad,
Is round-shoulder'd, and meagre-jaw'd;
Has thick, short hair, of sandy hue,
Breeches and hose of Max'reen blue;
Of lightish cloth an outside vest,
In which he commonly is dress'd;
Inside of which two more I've seen,
One flannel, th'other coarse nankeen.
He stole, and from my house convey'd,
A man's blue coat, of broadcloth made;
A gray great coat, of bearskin stuff
(Nor had the villian yet enough);
Some chintz (the ground was Pompadour)
I lately purchas'd in a store,
Besides a pair of blue-ribb'd hose,
Which he has on as I suppose.
He oft in conversation chatters
Of Scripture and religious matters.
And fain would to the world impart
That virtue lodges in his heart;
But take the rogue from stem to stern,
The hypocrite you'll soon discern,
And find (tho' his deportment's civil)
A saint without, within a devil,
Whoe'er secures said John McKeoghn
(Provided I should get my own)
Shall have from me, in cash paid down,
Five dollar-bills and half a crown."

Political articles, written in a satirical vein, and lampoons on public men and matters, filled the few newspapers that existed in that time, with now and then some playful composition, in prose or verse, about love, manners, and fashions. Some of the poetical effusions are signed with a female *nom de plume*. Yet the ladies did not eschew politics, and the patriotic muse more than once inspired them, as in the following lines, signed "A Female":

"THE FEMALE PATRIOTS.

"*Addressed to the Daughters of Liberty in America*, 1768.

"Since the Men, from a Party, or Fear of a Frown,
Are kept by a *sugar plumb* quietly down,
Supinely asleep, and depriv'd of their Sight,
Are stripp'd of their Freedom and robb'd of their Right.
If the Sons, so degenerate, the Blessings despise,
Let the *Daughters* of Liberty nobly arise;
And tho' we've no Voice but a Negative here,
The Use of the Taxables, let us forbear.
(Then Merchants import till your stores are all full,
May the Buyers be few, and your Traffick be dull.)
Stand firmly resolv'd, and bid *Grenville* to see,
That rather than Freedom we part with our *Tea*;
And well as we love the dear Draught when a-dry,
As American Patriots our Taste we deny.
Pennsylvania's gay Meadows can richly afford,
To pamper our Fancy or furnish our Board;
And Paper sufficient at *Home* still we have,
To assure the *wiseacre*, we will not sign *slave*;
When this *Homespun* shall fail, to remonstrate our Grief,
We can speak *viva voce*, or scratch on a Leaf,
Refuse all their Colours, tho' richest of Dye,
When the juice of a Berry our Paint can supply,
To humour our Fancy, and, as for our Houses,
They'll do without Painting as well as our Spouses;

While to keep out the cold of a keen Winter Morn,
We can screen the northwest with a well-polished Horn;
And trust me a *woman*, by honest Invention,
Might give this *State-Doctor* a Dose of Prevention.
Join mutual in this, and but small as it seems,
We may jostle a *Grenville*, and puzzle his Scheme;
But a Motive more worthy our *Patriot-Pen*,
Thus acting, we point out their Duty to *Men;*
And should the *Bound-Pensioners* tell us to hush,
We can throw back the satire by bidding them blush."

The General Assembly of Virginia having closed an address to Lord Botetourt, Governor-General of the Dominion, with a prayer that the Supreme Being might inspire his lordship "with all wisdom," the following epigram appeared in a Philadelphia paper:

"ON THE VIRGINIA ASSEMBLY OFFERING UP THEIR PRAYER FOR WISDOM FOR LORD B——T.

"The Assembly, in devoutest strain,
Ask for my Lord the gift of brain.
Wisdom alone will hardly do,
Next beg a little patience, too."

In 1771 the wits in the public gazettes made fun of those effeminate individuals who used umbrellas to protect their heads against the fierce rays of a July sun. The umbrella, even as a shelter from rain, was a new article. They were heavy, clumsy things, made of oiled linen stretched over rattan sticks, in imitation of the "quittasol" (the predecessor of the parasol) which came from India and were made of oiled-silk in every variety of colors. The ladies used them to keep off the rain. The men were satisfied with the protection of a heavy cloak or a sort of a cape (a French invention) called a *roquelaure.* Ministers and doctors, people who had to be out in all sorts of weather to call on the sick, had *roquelaures* of oiled linen. The usefulness of the umbrella during a shower was acknowledged, but its appearance in fair, sunshiny weather elicited the jeers of the populace and the mockery of men who should have been wiser. The doctors, however, recommended carrying an umbrella in summer as a safe protection against many diseases caused by exposure to the sun. Dr. Chancellor, Dr. Morgan, and Rev. Mr. Duché bravely carried the objectionable umbrella through the streets at mid-day, and the air of comfort with which they went unconcernedly about their business finally silenced the opposition. Many a wag found it convenient to shelter his "diminished head" under an umbrella, after exercising his wit upon it. Umbrellas were first introduced in England in 1768; they were advertised for sale in Philadelphia in 1772, by William Barrel, on Market Street.

Mrs. Esther Reed, who had but recently arrived in Philadelphia, gives her first impressions in a letter to her brother,[1] Mr. DeBerdt, dated Nov. 14, 1770. We quote as follows: "Miss Pearson is making a fortune by going to England and bringing back new fashions in her way. Articles for gentlemen's use would answer as well. As to the common articles of wear, the country will soon be overstocked. Vast quantities of goods come already from New York and Maryland, and all the country people are spinning coarse linen, which they find their account in. . . . I am sure, after the first weeks, you would like this place very well. The city does not answer my expectations. The plan, undoubtedly, is remarkably good, but the houses are low, and in general paltry, in comparison of the account I had heard. . . . We made our appearance on Thursday at the Assembly with Mrs. Foxcroft, and my ladyship opened the ball, much to the satisfaction of the company, as something new to criticise on. The belles of the city were there. In general, the ladies are pretty, but no beauties. They all stoop, like country girls. So much for this city."

Two months later Mrs. Reed wrote: "We meet with much civility, but I can't say the place suits me very well. The people must either talk of their neighbors, of whom they know every particular, of what they both do and say, or else of marketing, two subjects I am very little acquainted with. This I only say to you, for we hardly dare tell one another our thoughts, lest it should spread and be told again all over the town."

In 1772 the following was published as a description of a beau in Philadelphia:

"It has a vast quantity of hair on its head, which seems to stand on end and gives it the appearance of being frightened. That hair is loaded with powder and pomatum, all little enough, too, to keep any degree of life or heat in the few brains that are in small particles scattered about in the cavities of that soft skull it covers. The rest of it chiefly consists of French silk, gold lace, fringe, silk stockings, a hat and feather, and sometimes a cockade, and then it is quite irresistible. White bands, a diamond ring, a snuff-box, a scented handkerchief, and a cane. Its employment is to present that snuff-box, to wield that cane, to show its white teeth in a perpetual grin, to say soft things in every sense of the word to ladies, to follow them everywhere like their shadow, and to fetch and carry like a spaniel."

The average citizen, however, was more modestly equipped. A recently-arrived Englishman is represented as wearing his hair tied behind, well dressed in a brown broadcloth coat, lapelled jacket, and breeches of the same material, a castor hat, brown stockings and shoes, with pinchbeck buckles, while a teacher, who had got himself in some trouble with the sheriff, is described as clad in a blue coat, with a red collar and wristbands, sugar-loaf-shaped metal buttons, a blue surtout coat, Nivernais hat, and ruffled shirt; he, also, wore his hair tied behind.

The lady's hat for out-door wear was a very flat, round hat, worn so as to stand up perpendicularly on the right side of the head, or rather of the immense edifice of hair reared high over the head, the back and crown of which was protected by a sort of loose hood. A cloak of some bright color was worn in winter. Scarlet cloaks, when first imported, were great favorites with the leaders of fashion, but public taste condemned them and the mode did not last. We took our fashions from England, and the Philadel-

[1] We are indebted for this and subsequent extracts to a very interesting "Life of Esther DeBerdt, afterward Esther Reed," printed for private circulation in 1853, without the author's name, but which is known to be by Mr. William B. Reed, of Philadelphia.

phia ladies were probably careful to follow the directions contained in a "London Pocket-Book" of the period,[1] viz., "Every lady who wishes to dress her hair with taste and elegance should first purchase an elastic cushion exactly fitted to the head. Then, having combed out her hair thoroughly, and *properly thickened it with powder and pomatum*, let her turn it over her cushion in the reigning model. Let her next divide the sides into divisions for curls, and adjust their number and size from the same models. If the hair be not of a sufficient length and thickness it will be necessary to procure an addition to it, which is always to be had ready-made and matched to every color."

During the next ten years there were as many different styles of dressing the hair. Curls, crisp or long, feathers, flowers and ribbons, powder and pomatum, each had their turn, or were combined into so many enormities that they aroused the poet's sarcasm,—

"Give Betsy a bushel of horsehair and wool,
Of paste and pomatum a pound,
Ten yards of gay ribbon to deck her sweet skull,
And gauze to encompass it round.
Her cap flies behind, for a yard at the least,
And her curls meet just under her chin,
And those curls are supported, to keep up the jest,
By a hundred, instead of *one* pin."

A custom prevailed at the funeral of young girls which has long since ceased to be: it was that the coffin should be carried to the grave by some of the most intimate companions of the dead girl. Miss Sarah Eve in her journal, July 12, 1773, has the following entry: "In the evening B. Rush, P. Dunn, K. Vaughan and myself carried Mr. Ash's child to be buried; foolish custom for girls to prance it through the streets without hats or bonnets."[2]

Miss Sarah Eve, the daughter of Oswell Eve and Anne Moore,[3] was a highly accomplished young lady, with a quick and naturally observing mind. The following extracts from her journal give an insight of the social life in her time:

"February 26th. As fine a day as in April. In the morning Dr. Shippen came to see us. What a pity it is that the doctor is so fond of kissing; he really would be much more agreeable if he were less fond. One hates to be always kissed, especially as it is attended with so many inconveniences; it decomposes the economy of one's *handkerchief*, it disorders one's *high roll*, and it ruffles the serenity of one's countenance; in short, the doctor's, or a sociable kiss, is many times worse than a formal salute with bowing and curtseying, to 'this is Mr. Such-an-one, and this Miss What-do-you-call-her.' 'Tis true this confuses one no little, but one gets the better of that sooner than to readjust one's dress."

In another entry she remarks playfully, "I never once thought of it before I heard Mrs. Clifford mention it, why such an exemplary man as Mr. Duché should sit every day and have his hair curled and powdered by a barber. Since I have thought about it *greatly*, and would like to hear *his* sentiments on this subject. But, my dear ma'am, what would a parson be without *powder?* it is as necessary to *him* as to a *soldier*, for it gives a more significant shake to his head, and is as *priming* to his words and looks. As to having his hair curled, he perhaps thinks it of little or no consequence, since curled or uncurled locks will turn so gray, or perhaps he may look upon it as more humiliating to wear his own hair than a wig, as then his head must serve as a *block* on which the barber must dress it."

She goes with Maj. and Mrs. Hayes to visit a lady from "*Tren Town*" who lodged at Dr. Duffield's, and the visit is an ovation for writing this graphic pen-picture of shallow fashionable life: "We went down to the doctor's where I was introduced to the lady, her name

[1] The Eighteenth Century, by Alexander Andrews.

[2] The *Pennsylvania Magazine of History and Biography*, from which we copy these extracts from the journal of Miss Sarah Eve, says in a note concerning this custom: "As late as Dec. 19, 1813, it appears to have undergone but little change from the time mentioned in the diary, as Miss Hannah M. Wharton recorded in her journal: 'We have had a melancholy occurrence in the circle of our acquaintance since I last wrote in the death of the accomplished and amiable Fanny Durden. Six young ladies of her intimate acquaintance, of which I was one, were asked to be the pall-bearers. We were all dressed in white, with long white veils.'

"The child whose funeral was mentioned in the text was Rebecca, second child of Col. James Ash. . . . Col. Ash was born in 1750, and died in 1830. He married three times, and had twenty-four children. His first wife, whom he married when he was quite young, was Sarah Hinchman."

[3] Sarah Eve was one of the surviving six of thirteen children. This gifted young lady died Dec. 4, 1774, aged twenty-four years. She had received a good education, and was familiar with the best poetical and prose writers in the English language. Her disposition was as amiable as her understanding was strong and her imagination brilliant. A member of the family wrote of her, "Her hair, though red, was always fashionably dressed, and her appearance very stately. On one occasion, when a companion said she 'was too proud,' another answered, 'There is more humility under Sarah Eve's high head than under many a Quaker bonnet.'"

The *Pennsylvania Magazine* says of her family, "In 1745 Oswell Eve, the elder, was a sea-captain, commanding the ship 'George,' and was so prosperous that, from 1756 to 1760, he was part owner in no less than twenty-five different vessels. During part of this time he was a shipping merchant of Philadelphia, and in 1756 was a lieutenant in Capt. Samuel Mifflin's company of Philadelphia Associators. In 1766 he became a member of the Society for the Relief of the Poor, Aged, and Infirm Masters of Ships, their Widows and Children.

"A daughter of Oswell Eve, Jr., writes that her grandfather 'lived in a large stone house in Philadelphia; the sons and daughters were educated in Philadelphia, and my father was a classmate and associate of Drs. Rush, Shippen, and James. His father was the owner and captain of the British war-brig "The Roebuck;" my uncle, Joseph, had his father's commission in his possession. As soon as his eldest sons, John and Oswell, were large enough, he took them to sea with him, leaving the res tof the family at a place near Philadelphia, where his wife and daughter lived until near the commencement of the war, in very comfortable circumstances, seeing a great deal of company. It was then Dr. Rush became engaged to my aunt, but she died three weeks before the event was to take place.'

"As will be seen by the journal, Captain Eve, having met with misfortunes in business, left his family, May 1, 1768, and with his sons, John and Oswell, went to the West Indies, where he engaged in business, which was principally transacted at Montego Bay, Jamaica. After an absence of over five years he felt that his affairs would allow him to return to his family, and it is while looking forward with pleasant expectations for this event that the diary of his daughter closes." . . . "It is likely the house (occupied by Captain Eve's family) was situated on the stream which supplied the Globe Mill at Germantown road and Canal Street, the dam of which was west of the present line of Fifth Street above Thompson, a site now covered with houses, but until lately occupied by glue-factories and tan-yards, presenting a scene greatly different from that described in the journal as a place where wild flowers could be gathered."

EARLY PHILADELPHIA COSTUMES.

[From old prints in Pennsylvania Historical Society.]

is Brayen, her husband is a doctor and a man of fortune. We found her agreeing with a man about framing a picture for her, how soon one may discover some people's predominant passions. I thought I had hers before the man left her, and by evening I was pretty sure of it. Though by appearance fond of show and gayety, if I mistake not, and I did not see her good man, *she* is mistress. She had just returned from buying wine for the doctor as he preferred her taste before his own. 'Your price rather, thought I, for peace sake poor man!' She put on her cloak and bonnet, and we went a shopping with her, she wanted a hundred things, she cheapened everything, and bought *nothing!* She offered ten pence a yard for trimming which the woman said cost her fourteen, and accordingly for everything she wanted. At one o'clock she left us to go home and dress as she was to dine with us. At half after two she came to us, and at three we sat down to dinner, for my part, at that time of day, I should have thought *tea* full as proper, my impolite appetite unaccustomed to be so served, had left me two hours before, so that I had little to do with the original intention of dining and a greater opportunity of observing (dare I call it the *shallow* elegance of my surroundings, and the more shallow compliments and conversation of the greater part of the company). 'Where, my dear Mrs. Hayes,' said the doctor's lady, 'did you get everything so much handsomer and so much finer than anybody else?' a proper stress to be laid on the word *so*. The other lady with pleasure sparkling in her eyes and a consciousness that the compliment was no more than her due, exclaimed she was very polite and very obliging, and in this entertaining manner we passed an hour and a half at the table. We drank tea at candle light, the silver candlesticks very handsome and much admired. As soon as possible I bade the company good-night, except Capt. Stainforth, who saw me safe to my brother's. I came home, thanking fate that I had so little to do with high life and its attendants."

In another letter of Mrs. Reed's (Oct. 12, 1772), she mentions several articles of apparel which she desires her brother to send to her, as she cannot procure them easily in Philadelphia, viz., Black calma shoes, a dozen of eight-bowed cap wires, a quilted cap for her little girl, and a "quartered cap for her boy; for herself, a half-dressed handkerchief or tippet, or whatever is the fashion, made of thread lace; a handsome spring silk, fit for summer, and new fashion." In a subsequent letter, however, she countermands the order concerning the silk gown, as she finds she can have one made in Philadelphia.

On the 20th she writes, "You will no doubt hear of the failure of a very considerable house in New York; it seems to have been very unexpected, as they were in great credit. Many failures are expected here; the city is so much overstocked with goods that in many shops you may buy cheaper than in London, and the needy trader is constantly obliged for the sake of ready cash to send his goods (often bales unopened) to vendue, where they sometimes sell under prime cost, which is productive of universal bad consequences." This repletion of the market was not to last, however. Yet another year or two and how different the aspect of things will be! The grievances of the colonies have become unbearable. The people of Boston have destroyed the cargoes of the tea-ships; the Philadelphians, with that decorum and dislike of violence inherited from their Quaker ancestors, have compelled the vessels sent to their port to leave it without discharging their obnoxious cargo. Non-importation is resolved; the Revolution is commenced. The effect on society was to create division. We will not introduce the political history of Philadelphia in a chapter devoted exclusively to manners and customs, but even these will show the divisions of parties. A lady's dress revealed at once the side taken by her family; the patriotic fair ones proclaiming their resolve to encourage home manufactures, while the wives and daughters of the men who doubted the wisdom of the Revolutionary measures recently adopted, clung to English fashions and English goods. Still, at this closing page of the ante-Revolutionary period, there was neither the folly and extravagance, nor the trials and sufferings which marked the great struggle. There was no scarcity of the good things of this world, and the delegates to the Congress held in 1774 had no cause to complain of the hospitality of the Philadelphians. When the delegates from Massachusetts reached Frankford, a number of gentlemen from Philadelphia, including Mifflin, McKean, and Rutledge, went out with carriages, and, having cordially welcomed the delegates, brought them to the city. Here they were introduced to a number of other gentlemen, who vied with one another in paying them attention. During their stay it was a continual round of invitations to dinner parties, receptions, etc. One of the delegates—John Adams—kept a diary, and in this he noted with much exactness the many invitations he had accepted, even to putting down the bill of fare. A few extracts from these curious memoranda will show how well the wealthy Philadelphians lived:

"September.—Went with William Barrell to his store, where we drank punch and ate dried smoked sprats with him.

* * * * * * * * * * *

"Dinner with Joseph Reed. An elegant supper. We drank sentiments until eleven o'clock. Lee had dined with Dickinson, and drank Burgundy all the afternoon.

* * * * * * * * * * *

"Dinner at Mrs. Fisher's: Ducks, hams, chickens, beef-pies, tarts, creams, custards, jellies, fools' trifles, floating islands, beer, porter, wine, punch, and a long, etc.

* * * * * * * * * * *

"At Mr. Powell's: Curds and cream, sweet-meats of various sorts, twenty sorts of tarts, fools' trifles, floating islands, whipped syllabubs Parmesan cheese, punch, wine, porter, beer, etc.

"At Willing's: Turtle, and everything else.

"At Dr. Cox's, Water Street: Claret, Madeira, Burgundy, pears and peaches. Breakfast: Buckwheat-cakes, muffins and toast.

* * * * * * * * * * *

"Dinner at Chew's: Turtle, etc.; sweetmeats, trifles, etc. Dessert: Raisins, almonds, pears, peaches, and Madeira (very fine)."

Silas Deane, a New England delegate, was not so well pleased with our markets. He wrote as follows concerning them in 1774:

"Their meat is brought in the neatest order and appearance, and their mutton excels. But in the whole market there was nothing of the fish kind, and I scarcely saw any fowls of any kind worth naming. Fruit of but few kinds, and those very inferior (watermelons excepted, which you may think ought to be good when I tell you I saw them sold for two shillings each). Among their roots and vegetables I saw none of the first quality, and none at all of several which we value. I saw no celery, not a root; no kinds of salads, one basket of endive excepted; no beans but what were fit to shell; and the cucumbers offered for sale were older than we ever ate them. The roots and vegetables worth noticing are, cabbages and potatoes, good; turnips, carrots, and radishes, as tough as a dry, sandy soil can make them. But the red beets are good. . . . They expose horses, cattle, sheep, earthenware, stockings, etc., in the market with other things, so that they really have an assortment. But everything, without exception, is dearer than at New York. The common price of butter is sixteen pence per pound."

Nor was he favorably impressed with the beauty of the Philadelphia ladies, if we judge from the following extract from a subsequent letter:

"A brother delegate, remarkably fond of fine ladies, at a late fair, when the whole country was collected, asked me if I saw one pretty girl. I replied in the negative. He was then very free (as he was very well acquainted in New England, though not an inhabitant of it) in praise of your ladyships there, and taking a guinea out of his pocket, said, 'Deane, here is a vast crowd of girls; I will follow you, and the first that you shall say has a pretty face I will give the guinea to.' We strolled through the whole fair, and though I sincerely wanted him to lose the guinea, yet I could not in conscience say that I found one handsome face. From this judge of the general complexion of girls here."[1]

[1] All strangers were not as fastidious as Mr. Deane. The Duke de Lauzun declared that "for beauty, grace, and intelligence" he had never seen the superiors of the Philadelphia ladies. The Marquis de Chastellux has devoted many an enthusiastic page of his "Voyage dans l'Amérique" to his fair Philadelphia acquaintances. The Abbé Robin, a chaplain in Rochambeau's army, says, "They are tall and well-proportioned, their features are generally regular, their complexion is very fair and without colour, they have less ease and grace but a more noble bearing than French ladies. Indeed, I have noticed in many of them something of the loftiness which characterizes some of the *chef d'œuvres* of the old artists." The Chevalier de Beaujour, after describing the men, remarks, "The women have more of that delicate beauty which belongs to their sex, and, in general, have finer features and more expression in their physiognomy. Their stature is usually tall, and nearly all are possessed of a light and airy shape, the breast high, a fine head, and their colour of a dazzling whiteness. Let us imagine, under this brilliant form, the most modest demeanor, a chaste and virginal air, accompanied by those simple and unaffected graces which flow from artless nature, and we may have an idea of their style of beauty; but this beauty passes and fades in a moment. At the age of twenty-five their form changes, and at thirty the whole of their charms have disappeared." This closing remark is applied to American women in general.

But remarks still more gratifying than favorable comments on American beauty were made by these foreigners. They describe society as it was in the infancy of the nation, and the high tribute which they pay to the social virtues of the women of America is the more precious because it is still deserved, despite of the teachings of European "civilization." Marshal Count de Rochambeau, in his "Memoirs on the War of the Revolution," remarks incidentally, "Young women are free till their marriage. . . . But when they have once entered the state of matrimony they give themselves up entirely to it, and you seldom see, particularly in the rural districts, a woman of loose manners."

The Duke de la Rochefoucauld-Liancourt ("Voyage dans les États-Unis") comments favorably on the freedom, so rarely abused, allowed to young American girls. He says of the married women, "In the country she is, as in Europe, a necessary friend to the management of domestic affairs,—she is the soul of the family. In town she is so too. She is an indispensable resource for domestic affairs, while her husband is engaged in his own affairs, as every one is in America. She is an assiduous companion, and a society ever ready to be found in a country where there are no other but that of the family, and where the children soon quit their paternal abode."

In fact, it is a thought of which we should be proud, whatever may have been the criticisms, deserved or unjust, of foreigners upon American institutions and customs, the manners of American women have ever been the subject of their praise.

"It may be noticed," says Mr. Westcott in his "History of Philadelphia," "that the fairs were held in the public market-places, and were most generally attended by the country people, most of whom at that time were used to hard work, frequently in the fields, and were without the advantages incident to luxury and leisure and refinement, which give to women of taste opportunities to display their personal charms to the best advantage. The apology for Mr. Deane is that he did not get into the best society, which at that time was affected generally in favor of the crown."

The troublous times have come. The battle of Lexington has been fought, and independence has become a fact. Washington, appointed commander-in-chief in June, 1775, has started for Boston, where the Continental army is organizing; a number of Philadelphians accompany him. In Philadelphia everything bears a warlike aspect. We hear no more of races, of cock-fighting,—the favorite but cruel amusement hitherto so much in vogue,—no more bull-baiting or bear-baiting; the men have something else to think of, they discuss the war news, they prepare for war. Mrs. Reed, whose husband is appointed lieutenant-colonel of one of the three battalions of Pennsylvania, writes, "Two thousand men in the field, all in uniform, make a very military appearance. A regiment of men, whom they call riflemen, dress themselves like Indians, and make a very formidable show." Even the ladies have lost all interest in their wonted amusements, the ball-room is forsaken, dress affords no pleasure; war is the universal theme, the all-engrossing subject.

The newspapers belonging to the party of armed resistance made use of various devices illustrative of *union*, the essential element of success. The disjointed or dissevered snake was a favorite device at the time of the Stamp Act excitement, and when, in 1774, the colonists had resolved to take the important step for the promotion of union, namely, the assembling of a Continental Congress of delegates, that device was revived, with some modifications. The illustration of a disjointed snake, each part representing a colony, with the initials thereof,[2] first appeared in the heading of the *Pennsylvania Journal*, where it remained for about a year, or until the colonies were fairly united, on the meeting of the Second Continental Congress in May, 1775. The device excited the ire and disgust of the loyalists, and the Tory writers spoke in harsh terms of it. A writer in Rivington's *Royal Gazette*, in New York, called it "a scandalous and saucy reflection;" to which a correspondent of the *Journal*, signing himself "New Jersey," replied as follows:

[2] This illustration is reproduced on page 303, vol. 1. of this work.

"That New England's abused, and by sons of perdition,[1]
Is granted without either prayer or petition;
And that 'tis 'a scandalous saucy reflection,'
That 'merits the soundest, severest correction,'
Is readily granted. 'How came it to pass?'
Because she is pester'd by snakes in the grass,
Who by lying and cringing, and such like pretensions,
Get places *once* honored, disgracéd by pensions.
And you, Mr. Pensioner, instead of repentance
(If I don't mistake you) have wrote your own sentence,
For by such *snakes* as this New England's abused,
And the 'head of the serpents,' you know, must 'be bruised.'"

H. Clay Lukens, of Germantown, sent to the *Record* "the following description of the curious banner originally displayed by the American colonies after the commencement of active hostilities against Great Britain." It is taken from the *London Morning Chronicle* for July 25, 1776:

"The colors of the American flag have a snake with thirteen rattles, the fourteenth budding,[2] described in the attitude of going to strike, with the motto, 'Don't tread on me!' It is a rule in heraldry that the worthy properties of the animal, in the crest borne, shall be considered, and the base ones cannot be intended. The ancients accounted a snake or serpent an emblem of wisdom, and, in certain attitudes, of endless duration. The rattlesnake is properly an emblem of America, as this animal is found in no other part of the world. The eye of this creature excels in brightness most of any other animal. She has no eyelids, and is, therefore, an emblem of vigilance. She never begins an attack, nor ever surrenders; she is, therefore, an emblem of magnanimity and true courage. When injured, or in danger of being injured, she never wounds until she has given notice to her enemies of their danger. No other of her kind shows such generosity. When undisturbed and in peace, she does not appear to be furnished with any weapons of any kind. They are latent in the roof of her mouth, and even when extended for her defense, appear to those who are not acquainted with her to be weak and contemptible, yet her wounds, however small, are decisive and fatal. She is solitary, and associates with her kind only when it is necessary for their preservation. Her poison is at once the necessary means of digesting her food and certain destruction to her enemies. The power of fascination, attributed to her by a generous construction, resembles America. Those who look steadily on her are delighted and involuntarily advance toward her, and, having once approached, never leave her. She is frequently found with *thirteen* rattles, and they increase yearly. She is beautiful in youth, and her beauty increases with her age. Her tongue is blue, and forked as lightning."

The Declaration of Independence had been proclaimed, and the United States of America had come into existence. Philadelphia, being the seat of government, was soon filled with strangers, delegates to the Congress and their families, patriots and politicians from all parts of the land, military men, adventurers, and speculators from every part of the world. The introduction of these new elements wrought a great change in the hitherto quiet community: hazardous speculations took the place of steady business habits, and a mad thirst for pleasure and excitement pervaded society. In the winter of 1776-77, Richard Henry Lee wrote of Philadelphia that it was an "attractive scene of debauch and amusement;" and James Lovell complained to Washington that he found it "a place of crucifying expenses." Judge Edward Shippen, writing to his father in January, 1777, remarks, "How long matters may thus continue cannot be known, yet another summer must necessarily show us our fate. If the war should continue longer than that, we are all ruined as to our estates, whatever may be the state of our liberties. The scarcity and advanced price of every necessary of life makes it extremely difficult for those who have large families, and no share in the present measures, to carry them through, and nothing but the strictest frugality will enable us to do it."

While many patriotic ladies persisted in giving up finery and frivolous amusements, and turned all their energies to helping and encouraging their husbands and brothers, fashion did not lose its sway, and dress was ruinous, owing to the scarcity of goods and of money. The dress for gentlemen in good society at the beginning of the Revolutionary war is thus described:

"The hair was powdered and tied in a long queue; a plaited white stock; and shirt ruffled at the bosom and over the hand, and fastened at the wrists with gold sleeve-buttons; a peach-bloom coat, with white buttons, lined with white silk, and standing off at the skirts with buckram; a figured silk vest, divided so that the pockets extended on the thighs; black silk small-clothes, with large gold or silver knee-buckles; cotton or silk stockings; large shoes with short quarters, and buckles to match."

It is related in the life of Samuel Adams that, upon his being chosen in 1774 to attend the Congress in Philadelphia, his friends fitted him out with a full suit of clothes, as follows: two pairs of shoes of the best style, a set of silver shoe-buckles, a set of gold knee-buckles, a set of gold sleeve-buttons, an elegant cocked hat, a gold-headed cane, a red cloak, and a number of minor articles of wearing apparel. The sleeve-buttons and cane had upon them the device of a liberty cap.

Such costumes were necessarily very expensive. Still more so was the uniform and equipment of an officer in the army. To obtain for the Continental troops that uniformity of dress which is necessary in order to distinguish an army from a mob of armed men, was a problem difficult to solve with the scant means at command. Still it was done, in a manner, with economy.

The first troops raised in Pennsylvania being associators and militia organizations, a cheap and effective distinction was the hunting-shirt. This garment was made of various colors, principally of brown, green, and yellow, and some black. The riflemen clung to this style of uniform longer than did other arms of the service. The infantry were soon clad in uniforms resembling the British fashions, except in colors. The prevailing color of the Pennsylvania line was brown, with facings of buff, blue, green, or red. Blue coats were used by some regiments and battalions. To the artillery—as soon as regular artillery regiments were formed—was assigned the color of black, with red facings.

The Philadelphia Troop of Light Horse, associated Nov. 17, 1774, adopted the following uniform: a dark-brown short coat, faced and lined with white, white vest and breeches, high-top boots, round black

[1] New England was then suffering from the effect of the Boston Port Bill.

[2] This represented Vermont.

hat, bound with silver cord, a buck's tail, housings brown, edged with white, and the letters "L. H." worked on them. Arms: a carbine, a pair of pistols and holsters, with flounces of brown cloth trimmed with white, a horseman's sword, and white belts for the sword and carbine.

On the 16th of January the body of the brave Gen. Hugh Mercer was escorted, with all the honors of war, to its last resting-place in Christ churchyard. He was a Scotchman by birth, and had fought in the battle of Culloden with Charles Stuart. Making his escape after that disastrous defeat, he had fled to America and had settled in the province of Pennsylvania. But the brave soldier did not find peace—if indeed he sought it—in his new home. In 1755 he was a captain in the provincial forces sent against the Indians. He was wounded and left for dead on the battle-field. Having, by good fortune, escaped the scalping-knife of the savage, he made his way to Fort Cumberland, after wandering for some weeks through the woods, with no other food than berries and nuts. In 1758 he was made a lieutenant-colonel, and placed in command of Fort Du Quesne by Col. Washington. Upon the organization of the Continental army, we find the gallant Mercer serving with the rank of general under his old chief. Mortally wounded at Princeton, where he fought on foot, after his horse had been shot under him, and refusing to surrender when pressed by a whole detachment, he was beaten down with the butt end of their muskets and received a fatal bayonet thrust, which caused his death.

The body of the gallant Philadelphian, Capt. William Shippen, also killed in the battle of Princeton, was likewise buried with military honors in St. Peter's churchyard.

Since the organization of the army, funerals—not at all attended with the pomp of war—were of daily occurrence in Philadelphia. John Adams, in a letter dated April 13, 1777, says, "I have spent an hour this morning in the congregation of the dead. I took a walk into the 'Potter's Field' (a burying place between the new stone prison and the hospital), and I never in my whole life was so affected with melancholy. The graves of *the soldiers* who have been buried in this ground from the hospital and bettering-house during the course of last summer, fall, and winter, dead of the *smallpox* and *camp* diseases, are enough to make the heart of stone to melt away. The sexton told me that upwards of *two thousand soldiers* have been buried there, and by the *appearance* of the graves and *trenches*, it is most probable to me that he speaks within bounds." This Potter's Field was on the site now occupied by the beautiful Washington Square.

But a sadder spectacle than that of the funerals of their brethren was in reserve for the Philadelphians. On the 19th of September the news reached Congress that the enemy had reached the Swedes' Ford, and might be in Philadelphia within twenty-four hours. The members of Congress, the military officers in the city on business or leave, and many gentlemen, active supporters of the cause of freedom and independence, departed in haste for Trenton and Bristol. The people lived in the greatest apprehension until the 26th, when the enemy entered Philadelphia. The event is noted in Robert Morton's diary[1] in these words: "September 26th. About eleven o'clock A.M. Lord Cornwallis with his division of the British and auxiliary troops, amounting to about three thousand, marched into this city, accompanied by Enoch Story, Joseph Galloway, Andrew Allen, William Allen, and others, inhabitants of this city, to the great relief of the inhabitants who have too long suffered the yoke of arbitrary power; and who testified their approbation of the arrival of the troops by the loudest acclamations of joy."

On the other hand, Watson says J. P. Norris told him, "I recollect seeing the division march down Second Street when Lord Cornwallis took possession of the city,—the troops were gay and well clad. A number of our citizens appeared sad and serious. When I saw him there was no huzzaing." A lady told Mr. Watson, "I saw no exultation in the enemy, nor indeed in those who were reckoned favorable to their success." If we remember that there were many Tories in Philadelphia and that they now had the upper hand, it is easy to reconcile these different opinions. Some people did rejoice, if others felt "sad and serious;" but it is likely that the manifestations of joy were subdued, until the British were definitely, as was supposed, settled in the city. That respectable loyalist, Robert Morton, had occasion, not very long after, to change his mind about the "relief from arbitrary power" procured by the coming of Cornwallis. He wrote, on the 22d of November, "Seventh day of the week. This morning about ten o'clock, the British set fire to Fair Hill mansion-house, Jonathan Mifflin's, and many others, amounting to eleven, besides outhouses, barns, etc. The reason they assign for this destruction of their friends' property is on account of the Americans firing from these houses and harassing their pickets. The generality of mankind being governed by their interests, it is reasonable to conclude that men whose property is thus wantonly destroyed under a pretense of depriving their enemy of a means of annoying y'm on their march, will soon be converted and become their professed enemies. . . . Here is an instance that Gen. Washington's army cannot be accused of. There is not one instance to be produced where they have wantonly destroyed and burned their friends' property."

Mr. Watson tells an amusing anecdote of the manner in which "Stenton" was saved from destruction on the occasion of this act of incendiarism. Stenton had been included in the list of (seventeen, not eleven)

[1] See *Pennsylvania Magazine of History and Biography*, vol. i.

mansions doomed to destruction. Two men came to execute the order. They told the housekeeper to get her things out while they would go to the barn to procure straw to fire it. Hardly had they left the house when a British officer rode up in quest of deserters. The housekeeper told him that two had come, who were hiding in the barn. The officer galloped toward that building, crying out, with many oaths, "Come out, you rascals, and run before me back to the camp!" The incendiaries came out and endeavored to explain that they were merely obeying orders. The irate officer would not listen, but drove them back to camp, and Logan's house was saved.

Capt. John Heinrichs, of the Hessian Jäger Corps, was not favorably impressed with Philadelphia, its people, or its climate.[1] He writes to his friend in Germany that among one hundred persons in or about Philadelphia not one has a healthy color, the cause of which is the unhealthy air and the bad water, and gives a list of diseases that are common every year. Some wag must have imposed on him, for he makes the strange remark, "Nowhere have I seen so many *mad* people as here. Only yesterday, as I was dining with a gentleman, a third person came into the room, and he whispered in my ear, '*Take care, this gentleman is a madman!*' Frequently the people are cured, but almost all have a quiet madness, a derangement of mind which proceeds from sluggish not active blood." The captain finds the climate unendurable; the animals, as well as the products of the earth, are only half developed; a hare, a partridge, a peacock, etc., is only half grown. Wild game tastes like ordinary meat. One of the few good consequences of this war is, he thinks, that more forests will be destroyed, and the air will become purer. "A man from this city by the name of Hamilton [William Hamilton, of the Woodlands] alone lost fifteen hundred acres of woodlands, which was cut down for the hospital, and he had sufficient patriotism to remark recently in company that it was good for the country." He finds that the fertility of the soil is great, "but the corn itself is not as good as ours." And yet, this fastidious Hessian, quoting Burnaby's "Description of His Travels," ends his letter by saying, "Among these 'country houses, pleasure-gardens, and fruitful orchards' the highly-esteemed Jäger Corps have their winter-quarters, and where he says 'on the Schuylkill,' there I mount guard to-morrow. It seems to me as if this sketch were plainer than many an engineer could draw it." Capt. Heinrichs lived to become a lieutenant-general in the service of Prussia.

[1] *Pennsylvania Magazine.* "The Hessians in Philadelphia:" translated by Miss Helen Bell.

This fault-finding Hessian did not find much to admire in a city which had become the first in America in population, as it was the first then in commercial importance. For neatness of appearance, well-built houses, broad streets,—the principal ones and all the crossings paved,—excellent police regulations, open squares, and fine market-houses, it was second to none. Its fairs attracted the country people for many miles, and its quays presented a scene of bustle and activity seldom seen elsewhere, and to which the varied garb of the foreign seamen, the sable-hued Africans, and the stolid Germans from the settlements added much picturesque charm. For Philadelphia had wonderfully improved in the last ten years preceding the Revolution, and when the delegates to the first Congress assembled there, the impression of those who came from distant points was one of pleased surprise. The refinement of its society, the culture of its representative men, and the beauty and modesty of its women, crowning that large-hearted hospitality born in the early Quaker days, made it a "good place to live in."

Let us say something here of the place where a battle raged so near to the city.

HOUSE OF PASTORIUS FAMILY, GERMANTOWN.
[From an old drawing in Philadelphia Library.]

Germantown, as its name indicates, was a German settlement, and, however changed it is now, had retained its German character as late as 1793. The yellow fever scourge which devastated Philadelphia in that year spared Germantown, and many citizens, as well as the officers of the general and State governments and of the banks, fled from the city to this healthier place. After this, the number of English-speaking residents increased steadily, and the road to the city became, in time, lined with handsome mansions.

The first settlers were Francis Daniel Pastorius, who purchased the land for himself and others, and Jurian Hartsfielder. This purchase was made from William Penn in 1683. In 1689, Germantown was

Digitized by Google

incorporated as a borough, by a patent from Penn. The town lost its charter about the year 1706. Watson's "Annals" describe the old houses in Germantown as "plastered on the inside with clay and straw mixed, and over it is laid a finishing coat of thin lime plaster. Some old houses seem to be made with log frames and the interstices filled with wattles, river rushes, and clay intermixed. In a house of ninety years of age, taken down, the grass in the clay appeared as green as when cut." These houses were generally of one story and built low, with the gable ends on the street. The doors were divided at the usual window-sill height into two parts, the upper remaining open generally to admit air and light, the lower closed so as to keep the domestic animals from running into the house. Appearing in this upper open half, like a picture in a frame, the contemplative German *bürger* might be seen, pipe in mouth, his folded arms resting on the top-board of the closed lower part, gazing dreamily at the peaceful scene of comfort before him, with an occasional grunt of satisfaction, as he let the curling clouds of smoke escape slowly from between his lips. Or it might be the buxom *frau*, her blue handkerchief pinned up to her neck, her sleeves rolled up and her bare arms and brown hands showing the unmistakable and honorable marks of untiring industry, who would show herself in the aperture, to hold a few minutes' friendly gossip with a neighbor. The *fräulein*, doubtless, might occupy the place of an evening; and "Hans" or "Fritz," slyly approaching with his fragrant pipe, may have whispered to her just as tender vows as any Spanish lover thrumming his guitar under his lady-love's balcony, in Seville.

In those days of primeval innocence, the whole street of one mile in length, Oldmixon informs us, was fronted with blooming peach-trees. But these early settlers were industrious, thrifty people; their little community grew and prospered so well that Kalm, who visited it in 1748, describes it thus, "This town has only one street, but is near two English miles long. It is for the greatest part inhabited by Germans, who from time to time come from their country to North America, and settle here because they enjoy such privileges as they are not possessed of anywhere else. Most of the inhabitants are tradesmen, and make almost everything in such quantity and perfection that in a short time this province will want very little from England, its mother country. Most of the houses were built of the stone which is mixed with glimmer, and found everywhere toward Philadelphia, but is more scarce farther on. Several houses, however, were made of brick. They were commonly two stories high, and sometimes higher. The roofs consisted of shingles of the white cedar wood. Their shape resembles that of the roofs in Sweden, but the angles they formed at the top were either obtuse, right-angled, or acute, according as the slopes were steep or easy. They sometimes formed either the half of an octagon or the half of a dodecagon.

"Many of the roofs were made in such a manner that they could be walked upon, having a balustrade round them. Many of the upper stories had balconies before them, from whence the people had a prospect into the street. The windows, even those in the third story, had shutters. Each house had a fine garden. . . . The inhabitants were so numerous that the street was always full."

Dr. Rush, in his "Manners of the Germans of Pennsylvania," says, "Pennsylvania is indebted to the Germans for the principal part of her knowledge in horticulture. There was a time when turnips and cabbage were the principal vegetables that were used in diet by the citizens of Philadelphia. This will not surprise those persons who know that the first settlers in Pennsylvania left England while horticulture was in its infancy in that country." Schoepf says that "during the Revolutionary war some of the gardens in the vicinity of Philadelphia were improved by German prisoners, who had been in the service of the king of Great Britain. They introduced and cultivated broccoli, turnip, cabbage, etc."

Dr. Rush, quoting Tacitus' description of the ancient German villages, "Each man leaves a space between his house and those of his neighbors, either to avoid the danger from fire or from unskillfulness in architecture," adds, "Many of the German villages in Pennsylvania are constructed in the same manner. The small houses are composed of a mixture of wood, brick, and clay, neatly united. The large houses are built of stone, and many of them after the English fashion. Very few of the houses in Germantown are connected together. Where the Germans connect their houses in their villages, they appear to have deviated from one of the customs they imported from Germany."

Watson mentions four *hermits* living near the town in 1700,—John Seelig, Kelpius, Bony, and Conrad Mathias. They were what remained of a small religious community adverse to matrimony, and leading a holy, secluded life. Some of the members had been tempted to marry, and the sect had gradually died away.

There was a great deal of superstition in those days, especially among the Germans. The casting of *nativities* was much practiced, and those who made profession of astrology were called *conjurers*. "Old Shrunk," of Germantown, was looked upon as a great conjurer, who could find out stolen goods, discover hidden treasures, and do many other marvelous things taught by the "black art." It was generally believed that he could, by the mere force of his will, compel a thief to stand motionless whom he discovered in his orchard, which would lead to the belief that he was acquainted with animal magnetism, even before Mesmer made his public experiments and discovered what has been named after him "mesmerism." These

people believed that the presence of a *sphoke* or ghost in some lonely spot indicated that a treasure was buried there. The belief in money and jewels having been buried on the coasts of bays and rivers by defunct pirates existed even then. Watson speaks of a Col. T. F. [Thomas Forrest], who, at a later period, used to amuse himself much with the credulity of the people. "He pretended he could *hex* (conjure) with a hazel rod, and often he has had superstitious persons to come and offer him shares in spoils which they had seen a *sphoke* upon. He even wrote and printed a curious old play to ridicule the thing. Describing the terrors of a midnight fright in digging, he makes one of the party to tell his wife:

> "My dearest wife, in all my life
> Ich neber was so fritened;
> De spirit come, and Ich did run,
> 'Twas juste like tunder, mid lightning."

Owing to the want of good roads the travel from Germantown to Philadelphia was no trifling matter, yet the women often walked to town on market days, carrying heavy baskets on their heads, while the men trundled cumbrous wheelbarrows. Other farmers, however, drove their wagons, and the farmers' wives rode stout horses, with two paniers slung on each side. On going to church or to fairs, the custom was, as it existed in Europe at that time, for man and woman to ride the same horse, the woman sitting on a pillion behind the man. It was a long time before chaises or any kind of pleasure vehicles came into use. The wagons, made to carry heavy loads of produce and merchandise, were great, cumbersome things, with enormous wheels, which went creaking along at such a pace as precluded all thoughts of an enjoyable ride.

The Germans of Germantown, as it has been stated before, were principally tradesmen and manufacturers. They made very good linens, and became also famous for their manufacture of stockings. The very fact of having bad roads leading into the city had helped to build up the prosperity of Germantown, for, Mr. Watson tells us, "to avoid such, farmers bringing produce could sell out their whole loads in Germantown. In return they could get salt, fish, plaster of Paris, clover- and grass-seed, all kinds of groceries and dry-goods." Hence the great country stores of that time, which did a thriving business until turnpikes were built and the farmers took to driving straight to the city. "Such stores were granaries for all kinds of grain, and received and cured hogs and beef. They all made money. You might see a dozen wagons at a time about their premises."

Such was the town in and about which the British lodged their troops when they took possession of Philadelphia. "They took up all the fences," says Mr. Watson, "and made the rails into huts by cutting down all the buckwheat, putting it on the rails, and ground over that. No fences remained. . . . At that time and during all the war all business was at a stand. Not a house was roofed or mended in Germantown in five or six years. Most persons who had any substance lived in part on what they could procure on loan. The people pretty generally were mentally adverse to the war, equal, certainly, to two-thirds of the population of the place who felt as if they had anything to lose by the contest. So several have told me."

The British officers were quartered in houses in the town, and demeaned themselves with propriety. The soldiers were held under strict discipline, yet there were cases of individual robbing and plundering for which the inhabitants could obtain no redress, owing to the difficulty of identifying the offenders. "A large body of Hessians were hutted in Ashmead's field, out the School Lane, near the woods. Their huts were constructed of the rails from fences, set up at an angle of 45°, resting on a crossbeam centre. Over these was laid straw, and above the straw grass sod. They were close and warm. Those for the officers had wicker doors, with a glass light, and interwoven with plaited straw. They had also chimneys made of sod-grass. They no doubt had prepared so to pass the winter, but the battle broke up their plans. One of the Hessians afterward became Washington's coachman."[1]

Gen. Howe occupied Logan's house some time. The house No. 4782 Main Street, now Germantown Avenue, possesses rare historic interest. It was built by David Deshler, an old merchant of Philadelphia, in 1772 to 1774, and was owned by him at the time of the battle of Germantown, when it was taken possession of by Sir William Howe, commander-in-chief of the British army, as his headquarters, when he moved from Stenton, with his forces to oppose the attack by Washington on the British outposts. After the battle he continued to occupy the house for some time, and tradition has it that he here received a visit from the future King William IV., then a midshipman in the British navy.

In 1782 the property was sold by David Deshler to Col. Isaac Franks, who had been aide-de-camp to Washington. On the outbreak of the yellow fever in Philadelphia, in 1793, Col. Franks closed his house and went to Bethlehem, Pa. Soon after, on account of the fever, Congress left Philadelphia, the seat of government was removed to Germantown, and Washington, as President of the United States, rented Col. Franks' vacated house ready furnished. An inventory taken at that time is still preserved.

In 1804 the premises were purchased jointly by Elliston and John Perot as a summer residence. They continued to own and occupy it thus until 1834, when, upon the death of Elliston Perot, their property was divided, and this house fell to his share, and became part of his estate. In 1834 it was purchased by his son-in-law, Samuel B. Morris, a mem-

[1] Watson's Annals of Philadelphia, vol. ii.

ber of the old shipping-house of Waln & Morris, who made it his permanent residence, and lived there until his death, in 1859, leaving it by his will to his son, Elliston P. Morris, the present owner, who now (1884) resides in it. Owing to its successive family ownership of eighty years, the property has been kept in perfect repair, and, with scarcely any change, remains to-day the same as when occupied by Gen. Howe and President Washington. It is paneled throughout, and most of its old-fashioned, open fireplaces are surrounded by quaint tiling, and the windows retain their old eight-by-ten glasses, imported from Germany for the building.[1]

The British Gen. Agnew, who was killed in the battle of Germantown, had his headquarters in "Wister's big house, opposite Indian Queen Lane." Christopher Huber's house (afterward Samuel Shoemaker's, and since Duval's) was turned into a tailoring-shop for the army. The shoemaker- and blacksmith-shops were also taken possession of, and the soldier-workmen would proceed thence daily, in squads, to do their work. The owners of the shops generally assisted them in their task, in order to keep an eye on their tools and property.

Reuben Haines' house was made use of by the British surgeons as a hospital ward for amputating limbs, etc., after the battle. The American wounded were taken to another house on the hill. Chew's house has become celebrated from the fact that to the delay caused by the attempt to dislodge the British soldiers intrenched in it has been attributed the loss of the fight. John Dickinson's handsome house at Fair Hill, where he wrote his celebrated "Farmer's Letters," was burned by the British after the battle, the beautiful woods cut down, and the place laid waste. This was the house mentioned by John Adams in his diary (in 1774): "Went with my colleagues and Messrs. Thomson and Mifflin to the Falls of Schuylkill, and viewed the museum at Fort St. David's; a great collection of curiosities. Returned and dined with Mr. Dickinson at his seat at Fair Hill, with his lady, Mrs. Thomson, Miss Norris, and Miss Harrison. Mr. Dickinson has a fine seat, a beautiful prospect of the city, the river, and country, fine gardens, and a very grand library. The most of the books were collected by Mr. Norris, once Speaker of the House here, father of Mrs. Dickinson."

Mr. Townsend Ward, in his interesting papers on "The Germantown Road and its Associations," published in the *Pennsylvania Magazine of History and Biography*, mentions a house on the road to Naglee's Hill in which is to be seen a curious relic of the olden time. He says, "On a pane of glass in one of the windows of the house a guest, it is believed an officer of the Hessian force, engraved with the diamond of his ring an admirable equestrian likeness of Frederick the Great. On the lower margin he inscribed his name, 'M. J. Ellinkhuysen, fecit, 1783, Philadelphia.' The glass of the windows are of the early eight-by-ten size, and many in their turn became broken. This one fortunately escaped, and about thirty years ago Mr. Toland had it removed and framed for preservation. One of the last acts of Miss Toland was to permit this engraving to be reproduced." At the time of the British occupation this house was George Miller's, who became a colonel in the army. His house was made the quarters of more than a dozen of the British officers.

We will now resume our narrative of events in Philadelphia. Time is a wonderful pacificator, and the allurements of pleasure are often irresistible, especially with the fair sex. The rulers were courteous and agreeable; they were received as friends by the Tory families; they gave entertainments, balls, and theatricals; the winter of 1777-78 was a season of gayety unprecedented, probably, in the annals of the city. The belles could not resist such attractions, and some of the Whig ladies partook of these amusements without giving up their principles. They may have had many, to them, excellent reasons. With some it may have been a matter of policy, a desire to conciliate the enemy, and to protect some persecuted relative; others might entertain the hope of conquering the conquerors by the power of their charms; others, still, would not give up the field to their rivals, the Tory belles; and, lastly, some there were, doubtless, who did not see the importance of the act, but thought only of the fleeting moment of pleasure they would enjoy. At all events there was no lack of fair faces at the great "Meschianza," gotten up by the British officers on the 18th of May, 1778, as a sort of *fête d'adieux*.

The first month or two of the occupation, however, had not been a very agreeable period. The Philadelphians, accustomed to good living, and who had ever had good things in abundance, suffered from the scarcity of provisions. Then hard money was exceedingly rare and paper money was worthless. Indeed, it had depreciated to such an extent before the arrival of the British that silk sold at one hundred dollars per yard, and tea commanded fifty and sixty dollars per pound. But this "hard times" period did not last long, and if prices remained high, merchandise of every kind was not wanting.

The British evacuated Philadelphia, and right upon their heels came in the Americans. It was now the turn of the Whigs to rejoice, and bitter were their feelings toward the Tories who had welcomed the British invaders. A ball was given at the City Tavern "to the young ladies who had manifested their attachment to the cause of virtue and freedom by sacrificing every convenience to the love of their country." Many were of the opinion that the Tory

[1] The picture of the "Morris House," which should have been inserted with this notice, has been in error printed under the notice of Robert Morris, the financier, in vol. i. page 278. The house in Germantown was in no way connected with him.

ladies who had taken part in the Meschianza should be excluded from this ball, and, in fact, be "put in coventry" altogether, but this did not prevail, and Tory belles danced with the American officers, as the Whig belles had danced with the British. Gen. Wayne wrote from camp in July, "Tell those Philadelphia ladies who attended Howe's assemblies and *levées* that the heavenly, sweet, pretty red-coats, the accomplished gentlemen of the guards and grenadiers, have been humbled on the plains of Monmouth. The knights of the *Blended Roses* and of the *Burning Mount* have resigned their laurels to rebel officers, who will lay them at the feet of *those* virtuous daughters of America who cheerfully gave up ease and affluence in a city for liberty and peace of mind in a cottage."[1]

Gen. Arnold, the military commander of the city, did not think as Gen. Wayne, for he not only gave the example of extravagant display and unblushing speculation, but paid particular attentions to the Tory ladies. Mrs. Robert Morris wrote to her mother at this time, "I know of no news, unless to tell you we are very gay is such. We have a great many balls and entertainments, and soon the Assembly will begin. Tell Mr. Hall even our military gentlemen are too liberal to make any distinction between Whig and Tory ladyes. If they make any, it is in favor of the latter. Such, strange as it may seem, is the way those things are conducted at present in this city. It originates at headquarters, and that I may make some apology for such strange conduct, I must tell you that Cupid has given our little general a more mortal wound than all the hosts of Britons could, unless his present conduct can expiate for his past. Miss Peggy Shippen is the fair one."

The father of the fair Peggy, Edward Shippen, Jr., did not quite approve of the prevailing extravagance, for he wrote to his father in December of that year, "I shall find myself under the necessity of removing from this scene of expense, and I don't know where I could more properly go than to Lancaster. The common articles of life, such as are absolutely necessary for a family, are not much higher here than in Lancaster, but the style of living my fashionable daughters have introduced into my family and their dress will, I fear, before long oblige me to change the scene. The expense of supporting my family here will not fall short of four or five thousand pounds per annum, an expense insupportable without business." A few months previous to this he wrote to his father that it would be very difficult to procure any Madeira wine for him; "the only pipe I have heard of for sale was limited at eight or nine hundred pounds. . . . There is no such a thing as syrup, the sugar bakers having all dropped the business a long while."

An event in the month of July of that year was the arrival of the French ambassador, Monsieur Gerard. A grand banquet was given in his honor. On the 23d of August, the birthday of Louis XVI., the President and the members of Congress called upon the ambassador to offer their congratulations, and two days afterward he gave a handsome entertainment at the City Tavern.

Mrs. Washington arrived in Philadelphia about the middle of December. On the 17th an entertainment was given in her honor, from which the Tories were excluded. "The only public evidence of grace we have had," says Dunlap's paper, "in that infatuated tribe is that not a Tory advocate nor a quondam Whig interfered on this joyous occasion." The French minister and the president of the State were present. It was a very brilliant assemblage, and every one vied in paying respect to the wife of the commander-in-chief, in whom the hopes of all true Americans were centred.

Washington arrived on the 22d of the month. The impression produced on his mind by the scenes of folly and extravagance he witnessed was that of a great sadness, and he must have possessed the greatest fortitude to resist the discouraging thoughts that assailed him when he wrote to Col. Harrison, of Virginia, "If I were to be called upon to draw a picture of the times and of men from what I have seen, heard, and in part know, I should in one word say, that idleness, dissipation, and extravagance seem to have laid fast hold of most of them. That speculation, peculation, and an insatiable thirst for riches seems to have got the best of every other consideration, and almost every order of men; that party disputes and personal quarrels are the great business of the day, while the momentous concerns of an empire, a great and accumulating debt, ruined finances, depreciated money, and want of credit, which in its consequences is the want of everything, are but secondary considerations, and postponed from day to day, from week to week, as if our affairs wore the most promising aspect. . . . Our money is now sinking fifty per cent. a day in this city, and I shall not be surprised if, in the course of a few months, a total stop is put to the currency of it; and yet an assembly, a concert, a dinner, or a supper that will cost three or four hundred pounds, will not only take men off from acting in this business, but even from thinking of it; while a great part of the officers of our army, from absolute necessity, are quitting the service, and the more virtuous few, rather than do this, are sinking by sure degrees into beggary and want."[2]

What a graphic picture! and how useless the adding another touch to it!

Meanwhile, the ladies had got a new mania for high head-dresses,—the old fashion revived, with exaggerated proportions. Timothy Pickering, writing from Philadelphia to his wife in Salem, comments as follows upon the follies of fashion:

[1] Life and Services of Gen. Anthony Wayne. By H. N. Moore.

[2] Writings of Washington, Sparks, vol. v. p. 151.

"I mentioned to you the enormous head-dresses of the ladies here. The more I see the more I am displeased with them. 'Tis surprising how they fix such loads of trumpery on their polls; and not less so that they are by any one deemed ornamental! The Whig ladies seem as fond of them as others. I am told by a French gentleman they are in the true French taste, only that they want a few French feathers. The married ladies, however, are not all infected. One of the handsomest (Gen. Mifflin's lady) I have seen in this State does not dress her head higher than was common at Salem a year ago. But you know, my dear, I have odd, old-fashioned notions. Neither powder nor pomatum has touched my head this twelvemonth, not even to cover my baldness. The latter I find a very common thing, now men have left off their wigs."

In connection with these absurdly high head-dresses an anecdote is told of the Tory belle and famous wit, Miss Rebecca Franks. She was entertaining Col. Jack Stewart, of Maryland, an old but unfortunate admirer of hers, who had called upon her after the departure of the British forces, when a noise in the street drew them to the window. The crowd was jeering a figure in female attire, who wore a head-dress of enormous size,—a caricature of the style by which the Tory belles distinguished themselves, while her skirts were ragged and her feet bare. "The lady is equipped altogether in the English fashion," unluckily remarked the colonel. "Not altogether, colonel," was Miss Frank's prompt rejoinder, "for, though the style of her head is British, her shoes and stockings are in the genuine Continental fashion."

The press kept up an incessant warfare against the extravagant fashions, but with indifferent success. The *United States Gazette* for 1779 fired this hot shot:

"Ladies are accused of robbing their breasts of gauze, cambric, and muslin for the use of their heads, with quilts or supernumerary upper petticoats for cushions, pomatum, powder, and essence,—above, their heads tower to the extremity of the fashion; below, a single petticoat leaves them as lank as rats."

But the ladies were not alone guilty of extravagance; the gentlemen laid themselves open to criticism, and were thus severely handled by a writer in the *United States Magazine* for 1777, in an article entitled "A Retaliation:"

"Does not your hair—cherokeed, couped, raised in form of a pyramid, pinned, curled, frizzed, buckled, plaited, ramillied, cued, clubbed, confined in a bag, or loosely flowing on the shoulders—revolve through as varied a whimsicality of modes as any female's on this continent? And to complete the whole, have not many of you, in this scarcity of tortoise-shell, introduced the crooked comb, lest some rude breath of wind might derange a straggling hair from the position to which your friseur may have confined it?

"They are imitators of the enemy. Nor has love of country prevented the Anspacher[1] from triumphing even over the hat *à la* Washington.[2]

"When silver was plenty and easy attainable, an insignificant piece, much about the size of an English shilling, fixed above the upper joint of the great toe, gave the foot an inimitable grace and elegance in the eyes of the spectator; but in the present scarcity of that metal, behold the buckle expanded over the shoe in quantity sufficient for a tankard or a coffee-pot.

"At present we are deprived of almost every source of supplying furs, and you know the extreme demand for wool for the manufacture of clothing. As a natural consequence, the hat, which was lately pared and pruned till its little brim left the nose of the wearer exposed to the scorching heat of the noonday sun, is now metamorphosed and extended to the size of my tea-table, till, involved in the vast circuit, we are often at a loss to know where to find the head of the owner; and, when found, we sometimes discover it is not worth the trouble it cost us in the search.

"When superfine cloth might be purchased for thirty shillings, and other materials for clothing were proportionably cheap, it was really difficult, without the aid of a magnifying-glass, to discover where were the skirts of your coats, or whether they had any skirts at all. At present they have got below the knee. And I have no doubt, should the prices of articles increase five or six hundred per cent., we shall see them *à la Hesse*, dangling below the middle of the leg, like those worn by the officers made prisoners that night when the fate of millions yet unborn was vibrating in the air, and the guardian angel of America, in the person of our illustrious chieftain, preponderated in the scale.

"I can very well remember the time when a little rattan was thought a necessary appendage for the hand of a smart fellow, but now discarded from all kind of estimation. The gold-headed cane, with its string and tassel, hath become almost as necessary as the hand that carries it or the wrist on which it is hung."

The following list of articles stolen from Jacob Bankson, "living in Penn Street, corner of an alley leading to Willing's & Morris' wharf," will give an idea of a private citizen's wardrobe in 1779:

"One light-colored cloth coat; one purple ditto; narrow red and white stripped linen coat and waistcoat; scarlet cloth jacket; breeches, edged with white silver buttons; one scarlet ditto; waistcoat, worsted back, yellow metal buttons; one buff-cloth waistcoat and breeches, plated silver buttons; one white cloth waistcoat and breeches, one white cloth waistcoat with a belt; one pair brown cloth breeches; one elegant large cotton counterpane; two morning-gowns, one single and the other double; two women's long cotton gowns; one white Holland polance; one pair scarlet silk-velvet breeches, gold knee-bands; one black cloth coat, waistcoat, and breeches; one black silk waistcoat and breeches; one elegant shaded silk gown and petticoat; two pink Mantua gowns; one pink Mantua polance; one nankeen riding-dress; one long scarlet cloth coat, etc., etc."

Four hundred pounds reward were offered for the return of these goods.

To complete the picture, we have the description of the outfit of a bridegoom furnished in Philadelphia and for use during the honeymoon:

"A light-colored broadcloth coat, with pearl buttons; breeches of the same cloth; ditto black satin; best swansdown buff stripe; ditto moskin, checker figure; ditto satin figured; ditto Marseilles, white; ditto muslin set, figured; underveat, faced with red cassimere; two ditto, flannels; one ditto cotton ditto; one pair black patent silk hose; one ditto, white ditto; one ditto, stripe ditto; ten or one dozen white silk hose; three pairs of cotton hose; four pairs of gauze ditto; a towel; six shirts; twelve neck-kerchiefs; six pocket-handkerchiefs, one a bandanna; a chintz dressing-gown; a pair of silk gloves; ditto old kid ditto."

Mrs. Bache, in her letters to her father, Dr. Franklin, who was then American minister to France, refers frequently to the high prices and scarcity of articles of dress:

"They really ask me six dollars for a pair of gloves, and I have been obliged to pay fifteen pounds fifteen shillings for a common calamanco petticoat without quilting, that I once could have got for fifteen shillings. I buy nothing but what I really want, and wore out my silk ones before I got this. . . . The prices of everything here are so much raised that it takes a fortune to feed a family in a very plain way. A pair of gloves seven dollars, one yard of common gauze twenty-four dollars, and there never was so much dressing and pleasure going on,—old friends meeting again, the Whigs in high spirits, and strangers of distinction among us. . . . The minister was kind enough to offer me some fine white flannel, and has spared me eight yards. I wish to have it in my power to return him as good, which I will beg you will enable

[1] The large hat, so called because worn by the Anspachers.

[2] The small military hat which was generally used in our army, and which had been introduced into France by that appellation.

me to do." . . . She had asked for some fine linen, long black pins, and some lace and feathers, to be sent to her from France. Franklin ends a letter of mild reproof with the following characteristic remarks: "I therefore send all the articles you desire that are useful and necessary, and omit the rest; for, as you say you should 'have great pride in wearing anything I send, and showing it as your father's taste,' I must avoid giving you an opportunity of doing that with either lace or feathers. If you wear your cambric ruffles as I do, and take care not to mend the holes, they will come in time to be lace; and feathers, my dear girl, they may be had in America from every cock's tail." Mrs. Bache, in her letter in reply to this, justifies herself from any wish to be extravagant, and says, further, "I can assure my dear papa that industry in this house is by no means laid aside; but as to spinning linen, we cannot think of that till we have got that wove which we spun three years ago. . . . I did not mention the feathers and pins as necessaries of life, as my papa seems to think. I meant as common necessaries were so dear, I could not afford to get anything that was not, and begged he would send me a few of the others. . . . Home will be the place for me this winter, as I cannot get a common winter cloak and hat, but just decent, under two hundred pounds. As to gauze, now it is fifty dollars a yard, 'tis beyond my wish, and I should think it not only a shame, but a sin, to buy it if I had millions. I should be contented with muslin caps if I could procure them in winter; in the summer I went without; and as to cambric, I have none to make lace of."[1]

The private letters of that period of folly all agree in deploring the general extravagance.[2] Gen. Greene wrote that the luxury he thought predominant in Boston was no more to be compared to what prevailed in Philadelphia "than an infant babe to a full-grown man." He dined at one table where there were "an hundred and sixty dishes." Franklin is "astonished and vexed" to find that "much the greatest part of the Congress interest bills come to pay for tea, and a great part of the remainder is ordered to be laid out in gewgaws and superfluities." An entertainment is spoken of at which *eight hundred pounds* were spent in pastry.

A letter to Gen. Wayne from a brother-officer in Philadelphia tells of the effect this extravagance had on society:

"Permit me now to say a little of the dress, manners, and customs of the town's people. In respect to the first, great alterations have taken place since I was last here. It is all gayety, and, from what I can observe, every lady and gentleman endeavors to outdo the other in splendor and show. The manners of the ladies are much changed; they have really, in a great measure, lost that native innocence in their manners which formerly was their characteristic, and supplied its place with what they call an easy behavior. The manner of entertaining in this place has likewise undergone its change. You cannot conceive anything more elegant than the present taste. You will hardly dine at a table but they present you with three courses, and each of them in the most elegant manner."

What a contrast these pictures of luxurious living present to Washington's well-known personal economy, even during better times, as illustrated in the following anecdote, related by Mr. Griswold in his "Republican Court." It was during Presidential times in New York. "Fraunces (the steward of President Washington) was always anxious to provide the first dainties of the season for his table. On one occasion, making his purchases at the old Vly Market, he observed a fine shad, the first of the season. He was not long in making a bargain, and the fish was sent home with his other provisions. The next morning it was duly served, in the best style, for breakfast, on sitting down to which Washington observed the fragrant delicacy, and asked what it was. The steward replied that it was 'a fine shad.' 'It is very early in the season for shad; how much did you pay for it?' 'Two dollars.' 'Two dollars! I can never encourage this extravagance at my table; take it away; I will not touch it.' The shad was accordingly removed, and Fraunces, who had no such economical scruples, made a hearty meal upon it in his own room."

A glance at the prices paid for various necessaries of life will give an idea of the depreciation of paper money in 1779, and make the culpable extravagance of the fashionable society still more incomprehensible. Butter sold at from two to three dollars a pound; flour at twenty pounds the hundred-weight; green peas, twenty to twenty-five shillings the half-peck. A silk handkerchief cost forty dollars, a man's hat four hundred dollars, a pair of leather breeches three hundred dollars, a pair of shoes one hundred and twenty-five dollars, and a suit of clothes sixteen hundred dollars! Fish must have been dear, when a fish-hook was worth half a dollar! Such was the price at which William Livingston bought a few for Anthony Bleeker and some other "gentlemen fishers."

It is no wonder that the excitement caused by this abnormal state of things culminated in the riot known as the "Fort Wilson Affair." That the disturbance was short-lived and was suppressed at the cost of so few lives is still more surprising.

The utter want of discretion of the Tories, their open sympathy with the enemy of their country, and their avowed hostility to the government, caused general indignation and, not unfrequently, fierce denunciations. These infatuated people seemed to court persecution. The Tory ladies, especially, made themselves conspicuous by their open sympathy for everything British. Governor William Livingston, of New Jersey, says, in a letter to his daughter in Philadelphia, "I know that there are a number of flirts in Philadelphia, equally famed for their want of modesty as want of patriotism, who will triumph in our over-complaisance to the red-coated prisoners lately arrived in that metropolis. I hope none of my connections will imitate them, either in the dress of their heads or in the still more Tory feelings of their hearts."

But if such frivolous creatures were to be met with in Philadelphia, that city could boast of a large majority of true-hearted daughters of America. In the spring of 1780, when the distress of the American army was at its height, the ladies of Philadelphia undertook to collect by voluntary subscriptions money and clothes for the tattered soldiers, who were suffering s ‑eprivations in the cause of freedom.

[1] Letters to Benjamin Franklin from his Family and Friends, and Works of Franklin, Sparks.

[2] See the interesting sketch "Philadelphia Society One Hundred Years Ago," in the *Pennsylvania Magazine of History and Biography*, No. 4 of vol. iii.

Mrs. Reed was at the head of this movement, which was eminently successful, for the collections in Philadelphia City and County alone amounted to upwards of three hundred thousand dollars paper currency. Circulars were addressed to neighboring counties and States, and met generally with a liberal response. Maryland and New Jersey contributed generously.

William B. Reed, in his "Life of Esther Reed," says, "The original memoranda and accounts of these contributions, with the names of each committee and contributor, are in my possession. The number of contributors was 1645, thus apportioned: The city, 1099; Southwark, 152; Northern Liberties, 171; Germantown, 152; and Bristol, 13. All ranks of society seem to have united, from Phillis, the colored woman, with her humble 7*s.* 6*d.*, to the Marchioness de Lafayette, who contributed one hundred guineas in specie, and the Countess de Luzerne, six thousand dollars in Continental paper and one hundred and fifty dollars in specie."

We take the liberty of copying *in extenso* from Mr. Reed's book two letters of historic interest. The first is addressed to Gen. Washington, and dated Philadelphia, July 4, 1780:

"SIR,—The subscription set on foot by the ladies of this city for the use of the soldiery is so far completed as to induce me to transmit to your Excellency an account of the money I have received, and which, although it has answered our expectations, it does not equal our wishes, but I am persuaded will be received as a proof of zeal for the great cause of America, and our esteem and gratitude for those who so bravely defend it.

"The amount of the subscription is 200,580 dollars, and £625 6s. 8d. in specie, which makes in the whole in paper money 300,634 dollars.

"The ladies are anxious for the soldiers to receive the benefit of it, and wait your directions how it can best be disposed of. We expect some considerable additions from the country, and have also wrote to the other States in hopes the ladies there will adopt similar plans to render it more general and beneficial.

"With the utmost pleasure I offer any further attention and care in my power to complete the execution of the design, and shall be happy to accomplish it agreeably to the intentions of the donors and your wishes on the subject.

"The ladies of my family join me in their respectful compliments and sincere prayer for your health, safety, and success. I have the honor to be, with the highest respect,

"Your obedient humble servant,

"E. REED."

The other letter accompanied the offering of Madame de Lafayette:

"HEADQUARTERS, June 25, 1780.

"MADAM,—In admiring the new resolution, in which the fair ones of Philadelphia have taken the lead, I am induced to feel for those American ladies who, being out of the continent, cannot participate in this patriotic measure. I know of one who, heartily wishing for a personal acquaintance with the ladies of America, would feel particularly happy to be admitted among them on the present occasion. Without presuming to break in upon the rules of your respected association, may I most humbly present myself as her ambassador to the confederate ladies, and solicit in her name that Mrs. President be pleased to accept of her offering. With the highest respect, I have the honour to be, Madam,

"Your most obedient servant,

"LAFAYETTE."

In Washington's answer to Mrs. Reed, he suggests that the amount collected should be deposited in the newly-created bank, and bank-notes received in lieu of it to purchase the articles intended. He adds: "This, while serviceable to the bank and advancing its operations, seems to have no inconvenience to the intentions of the ladies. By uniting the efforts of patriotism they will reciprocally promote each other, and I should imagine the ladies will have no objection to a union with the gentlemen."

It is refreshing, after recording scenes of frivolity and extravagance, to dwell upon such evidences of noble patriotism. The former are forgiven and forgotten; the latter will live forever in the hearts of true Americans. However great the sufferings of our forefathers, however praiseworthy their endurance and self-sacrifice, they could not have accomplished their work if the women of America had not been faithful to the holy cause of freedom and independence. The names of the heroes of the Revolution have been recorded in prose and verse. How many acts of female heroism have passed unknown or unremembered? Had she not the heart of a heroine, that Philadelphia lady who wrote to a British officer, a former friend of her family, "I will tell you what I have done. My only brother I have sent to the camp with my prayers and blessings, and had I twenty sons and brothers they should go to emulate the great examples before them. I have retrenched every superfluous expense in my table and family. Tea I have not drânk since last Christmas, nor bought a new cap or gown since your defeat at Lexington. I have the pleasure to assure you that these are the sentiments of all my sister Americans. They have sacrificed assemblies, parties, tea-drinkings, and finery to the great spirit of patriotism. If these are *our* sentiments, what must be the resolutions of our husbands *but to die or be free!* All ranks of men among us are in arms. Nothing is heard in our streets but the trumpet and drum, and the universal cry is 'Americans to arms!'" But this was written in the early days of enthusiasm. Many thought and acted likewise, who, while still ready to sacrifice their lives, could not, at a later date, steer clear of the whirlpool of fashionable extravagance.

The taste for fashionable frivolity and display during the gloomy winter of 1780 was not confined to Philadelphia. Eugene Lawrence, in speaking of New York City at this time, in a paper read before the New York Historical Society,[1] Jan. 6, 1857, says, "Meanwhile, in the midst of all this suffering and want, the city streets were filled with the fashions and luxuries of Europe. The ladies crowded William Street, and the merchants spread out the most costly wares. French silks, captured in some unlucky vessels, sold readily at extravagant rates. Lutestrings and poplins, brocades, and the best broadcloth of England were shown on the counters of William Street and Wall; and it is a curious circumstance that through all the war William Prince, of Flushing, continued his advertisement of fruit and flowers, of

[1] History of New York City, by William L. Stone, p. 268, note.

magnolias and apricots, and of the finest grafts and the rarest seeds."

Mrs. Riedesel, wife of a German general in the British service, in a letter to her mother tells a laughable anecdote of fashion. "We remained," she wrote, "the entire summer of 1780 upon this lovely estate" (Gen. Clinton's country-seat on the Hudson). "Two Miss Robinsons came to share our loneliness and enliven our little company. They remained with us a fortnight previous to our return to the city, when the news of the arrival of a ship from England, bringing over the latest fashions, took them back again to the town. On our return to the city I scarcely recognized them in their odd and actually laughable garb, which a very pretty woman, just over from England, had imposed upon them and the other New York ladies. . . . Accordingly, she made them think that in England they wore bodies that were parted in the middle, whereby the points stuck upwards, hoops as large around as those of a hogshead, and very short cloaks tied up with ribbons, all of which they believed implicitly, and copied after."[1]

Witty Rebecca Franks was in New York at that time, her father, David Franks, having been invited by the Pennsylvania government to leave Philadelphia, and in one of her chatty letters to her sister—the wife of Andrew Hamilton—she pays a high compliment to the Philadelphians. She wrote, "By the bye, few ladies here know how to entertain company in their own houses, unless they introduce the card-table. Except the Van Hornes, who are remarkable for their good sense and ease, I don't know a woman or girl who can chat above half an hour, and that on the form of a cap, the color of a ribbon, or the set of a hoop, stay, or *jupon*. I will do our ladies—that is, the Philadelphians—the justice to say, that they have more cleverness in the turn of an eye than those of New York have in their whole composition. With what ease have I seen a Chew, a Penn, an Oswald, an Allen, and a thousand others, entertain a large circle of both sexes, the conversation, without the aid of cards, never flagging nor seeming in the least strained or stupid." Miss Franks was certainly a judge in matters conversational. She concedes, *entre nous*, to the New York girls one advantage over the Philadelphians: they have a greater quantity of hair and better forms. She rattles away about the ways of the New York ladies, who avow too freely their partiality for a man and are the first to show a preference, and finally comes down to the question of dress. She describes the fashions as follows: "I shall send a pattern of the newest bonnets: there is no crown, but gauze is raised on wire, and pinched to a sugar loaf at the top,—the lighter the trimming the more fashionable,—and all quilling. Nancy Van Horne and myself employed yesterday morning in trying to dress a rag baby in the fashion, but could not succeed; it shall go, however, as it will in some degree give you an opinion on the subject. As to the jacket, and the pinning on of the handkerchief, yours, you say, reaches to the arm. I know it, but it must be pinned up to the top of the shoulders, and quite under the arm, as you would a girl's vandyke. The fuller it sets the handsomer it is thought. Nobody ever sets a handkerchief out in the neck, and a gauze handkerchief is always worn double, and the largest that can be got; it is pinned round the throat, as Mrs. Penn always did, and made to set out before like the chitterling of a man's shirt. The ladies here always wear a pin or a brooch, as the men do." She mentions two pairs of shoes sent to her by her aunt Richa from England; "one pair, dark maroon, embroidered with gold, and the other, white, with pink." Miss Franks, soon after the war, was married to Lieut.-Gen. Sir Henry Johnston, and subsequently lived in England. The witty and sarcastic sayings of this Philadelphia belle have often been quoted and would fill a volume. She had an irrepressible fondness for repartee, and would hit a friend for want of a foe, as she did Sir Henry Clinton at a ball in New York. While conversing with her that officer called to the musicians, "Give us 'Britons, strike Home!'" "The commander-in-chief has made a mistake," exclaimed Miss Franks, "he meant to say, Britons, go home!"[2]

But her humor was not always of the most refined. The correspondence between her and Gen. Charles Lee, published in the *United States Magazine* for January, 1779, somewhat extraordinary in its character, arose out of an assertion (at least it was so said by Gen. Lee) attributed to Miss Franks, that Gen. Lee "wore green breeches patched with leather." He said that they were "actually legitimate sherryvalies, such as his majesty of Poland wears (who, let me tell you, is a man who has made more fashions than all your knights of the Meschianza put together, notwithstanding their beauties)." In a note it is said that sherryvalies "are a kind of long breeches, reaching to the ankle, with a broad stripe of leather on the inside of the thigh, for the convenience of riding."

Of a very different sort was the wit of another famous belle of that time, the accomplished Miss Vining. Miss Montgomery, in her "Reminiscences of Wilmington," says "her rare beauty and graceful form commanded admiration, and her intellectual endowments—a mind stored with historical knowledge and sparkling effusions of wit—entertained the *literati* and amused the gay. The singular fluency and elegance with which she spoke the French language, with her vivacity, grace, and amiability, had made her a general favorite with the French officers, who praised her in their home correspondence to such a degree that her name became familiar in Paris, and the queen, Marie Antoinette, spoke of her

[1] Ibid.

[2] "Anecdotes of the American Revolution." Garden.

with enthusiasm to Mr. Jefferson, expressing a wish that she might some time see her at the Tuileries. The intimate friendships she formed during the Revolution were preserved after the peace, by a large correspondence with distinguished men. Lafayette appears to have been very much attached to her, and she wrote to him frequently until she died. Foreigners of rank rarely visited Wilmington, after Miss Vining's retirement from the society of Philadelphia, without soliciting an introduction to her. Among her guests were the Duke de Liancourt, the Duke of Orleans (Louis Philippe), and many others; and it is related that Gen. Miranda, passing through the town in a mail-coach, at night, left his card for her at the post-office. The death of her brother, a man of eminent abilities, who was chosen at an early age a member of Congress from Delaware, was followed by a series of misfortunes, and, retiring from the gay world in the maturity of her charms, she passed the closing years of her life in poverty and seclusion."[1]

Miss Vining's opinion of the society of Philadelphia is expressed in a letter to Governor Dickinson in 1783 (she was then twenty-five years of age), when she complained that Philadelphia had lost all its gayety with the removal of Congress from the city. "You know, however," she adds, "that here alone can be found a truly intellectual and refined society, such as one naturally expects in the capital of a great country."

The bonnet called the "calash" came into notice about 1780, and is thus ridiculed in Rivington's *Gazette* of 1782:

"Hail! great Calash! o'erwhelming veil!
 By all indulgent Heaven
To sallow nymphs and maiden stale
 In sportive kindness giv'n;
Safe hid beneath thy circling sphere,
 Unseen by mortal eyes,
The mingled heap of grease and hair
 And wool and powder lies!
From the bald head should pad and tête,
 And loads of horsehair fall,
Fear not the loose, disordered pate,
 Calash will hold them all!"

But the "calash" was only worn out-doors. The pyramid of hair now thrown back obliquely over the head, with light crisp curls at the base, was surmounted by figures of butterflies, caterpillars, coaches and horses, etc., in blown glass. These ridiculous ornaments, much in vogue in England at that time, were not very long the fashion. Friendly relations with France had had for one of its first results the introduction of the French modes in the ladies' dress. The *coiffure* of lofty feathers, invented by Mlle. Bertin, the Paris milliner, and cherished by the unfortunate Marie Antoinette, was received with much favor by the Philadelphia ladies. This head-dress is thus described in 1781:

"A cap like a bat,
Which was once a cravat,
 Part gracefully plaited and pinned is;
Part stuck upon gauze
Resembles macaws,
 And all the fine birds of the Indies!
But above all the rest,
A bold, amazing crest
 Waves nodding from shoulder to shoulder!
At once to surprise,
And to ravish the eyes—
 To frighten and charm the beholder!
In skirt, head, and feather,
And wig altogether,
 With wonder and joy would delight ye!
Like the picture I've seen
Of th' adorable queen
 Of the beautiful, blest Otaheite!"

The satirist does not inform us whether in Philadelphia, as it did in Paris, this towering head-dress compelled the wearer, as she rode in her carriage, either to hang her head out at the door or to sit on the floor of the vehicle.

Not every woman's hair furnished sufficient material for these elaborate pyramids; besides, they proved very awkward at bedtime, and could not be arranged at a moment's notice, so it became the fashion for ladies to wear wigs. Whether they consented to the sacrifice of having their hair shaved, as did the men, or some artificial means were found by which they could wear these cumbrous appliances over their own hair, history telleth not. The use of wigs had long been discarded by the mass of the people, but was still the necessary appendage to a gentleman of fashion's dress. At home they got rid of it, and wore a velvet cap to protect their bald pates in winter and a linen cap in summer. Their velvet or fine broadcloth coat was also laid aside, and the more comfortable dressing-gown of flowered damask donned. These coats were of all colors, and the dressing-gowns not always of damask. Worthy citizens were often seen on the streets during business hours clad in a flowing gown of calico.

The return of peace having permitted the importation of foreign goods, a fall in the prices was the natural consequence, and the ladies could indulge more freely in their taste for dress. Mr. Griswold, in "The Republican Court," page 268, says in a note, "During the period in which Philadelphia was the seat of government, on the arrival of the spring and fall ships from England, the pavements all along Front Street, from Arch Street to Walnut Street, were lumbered and scattered, before the doors of importers, with boxes and bales of English dry-goods, the clerks, apprentices, and subordinates of the merchants as busy as bees in their several vocations, some with sharp knives and claw-hammers ripping and breaking open the packages and cases, and others within-doors exhibiting the goods as salesmen, altogether displaying a pleasant bustle of rivalship and competition. The retailers, principally women, were hovering around, mingling with the men, and viewing with admiration the rich varieties of foreign chintzes,

[1] Griswold's "Republican Court," note to p. 21.

muslins, and calicoes of the latest fashions. All sums of money were computed in pounds, shillings, pence, and farthings, dollars and cents being unused denominations, except in the reports of Mr. Hamilton." "The first brilliant retail fancy dry-goods shop was opened about this time," says a writer in *Hazard's Register*, "by a Mr. Whitesides, as it was said, from London, in the true Bond Street style, at No. 134 Market Street, and the uncommon size of the panes of glass, the fine mull-mull and jaconet muslins, the chintzes and linens, suspended in whole pieces and entwined together in puffs and festoons, and the shopmen behind the counter, bowing and smiling, created for a time some sensation."

It was no longer the time for such prices as Capt. McLane paid to William Nicolls,[1] in January, 1781, to wit: one pair boots, six hundred dollars; six and three-quarter yards calico, at eighty-five dollars per yard; six yards chintz, at one hundred and fifty dollars per yard; four and a half yards moreen, at one hundred dollars per yard; four handkerchiefs, at one hundred dollars apiece; eight yards quality binding, at four dollars per yard; one skein of silk, ten dollars. The total amount is $3144.50, but with the proviso, "If paid in specie, £18 10*s*."

Mr. Watson tells a good story about the first fancy retail hardware-store, with bulk-windows, opened by James Stokes, in what had been the old Coffee-House, at the southwest corner of Market and Front Streets. "The buck-handled 'Barlow' penknives, the gilt and plated buttons, and the scissors, curiously arranged on circular cards (a new idea), and the bulk-windows lighted up at night (a new thing), was a source of great gratification to the boys and the country market-people lounging about with arms folded, on Tuesday and Friday evenings. One evening, among a group of gazers from about Conestoga, one of them exclaimed to the others in Pennsylvania German (Dutch), 'Cook a mole har, cook do! meiner sale!'" In German, "Guck' einmal her! Guck' da! Meine seele!" *i.e.*, "Only look here! Look at that! My soul!"

The trying times of the Revolution were now over. After the heroism displayed in the long struggle, wisdom must consolidate the new government, in order that the victory shall not be barren. The situation was still critical, but we had Washington.

The study of the manners and customs of a people is intimately connected with that of their political history. Thus we see the influence of the Quaker ideas of the early founders of Philadelphia strongly marked in the picture of Philadelphia society at the beginning of the eighteenth century. This influence is already greatly modified toward the middle of the century, by the increase of that part of the population which entertained views at variance with those of the Friends. Then came the Revolutionary period; the Quakers were generally opposed to the war; their influence wanes and disappears; they cannot resist the current of new ideas, and they are even compelled to compromise with the world; still the minority they form in the community is of immense importance,—Quaker simplicity checks worldly extravagance and helps it to return from excess to moderation. But the Revolutionary period is a period of transition; society is swayed by the alternate victories of conflicting elements and by foreign influences. The travelers who visited our shores during the war, and who speak with praise of our society, pay it a rare compliment; they must have instinctively recognized the characteristics, still undeveloped, of the American society of the future, the society born in peace, when with the turmoils of war had ceased the follies and exaggerations of an unsettled public taste.

The rigidity of President Washington's principles, the examples of economy and simplicity to be found in his manner of living, the sweet influence of Mrs. Washington, and of such superior women as her friends, Mrs. Hamilton, Mrs. Knox, Mrs. Morris, Mrs. Stewart, Mrs. Powell, Mrs. Bradford, Mrs. Otis, and Miss Ross, gave an elevated tone to that society among whose brightest ornaments were that leader of taste and elegance and famous beauty, Mrs. Bingham (daughter of Thomas Willing), whom Mrs. Adams mentions as the "dazzling Mrs. Bingham," Miss Nancy Hamilton, Mrs. Madison, or, we should say, the fascinating Widow Todd, for she married Mr. Madison in 1794, and those favorite young friends of Washington, Miss Harriet Chew, who some years after married Charles Carroll, Jr., of Maryland, her sister, Mrs. Henry Philips, and their elder sister, Peggy, who married Col. John Eager Howard, of Baltimore, in 1787. She then left Philadelphia, but came back to reside in 1796, while her husband attended Congress as a senator from Maryland. The Chew sisters were renowned for their beauty and amiability.

Mrs. Washington's first *levée* in Philadelphia is thus spoken of by Miss Sally McKean in a letter to a friend in New York: "You never could have had such a drawing-room; it was brilliant beyond anything you can imagine; and though there was a great deal of extravagance, there was so much of Philadelphia taste in everything, that it must have been confessed the most delightful occasion of the kind ever known in this country." The "extravagance" mentioned by Miss McKean must have been little to the taste of the President, who attended his wife's *levées* as a private gentleman, much relieved at dispensing with the ceremonious forms of his official receptions, if we are to judge by his own words when he wrote to Mrs. Catherine Macaulay, "Our wishes are limited, and I think that our plan of living will now be deemed reasonable by the considerate part of our species. Mrs. Washington's ideas coincide with mine own as to simplicity of dress and everything

[1] Watson's Annals, vol. ii.

which can tend to support propriety of character, without partaking of the follies of luxury and ostentation."

Oliver Wolcott, on being appointed auditor of the Treasury, in 1789, went to New York to see whether he would be able to maintain his family there on the emoluments of his office, and after due inquiry wrote to his wife: "By observation of the people in public service, and other respectable families, I am confident that no change in our habits of living will be in any degree necessary. . . . *The example of the President and his family will render parade and expense improper and disreputable.*" When Congress was removed to Philadelphia rents rose and the markets became dearer. Mr. Wolcott wrote to his wife: "I have at length been to Philadelphia, and with much difficulty have procured a house in Third Street, which is a respectable part of the city. The rent is one hundred pounds, which is excessive, being nearly double what would have been exacted before the matter of residence was determined."

That rents and the cost of living had increased was the natural consequence of the influx of population resulting from the transfer of the seat of government. Philadelphia was the great metropolis, to which came travelers and foreigners of distinction, impelled by curiosity to see this new republican government, or by admiration for the great man who had brought his country safely through a crisis such as no other people had ever known. Then there were the numerous officers of the government and their families, and many eminent citizens from other parts of the country, attracted, as by a magnet, by the presence of Washington and the Congress. More remarkable was the change which had taken place in the customs of the people between the time of the ending of the war and the return of Congress. The vagaries of fashion during that period have been recorded.

An inventory of the wardrobe of Gen. Lord Sterling, published in the "American Historical Record," vol. i., shows that officer to have been remarkably well provided, as the total of garments was four hundred and twelve, among which were thirty-one coats, fifty-eight vests, forty-three pairs of breeches, thirty shirts, one hundred and nineteen pairs of hose, fourteen pairs of shoes, and four pairs of boots. It may show either how scarce were gloves, or how unusual was the wearing of them at this time, that Sterling had but two pairs of gloves, while he had fifty-four cravats and stocks. The list is without date, but probably it was taken in the Revolutionary war, as among the articles are a "blue cloth coat, vest, and breeches (regimental), laced with gold." Hats or caps are not mentioned in this inventory. The breeches were showy, being of various striking colors, and made of crimson and figured velvet; brown cloth, lined with red; gay with gold lace; white, claret, scarlet, and other varieties of colors. The coats were of cinnamon silk, blue cloth, brown mixed, white cloth, blue, claret, scarlet, brown, black, plum, gray, parson's gray, and other colors. The stockings were of various colors and material; and the vests, in most cases, of the color of the coats and breeches.

Lord Sterling was excusable, but fashion does not stop at lords; it penetrated even into the agricultural districts of Pennsylvania.

In the *Freeman's Journal* of July 10, 1782, a farmer complains against tie-wigs with tails, double rows of gilt buttons upon coats and waistcoats, and laced and embroidered garments. He said,—

"My eldest son, having spent some weeks in the city, comes home a mere baboon; hair besprinkled as white with powder as that of an old man of eighty years of age; a pair of ruffles reaching from his wristbands to the extremity of his nails; a strip of gold lace encircling his hat, with a button and loop of the same metal; a huge stock on his neck, containing muslin enough to be his winding-sheet; a suit of superfine clothes, wrought out in a most glaring manner; and, to complete all, a long piece of cold iron, called a sword, dangling after him,—in imitation, I suppose, of some coxcomb he has seen in town."

A few days afterward, "Priscilla Tripstreet" says,—

"Umbrellas used by men ought to be taxed; they are unfit for a man. Why should the men's silver, pinchbeck, and plaited shoe-buckles, weighing a pound each, be passed over in silence?"

Even the Quakers were not free from the contagion; not so much the men, for Brissot de Warville, in 1788, describes the Quaker dress as—

"a round hat, generally white; cloth coat; cotton or woolen stockings; no powder in their hair, which is cut short, and hangs around. They carry in their pockets a little comb in a case; and, on entering a house, if the hair is disordered, they comb it before the first mirror they meet. They put on woolen stockings on the 15th of September. It is an article of discipline, which extends to their clothing."

But the Quaker ladies, if prohibited from imitating their worldly sisters and too timid to follow the example of pretty Dolly Payne, who, after the death of her Quaker husband, Todd, became one of the gayest belles of the republican court, nevertheless introduced many little improvements in their toilet that would have horrified the meetings of olden times. De Warville says of them,—

"The Quaker matrons wear the gravest colors, little black bonnets, and their hair simply turned back. The young women curl their hair with great care and anxiety, which costs them as much time as the most exquisite toilet. They wear little hats, covered with silk or satin. They are remarkable for their choice of the finest linens, muslins, and silks. Elegant fans play between their fingers. Oriental luxury itself would not disdain the linen they wear."

Three years later the Duke de la Rochefoucauld-Liancourt made the sage reflection, "Ribbons please young Quakeresses as well as others, and are the great enemies of the sect."

In *The Times*, by Peter Markoe, published in 1788, the poet says,—

"Genius of Penn! couldst thou thy mansion quit
And hear sound Sense abused by flimsy Wit;
Couldst thou behold by fops thy habit mocked,
And view the doubtful hat, half-flapped, half-cocked;
Locks which the useful comb have seldom known,
And cheeks which glow with roses not their own;
Stays which distress the fashionable belle,
Producing more than Nature's graceful swell,

> Whilst Art, the foe of genuine beauty, spreads
> Hoops from their waists and cushions on their heads—
> Struck by the scene less wicked than uncouth,
> How wouldst thou pity our degenerate youth!"

In "The Trifler," published in the *Columbia Magazine* for 1788, the writer makes a very sarcastic attack on the ladies. He says,—

"A few years ago the happiness of the ladies depended as much on the display of their necks and the contraction of their waists as it now does upon their anterior projection and posterior plumpness. Miss Becky Catastrophe—a young lady of a diminutive size—has quitted a ball-room in the extremest mortification because her *bishop* was not as large as Mrs. McRump's,—a matron whose natural swell might have disclaimed the assistance of Art! And Mrs. Palace has scarcely excited so much envy by the elegance of her manners and the brilliancy of her equipage as by a voluminous *craw*, which, like the fortification of Gibraltar, serves indeed to keep everybody at a distance. But, then, the difficulty of conveying provisions to the garrison is equally great in both instances."

In Carey's *Herald*, the year before, the disappearance of the queues is thus noted,—

"There is said to be a rage for cropping. Many of our young men lately have discumbered themselves of queues and clubs, and even some beaux, lately arrived from London and Paris, have docked those ancient ornaments of the head, and adopted a style called *à la mode d'Amérique*."

This fashion came from France. The influence of that country on the Americans' style of dress was great after the Revolutionary war, and still more so during the French Revolution. The Parisian republicans looked to ancient Greece and Rome for simplicity of dress, and the skirts, flounces, and trains gave way to the simple flowing robe *à l'antique*, with short sleeves and the waist under the armpits. This radical change in the ladies' garments crossed the ocean in due time. Another grateful change was the total abandonment of powder and high head-dresses.

In 1791 these changes had not all taken place, but an unbecoming fashion was thus satirized:

"THE CRAW OF FASHION—A NEW SONG.

> "Fashion! mayst thou ever reign
> In each city, on each plain!
> Lying rouge we now despise!
> Fashions cease to scale the skies!
> Taste ordains a newer law,
> And establishes the Craw!
>
> * * * * * * *
>
> "Beauty, with true lustre shine!
> All will own thee half divine!
> If to reason thou shouldst bend,
> Truth will own thee Reason's friend.
> Study to preserved applause:
> *Maids* have *bosoms*—*geese* have *craws*!"

The changes in male costumes were more important even than those in the dresses of the ladies: cloth of various colors was now used instead of silk, satin, and velvet, richly embroidered, which had been the previous style. The stiffening was taken out of the skirts of coats, the waists were shortened, and waistcoats were cut so short that they did not reach the hips. Breeches gradually vanished from view. Shoes were subject to experiment with various sorts of buckles, but were gradually lengthened into the Hessian boot, which, with pantaloons, were in full fashion before the year 1800. The broad black ribbon worn round the necks of gentlemen gave way to the cambric stock buckled behind, and to this followed the white linen cravat monstrous in its folds. The latter banished the ruffle from the shirt, and brought forward the standing shirt-collar.

About this time the round hat, which had made its appearance in England even before the end of the war, came into general use, and the cocked hat was put aside as out of fashion; it and the powdered hair and queue were, however, retained by the older men as part of a gentleman's full dress.

Asbury Dickens says of Washington and others,—

"He [Washington] was dressed in a full suit of the richest black velvet; his lower limbs in short-clothes, with diamond knee-buckles and black silk stockings. His shoes, which were brightly japanned, were surmounted with large, square silver buckles. His hair, carefully displayed in the manner of the day, was richly powdered and gathered behind into a black silk bag, on which was a bow of black ribbon. In his hand he held a plain cocked hat, decorated with the American cockade. He wore by his side a light, slender dress-sword, in a green shagreen scabbard, with a richly-ornamented hilt.... At the head of the Senate stood Thomas Jefferson, in a blue coat, single-breasted, with large, bright, basket buttons, his vest and small-clothes of crimson. . . . In the semicircle which was formed behind the chair, and on either hand of the President, my boyish gaze was attracted by the splendid attire of the Chevalier D'Yrujo, the Spanish ambassador—then the only foreign minister near our infant government. His glittering star, his silk *chapeau-bras* edged with ostrich feathers, his foreign air and courtly bearing, contrasted strongly with those nobles of Nature's forming who stood around him."

Let us see, now, what a foreigner says of Washington at home, and of Philadelphia.

Viscount de Chateaubriand, who came to America in 1791, with the intention of seeking the Arctic northwest passage, visited Philadelphia to see Gen. Washington, for whom he brought a letter of introduction from Marquis Armand de la Rouairie, formerly a colonel in the Continental army. He says of this city, in his "Voyage en Amérique": "On approaching Philadelphia we met some country-people going to market, some public conveyances and other very elegant carriages. Philadelphia seemed to me a handsome city. The streets are wide; some, lined with trees, cross each other at right angles in a regular order from north to south and from east to west. The Delaware flows parallel to a street which follows its northern [western] shore. This river would be of considerable importance in Europe, but is not spoken of here. Its shores are low and but little picturesque.

"Philadelphia, at the time of my voyage, did not extend to the Schuylkill. Only the land toward that stream was divided into lots, upon which a few isolated houses were built. The aspect of Philadelphia is cold and monotonous. Generally speaking, what is wanting in the cities of the United States is monuments, and above all, old monuments. . . . A man landing, as I did, in the United States, full of enthusiasm for the ancients, a Cato, who sought everywhere the rigidness of the early Roman manners, must have been greatly scandalized on meeting everywhere the elegance of dress, the luxury of equipages, the frivolousness of conversations, the unequality of fortunes, the immorality of banking and gaming-houses, the

noise of ball-rooms and theatres. In Philadelphia I might have believed myself in an English town. There was nothing to announce that I had passed from a monarchy to the republic. . . . My political *disappointment* doubtless caused the ill-humor which made me write the satirical note (in the "Essais Historique") against the Quakers, and even a little against all Americans. The appearance of the people in the streets of the capital of Pennsylvania was generally agreeable, the men were very neatly clad, the women—above all the Quakeresses, with their uniform hats—exceedingly pretty."

The enthusiastic young Frenchman's narrative of his interview with Washington is not without interest. "When I arrived in Philadelphia," he wrote, "the great Washington was not there, I was obliged to wait a fortnight; at last he returned. I saw him pass in a coach which whirled rapidly past, dragged by four mettlesome horses. According to my ideas, Washington must necessarily be a Cincinnatus; now Cincinnatus in a coach disturbed somewhat my republic of the year of Rome 296. Could the Dictator Washington be any other than a rustic, urging his oxen with a goad, and holding the handles of his plow? But when I went to carry my letter of recommendation to that great man, I found the simplicity of the old Roman.

"A small house built in the English style, and resembling the other houses in its neighborhood, was the palace of the President of the United States; no guards, not even footmen. I knocked, a young servant girl opened the door. I asked her if the general was at home; she said that he was. I told her that I had a letter to hand him. The girl asked my name, difficult to pronounce in English, and which she did not succeed in retaining. She then told me gently, 'Walk in, sir,' and she led the way through one of those narrow corridors which serve as vestibules in English houses, introduced me into the parlor and begged me to wait the general's coming. . . . After a few minutes' waiting the general entered. He was a man of tall stature, with a calm and cold rather than noble countenance (the engraved pictures of him are very resembling). I silently handed him my letter; he opened it, looked at the signature, which he read aloud, exclaiming, 'What, from Col. Armand!' This was the name by which he was used to call him, and which the Marquis de la Rouairie had signed."

Chateaubriand then went on to explain the object of his voyage. Washington, he says, made very few short remarks, sometimes in French, sometimes in English, and listened with a sort of astonishment. Perceiving this, the Viscount said, with warmth: "But it is less difficult to discover a northwest passage than to create a nation as you have done, General!" "Well, well, young man," replied Washington, deprecatingly, taking him by the hand. The young traveler, who was to make so great a name in French literature, was invited to dine with the President the next day. There were but half a dozen guests, and they talked principally about the French Revolution. On the following day Chateaubriand continued his voyage. He says of this solitary interview with Washington, "My name, probably, did not remain an entire day in his memory. I was happy, however, that his glance once fell on me! I have felt the warmth of it all my life. There is virtue in the glance of a great man."

The parallel between Washington and Bonaparte which follows this remark, is one of the most appreciative ever written, of the character of the modern Cincinnatus. We will quote one paragraph: "Washington was altogether the representative of the wants, the ideas, the lights and opinions of his time; he wished the very thing he was called upon to do; hence the coherence and perpetuity of his work. This man who strikes us but little, because he is natural and of just proportions, has confounded his own existence with that of his country; his glory is the common patrimony of growing civilization; his fame rises like unto a sanctuary where flows an inexhaustible stream for the people."

Chateaubriand's poetic fancy may have exaggerated the simplicity of the President's domestic arrangements; there is no exaggeration in his appreciation of the man.

Another traveler has given vent to his enthusiasm about Philadelphia in the following poetic effusion. It is taken from "Travels through America," a poem, by Michael Forrest, published in Philadelphia in 1793:

"Hail, PHILADELPHIA! I now behold
Thy regularity, as I've been told;
But more majestical thou dost appear—
More grand, more regular, and far more clear—
Than my ideas were of thy grand form,
Or even now my pen can well inform!
Governor PENN first its plan begun,
In imitation of old Babylon.
The streets are wide, and in a line direct;
The angles right, where they do intersect;
The footway pav'd nicely, with brick and tiles,
From north to south, nearly two English miles;
And from both rivers[1] to the centre street,
Named First, Second, and so on till they meet.
That half alone, joining the Delaware,
Is built out nearly to the Centre Square.
The buildings shew no great variety,
But the most pleasing regularity;
Void of extremes, the houses friendly join,
Nor cottage low nor palace rouse the nine
To sound the warmbling lyre. Upon the whole,
From the Arctic to the Antarctic pole,
View all the cities round this flying ball,
Their commerce, shape, and regulations all;
Compare their climates and situation,
Their buildings, cleanness, and navigation,
Then judge impartially, and you will find,
That Philadelphia most will please the mind."

Dancing, as an amusement, was little resorted to during the war of independence, except while the British were in possession of the city. After the

[1] Schuylkill and Delaware.

conclusion of hostilities the old City Dancing Assembly was revived, and gave balls at their own rooms. Balls, dancing-parties, dinners, and tea-parties were frequently given by the wealthy and fashionable. De Chastellux thus describes the manner in which things were conducted at the assembly balls:

"The assembly or subscription ball, of which I must give an account, may here be properly introduced. At Philadelphia, as at London, Bath, Spa, etc., there are places appropriated for the young people to dance in, and where those whom that amusement does not suit play at different games of cards. But at Philadelphia games of commerce are alone allowed. A manager, or rather a master of ceremonies, presides at these methodical amusements. He presents to the gentlemen and ladies—dancers—billets folded up, containing each a number. Thus Fate decides the male or female partner for the whole evening. All the dances are previously arranged, and the dancers are called in their turns. These dances, like the toasts we drink at table, have some relation to politics. One is called 'The Success of the Campaign;' another, 'The Defeat of Burgoyne;' and a third, 'Clinton's Retreat.' The manager is generally chosen from among the most distinguished officers of the army. This important place is at present held by Col. Wilkinson, who is also clothier-general of the army."

He alludes again to the custom of having but one partner for the whole evening, a custom which, he thinks, prevails only in America. He says, "Dancing is said to be at once the emblem of gayety and of love. Here it seems to be the emblem of legislation and of marriage. Of legislation, inasmuch as places are marked out, the country dances named, and every proceeding provided for, calculated, and submitted to regulation; of marriage, as it furnishes each lady with a partner, with whom she dances the whole evening, without being allowed to take another. . . . Strangers are generally complimented with the handsomest women. The Comte de Dumas had Mrs. Bingham for his partner, and the Viscount de Noailles had Miss Shippen. Both of them, like true philosophers, testified a great respect for the manners of the country by not quitting their partners for the whole evening. . . . When music and the fine arts come to prosper at Philadelphia, when society once becomes easy and gay there, and they learn to accept of pleasure when it presents itself, without a formal invitation, then may foreigners enjoy all the advantages peculiar to their manners and government, without envying anything in Europe."

De Chastellux describes an "American" dinner at the Chevalier de Luzerne's, and complains of the "absurd and truly barbarous practice, the first time you drink, and at the beginning of dinner, to call out successively to each individual, to let him know you drink his health." "One is ready to die with thirst," he says, "while he is obliged to inquire the names or catch the eyes of five and twenty or thirty persons. The partial or direct attacks when a guest asks permission to drink with you and passes you the bottle drives him to comical despair, the bottle is then passed to you, and you must look your enemy in the face, for I can give no other name to the man who exercises such an empire over my will. You wait till he likewise has poured out his wine and taken his glass. You then drink mournfully with him, as a recruit imitates his corporal in his exercise."

The Prince de Broglie describes good-humoredly his first experience at tea-drinking in Philadelphia:

"On the 13th of August, 1782," says he, "I arrived at Philadelphia, the already celebrated capital of a quite new country. M. de la Luzerne took me to tea at Mrs. Morris', wife of the Secretary of the Treasury of the United States. Her house is small, but well-ordered and neat; the doors and tables of superb, well-polished mahogany; the locks and andirons of polished brass; the cups arranged symmetrically; the mistress of the house good-looking and very gray. All was charming to me. I took some of the excellent tea, and would have taken more, I think, if the ambassador (M. de la Luzerne) had not kindly warned me at the twelfth cup that I must put my spoon across my cup when I wished to bring this warm-water question to an end. Said he, 'It is almost as bad to refuse a cup of tea when it is offered to you as it would be for the master of the house to offer you another when the ceremony of the spoon has indicated your intentions on the subject.'"

The Duke de la Rochefoucault-Liancourt, who was in the United States in 1795, '96, '97, said,—

"The profusion and luxury of Philadelphia on great days, at the tables of the wealthy, in their equipages, and in the dresses of their wives and daughters, are, as I have observed, extreme. I have seen balls on the President's birthday where the splendor of the rooms and the variety and richness of the dresses do not suffer in comparison with Europe; and it must be acknowledged that the beauty of the American ladies has the advantage in comparison. The young women of Philadelphia are accomplished in different degrees, but beauty is general with them. They want the ease and fashion of French women, but the brilliancy of their complexion is infinitely superior."

But the duke is not so well satisfied with the hospitality, or rather the want of hospitality, of the Philadelphians. He tries to account for it thus:

"The inhospitality to strangers, so often spoken of, is caused by the anxiety of the inhabitants to amass wealth.

"This mercantile idea of necessity confines the man whom it influences, and gives him no time or taste for the pleasures of society. What is justly called *society* does not exist in this city. The vanity of wealth is common enough. The rich man lives to show strangers his splendid furniture, his fine English glass, and exquisite china. But when the stranger has once viewed the parade in a ceremonious dinner, he is dismissed for some other new-comer who has not yet seen the magnificence of the house, nor tasted the old Madeira that has been twice or thrice to the East Indies; and then a new face is always more welcome than an old one to him who has little to say to either. The real state of society in Philadelphia is included in invitations to great dinners and tea to all who arrive from Europe,—English, French, inhabitants of every country, men of every class and of every kind of character, philosophers, priests, literati, princes, dentists, wits, and idiots. The next day the idolized stranger is not known in the street, except that he be wealthy, especially in money, when, indeed, the politeness of the citizens of Philadelphia continues to exist as long as the stranger can purchase estates, and even beyond that term, for the homage paid to wealth is a worship in which all sects unite."

Isaac Weld, who was in this country at the same time as the Duke de Liancourt, says, on the same subject, "It is a remark very generally made, not only by foreigners, but also by persons from other parts of the United States, that the Philadelphians are extremely deficient in hospitality and politeness toward strangers." He then proceeds to criticise Philadelphia society in the following severe terms:

"Among the uppermost circles in Philadelphia pride, haughtiness, and ostentation are conspicuous, and it seems as if nothing could make them happier than that an order of nobility should be established by which they might be exalted above their fellow-citizens as much as they are in their own conceit. In the manners of the people in general there is a coldness and reserve—as if they were suspicious of some de-

signs against them—which chills to the very heart those who come to visit them. In their private societies a *tristesse* is apparent, near which mirth and gayety can never approach. It is no unusual thing in the genteelest houses to see a large party of from twenty to thirty persons assembled and seated around a room without any other amusement than what arises from the conversation—most frequently in whispers—that passes between the two persons who are seated next to each other. The party meets between six and seven in the evening. Tea is served with much form, and at ten—by which time most of the company are wearied with having remained so long stationary—they return to their homes. Still, however, they are not strangers to music, cards, or dancing. Their knowledge of music, indeed, is at a very low ebb, but in dancing, which seems to be their favorite amusement, they certainly excel. The women in general, while young, are very pretty; but by the time they become mothers of a little family they lose all their beauty, their complexions fade away, their teeth begin to decay, and they hardly look like the same creatures."

Mr. Weld must have been introduced to a very different set from that visited by the travelers already quoted. Perhaps the satirical writer of an essay under the title of "The Trifler," published in the *Columbian Magazine*, in 1788, was right in his views of Philadelphia society when he said,—

"In Philadelphia there are several classes of company,—the *Cream*, the *New Milk*, the *Skim Milk*, and the *Canaille!* . . . In private parties and in public meetings, the distinctions here are accurately preserved. The Cream generally curdles into a small group on the most eligible situation in the room. The New Milk seems floating between the wish to coalesce with the Cream and to escape from the Skim Milk; and the Skim Milk, in a fluent kind of independence, laughs at the anxiety of the New Milk, and grows sour upon the arrogance of the Cream. Hence it is, sir, that our concerts and assemblies have lost their charms—for the superiority established on the one hand, and the mortifications felt on the other, seem to have produced this resolution; that never again shall the ears of Cream and New Milk listen to the same melody, or their feet caper. Notwithstanding these variances, however, each class closely imitates its immediate superior; and from the conduct of one you may easily conceive the conduct of all. The marriage week is appropriated in the same manner. You drink punch with the bridegroom, and tea with the bride. Every lying-in furnishes you with a taste of the caudle and the sight of a bed; and every tea-party consists in the same parade, whether your cake is handed on silver or Japan by a supercilious footman in lace, or a female apprentice in camlet."

This writer further divides society into "the Dressers, the Eaters, the Drinkers, the Singers, the Tattlers, the Politicians, and the Dozers."

Bulow, who was in this country in 1791, '92, '95, '96, must have met with some unpleasant adventure in Philadelphia, for nothing pleases him there. He speaks more like one smarting under some injury than as an impartial observer. It is a criticism *de parti pris*. He says, "Devouring immense quantities of flesh, the Americans call 'living rich!' . . . Their drink is for the most part brandy and water, and Madeira wine which is strongly adulterated with brandy." He illustrates the inhospitality of the Philadelphians by the story of an Englishman who burnt all his letters of recommendation because they procured him everywhere no other benefit than a glass of brandy and water. At public dinners they drink many toasts, "and for twelve persons on such occasions, you may always reckon sixty bottles of Madeira wine! Judge in what a condition the people return home! In general, Americans make a point of honor to spend a great deal at taverns. But tavern-keepers do not make great fortunes, because there is so much 'toping on credit,' and 'the payment often fails.' . . . The tea parties were invented by Avarice, in order to see company cheap." They would be a good economical invention, if they were not "so stiff." "The greatest expense is for furniture, which must be all made of mahogany. Travelers have been often astonished to find handsome carpets and mahogany tables and desks,—and in log houses, or rather huts!

". . . Luxury in North America turns upon objects of vanity, never to the production of the fine arts." In proof of this the artistic Bulow informs us that "an Italian came to Philadelphia with some copies in plaster-of-Paris of some excellent statues; but he could sell none of them, and went away again. A glass of grog, or of cold punch, is worth more to them than the most beautiful picture or statue." American architecture offends the good taste of this amiable foreigner, and he notes with disgust that "among the new houses in Philadelphia the most fantastic caricature shapes are found."

Luxury in house furnishing was, as a matter of course, a fit accompaniment of luxurious living. If the wealthy purchased fine imported furniture, home manufactures were daily increasing in importance, and the citizen of moderate means could introduce many improvements in his house. This was a field in which, despite Mr. Bulow's opinion, the native good taste of the Philadelphia ladies could display itself to advantage. European workmanship may send its most elegant productions to our markets, but the mere ability to purchase these and fill our rooms with them will not give us elegantly-furnished houses. It is the *taste* which presides in the selection and the arrangement that will make them pleasing to the eye. The charm attached to an American home, that *je ne sais quoi* which strikes the foreigner agreeably, is due neither to the English nor the French style of the furniture, but is peculiar to the American taste of the lady of the house. In no other city is this charm felt more than in Philadelphia.

The fondness for carpets, so characteristic of the American housekeeper,—for even at this late day well-to-do familes in Europe do not find carpets indispensable to their comfort,—became general as soon as this article was appreciated. The first carpets in use attracted much attention in Philadelphia about 1750, and in 1788 De Warville wrote as follows:

"It already appears that they have carpets,—elegant carpets. It is a favorite taste with the Americans. They receive it from the interested avarice of their old masters, the English. A carpet in summer is an absurdity; yet they spread them in this season, and from vanity. This vanity exercises itself by saying that the carpet is an ornament. That is to say, they sacrifice reason and utility to show.

"The Quakers likewise have carpets, but the rigorous ones blame this practice. They mentioned to me the instance of a Quaker from Carolina, who, going to dine with one of the most opulent at Philadelphia, was offended at finding the passage from the door to the staircase covered with a carpet, and would not enter the house. He said that he never dined in a house where there was luxury, and that it was better to clothe the poor than to clothe the earth."

The character of the usual household furniture of the time is shown by the following list of articles belonging to Dr. Franklin's estate, and advertised to be sold at auction in May, 1792, by Richard Footman, auctioneer:

"Mahogany sideboards, dining-, card-, and Pembroke tables, mahogany chairs, looking-glasses, clothes-presses, tea-urns, plated candlesticks, windsor-chairs, an elegant sofa, chints window-curtains, chest of drawers, a forte piano, a harpsichord, a copying-press, circular and sundry other coal-grates, Franklin stoves, china and queensware, brass andirons, shovel and tongs, patent lamps, plated knives and forks, jack, etc., silver and plated ware, waiters, sugar canisters, snuffers and stand, a dish-cross, tea- and coffee-pots, cruet frame and castors, candlesticks, saucepans, butter-ladles, wine-strainers, funnels, tureen with handsome glass and elegant workmanship, milk-pots, etc. Also a sedan chair."

Dr. Franklin, in the latter part of his life, had grown fat and heavy, and this sedan chair was his usual conveyance.

Two other advertisements of sales, although dated in the beginning of the present century, describe the furniture in use during the latter part of the eighteenth century in the homes of wealthy citizens. The first, in April, 1803, was at the house of Thomas Ketland, merchant, in Market Street, and comprised a drawing-room suite of French chairs, curtains, and sofa, in yellow damask; one mahogany four-post bedstead, with two hair mattresses and down feather-bed; richly-painted cornices, and three window-curtains to match; mahogany sideboard; dining-tables; mahogany commodes; tambour and satin-wood secretaries; one lady's writing-desk, painted; mahogany wash-hand stand; fire-screens; wine-coolers; one upright fine-toned mahogany forte piano, with stops, by Stoddard; one large, superb wardrobe, with writing-desk, drawers, closets, etc.; French Sevres tea-china in sets; one pair vases, superbly painted; groups of several figures and hyacinths, pleatue, French; a very handsome French clock, of the finest workmanship; a pair of French bronzed and gilt andirons; sundry prints and pictures; one elegant painting of dead game; Derbyshire ornaments; Italian marble busts; one large set of cut-glass dinner-ware; girandoles; dessert-dishes, etc.; a large glass hall-lamp; one pair richly-gilt tripods; gilt brackets, etc.; dinner-sets of English earthenware; a large steel grate, with a variety of other articles.

The second, published in the *United States Gazette* of Nov. 16, 1805, is still more important as describing the household furnishings of one of the leaders of society, of which Wanzey, in 1794, made the following note in his diary:

"June 8.—I dined this day with Mrs. Bingham, to whom I had letters of introduction. I found a magnificent house and gardens in the best English style, with elegant and even superb furniture. The chairs of the drawing-room were from Seddons, in London, of the newest taste,—the backs in form of a lyre, with festoons of crimson and yellow silk; the curtains of the room, a festoon of the same; the carpet, one of Moore's most expensive patterns. The room was papered in the French taste, after the style of the Vatican at Rome. In the garden was a profusion of lemon-, orange-, and citron-trees, and many aloes and other exotics."

The advertisement referred to contained a very full catalogue of the principal articles of furniture and plate belonging to William Bingham, which were to be sold at auction by A. Pettit & Co. In the drawing-room were a looking-glass seven feet six inches by five feet, a glass chandelier, four girandoles, four gilt candlesticks, three sofas, eight sets of blue satin window-curtains with gilt cornices, two gilt branch candlesticks, six large arm-chairs, two fire-screens, with shovel, tongs, and fender, carpet, with vases, figures, and artificial flowers. The parlor was furnished with ten looking-glasses, two rush-bottom settees, ten arm-chairs, and ten single chairs, dining-tables, mantel ornaments, Venetian blinds, and one harpsichord. The dining-tables probably were placed there for convenience. The furniture of the dining-room was a mahogany sideboard, wine-cooler, twenty-four mahogany chairs with morocco bottoms, brass and iron fenders, shovels, tongs, and bellows, with chandeliers, girandoles, brass lamps with reflectors, shade lamps, and a very large assortment of china, dinner, and tea sets, with bottles, decanters, and glassware. In the ball-room—probably placed there for convenience and sale—was a mahogany bedstead, seven feet square, with canopy, curtains, and mattress complete. The chambers were supplied with bedsteads with damask curtains, chairs with damask stuffed bottoms, yellow and pink chairs, and sofas with silk bottoms, and bureaux in japan, gold, and mahogany. There were figures in all the rooms, and in one of them a full-length portrait of Mrs. Siddons as the "Grecian Daughter," with vases and other ornaments. Silver plate was composed of tureens, vases, dishes, candlesticks, waiters, urns, bowls, goblets, trays, forks, spoons, etc., and weighed nearly two thousand ounces, in addition to which were several articles of plated ware. In the hall were twelve windsor-chairs, pedestals of composition and marble, with busts of Voltaire and Rousseau, three busts of Franklin, bronze and composition figures, two marble medallions in gilt frames, and a dial on a composition pedestal. In the library were three mahogany bookcases, a secretary, a copying-machine, four bronze figures, two urns, two busts, and a centrepiece placed on the top of the bookcases, with a costly collection of paintings and prints.

This list helps us to picture to our minds the grand apartments so often filled with a galaxy of beauties, in which the central figure was the charming hostess, acknowledged by all the queen of elegance, the rooms in which Washington, the Adamses, Jefferson, Madison, Hamilton, and other public men, met the Chews, the Mifflins, the Willings, and mingling with the gay crowd of ladies, forgot for a while the cares of state.

The number of equipages increased with the luxury of the times. William Priest, musician, "late of the theatres of Philadelphia, Baltimore, and Boston," in his "Travels in the United States of America,"—commencing in 1793 and ending in 1797,—says, "There are eight hundred and six two and four-wheel pleasure carriages in the city. The population

does not exceed fifty thousand inhabitants. This is a proof of the luxury of the people."

Weld describes with great minuteness the equipages which he saw in Philadelphia:

"The carriages made use of in Philadelphia consist of coaches, chariots, chaises, coachees, and light wagons, the greater part of which are built in Philadelphia. The equipages of a few individuals are extremely ostentatious. Nor does there appear in any that neatness and elegance which might be expected among a set of people who are desirous of imitating the fashions of England, and who are continually getting models over from that country. The coachee is a carriage peculiar, I believe, to America. The body of it is rather longer than that of a coach, but of the same shape. In the front it is left quite open down to the bottom, and the driver sits on a bench under the roof of the carriage. There are two seats in it for the passengers, who sit in it with their faces to the horses. The roof is supported by small props, which are placed at the corners. On each side of the door, above the panels, it is quite open; and, to guard against bad weather, there are curtains, which are made to let down from the roof, and fasten to buttons on the outside. There is also a leathern curtain, to hang occasionally between the driver and passengers. The light wagons are on the same construction, and are calculated to hold from four to twelve people. The only difference between the small wagon and the coachee is that the latter is better furnished, has varnished panels, and doors at the side. The former has no doors, but the passengers scramble in the best way they can, over the seat of the driver. The wagons are used universally for stage-coaches."

Meanwhile, the ever-changing fashions continued to turn the heads of the belles and beaux, and to inspire the satiric muse.

The *Columbian Magazine* of 1792 has the following:

"THE REVOLUTIONS OF FASHION.

"Fashion, intent our wonder to excite,
Seems nature for the marvelous to slight!
Now on the head the Bonnet soars, designed
To show a towering, bold, ambitious mind!
Now swells the Petticoat, a spacious round,
And now in length three yards or more are found!
Tètes like the Titan's heaven appear to scale
As Fashion's arbitrary laws prevail!
The Stay's sharp peak with star-like lustre glows,
And the paste Buckle glitters on the toes!

"These wanderings of Taste we may excuse,
Assisting by politeness Beauty's views!
Powder! behold thy cheering, cleanly aid,
By Nature's tresses amiably displayed!
But may no curling-tongs e'er heat that brain,
Where cool Discretion should in triumph reign.

"Still will those Follies frame tyrannic laws,
Now dealing in Cork Hips and now in Craws.
Must Delicacy to thy power submit?
Wilt thou yield ample scope for sneering Wit?
The fair shall never suffer in my verse,
And simply thus a cynic's thoughts rehearse:
'There was a time, perhaps that time remains,
When feathers gave the tone to female brains.
Each whim the fair with readiness embraced,
Since to be flighty was a proof of taste.
There was a time, attached to liberal arts,
When ladies soothed our minds and cheered our hearts.
By moderate arts, ye fair, preserve your reign.
Prudence alone your empire can retain.
From delicacy, hope, sincere applause,
Your *hearts* men wish to gain, but slight your *craws!*'"

The fashions for men underwent some change about this time.

Oswald's *Gazetteer* for September, 1792, specifies the gentlemen's dress for balls, and declares that shoe- and knee-buckles are abolished.

"Two yards of black ribbon for the shoes, and an equal quantity for the knees, are used instead of buckles. The breeches are very tight. Two watch-chains and trinkets are worn. The hair is powdered, frosted, and perfumed. The cape is of different color from the coat. Muslin and cambric are worn about the neck; and the genteel beau is particularly genteel when he wears a tamboured shirt."

There was still some elegance in this, but the time was not far when Philadelphians, in no small number, would imitate the absurd fashions and coarse manners of the Parisian *sans-culottes*. The Americans had seen, with sympathetic interest, the incipiency of the French Revolution: it was the struggle of right against abuse; the Frenchman of 1789 did but follow the example of the American colonies. French people and French ideas were popular here, as it was but natural they should be, and we have mentioned in these pages the introduction of fashions *à la républicaine;* but affairs in France had taken a turn unexpected by the patriots, who demanded but the "rights of man;" a bloodthirsty mob had taken control of the government; Louis XVI., the honest king, who had befriended the struggling colonies, had been beheaded in the name of liberty; his beautiful queen also had perished on the scaffold; the hideous guillotine was decimating the nobility of France, it did not spare the families of those gallant gentlemen who had fought under Washington, and yet the wild ravings of the followers of Robespierre found an echo in our streets. The *bonnet rouge* made its appearance.

"No such 'frenzy,' to use Mr. Jefferson's favorite expression, has ever since been known in America. . . . Politeness was looked upon as a sort of *lèse républicanisme;* the common forms of expression in use by the *sans-culottes* were adopted by their American disciples; the title citizen became as common in Philadelphia as in Paris, and in the newspapers it was the fashion to announce marriages as partnerships between citizen Brown, Smith, or Jones, and the *citess* who had been wooed to such an association. Entering the house of the President, citizen Genet (French ambassador) was astonished and indignant at perceiving in the vestibule a bust of Louis XVI., whom his friends had beheaded, and he complained of this 'insult to France.' At a dinner, at which Governor Mifflin was present, a roasted pig received the name of the murdered king, and the head, severed from the body, was carried round to each of the guests, who, after placing the liberty cap on his own head, pronounced the word 'Tyrant!' and proceeded to mangle with his knife that of the luckless creature doomed to be served for so unworthy a company. One of the Democratic taverns displayed as a sign a revolting picture of the mutilated and bloody corpse of Marie Antoinette."[1]

The Parisian beaux of the time were called *muscadines*. Their style of dress was adopted by their imitators in Philadelphia. A writer in Oswald's *Gazetteer*, of January, 1795, describes them, as follows:

[1] Griswold, "The Republican Court."

"The sweet muscadines have the queue and the twist, the parallelogramic waistcoat and the waistcoat circular, the bolstered neckcloth and the cravat puddingless [although almost everybody wears something of a pudding]. They have the cape velvet, the cape cloth, the cape up and the cape down, the slash sleeve and the close sleeve, the London broadcloth and the Paris narrow back, the lapelle and the single breast, the covered queen's nipple, death's head, and metal button, the culotte long, the culotte short, and the bow."

In "The Trifler," published in the *Columbian Magazine*, it is said, speaking of the divisions in society:

"Florio, who is a type of the whole, has fretted himself into a fever that almost cost him his life because a modest tailor has made a pair of yellow breeches decently large for his limbs, and has not carried the cape of his coat as high as the crown of his hat."

But the best hit was in the Philadelphia *Minerva*, —"The Sunday Parade," a most delicious ode. In this effusion the writer says,—

"Thus all our modern belles and beaux
Are swaddled in such loads of clothes
As proves them ornamental gluttons.
Lord! what a dash does Mr. Demme cut,
In his superlative, unrivaled strut,
Besplattered with a peck of buttons!
His frizzled friends, this charming weather,
Have ventured out to air their leather—
Some staggering beneath as huge a sack
As Bunyan's Pilgrim carried on his back!
Sure they should strut with shanks of toughest steel
To prop the massy bundles which they wear;
For 'tis a sorry sight, my friend,
To see their charming little spindles bend
Beneath such monstrous packages of hair,
Crammed in with tallow and with Indian meal—
Some bungling barber's expeditious work,
Who took no pains to decorate their pork!

"Who pace with strange, exotic bags,
Put on unseemly o'er their rags;
And breeches buttons round their necks—
Gaping with huge and ghastly snout,
And whitewashed eyes turned inside out!

"THE MEN.

"'Most ladies lose their hearts,
Enchanted by the power of clothes—
By silks and satins, wigs and crapes,
Superbly hung on muffled apes,
And bolsters tied below their nose!'

"THE LADIES.

"'But it excites my wonder more
To see them wear their watch before,
Like warming-pans, of monstrous size!'"

These follies, however, were limited to a certain class of young men. Sober-minded gentlemen clung to the becoming old style.

A writer in Oswald's *Gazetteer* of January, 1795, describes fashions in polite assemblies. He speaks of the turban, the "shot dress," and the ruffled sleeves. Proceeding further, he speaks of—

"the satin waist, with trails of mull loose, and jaconette, gauze, crape, and light stopper. Then there's the hair up, the hair down, the frieze and the frizzles, the straight, and the curled. There's the Spanish leather, the Danish kid, the tamboured and plain slipper, and Roman sandals with English flat heels, and perch sky-scraper heels."

Wanzey, in 1796, said,—

"At the theatre ladies wear small bonnets of the English fashion, some of chequered straw, some full-dressed, with caps, and a very few in the French style,—the younger ladies with their hair flowing in ringlets on their shoulders.

"The gentlemen had round hats, coats with high colors (cut quite in the English fashion), and many coats of striped silk."

Washington never changed his style of dress, the plain black velvet suit already mentioned. At his inauguration, John Adams wore a full suit of light drab, with loose cuffs. He also wore wrist-ruffles. His hair was powdered and tied up in a bag.

William McKoy, speaking of the inauguration of John Adams, in 1797, gives a very full description of the Marquis D'Yrujo, the Spanish minister, who married the amiable Sally McKean. He says, "He was of middle size, of round person, florid complexion, and hair powdered like a snow-ball; dark-striped silk coat, lined with satin; white waistcoat, black silk breeches, white silk stockings, shoes and buckles. He had by his side an elegant-hilted small-sword, and his chapeau, tipped with white feathers, under his arm."

Jefferson, Mr. McKoy says, was dressed in a long blue frock coat, single-breasted, and buttoned down to the waist; light sandy hair, very slightly powdered, and queued with black ribbon a long way down his back.

One more poetical squib. They give us not only the caricature of the fashions, but specimens of the satiric wit of the time.

In Carey's *Recorder*, in 1798, was published the following:

"THE ADDRESS OF A VERY UGLY LADY TO HER 'UGLY,'—A HIDEOUS INSTRUMENT WHICH THE WOMEN OF FASHION WEAR ROUND THEIR HEADS.

"Come, blest invention, come! In kindness screen
This old, yet fruitful, source of all my woes!
Draw round my amber eyes thy case of green,
And wrap in night this never-ending nose!
In numerous blessings crown her useful head,
Who found a remedy for ills so great—
Ills that not Spanish wool, not e'en white lead,
Could cure, remove, diminish, or abate;
A mouth whose wide embrace both ears inclose;
A nose of ruddiest hue, sublime and high;
A chin on which a tankard might repose;
And the dull leerings of a blinking eye—
All seek for safety in the dark'ning veil—
All fly for rescue from the critic's stare—
The red, the dark, the purple, and the pale,
And the long, meagre, furrowed face of Care!"

Much has been said of the freaks of fashion and the submission to its behests shown by both sexes. Yet there has ever been a marked difference in the results of this submission. The ladies, prompt to accept any new style that might enhance their personal charms, have sometimes been deluded into adopting some ridiculous mode, but it was short-lived, and disappeared so soon as the experiment was made and proved it to be a failure. The forms of their head-dress were often changed, yet powder remained long in use; it was abandoned and taken up again. Why? Because powdered hair was becoming, though not natural and causing much trouble and loss of time in the dressing. So with their wearing apparel; it was more or less ornamented, beflounced, and cut in fanciful shapes;

its return to simplicity, attempted at different periods, was never lasting. The taste for ornament is inborn with women; even the uncivilized savage maiden will deck her person and decorate her scant dress with feathers, beads, or bright-colored seeds and shells. It is with all the sex an unsatiable thirst for the beautiful.

Not so with the men; they have no sooner attained a style of dress that makes them presentable than they cast it off for something hideous or ridiculous. The dress worn by our Revolutionary fathers, especially at and after the end of the war, had a manly elegance unequaled at any other period. It was as far removed from the stiffened skirts, laces, and feathers, in which the fops of an earlier period delighted, as it is from the uniform ugliness of the garments of the present generation, whose only merit is in being comfortable, the love of ease having become the characteristic of modern society. The ladies, kind souls! have made so many concessions that they are not shocked at the sight of a beau in a short sack coat, tight pantaloons, and diminutive round hat, puffing away at the inevitable cigar.

Can any one, gifted with the faintest artistic taste, after looking at the pictures of the Washingtons, the Adamses, the Jeffersons, and their contemporaries, realize the fact that to their imposing costume succeeded the dress we now describe? The coats were of the fashion called in modern times "swallow-tail," but much more broadly cut in the skirts, which commenced about the region of the hips in front, extended in a sloping line backward, and were cut off square in the back, so as to reach about to the bend of the leg. The lappels in front were prodigiously broad. The collar rose up on the sides as high as the bottom of the ears, and was continued in the back of the same width, and then it was doubled and turned over all round with a fold quite as broad. The cravat was wide and high, an oval fence around the neck, sufficiently wide and deep to allow the man to sink his chin into it. The ends were brought down in front, kerchief fashion, and knotted. The cravat was invariably made of light silk or linen, muslin, except occasionally in India importations, not having come into use. There was no shirt collar. Vests were shortened, and reached no lower than the well-defined region of the waist. Sometimes they were single-breasted, cut low, with small, straight collars, and allowed the display of the frills, or they were double-breasted, and finished with broad lappels. Another style was tight about the neck, covering the whole shirt except the collar, and extending from the neck no more than half a foot to the waistbands of the high pantaloons.

Breeches were not entirely banished, especially in the most polite society. They were in use for parties and balls, but they were superseded for ordinary business, and for men's wear generally except for party purposes, by trowsers and pantaloons. The latter went through strange mutations of cut and shape,—were sometimes closely fitted to the limbs, and called "tights;" at other times they were baggy and bulging. Sometimes they were tight at the waist and very broad at the bottoms; sometimes they were tight at the knee, and spread out like funnels toward the ankles. Again they were tight at the ankles, and loose and broad at the knee. They went through other changes, among which might be mentioned plaits at the sides and waist, tucks at the bottom, and other fantasies.

Fops clung for some time to perukes, powdered heads, and three-cornered hats. Elderly gentlemen of the old school were also loath to give them up, and as late as 1800 even wore the large wigs made of gray or white horsehair. When they gave up these, they consoled themselves in the use of the queue or pigtail, formed by twisting and tying the natural hair behind, below the back of the neck. But the middle class followed the French republican fashion, and cut their hair *à la Titus*,—a shock head from the forehead to the back of the neck. At a later period another French style was introduced; the hair combed down the forehead to within a short distance from the eyebrows, and cut straight across, was allowed to grow long on the sides and back of the head, covering the ears, *en oreilles de chien*, as may be seen in the portraits of Gen. Bonaparte at the time of the campaign in Italy.

The beard during all this time was banished from good society. The cheeks, upper and lower lip, and throat, were carefully and laboriously deprived of their natural growth of beard once, twice, or thrice a week, and, among the highly fashionable, every day. No gentleman could present himself with decency at church or at the theatre, or visit his friends and acquaintances, unless he was most scrupulously shaved, and was able to present a clean and respectable appearance.

The hats had narrow brims, and the crown tapered off toward the top, not unlike the Tyrolese hat, but less elegant. They were made of beaver, or of the skins of the muskrat, the otter, and the raccoon, these furs being used for body and all in the finer hats, or the fur was felted upon wool; coarser hats were made entirely of wool. The various furs were also used in the making of caps, or these were made of cloth; there were various shapes of caps.

As long as stockings continued to be an outside portion of the dress of gentlemen they were objects of care and sometimes of pride. Upon occasions of ceremony, where elegance of costume was looked for, the stocking was of silk,—white among young men who coveted distinction on account of the observance of the proprieties, and black among elderly gentlemen who commanded respect on account of age or social position. For persons in moderate circumstances, and those who could make no claim beyond that of being useful members of the community, the

stockings were of yarn,—gray, blue, or brown, according to the fancy of the good wife who knitted them. Striped yarn stockings, *à la mode de Paris*, were also worn with the short pantaloons not reaching to the ankles. Low shoes with metal buckles remained in the fashion until 1800, when they were succeeded by high boots, which were worn with the short breeches. A curious fact is that, until that time, there was no distinction made by shoemakers between the right and left feet. About 1800 William Young, who lived at No. 128 Chestnut Street, claimed to have introduced this valuable improvement. His advertisement gives the following summary of fashions:

"Plover and snipe toes, cock and hen toes, goose and gander toes, duck and drake toes, gosling toes, hog and bear snouts, ox and cow mouths, shovel and stick nose, and others too tedious to mention.

"THE PRESENT EUROPEAN FASHIONS:

"Suwarrows, cossacks, hussars, carrios, double-tongues, fire-buckets, Bonapartes, greaves, Swiss, hunting, walking, full-dress, York."

Some time after this announcement, Mrs. Young promised that she would—

"by the direction of her husband, cause her sex to have right and left feet,—to stand and walk with facility and pleasure. Why should they not be at ease as well as the gentlemen? It is a wonder that some one or more cordwainers in their line have not come forward in the execution of an object so extraordinary, expedient, and exquisite in its nature. All colored silks and satins, as well as fancy patterns, kid do., and morocco do., will be procured."

John Bedford, of No. 73 South Second Street, in 1800, took out a patent for "iron-bound boots and shoes." He said that they were made—

"on a plan entirely new, equally fit for men, women, and children. He has the pleasure of saying that this invention is considered by some of the best judges in this city to be one of the most economical ever offered to the consideration of the public, for it not only saves immense labor, but material also, both of which are well known to be of serious consequence in this country."

Bedford said that in the old way of making shoes, one pair a day was as much as could be made by one man, and that few men could make more than four or five pair a week. But by his new plan a man and a boy could make from six to ten pairs a day, so that the improvement would be a vast saving in time and leather, and would be an immense economy to the people of the United States.

While on the subject of shoes, it may be well to note that such a thing as our modern blacking or "shoe-polish" was unknown. Day & Martin's liquid blacking was first manufactured in England in 1801, and Lee & Thompson began its manufacture in New York in 1803. The first blacking which was manufactured in Philadelphia was made, some time later, by William Stubbs, Stubbs & Allen, and Robert Cochran. Before this "Blackball," so called, was the article used upon boots. It was composed of lampblack, mutton suet, or bayberry tallow, and not unfrequently of the greasy mixture which the tanners call "dubbing." Whatever might be the labor used with this mixture, there was still danger of its rubbing off upon the clothing of the person coming near the boots or shoes upon which it had been used. Ladies walking with gentlemen arm-in-arm, or dancing with them at parties, were particularly exposed to this nuisance; and when the modern shoe-blacking came into use, the benefit of it was universally recognized.

Jewelry, of which the ladies made a brilliant display, was but little worn by men. Watches were generally of silver and of very large size; they were worn outside. A French fashion, which prevailed only among a few, was the wearing of two watches, one on each side, with a steel or silver chain, from which dangled a bunch of watch-keys, seals, and bright-colored tropical seeds set like precious stones.

What a comical picture there is in the following reminiscences of a writer quoted by Mr. Watson:

"The coat I wore was such as fashion enjoined. The skirts were long and narrow, like a swallow's tail,—two-thirds, at least, of the whole length; the portion above the waist composed the other third. The waist was directly beneath the shoulders. The collar was a huge roll reaching above the ears, and there were two lines of brilliant buttons in front. There were nineteen buttons in a row. The pantaloons (over which I wore the boots) were of non-elastic corduroy. It would be unjust to the tailor to say that they were fitted like my skin, for they sat a great deal closer. When I took them off, my legs were like fluted pillars grooved with the cords of the pantaloons. The hat that surmounted this dress had a three-quarter-inch rim and a low, tapering crown. It was circled by a ribbon two inches wide."

Another writer, who, about 1850, gave his reminiscences of forty or fifty years before, said,—

"When I was a child the ladies wore shoulder-straps to their petticoats, but the men none to their breeches. The consequence was that gentlemen had frequently to adjust their waistbands. Learned judges standing up to charge a jury, and venerable clergymen preaching in the pulpit, I was accustomed to see hitching up their small-clothes with one hand, while with the other they tucked the lower portion of a fine ruffled shirt between the waistband and flaps of an ancient vest. This was necessary to prevent the exposure of a double linen ruffle below the waistcoat, extending horizontally from hip to hip. This horizontal fold of white linen,—not always exactly white, however,—in connection with the long, perpendicular ruffle of the bosom, formed a sort of inverted cross, of greater dimensions than the one paraded on a Roman bishop's back. The fashionable breeches of my early days were but a few inches longer than the thigh-bone of the wearer, and were buckled tight below the knee-pan, often to an obstruction of a free circulation of the blood, and productive of such itching as made a gentleman glad to unbuckle his knees when in his own dwelling in the company of his family alone.

"Was such a dress in itself desirable? Yet I remember when the male sex began to use suspenders, and they were ridiculed who first wore shoulder-straps. They were said foolishly to affect a female mode of dress. But why was it not well to keep breeches in their place by suspenders, instead of hitching them up perpetually by the hands?"

As we stop on the threshold of the nineteenth century, we will, for the benefit of the ladies, peep into the mysteries of fashion in the next half-dozen years.

In 1800 the walking-dresses for ladies were in the style called *à la grecque*,—a closely-fitting garment of very plain make, with the waist as high up as it could be made; the bosoms, cut square, were gathered in surplice style, and the neck and shoulders were protected by a muslin or gauze handkerchief, crossed in front, and forming a point behind. The bonnet fitted as close to the head as a cap, and the hair was twisted

or turned up high on the back of the head, while, in front, it was combed straight over the forehead, almost to the eyebrows. The evening dress, while preserving the style, was more elaborate; instead of the handkerchief, a ruffle was worn round the neck of the garment, descending in front, and leaving the neck and shoulders bare. The hair was frizzled in front, and an ostrich plume fell with a graceful curve over the top-knot. Whether for walking or evening, the sleeves were short, and gathered up with a band, above the elbow, leaving the arms bare.

A very popular head-dress for street wear in the summer time was made of muslin or some other light material. It surmounted the head like a cap, and was kept in place by a ribbon of some gay color all round the crown. The light muslin, often bordered with lace, descended in graceful folds on either side of the face and on the back, protecting the neck from exposure to the sun. It was a becoming *coiffure*, and was further improved, after a short time, by being divided in the back, and made to hang down both shoulders to the waist, the ends being finished off with a knot or tassel.

The sleeves kept getting shorter, and the exposure of bare arms in the streets were disapproved by staid people and ridiculed by the wits. The *Portfolio* in 1803 got off the following cruel hit:

"The display of a beautiful elbow is now becoming an old fashion, and some dashing belles intend to introduce the display of a finely-shaped knee. This will be no difficulty, considering that petticoats are laid aside."

It was during this period of bare arms that Moses Guest wrote the following piece, which appeared in the volume entitled "Poems on Several Occasions," published in Cincinnati some years later:

"Their heads and heels are often changing,
And still for novelty they're ranging,
Sometimes a hoop must swell their size,
And sometimes they a cushion prize;
Sometimes we find their waists are small,
But now we see they have none at all.
A princess fair first found this out—
Designed to hide her shape, no doubt.
Her light, loose dress, 'twas said, looked neat;
'Twas elegant, 'twas thought complete.
Then soon from Charlotte, England's queen,
Down to the lowest maid 'twas seen.
With something new they're always arming,
And say variety is charming!
Their elbows naked now we view—
I'd almost said their bodies too—
For many, filled, 'tis said, with pride,
Have laid their underclothes aside;
Such antique dress they do despise,
And nought but gauze and muslin prize."

The author adds, in a note, "When this piece was written it was the fashion for young ladies to dress as thinly as possible, with gauze and muslin; to have their arms bare nearly up to the shoulders, and also to have the upper part of their breasts bare,—which fashion they adhered to even in the most severe winter weather."

A novelty introduced in 1803, was a basque of different material and color from that of the dress. It was received with much favor and retained for several years with such improvements from time to time as lengthening the basque, edging it with embroidery, and adding variety by the use of a scarf fastened at the right shoulder and on the opposite side below the middle of the dress with a flower.

The French fashions were not the only ones consulted, however; many, and of the less frivolous, clung to the old England styles.

The *Philadelphia Repository*, in 1802, reported the London fashions in this manner:

"The Bonapartian hat is coming into vogue. It consists of white or salmon-colored satin, in the form of a helmet, surrounded with a wreath of laurel, and worn much on one side.

"Plain white chip hats, in the gipsy style, without any ornament whatever, tied carelessly under the chin with pea-green or pink ribbon.

"The archer-dress, a petticoat without any train, with a border of green or blue; a blue or green sarcenet boddice, vandyked at bottom; loose chemise sleeves, and no handkerchief. The head-dress, a small white or blue satin hat, turned up in front. Brown, gray, or olive silk stockings with yellow or orange cloaks, are worn by the ladies to walk in.

"Feathers and flowers continue to be much worn, and wreaths of roses on the hair for full-dress, in preference to more cumbrous ornaments.

"Small watches are worn by a few dashing belles, on their bosoms, not bigger than the round of a half-guinea."

The pelisse, of different color from the underdress, came into fashion in 1805. The muffs used in winter, which had been hitherto quite small, attained a large size; boas of white or colored fur became also very popular. The shape of the bonnet underwent a considerable change about that time; the front was turned up high above the forehead, and a large ostrich feather rose conspicuously over the crown. The style of the dress remained pretty much the same.

A writer in the *Portfolio*, in 1804, attacked a new style of bonnets in this wise: "The ladies have just now adopted a repulsive kind of hat, which may be called the 'poking hat.' It has a long projection, like the beak of a snipe, and is a good guard against all familiar approach of those who have any regard for their eyes. It is an invention inspired by the Goddess of Ugliness, and is quite worthy of its origin." This head-gear, called the "poke bonnet" and in later years the "coal-scuttle bonnet," could not withstand the ridicule constantly "poked" at it by the wits; besides, the ladies became convinced that it spoiled their good looks; it was given up. But, by a strange contradiction, the very homeliness which caused it to be discarded by the worldly, gave it favor in the eyes of the Quakers. This was the very thing to keep variety out of the heads of the young Quakeresses. Some slight alterations were made to it, and it was prescribed as the proper and permanent head-dress for the female members of the sect. Many a pretty face beams now from under the modest "scoop bonnet," the gentle possessor of which has never heard of its original model, the "poke bonnet," once worn by the worldly belles of 1804.

In 1806 the skirts of the dress were made longer, and a very decided tendency toward a train was perceptible. But, alas! as the skirt lengthened the waist

shortened, and a writer in that year expressed his dissatisfaction by the remark, "The part called the waist, which used to be admired, has disappeared, and we are left to conjecture where it may be found."

A fur hat, with rim and bell-crown, similar to the men's pattern of round hats, was worn that year by many ladies as a comfortable, if not pretty, head-dress for walking out in winter. The straw bonnets for summer wear were tastefully decorated with ribbons and flowers. A pretty fashion, introduced from France about this time, was that of carrying a rich lace handkerchief in the hand. It came from the Empress Josephine; that amiable woman had very bad front teeth, and, as she was very gay and easily provoked to laughter, when she laughed she raised her handkerchief to her mouth to conceal this defect. Josephine was passionately fond of fine laces, and her handkerchiefs were made of this costly fabric. The ladies of the court took to flourishing lace handkerchiefs, and they became an indispensable part of a fashionable costume. Thus it came to pass that the elegant daughters of the Philadelphia merchants invested large sums in lace handkerchiefs, because an empress of the French happened to have defective teeth.

Very little has been said of the costumes of children. During a former period, as we have seen, they wore wigs, and, from all accounts, their costume made them the miniature "counterfeit presentments" of their papas and mammas; but the ideas of Jean Jacques Rousseau about childhood having created quite a furor just before the French revolution, more freedom was given to the youthful limbs. Then Dame Fashion claimed this a new conquest, and pretty soon there were special styles for children's dresses; these were imported in Philadelphia, as well as the styles for the grown folks. They were not always comfortable nor becoming to childhood.

About 1806 an entire metamorphosis took place in the dress of young gentlemen, owing to the make and wear of their small-clothes and the shape of the trowsers. A writer of the period said,—

"The prominence that was formerly continued in the vest or jacket has found its way into a pair of wide pantaloons, making a corresponding swell or protuberance in front and rear; and these are made more conspicuous by the short jacket that merely covers breast and shoulders. In fact, the appearance of some is so remarkable that, if one of their grandmothers could now see them, she would conclude that they were ready to *tumble to pieces!*"

Witty ladies sometimes amused themselves at the expense of the beaux. The following song appeared in the *Portfolio* Aug. 9, 1806:

"THE BOOTEES.

"*A New Song by Miss Kitty Crotchet.*

["*To be said or sung to the tune of 'Dorothy Dumps,' or any other tune the reader pleases.*]

"Of all the gay beaux
That sport their smart clothes,
There's none that my fancy can please,
With their spencers of crops,
Or woolly foretops,
Like Bob with his tippy bootees.

"Inexpressibles tight
Some fancies delight,
With bunches of tapes at their knees;
Yet all must confess,
Though snug in the dress,
They yield to Bob's tippy bootees.

"The blue pantaloons,
As they march in platoons,
Each lady's attention quick seize;
But I let them pass by,
And turn round my eye,
Then look at Bob's tippy bootees!

"View little Jack Spratt,
With his head from cravat
Peeping out like a mouse from a cheese,
With shoes on his toes,
And a handful of bows,
Then look at Bob's tippy bootees!

"Then there's Sir Thomas Tape,
With a coat and a cape
Like blankets of wild Cherokees;
Whether quiet or moving,
He looks like a sloven,
Near Bob with his tippy bootees.

"With such a dear lad
I ne'er could be sad,
Should we wander o'er mountains or seas;
And happen what might,
I'd still find delight
In my Bob with his tippy bootees!"

The Philadelphians, in all times, seem to have been fond of *badinage*. We have given in this chapter many squibs and witty criticisms published in the newspapers at different times during the period of which we treat. We will close these quotations with some amusing extracts from Washington Irving's "Stranger in Philadelphia," published in *Salmagundi*, in 1807. Under the guise of pleasant banter, they express a very flattering opinion of Philadelphia society. The interest to be found in the perusal of these extracts will be our excuse for their length. At the time of his visit Irving was a young man, fond of society, and who saw the best there was in Philadelphia.

He pays his compliments to the ladies in this fashion,—

"The Philadelphia ladies are, some of them, beautiful; some of them tolerably good-looking; and some of them, to say the truth, are not at all handsome. They are, however, very agreeable in general, except those who are reckoned witty, who, if I might be allowed to speak my mind, are very disagreeable, particularly to young gentlemen who are traveling for information. Being fond of tea-parties, they are a little given to criticism, but are in general remarkably discreet and very industrious, as I have been assured by some of my friends."

In another place he compares their ways to those of the New York ladies, and the comparison is not to the advantage of the latter. He says,—

"The amusements of the Philadelphians are dancing, punning, tea-parties, and theatrical exhibitions. In the first they are far inferior to the young people of New York, owing to the misfortune of their mostly preferring to idle away the time in the cultivation of the head instead of the heels. It is a melancholy fact that an infinite number of young ladies in Philadelphia, whose minds are elegantly accomplished in literature, have sacrificed to the attainment of such trifling acquisitions the pigeon-wing, the waltz, the Cossack dance, and other matters of equal importance. On the other hand, they excel the New Yorkers in punning, and in the management of tea-parties. In New York you never

hear, except from some young gentleman just returned from a visit to Philadelphia, a single attempt at punning. And at a tea-party the ladies in general are disposed close together, like a setting of jewels or pearls round a locket, in all the majesty of good behavior; and if a gentleman wishes to have a conversation with one of them about the backwardness of the spring, the improvements in the theatre, or the merits of his horse, he is obliged to march up in the face of such volleys of eye-shots, such a formidable artillery of glances, that if he escapes annihilation he should cry out 'A miracle!' and never encounter such dangers again. I remember to have once heard a very valiant British officer, who had served with credit for some years in the train-bands, declare, with a veteran oath, that sooner than encounter such a deadly peril he would fight his way clear through a London mob, though he were pelted with brickbats all the time! Some ladies who were present at this declaration of the gallant officer were inclined to consider it a great compliment, until one more knowing than the rest declared, with a little piece of a sneer, that they were very much obliged to him for likening the company to a London mob, and their glances to brickbats! The officer looked blue, turned on his heel, made a fine retreat, and went home, with a determination to quiz the American ladies as soon as he got to London."

He falls in with the wags, and being doubtless recognized as one of the brotherhood, is greeted with broadsides of wit, which inspires the following lament:

"Oh, my friend, how dreadfully I have been maltreated in this most facetious city! The good folk of this place have a most wicked determination of being all thought wits and *beaux esprits*; and they are not content with being thought so by themselves, but they insist that everybody else should be of the same opinion, and it has produced the most violent attack of puns upon my nervous system. The Philadelphians do absolutely 'live, move, and have a being' entirely upon puns, and their wits are absolutely cut up into sixpenny-bits, and dealt out in small change. I cannot speak two sentences but that I see a pun gathering in the faces of my hearers. I absolutely shudder with horror. Think what miseries I suffer, me to whom a pun is abomination! Is there anything in the whole volume of the 'miseries of human life' to equal it? I experienced the first attack of forlorn wit on entering Philadelphia. It was equal to a twinge of the gout or a stitch in the side. I found it was repeated at every step. I could not turn a corner but that a pun was hurled at my head; till, to complete my annoyance, two young devils of punsters, who began just to crow in the art like young bantams, penned me up in a corner at a tea-party, and did so be-pun me that I was reduced to absolute stupidity. I hastened home prodigiously indisposed, took to my bed, and was only roused therefrom by the sound of the breakfast-bell."

One more extract, too good to be lost. Poor Irving is button-held by a mad punster, and compelled to listen to a series of insane *jeux d'esprit*. He tells the story in such a way as to make the reader share his agony. Here it is:

"On my way from the stage-office to Renshaw's I was accosted by a good-looking young gentleman from New Jersey who had caught the infection. He took me by the button, and informed me of a contest that had lately taken place between a tailor and a shoemaker about,—I forget what. Snip was pronounced a great fellow of *capability*,—a man of gentlemanly *habits*, who would doubtless *suit* everybody. The shoemaker *bristled* up at this, and *waxed* exceeding wroth,—swore the tailor was but a *half-souled* fellow, and that it was easy to *shew* he was never *cut out* for a gentleman. The *choler* of the tailor was up in an instant. He swore by his *thimble* that he would never *pocket* such an insult, but would *baste* any man who dared to repeat it. Honest Crispin was now worked up to his proper *pitch*, and was determined to yield the tailor no quarters; he vowed he would lose his *all* but what he would gain his *ends*. He resolutely held out to the *last*; and, on his threatening to *back-strap* his adversary, the tailor was obliged to *sheer* off,—declaring, at the same time, that he would have him *bound over*. The young gentleman, having finished his detail, gave a most obstreperous laugh, and hurried off to tell his story to somebody else. '*Licentia punica*,' as Horace observes. It did my business. I went home, took to my bed, and was two days confined with this singular complaint."

The contest between the colonies and the mother-country had attracted the attention of the world, and many distinguished travelers visited the United States when peace was restored. We have quoted extensively from the impressions of travel published by most of them. The greater number of these travelers, especially in the early period, were Frenchmen,—a fact easily accounted for by the friendly relations which existed between the people of the two countries since the time when the allied forces of France and the United States had fought the battles of the Revolution.

François Jean, Marquis de Chastellux, member of the French Academy and "maréchal des camps" in the armies of the king of France, came to this country in 1780, with the rank of major-general, under Count de Rochambeau. He remained in this country about three years, and won the good opinion of the Philadelphians during his sojourn in Philadelphia in 1782. Of the estimation in which he was held by Washington, one may judge from the latter's playful letter congratulating the marquis on his marriage, which had taken place in Paris, in 1787, but a short time before his death. "I was," wrote Washington, "not less delighted than surprised to meet the plain American words, 'my wife.' A wife! well, my dear Marquis, I can scarcely refrain from smiling to find you caught at last. I saw by the eulogium you often made on the happiness of domestic life in America, that you had swallowed the bait, and that you would as surely be taken, one day or another, as that you were a philosopher and a soldier. So your day has at length come. I am glad of it, with all my heart. It is quite good enough for you. Now you are well served for coming to fight in favor of the American rebels, all the way across the Atlantic Ocean, by catching that terrible contagion, domestic felicity, which, like the smallpox or the plague, a man can only have once in his life, because it commonly lasts him (at least with us in America,—I know not how you manage these matters in France) for his whole lifetime. And yet, after all, the worst wish which I can find it in my heart to make against Madame de Chastellux and yourself is, that you may neither of you ever get the better of this same domestic felicity during the entire course of your mortal existence. If so wonderful an event should have occasioned me, my dear Marquis, to write in a strange style, you will understand me as clearly as if I had said, what, in plain English, is the simple truth, 'Do me the justice to believe that I take a heartfelt interest in whatever concerns your happiness.' And, in this view, I sincerely congratulate you on your auspicious matrimonial connection." Chastellux, on his return to France, published the following works: "Voyage dans l'Amérique septentrionale dans les Années 1780, '81, '82," "Discours sur les Avantages et Désavantages qui résultent pour l'Europe de la Découverte de l'Amérique," "Discours en Vers adressés aux Officiers et Soldats des différentes Armées américaines, traduit de l'Anglais de David Humphreys," "De la Félicité publique."

The young, handsome, and intelligent Brissot de Warville[1] came to Philadelphia in 1788–89. He was a quick observer, and Washington said of him that "he was intelligent, discreet, and disposed to receive favorable impressions of America." Brissot published his impressions in "Nouveau Voyage dans les États-Unis de l'Amérique septentrionale." He also published at Philadelphia and Geneva "Examen du Voyage du Marquis de Chastellux dans l'Amérique septentrionale," "Mémoire sur les Noirs de l'Amérique septentrionale lu à l'Assemblée de la Société des Amis des Noirs," and "De la France et des États-Unis, ou de l'Importance de la Révolution de l'Amérique pour le Bonheur de la France." Brissot was more critical than Chastellux, and censured some of the statements of the latter very severely.

The visit of François Auguste de Chateaubriand has already been mentioned in these pages. He gave up his contemplated expedition to the North Pole, but he traveled extensively through this country, visited the West and Northwest, and the South as far as Florida, and lived some time among the Indians on the borders of the great lakes. He returned to France at the end of 1792, ignorant of the great events that had taken place during his long absence in the wilds of America. He saw his nearest relatives perish by the guillotine, and he remained alone the last of a noble race. These horrors cast a shadow over his whole life. He never was a happy man, though he acquired undying fame as a poet, author, and statesman. His visit to America inspired him to write "The Natchez," "Atala," "René," and the "Voyage en Amérique," already quoted. It was also in the forests of the New World that he conceived his great work, "The Genius of Christianity," a book which did more to save France from the gross materialism of the revolutionists than anything that has been written on the subject. Chateaubriand had hoped to find a second Washington in Bonaparte. Disappointed in this hope, he renounced the liberal doctrines of his youth.

Count Adriani, of Milan, visited the United States in 1790, being the bearer of an ode addressed to Washington by Alfieri. He published some account of his travels, which was considered abusive.

Several exiles came from France during the reign of the "terrorists." The Viscount de Noailles, a brother-in-law of Lafayette and a soldier of the Revolutionary war, where he had held an officer's commission under Count de Rochambeau, came back, a fugitive, in 1793. Like many other noblemen of the time, prompted by the liberal principles which had led him to offer his sword to the cause of freedom in America, he had sided with the people in 1789, but when he saw Louis XVI. a prisoner and doomed to the guillotine, he went to England and thence came to Philadelphia, where he remained until better times permitted him to return to his native land. He at one time projected a settlement of the Susquehanna, but abandoned it for want of funds. He was very poor while in America, and during the latter portion of his stay in the city he occupied, gratuitously, the third story of a house upon the grounds of William Bingham, situate on Fourth Street, near Spruce, with an entrance from the street.

William Cobbett, the politician, Dr. Joseph Priestley, a man of science and a rationalistic philosopher, together with Dr. Thomas Cooper, a natural philosopher and chemist, came to the United States in 1794. Cobbett settled in Philadelphia, where he pitched into politics with such freedom that six or seven years' experience of America terminated his career. Priestley lectured and wrote, but finally settled at Northumberland, on the Susquehanna, together with his son, Dr. Cooper being a neighbor.

The celebrated diplomatist Charles Maurice, Prince

[1] The life and sad ending of this gifted and well-meaning man deserve more than a passing notice. Jean Pierre Brissot was what would be styled to-day "a self-made man." The son of a tavern-keeper of Chartres, he had received a good education. He left college full of admiration for the ancient Romans of the republic, and thirsting for fame. But his obscure plebeian name was an obstacle to success. His father had purchased a small estate called Ouarville; he assumed this name, changing the "Ou" into the W, so little used in France then, and came to Paris as Brissot de Warville. His undoubted talent and genial manner, his liberal views fearlessly expressed, soon made him friends among the philosophers of the school of Voltaire and Rousseau, who were unconsciously preparing the French Revolution. He published several pamphlets on the state of the kingdom, which led to his being imprisoned in the Bastille. He was released after a few months' confinement, through the influence of the Duke d'Orleans, and soon thereafter went to England, it is said, on a secret mission. It was after this he came to America. The political agitation which preceded the Revolution of 1789 hastened his return to France. He appeared in Paris in the garb of a Quaker, and, no sooner arrived, took an active part in public affairs. He published several pamphlets, and started the journal "Le Patriote Français," which soon commanded great influence. He was elected a deputy to the Legislative Assembly, and appointed member of the committee on foreign relations. It was owing to Brissot's report, as president of this committee, that Louis XVI. was obliged to declare war against the Emperor of Germany, April 20, 1792. On the 1st of February, 1793, he urged and obtained a declaration of war against England and Holland. One of the leaders of the Girondins, he had his own followers, known by the name of *Brissotins*. His influence excited the jealousy of Robespierre, who denounced him as a traitor for having drawn the country into war, the costs and sufferings of which would be borne by the people. The defeat of the Girondins' party, on the 31st of May, ruined Brissot's prospects, and put his life in danger. Orders for his arrest, and that of several influential "Brissotins," had already been issued by the terrible *Comité*, the passive instrument of Robespierre's vengeance. Brissot attempted to seek an asylum of safety in Switzerland, and left Paris in disguise, with the passport of a Swiss merchant. On the way he was recognized, and arrested, and brought back to Paris, where the guillotine ended his checkered life, Oct. 31, 1793. Brissot was an honest man, and a sincere republican, with no mean abilities. In addition to the books already quoted, which all relate to America, he published the following important works: "Bibliothèque philosophique sur les Lois criminelles," 1782–86, 10 vols. 8vo; "De la Vérité, ou Méditations sur les Moyens de parvenir à la Vérité de toutes les Connaissances humaines," 1782, 8vo; "Tableau de la Situation des Anglais dans les Indes orientales," 1784, 8vo; "Lettres politiques sur l'Histoire d'Angleterre," 1786, 2 vols. 8vo; and many political pamphlets on French affairs. Such is the work of the man in whom Sullivan saw only "a brisk little Frenchman." Returning to France with his republican theories considerably modified by what he had seen and observed in the United States, Brissot wished France to have a republic modeled upon the one he had just left, and which he admired sincerely. The Reign of Terror ended his dream, as it has that of many sincere republicans.

de Talleyrand Périgord, Bishop of Autun, came to Philadelphia. A nobleman and a priest, he had been one of the most active supporters of the French Revolution. Still, he was not of that advanced class of republicans who advocated the guillotine as the mainstay of liberty, and, after the fall of Louis XVI., he fell into discredit and thought it safe to leave France. He sought a refuge in England, but the government of that country was in little sympathy with renegades and revolutionists, and Talleyrand was given twenty-four hours' notice to leave British soil. It was then he came to America. Here he entered into important mercantile speculations, made money, and took out papers of naturalization. He returned to France, however, after the end of the Reign of Terror, and acquired the unenviable name of the most cunning and unscrupulous diplomatist in Europe. The celebrated axiom attributed to him, "Speech was given to man to enable him to disguise his thoughts," gives the key to his character. He served alternately Napoleon and the Bourbons, and betrayed them in turn. Despised, yet feared, employed for his undoubted talent at a time when his craftiness made him the head of European diplomacy, he lived until 1838. He was a great wit, and his *bon mots* are often quoted. Talleyrand, although he had once enjoyed the title and privileges of an American citizen, was not friendly to the United States, and often made American society the subject of his mockery.[1]

The Duke de la Rochefoucauld-Liancourt came to Philadelphia about the close of the year 1794, and remained there about five months. He also was an exile, and had lived fifteen months in England before coming to the United States. A nobleman of ancient lineage and liberal views, he brought with him many letters of introduction, and was at once received in the best society in Philadelphia. He was particularly intimate with the families of Gen. Henry Knox and Judge Chew. On his return to France he published a work on "The Prisons of Philadelphia," and his "Voyage dans les États-Unis," in eight volumes. He was a close observer, and his study of American society and institutions is remarkable for the impartiality of the writer.

Alexander Baring, son of Sir Francis Baring, baronet and merchant, afterward banker, was sent to the United States, when he attained the age of manhood, to acquire a knowledge of the commercial relations between Great Britain and America. While here he moved in the best society, and he became acquainted with Anne Louisa, daughter of William Bingham, and married her. While residing in Philadelphia, his son, William Bingham Baring, was born. The father afterward became, in England, banker for the United States. During the war of 1812 this firm, without instructions from the United States, paid regularly the interest on the American debt owing in Great Britain, although without remittances. Mr. Baring afterward became Lord Ashburton, and in 1842 came to the United States once more as special ambassador from Great Britain, during which time was negotiated the great Ashburton-Webster treaty in relation to the northeastern boundary. Lord Ashburton died in 1848.

George Washington Lafayette, son of the Marquis,

[1] After his return to Paris Talleyrand lived with a beautiful widow named Mrs. Grandt, who was the most ignorant and stupid creature to be found. To please the first consul, who frowned down scandalous immorality among the officers of the government, he married this woman as soon as he was relieved of his priestly vows by a brief of the Pope, in 1801–2. Talleyrand liked to give dinners, and madame's *naïvetés* usually kept him in hot water on such occasions. The celebrated traveler, Denon, having returned from his voyages, was lionized by Parisian society, and Talleyrand, as a matter of course, wished to entertain him. Full of misgivings, the prince had a little precautionary talk at breakfast with his beautiful companion. "My dear," said he, "Mr. Denon, the famous voyager, will dine with us to-day. He will sit on your right; try to say something agreeable to him. His book of travels had just been published; send for it and read it to-day. You will find it very entertaining, for Mr. Denon has visited many strange countries and met with thrilling adventures: he has been shipwrecked, has lived among the savages. You can lead him to talk of these adventures; nothing pleases a traveler more than to speak of his travels." And Talleyrand went away rejoicing in his happy forethought. Poor madame was anxious to please her lord; she was aware that he had more than once blushed at her blunders. Wasn't it kind of him to suggest a way out of her embarrassment? She went immediately to the bookseller's; she would get the book herself. Alas! on entering the store she had entirely forgotten the traveler's name. "It is a book full of adventures," she explained to the shopman; "there is something in it about shipwrecks and savages and strange things seen in wild countries. I can't recollect the man's name, but I know it ends in *on*. Why, you must know what I mean; everybody reads this book!" "Ah! exclaimed the bookseller, after thinking a moment, "I know what madame wants. Here is the book; I have sold ever so many copies of it. Madame will find it very interesting." The gratified lady seized her prize, drove home, and shut herself up with the precious volume. When she came down to meet her guests she was radiant with smiles, and she gave her husband a reassuring look of intelligence. During the early part of a dinner-party there is generally little conversation, the guests are too much absorbed by the process of mastication. But madame could not wait; she was brimming over with recently acquired information; she had prepared her phrase of attack, and was afraid she might forget it. Amid the general silence her clear, silvery voice was heard addressing the following sympathetic remark to her right-hand neighbor: "Ah! monsieur, what must have been your grief when you saw your faithful Friday die, leaving you alone once more on your island?" Denon looked aghast at her; every head was turned toward that end of the table, while at the other end the prince, his usually sallow face red with mortification, looked at his wife with an expression which would have terrified the poor lady had she seen it; but she was looking at Denon, and repeating her pathetic ejaculations about "that poor man Friday." A light dawned on the mind of the great traveler; he had read De Foe's charming book, which had recently been translated in French. Madame had mistaken him for "Robinson,"—the French seldom use the surname "Crusoe," but designate the lonely inhabitant of the deserted isle by the simple cognomen "Robinson." Such was, indeed, the fact; madame had devoured the book as the narrative of real adventures, of which she was to meet the interesting hero. Denon was a kind man. He readily understood the simple creature at his side, and instead of chaffing her he told her many pleasant little stories of his own experience, not so thrilling, he said, as the adventures of that much more celebrated traveler for whom she had done him the honor to mistake him. These two chatted away like a pair of friends the whole evening. Madame thought Robinson-Denon the most pleasant man she had ever met. But Talleyrand vowed *in petto* that he would never again presume to suggest beforehand a subject of conversation for madame. The story was too good to be lost; it soon went the rounds of the Parisian *salons*, and was declared to be the best of Madame Grandt's many blunders.

when the latter was taken prisoner by the Austrians, came to Philadelphia with his tutor, M. Frestell. Washington was deeply moved by the misfortunes of his friend and companion in arms, but he would not, in the then condition of political affairs, allow the son to be brought too prominently before the public. The youth continued quietly his studies, the President seeing that he lacked nothing. But when Washington ceased to be the President of the United States, he was no longer hindered by reasons of state from showing his affection for the son of Lafayette. He took the young man with him to Mount Vernon, and lavished upon him, until his departure for France, all the attentions and care of a loving father.

"Misfortune makes strange bed-fellows," says the proverb. Philadelphia, in those days, gave shelter to Frenchmen of various conditions of life, and whose future was to show still greater disparity. In the same year, 1796, there arrived a scion of royal blood, the young Duke of Orleans, who, thirty-four years later, was to be known as "Louis Philippe 1er Roi des Français." His father, "Philippe Égalité," had dishonored himself, adopting the part of a fierce Jacobin, and casting the vilest insinuations on the fair name of his own mother. Then destroyed by the very wretches whose favor he had courted, he had perished by the guillotine. The eldest of three sons, young Louis Philippe, had joined the French army, and sought to retrieve the paternal disgrace by deeds of valor; but his services did not shield him from persecution. Exile was his reward. He went to Switzerland, where he taught school. Gouverneur Morris induced him to go to the United States, and even gave him letters of credit on New York bankers; but the young prince possessed the true dignity of misfortune, and would not avail himself of Mr. Morris' generosity. In Philadelphia he was known to be in very straitened circumstances, but he moved in the best society and was universally respected. He became intimate with Mr. William Bingham's family, and, smitten with the charms of one of the daughters, made her an offer of marriage. The prudent father declined the royal alliance: "Should you ever be restored to your hereditary position," he said, "you will be too great a match for her; if not, she is too great a match for you." Thus, a Philadelphia belle narrowly escaped ascending the throne of France, or, perhaps, giving the world another edition of the Patterson-Bonaparte case.

In 1797 the duke's brothers, Duke de Montpensier and Count de Beaujolais, joined him in Philadelphia. It seems that they engaged in business, for the City Directory for 1798 has on its register, "D'Orleans, Messrs., merchants, near No. 100 South Front." A short time after this they left Philadelphia. The year before they had done what was considered a hazardous undertaking, viz., making a tour through the West and South on horseback, and attended by a single servant. Louis Philippe, after he became king, adverted freely to his days of exile. He startled a foreign ambassador very much one day by beginning a remark with the words, "When I was a schoolmaster." He used to say that he was the first king who had "cleaned his own shoes."

Constantin François Chasseboeuf, Count De Volney, French author and free-thinker, exiled from France after confinement by Robespierre, came to the United States in 1795, and remained in the country three years. Before his arrival he had published at Geneva his celebrated work, "Les Ruines, ou Medidations sur les Revolutions des Empires." Stuart painted his portrait while he was in Philadelphia. Samuel Breck said,—

"Volney I knew well. (Note that I was upward of twenty-five years old in those days.) He was a man, as I have said elsewhere, of proud spirit and sour temper, jealous of the least appearance of slight, presuming much on his celebrity as a writer, and who judged us in terms of bitterness and folly. He had the arrogance to assert that the talents of Washington would not have raised him above the rank of a colonel in the French service. He pronounced as flippantly upon the spirit of our people, which he did not at all understand, as he did upon the qualifications of Washington. Happening to be in conversation one evening with him, in a richly-furnished room, when the news arrived of the Algerines having declared war, he pointed to the silk curtains, and remarked to me that since we had taken to decorate our houses with the rich trappings of European luxury, we must submit to any foe who chose to attack us, and that the Moors had nothing to do but to sail into our harbors and put us under contribution, adding that the revolutionary courage of the people had become enervated by fine-papered parlors and satin chairs. This is the way we were judged by nearly every superficial, prejudiced foreigner."

In the year 1796 there came to Philadelphia Dr. Eric Bollman, who had acquired some celebrity by his bold but unsuccessful attempt to liberate Gen. Lafayette from an Austrian prison in 1795. The name of Lafayette, ever dear to the Americans, insured the doctor a hearty welcome, but he does not seem to have created a very favorable impression here. John Adams, in a letter to his daughter, expressed the following severe opinion of the stranger: "With an extravagant character for knowledge and capacity, he appears to be an adventurer with little judgment or solicitude."

Hamilton thought more favorably of Dr. Bollman. He wrote of him to Washington, "He appears to have been induced to think that he attempted a service which would strongly recommend him to the favor of the people of this country; and, as a consequence, he hopes for some civil employment under our government. He seems to be a man of education, speaks several languages, converses sensibly, is of polite manners, and, I dare say, has the material of future advancement."

Bollman remained in the United States for many years.

Thaddeus Kosciusko, another of those gallant foreigners who had fought for American independence, returned to this country in 1797. The life of this celebrated Polish patriot since the Revolutionary war had been most eventful. Taking an active part in the last struggle of Poland for liberty, between

1789 and 1794, he was Dictator of that unfortunate country when he fell, covered with wounds, at the battle of Maciejowice. He was taken prisoner, and remained two years a captive. Congress had given him a pension and added a grant of land. Kosciusko's character was without blemish; his bravery in the field and skill as an engineer had won him distinction in the American army. De Liancourt speaks highly of him in his book on the United States.

With Kosciusko came another Polish patriot, who had been his companion in arms and in captivity, the poet Julian Ursin Niemciewicz. He had been a deputy of the Diet of Lithuania, where the fervor of his eloquence fired all hearts. Niemciewicz was a very amiable man as well as a gifted poet. He won the heart of an American lady, married her, and lived several years in the United States.

André Michaux and his son, François André, both eminent French botanists, visited Philadelphia in 1796. François André Michaux came again, alone, in 1802, commissioned by the French government to examine the natural productions of the Western States. He made a third visit in 1806. Michaux, the younger, acquired great fame as a botanist. Besides his works upon forest trees, in which he speaks of America, he published "A Journey to the West of the Allegheny Mountains," in which appear several notices of Philadelphia. The book was originally published at London, in 1805.

France, naturally, since she was the ally of the revolted colonies, was the first power which sent a representative to the United States. Her first ambassador, Monsieur Gerard, was a polished gentleman, of excellent manners and much ability. He made many friends in Philadelphia, although he did not remain very long here. Washington held him in great esteem. Watson relates, upon the authority of Col. McLane, who was among the guests, that Monsieur Gerard gave once an elegant dinner to about one hundred French and American officers, and while they were dining there arose a violent thunder-storm. The lightning struck the house and melted all the silver spoons and other plate upon the table. One of the French officers was killed and all the company stunned by the fearful shock.

The Chevalier de la Luzerne succeeded Monsieur Gerard. He occupied Carpenter's mansion, and it was there he gave the entertainment in honor of the birth of the Dauphin of France, already mentioned. It was for the time a scene of magnificence unprecedented. "The whole gardens were gorgeously illuminated, and the guests were seen by the crowd from the street under an illuminated arcade of fanciful construction and scenery." The *fête* ended with a splendid display of fire-works. De la Luzerne had the honor of presenting to Congress the pictures of Louis XVI. and his unfortunate consort, Marie Antoinette, sent by the king in testimonial of friendship. These portraits were placed in the large committee-room of the Senate. They were subsequently taken to Washington City when the seat of government was removed there, and were burned by the English in the war of 1812.

When France ceased to support a full minister to the United States, M. Barbé de Marbois, who had come with De la Luzerne as his secretary of legation, took charge of the office. When Congress removed to New York M. de Marbois went to that city, and a short time after married a daughter of William Moore, at one time president of Pennsylvania. She was a sister of Col. Thomas Lloyd Moore. Appointed *intendant* of Hispaniola in 1785, M. de Marbois left New York and was succeeded as *chargé d'affaires* by Louis William Otto. The latter was superseded by the Marquis de Moustier in 1787, but resumed the office after the recall of the marquis, and was holding it when Congress returned to Philadelphia in 1790. M. de la Forrest was vice-consul-general. Upon the advent of the Robespierre faction to power, the troublesome citizen Genet arrived as ambassador. He behaved with so little prudence, or indeed propriety, that Washington demanded his recall, and citizen Fauchet was sent in his place. He lived at the corner of Twelfth and High Streets. M. de la Forrest again filled the office of vice-consul, which had been given to citizen Dupont during Genet's short term. Citizen Adet in 1795, and citizen Letombe in 1797, were the next consul-generals. The difficulties between the United States and France caused the withdrawal of the latter's representative until friendly relations were resumed.

The country next earliest represented was Spain. Her first ambassador, Don Juan de Mirailles, died during the Revolution. Don Joseph de Viar came as *chargé d'affaires* in 1790. In 1793 this gentleman and Don José de Jaudennes were commissioners from Spain. Jaudennes was subsequently superseded by Don Carlos Martinez, Marques de Yrujo. Washington wrote to Pickering in relation to the young marquis in 1796: "He is a young man, very free and easy in his manners, professes to be well disposed toward the United States, and, as far as judgment can be formed on slight acquaintance, appears to be well informed."

De Yrujo, it has been mentioned elsewhere, married Miss Sally McKean. A son, afterward Marquis of Soto Mayer, was born in Philadelphia. De Yrujo in 1797–98 resided at No. 315 High Street. This was on the north side of the street, between Eighth and Ninth. The house was occupied in 1795 by Pierce Butler, senator from South Carolina. Don Joseph Ignatius de Viar continued to discharge the duties of commissioner or consul-general, and lived during the greater part of this time at the northwestern corner of Fourth and Prune Streets.

The Chevalier de Freire came to Philadelphia as resident minister from Portugal in 1790. He was very wealthy, and his wife, who dressed with much

elegance, used to appear blazing with diamonds on all great occasions. She was an amiable woman, and became quite intimate with Mrs. Washington. After Franklin's death De Freire rented his house in Franklin Court. He was a resident of Philadelphia for more than ten years. Ignatius Palyart, No. 208 South Second Street, was consul-general of Portugal.

The United Netherlands were represented in 1790–91 by Francis P. Van Berckel, who was accredited to the American government while it was yet in New York. He resided in 1791 at No. 276 High Street, which was on the south side, between Eighth and Ninth. In 1796 his residence is put in the Directory at No. 258 High Street. He was succeeded in 1796–97 by R. G. Van Polanen, who was minister resident. The latter remained until after 1800. During the greater portion of this time the consul-general from the United Provinces was John H. Christopher Heineken, at No. 64 North Third Street.

Charles Helsted was accredited consul-general from Sweden in 1791. He was succeeded by Richard Soderstrom, who died in Philadelphia, after many years' residence. In 1800 he was living in Walnut Street, between Seventh and Eighth Streets.

The earliest representative of Prussia at Philadelphia was John Godfrey Paleske. In 1794 he lived on Chestnut Street, between Tenth and Eleventh.

In 1790–91 Great Britain accredited Sir John Temple as her consul-general. Dr. Phineas Bond was her consul for Philadelphia. Dr. Bond was a native Philadelphian, a brother of Dr. Thomas Bond. He had always been a Tory, was arrested in 1777, and signed the parole. The government of Great Britain rewarded his loyalty in 1786 by appointing him British consul for the Middle States. This appointment led to much heated debate in Congress. It made Dr. Bond consul and "commissioner for commercial affairs," and the latter title was held to confer some of the powers of a minister. He was confirmed as consul only. He was living in Philadelphia at the time of the affair between the "Chesapeake" and the "Little Belt." On that occasion a crowd of people marched past Dr. Bond's house and played "The Rogue's March." He remained in the city until hostilities commenced between Great Britain and the United States, in 1812, when he was compelled, after a life of many years in his native city, to retire in his old age to England, where he died.

The first minister from Great Britain to the United States was George Hammond, who came here in 1793. He lived three years in Philadelphia, during which time he courted and married one of the daughters of Andrew Allen. He was succeeded, in 1796, by Robert Liston, who remained in Philadelphia until the removal of the seat of government. Mr. Liston was accompanied to Washington by his secretary of legation, Edward Thornton, father of Sir Edward Thornton, British minister to the United States in 1880, and for some years before. Liston was succeeded as minister plenipotentiary in 1803 at Washington by Anthony Merry, who gave way, in 1806, to David M. Erskine. After the close of the war Charles Bagot was British minister from 1815 for five or six years. He gave way to Stratford Canning.

Russia was represented in 1809 by Andrew Daschkoff, consul-general and *chargé d'affaires*. He became minister plenipotentiary and envoy extraordinary in 1813, and continued so until 1819. During the war of 1812 he offered the mediation of the emperor of Russia between the governments of the United States and Great Britain. Mr. Daschkoff was exceedingly popular in society. When he left the city in May, 1819, to return to his native country, Poulson's *Advertiser*, in noticing his departure, said that Mr. Daschkoff and his lady would "long be remembered for the elegant hospitality which has distinguished their residence in this city. Rarely, if ever, has a new foreigner attracted so large a share of admiration and affection as Madame de Daschkoff." She was represented to be a lady possessing talents of superior order, which were cultivated to perfection, and she was equally distinguished for her personal accomplishments and the qualities of her heart. In regard to Mr. Daschkoff, it was said "his own house has been on the most friendly and liberal establishment, and Americans were always received there with peculiar kindness and attention, as many can testify who have passed cheerful and happy hours under his roof."

Mr. Daschkoff's successor was Pierre de Poletica, who had probably been his assistant, for, upon Mr. de Poletica's departure for Europe, in 1822, a public dinner was given to him in Philadelphia, one of the reasons for which was stated to be because he had "lived so long and had been so highly esteemed among us."

Besides those already mentioned, several members of the diplomatic corps married in Philadelphia, testifying thus to the superior charms of our girls and their own good taste. Richard Soderstrom, consul-general of Sweden, who lived thirty-two years in America, spent nearly the whole of that period in Philadelphia, where he married and left children. He died in 1815, and was buried in the old Swedish churchyard, in Southwark. Baron de Kantzow was appointed minister resident of Sweden in 1814. Bernard Dahlgren was Swedish vice-consul. In 1808 he was married to Miss Martha Rowan, of Philadelphia. He never returned to Europe. He was the ancestor of Admiral John A. Dahlgren, of the United States navy, and of Col. Ulrich Dahlgren, who was killed during an attempted raid on Richmond in 1864.

P. Pederson, *chargé d'affaires* for Denmark in 1805, was minister resident in 1816, and lived in Philadelphia until 1825. He married a lady of Philadelphia, who died in Europe while on a visit there in 1815. In May, 1820, Mr. Pederson was again married, by Bishop White, to Miss Annie

Caroline, eldest daughter of William Langdon Smith, of South Carolina.

The new South American republic of Columbia was represented by Don Manuel Torres, minister plenipotentiary, who made West Philadelphia his residence. He died at Hamiltonville in July, 1822, and was honored with a military funeral, on which occasion the Washington Grays and some of the companies of the Washington Guards turned out.

In addition to the persons in the diplomatic service, there were, at the close of the last century and the beginning of the present, other foreign residents of some distinction. Philadelphia was also visited during those years by many travelers who were distinguished either for eminence attained in their professions or by reason of their birth. The names of some are of historic interest.

Baron de Brahm (John William Gerard), a German officer of some merit, came to the United States at the end of the century. He had quiet tastes, and, charmed with the peaceful aspect of Germantown, he settled there. He married a member of the Society of Friends. The year of his death is not known, but his widow, Mary de Brahm, died in February, 1806. There was another person of almost similar name,—Andreas Everandus von Braam Honchgust,—who had been the Governor of a Dutch East India island. He bought a place on the Delaware, three miles below Bristol, and erected there a costly mansion, to which he gave the name of China Retreat. In later times it has been known as Bristol College.

Another old soldier, Baron Col. Frederick H. de Weissenfels, a native of Prussia, who had served in his own country, then in the British army, and finally in the Continental army, had settled in Philadelphia. He died there in February, 1806.

In the early part of the century there came to Philadelphia a man who soon attained social distinction, while, strange to say, there hung over his origin and antecedents a veil of mystery, never penetrated even by his most intimate acquaintances. This was Talbot Hamilton, believed by some to be a Scotchman, by others an Englishman, who first came into notice as a teacher in a country school, the academy at Lower Dublin, from which he resigned in 1802, to take charge of a school in Hamilton village. In 1807 he established a private academy for young ladies back of No. 34 Church Alley, which he directed for about ten years. A man of fine education and acknowledged merit, he formed acquaintance with the most cultivated people and moved in the best society. His tastes were artistic, and, having acquired wealth, he accumulated a valuable collection of paintings and a good library. He was a member of the Philosophical Society, of the Athenæum, and of the Academy of Fine Arts. He went abroad in 1820, and died at Naples in April of that year. Upon the opening of his will it was found that he had bequeathed his fine collection of paintings to the Academy of Fine Arts and part of his library to the Athenæum. In noticing his death, Poulson's paper said, "Of his early history nothing is known. In his freest conversation an impenetrable veil was thrown over his early career."

Philadelphia had seen French noblemen, the very flower of that aristocracy which, notwithstanding its many faults, was admired for its chivalrous courage and elegance of manner; she had seen the sincere patriot and the demagogue; she had opened her hospitable doors to a future king of France; she was now to see some members of that Corsican family whose eldest son, himself sitting on the throne of the Bourbons, placed brother after brother on the thrones of the countries conquered by his military genius, frail monuments of an insane ambition, which were destined to crumble into the dust of oblivion long before the young American republic would attain its full growth or the last of Washington's companions pass away from the face of the earth. Jerome, the youngest of the Bonapartes, whom his brother Napoleon had placed in command of a French frigate, came to Philadelphia in 1803, and lodged at the old Indian Queen Hotel, in Fourth Street. He did not remain very long, and, to all appearance, did not make much impression on the Philadelphia belles, although he was a handsome young fellow, with a soft heart and a softer head. He went to Baltimore, where he was more successful, for he there won the heart and hand of Miss Elizabeth Patterson, the fascinating daughter of William Patterson, merchant. The young couple passed through Philadelphia in 1804, on their way to New York, where they were to embark upon Jerome's frigate, "Le Président." The presence of some English cruisers off Sandy Hook making the voyage unsafe, they returned and took passage on the "Philadelphia," bound to Cadiz, Spain; but this vessel meeting with a heavy gale in Delaware Bay, Jerome and his wife were landed at Pilot Town and came back to Philadelphia. They finally returned to Baltimore, and succeeded in sailing from that port in the spring of 1805. It seems as though Miss Patterson's good genius had tried so long to put obstacles to their departure as a warning of the bitter fate which awaited her in Europe. It were idle to recount here the story of the young wife's wrongs, to tell how the weak husband succumbed to Napoleon's stern will, and renounced the wife he had sworn to love and protect. This American girl did not pine and die of a broken heart, neither did she gratify the desire of the omnipotent emperor, and consider herself simple Miss Patterson. She never abdicated her rights, but retained proudly the name of Mrs. Bonaparte. She bore it, unsullied by any act of hers, until her death, at an advanced age, and during her long, lonely life she saw the mighty Napoleon hurled from his imperial throne, his brothers wanderers upon the earth, and himself a prisoner, released only by death. She lived to see the ephemeral restoration of

the Bonaparte dynasty, and her own grandson greeted as a cousin by the third Napoleon. She saw the fall of the second empire and France a republic.

Jerome Bonaparte was a weak, pleasure-loving, dissipated young man, who held his eldest brother in great awe. Napoleon kept him in leading-strings; having made him behave so infamously to his American wife, he rewarded him with the crown of Westphalia,—that is, he made him, as he did others, a nominal king, who was to do the bidding of the emperor of the French. An anecdote of the time will show what sort of a character was young Jerome. He had some boon companions, with whom he often sought relief from the forced dignity of his brother's court. One of these was Pigault-Lebrun, the writer of erotic novels; the other, whose name has escaped our memory, a young poet of the same cloth. The emperor had just told Jerome that he had made him king of Westphalia; the young man, on leaving the imperial presence, like one dazed by a sudden vision of grandeur, met his two friends, and hastened to tell them the great news. "You will cast us aside," said Lebrun. "Never!" cried the new king. "Never! my dear friends! You must come with me; you will be the highest dignitaries of my court. Come, let us go and dine together; we will talk the matter over." The trio stepped into the nearest restaurant, asked for a private room, and ordered a sumptuous feast. By the time the dessert was brought in it had been arranged that Pigault-Lebrun would be lord chancellor, and X, minister of finances of the new kingdom. Then began an animated discussion of the laws and measures to be introduced, and many a bottle of wine was drunk to stimulate the eloquence of the three friends. At last the dinner was over, and the host, made somewhat uneasy by the great consumption of liquids to be charged to these young strangers, came in with his bill. Jerome took out his purse. Alas! it did not contain half the sum required. As to his friends, they respected the tradition, and were, like true authors, absolutely penniless. X, who already felt all the importance of his office, waved his hand grandly to the proprietor of the restaurant, saying, "Have no fear, my good man; I will see that your bill is paid to-morrow." "Hum, I don't know who you are, sir!" "I am the High Treasurer of the Kingdom of Westphalia." "And I, the High Chancellor of Westphalia," chimed in Lebrun, in a husky voice, "indorse the promise of Monsieur the Treasurer." "Indeed," sneered the exasperated creditor, "those are your titles, messieurs! And I suppose that tipsy rogue yonder is the King of Westphalia?" "I am the man," hiccoughed Jerome, who was vainly trying to keep his eyes open. Mine host, no longer doubtful that he had to deal with three swindlers, sent for the police, who marched the three friends to the office of the "commissaire." There, luckily, some one was found who knew Jerome, and the matter was adjusted, but by the next day the emperor knew all the particulars of this adventure. Great was his wrath. He ordered Jerome to depart immediately for his kingdom, and Pigault-Lebrun and X were forbidden from having anything to do with organizing the court of Westphalia.

Another Bonaparte (Joseph, ex-king of Spain) came to Philadelphia some years later, about 1815. He is said to have lived in Capt. John Savage's house, on Ninth Street, and subsequently in John Beale Bordley's house, No. 7 Union Street; but his residence of a permanent character was at Lansdowne, the country-seat of the Binghams, on the west side of the Schuylkill, the grounds of which are now included in Fairmount Park. Samuel Breck records in his diary, under date of April 20, 1816, that he was informed that "the ex-king of Spain, Joseph Bonaparte, had hired Lansdowne House for one year and was already established in the mansion." He must have remained there for more than one year,—probably for two years. Breck records, under date of Sept. 1, 1817, that Julia Rush, daughter of Dr. Benjamin Rush, who afterwards married Henry J. Williams, informed him that she had lately dined at Joseph Bonaparte's. After this he leased John Dunlap's house, at the southeast corner of Market and Twelfth Streets, where he lived until 1825. He had purchased in the mean time some land near Bordentown, N. J., where he built a fine mansion as a summer residence. This place, called "Point Breeze," was tastefully arranged, and the house contained many valuable works of art, statuary, paintings, etc. It was destroyed by fire in 1820. The people in the neighborhood rendered every possible assistance in the effort to save the property, and Mr. Bonaparte afterwards sent a letter of thanks to one of the magistrates of Bordentown, in which he bore grateful testimony to the kindness and honesty of the people, declaring that—

"all the furniture, statues, pictures, money, plate, gold, jewels, linen, books, and, in short, everything that was not consumed, has been most scrupulously delivered into the hands of the people of my house. In the night of the fire, and during the next day, there were brought to me, by laboring men, drawers in which I found the proper quantity of pieces of money, medals of gold, and valuable jewels, which might have been taken with impunity."

Another Frenchman, very little in sympathy with the Bonapartes, made Philadelphia his home in 1805. Gen. Jean Victor Moreaux, banished from France for an alleged participation in the plot of Pichegru and Cadoudal against the life of the first consul, was held to be the greatest general of the French republic next to Bonaparte, and even by many considered his equal. His guilt, stoutly denied by himself, was generally doubted, and his disgrace was attributed to Bonaparte's jealousy of the hero of Rastadt, Etlingen, and Hohenlinden. Soon after his arrival the citizens of Philadelphia gave Gen. Moreau a public dinner. He petitioned the Legislature of Pennsylvania for permission to hold real-estate in the commonwealth. This request, refused at first, was subsequently granted, and Moreau purchased part of the Robert

Morris property at Morrisville, in Bucks County. On the 17th of April, 1811, Gen. Moreau entered his declaration of becoming a citizen of the United States, in the office of the clerk of the Circuit Court at Philadelphia. Whether he became fully naturalized is a matter of doubt, but Gen. Moreau returned to Europe in 1813, upon the invitation of the czar of Russia and the kings of Sweden and Prussia. While standing near the Emperor Alexander, at the battle of Dresden (Aug. 27, 1813) he had both of his legs broken by a cannon-ball from the French batteries. He died five days later. In 1816, Moreau's property in Morrisville was sold for account of his wife and daughter, and it realized fifty-two thousand dollars.

JOHN DUNLAP'S HOUSE.
[From an original drawing.]

About the same year (1805) David Parrish, of Antwerp, established himself in Philadelphia as agent of the Hopes, bankers, to effect a transfer to Europe, under the American flag, of silver which was on deposit in Mexico. He lived in fine style at No. 228 Walnut Street, then at No. 152 Walnut Street, Samson's Row, and finally in the fine house No. 1 York Row, at the southwest corner of Walnut Street and Columbia Avenue, now called Washington Square, which was afterward occupied by Dr. McClellan and Josiah Randall. In the United States he operated through the mercantile houses of Willing and Francis and others. Stephen Girard was at one time correspondent of the Hopes and the Barings.

John Dunlap's house was one of the finest in the city, and had connected with it almost a square of ground, extending from Market to Chestnut Street, and from Eleventh to Twelfth. South of it, on Twelfth Street, were two dwelling-houses, in one of which Robert Morris, the financier of the Revolution, lived and died. The other was occupied by Paul Busti, merchant. John Dunlap's house was built in 1790, and the roof covered more distinguished residents than almost any other house in the city, as the following list of some of the tenants will show:

1791. Edmund Randolph, Attorney-General of the United States.

1792. Chevalier Jean De Ternant, minister of the French Republic to the United States.

1793. Citizen Edwin Charles Genet, minister of the French Republic to the United States.

1794. Joseph Fanchet, minister of the French Republic to the United States.

1795. M. Adet, minister of the French Republic to the United States.

1797. Capt. John Dunlap.

1815. Baron De Kantzow, minister from Sweden to the United States.

1817. Joseph Bonaparte, Count De Survilliers, ex-king of Spain.

1824. Charles Lucien Bonaparte, prince of Canino and Mussignano, son of Lucien Bonaparte, with his wife, Princess Zenaide Charlotte Julie, daughter of Joseph Bonaparte.

1825. Dr. John Y. Clark, husband of Baroness Lallemand, a niece of Stephen Girard, with that lady. Girard then the owner of the house.

1829. Stephen F. Nidelet.

After the death of Stephen Girard the Dunlap house was torn down and the whole square improved under direction of the Girard Trust.

In 1808, Richard Penn, Lieutenant-Governor before the Revolution, returned from England, whither he had gone at the beginning of the war. He brought with him his son William and his daughter Hannah, and remained a little over a year in Philadelphia, looking after his landed interests. It was during this visit that young William Penn married a beautiful girl, Julia Catherine Balabrega, a native of Philadelphia. Though perfectly respectable, the bride's parents were of a lower station in life than that held by the Penns, and great was the scandal among those who entertained aristocratic prejudices. But William had consulted only his own happiness. He let society declaim about his *mésalliance*, and took his young wife to England, where they lived happily until his death.

Many travelers visited Philadelphia in the early part of the century, most of whom published their observations. Robert Sutcliff, an English Quaker, who had a brother and a cousin living in Philadelphia, came to examine the resources of the country, and was so well pleased that he went back for his family, and brought them over in 1811. Unfortunately, he died in the same year; but during his first visit he had not been idle, and in the year following his death his manuscripts were published under the title of "Travels in Some Parts of North America in the years 1804–6." Sutcliff was a man of correct judgment and little given to exaggeration; his comments are sensible, and his narrative interesting.

Charles William Jansen published "The Stranger in America" at London, 1807. His observations embrace the period from 1793 to 1806. Jansen, in his title-page, styles himself "Counselor-at-law, late of the State of Rhode Island."

Vincent Nolte, a native of Leghorn, resided some time in Philadelphia, and was connected with David Parrish. He had traveled extensively, and was called "a restless cosmopolite," having resided alternately in Asia, Europe, and America. In his work entitled "Fifty Years in Both Hemispheres," published in 1854, he relates several anecdotes in connection with his residence here.

John Melish published "Travels in the United States of America," in the years 1806–11; "A Description of the United States," in 1816; and "A Statistical View of the United States," in 1822. He was a native of Scotland, and after traveling extensively through this country settled in Philadelphia, where he engaged extensively in the publication of maps and geographical and statistical works. He died in Philadelphia, Dec. 30, 1822.

Felix de Beaujour, for some time consul-general of France in Philadelphia, wrote in French a very important work, illustrated with tables and valuable statements, concerning the agriculture, commerce, and manufactures of the country. His observations of Philadelphia society are written in a spirit of fairness and impartiality. His book was translated into English, and published in London in 1814, under the title of "Sketch of the United States of America, from 1800 to 1810."

Henry Ker wrote a very fair book, "Travels through the Western Interior of the United States, from the year 1808 to 1816."

F. Cuming published in 1810 "Sketches of a Tour to the Western Country, Down the Ohio," etc., commenced in 1807. Commencing his trip at Philadelphia, he says nothing of the appearance of the town, because, he alleges, "he did not think it worth while to describe the city, which had already been very fully described by others." As, however, he had to cross the Schuylkill by a bridge, he described it pretty fully, as well as the floating bridge at the upper ferry.

Lieut. Francis Hall, of the Fourteenth Light Dragoons, published "Travels in Canada and the United States in 1815–17." His book is entertaining and fair in judgment. The *North American Review* said of him, "He has good sense enough to think that a country is not to be judged by its tavern-keepers and hostlers, and too much good humor to rail at a whole people because he meets with occasional instances of fraud and churlishness."

Of a different temper was Henry Bradshaw Fearon, a London surgeon, who visited this country about 1816–17. He was evidently prepared to criticise and denounce everything he saw. His observations were printed in "A Narrative of a Journey of Five Thousand Miles through the Eastern and Western States of America." His work created a great deal of irritation in this country. Even the *London Monthly Review* noticed his "tone of ill-temper," while Sydney Smith, who was no lover of America, was compelled to admit in the *Edinburgh Review* that Mr. Fearon was "a little given to exaggerate in his views of vices and prejudices."

John Palmer published in London in 1818 "A Journal of Travels in the United States of North America and in Lower Canada in 1817." Sydney Smith said of him, "He is a plain man, of good sense and slow judgment." Palmer came from Lynn, Norfolk, England.

William Tell Harris wrote "Remarks made during a Tour through the United States of America," a fair book; and Emma Howitt, a lover of nature and a member of the Society of Friends, published some interesting "Selections from Letters written during a Tour through the United States in the Summer and Autumn of 1818–19."

Baron Von Humboldt, the celebrated naturalist and traveler, made a flying visit to Philadelphia, in 1804, with his friends Von Bonpland and Montufar, with whom he had explored South America and the Andes Mountains. The travelers were on their way to Washington, where they called on President Jefferson, who received them with great distinction.

A great excitement in literary circles was created in 1804, by the coming of the poet, Thomas Moore. He had received the appointment of registrar of the British Admiralty in the island of Bermuda, but after taking possession of the office, he found that his duties might be performed by a deputy, and did not require his personal attention. He determined then to return to England by the way of the United States, for to a man of his temperament residence in the quiet island of Bermuda was little better than exile. Moore remained about ten days in Philadelphia, and if he had a poet's weakness for praise and flattery he must have left more than satisfied. The poetical squad connected with the *Portfolio* lauded their foreign *confrère* with so much exaggeration that their praise might have been mistaken for satire. The flattering attentions he received in Philadelphia

were so pleasing to Mr. Moore, that he made this city an exception in the general condemnation of things American. His preconceived opinion of the United States reveals itself in a letter to his mother, dated Baltimore, June 13, 1804, when he says,—

"I shall leave this place for Philadelphia to-morrow or the day after. I shall see there poor Edward Hudson, who, if I am rightly informed, has married the daughter of a very rich bookseller, and is taken into partnership by the father. Surely, surely this country must have cured him of Republicanism!"

In a letter dated Philadelphia, June 16th, he says,—

"I have seen Edward Hudson. The rich bookseller I had heard of is Pat Byrne, whose daughter Hudson has married. They are, I believe, doing well."

THOMAS MOORE.

Some days later he wrote her from Passaic, as follows:

"Among other things, my reception at Philadelphia was extremely flattering. It is the only place in America that can boast of a literary society, and my name had prepossessed them more strongly than I deserved. But their affectionate attentions went far beyond this deference to reputation. I was quite caressed while there, and their anxiety to make me known by introductory letters to all their friends on my way, and two or three little poems of a very flattering kind, which some of their choicest men addressed to me, all went so warmly to my heart that I felt quite a regret in leaving them; and the only place I have seen which I had one wish to pause in was in Philadelphia."

In a letter from Saratoga, dated July 10, 1804, he says that the poem, "Alone by the Schuylkill a wanderer roved," was written after he left Philadelphia, and that he was not very certain as to the situation or course of that river. He says,—

"Dear mother, I know you will be pleased with the little poem I wrote on my way from Philadelphia. It was written very much as a return for the kindness I met with there, but chiefly in allusion to a very charming little woman—Mrs. Hopkinson—who was extremely interested by my songs, and who flattered me with many attentions. You must observe that the Schuylkill is a river which runs by, or (I believe, through), Philadelphia."

Nearly a month had elapsed since Moore's departure from Philadelphia, when the *Portfolio* mentioned his visit, and published "Alone by the Schuylkill a wanderer roved." To the passage in these verses,

"Like eyes that he loved were her eloquent eyes,
Like them did they soften and weep at his song,"

was appended a note in which it was stated that those lines alluded to the circumstance that in a certain company where Moore sang a song, "a lady wept." This lady was Mrs. Joseph Hopkinson, whom Moore mentioned in the letter above quoted.

The *Portfolio* of July 28th contained five poems by Thomas Moore: "When Time, who steals our years away;" "Thy song has taught my heart to feel;" "Dear, in pity do not speak!" "Good-night! good-night! and is it so?" and "When the heart's feeling." On August 11th was published "Loud sung the wind," and "The sorrow long has worn my heart." Everybody went into raptures over these songs, and the *Portfolio* said, by its editor, Dennie, Aug. 25, 1804,—

"The ardent admirers of Mr. Moore cherish a lively hope that the fascinating friend and the sweet poet, after enjoying the hospitality of his countrymen in the British provinces, will shortly return to gladden the social and literary circles on the banks of the Delaware. The editor will greet him with that warmth of welcome which the presence of such a friend inspires; and many an Horatian spirit will exclaim,—

"'Hinc tibi copia
Manabit ad plenum benigno
Ruris honorum opulenta cornu,' etc."

A short time after several pieces of poetry in laudation of the "Translator of Anacreon" were published in the *Portfolio*.

But the American public at large, who might have shared the Philadelphians' admiration of Moore, were greatly disappointed when the "Epistles, Odes, and other Poems," by Thomas Moore, were published in 1806. This volume of poetry contained notes to some of the compositions, which referred to the author's experience in the United States in a manner little palatable to the sensitive American mind. Philadelphia, as we have already remarked, escaped his censure. He said, in reference to his visit here,—

"In the society of Mr. Dennie and his friends at Philadelphia I passed the only agreeable moments which my tour through the States afforded me. Mr. Dennie has succeeded in diffusing through this elegant little circle that love for good literature and sound politics which he feels so zealously himself, and which is so very rarely the characteristic of his countrymen. They will not, I trust, accuse me of illiberality for the picture I have given of the ignorance and corruption that surround them. If I did not hate as I ought the rabble to which they are opposed, I could not value as I do the spirit with which they defy it; and in learning from them what Americans can be, I but see with the more indignation what Americans are."

Many were the sharp replies of the American critics, and some very uncomplimentary things were said to and of Mr. Moore. Of a different temper was the ingenious revenge of a critic in the *Literary Magazine*, who published the following choice *morceau* as if written by Moore himself; until the hoax was discovered the Philadelphians were indignant:

"Philadelphia is the most dull, monotonous, uninteresting city on the face of the globe, whose positive advantages it would take a Solomon to discover. The negative catalogue, however, is not so scanty. It wants more churches, markets, and coffee-houses. Its churches, few as they are, want steeples, and their steeples want bells. They also want audiences, and their audiences want zeal. Their choirs want singers, and

their singers want voices. Their markets want space, air, and shelter, and their coffee-houses want room, dignity, and convenience. The streets want variety, being too uniformly wide and straight. Of the only curved streets, one is too narrow and the other is too wide. In the one the houses are too high, and in the other they are too low. Where the houses are dissimilar they are too dissimilar; where they are alike they are too much alike. The city wants more hotels. The few there are are dirty, noisy, dark, and inconvenient. The streets have too many trees, but little shade. Their foot-pavements are smooth where smoothness is least wanted, and their carriage-ways are rough where roughness is most troublesome. In a town of eighty thousand people many must go a mile to market, and as far to church. The best and most busy streets are twice a week crowded for half a day together with horses and carts. The principal street is lined all the year round with wagons, which serve the purpose, while moving, of ships; while standing, of stalls and inns. And the street has all the furniture of a stable-yard.

"Philadelphia has two theatres, one of which is very much in the style of a barn, is placed in the dirty and obscene skirts of the city, and is at least a mile from the habitation of two-thirds of the inhabitants. It is only opened occasionally, on the arrival of a company of mountebanks, jugglers, or rope-dancers. The other is opened half the year, and about one in two hundred of the people frequent it each night of exhibition, which takes place twice or thrice a week.

"Everything in this city is in a state of revolution. The only house which deserved the name of a genteel or fashionable residence was lately turned into a tavern. The house occupied by Washington and Adams in the days of their sovereignty underwent the same fate. A house designed as a palace for the Governor of the State has lately become a college, and the hall of the Revolutionary Congress is now a depository for stuffed birds and beasts.

"The only magnificent buildings are characteristic of the genius of the place: they are *money-shops*, vulgarly called banks. One of them is a mass of hewn marble, disposed most ridiculously into the form of a Grecian-Ionic temple, thus exemplifying the most preposterous incongruity between the form and the purpose. The other is not liable to this objection, but is built, in the interior, of such materials that a random spark would soon reduce the whole into a heap of ruins."

Whether the stranger in Philadelphia, coming with good introduction, mingled with the "best society," and could observe closely the beauty of the women and the manners of the men, or, being of a philosophical and practical turn of mind, gave his attention to facts and figures, and prepared statistics for publication, or being a mere wanderer, unknown and unwelcomed, he passed unnoticed through the crowd, he must have found subjects for amusement, and often for wonderment if he came from a distant clime, in the street noises and sights that greeted his ears and eyes at every step. Early in the morning, in the period between 1825 and 1835, he would be startled by the blasts of a horn, followed by an effort at vocal music, in which he might catch the words,—

"Charcoal by the bushel;
Charcoal by the peck;
Charcoal by the frying-pan,
Or any way you *lek!*"

Looking out he would see "Jimmy Charcoal," the New Jersey man, sitting on his long, narrow wagon, all grimy with the dust of his merchandise, yet looking out with a bright eye for the housemaids, who hastened to the door at the well-known sound of the horn. For wherever stone-coal was used charcoal was the proper thing, and if it was summer the housekeeper preferred the charcoal furnace for outdoor use to the kitchen stove, which heated the house unpleasantly. The charcoal venders always came from New Jersey, and Jimmy was, of them all, the most popular with the maids, because of his engaging manners, pleasant jokes, and musical talent. The blowing of the horn, however, became a nuisance, and was prohibited by an ordinance of the City Councils, which was adopted principally in consequence of Paul Beck's exertions. Charcoal Jimmy persisted in using the proscribed instrument, was arrested and made to pay a fine. He considered himself an aggrieved man: how was he to announce his approach if he did not blow his horn? Suddenly his countenance lighted up; if he did not exclaim "Eureka!" it was because he did not know the meaning of the word, and besides he wisely kept his own counsel. The next day the loud ringing of a bell in the street brought all heads out. Jimmy alternated his ringing with this improved version of his song:

"Charcoal by the bushel;
Charcoal by the peck;
Charcoal by the barrel,
In spite of Paul Beck."

There was no law against bell-ringing, and Jimmy was permitted to use in place his substitute for the "blasted horn."

Scarcely would the charcoal-man's song die away, when the cry "Sweep, oh! Sweep, oh!" reminded the housekeepers that they would have to pay a fine of forty shillings if their chimney took fire in consequence of their neglecting to have it swept once a month. If it did take fire notwithstanding the sweeping, the master-sweep paid the fine for having done his work negligently. The sweeps were generally negroes, upon whose dusky faces the soot did not show. The master-sweep had generally about half a dozen boys for his aids. These little blacks went up the whole length of the chimney, scraping and brushing the soot on their way, and when they reached the top popped out their woolly heads, protected by a coarse cloth cap, and shouted their cry of triumph.

In the street below, as if to remind the sweep of the ablutions he would have to go through and the amount of scrubbing it would take to get the black dust off from his tattered garments and his ebony skin, the soapseller's melodious voice would respond, "Soft-soap! soap! soft-soap!" and the hardy colored man would look up at the grinning little black face, with teeth of dazzling white and merry eyes, peeping from the chimney-top, nod and resume his march, trundling his wheelbarrow upon which stood the heavy barrel of soft-soap. The brick-dust vender, generally an old negro man or woman, followed, carrying, poised upon the head, the small tub of fine-pounded "salmon" brick, used to clean knives and forks and all sorts of brass implements. A frequent companion to the brick-dust seller was the sand-man, whose melancholy voice invited you from afar to "Sand your kitchens! Sand your floors!"

Crossing the path of these humble bread-winners,

and avoiding all contact with charcoal or brick-dust, the trim baker, his head and coat-collar as well powdered with flour as those of a fashionable gentleman, sped on silently, carrying his covered basket of fresh loaves, or, if his business was extensive, pushing his hand-cart from door to door. The baker was a very important man, for housekeepers did not have such kitchen ranges as they have now, and, especially in the summer, they relied on the baker's hot ovens for the baking of their pies and cake and the roasting of their meats and fowls. The charge was so much per dish, and in thickly settled neighborhoods the baker did a good business. The aristocratic milkman rattled past in his light wagon, his bright cedar churns with hoops of shining brass standing by his side. Having dispensed the required quantum of fresh country milk and cream to his customers in time for breakfast, he would drive leisurely home, or perhaps stop at the tavern and refresh himself after his early drive of several miles. There were also milk-stands in the neighborhood of the markets, where people went for their supply of milk, and where, in the summer time, housekeepers going to market could purchase that refreshing preparation, curds-and-whey. After a time ice-cream and lemonade made a formidable competition to the curds. A Frenchman named Roux was the first to sell them in the market.

The muffin-man came at a much later period. He followed his trade in the latter part of the day or in the dusk of the evening. The tinkle of his little bell was a familiar sound at which the expectant housekeeper gave the signal for supper to be put on the table, for now she was sure of a dish of delicious hot muffins. In 1813, P. Metham had his Yorkshire muffin bakery at No. 9 Knight's Court, Cherry Street, near Ninth. He had perfected the arrangement of the long basket in which he carried his muffins, so that they were kept warm to the last. He was very extensively patronized.

"Soap-fat and hickory ashes" was a cry often heard in the alleys upon which the yard-gates and kitchen doors opened. The 'ash man,' who drove an important business when wood was generally burned, thus announced his coming to the servant-girls, who kept for him the ashes and fats from the kitchen, their usual perquisites. They received in exchange a piece or a bar of hard, yellow soap, for no money ever changed hands in these transactions. Some families saved their fats and ashes and manufactured their own soap, an easy operation, made still easier nowadays by the use of concentrated lyes.

Hominy, made from broken maize, the kernel being hulled, was an Indian food which was taken to the tables of the blacks. White people learned to like this healthy preparation. There were tables at the ends of the markets, where it was sold by colored people, the grain being put up in bags, ready for transfer to the market-basket. About 1828 the original hominy man made his appearance. He was middle-aged, stout, had a broad face and short gray side-whiskers. He carried a large basket, which was stocked with parcels of prepared hominy. His care was to make a business for himself, and he traversed all parts of the town, seeking customers and announcing his presence. He had a clear, strong, resonant voice,—*tenore robusto* they would call it on the operatic stage,—and his refrain could be heard at a great distance,—

"Hominy man come out to-day
For to sell his hominy."

This he would vary by an occasional notice,—

"Hominy man is on his way
For to sell his good hominy."

OLD HOMINY MAN.

This person became quite a town character, and was known to everybody. The original "hominy man" long since left these peaceful scenes for another world. He was succeeded by one upon whom his mantle had fallen. The man who in 1883 solicits custom in the old way is the third or fourth in succession from the original hominy man.

The unwary stranger might be startled by the sudden shooting down of a cord of wood from the cart upon the cobble-stones, and the cry of "Way, piler!" with which the wood-sawyer would interrupt the rasping sound of his hand-saw, to warn his comrade in the cellar that another armful of sawed sticks was ready. Or he would look wonderingly at the brawny fellow walking past, with a huge axe over his shoul-

Google

der, from which implement hung two iron wedges, which jingled together and made a ringing noise at every motion. But the fellow bellowed, with stentorian lungs, "Spli-t wood!" and thereby revealed his professional character. The wood-sawyer divided the logs and long sticks into short billets, but it was the wood-splitter's business to split a portion of these for kindling-wood, unless some male member of the family had industry enough to do it. What changes modern progress has brought! Everything is done now by machinery. There is saving of money and increased comfort to the consumer, but how many humble trades by which the poor made an honest living have been destroyed! But the voice of the wood-splitter is drowned by the more powerful roar of the driver of the oyster-cart, "Ah yer oys-ta-oh! yer the go! oys-ta-oh!" Besides this perambulating oyster-man, there were stands and tables at the corners of the markets and other well-thronged places for the sale of stewed oysters. The oyster-cellar is of more modern discovery.

In the spring of the year the shrill voice of the female fish-huckster might be heard announcing the advent of the shad, dear to gourmands, "You buy an-ey sha-a-d?" Later in the year her cry changed to, "You buy any pe-e-rch?" "Buy any blackfish?" or "You buy any ca-a-t-fish?" But, if the season was dull, the same voice might be recognized, crying, "You buy any cherries?" or "You buy any straw-ber-ees?" and, still later in the season, "Buy any peaches?" to the legitimate fruit-huckster's disgust. Watermelons, cantaloups, apples, and peaches were generally sold on the streets by men, who, as they drove their well-filled carts around, thought it their duty to call the attention of buyers by terrific yells that would make a nervous man take to his heels: "Here's your ripe, freestone peaches! Here they go, three fips a half-peck, oh!" or "Sweet, mellow apples at a levy a half-peck, oh!"

Fleeing this pandemonium of sounds, avoiding the old cake-woman at the corner only to run into the scissors-grinder and his grinding-machine, whose whirling sound, as he busily works the treadle with his foot, is lost in the prevailing din, the bewildered stranger turns, perhaps, towards the wharves where numerous vessels are loading and unloading, for the commerce of the port of Philadelphia at that time was greater than that of New York. "In 1800 there were forty ships engaged in the East India and China trade, over one hundred ships which made voyages regularly between Philadelphia and various European ports, and twenty-five ships in the West India trade. There were brigs and smaller vessels also engaged in this traffic, so that the foreign commerce may be assumed to have given employment to at least two hundred large vessels. The coasting trade was also valuable."[1] As the stranger approaches the river, a strange chorus greets his ear:

"Ro! ro! ro! ro! around the corner, Sally!" chant the voices; and another chorus strikes out with admirable effect,—

> "Nancy Bohannan, she married a barber;
> Shave her away! shave her away!
> He shaved all he could, he could not shave harder;
> Shave her away! shave her away!"

The singers are the black stevedores, who thus lighten and facilitate the work of loading the vessels, their joint efforts being guided by the rhythmic arrangement of the song. The loiterer pauses and listens with delighted interest. His curiosity is excited; he would like to know who was "Nancy Bohannan," and why they must "shave her away," but he dares not interrupt the men's work by asking them questions. He strolls along the noble river, and finally turns back into the city, his curiosity aroused by the discordant sounds of musical instruments playing different tunes. A crowd of children and colored people, or, rather, two crowds, surround two rival organ-grinders stationed at opposite angles of the street-corner. One has a monkey dressed in a red coat and cocked hat. The boys predominate in *his* public, by no means a silent one, for each caper of poor Jack leads to loud and delighted comments. The other has no monkey, but he has pushed a slide from the front of his instrument, and lo! here is a diminutive ball-room, with minute ladies and gentlemen whirling around in all the glory of velvet, satin, and tinsel. The little girls press close in front of *this* organ, and gaze in silent wonder on the little automaton figures. The rival organ-grinders are Italians; their scowling looks reveal their fierce passions; the musical struggle may end in a row; but, no; both abandon the field discomfited as the juvenile audience rush from them to a still greater attraction than dancing monkeys and revolving puppets. The orchestra-man is coming! He comes, a whole orchestra in himself, as his lips run over reeds of the Pandean pipes he has thrust in his vest bosom; the motions of his head set the Chinese bells a-ringing which are affixed to his crown in lieu of a hat; the cymbals attached to his elbows clash in time; his hands wield the drumsticks with lightning rapidity, and yet find time to strike the triangle hanging over the drum in front of him. He marches on proudly, although not an elegant figure, followed by the crowd and by the envious gaze of an Irish piper, who has stopped, his bag under his arm, seeing the futility of competing with such a rival.

The children follow, oblivious of home and of time and distance, and by and by there will be anxious faces looking down the street, mothers will run distractedly to and fro, and finally another Philadelphia institution, the town-crier and bell-man, will have to be brought upon the stage. He moves on with solemn step, ringing his bell vigorously, stops at a corner,

[1] Westcott's History of Philadelphia.

where the people crowd round him to listen to his proclamation, and in a loud voice he describes the lost child. He recites the name, age, general appearance, and style of dress of the missing one, together with the name and residence of the parents. His voice is doleful in its tone,—it may be sympathy for the sorrowing mother, yet in the same tone did he not announce the loss of Dick Brown's horse and Widow Flanagan's cow? Withal, he was a useful, kind old body, this same bell-man. He has disappeared with his crony, the old city watchman, who used to walk so cautiously along the dimly-lighted streets, carrying his flambeau and his rattle. Poor old Charley, as the boys used to call him, who nearly teased the life out of him. He was lamp-lighter as well as watchman, walked his beat at regular intervals, and called out the hour, the state of the weather, and any startling event, such as a fire or a riot. The fact is on record that the old watchman did once startle the whole community from their slumbers, and brought them out, delirious with joy, in the streets. It was the night he cried, "O-h! p-a-s-t three o'clock, and Cornwallis is taken!" His piping voice rang like a clarion on that occasion.

The old watchman gone, his "box" ceased to ornament the street corner. Those watch-boxes were queer little shelter-places, where the guardians of the night could rest their wearied limbs in the intervals between their rounds and find protection from the pelting storm. They were square or hexagonal in shape, with a diameter of about four feet, and a height of seven or eight feet. The roof, running to a point, was surmounted by a lamp or lantern. A bench for the watchman to sit on, a few hooks on which to hang his overcoat and his citizen's clothes, a shelf in a corner where to stow away his oil-can and torch, used in lighting the street lamps, composed all the furniture of the watch-box. The lamplighter's torch, constructed of iron or tin, had a reservoir or fountain for the oil at the base, and a large wick, well fed with oil, so as to resist the wind. Having lighted this the watchman would start on his lamp-lighting errand; but sometimes it happened that a sudden gust of wind would put out his smoky torch. Then he was indeed in a quandary, for he must find some sheltered place where he could strike a light with his tinder-box and brimstone matches and ignite the blackened wick. With all these difficulties in his way his work, however, was well and faithfully done. In time the watch-box was made of circular form, and its dimensions enlarged. A diminutive stove then added to the comforts of the watchman, but invited sleep in forbidden hours. Woe to the poor "Charley" if he was discovered asleep by the dissipated young fellows roving about the streets at late hours! They would fasten the door from the outside, and call out "Watch! watch!" in tones of great distress, while the imprisoned officer made vain efforts to get out. The watch-boxes were made of wood, light, and, simply resting on the pavement, were easily moved. The wicked fellows would sometimes pass a stout rope round the frail structure and drag it to another spot, or suddenly turn it over, to the great terror and, perhaps, bodily harm of the drowsy occupant.

Among the peculiar noises heard in the neighborhood of the markets, one that always attracted a crowd was the flourish of trumpet announcing the proximity of show-beef. In the early part of the century it was the practice to drive cattle particularly fat to the slaughter-house through the streets of the city decorated with flowers and garlands, and with gay ribbons tied to their horns, in order to attract to the sale of the meat, which was to take place on the succeeding day. In Birch's view of the new market is a representation of one of these little processions, which is accompanied by a fiddler who seems to be playing right merrily. The sound of the trumpet became so closely associated with show-cattle in the minds of the people, that long afterward, at the concert or oratorio, a trumpet solo always provoked merriment in the audience and the suppressed exclamation, "Show beef."

A sight of no little interest and wonder to the stranger in Philadelphia, in the early part of the century, was the North American Indian, no longer in all the glory of war-paint, scalping-knife, and feathers, yet retaining enough of the characteristics of the noble sons of the forest to be an object of study for the European traveler. These Indian visitors were mostly descendants of the Lenni Lenape; they came in small parties with their squaws and papooses. The costume of the men presented a curious combination of the garments of the civilized world with those fashions dear to the savage. From the former they borrowed the fur hat, and the rough coat or overcoat as a good substitute for the blanket, but they disdained trowsers and shoes; their feet were protected by the convenient moccasin. There was one artifice of the toilet which these untutored sons of nature rarely neglected, however: they painted, not in imitation of our fair belles, with rouge and pearl-white, but with coarse ochres which gave a hideous expression to their faces. Neither did they fail to wear the large ear-rings of copper or silver in true Indian style. Their great object did not seem to be so much a desire to study the manners and customs of the whites, as to "turn up a penny" whenever they saw a chance. Their faithful bows and arrows, which they always carried, proved to be excellent implements of trade; they displayed their skill by shooting for pennies, "fips," "levvies," and "quarters," at the choice of the spectators. The piece being put up at some convenient place—a crack in the wall or post, a projecting stone, or even simply dropped upon the pavement at a suitable distance—sometimes as much as fifty yards, the "brave" would be invited to shoot. He seldom missed the mark; having struck the piece, he pocketed it without the

least signs of emotion, except perhaps a subdued grunt, and went on his way, unless invited to try his luck on another piece, which happened not unfrequently, for people never tired admiring his extraordinary skill with this primitive weapon.

The women's appearance was not so interesting as that of the men; their common calico dresses and dirty blankets did not enhance their charms. They went bare-headed and bare-footed, and, veritable beasts of burden, besides the papoose safely fixed on their backs, they carried bundles of moccasins and pouches decorated with bead-work and bark baskets, cunningly worked and painted. These they offered for sale at the street corners, while their noble lords shot their arrows or idled about the streets. The dark-skinned papooses, with their bead-like eyes and stolid little countenances,—for it is seldom one hears an Indian child cry,—were objects of general interest. These Indian women did not seem unhappy, but apathetic. The woman's rights question had never been discussed among them; it had not been agitated among the whites then, and if it had it would have made no difference with these dusky representatives of female loveliness. The Indians' code of gallantry authorized the men to respect their own dignity and leave all the hard work to their wives; they accepted it without murmur. Civilized white husbands have been known to entertain these Indian notions, as many a hard-worked wife may testify. Occasionally there were exhibitions by the Indians of the semi-theatrical display of their war dances and other customs. These were held at public gardens in summer and at taverns in winter. In 1825, Warwick, who kept a tavern at Seventh and South Streets, and who had a large exhibition-room in the second story, used for meetings, free-and-easys, etc., had a party of six Western sons of the forest, who went through performances illustrating their modes of life, for the edification of pale-faced visitors, who paid their price for admission. But these hired performers were far less interesting than the free visitors who used to shoot for pennies.

Every city has its harmless lunatic, enjoying the freedom of the streets and contributing to the amusement of the thoughtless. The madman is sacred in the eyes of the Mussulman and of most of the savage tribes: it is only the civilized Christian who laughs at his incoherent discourse or meaningless actions. Then there is the oddity, the eccentric individual, who will not do as others do. Philadelphia has had her crazy street characters, her oddities and eccentricities. She probably has them now, in greater number than ever, but what with the immense population of the city, and the busy, hurried ways of the age, they pass unnoticed, except by a few, until some foolish act of theirs brings them before a court or in the newspaper reports. Their modern name is the "crank," and they are not half so interesting a study as were their predecessors.

The spectre-looking elderly spinster, Leah, mentioned by Watson, who remembered having seen her, could not have excited merriment, for her oddities were of a ghostly turn. One of her favorite occupations was passing the night in the Potter's Field, where, wrapped in a long blanket, she stalked among the graves for the avowed purpose of "frightening away the doctors." Leah was a member of the society of Friends, and a very simple, kind-hearted creature. There must have been some incident in her life connected with resurrectionists, since her great anxiety was to protect the graves from desecration.

Nor was there anything laughable in the madness of Honorah Power, commonly known as "Crazy Norah." What was her history? The child of a well-to-do Irish farmer, she was left at his death with a modest but sufficient provision. She lived with a married sister, and put her money in the hands of her brother-in-law; he squandered it as well as his wife's portion. Norah came to America and hired herself out in Philadelphia as a servant. She was modest, well-behaved, and a pious Roman Catholic. She attended St. Mary's Church regularly. During the Hogan riot the church was desecrated. The effect of this painful scene on the girl's mind was disastrous; she became insane. After a time, her excitement being allayed, she recovered in part her reason, and was able to earn her bread by doing errands, collecting bad debts, etc. But she was too mad to fill any place requiring her constant attention. She walked a great deal, and had a pleasant word for every one she met. She was fond of children, though the boys tormented her sometimes; "she would take them by the hand," says Mr. Watson, "induce them to say the Lord's Prayer and the Catholic Creed, and then reward them with some trifle from the large bag she invariably carried, such as a button, a piece of colored china, old ribbon, or some similar thing of little or no value." She is described as a tall woman "with sharp, firm features, a clear black eye, and iron-gray hair, and whose quick step, together with her peculiar dress, gave her a masculine appearance."

"Lang Syne," of Germantown (Benjamin J. Leedom) says,—

"Sometimes, while sitting in silence in Pine Street Meeting, I have seen the door open and Norah would stalk in, and, advancing up the middle aisle, would stop, and standing erect as a statue, would make the sign of the cross and commence counting her beads. As she was well known by all the meeting, no one interfered with her, and she was permitted to pursue her way unmolested. After having gone through with her religious performances she would either stalk out or take a seat on the men's side and remain until the meeting closed, everybody kindly greeting her as they left. . . . Tall and slender in person, graceful in figure, her head surmounted by a man's hat, high men's boots reaching to her knees, with a leather girdle around her waist, and a large black cross suspended from her neck; she would frequently stop me on the street and make the sign of the cross on my forehead."

But who could have helped from smiling on meeting Michael Weaders, or rather "Me Mo Michael Hans Muckle Weaders," as he styled himself? "Lang Syne" describes this fantastic being, who

was a servant in the Pancoast family. When he was sent on an errand—

"he could scarcely proceed a square in an hour, being continually surrounded by all sorts of people, some viewing him and listening to him, and some asking him over again the same question which he had been asked a thousand times. Whether the question repeated came from the child or the man, he was sure to answer them every one with an unbroken smile extending from cheek to cheek (sans teeth), with unwearied patience, idiotic simplicity, and an affectionate tone of voice. To astonish them he sometimes changed his usual amiable appearance and expression of countenance to a hideous squint, his two eyes gazing at each other, and his long tongue hissing like a serpent from between his boneless gums, causing the juvenile spectator to shrink away from the horrid sight, which was but for a moment. Then, resuming his usual benevolent, smiling look, he would say, 'That's the way to frighten the Indians, so it is!' He claimed as sweethearts all the fashionable unmarried belles in the city. He had 'fifty hundred, twenty hundred and sixteen' of them; and when any one of them married he was sure to go the next day after the wedding to claim his forfeit,—always cheerfully given to him,—which was a half-crown and a glass of punch from the lady's own hands, 'which,' said he, 'was all the same as though I married her myself.'"

Michael Weaders died Feb. 23, 1808, aged eighty-three years. The *United States Gazette* records this obituary notice:

"He was a native of Germany, and a steady inhabitant of, or near, this city for upward of seventy years. It may be truly said that he lived a harmless and an inoffensive life. He had not the strongest mental capacity, and although he experienced more of the smiles and attentions of the fair sex than usually fall to the share of an individual, he preferred a life of celibacy as most conducive with his happiness. He was a zealous patriot at the commencement of our Revolution, but being terrified at the approach of the British army, he receded from his patriotism and made his peace with Gen. Howe; and on being asked what induced him to relinquish his former principles, he answered, 'It is best to be friendly.' Honest Michael was well known to many of the inhabitants of Philadelphia; though they will no more hear him utter his friendly salutation, 'I see thee first!' he will still retain a place in their remembrance."

Another curious character was Henry Noble, a colored man, who went by the nickname of "Whistling Harry." Whether he was totally insane does not appear, but his peculiarity was a strange one. "Lang Syne," of Germantown, informs us that—

"he always carried a stick, with a tin kettle on his arm. For a cent he would spell 'Constantinople' and give a prolonged whistle that could be heard for a square. When the cent was produced he would commence, 'C-o-n, that's Con, s-t-a-n, that's stan, t-i, that's ti, *n-o-b-l-e* (being his name), that's Constantinople,' giving a smack with his lips like the report of a pistol between each syllable, and winding up with his prolonged whistle, his eyes nearly starting from their sockets. He was generally surrounded by a crowd of boys from the stores along Market Street, between Fourth and Fifth. Cent after cent was produced, and ofttimes he was called upon to repeat his performances."

"The Man with the Whip" was an eccentric fellow, well known at that time. He had manufactured an enormous whip made from hickory withes with a long handle. It was his delight to swing this immense whip, which extended half-way across the street, and to crack it, to the great annoyance and possible danger of passers-by. What was his particular object in indulging in this amusement no one knew, but the city fathers put a stop to it. He was declared a nuisance, and he and his whip disappeared from the scene. "Lang Syne," of Germantown, gives this recollection of his performance:

"I saw him once standing in the middle of the crossing betwixt the Third and Fourth Streets markets, swinging the whip over his head in circles and until it had sufficient impetus, when he let it out with a report like the explosion of a rifle."

There was another well-known character,—not a madman, nor yet an idiot, but, on the contrary, a man of uncommon intelligence, who was often exposed to the jeers of the thoughtless populace because nature had denied him the fair proportions usually allotted to man. Richard Folwell, *alias* "Dicky" Folwell, was a dwarf and a cripple. He was witty and eccentric, as is commonly the case with dwarfs and hunchbacks, and, thanks to his tormentors, often mingled in some comic adventure. One day as he was crossing Walnut Street, a pig, scared probably by some wag, ran between the legs of the little man, who found himself suddenly astride the animal's back, and was carried some distance up the street before he could alight. The wags circulated the story that he had been seen riding a pig through Second Street from Walnut Street past the Coffee-House to Chestnut Street, and poor "Dicky" knew peace no more. This deformed creature was a printer, and managed with considerable ability a paper called *The Spirit of the Age*. Free in its comments on men and measures, Folwell's paper was no more personal than the journals of the time. That Folwell was familiar with other subjects than those which form the especial province of the journalist, that he was a thinker interested in the well-being of his fellow-man, whom he so little resembled, is shown by the plan he wrote and published for the extinction of yellow fever *by the use of ice-cold air and refrigeration*, "thus anticipating by more than half a century," says a writer, "the proposition of Gamgee, to whom Congress lately voted a half-million of dollars to experiment upon that theory."[1]

In the early part of the century some very odd performances could be seen on the streets on Christmas-eve and during Christmas week. Parties of "Mummers" went round from house to house, reciting rhymes explanatory of their fantastical disguises, and demanding "dole." This custom, which came from England, prevailed in the early part of the present century, and is well remembered by the old inhabitants of Philadelphia. The "Mummers" were but a popular reminiscence of the English saturnalia celebrated of old under the direction of "the Lord of Misrule,"—a fantastic personage, known to the Scotch as the "Abbot of Unreason" and to the French as "Le Pape des Fous." The English "Lord of Misrule," or Christmas prince, was originally created for the purpose of regulating "misrule" and keeping it within bounds wherever the king resided; but the institution became popular, and every town or parish had its manager of Christmas festivities, invested with plenary power. None delighted more in these whimsical exhibitions than the students in the inns of

[1] Westcott's "History of Philadelphia."

court. Gradually this moderator of fun took such delight in the antics of his subjects that he deserved the title of "a grand captaine of mischiefe," given him by the Puritan Stubbes in the reign of Elizabeth. The "dole" was a tax levied upon the citizens by the temporary ruler, and was generally paid with promptness, to avoid further annoyance. It was not always so, however. Disraeli, the elder, quotes from a manuscript letter of the learned Mede to Sir Martin Stuteville, an account of what seems to have been the last memorable act of a "Lord of Misrule" of the inns of court, and which occurred in 1627, when the Christmas game became serious. "The Templars chose one Mr. Palmer their 'Lord of Misrule,' who, on Twelfth-eve, late in the night, sent out to gather up his rents at five shillings a house, in Ram Alley and Fleet Street. At every door they came they winded the Temple horn, and if at the second blast or summons they within opened not the door, then the 'Lord of Misrule' cried out, 'Give fire, gunner.' His gunner was a robustious Vulcan, and the gun or petard itself was a huge overgrown smith's hammer." The letter goes on to relate how complaint was made to the lord mayor, who summoned the "Lord of Misrule" to appear before him, but the latter refused. They finally agreed to meet half-way. The interview ended in a general row, the "Mummers" were worsted, and the "Lord of Misrule" was captured by his lordship the mayor himself, who, taking him by the shoulder, "led him to the compter, and thrust him in at the prison-gate with a kind of indignation; and so, notwithstanding his hurts, he was forced to lie among the common prisoners for two nights." The prisoners obtained their liberty, at the solicitation of the attorney-general, upon condition they should repay the gathered rents, and "do reparations upon broken doors." The attorney-general *fetched them in his own coach*, and carried them to the court, where the *king himself reconciled my lord mayor and them together* with joining all hands." Notwithstanding this mark of royal favor, the "Lord of Misrule" and his mock court lost much of their importance after this. They disappeared finally after the death of Charles I. But the spirit of tomfoolery which had inspired them continued to display itself feebly in annual mummeries, the performers reciting some rhymed speeches in connection with a semblance of a plot,—crude attempts to imitate the celebrated "masques" contrived for the amusement of royalty, without the wit and splendor of their models.

One of the oldest of these second-rate masques, "St. George and the Dragon," had crossed the ocean, but the Philadelphia "Mummers" took many liberties with the *dramatis personæ*, and modified some of their speeches to suit the time and the public. Thus St. George became George Washington, and "Cooney Cracker," an American creation, took the place of "Little Devil Doubt." Beelzebub's speech suffered but trifling changes. It was originally,—

"In comes I, old Father Beelzebub,
And on my shoulder I carry a club,
And in my hand I carry a can—
Don't you think I'm a jolly old man?
As jolly as I am, Christmas comes but once a year;
Now's the time for roast beef, plum-pudding, mince-pie, and strong beer."

In the Philadelphia version, according to an old citizen's recollection, it began as follows:

"Here comes I, old Beelzebub,
On my shoulder I carry a club,
In my hand a dripping-pan—
Don't you think I'm a jolly old man?"

Another correspondent substitutes "a frying-pan" for "a dripping-pan."

Little Devil Doubt's speech was this:

"In comes I, Little Devil Doubt;
If you don't give me money I'll sweep you out!
Money I want, and money I crave;
If you don't give me money I'll sweep you to your grave!"

But the American Cooney Cracker spoke differently. One version of his speech is this:

"Here comes I, old Cooney Cracker!
I swear to God my wife chews terbacker!
A pipe is good; cigars are better;
When I get married I'll send you a letter."

Another version differs in the three last lines:

"I want some money to buy tobacco;
Tobacco's good; cigars are better;
Give me some money, or I'll marry your daughter."

Of the speech attributed to George Washington, only the first two lines are remembered. They were:

"Here am I, great Washington!
On my shoulders I carry a gun."

The patriotism of the American mummers had reversed the position of the two leading characters, and St. George, the patron saint and mythical hero of England, defending her against the dragon, became George Washington, the destroyer of that dragon—British rule in America.

A correspondent, speaking of these representations, said,—

"It was considered the proper thing in those days to give the leading mummer a few pence as dole, which, in the language of the present time, they would 'pool,' and buy cakes and beer. It was also regarded as the right thing to do to invite them into the house, and regale them with mulled cider, or small beer, and home-made cakes. It was considered a great breach of decorum, or of etiquette, to address or otherwise recognize the mummers by any other than the name of the character he was assuming. I remember a little girl who, with all the curiosity of her sex, had discovered a neighbor's boy in the party; and with childish impetuosity she broke out with, 'Oh, I know thee, Isaac Simmons! Thee is not George Washington!' etc. This departure from the proprieties of the occasion was made the subject of comment on many returning holidays. Such were the simple and gentle ways of those whose footsteps we are steadily and surely following, and still toward the setting sun."

One of these bands of mummers, which was recruited in the neighborhood of Sixth and South Streets, was led by Eph Horn, afterward noted as an Ethiopian minstrel singer. Horn brought out Beelzebub and Cooney Cracker, also the Prince of Egypt, who announced,—

"Here I am, the Prince of Egypt!
I am Pharaoh's only son."

These "mummeries," however, did not find favor with all the people. In fact, Christmas itself was not generally observed. The Quakers did not incline to the commemoration of holidays, nor did the more rigid of the Protestant sects, especially the Presbyterians. To the Episcopalians, the Catholics, and the Germans of the Reformed or Lutheran Churches, it was a day for family reunions and social gathering as well as a religious festival. The Germans introduced the Christmas-tree, with toys, trinkets, figures of angels, and numerous little lighted tapers,—a pretty custom with which many American families have since become familiar. In the homes of Americans of English descent the traditional row of children's stockings could be seen on Christmas-eve hanging in the chimney-corner, and the little ones, tripping up to them in their bare feet on Christmas-day, were sure to find them well filled with "goodies" and pretty things. The Christmas-dinner, so often described, with its three great features of turkey, plum-pudding, and mince pie, and its company of merry faces, assembled in friendship and kindly feelings, was an old English custom, too good to be rejected by the Americans.

As a closing scene to the Christmas festivities, there was an ancient custom, of German origin, it is said, which was the cause of some useless legislation. This was the "shooting away the old year,"—firing guns, pistols, and fire-crackers at midnight on the 31st of December. As early as the year 1774 an act was passed prohibiting these noisy demonstrations, as greatly disturbing the public peace, under penalty of a fine, and in after-years the mayor of the city frequently made proclamation calling attention to this act; but all these prohibitory measures were disregarded by many, and the new year continued to be ushered in by the discharge of fire-arms and pyrotechnic displays.

There was another festival, celebrated only by a certain class of the population, viz., the Irish Catholics, which often brought trouble and ended in a regular riot. This was the celebration of St. Patrick's day. Early in the morning the Irish pipers and drummers went around playing their national airs, and every Irishman, woman, and child displayed the cherished shamrock. The Hibernia Greens paraded, and the procession after marching down Chestnut Street would pass through such portions of the city where their countrymen mostly resided. The Protestant Orangemen would often make a counter demonstration, and if the two parties met a fight always followed. A contrivance calculated to rouse the ire of the Irish Catholics was the "stuffed Paddy," an effigy made of old clothes and straw, with a string of potatoes hanging to its neck, a pipe in its mouth, or where its mouth should have been, and holding a bottle in one hand and a glass in the other. This scarecrow figure was taken to some convenient place in the Irish quarters, before daylight on St. Patrick's day, and hung by the neck to some awning-post or to a tree. Woe to the perpetrators of this joke if they were caught in the act; they seldom escaped without broken bones. Foolish young Americans sometimes thought it good fun to annoy the "Paddies" by getting up these figures. This continual antagonism engendered much bad feeling, and a serious riot that happened in after-years led to a strong expression of public opinion against these celebrations, and caused their abandonment.

For some years after the Revolution, in fact, as late as the war of 1812, the old English festival of May-day was kept by certain classes of people. The Maying parties, composed principally of young men and young women, left the city in the early morning to spend the day in the fields and woods. They had a feast and dances on the grass, for they went with well-provided hampers, and the fiddler was an indispensable guest. After a day's enjoyment in the cool shade and sweet-scented fields, they returned laden with fragrant spoils, tired but happy. Lovers fully appreciated the innocent pleasures of Maying; hands met in breaking the lilac bough; cheeks met in close contact as two young heads bent over the same tiny field-flower, and the gay carol of the feathered songster overhead was a fit accompaniment to the softly-whispered vows of youthful love.

Although spring flowers are not suggestive of fish, May-day was the special holiday of the fish hucksters and shad fishermen. They met in the Water Street taverns, where they indulged in much jollification and dancing. May-poles were erected in front of these taverns or upon the Market Street hill, around which there was also much dancing. These good people went in for a day of fun and frolic, and they made the most of it while it lasted. For many years after the May-pole ceased to be seen, and Maying-parties went out of fashion, the fishermen and fishwomen kept up their May-day dancing and feasting in the taverns.

Two other anniversaries, dear to every American heart, were celebrated with fitting enthusiasm. Washington's birthday was an occasion for processions, orations, and banquets, and it should have been a national holiday, in which all the people would have participated, were it not that the societies most prominently engaged in the celebration being entirely composed of Federalists, the Democrats came to consider the 22d of February as a political anniversary, and they abstained from participating in ceremonies directed by their political opponents. This abstention extended even to the volunteer companies not in sympathy with the Federalists.

But the glorious Fourth of July was an occasion on which party feeling was ignored. The enthusiasm of the people manifested itself individually by the firing of guns, rockets, and fire-crackers, without prejudice to the organized programme, embracing

generally a military procession, patriotic orations, banquets, and displays of fire-works. We burn less powder now, and we object to noisy demonstrations. It may be all for the best, but there is danger, as the celebration becomes more restricted every year, that the anniversary of our national independence will gradually and quietly sink into oblivion. It would be well that the rising generation should be taught to reverence the day, and to kindle in their young hearts a spark of the spirit of '76, which made heroes of their fathers,—the spirit of endurance, of self-sacrifice and love of country, without which all the boasted progress of the age cannot save a people from decline.

An occasion for considerable excitement and some lively scenes, especially in the "old city," was "election-day." The general election for the city was held at the State-House, the windows of the east and west rooms, first floor, upon Chestnut Street and upon the State-House yard being appropriated to that purpose. For the Northern Liberties the elections were held at the Commissioners' Hall, which, in the early part of the period, was at the south end of the market at Second and Coates Streets. It was afterward transferred to the quarters originally belonging to the British barracks, on Third Street, above Tammany (or Buttonwood), which was thenceforth called Commissioners' Hall. The Southwark elections were held at the Commissioners' Hall, on the east side of Second Street, north of Christian, and those of Spring Garden at the hall on the northeast corner of Eighth and Buttonwood Streets. Each of these places was the focus of interest and activity for its district.

Platforms of wood were erected in front of each polling-window, so that the voter might be elevated to a level with the election officers within. Where the population of the ward was large and the election an important one, there was often great struggling among the voters to reach the polling-window, especially during the last hours of voting; pushing and jostling led to angry recriminations and finally to blows, and the strife would soon spread out among the mass of the people in the street, during which excitement fists, canes, umbrellas, or whatever instruments of offense were handy were used, while hats, coats, and apparel were torn to rags; and when the *mêlée* was over, the combatants, bloody, with blackened eyes and torn and disheveled hair, would manage to get out of the throng and sneak homeward. Nothing more serious than bruises were the results of these encounters. The carrying of deadly weapons, such as the pistol, the blackjack, and the knife, was unknown.

There was no recorded instance of any person having been killed in an election fight in Philadelphia between 1800 and 1825, nor for many years afterward.

But if political questions could be settled by the ballot with an occasional accompaniment of fisticuffs, there was a domes[illegible] [illegible]o solve then, as it still is now, and housekeepers discussed to no avail the "servant question." It seems that they were even worse off at that time, judging from the character of the servants described by Samuel Breck in his "Recollections:"

"This is a crying evil which most families feel very sensibly at present. The vast quantity of uncultivated lands, the general prosperity, and the unexampled increase of our city unite to scatter the menial citizens, and to make it extremely difficult to be suited with decent servants. I have, in the course of ten or twelve years' housekeeping, had a strange variety, among which I have heard of one being hung, of one that hung himself, of one who died drunk in the road, and of another that swallowed poison in a fit of intoxication. Those that form my present household have lived with me from one to three years, and are pretty tolerable."

Several years later Mr. Breck noted in his diary the following instance of the extravagance of servant-girls:

"Mrs. Breck discharged a servant-girl to-day for fibbing and mischief-making. She has been nearly three years in my family, and has contrived artfully enough to quarrel with, and occasion the dismissal of, four or five of her fellow-servants. But what makes me take any notice of this woman is that she, like many others who have served in my house these last twenty-five years, came to us almost naked, and must have seen hard times without profiting by the lessons of adversity; for no sooner was she entitled to receive a few dollars than she squandered it on finery, instead of buying necessaries. In this manner she has gone on until this day, bedecking herself in merino shawls, chip bonnets, etc., without laying up fifteen dollars, although she has received from one dollar and fifty cents to one dollar and twenty-five cents per week. Mrs. Breck informs me that when she took up about eleven dollars which were due to her in June last, she told her that she was bare of necessary clothing; yet, with this modicum for her all, she went to town and bought some satin to trim her bonnet in the style of that of a young lady who was on a visit to me, a gilt clasp that must have cost three dollars, a parasol that came to perhaps four dollars more, a set of tortoise-shell combs, and some other trash; so that she brought home of real necessaries nothing but one poor shift! If this girl gets out of place, or becomes sick, she will not have enough to support herself one month. This is a faithful picture of the wasteful and disgraceful extravagance of nine-tenths of the servants, male and female, for the last thirty years."

Many housekeepers of the present time might, without doubt, indorse Mr. Breck's remarks. The servant-girls' wages, though much higher than at the period treated of, are but too often foolishly spent in useless finery. There are two reasons why this practice is so common. In the first place, servants here do not form a class as in Europe; the girl who hires her time and services looks upon the arrangement as temporary; unless she is very ugly (and what woman ever believed herself ugly?) she expects to marry and have a home of her own. Dress, then, becomes an important question with her. She must look her best if she wishes to catch a husband. Another reason for a servant's extravagance is, too often, the example set by the mistress of the house. If she be extravagant and wasteful she cannot expect her servant to be modest and prudent, for a servant is but human, after all; and to resist temptation, with the daily recurrence of examples of folly in her superiors, would require heroism such as cannot be justly expected of her.

Fanny Wright, in the "Englishwoman in America," discusses the servant question, and says, in conclusion,—

"The native American, when he can be obtained, makes a valuable domestic. Household service, as I have observed in a former letter, is not an employment that the citizens are fond of; but the very qualities which disincline them from it make them the more trusty when engaged in it. The foreigner, however, must be careful not to rub their pride. No American will receive an insulting word. A common mode of resenting an imperious order is to quit the house without waiting, or even asking, for a reckoning. The sensitiveness of the American pride is sometimes not a little curious and amusing."

During the early part of the century many improvements and inventions tending to increase comfort were introduced. The bath-room arrangements were of the utmost simplicity. Wooden or marble tubs were used, to which hot and cold water had to be carried in pails. A floating furnace was invented, which was to be placed in a bath-tub to heat the water. It was in the shape of a cylinder of copper, within which was to be placed a charcoal-fire. Two hollow arms, extending out like horns, were to reach above the surface of the water, so that while one furnished draught to the fuel the other would carry off the smoke and the gases. The inventor quaintly remarked in favor of the contrivance that, when properly operated, it would be "quite sufficient to render the water of the bath comfortable in about two hours." But he made no reference to the fact that in order to prevent the bather from being stifled by the gas from the burning charcoal it would be necessary to have the windows of the room in which the bath was placed hoisted, so that whatever in winter-time might be gained by this method of heating the bath would be lost by the chilling discomfort of a cold bath-room.

The boiler or water-back connected with pipes was not invented until several years after the introduction of the Schuylkill water in the houses. Floating-baths were introduced in 1813. The applicability of gas for illumination had been shown at the Philadelphia Museum, at the State-House, at Masonic Hall, and at the Chestnut Street Theatre. In 1816, William Henry, who made the gas apparatus for use in the museum and theatre, placed pipes and set up an apparatus for manufacturing gas at his residence, No. 200 Lombard Street, near Seventh. He was a copper- and tinsmith. Notwithstanding this ocular demonstration, the Philadelphians remained indifferent, and stuck to their candles or to lamps in which they burned whale-oil. For grand illuminations they used wax candles.

Edward Clark, of Philadelphia, obtained a patent for lamps April 27, 1814, and Asa Taylor for candle-lamps Oct. 9, 1819.

The tinder-box, steel, and flint continued for a long time to be the only means of obtaining light. At last, in 1819, a new process was discovered. *Silliman's Journal*, in 1819, describes this new wonder in the following manner:

"We may say that while this method of obtaining fire was employed by lovers of curiosity, it was in a very small degree. There was too much trouble to be taken in the production of the flame to cause the invention to be brought into common use."

This method was a match tipped with some chemical composition, which, on being thrust into a bottle containing another chemical, took fire.

Ice creams were only made to order by the confectioners until the beginning of the century. Bosio, who opened his ice-cream house in 1800, had many imitators, and in a few years the use of frozen cream and custards and water-ices became general.

The water-cooler was brought into use about 1810 by Branch Green; and Daniel George, in 1811, was the first to engage in the ice business as a regular calling.

In the summer of 1816 the *United States Gazette* noted the fact, "This summer, for the first time, vessels loaded with ice went to sea to obtain fish, and brought them in ice to the Philadelphia market."

The refrigerator was invented by Thomas Moore, of Montgomery County, Md., first in such form as to facilitate the carriage of produce to market in better condition than had been possible under the old methods. The additional possibilities of the invention were thus suggested in 1802:

"This, however, is only one amongst many uses to which it may be applied; every family may be furnished with a vessel in their cellars, in which, by the daily use of a few pounds of ice, fresh meat, milk, butter, liquors, or any kind of provisions, may be cooled and preserved as effectually as in common winter weather. It would be very useful to butchers, who often lose considerable quantities of meat in summer. Fishermen might easily transport their fish a great distance without spoiling in any weather. Even our tables may be supplied with handsome vessels, not much exceeding the usual size, for containing certain kinds of food and liquids, which will cool their contents effectually, without exposing any ice to view."

At that time the tomato, which is now to be seen on every table in the land, was unknown as an esculent to the Philadelphians generally. It was called the "love-apple," and cultivated as an ornamental plant. The merits of the luscious terrapin were not discovered for a long time. The first time that we find it spoken of is in an advertisement published in Poulson's *Advertiser* in 1814, by one John Bailly, who gave notice that he had arrived in the city with one hundred dozen of terrapin, and that he could be found at the Rising Sun Hotel, in Letitia Court. In Palmer's list of articles sold in the Philadelphia markets in 1818, he calls them "tarapin's, or bay tortoises." The price was from one to two dollars per dozen. The negroes of Delaware, Maryland, and Virginia had eaten them for a long while before this time; but their masters seemed to be of the opinion that they were only fit to be the food of slaves.

But we have passed the limits allotted to this chapter, and must stop. With the nineteenth century began an era of scientific progress which, in a few years, saw changes accomplished that could not have been dreamed of at any period of the momentous eighteenth century. We have thrown a curious retrospective glance on the social life of that past age,

ELECTION SCENE IN FRONT OF STATE-HOUSE IN PHILADELPHIA IN 1815.

and found much to wonder at; what would have been the feelings of those dead actors in a great drama, had they had a vision of our railroads and telegraph, of the telephone and electric light! We have made science our slave and conquered the latent forces of nature and made them contribute to our comfort; yet we have much to emulate in the lives of our predecessors: their virtues made them happy and made their country great.

CHAPTER XXIX.

AMUSEMENTS OF THE PHILADELPHIANS.

"While Quaker folks were Quakers still, some fifty years ago,
When coats were drab, and gowns were plain, and speech was staid and slow,
Before Dame Fashion dared suggest a single friz or curl."

So sings R. A. Jackson, beginning the story of pretty Ruth and her unwelcome lover, Sylvanus Moore. Make "fifty" a hundred, and the introduction will serve the purpose of the history of amusements in Philadelphia. For we must begin with the "good old times," when the Quaker influence predominated in the provincial city, when every one's energies were directed mainly toward founding a home and acquiring "substance." In those times amusements were few and of the simplest kind. The founders of this prosperous community led an active, busy life,—withal a quiet one; they did not feel the want of exciting pleasures, which, moreover, were condemned by their religion, and religion governed every act of their life. The very word "amusement" was objectionable, as meaning something frivolous and worldly. They had but two resources against *ennui*, and they availed themselves of these. First, there was "going to meeting," which was not merely a duty but a positive mental enjoyment and a delightful rest for the body. Then, as man must have some kind of material enjoyment, the early Philadelphians sought naturally that which was suggested by the abundance of the land, the pleasures of the table, and big dinners became their principal recreation. To these two habits cultivated by our Quaker forefathers are due two characteristics of the people of Philadelphia, which have outlived the many changes brought about by time,—the religious, moral tone of society, and a general inclination to good living, and its natural sequence, hospitality. Every traveler who has written about Philadelphia has noticed these facts, and Philadelphia "dinners" and "tea-parties" have furnished the theme of many pleasant remarks. If these strangers have found anything to criticise, it has been the lavish extravagance of their host or hostess,—a criticism which may be accepted as a compliment. The history of every community, of every country, shows that it bears for centuries, if not forever, the recognizable mark of its founders. Laws and institutions, manners and customs may change in time, but there is something in the character of the people which survives all these changes, and reveals the influences, good or bad, which controlled the organization of the social body. The seal of the cavaliers in Virginia, of the Puritans in New England, of the Quakers in Pennsylvania is just as easily traceable as that of the French in Louisiana and Canada, although the greater differences of language and religion existed in those two colonies when they became the one English and the other American.

Against riding, swimming, fishing, and skating, there would be no prohibition; they were natural recreations which could be freely indulged in by all. In course of time there were fishing clubs and swimming clubs. As to skating, it became an art in which the Philadelphians acquired no little fame. Graydon, in his "Memoirs," says that "though the Philadelphians have never reduced it [skating] to rules like the Londoners, nor connected it with their business like Dutchmen, I will yet hazard the opinion that they are the best and most elegant skaters in the world." And Graydon had seen "New England skaters, Old England skaters, and Holland skaters."

In support of this judgment we will quote the following anecdote of the painter West, as told by Mr. Dunlap, in his "History of Art:" "West was a skillful skater, and in America had formed an acquaintance on the ice with Col. (afterward too well known in the colonial war as General) Howe; this friendship had dissolved with the thaw, and was forgotten, till one day the painter, having tied on his skates at the Serpentine, was astonishing the timid practitioners of London by the rapidity of his motions and the graceful figure which he cut. Some one cried, 'West! West!' It was Col. Howe. 'I am glad to see you,' said he; 'and not the less so that you come in good time to vindicate my praises of American skating.' He called to him Lord Spencer Hamilton and some of the Cavendishes, to whom he introduced West as one of the Philadelphia prodigies, and requested him to show them what was called 'the salute.' He performed his feat so much to their satisfaction that they went away spreading the praises of the American skater over London. Nor was the considerate Quaker insensible to the value of such commendations. He continued to frequent the Serpentine and to gratify large crowds by cutting the Philadelphia salute." The sequel was that many of the admirers of the skater became acquainted with the painter and sat to him for their portraits.

Graydon names Gen. Cadwalader and Charles Massey, the biscuit-baker, as the two reputed best skaters of his day. William McKoy, in his "Lang Syne Reminiscences," mentions as being "decidedly superior to the rest for dexterity, power, and grace" William Tharpe, Dr. Foulke, Governor Mifflin, C. W. Peale, George Heyl, and "Joe" Claypoole; also a

black skater who "outstripped the wind." Franklin Peale became as famous a skater as his father. Capt. James Page, of the State Fencibles, was also much admired. Dr. Joseph Parrish was equally expert, but being a Friend he did not indulge in "fancy touches." The list of these brilliant performers on the ice does not include any ladies' names. It is reasonable to believe that women at that time had not learned to skate, or at least that they thought it indecorous to exhibit their native graces in public; but the girls, doubtless, had many a surreptitious slide with their young brothers on some retired pond or creek. As for the boys, they did as all boys do,—they practiced on every frozen gutter, slided, fell, began again, went home with torn clothes, scratched noses, and unaccountable bumps on their heads, to the great distress of their mothers and suspicion of *pater familias*, until some fine day they appeared on the ice in all the glory of a new pair of skates, and proudly out-skated their elders. But if the fair Philadelphians did not venture upon the glassy surface of the Delaware, they congregated on its shores to witness the sport, and their approving bright glances had not a little to do with the efforts of the skaters to outdo each other in the grace and skill of their performances.

If skating remained an innocent amusement, riding led gradually and inevitably to horse-racing, at first a friendly trial of speed on an invitingly smooth road, then betting, the establishment of a race-course, and gambling unlimited. The Society of Friends did not approve of horse-races, but others did, and races were held at a very early period. Race Street got its name from being the street leading directly to the racing-ground. In 1726 the grand jury present "that since the city has become so very populous, the usual custom of horse-racing at fairs in the Sassafras Street is very dangerous to life," etc. Capt. Graydon, in his "Memoirs," says racing was a great passion of his young days. Watson notices the first public advertisement of a race in 1761, "wherein is stated the terms of running the intended races" at the Centre Race-Ground, to run three times around the course each heat." The grounds themselves at the same time were familiarly called "the Governor's woods."

The races at the Centre Square were discontinued in 1775.

Mr. Thomas Bradford, telling Mr. Watson of his recollections of the races, says "he was told that the earliest races were scrub- and pace-races, on the ground now used as Race Street. But in his younger days they were ran in a circular form on a ground from Arch or Race Street down to Spruce Street, and from Eighth Street of Delaware to Schuylkill River, making thus two miles for a heat. About the same time they also ran straight races of one mile, from Centre Square to Schuylkill, out High Street."

It seems that, at that time, pacers were deemed the most genteel horses. The Philadelphians, true to their English ancestry, had a decided fondness for horseflesh, and gentlemen having fine animals were wont to try their speed on the public streets. The race was often a spontaneous one, resulting from two riders getting into a discussion about the relative merits of their horses, but there were occasions when some day was fixed upon in advance for a trial, and the friends of the riders would assemble at a certain point to see the sport. Racing on the streets prevailed long after the Revolution, and when Philadelphia had become quite a large city. This dangerous custom became such a nuisance that on the 22d of March, 1817, the Legislature passed an act prohibiting horse-racing on any of the public streets of Philadelphia. The penalty was a fine of fifty dollars and forfeiture of the horse.

The citizens who were forbidden the unlawful pleasure of riding at break-neck speed through crowded streets could find ample compensation in taking drives or rides on one of the several fine roads leading out of the city through a beautiful and picturesque country. Mease said, in 1810, "No city in the United States affords so many diversified rides in its immediate vicinity as Philadelphia." But then driving or riding leisurely is not accompanied by the excitement of racing.

A regular race-course, very extensively patronized to all appearance, was in use near Germantown at quite an early period. Bulow, who visited Philadelphia in the latter part of the last century, speaks, in his account of his travels, of having witnessed a race near Germantown, where he saw horses run a four-mile heat in eight minutes, a feat which, he says, the horses of Germany could not perform.

Another race-course was situated upon the Hunting Park estate, at the corner of Nicetown Lane and the old York road. It was known as Hart's race-course.

That racing was, however, far from generally popular is shown by the fact that "fifteen hundred mechanics and twelve hundred manufacturers" signed an address to the grand jury, in June, 1802, in which they declared that the race-course was injurious to them, and went on to say,—

"This English dissipation of horse-racing may be agreeable to a few idle landed gentlemen, who bestow more care in training their horses than in educating their children, and it may be amusing to British mercantile agents and a few landed characters in Philadelphia; but it is in the greatest degree injurious to the mechanical and manufacturing interest, and will tend to our ruin if the nuisance is not removed by your patriotic exertions."

In September of the same year the "great mischiefs and vices" resulting from races held at a place between Frankford and Bustleton were denounced in a communication to the *Philadelphia Gazette*. Again, in 1805, the evil consequences of races are exposed by a writer in the *Daily Advertiser*, who says, "The Germantown races yesterday commenced, where I suppose

intoxication, riot, lewdness, and distress may be seen in all their various shapes."

Races continued to be held, however, for several years later, but this species of gambling could not meet with the approval of the Legislature, and on the 17th of February, 1820, a law was passed which declared that "all racing, running, pacing, or trotting of horses, mares, or geldings, for money, goods, or chattels, or other valuable things, shall be, and hereby are declared to be, common nuisances and offenses against this State." The animal used in the race was liable to be forfeited and seized by the overseers of the poor. All wagers and bets on horse-races, and notes and other securities given on account of the same, were declared void. The act further made it an offense to make up a purse or plate to be run for, to print advertisements, handbills, etc., mentioning the time and place at which races were to be held. Races for money were broken up for a time, but as racing to merely test the speed of the horses was not prohibited, a great deal of private betting was carried on, and the law was thus evaded, though apparently respected.

Before the Revolution such barbarous amusements as cock-fighting, bull-baiting, and bear-baiting were frequently indulged in, especially cock-fighting, in which men of the highest respectability found pleasure. Watson, in his "Annals," quotes from a letter of Dr. William Shippen to Dr. Gardiner, in 1735, announcing that he sent his friend "a young gamecock to be depended upon," and giving as a reason for not sending an old cock that "our young cockers have contrived to kill and steal all I had." The venerable annalist also states that Timothy Matlack had once "a great passion" for cock-fighting, which caused the wags to transform the initials T. G., with which he sometimes signed his political articles, into Tim Gaff, by which nickname he was afterward designated. Bull-baiting and bear-baiting were patronized principally by a lower class of people; they were usually gotten up by the butchers, who reared and kept dogs for the sport. Yet, it is on record that some very respectable citizens also kept bull-dogs and found much enjoyment in the excitement of these fights. These practices were gradually abandoned by the better class of men, but did not disappear entirely for some years after the Revolution.

Poulson's *Advertiser* of April, 1812, contained a complaint from a correspondent that on Easter Monday a certain neighborhood (not named) was a scene of riot and confusion on account of a cock-fight; also that a boxing-match was advertised at Bush Hill, which had been prevented by constables and aldermen. The writer took this occasion to lament the increasing wickedness of mankind.

As late as 1821 cock-fighting was carried on, but the cock-pit was shunned by all who laid a claim to social standing. Waln, in "The Hermit in Philadelphia," published in that year, says,—

"Cocking, to which English ruffians are so generally addicted, is limited to a very small number of Philadelphia fashionables. Several cock-pits, however, exist in the neighborhood of the city under the superintendence of men who have nothing further to dread from the opinion of the world. Toward a certain quarter there is one of higher rank, to which some of our aspirants have the misfortune to belong. This barbarous predilection subsides with the rude passions of youth, and I do not know one veteran cocker to disgrace the character of our city."

At the time when the Council was so much exercised about tavern frays and disturbances that it had to increase the number of night-watchmen, there was, without doubt, a good deal of "gaming and curses loud and deep" in some of these haunts of vice, yet it is strangely true that while in England gambling was carried on to such an extent that the period of which we speak might be called the "age of gaming," this fashionable vice never prevailed to any alarming extent in Philadelphia. Card-playing, even for amusement, never became a general custom, nor was it at a later period the principal attraction in fashionable society receptions, as it was in New York, as stated by the witty Rebecca Frank, in a letter already quoted in our chapter on Manners and Customs. The condemnation by the Friends of all sorts of gambling as frivolous and injurious, and leading to loss of substance and waste of time, and by the Puritans as a sinful practice, had their weight with public opinion, and Philadelphia society sought more intellectual recreation than that of handling slips of painted pasteboard. Still, it was not thought improper for sedate old gentlemen to sit down to a solemn rubber of whist, or perchance to a game of "all fours" or cribbage. But in every large or growing city there is always a class of people who care little for their reputation, and are not influenced by the opinion of good society. Among such there was much surreptitious gambling. The Legislature found it necessary to put a restraint upon this demoralizing practice by which the young and weak were lured to destruction, and by an act of Assembly, passed in 1794, playing at cards, dice, billiards, bowls, shuffleboard, or any game of hazard or skill, for money or other valuable consideration, was liable to fine.

Among the games of hazard prohibited by this act was one designated by the mysterious name of the "E. O." The extreme simplicity of this game was one of its chief attractions. On a round table, covered with canvas or oil-cloth, were painted lines radiating from a small circle in the centre. Upon each division formed by these lines the letters "E" and "O" were painted alternately. On one of these letters, in any division, at his choice, the players staked their money; the keeper of the game now placed a teetotum in the small circle in the centre of the board, and gave it a whirl; the toy spun around, tracing an erratic circle over the lines, and finally *died* in one of the divisions, to the great joy of the player who had hit upon the lucky letter and the discomfiture of the others. That a certain skill in twirling the teetotum enabled the keeper to score regular profits is mani-

fest, yet the dupes were not wanting to bet on the E. O. This old game has reappeared at different periods under other names, and with various improvements, the most artistic being the "menagerie," which was for a short time in vogue some thirty or forty years ago. Instead of letters, the table was ornamented with figures of animals, and the teetotum had octagonal sides. The elephant was the most difficult to reach, and a lucky hit on this animal brought considerable gain. Many went to "see the elephant," who came back sorely disappointed and never boasted of what the sight had cost them.

Billiards was a game much in vogue, though frequently denounced as gambling. A writer in the *Repository*, in 1802, said with fine sarcasm,—

"For the benefit of the friends to mental improvement, to the refinement of human nature, and to the happiness of society, the theme of this shall be, 'The virtues of a billiard-table.' The art of playing dexterously on this table is one of the most elegant accomplishments of gentlemen of spirit and spunk in every quarter of the refined world.

"There is something in it peculiarly adapted to the happy political constitution of the State. It reduces all to a perfect level. The sot, merchant, cobbler, captain, blacksmith, spruce gallant, pickpocket, and jockey are all hale fellows well met, and merit is the only true criterion of eminence. Such a general and promiscuous collection must certainly have a most happy influence over the gay and thoughtless youths of this city. It was ever a virtue in the young to revere and imitate the aged. Happy for them it is that here they may follow the example even of those whose gray hairs stimulated them to a redemption of their time by the constant repetition of *memento mori*."

Another writer defends the game as a perfectly innocent amusement, provided that no sum of money whatever be staked, and ends by comparing it to the childish play of marbles:

"Both games are played with balls; the only difference is that the one are made of common stone, and the other of ivory, and that the one is driven forward by the hand, and the other with a stick. Now, I cannot see why anything sinful can be attributed to an elephant's tooth more than to a stone, or how the crime is greater by propelling a ball with a stick instead of the hand, or by playing on a table and in a room instead of at the corner of a street and on the ground. I think the greatest sin is to be attributed to the latter game instead of the former."

For a short time pugilism, which had become fashionable in England, was taken in favor in Philadelphia. In 1824, William Fuller, who styled himself "the celebrated pugilist from London," gave notice that he proposed to give "lessons in the above-named manly science, whereby gentlemen, after a few lessons, will be enabled to chastise those who may offer violence, and protect themselves from the attacks of ruffians." In November of the same year, G. Kensett, "scientific boxer, from London," opened his school for teaching the art of self-defense. In February, 1825, Kensett gave "a grand display of the useful art of self-defense," assisted by several amateurs.

British boxers and French fencing-masters did not succeed, however, in exciting in the Philadelphians' breasts an inordinate fondness for the "ring" or *salle d'armes*. It is a singular fact that the native American, in every part of the Union, though he be ever ready to fight his battles with the knife, the pistol, or the rifle, and he may on an emergency strike with his fist, has never taken kindly to scientific fisticuffs or the small-sword exercise.

But the Philadelphians were fond of many sports requiring strength or agility, especially out-door sports. Bowls, ten-pins, quoit-throwing, bullets or "long bowls," the shuffle-board, with its heavy weights to be shoved or "shuffled" with a strong hand, guided by a cunning eye, were games which attracted crowds of visitors to the suburban inns and public gardens. A little betting on results may have thrown a spice of gambling in these amusements, but generally they were indulged in merely for the sake of the sport.

The first place of public resort fitted up on the plan of the public gardens in London was at the Lower Ferry at Schuylkill, known as Gray's Ferry. It was opened to the public shortly after the Revolution, and soon attained a well-merited popularity. Visitors, attracted by the novelty of the thing, were delighted with the tasteful arrangement of the place, where shaded walks, beautiful flowers, and artistic decorations combined to please the eye, while comfortable boxes afforded places of rest, where refreshments of every kind could be obtained. The city poets—the muses have never lacked fervent worshipers in Philadelphia—grew delirious over the beauties of the place, both natural and artificial, and the *Columbian Magazine* more than once admitted into its "Poet's Corner" "Verses upon Gray's Ferry," and "Lines" and other poetical effusions inspired by the same. Nor was the attractive resort celebrated by poets only, its praise was sung in prose as well. The following passage, clipped from one of these laudatory articles, bears evidence to the orderly disposition of the people:

"It is remarkable that public gardens are so little disordered by the concourse of mixed multitudes. The reason of this must be that even rude minds are harmonized by the genius of the place, and are awed into veneration for its beauty. When the pleasure-grounds of the Messrs. Gray were first opened to the public, their friends apprehended vexatious mischief from the less cultivated part of their visitors; but were agreeably disappointed, notwithstanding the novelty of the scene and that impatience of restraint which, in some degree, is a necessary evil in very free countries. In this respect, I place elegant gardens among the nurseries of national virtue. The sacred page, in conformity with our finer feelings, has laid the scene of man's first innocent and happy existence in a garden, and represents the future mansions of the just under the emblems of a paradise planted with the trees of Life, and watered by the crystal streams that spring from the throne of God! A mind accustomed to noble thoughts will frequently rise from Nature to Nature's God, and exclaim, with the poet,—

"'Hail! Source of being!—universal Soul
Of heaven and earth! Essential Presence, hail!
To Thee I bend the knee! To Thee my thoughts
Continual climb, who with a master hand
Hast the great whole into perfection touched!'"

Among the amusements prepared for the entertainment of visitors were concerts and fire-works,—the latter the most popular at all times with the crowd. On the 4th of July, 1790, the proprietors of Gray's Garden gave a splendid exhibition. The floating bridge was decorated with shrubbery and flowers, and with flags representing all the States in the Union.

The ship "Union"—a prominent object in the Federal procession of 1789—lay off the gardens, flying the colors of all nations. At night the "Union" appeared in a blaze of light, as did also a floating island, with a farm-house and garden. The portraits of the Presidents of the United States, and the many statues of heathen deities which decorated the gardens, were illuminated also. Thousands assembled at the ferry to admire the fairy-like scene, and it was pronounced a great success,—the grandest spectacle, in fact, presented since the Federal procession pageant.

At that time Gray's Garden had already a rival in the public favor. This was Harrowgate, in the upper part of the county, where a mineral spring had been discovered, possessing, it was claimed, great medicinal virtues. The proprietor, George Esterley, advertised his "Medical Waters for Drinking or Bathing," giving the analysis made by Drs. Rush, Mease, and Streble; but mindful of the comforts of the well as much as of the cure of the ailing, he ended his advertisement with the following inviting promise: "He is determined to keep the best of liquors of all and every kind. Breakfast, dinners, tea, coffee, and fruits of all kinds may be had at the shortest notice, and also excellent accommodations for boarding and lodging," which leads to the belief that brandy and rum did not destroy the virtues of the Harrowgate mineral waters.

The city poets strung up their lyres and forthwith sang the praise of the new Helicon. Harrowgate became subsequently a favorite resort during the pleasant season of the year, less, however, on account of its spring than for the attractions it presented as a public garden. It was a famous place for concerts and exhibitions, and was sometimes called "Vauxhall." In the summer of 1792, Monsieur Rolong, a famous harpist, appeared here. Messrs. Phill, Schulz, Tremner, Roth, Christhilf, Spangerberg, etc., assisted in an instrumental concert. Transparencies were exhibited, illuminated in the Chinese style. Kenna, of the Northern Liberty Theatre, gave a grand concert at Harrowgate, July 4, 1793.

The Wigwam baths, on the banks of the Schuylkill, at the foot of Race Street, were fitted up in 1791 by John Coyle. This establishment boasted of a Bowling Green, two shower-baths and one plunging-bath, but it had other attractions, alluded to by Priest, in his "Travels through the United States," 1793–97, when he says, "One evening, at six o'clock, a party of pleasure went to a tea-garden and tavern romantically situated on the banks of the Schuylkill, famous for serving up coffee in style. On the table there were coffee, cheese, sweet cakes, hung beef, sugar, pickled salmon, butter, crackers, ham, cream, and bread. The ladies all declared it was a most charming relish."

An attempt was made, in 1796, by Bates and Darley, performers at the new theatre, to establish a popular place of resort at Bush Hill. They leased for this purpose Andrew Hamilton's mansion with its fine gardens, but their plan was not such as to command success, and the attempts to put it in execution proved a failure. By this plan one hundred subscribers, at one hundred dollars each, were declared necessary,—the money to be paid quarterly. The subscribers were to have free tickets to the exhibitions, concerts, and entertainments, and were to be repaid by Bates and Darley in ten years, by annual installments of ten dollars.

If Bates and Darley's scheme proved to be impracticable, their selection of Bush Hill as a place of public resort showed judgment; for a few years later the mansion and grounds were leased by Lozout & Brown, who established there a public garden, and their venture was quite profitable. J. E. Lozout, who was a pyrotechnist "from France and Germany," gave a fine exhibition of fire-works on the grounds. It gave so much satisfaction that to gratify the public wish, on the Fourth of July, he gave another grand pyrotechnic display at Richardet's Long-ball Alley, below the new Catholic church, on Fourth Street. The fact that the tickets of admission were sold for one dollar speaks well for the excellence of the entertainment and the liberality of the patriotic spectators.

"Louth Hall," kept by John Hyde, on Tenth Street, between Race and Arch Streets, was taken by Louis Fouquet in 1803, and opened as a public garden. It soon became famous for its excellent cookery and the fine style in which Fouquet served up dinners and banquets. Military companies and other societies gave it the preference for their annual banquets. The place enjoyed a deserved popularity during about ten years; after that, the cutting through of Cherry Street having spoiled the grounds, the business declined, and Fouquet gave it up in 1816. The place ceased to be a garden after his retirement.

There were some nurseries and botanic gardens which, being established originally for the cultivation of flowers, trees, and plants, became, in consequence of the elegance of the manner in which they were laid out and the attractions of the gardens and floral splendor, places of resort. Some of them furnished refreshments, edible and potable. Among the former were tea, coffee, milk, relishes, soups, etc. Some of them sold liquors, the most popular of which among those who resorted there were mead, metheglin, malt beverages, ice cream, etc.

One of the oldest was that of Daniel Engelman, florist and seedsman. He was a Dutchman from Harlem, Holland, who came to Philadelphia in 1759. At an early period he established his nursery and garden on the north side of Arch Street, between Schuylkill Seventh [Sixteenth] and Schuylkill Eighth [Fifteenth]. He was still at that place in 1822. After he relinquished it, and about 1826–27, Thomas Smith became proprietor, and opened it as the Labyrinth Garden.

George Honey, formerly clerk to the County Commissioners, also established a garden at an early

period. It was quite large, having four hundred and ninety-five feet frontage on Race Street, five hundred and seven on Schuylkill Third, and five hundred and fifty-six on Schuylkill Second. Thomas Birch, gardener, was established here as early as 1811. John MacAran, who had been gardener for seven years for William Hamilton, of the Woodlands, and who also had laid out and improved Lemon Hill for Henry Pratt, went into business with him as nurseryman, florist, and seedsman at the beginning of that year. They remained together until 1822. Birch relinquished control of the garden about 1824, and it was afterward kept by August D'Arras. It contained about six acres.

Gray's Garden ceased to be a place of public amusement about the end of the eighteenth century, although it continued to receive patronage as a place of refreshment. Its distance from the city was the principal objection to it, and when equally attractive gardens were established at more accessible points its popularity waned and finally disappeared. After the Grays, Joseph Reed kept the garden and ferry until 1803, when Isaac Tucker became the lessee. He was there but one year, and was succeeded by James Coyle, formerly of the Indian Queen Tavern. By that time the garden had ceased to be a place of amusement.

The same causes brought about the decline of Harrowgate, notwithstanding the virtues of its waters and the musical attractions offered by Gillingham and Hupfeld in 1810, when they got up a series of entertainments on the plan of the celebrated London "Vauxhall." Harrowgate was offered for sale in 1816.

The old Lebanon Garden, at the corner of Tenth and South Streets, is better remembered as a popular tavern than as a place of amusement. It became a favorite resort for old Democrats. Among the events connected with its history are a display of fire-works in 1817, and a bear-roasting on the 4th of March, 1829, when Gen. Jackson was inaugurated President; also a Democratic celebration on the Fourth of July, 1832, when a man was fatally injured by the explosion of a cannon.

The old ante-Revolutionary place of resort, Centre-House Garden, on the south side of Market Street, at the southwest corner of Schuylkill Eighth [now Fifteenth] Street, had not entirely lost its popularity at the beginning of the present century. A concert was given there on the 4th of July, 1800, by Messrs. McDonald, Walen, and others. In the summer of 1808 a Mr. Victorien erected an amphitheatre at the Centre-House Garden, and announced that the performances would consist in feats on the tight-rope, ground and lofty tumbling, etc., in which he would be the principal actor. The building was opened in July, 1809, by a Mr. Martin, as a "summer theatre." Martin sent up a balloon on the Fourth of July.

The Lombardy Garden was appropriated to public use about 1800. It was situated on the west side of Centre Square and on the north side of Market Street. It occupied the lot now bounded by Market, Filbert, the street formerly called Oak and Merrick [now a portion of Broad Street], and Schuylkill Eighth [now Fifteenth Street]. James Garner became the occupant, and provided "breakfast, tea, and turtle-soup" for his customers. Summer concerts were also given there. In 1803, Jacob Kraafs was the lessee and gave notice that concerts would be given, "admittance, twenty-five cents, part in refreshments on the plan of Sadler's Wells." He also changed the name of the place to "The New Sadler's Wells," but in a very short time the old name was resumed. John F. Renault gave a grand exhibition of fire-works in May, 1805. Among other things presented to dazzle the public were figures of Washington and Jefferson. In June, 1811, Charles J. Delacroix, for nine years director of the festivals at Vauxhall, New York, gave two exhibitions of pyrotechnic art at Lombardy Garden. In 1819 the property was advertised to be sold. In May, 1822, Anthony Elton gave notice that he had opened, at the old Lombardy Garden, the Centre Square Hotel.[1]

As all the young people agree that eating ice-cream is an amusement, Bosio, the Italian confectioner, is entitled to an honorable mention in this chapter, since his "ice-cream house" opened in 1800, in Germantown, "opposite the Spread Eagle," was the first establishment of the kind known to the Philadelphians. Moreover, Bosio's success induced others to embark in the ice-cream business. Meanwhile greater attention had been given to the cultivation of the strawberry, and it was discovered that the flavor of this fruit combined admirably with that of fresh cream. The lucky possessors of strawberry-patches and milch cows invited the public to come and partake of this delicacy, and as no discovery is ever made but it leaves room for improvement, after a time "ice-cream" was substituted for the plain "cream" and strawberries.

Among those "strawberry-gardens" which combatted successfully against the old places of resort by offering their heated and thirsty visitors some cooling, delicious fruit bathed in rich, fresh cream, instead of the coarse viands and intoxicating drinks of yore, the following were noted:

In June, 1808, notice was given that Strawberry Hill, beyond the Robin Hood Tavern on Ridge road, was open for the reception of company. It was provided with an abundance of excellent strawberries and cream.

George Esher, in June, 1824, gave notice to the public that he was prepared to furnish strawberries and cream at his strawberry-garden on Ridge turnpike, two and a half miles from the city. It is very probable that his place was at Strawberry Hill.

---

[1] The Pennsylvania Railroad depot now occupies the site of this garden.

There is reason to believe that the premises are now in the park, and are known as Strawberry Mansion. Strawberry Hill was originally the country-seat of Commodore John Barry.

Daniel Kochersperger, in 1824–25, apprised the public that he was ready to furnish them with strawberries and cream at his farm on Francis Lane (now Fairmount Avenue), between Ridge road and the new penitentiary.

Vincent Chirico gave notice in April, 1824, that he had opened Washington Garden, at the corner of Hamilton Street, Morrisville, near the water-works at Fairmount, where he was ready to dispose of cakes, fruit, ice-cream, etc. The situation of the garden was probably near the intersection of Hamilton and Morris Streets, which is now commonly called Callowhill Street, although not in a direct east and west line with that street.

The Moyamensing Botanic Garden, which was established in 1820 by Alexander Parker, was particularly noted for some box-trees of unusual size which stood near the door. These curious specimens of luxuriant vegetation and horticultural skill were cut and trimmed with fanciful taste so as to present the appearance of a square base or pedestal, two or three feet high, upon which rested a huge round ball; above this rose a sort of spire, making altogether a very singular figure. Hundreds of visitors came, year after year, to gaze on these box-trees, wondering how they could preserve the symmetry of their outlines while perceptibly, though slowly, growing larger. The Moyamensing garden was on Prime Street (Love Lane), between Eighth and Eleventh Streets. At that time Ninth and Tenth Streets were not opened as far as Prime Street. When the extension of the city necessitated the farther opening of these streets, it happened that Tenth Street went exactly through the middle of Parker's Garden, leaving the old house just beyond the line of the sidewalk.

Another fine nursery garden was that established on the lot bounded by Filbert, Arch, Schuylkill Fifth [Eighteenth] and Schuylkill Sixth [Seventeenth] Streets, by John MacAran, already mentioned as having been Birch's partner. MacAran supplied his visitors with strawberries and cream, and fitted out his garden in a very tasteful style. He built a large, high conservatory, in which were displayed large plants and trees. His hot-houses were long, spacious, and convenient to walk through. The out-door flower-beds and the garden, with its little boxes, vines, and shrubbery, were all arranged in good taste, and with the occasional display of a rare exotic, and illuminations with colored lamps on gala evenings, the place commanded a large and profitable attendance. MacAran's garden contained about four acres.

MacAran's had a collection of living birds and animals, and the place became a concert-garden and vaudeville theatre about 1840, and fire-works were exhibited there. A spectacle that never failed to attract the crowd was a fine representation of the eruption of Mount Vesuvius.

Pyrotechnic exhibitions were always popular in Philadelphia, and at a remote period were the principal feature in all public celebrations. They were so well received that artificers found it profitable to give them regularly on a minor scale. On special occasions these exhibitions were of a rare degree of perfection. Watson's "Annals" contain the following description of the great fire-works exhibited in September, 1758, on the Delaware River, in honor of the reduction of Cape Breton by Gen. Amherst: "It represented a citadel in the centre and on each flank a tower. On shore were other works to represent the French. Then a great exhibition of fire ensued, and the sounds of cannonade, etc. The citadel approached to storm the works on shore; they sprung a mine and surrendered. Then succeeded rejoicings by a swarm of rockets from the towers, etc. This was certainly a very grand display for so small a community as Philadelphia then was to effect. The truth was, the enterprise of Cape Breton was deemed an American affair of great merit, a thing in which the northern and middle colonies gave themselves great credit."

During the war of independence, when the Chevalier de Luzerne, ambassador of France, gave a splendid night entertainment in honor of the birth of the dauphin of France (poor little Louis XVII., who was destined to die a prisoner, after untold sufferings), the principal feature on that occasion was a brilliant display of fire-works. The pyrotechnist who prepared that exhibition was probably the Frenchman, Jean Laugeay. We find him, in October, 1781, exhibiting "a very grand fire-works, by a girl eleven years old, consisting of two English men-of-war fighting two Americans in force, and the battle shall be given to the Americans." In 1782 he gave an exhibition in the State-House yard (price of admission, one dollar), and on the 4th of July, 1787, another grand exhibition at Reade's Centre House, Market Street (admission, 7*s.* 6*d.*).

Ambroise & Co., "fire-workers, painters, and mechanicians,"—also French,—erected an amphitheatre in Mulberry Street, between Eighth and Ninth, where they gave regular exhibitions. A grand scene, which they brought out in September, 1794, and repeated many times afterward, was a representation of the taking of the Bastille, in which the shattering of the drawbridge was depicted with awful fidelity, and balls were "seen issuing from the cannon and musketry." Ambroise & Co. may claim the honor of having been the first to manufacture inflammable gas and exhibit the effect of gas-light in America. In August, 1796, they advertised an exhibition of fire-works, part of which was composed of combustibles in the usual style of pyrotechnics. The other part was composed "of inflammable air, by the assistance of light, as lately p[illegible]rope." By this latter means

were "exhibited an Italian parterre," "a picture of the mysteries of Masonry," "a view of a superb country-seat," "a grand portico," etc. There were eight pieces thus exhibited. Another fine exhibition given by these artists was the display of fire-works in February, 1796, in honor of the general peace reigning throughout the world at that time. The celebration was gotten up by subscription at Michael Ambroise & Co.'s amphitheatre, in Arch Street, between Eighth and Ninth. There was a grand triumphal arch twenty-six feet in height and twenty feet in width, decorated with pilasters, statues, vases, baskets, and inscriptions.

The oldest museum that we hear of in Philadelphia was that of Pierre Eugene du Simitiere, which was, at best, but a private collection, temporarily opened to the public. Du Simitiere was a Swiss-French gentleman, of good education, a writer and a painter. He had a decided turn for collecting curiosities, literary or natural. He had lived in New York, and he spoke and wrote English correctly; he came to Philadelphia before the Revolution. He wrote a great deal. Five volumes of his curious MSS., with some rare fugitive printed papers, are in the Philadelphia Library. His collection of curiosities became so much spoken of that he was frequently importuned by applications for permission to examine it. In 1782 he advertised it as the "American Museum," stating that it was constantly increasing, and that he was frequently applied to for an inspection of it; he had, therefore, set apart Tuesdays, Thursdays, and Saturdays, between the hours of ten and twelve in the morning, and three and four in the afternoon, an hour for each company, not to exceed six in number. His house was in Arch Street, above Fourth. The price of the tickets was half a dollar each. Du Simitiere afterwards proposed to make his museum a permanent public exhibition, and he applied for assistance from the commonwealth to enable him to enlarge his building, but his application was unsuccessful.

In 1784, Charles Wilson Peale opened a museum at his residence, corner of Third and Lombard Streets. Mr. Peale had painted and preserved a large collection of portraits, principally of Revolutionary men; to this interesting gallery of paintings he added many natural curiosities collected by himself, and he opened his rooms to the public. The exhibition was a success from the first. The collection of portraits was a patriotic enterprise which could not fail to meet with general commendation. It served to preserve the features of the heroes who had fought the battles of the republic, or had assisted in saving it by their wise counsels and their examples of disinterested patriotism. Already many of the originals slept the eternal sleep from which there is no waking, and though their deeds were remembered, posterity could have formed no idea of those faces lighted up by the noblest passion but for the pencil of Charles Wilson Peale.

This indefatigable and zealous artist worked day and night to make his museum an institution of which Philadelphia should be proud. His collection of natural curiosities increased so rapidly that his rooms could no longer contain them. In 1792 he discovered a new process for the preservation of beasts and birds, and he applied to the Legislature for assistance to enable him to perpetuate the advantages of his valuable discovery, which, he claimed, surpassed any previous process. He had already on several occasions sought to obtain aid from the State, for he held that his museum, though the undertaking of a private individual, was a public benefit.

In 1794 a committee of the House, which had visited the museum, made a very favorable report, recommending that a loan of one thousand dollars be made to Peale. The House, however, refused to adopt this recommendation.

At this juncture the Philosophical Society nobly came forward and granted Peale the use of its building in Fifth Street, below Chestnut. Thither the museum was transferred in September, 1794, and its importance was better appreciated when the numerous specimens were properly arranged in the spacious rooms of the society. Here Mr. Peale began to form a zoological garden in a small way. It was fitted up in the rear of the building on Independence Square. Among other live specimens there was an eagle, over whose cage was this inscription, "Feed me well, and I'll live a hundred years." Mr. Peale manipulated wax with as much skill as he wielded the brush. The Rev. Manassah Cutler, who visited the museum while it was still at Third and Lombard Streets, relates the following anecdote:

"Immediately after dinner we called on Mr. Peale to see his collections of paintings and natural curiosities. We were conducted into a room by a boy, who told us Mr. Peale would wait on us in a minute or two. He desired us, however, to walk into the room where the curiosities were, and showed us a long, narrow entry which led into the room. I observed, through a glass window at my right hand, a gentleman close to me, standing with a pencil in one hand and a small sheet of ivory in the other, and his eyes directed to the opposite side of the room, as though he was taking some object on his ivory sheet. Dr. Clarkson did not see this man until he stepped into the room; but instantly turned about, and came back, saying, 'Mr. Peale is very busy taking the picture of something with his pencil. We will step back into the other room, and wait till he is at leisure.' We returned through the entry; but as we entered the room we met Mr. Peale coming to us. The doctor started back in astonishment, and cried out, 'Mr. Peale, how is it possible you should get out of the other room to meet us here?' Mr. Peale smiled and said, 'I have not been in the other room for some time.' 'No!' said Dr. Clarkson. 'Did I not see you there this moment with your pencil and ivory?' 'Why do you think you did?' asked Peale. 'Why do I think I did?' replied Dr. Clarkson. 'I saw you there if I ever saw you in my life.' 'Well,' says Peale, 'let us go and see.'

"When we returned we found the man standing as before. It was a piece of waxwork which Mr. Peale had just finished, in which he had taken a likeness of himself."

Mr. Cutler says of the collection,—

"The walls of the room were covered with paintings, both portrait and historic. Under a small gallery his natural curiosities are arranged in a most romantic and amusing manner. There was a mound of earth, considerably raised and covered with green turf, from which a number of trees ascended and branched out in different directions. On the de-

clivity of this mound was a small thicket, and just below it an artificial pond; on the other side a number of large and small rocks of different kinds, collected from different parts of the earth. At the foot of the mound were holes dug, and the earth thrown up, to show the different kinds of clay,—ochre, coal, marl, etc.,—which he had collected from various parts; also ores and minerals. Around the pond was a beach, on which was exhibited a fine assortment of shells, turtles, frogs, lizards, water-snakes, etc. In the pond was a collection of fish, with their skins stuffed, water-fowl, such as geese, ducks, cranes, herons, etc., all having the appearance of life, for their skins were admirably preserved. On the mound were such birds as commonly walk on the ground, etc."

But the great curiosity that attracted all Philadelphia to the museum, some years later, was the skeleton of the mammoth. Peale got the first information about the discovery of this skeleton in 1785. The first bones were brought to him by Dr. Browne, for the purpose of making drawings of them. Mr. Peale often gazed on these drawings, and thought what a grand thing it would be to procure an entire skeleton. The occasion, so long wished for, presented itself in the autumn of 1799. In digging a marl-pit in the vicinity of Newburgh, on the river Hudson, some workmen came upon many bones of extraordinary size. Peale, learning of the discovery through the newspapers, proceeded to the spot and succeeded in obtaining a collection of bones. Some portions of the skeleton were wanting, and artificial ones had to be substituted. The bones collected belonged to more than one animal, and after completing the first skeleton it was found that a second might be put together. This was done by Rembrandt and Raphael Peale, who took this second skeleton to England in 1802. They failed to sell it there, and brought it back to this country in 1803. In honor of the finishing of the second mammoth a collation was given within the cavity of the skeleton to twelve gentlemen. This original feast was the subject of a long article in the *Portfolio*, in which all the toasts, many of them witty, were given, as well as a long poem written for the occasion.

Peale had many warm friends and admirers, and after the removal of the Legislature from Philadelphia they exerted themselves on his behalf to obtain the use of a vacant portion of the State-House. By an act passed on the 17th of March, 1802, Mr. Peale was authorized to occupy the east room of the lower story (now known as the Independence Hall) and all the upper stories. He established his museum in the second story. Additions to the curiosities on exhibition were constantly made, and Mr. Peale spared neither pains nor money to make the museum worthy of the public patronage. Until 1806, the place was open to visitors during daytime only, owing to the difficulty of lighting large rooms with the ordinary lamps and candles in use at that time. In that year the proprietor gave notice that the museum would be lighted twice a week with patent lamps and candles equal to the light of two hundred and twenty ordinary lamps of candles. These evening exhibitions were generally well attended, for, in addition to their being an accommodation to the general public, there was always some novel feature introduced to make the exhibitions more attractive. In this Mr. Peale was assisted by his sons,—Rubens, Franklin, and Titian Peale. They gave lectures and experiments in chemistry, philosophy, exhibitions of the magic lantern, philosophical fire-works, electric experiments, and other entertainments, scientific and instructive.

Charles Wilson Peale and Titian Peale, assisted by —— Fenton and James Griffith, were the taxidermists of the museum. In 1809, Mr. Peale commenced a collection of stuffed monkeys, dressed as human beings, and engaged in some of the occupations familiar to man. The first exhibition represented a poet and a painter, with another individual sitting for his portrait in the artist's studio. Others followed, and in each new group some comical effect was obtained. Monkeys were represented as engaged in the various trades, and the contrast between their grave occupations and their mischievous faces and ridiculous atattitudes was extremely amusing. Peale's monkey tradesmen live in the memory of many an aged Philadelphian.

So many specimens had been added to the museum that the place was crowded, and there were many duplicates. Rembrandt Peale added to this surplus stock a collection of natural curiosities, which he purchased from James Savage, and he proceeded to Baltimore, where he established a museum and gallery of fine arts in Holliday Street. In January, 1818, the "Great Sea-Serpent" was exhibited at Peale's Museum. This monster, captured in the month of September of the preceding year off the coast of Massachusetts, had been submitted to the examination of the Linnæan Society of New England, and by it named *Scoliophis Atlanticus*. J. R. Peniman painted a grand picture of the capture of the sea-serpent, and this picture, nineteen feet in length by nine feet in height, was added to the treasures of the museum. Another sea-monster—a "devil-fish," twelve feet long, fifteen feet broad, and weighing two thousand pounds—was exhibited at the museum in 1823. Occasionally the place was opened to other exhibitions besides those of natural curiosities. Thus, in 1820, the "Pandean Band," consisting of a single performer, an Italian named Signor Helene, who played on five different instruments at the same time, was engaged. He was certainly a living curiosity, if not a "natural" one, for by using his hands, elbows, and knees, he managed to play on the Italian viola, the Turkish cymbals, and the tenor drum, while he blew into a set of pandean pipes thrust into his waistcoat, and by wagging his head tinkled the Chinese bells fixed thereon as a sort of helmet, presenting a grotesque rather than artistic appearance. The "orchestra-man" has long ceased to be a curiosity, but at that time he drew well.

The art gallery connected with Peale's Museum contained principally portraits painted by C. W. Peale himself, and by his sons at a later date. They will be

treated under their proper head in our chapter on art.

Peale's Museum was absorbed into the Philadelphia Museum Company, which was incorporated by act of the Legislature in February, 1821. The corporators were Pierce Butler, Raphael Peale, Rembrandt Peale, Coleman Sellers, and Rubens Peale,—all of whom, except Butler, being members of the Peale family. It was organized on the 14th of March, 1821, and the trustees were Pierce Butler, Professor Robert Patterson, Zaccheus Collins, Coleman Sellers, and Rubens Peale. The company established a series of scientific lectures, to be illustrated by articles in the possession of the company. This was a good plan to diffuse knowledge in the most entertaining manner. These interesting lectures were delivered by the following gentlemen: On Mineralogy, Dr. Gerard Troost; Zoology, Thomas Say; Comparative Anatomy, Dr. Richard Harlan; Physiology, Dr. John D. Godman. The conservator in zoology was Titian Peale, and the manager Rubens Peale. Charles Wilson Peale delivered a lecture on Natural History, in 1823. In 1828 the museum was removed to the Arcade, where it remained until 1838.

On the 4th of July of that year the Philadelphia Museum building, at the northeast corner of Ninth and Sansom Streets, was opened for exhibition. The museum was supposed to have outgrown the accommodations for the storage and exhibition of the collection at the Arcade. As early as Dec. 22, 1835, leave was given to the Museum Company, which was incorporated in 1821, to change its capital so that five hundred shares of two hundred dollars each should be divided in value into one thousand shares of one hundred dollars each. This would only have been a change without increase of capital. But permission was given to increase the number of shares to four thousand, which would swell the capital to four hundred thousand dollars. In the act it was declared that no part of the museum should be sold except duplicates. With the increased stock and in an enlarged spirit of enterprise the managers of the museum undertook the erection of a splendid building. It was two stories in height, each with very lofty ceilings. The length was two hundred and thirty-eight feet, nearly three-quarters of the square, extending from Ninth toward Eighth Street. The width was seventy feet. The second story ran over all. The first story extended back to an inclosed portion cut off from the main building, an apartment by itself which was called the lecture-room. It had its separate entrance, and the ticket-office, etc., on Sansom Street, and ran eastward toward a square passage and gateway, which ran to and connected with an alley of about twenty feet in width extending eastward from Ninth Street, and on the north side of the museum building. This alley separated the museum from the rear end of buildings of Chestnut Street, the principal of which was Cook's Circus, afterward Burton's National Theatre. The first story of the building was reached by the doorway on Ninth Street. It was appropriated on the opening for the use of Dunn's Chinese Museum, a very fine collection, which had been made by Nathan Dunn, merchant, during a long residence in China. This exhibition was a life-like representation of Chinese men and women in their proper costumes and engaged in their business, social avocations, and amusements.[1]

The second story was approached by a spacious stairway. The long room was of sufficient height to admit of a gallery all round it near the walls. In the middle of the floor, mounted upon a high pedestal, was the skeleton of the great mammoth, an elephant, other animals and objects, extending from the front

[1] In the "History of Chestnut Street," by Casper Souder, Jr., is the following description of Dunn's Chinese Museum:

"The collection was wonderfully complete. First, there were life-size and life-like wax figures which represented every order of the Chinese from the blind beggar to the mandarin of the first class. These figures were all dressed exactly as the originals dress, and all were presented in the exercise of their respective vocations. The huge room in which the collection was exhibited was fitted up with compartments in which were represented Chinese streets, Chinese parlors, Chinese chambers, Chinese workshops, Chinese stores, and Chinese temples. All these were appropriately furnished, not with painted shams, in the way of tools, fixtures, etc., but with real substantial articles which were made in China, and which at that moment had their counterparts in the houses and shops of the Celestials. There was a cabinet of curiously-wrought furniture, and in which a party of high government officials, with their scribes, etc., were engaged in the discussion of some business matters. The waxen mandarins were all clad in the splendid embroidered garments of their order. And the desciiptive catalogue would teach the visitor how to distinguish the different grades of officials by the color of the button on the top of the cap. Close to where the great men were in council would be a group of their wives, with their little feet peeping out from their embroidered skirts, and (the wives) taking tea together out of tiny porcelain cups while their lords were engaged in discussing the affairs of the central flowery kingdom.

"The store-keeper was behind his counter, just as he was to be seen in the streets of Canton, and with rolls of real silk upon the shelves of his shop. A tawny-skinned customer was represented making his selection of goods; a clerk was busy at his desk making entries in his books with the aid of a camel's-hair pencil and a stick of India ink; a beggar was soliciting alms; the walls were adorned with wise maxims from Confucius, and a Chinese store was displayed to the life. In the narrow apartment which represented the open street were coolies trotting along with some luxurious individual suspended in a 'sedan-chair' from bamboo poles; the Chinese barber was seen plying his trade upon the 'nob' of a customer in the open air; the itinerant tinker was blowing his fire to commence operations upon a cracked dinner-pot; an ancient cobbler was busy upon a damaged shoe; and even the boatman who spends his entire life upon a frail skiff on the Canton River was represented, with his wife and his little ones, on board a real boat taken from the river by Mr. Dunn, with all its real fixtures and appurtenances complete even to the gourd which was tied to the young amphibious Celestials to keep them afloat in case of a sudden dip in the river. There were models of Chinese houses, temples, bridges, boats, war junks, etc.; practical agricultural implements just as they had been used by Chinese husbandmen for hundreds of years; Chinese weapons of war, Chinese coins, Chinese idols, Chinese books; in short everything made by the Chinese or used by them was there in its full proportions, or, if too unwieldy, it was represented by models. The collection was very attractive for several years, and the interest was increased by the presence of a couple of real Chinamen in their native costume, one of whom was a clerkly gentleman, who used to write the names of visitors upon a card in Chinese characters at the consideration of a shilling a head. His brother Chinaman was a musician, who was wont to discourse the most abominable strains that were ever produced by a squawking human voice and an instrument which seemed to be a cross between a hurdy-gurdy and a plantation banjo."

to the back, and leaving the centre of the grand hall free of other obstructions. The natural history collection, animals, beasts, birds, etc., were placed in alcoves, lighted from the many windows on the north and south sides. The gallery floors were sustained on the top of the cases of the alcoves. There were cases also in this part of the building between the windows, but not so deep as on the main floor. A fine landscape scene filled up the extreme end of the hall from gallery to ceiling. The profile department, a most attractive and popular adjunct of the museum from the time of its being in the State-House, was arranged for taking silhouettes about the middle of the north gallery. Portraits of the old Peale collection, two or three hundred in number, were arranged along the fronts of the galleries. The arrangement was attractive. The collection had never been shown to such advantage, but, unfortunately, the enterprise was not successful. The lot had been taken up from Isaac Brown Parker on a heavy ground-rent. The building is said to have cost one hundred and thirty thousand dollars. While the patronage would have been liberal enough in a situation where the expenses were not so heavy, they were not sufficient to keep up either of these collections. At first the visitors were very considerable in number, but when local curiosity had been fully satisfied, the ordinary run of business was not sufficient to keep up the establishment. Dunn's collection was the first to yield. After two or three years it was removed to London, with promise that it should be returned in a few years. It was believed that Mr. Dunn intended to bequeath it to the city of Philadelphia as a free museum. But financial difficulties intervened, and the design was not accomplished. The Chinese collection was removed about 1842–43. The lower room, thence familiarly known as the Chinese Museum, although no museum was there, was thrown open for use for balls, concerts, public meetings, exhibitions, etc. Peale's museum, in the upper story, had a longer tenancy. After the novelty had ceased and the receipts had begun to fall off seriously, the managers instituted additional attractions in the shape of cheap concerts. Norton, the trumpeter, Mrs. Watson, and Mrs. Bailly were principal attractions. After them came the Shaws, — Rosina (afterward Mrs. Charles Howard and Mrs. Harry Watkins, actress), Mary (afterward Mrs. Fogg, afterward Mrs. Krollman), Josephine (afterward Mrs. Russell and Mrs. John Hoey), and David T. Shaw. Prices came down. The Norton & Watson concerts were fifty cents admission,—twenty-five cents to the museum and twenty-five cents for the music. The Shaw concerts fell to twenty-five cents. At a later day "levy" concerts were given in the museum and in the hall of the Chinese Museum. The programmes were of immense length, sometimes having upon them thirty-five pieces, including marches by brass bands, serious and comic songs, quartets, choruses, violin and piano solos, with perhaps a recitation or two to make a little variety. These "levy" concerts were given at a period when times were hard and money was not very plenty, and people were disposed to economy. They were cheap and attractive, because they were generally well conducted. The professional performers were persons of experience, the amateurs who were singers usually possessed good natural voices and knew something about music, and the instrumental performers were quite respectable in their efforts.

After a struggle of about six years the Philadelphia Museum was unable to maintain itself longer. The fine collection of objects of natural history, the largest in the country, was sold and dispersed. Barnum secured a portion of them for his collection in New York and for his museum in Philadelphia. Other curiosities went to Baltimore, Boston, and other cities. An effort was made to continue the better portions of the Peale collection in the old Masonic Hall in Chestnut Street, and to exhibit such curiosities as had been saved in connection with theatrical performances. The Academy of Fine Arts, or Peale's Museum Theatre, was opened by John Sefton & Co. in August, 1846, and closed in July, 1847.

The whole building at Ninth and Sansom Streets now became devoted to public use. The lecture-room, something like that in a medical college, the lecturer standing on a platform below the spectators, they seated in rising benches up to the ceiling, was occupied for many purposes. The genial Signor Antonio Blitz, magician and ventriloquist, popular with old and young, held the place for his winter exhibitions for many years. Other performers of various kinds, elocutionists, vocalists, musicians, orators, and lecturers, on week-days, alternated on Sundays with clergymen and religious congregations. The well-known Francis Fauvel Gouraud attempted here to teach some hundred ladies and gentlemen "the art of memory," and failed, as many of them declared, miserably. Monster balls on behalf of the Catholic benevolent institutions on St. Patrick's Day, with a few after-demonstrations, closed out the season of gayety which commenced about the beginning of November, and led off about that time with the grand fancy costume ball of the Maennerchor, succeeded by balls under the auspices of fire companies, military companies, and other organizations. All the great public meetings came to be held as matter of course in the Chinese Museum, which was the popular, but not accurate, name given to the whole building. The Franklin Institute held its annual exhibitions there, occupying both rooms and making a temporary apartment for the display of stoves, grates, and machinery out of the alley on the north, which being floored and boarded over with a temporary roof made a long, narrow gallery. The Horticultural Society held its annual floral shows in September and October. Political meetings by all parties were held in the first and second stories.

It was estimated that from three to four thousand persons could find standing-room in the Chinese Museum apartment. The upper story, upon floor and gallery, had room for five or six thousand. There were frequently held important conventions and congresses. In 1847 the Whig national convention met there and nominated Zachary Taylor and Millard Fillmore for President and Vice-President of the United States. The grand banquet by citizens of Philadelphia to the returned volunteers from Mexico took place in the museum room, July 24, 1848. The celebration of the arrival of the "City of Glasgow" steamship, a fine affair, took place there Jan. 11, 1851. The last grand occasion upon which this building was employed was the great consolidation ball and banquet, March 11, 1854. In less than four months after this time the building was in ashes, the flames having been communicated from the National Theatre immediately north of it, which took place July 5, 1854. Isaac Brown Parker, the original owner of the ground, as well as that north of it, occupied by the theatre, had become repossessed by sheriff sales upon his mortgages. He held the vacant lots for some years, and sold them finally to the Butler House Hotel Company, which erected a grand building, extending on Ninth from Chestnut Street to Sansom, along Chestnut to the full width of the National Theatre lot, along Sansom to the extreme east boundary of the museum property, which they finished and opened for guests for the first time on the 13th of February, 1860, and called the building the Continental Hotel.

Daniel Bowen came to Philadelphia in 1790, and opened a wax-work exhibition and museum of paintings and curiosities. In 1795 he took his collection to Boston, where it became the foundation of the Columbian Museum. He gave as one of his reasons for this removal "a desire to avoid a continued competition with my particular friend Charles W. Peale, a distinguished artist of Philadelphia." Bowen's Boston Museum was burned twice. After the second disaster, about the year 1810, he came back to Philadelphia, where he resided until his death, in 1856, at the extreme age of ninety-six years. He was a native of Massachusetts, and had served in the privateer "Providence" during the Revolution. While on board of that vessel he was taken prisoner and carried to England, where he was confined for some time in a prison.

A shameless exhibition was announced on the 21st November, 1794, in the following curious advertisement:

"EXHIBITION OF FIGURES IN COMPOSITION AT FULL LENGTH, Corner of Second and Callowhill Streets, at the sign of the Black Bear.

"The late king of France, together with his queen taking her last farewell of him in the temple the day preceding his execution. The whole is a striking likeness, in full stature, and dressed as they were at the time.

"The king is represented as standing, his queen on her knees by his right side, overwhelmed with sorrow and ready to faint, the king looking tenderly at her.

"Second is the scaffold on which he was executed, whereupon the king stands in full view of the guillotine. Before him is a priest on his knees, with a crucifix in one hand and a prayer-book in the other. On the side of the guillotine stands the executioner, prepared to do his duty.

"When the last signal is given, the priest rises on his feet, the king lays himself on the block, where he is secured. The executioner then turns and prepares to do his duty, and, when the second signal is given, the executioner drops the knife and severs the head from the body in one second. The head falls in a basket, and the lips, which are first red, turn blue. The whole is performed to the life, by an invisible machine, without any perceptible assistance.

"Made by the first Italian artist, of the name of Columba. The workmanship has been admired by the most professed judges wherever it has been seen.

"*₊* The proprietors humbly hope for the encouragement of the public, as nothing shall be wanting on their part to render the exhibition pleasing and satisfactory to their patrons.

"Price, three shillings. Children half-price. To be seen from nine in the morning till nine at night."

It was in reference to this exhibition that Cobbett wrote this very proper rebuke:

"The queen of France, the calumniated Antoinette, was the first foreigner, except some generous Englishmen, that advanced a shilling in the American cause. Have I ever abused her memory? It was not I—though it was an Englishman—that cut off her head, and besprinkled her garments with blood, on a sign hung over the public road. It was not I that guillotined her husband, in an automaton, every day, from nine in the morning till nine at night, for the diversion of the citizens of Philadelphia."

A museum, which for many years enjoyed a high degree of popularity, was opened, in 1807, at No. 48 Market Street, by Jesse Sharpless. As his collection increased, he advertised extensively, giving a list of the principal wax figures and curiosities on exhibition. This list, in 1813, comprised forty-seven items.[1]

---

[1] Advertisement of 1813:

"MUSEUM OF WAX FIGURES,

"NATURAL AND MECHANICAL CURIOSITIES,

"at the White House, Market Street, opposite the west end of the Jersey "Market.

"This museum has been improved and considerably increased by the addition of a number of new figures, paintings, etc. A handsome organ, likewise a complete electrical machine, with extensive philosophical apparatus, has been added to the collection.

"1. Baron Trenck, loaded with sixty-eight pounds of iron, in the dungeon of Magdeburg.

"2. His Excellency James Madison, President of the United States.

"3. Napoleon Bonaparte, Emperor of France.

"4. Ferdinand VII., King of Spain.

"5. The present Pope of Rome.

"6. Goliath of Gath, and David, armed with a sling and stone.

"7. Columbus, the discoverer of America.

"8. The Connecticut and Boston Beauties.

"9. The Methodist Beauty.

"10. General Braddock, who fell near Pittsburgh.

"11. Miss Paine.

"12. The infant Moses, as discovered by Pharaoh's daughter.

"13. The immortal Washington, the Father of his Country, in full uniform, crowned with flowers by two female figures representing Liberty and Fame.

"14. The Lion between the feet of Washington.

"15. A figure showing the muscles, etc., of the human body.

"16. The head of John the Baptist on a charger.

"17. Admiral Viscount Nelson, who fell at Trafalgar, attended by his first lieutenant and surgeon.

"18. A painting representing the good Samaritan. A calf with two heads, six legs, and two tails.

In 1816 the enterprising proprietor exhibited the picture, by Boudet, of the death of Maj.-Gen. Ross, "who fell in the attack on Baltimore, the 12th of last September."

In the summer of 1818 there was added to the museum, "The Birth of Christ, with a group, and a picturesque view of the city of Bethlehem, exhibiting two hundred statues. The Battle of Waterloo brings to the view of the spectator several thousand men in arms." The elephant Columbus was exhibited in 1819. This animal was eight feet high, and weighed between four thousand and five thousand pounds. In the winter of the succeeding year, when he was brought back to the museum, he had grown to be nine feet high, and he weighed six thousand pounds.

In 1820 the museum contained three hundred wax statues, two hundred paintings, three hundred engravings, and many valuable curiosities. In May, 1821, was added a representation of the duel between Commodores Decatur and Barron, attended by their seconds, Commodores Bainbridge and Elliott. In May, 1822, the following living curiosities were exhibited: "Shuwiskanna, an Indian chief, twenty years of age, double-jointed, and only thirty inches high; sits in a bowl, and moves himself about with the aid of two sticks. Also a black man turned white; born in Virginia; aged sixty years. Some parts of his body are spotted like a leopard."

Mr. Adrian, professor of philosophic legerdemain, gave exhibitions at the museum in the early part of the year 1824.

There was a camera obscura fixed on the roof of the museum, which in clear and fine weather furnished attractive views of the active life at the court-house just west of it, at the fish-market, at the wharves, and in the busy street below.

The magic lantern was, at all times, a popular exhibition with the younger visitors at the museum.

"19. Othello stabbing Desdemona,—taken from Shakspeare.
"20. The Goddess of Love, with two doves.
"21. An elegant Chinese Pagoda, with two handsome Chinese ladies.
"22. A group representing Hercules tempted by Virtue and Vice.
"23. A box showing in perspective the principal buildings and cities.
"24. Joseph Bonaparte, King of Spain.
"25. His Majesty George III., present King of England.
"26. Dr. Lamb and the Philadelphia Beauty.
"27. The Little Beauty and her Sleeping Sister.
"28. General Porter, supported by his waiter. The Indian throwing his tomahawk.
"29. Four Paintings, namely: Mount Vesuvius, Battle of Trafalgar, the Burning of the 'Philadelphia' frigate, and Columbus' First Landing in America.
"30. In the second room, on the left hand, stand the different State Beauties, with the colors.
"31. The Funeral of Admiral Nelson, surrounded by Soldiers.
"32. The Jovial Dutchmen over their glasses and cards.
"33. A Beggar and the Generous Little Boy.
"34. His Excellency President Washington and the venerable Benjamin Franklin.
"35. William Penn, founder and first Governor of Pennsylvania.
"36. Mrs. Newlin, with her six children at one birth.
"37. An Automaton Tumbler.
"38. The Philosophers, dressed in black.
"39. The Temple of the Invisible Lady.
"40. O'Brien McCool, the Irish Giant, weighing seven hundred pounds.
"41. A son of Hibernia, fourteen years old, and six feet four inches in height.
"42. Madame Bonaparte, consort of Napoleon.
"43. A correct likeness of the philosopher Richard Folwell.

"ALSO TO BE SEEN,
"the four naval victories of
"CAPTAINS HULL, DECATUR, JONES, AND BAINBRIDGE,
"on transparent canvas.

"From the great number of persons who have frequented this museum, and their repeated marks of approbation, the proprietor flatters himself that the improvements made, and still making, will give general satisfaction.

"The museum is open from 8 o'clock in the morning till 10 o'clock in the evening.

"Admission, 25 cents. Children, 12½ cents.

"Profiles taken and framed."

Advertisement of 1816:

"WASHINGTON MUSEUM,
"AND GALLERY OF PAINTINGS,
"in the large, new brick building in Market Street, third door below Second Street.

"The late addition in
"WAX STATUES, PAINTINGS, AND NATURAL CURIOSITIES,
"added to the former, makes a large collection,—such as the proprietor flatters himself will both satisfy and gratify the visitors. There are nine different rooms, which contain the different articles.

"ONE HUNDRED AND FIFTY STATUES IN WAX.

"Room No. 5 contains the group of General Moreau, who joined the Emperor of Russia against Bonaparte, after he was so dreadfully wounded by a cannon-ball, and in the act of being borne off the field of battle by two grenadiers. He is dressed in the uniform of a Prussian General. His thigh-bone is plainly to be seen, together with the artery crurales; his countenance exhibiting the pallid hue of death, the wound representing the natural appearance; his favorite aide-de-camp, Baron Korsakow, deploring the misfortune of his general. A soldier weltering in his blood, his head shattered by a cannon-ball, which exposes to view the internal part of the head lacerated. All of which are executed with the greatest anatomical precision. Also, the group of General Packenham (who fell at New Orleans, in the engagement with General Jackson), after he was so dreadfully wounded by a cannon-ball, and supported by one of the infantry. The ball passed through the front of his stomach. The wound being large, his entrails are exposed to view, which enables the beholder to judge the horrid effects of war; surrounded with a number of British officers and soldiers, struck with horror, and surprised at the loss of their general. And Fairbanks, who destroyed Miss Falls, and who was executed for it.

"Room No. 6 contains nearly one hundred paintings, fifteen of which contain nearly one hundred feet of canvas each, and many of them are as interesting as any paintings in America. They represent battles, treaties, landscapes, etc.

"And from the summit of the building there is one of the handsomest panoramic views in Philadelphia.

"Room No. 7 contains ten different pieces of anatomical preparations in wax, executed in the first style, which will be found worthy the attention of medical gentlemen and connoisseurs. Also a number of handsome paintings,—
"1. Wertmuller's Venus.
"2. Otis' Bathing Figures.
"3. Wertmuller's Wood Fawn.
"4. Bodet's Bathing Figures.
"5. The Handsome Danse.

"And about fifty statues from France. This room is 25 cents extra.

"Profiles taken and handsomely framed.

"The museum is handsomely illuminated every evening, with appropriate music, and only 25 cents; children, 12½ cents."

Additions announced in 1820: Samson and Delilah, the Albinos, Charlotte Temple and Montroville, the Invisible Lady, Erasmus, Friar Bacon, Baron Swedenborg, and several French, English, and American dandies.

We have given, at some length, the history of the oldest and principal museums, which for many years were popular places of amusement. Of minor shows, of various descriptions, exhibited for a short time only, there was a goodly number, especially during the earlier part of the present century. The itinerant showman has lost his importance in this age of railroads and vast combinations; if he exists, he is found attached to some mammoth show, which, under the name of "circus," offers to the public a hundred different amusements combined. Of these early caterers for the amusement of the good people of Philadelphia, some have been incidentally mentioned in our chapter on Manners and Customs. We shall give, hereafter, a brief record of their transient visits, but we wish first to say something of that favorite of all Americans, young and old,—the circus.

The first permanent circus and *manège* created in Philadelphia was built in 1785, on Market Street, near the Centre House, by Mr. Poole, who claimed that he was "the first American who ever exhibited feats of equestrianism on the continent." Poole could perform various dexterous feats while riding two horses at full speed,—something too common now to attract notice, but which was deemed a wonderful act of horsemanship at that time. He had also some well-trained trick horses. He kept his circus open for a little over a year. In 1787, the equestrian Bates, who had performed in Philadelphia during a transient visit in 1772, came back and rented Poole's building, where he opened a riding-school.

Another equestrian, the Scotchman, John Bill Ricketts, who was a pupil of Hughes, of the Blackfriars' Bridge Circus, London, came to Philadelphia in 1792, and erected a building for a riding-school at the southwest corner of Twelfth and Market Streets. His success as a riding-master was such that he ventured to pull down the house and erect a larger one fitted up as a circus. This was opened for equestrian performances by daylight on the afternoon of April 12, 1793. The price of admission to boxes was 7*s.* 6*d.*, to pit, 3*s.* 9*d.* Seven hundred persons were all that could by any possibility be crowded into the establishment, and at the inaugural performance the house was full. Ricketts astonished the audience by riding upon two horses at the same time at full gallop. Master Ricketts and Master Strobel assisted him. The company was strengthened by the arrival of Signor Spinacuta, a dancer on the tight-rope, Mr. McDonald, an equestrian and clown, and others. Gen. Washington assisted in rendering this circus fashionable by attending a performance on Saturday, April 22, 1793. If Ricketts' venture proved profitable, he certainly showed himself worthy of the liberal patronage of the Philadelphians, for, during the season of 1794, he gave benefits for a fuel fund for the distressed poor of the city, the income of which is still used for that purpose. He also gave a benefit for the French exiles driven out of Hispaniola.

The building at Twelfth and Market Streets could no longer accommodate all who sought admission to the popular spectacle, and Ricketts concluded to build another circus, where, in addition to the larger seating capacity, he could give evening performances. He built an amphitheatre at the corner of Sixth and Chestnut Streets, which was opened to the public on the 19th of October, 1795. The building was of a circular form, and was ninety-seven feet in diameter. The roof rose from the outer walls, which were eighteen feet high, in the shape of a cone fifty feet high, which was decorated at the top with a figure of a flying Mercury. The centre of the dome, in the interior, was decorated with a blazing star, from which was suspended a chandelier having a number of lights. There was a handsome portico on the Chestnut Street front, which was the principal entrance, and from whence a lobby ran round to what were called the music or proscenium boxes. The stage was at the south end of the building, and was large enough for dramatic performances. The centre of the building was appropriated to the ring, and the boxes ran round this circle in the shape of a horseshoe, rising up to eight or nine rows of benches, which were divided into boxes and pit. The house had accommodations for twelve hundred or fourteen hundred persons. A coffee-room communicated with these portions of the house. "Patent" lights were placed on the pillars, and the building, in its decorations and fixtures, was justly considered the finest amphitheatre in America. John Bill Ricketts, his son Francis, and Sully were the principal equestrians. Signor Reano, a slack-rope dancer, and soon thereafter, Spinacuta, a tight-rope dancer, and his wife, who rode two horses at full speed, added to the attractions of the place. The trained horse, Cornplanter, could jump over another horse fourteen hands high. Ricketts performed the dangerous feat of riding two horses, each foot placed upon a quart-mug, set loosely upon the saddle. Francis Ricketts rode on his head, balancing himself on a pint-pot, and, while blindfolded, dismounted from his horse, going at full speed, picked up a watch, and mounted again. During the seven months' season that year several pantomimes were brought out with excellent success.

Ricketts' Art Pantheon and Amphitheatre, as it was called, enjoyed its well-deserved popularity for some years, but an accident destroyed in a few hours the work of many years. The building was burned down on the 17th of December, 1799, and Ricketts was totally ruined. The fire originated in a building adjoining the amphitheatre, and which was used for storing scenery and other property. The roof caught fire, and the flames spread rapidly. In the circus a large audience had assembled; the usual equestrian performances were over, and the actors were dressing for their parts in the pantomime of "Don Juan," when the terrible cry of "Fire!" was heard, and tongues of flame were seen leaping out from the base

of the dome over the actors' entrance. The terrified audience evacuated the building in haste and confusion, but, happily, without injury. In a short time the whole dome was in a blaze, and all hopes of saving the building were given up. The adjoining building, a fine structure originally erected for the Episcopal Academy, but then occupied by James Oeller's hotel, was totally destroyed by the flames, and considerable damage was done to a row of new houses extending to Sansom Street. It was the biggest fire that had ever happened in the city. Ricketts' loss was estimated at twenty thousand dollars,—a large sum for the time. The unfortunate manager supposed that the building had been set on fire willfully, and he offered a reward of one thousand dollars for the apprehension of the incendiary; but, upon investigation, it was ascertained that the disaster was due to the culpable negligence of a drunken stage carpenter, who, having had occasion to go into the loft, left his lighted candle behind when he came down.

Before these facts were ascertained, some bigoted people saw in the destruction of the circus a judgment of Providence. The last scene of the pantomime they considered impious. It was described in the bills as follows: "The last scene presents the infernal regions, with a view of the mouth of hell; Don Juan being reduced by his wickedness to the dreadful necessity of leaping headlong into the gaping gulf, in a shower of fire, among the furies, who receive him on the points of their burning spears, and hurl him at once into the bottomless pit."

It was said that the fire arose in the attempt to depict the flames of hell, and those saintly people came to the logical conclusion that the destruction of the circus was a judgment. Unfortunately for the moral effect of their reasoning, it was shown that the pantomime had not even commenced, and the flames, lighted by a drunken man's carelessness, had come from the roof, not from the pit.

Ricketts attempted to retrieve his losses, in part at least, by giving day performances in the rival establishment of Monsieur Lailson, whom he found kindly disposed to help him in his misfortune; but poor Ricketts was broken in spirit as well as in fortune, he soon gave up struggling against an adverse fate, and returned to England.

Lailson in 1797 had erected a splendid amphitheatre at the southwest corner of Fifth and Prune Streets, which extended as far west as the jail wall. He opened his establishment on the 8th of April, in that year, with equestrian exercises and the pantomime of "Les Quatre Fils Aymon; or, the Four Valiant Brothers," from the old French historic legend of that name. The equestrian performers were Monsieur Lailson, Langley, Sully, Herman, McDonald, C. Vandervelde, Reano, and Miss Vanice. The pantomimists were Pouble, Jaymon, Douvilliers, Poignard, Viellard, St. March, Leger, Savoil, Madame Douvilliers, Mrs. Rowson (a different lady from Mrs. Rowson the actress and author of "Charlotte Temple"), Mrs. Devan, and Mademoiselle Lailson. The company also performed French comedies and operas, in which Miss Sophie and Miss Tesseire appeared.

There were then in the city, operating at the same time, two theatres and two circuses, besides numerous minor exhibitions. The evidently increasing taste of the people for such amusements gave much concern to those who still clung to the simple ways and healthy pleasures of an earlier period. The Friends, particularly, were shocked at this frivolous tendency of the times, and they addressed a memorial to the mayor and Council protesting against the continuation of those exhibitions. Whether the moral effect of this opposition was to deter many from continuing to patronize the circus,—for the Council could take no action tending to close places of amusement that were not disorderly,—or Lailson's expenses were too heavy,—his equestrian company being the largest that had ever visited the United States, and the dresses and paraphernalia were gotten up on a scale of unusual magnificence,—his enterprise had a ruinous ending. In June, 1798, a short time after commencing his second season, he became bankrupt. His company was broken up, and his horses and stage-properties were sold. The greater portion of the latter was purchased by Wignell & Reinagle for the Chestnut Street Theatre Company. A month later—the building being unoccupied—the immense dome partially forced out the walls and fell in with a fearful crash, putting an end to the history of Lailson's Amphitheatre but not to the building, a portion of which was repaired and roofed and used for various purposes.

The burning of Ricketts' Circus, following the falling in of the dome of Lailson's Circus, put an end to regular equestrian performances for some time. In 1802, Thomas Swann, riding-master and farrier, had a riding-house in Southwark, adjoining the South Street Theatre, where, besides teaching his art, he gave some public exhibitions of horsemanship. In January, 1803, he invited the public to attend a lecture on the horse, in the old Lailson Circus building, on which occasion he proposed to "cause to be destroyed and dissected" a particularly lame horse. At the same time a real skeleton of a horse would be presented, and the lecturer would demonstrate the progress of the disease known as "hipshot," from which the animal to be slaughtered suffered. A little later, in the same year, Swann opened an amphitheatre and circus at the corner of Thirteenth and Market Streets. A lecture by the manager, equestrian performances, vocal and instrumental music, manœuvres of "the new exercise of the broadsword for cavalry movements, together with readings and recitations by a young gentleman lately from Europe," were the attractions offered on the opening night. The performer of broadsword exercise was a Mrs. Scott. She took her benefit at this amphitheatre on the 13th

of October. On that occasion she returned "her sincere thanks to those gentlemen of the City Troop, and others, who were present at her second essay of the broadsword exercise, for their approbation of her performance, and solicits their patronage for this night of her benefit." On that occasion Mrs. Scott exemplified "the six divisions of the broadsword exercise for cavalry movements, in which is exhibited ninety-three motions."

Swann occupied this amphitheatre until 1810, when he went to the amphitheatre erected by Monsieur Victorien, in 1808, at the Centre-House Gardens. Victorien gave performances on the tight- and slack-rope and wire, with ground and lofty tumbling. He did not remain long here. In 1810, Monsieur Poutingam opened a riding-school at the corner of Tenth and Arch Streets. At the end of one year, his enterprise not having been successful, Poutingam gave up the establishment. It was rented by Swann, who kept it until his death, in July, 1812.

The "New Circus," at the northeast corner of Walnut and Ninth Streets, was opened in 1809, by Pepin & Breschard. Victor Pepin was a native of Philadelphia, descended from one of the French Neutrals which had been brought to this city from Acadia before the Revolutionary war. Breschard was a Frenchman. The building was very large, and all the arrangements perfect. The dome was estimated to be eighty feet in height over the ring. The circus company, which had come from Spain upon the invitation of Don Leonis, Spanish consul for Philadelphia, was splendid. They performed to fine houses, with unabated success, during two seasons, after which they traveled on an extensive circuit, while alterations were being made to fit up the new circus for theatrical performances. Breschard was excellent in pantomime. Of Pepin, a writer quoted by Clapp in his "History of the Boston Stage," says,—

"Whether on foot or on horseback, he showed the port of a king. No Pepin of France that ever rode into Paris with his doughty Austrasians could have claimed greater homage than our martial equestrian as he brought up the rear of his glittering troops,—he himself in the costume of a Gallic field-marshal. Pepin differed, however, from his royal precursors in one great respect,—he had rather more brains; and both in ruling his State and in staving off revolutions, he showed a firmness and a skill that grander heads might have copied."

Returning to the minor shows of a miscellaneous character, we note, in 1800, "An exhibition of a Happy family, in a neat and warm room, formerly a Freemason's hall, at No. 61 Walnut Street, near the City Tavern." The "Invisible Woman," exhibited "in the house lately occupied by the Secretary of State, at No. 18 South Fifth Street. "A pygarg from Russia," exhibited at the Black-Horse Tavern, Market Street. "It has the likeness of the camel, bear, mule, goat, and the common bullock, and weighs eleven hundred-weight," said the advertisement, which went on to explain that this animal is spoken of in the book of Deuteronomy, chapter xiv., and was eaten by the ancients. "A white negro boy, born in South Carolina," at Mrs. Beatty's, No. 127 Water Street, at the sign of the Liberty Tree. An ostrich, "eleven feet high," lately imported from Africa, shown by Secondo Bosio, at No. 144 Cedar Street, at the sign of the Two Brother Sailors.

A wax-work show of fifty figures was opened in 1801, by Moulthrop & Street, at No. 100 North Second Street. Among the effigies were those of Franklin, John Adams, Jefferson, and Washington,—the latter being represented on his death-bed. In August of the same year,—rather a warm month for such an exhibition,—Mr. Wooley notified the public that he would eat fire and walk on red-hot iron with his naked feet, at the sign of the Castle and Grapes, on Fifth Street. A cassowary, "the giant of the feathered tribe, five feet high," could be seen at No. 308 South Front Street, while the "Learned Pig" astonished the visitors at the Rising Sun Hotel, Market Street, by telling the time of day, distinguishing colors, counting the company present, etc. When, in 1803, one of these educated grunters was on exhibition at the Centre House, the *Aurora* made the remark that "within four years four learned pigs have been exhibited." A model of Jerusalem and the Temple of Solomon, of the dimensions of sixteen by nine feet, could be seen at Patrick Kennedy's, No. 87 South Second Street, and at No. 112 Race Street there was exhibited "curious musical machinery in the shape of a clock, which of itself performs several airs upon the flute, and presents to view an automaton young lady seated at a piano-forte, performing on that instrument."

A visitor who astonished and delighted the Philadelphians in 1802 was John Ranie, professor of legerdemain and ventriloquism. The professor was a prestidigitateur, a mind-reader, and a ventriloquist, and the wonderful feats which he announced in his lengthy advertisements and faithfully performed were equal to anything that has since been attempted by our most famous modern wizards. His extraordinary success during a stay of several months justified his coming back the following year, when he gave performances at the Assembly-room, adjoining the new theatre. He was again in Philadelphia in 1810, and exhibited at the City Assembly room, in connection with Charles Ranie, or Rannie.

Bartholomew Corsa & Co., in July, 1804, exhibited a collection of waxen figures "formed from the originals," "of the same complexion, stature, dress, etc., of the personages whom they represent." There were twenty-six figures in this exhibition. In September there were thirty-four. The collection, which about this time had been removed from 106 Walnut Street, where first exhibited, to Dr. Franklin's mansion, in Franklin Court, was purchased by John Baptiste Justice & Co.

At the Red Lion, Market Street, an African lion of large size was exhibited. But soon thereafter a rival

beast was announced at Swann's riding-school: "The largest African lion that ever was seen in this city let out of his cage in a part of the school perfectly secure from the spectators, opposite Lombardy Gardens." A dancing horse was another attraction at Swann's.

Another Invisible Lady, "direct from Spain," invited the people to Vogdes' Assembly-room, while Mr. Smith, lately from Europe, announced "freaks of philosophy, ventriloquism, astronomy," etc., at Quesnet's ball-room, but many preferred to go and see the whale that had been caught in the Delaware. It was dead, and was kept on exhibition as long as the curious could endure the stench arising from its decayed flesh. During the exhibition an arm-chair was placed in the capacious mouth of the monster, and it was considered a distinction to have occupied that seat for a few minutes. The bold adventurers who claimed this honor were never tempted to venture, Jonah-like, within the cavernous depths of the whale's throat. A series of exhibitions of animals followed. Two live porpoises, one nine feet and the other six feet long, were exhibited at the Black Horse Tavern in 1805, an elephant at the George in 1806. The following year the learned African horse Spotee, which had a tail like an elephant, was exhibited at the Black Horse. This wonderful animal was represented to have a knowledge of arithmetic, and could add, subtract, and divide, tell the number of buttons on a coat, etc. At the same tavern there were exhibited that year two royal tigers from Surat, in Asia, and a living sea-dog, taken in the Delaware River, near Trenton. A live panther was shown at the sign of the Sorrel Horse, and in 1809 an exhibition of monkeys that "danced on the tight-rope" was advertised at the Shepherdess Tavern, on Moyamensing road.

In the latter part of 1805, Christopher Winckelback, "director of the Hall of the Liberal and Mechanic Art Society at Basle, in Switzerland," brought to the city his optic glass, with views in Switzerland, original paintings, prints, drafts, images of alabaster, and a variety of machines of his own invention, among which were several water-works, etc.; and in 1807, J. H. Rauchner exhibited at No. 100 Chestnut Street some wax-work figures, prints and paintings. He also informed the public that "there is also a grand hand-organ for the use of visitors."

John Scudder, in the summer of 1808, exhibited at Auriol's ball-room, No. 64 South Fourth Street, a grand panorama of historical paintings, representing "The Battle of Bunker's Hill," "The Bombardment of Tripoli," "The Burning of the Frigate 'Philadelphia' in the Harbor of Tripoli," "View of the Sports of India," and "A Correct Likeness of Brook Watson, Esq., whose leg was bitten off by a shark while he was bathing in the water at Havana, notwithstanding which he recovered, and lived to be chosen Lord Mayor of London."

"An astonishing female artist" was on exhibition in the year 1809, at the Shakespeare Hotel, corner of Chestnut and Sixth Streets. This unfortunate creature, otherwise as perfectly formed as any woman, was born without any arms or legs, and it was announced that "Nature has deprived this young lady of the use of all her limbs, to make amends as it were in the exercise of other faculties surpassing all human belief. She will paint elegant flowers and landscapes, mix colors, write, thread a needle, cut cloth or paper with the scissors held in her mouth, etc., etc."

This lady was Miss Sarah Rogers, the wonder of the time. Respectable and poor, she had no other means of livelihood than the exhibition of herself and her extraordinary performances, a means repugnant to the modest female mind. She accepted this hard necessity with courage, and succeeded in earning a comfortable support, while enlisting the sympathy of all who saw her.

A "Moving Panorama, with a large number of people at their trades and in proper motion," was exhibited at Cook's building, South Third Street, shortly afterward.

"The American Dwarf, two feet eight inches high, and fifteen years old," was exhibited in full regimentals at Barnum's Shakespeare Hotel, northwest corner of Sixth and Chestnut Streets, in the latter part of the year.

A "New Museum" exhibited in 1809, at No. 136 Market Street, a "sea-tiger from Greenland," and a "living leopard." In 1811 the "Historical Gallery," at the corner of Seventh and Chestnut Streets, had as its principal wax figures "The Arrestation of Robespierre," "The Celebrated Charlotte Corday," and "The Execution of Louis XVI." In the same year Lewis Chiappi, proprietor of the Roman Museum, No. 135½ Market Street, had on exhibition among other curiosities a wax figure of "Dicky" Folwell, printer, a well-known local character, already mentioned in another chapter of this history. Chiappi had also figures in wax of Washington and Lord Cornwallis.

Dawson & Pardee, at the northwest corner of Seventh and Chestnut Streets, exhibited in January, 1811, "a band of elegant musicians, in wax-work, all of which will chime a number of tunes in unison, and accompanied by an elegant organ."

Zerah Colburn, the astonishing Vermont calculator, six years old, was exhibited in March at various places,—at Peale's Model Room, on Fifth Street, opposite the City Library; at No. 96 South Second Street, and at the Merchants' Coffee-House. This unfortunate child's strange gift—he could solve readily complicated problems in arithmetic which would have cost the best accountants a considerable expenditure of time and thought—was exhibited by his father for the avowed purpose of raising a fund for his education. The elder Colburn did, in fact, take him to England, and put him to school there,

but he took him away before he was sixteen years old. Young Colburn's mathematical powers left him when he reached manhood. He tried various professions, and became in time an actor, a teacher, a Methodist preacher, and a professor of languages and literature. He died at the early age of thirty-five years.

In February of the same year Miss Harvey, "the beautiful Albiness, the most astonishing phenomenon ever known," was exhibited at Earle's gallery. She was an Englishwoman by birth. The color of her eyes was said to be "a delicate red." Charles Wilson Peale, then in his seventy-seventh year, painted her portrait. Miss Harvey was subsequently married at Charleston, S. C. She died in Havana in 1820.

During the spring Maffei exhibited at Washington Hall a puppet-show under the high-sounding title of "A Picturesque and Metamorphosis Theatre." The figures in this show were two feet high. Stanislaus Surin, afterward manager of Tivoli Garden, gave "philosophical experiments," in which he brought science to assist in his legerdemain tricks. East India jugglers exhibited the same year at Masonic Temple, and "a great natural curiosity, a living elephant," was to be seen in Arch Street.

At the beginning of the year 1813, D. Bowen and J. Kidder brought from Boston the Phœnix Museum, which they exhibited at the Shakspeare Rooms. The collection consisted principally of what were called panoramic views. Among them was "a correct representation of Market Street, from the old court-house to Centre Square." It was shown for a few months.

In the same year the patriotic Philadelphians were invited to see a panorama of the naval engagement between the United States frigate "Constitution" and the British frigate "Guerriere." The sketches, it was said, had been taken under the direction of Capts. Hull and Morris, and "the relative situation of the ships may therefore be depended upon as being correct." The same subject was illustrated at a mechanical theatre, on Lombard Street, designated as the "Amusement Pittoresque Méchanique;" here the two vessels went through the manœuvres of a naval fight, and the "Guerriere" was conquered by the "Constitution." These exhibitions commanded a good attendance.

The Columbian Museum of Wax Statuary was opened at No. 130 Chestnut Street on the 1st of November, 1813. There were wax statues of Washington, Adams, Jefferson, Madison, Gen. Pike, Capts. Bainbridge, Decatur, and Hull, of the navy, and the emblematic representation of "The Tears of Columbia," representing a female figure weeping over the tomb of Capt. James Lawrence. This enterprise did not achieve sufficient success to warrant a long continuance.

Minor shows continued to divide the attention of the sight-seers; the most successful being those which exhibited wild and rare animals.

Among the latter, the mammoth horse Columbus, which was exhibited in 1814, is worthy of mention. This magnificent animal was six years old, twenty hands high, and weighed two thousand seven hundred pounds. It was claimed to be "the largest horse ever produced in Europe or America." Columbus was bred in Pennsylvania. In November of the same year a whale nearly twenty-five feet long was caught in the Delaware, near Trenton, and was exhibited at Kensington. Dr. Lewis Chiappi, a skillful modeler in wax, made a model representation of this whale, with wax figures, the whole representing the way in which it was harpooned by Isaac Yard. John Smith, the dwarf, was exhibited at the same time. He had been reported to be dead, and he complained of the anonymous rival whose jealousy had thus stimulated him "to heap affliction upon bare eighteen inches of his fellow-man." A remarkable exhibition was made in 1813, by Mr. McKenzie, in Harmony Court, of a carriage "which runs by its own power in a large room."

Day Francis, "the great juggler and magician," performed some wonderful feats at Masonic Hall, in 1816. In 1817, Le Sieur Blanchard, "known by the celebrated appellation, *multum in parvo*, and the astonisher of the world," exhibited his skill in jugglery at Masonic Hall, proving himself a formidable rival to the "Sieur Breslau" and Potter, who were exhibiting at Washington Hall. Yet none of these worthies could compare with the East India magician, Sena Sam, who visited Philadelphia in 1818. His feats were truly wonderful. A "mammoth child" arrived from Europe, and was exhibited in 1819. This infant prodigy was five years old, three feet seven inches high, three feet five inches around the body, twenty-five inches around the thigh, fifteen inches around the calf of the leg, and it weighed one hundred and thirty pounds.

In the same year the Mechanical Museum was opened at No. 202 South Front Street. There were some very curious mechanical figures in this collection. At the end of the year James Griffith, who had been engaged at Peale's Museum, purchased the Mechanical Museum. Among the curiosities which he added to the collection in 1820 were two self-moving machines, invented and constructed by Willard Foster, of Vermont. In 1821, James Tilley gave some interesting exhibitions of fancy glass-blowing. His success was such as to justify his making periodical visits to the city for some years afterward. Exhibitions of nitrous oxide, or exhilarating gas, were given that year at Washington Hall. Among the novelties in 1821 were two Esquimaux, "a male and a female," together with a dog, "half wolf and half fox, from the coast of Labrador." They gave some exhibitions of their skill in guiding a canoe on the Delaware River. J. L. Boqueta exhibited a mechanical theatre at the beginning of 1822. Four dogs acting as the motive-power of the machinery of a newly-invented grist-mill, which produced flour of a good quality,

were shown at Bush Hill. But the great curiosity was the—

"wonderful Leviathan, or Sea-Serpent, caught at Brown's Point, N. J. It was described as measuring thirty-two feet ten inches in length, and eighteen feet in circumference. This monster of the deep has two legs, with a nail projecting out of the palm of each foot about the size of a man's thumb-nail. It has two long fins near the gills about four and a half feet long, and one large fin on the back about four feet long. Its tail is forked, the upper part about five feet and the under part three feet long. In each of the jaws there are six rows of small white teeth. The mouth is a phenomenon in nature, and difficult to describe. It has no bones, no heart, no tongue, no brain; but had a very large liver, which produced about four pounds of oil. It has five gills, each folding over the other. The skin is rough and of a leadish color, and is preserved in good order and complete shape. When taken it had about two bushels of lamprey eels adhering to its sides."

In 1823 more ventriloquism and legerdemain feats by Monsieur Perinor, physician and aeronaut, who also took portraits by a new process; the "celebrated picturesque theatre of Mr. Michael Muckle," exhibited by its new proprietor, Mr. Villivave; a handsome exhibition in Earle's gallery of a mechanical panorama representing an Italian village, with its inhabitants at their respective avocations, animals moving, etc. The figures were fifteen inches in height, and there were over one hundred of them in motion at the same time. This interesting piece of work continued attractive for several months.

In January, 1824, "a menagerie of twenty-one living animals, much the largest and most valuable collection ever in America," was exhibited at No. 272 Market Street.

In April "an Egyptian mummy, received from ancient Thebes, with its double sarcophagus, or coffin, curiously ornamented," was exhibited at Sully & Earle's gallery, opposite the State-House. It was received by the Boston Medical Society, and was exhibited for the benefit of the Massachusetts General Hospital. It was said to be the first mummy that had been brought to America.

About the same time there was on exhibition at No. 28 South Sixth Street "two ancient urns, or sarcophagi, formerly used for containing the ashes of the deceased, according to the customs of those days, found in Rome, one hundred and fifty feet below the surface of the earth, in a vault."

The Pennsylvania Museum was opened in this year in a new and spacious building No. 270 Market Street. The animals of a menagerie which had exhibited for some years previous occupied the lower floor and the yard. The upper stories were devoted to the display of curiosities, wax statuary, and a picture-gallery, with a place for performances. At this museum, in February, 1825, were engaged for six nights the Spanish dancers, Messrs. La Conta and Gonzalo, and Master Minich. La Conta danced the fisherman's hornpipe on the tight-rope, and performed the much more difficult exercise of saltation on the same rope with a living boy tied on each foot. Gonzalo danced on the tight-rope with wooden shoes. But his great performance was taking a collation from a table while himself seated upon a chair, both of which were fixed upon the rope and kept in equilibrium by the skill of the performer.

Minich was the clown. Adrian performed there, in March, in the character of a Greek juggler, and Monsieur Helene, the pandean performer, joined him in April. An Egyptian mummy was added to the treasures of the exhibition. The picture-gallery contained some large and showy pictures. Patrick McGee, the Irish giant, was exhibited at this museum in the summer and fall of 1824. He was represented to be nearly eight feet high, and was conspicuous for the masculine beauty of his form.

J. D. and H. I. Browere gave an interesting exhibition of "the Grând Inquisition of Spain and Portugal, sixteen figures as large as life undergoing trials, tortures, and burning." The instruments of torture were said to be made from drawings of the originals previous to their destruction in 1812. A "female sea-monster," caught upon Elk River, was also exhibited. There were four American dwarfs exhibited that year,—Joseph M. Stevens, thirty-seven inches high, and three sisters, Hannah, Rebecca, and Abigail Hatch, born at Falmouth, Mass. These sisters were described as well-proportioned and possessing the manners of educated women. They were exemplary in their piety and Christian devotion. Their ages were between twenty-five and forty years, and their heights between thirty-six and forty-two inches.

A rare set of Gobelin tapestry was exhibited at Earle & Sully's gallery about that time. This beautiful work had been made by order of the unfortunate queen Marie Antoinette to be presented to Gen. Lafayette. There were four large pieces, twelve by ten feet, and containing twelve figures, representing the four quarters of the globe, and twenty-four smaller pieces, for chair-covers, representing the arts and sciences. The whole was worth two thousand louis.

A very curious piece of mechanical work was an allegorical representation of the treaty of Ghent, made about that time on a large organ by Michael Muckle, in Philadelphia. The figures, which were quite numerous, "moved naturally, as if alive."

Lawrence Astolfi, a confectioner and distiller, who had established himself in business at No. 136 Market Street, about the year 1810, concluded, in 1813, to add the management of a place of public resort to his mercantile operations. To this effect he opened a summer theatre at the Columbian Garden, on Market Street, between Thirteenth Street and Centre Square. The first season was inaugurated by the Manfredi Company with the pantomime of "The Imaginary Sick Man." Manfredi played the *Clown* in this piece, and was assisted by Miss Catharine, as *Columbine*, and Messrs. Mestayer (*Harlequin*), Lewis, John, Parzote, and Grindone. Robertson, the "antipodean" performer, Jones, and Johnston joined the company a short time after; and the old actor, Fennell, appeared

one night in a recitation. This company brought out, for the first time in this country, the pantomimes of "Valcour and Emilia, or the Unfortunate Lovers," and "Le Marechal de Logis." After this first season Astolfi did not keep up his summer theatre for two years, although his garden was much frequented as a place of resort and refreshment. In 1816 it was again announced as a place of amusement. The opening took place on the 14th of June, with a grand illumination by means of two thousand five hundred lamps. In September of that year, T. Robinson gave a grand concert at the Columbian. The singers were himself and Miss Monier. Wolfe played the clarionet and Robinson and Bracken blew the trumpets. In 1819, Mestayer gave theatrical performances there with a small company, consisting of himself and wife, their sons, John and Harry Mestayer, and Monsieur Dedus, sword-swallower.

Stanislaus Surin, a professor of legerdemain, who had performed in the city during the previous year, succeeded Astolfi in the management of the Columbian Garden in 1820. He changed the name of the place to "Tivoli Garden," and gave there exhibitions of jugglery, accompanied with songs by Mr. Scott and others. At the end of May a summer theatre was opened at the Tivoli with "The Purse" and "The Intrigue." The company consisted of Messrs. Thornton, King, Scott, Mestayer, Charles S. Porter, Bard, Simpson, Bloom, Klett, Laidly, Allen, Champion, and Godeau (tight-rope dancer), and Mesdames Riddle, Still, Murray, Mestayer, Allen, Williams (tight-rope dancer), and French. They performed farces and light pieces. In 1823, Villivave, the tight-rope performer, opened the Tivoli with "The Company of Five Nations," but did not remain there very long. Louis Mestayer and Frederick Eberle took the Tivoli and fixed up a pretty little theatre there. John Crouta painted some of the scenes. The company consisted principally of the Mestayer and Eberle families, the former having two sons and two daughters, and the latter three sons and two daughters. Among the pieces brought out by them was "Modern Honor, or how to shun a Bullet," which was written by Joseph Hutton, in ridicule of a duel which had lately taken place between Col. Duffy, of South Carolina, and Col. Cummings, of Georgia. The season of 1824 was opened in May, with a very strong company, recruited in part from Drake's Cincinnati company. Among them were young Samuel Drake and his wife,—a daughter of Palmer Fisher by a first marriage,—Palmer Fisher and his young and pretty wife, who was afterwards long known to the American stage as Mrs. E. N. Thayer, W. Jones, William Anderson and wife, John Green, Crampton, Carter and wife, and others. Still, the vocalist, played a star engagement, and appeared in "The Devil's Bridge," "Poor Soldier," and other pieces. Mrs. Battersby, from the Chestnut Street Theatre, also played an engagement, at the close of which she took the public somewhat by surprise by appearing in the character of *Hamlet*. Mrs. H. A. Williams (afterwards Mrs. Maywood), who succeeded Mrs. Battersby, followed her predecessor's example by donning male attire and attempting the most unfeminine part of *Richard III.*

On the 1st of July the Fishers and Drakes separated from the company and opened Vauxhall, thereby injuring their old co-associates to some extent, without benefit to themselves, for their Vauxhall enterprise was short-lived, and proved a failure. The Tivoli company had the rare generosity to give the disappointed seceders a benefit after Vauxhall had closed. Still more praiseworthy was the act of old Joseph Jefferson, of the Chestnut, usually so scrupulous in maintaining his dignity as a member of a first-class theatre company. Remembering that he owed to Palmer Fisher a debt of gratitude for assistance given him by the latter before he left England, he volunteered his services for this occasion, and appeared as *Kit Casey* in "Town and Country," and *Shelty* in "The Highland Reel."

In April, 1825, the Tivoli Garden Theatre was opened under the management of a Mr. Johns, who, however, only remained five or six weeks. A new company was formed, and the Tivoli Garden Theatre reopened on the 23d of May with "The Soldier's Daughter" and "The Mayor of Garrett." The company at this time was composed of Charles S. Porter, Henry Eberle, Morrison, Hardy, Charles Webb, Henry, John Crouta, Jr., Sinclair, Lowrey, Mestayer, Mrs. Johns, Mrs. Mestayer, Miss Grier, and the Misses Eberle. Sinclair was blind. He had originally been a circus performer, but, losing his sight, could only be occasionally made use of in one or two parts. The actors generally joined to give him a benefit once in a season, on which occasion he usually played with painful naturalness the part of *Darling*, a blind man, in John Howard Payne's melodrama of "Adeline." In time Sinclair accumulated enough to enable him to set up a café and boarding-house opposite the Bowery Theatre, New York, which was a favorite resort of theatrical people, and by the profits of which he was enabled to support himself.

The Vauxhall Theatre, where the Fishers and Drakes made their unfortunate experiment in 1824, was a garden theatre, established in 1814. The establishment occupied the whole block bounded by Walnut, George [Sansom], Juniper, and Broad Streets, which was the property of Capt. John Dunlap. The theatre was erected at the northeast corner of Broad and Walnut Streets, and was used for various sorts of exhibitions. Vauxhall Garden was a favorite place for the display of fire-works and for balloon ascensions. On the evening of Sept. 8, 1819, a balloon ascension, which had been announced, thereby attracting a large number of spectators, was postponed for some reason unsatisfactory to the crowd. A disturbance ensued, which soon culminated into a regu-

lar riot. The theatre building was set on fire, and much damage done to the grounds, on which were various species of trees planted by the owner of the lot.

The Vauxhall Garden was refitted for public exhibitions, but not with the thoroughness and elegance of the original establishment. In November, 1820, the aeronaut Guille made a balloon ascension there with a parachute, in the car of which was a monkey. Both came down safely, the frightened monkey reaching the earth some minutes before his master. William Muirhead and Reuben Traveller took the Vauxhall in 1821, but did not have a very brilliant season. In October, 1822, Mr. Brown gave a grand pyrotechnic exhibition at this garden. Among the subjects represented were a grand "Temple of Independence," sixty feet wide and twenty-four feet high, with a full-length portrait of Washington in the centre, and "The Cataract of the Falls of Niagara," which was forty feet wide. "Mr. Brown, the artist, will appear on the rocks in the centre, clothed in brilliant fire, and will suddenly leap into the gulf below." Also a representation of Mount Etna, which was given several times.

After the unlucky attempt by the company of which Palmer Fisher and W. Jones were managers, the Vauxhall was reopened in 1825 by Joseph Diackeri, formerly the proprietor of the Philadelphia Garden. He made some improvements, among which was the building called the Lafayette Retreat, which was erected in the centre of the lot, and was surrounded by a flower-garden. He provided his guests with ice-creams, fruits, liquors and refreshments, and turtle-soup, and once a week illuminated the gardens and delighted the audience with the music of an excellent orchestra. A grand exhibition of fire-works was given there by Brown & Regnault on the 23d of July of that year, in honor of Gen. Lafayette. The grand arch of Columbia, with the Goddess of Liberty reclining on the pillar of Fame, the Tree of Liberty, the American Eagle, etc., was the great feature of the exhibition. Lafayette was received at the entrance of the garden by one hundred little girls all dressed in white. It was altogether a very successful affair. After this exhibitions of fire-works and illuminations were occasionally given during the season, which closed about the middle of September.

The satirist, Waln, in his "Sysiphii Opus," says of the closing of the Vauxhall,—

> "Now tradesmen's daughters shun the slippery streets,
> That oft have witnessed their nocturnal feats;
> The shady bowers, where oft the cooling ice,
> The spicy sandwich, or the savory slice
> Rule o'er the senses with a sovereign sway,
> And rouse the soul to titillating play;
> Where frothy mead expands its sparkling fumes,
> And many a heart to loving thraldom dooms,
> While genial darkness animates the frame,
> And balmy zephyrs fan the rising flame.
> Vauxhall no longer, with variegated light,
> Cheats the dull sameness of the moonless night,
> Where Love breathes softness to the attentive ear,
> And yielding nymphs the vows of Firmness hear,
> While Music's melodies through ether sail,
> Burst on the ear, and loiter on the gale."

The public gardens, as we have shown, from being places of refreshment, where sports and games and occasional open-air exhibitions and concerts were gotten up for the entertainment of visitors, had, in several cases, been further improved by the construction of summer theatres. In giving an account of these, we have unavoidably encroached upon the history of the regular theatres, or, more properly speaking, the history of the legitimate drama in Philadelphia, which will form another part of this chapter. Before coming to it, however, we must go back to an earlier period, and trace the introduction and progress of another amusement which preceded the first theatrical performance, and which, less public in its nature, and not so generally indulged in, is nevertheless intimately connected with the history of the changes that have taken place in the society of the Quaker City. We allude to dancing, which, at first forbidden, then suffered, finally became the amusement *par excellence* of fashionable society, in which our city belles displayed their native gracefulness of figure and motion, so as to be acknowledged without superiors in the polished society of any country.

In a chapter devoted to the history of amusements, dancing should perhaps have taken precedence of all others, for the taste for this sort of recreation seems to come naturally to man, even in the savage state. It is then a mimic representation of the passions that sway the uncivilized races. Our American Indians have their war-dances by which they excite their warriors to the highest pitch of frenzy, and rouse the warlike spirit of their young men; the savage tribes in all countries have theirs,—for dancing is but the active display of exuberant joy, and what greater joy for a savage than the prospect of taking his enemy's skull or scalp? The *bamboula* of the native African is an inimitable amorous dance, such as the most perfect professional dancer dare not attempt. The Spanish dances, expressive of the passion of love, are but an ardent and graceful pantomime, and the Spaniards probably inherited them from their old conquerors, the Moors. The voluptuous dance of the Bayaderes still charms the indolent potentates of the East. In fact, dancing is universal and natural, and the philosopher who first proclaimed that "man is the only animal who speaks," might have added "and dances." It is therefore a matter of some surprise that the good Friends who managed public affairs in Philadelphia in the olden time should have discouraged this amusement, especially as dancing has been made to express religious fervor as well as the human passions. Without holding the dancing Dervishes as an example, did not King David dance before the Ark of the Covenant? Besides, civilization had reduced dancing to an art, innocent and mean-

ingless, whose sole effect is to give gracefulness to motion. The formal minuet of that time was about as solemn a performance as could be wished, nevertheless dancing-masters were not numerous, and such as there were did not grow rich very rapidly. Still, as the population received frequent accessions of "worldly people," the terpsichorean art had its devotees, and the City Dancing Assembly was organized (1740). We have given in another chapter the list of the original subscribers, and also a list of the ladies of fashion who attended the ball of the City Assembly in 1757. This association was composed of the exclusives of the day, and none were invited who did not belong to the set. Mr. Watson preserved, among other curiosities illustrating the history of Philadelphia society in that remote period, a card of admission of the year 1749, addressed to Mrs. Jeykell, one of the beautiful leaders of fashion at the time. She was the granddaughter of the first Edward Shippen, a Quaker and first mayor of Philadelphia. She was married to the brother of Sir Joseph Jeykell, the secretary of Queen Anne. This card, like all cards used for such purposes in those early years, was written on the back of a common playing-card, there being no *blank* cards in the country. Watson copied one of these invitations which was *printed* on the back of a playing-card, and read thus, to wit,—

"The gentlemen of the Army present their compliments to Mrs. Jeykell, and beg the favour of her company to *a ball* at *the State-House* on Monday next, Saturday, September 20, 1755."

The same writer tells this curious anecdote of a time when carriages were not so common as they are now: "One of the really honorables of the colonial days has told me of his mother (the wife of the chief justice) going to a great ball *in Water Street*, in her youthful days, to *Hamilton's stores* on the wharf, on Water Street next to the Drawbridge, she going to the same in her *full dress on horseback*." Think of it, ye belles of 1884, who, wrapped in furs, recline languidly on the soft cushions of your hermetically closed carriage, and think the rapid drive to the ball-room door quite a trial this bleak winter weather.

During the Revolutionary war the regular Assembly balls had been suspended. They were revived when peace was restored; but political feeling was a new element of discord added to the exclusiveness of the old Assembly association, which brought about divisions in society, and there were opposition balls given. This feeling died out, however, and in 1800 the rival factions were united in a single body. The Assembly balls in that year were held at the City Tavern. The managers for the season of 1800–1 were William Cramond, Jasper Moylan, Thomas M. Willing, Samuel Mifflin, Stephen Kingston, Samuel S. Cooper, James Wilcocks, and Charles W. Hare. For 1801–2 the managers were Thomas M. Willing, Samuel Mifflin, Stephen Kingston, Matthew Pearce, Peter McCall, and Henry Nixon. In 1803, the new Shakespeare Building having been finished at Sixth and Chestnut Streets, the first assembly was held in Mr. Haines' room in that building. Afterward they were held at Francis' Hotel, which then occupied the Masters and Penn mansion (afterward the Washington mansion), Market Street, between Fifth and Sixth.

Harmony, it appears, did not reign among the subscribers, and the Assembly dissolved. In November of that year, a meeting of the "ci-devant subscribers" having been called for the purpose of holding a subscription-ball, a new Assembly was organized. The balls of the ensuing season were given in a large room over J. B. Barry's furniture-store, in Second Street.

In 1807 the managers of the Assembly were John Mifflin, Daniel W. Coxe, John B. Wallace, James Hamilton, Edward Shippen Burd, and Robert Hare, Jr. The first assembly for that year was held at the Exchange Coffee-House (formerly Bingham's mansion), South Third Street, on the 29th of January. In 1810 the assemblies were held at what was then called the City Hotel, in the old McCall mansion, corner of Second and Union Streets. But things must have sadly changed since the time of the old "exclusives," if we may judge from the following criticism, which appeared in the *Trangram, or Fashionable Trifler* in that year:

"The principal supporters of our city practicing balls are a strange medley of capering youths, who, the moment they are released from the finger drudgery of pen, ink, and paper, repair to the Assembly, where they contrive to kill an evening in the pleasing avocations of dancing and quarreling, occasionally interspersed with the delightful auxiliaries of smoking and drinking. When the promiscuous variety are met, they employ a portion of their time in quarreling for places in a set for a cotillion or country dance, and are famous for a peculiar dialect, for spitfire aggravations, provoking phrases, quaint oaths, and thundering mouth-grenades. Should the heat of the weather require more air than exercise, they retire to a witt drawing-room, where they stupefy their senses by the narcotic fumes of a cigar, dry their skins to parchment, bake their entrails to cinders, and exhaust all their radical moisture; so that when they return to their partners the room is perfumed like the interior of a warehouse on James River. Some exercise other extravagances—qualify their lemonade with the tincture of pure cognac, of which their fair partners sip a drop or two to prevent danger from excessive heat, and which these foplings drench in quantities, so that in the conclusion they become as noisy and quarrelsome as apes."

It is not to be wondered at, therefore, if the organization lost much of its social attraction, and ended in dissolution. Its last balls were given in 1815. After that it must have ceased to exist, for in a statement published in 1817 it was announced that gentlemen who were disposed to revive the City Dancing Assembly had held a meeting at Renshaw's hotel, and had resolved that "in the city of Philadelphia, the residence of so much elegance, and the resort of so much gayety, there ought to be Dancing Assemblies." Accordingly subscription-books were ordered to be opened, under the direction of David Lenox, George Harrison, Thomas Cadwalader, Robert Wharton, Charles J. Ingersoll, Samuel H. Wilcocks, Thomas F. Leaming, William S. Biddle, and James Craig. Subscription price, twenty dollars. The committee was requested to make such inquiries, "respecting the sum of money formerly subscribed for the erec-

tion of an assembly-room as may be proper, and that it consult with the present trustees of that fund respecting its disposition." Action upon this subject was prevented by a notice given in the same papers that a Cotillion Party had been formed, of which Benjamin Tilghman, Thomas I. Wharton, Charles S. Coxe, Edward S. Coxe, William Rawle, Jr., James Craig, Thomas W. Morris, and Joseph P. Norris, Jr., were managers. In consequence of this, notice was given that another meeting of the projectors of the City Dancing Assembly was held, at which it was resolved that "the Cotillion Party being already organized on an extensive scale, it is considered inexpedient to take any measure for the re-establishment of the City Dancing Assembly for the present year." These parties were given at the Masonic Hall. They were continued for a couple of years, after which the old title, "City Dancing Assembly," was revived. The balls were held up to 1825 and afterward.

Waln, in his amusing book, "The Hermit in America," describes one of these cotillion parties at the Masonic Hall, which he represents to have been given under fashionable auspices. The leader of the orchestra band was the colored fiddler, Frank Johnson, who enjoyed a high reputation in respectable society as a performer of dance and concert music. Says the "Hermit,"—

"The room was about half filled with the most splendid collection of belles and beaux. The greater portion of them were engaged in dancing cotillions, after the fashion of my country [France]. The decorations of the saloon, independent of certain dark-looking figures (apparently in bronze), which were placed at certain intervals around, are plain, but neat and ornamental. The figures alluded to have the most comical effect imaginable, and are no doubt placed there for the purpose,—seeing that no place is better adapted to the free and admissible use of the risible muscles than a ball-room. The ingenious managers deserve credit for this invention, for I believe it is indisputably original."[1]

[1] Here is another spicy *morceau* from the same work. The "Hermit" attends, with an American friend, a public cotillion party at Masonic Hall, and the following dialogue ensues:

"'But I observe a kind of pen fenced off, as it were, at the other extremity of the room, for what purpose I am at a loss to determine.'

"'That is a very useful inclosure, I assure you. It serves for three purposes of no little consequence. The first and the most important is the accommodation of those wise and cautious matrons, who, knowing from experience the necessity of a mother's presence on such occasions, accompany their daughters to all places of public and private resort. This is a custom that should never be destroyed. All who have experience know what young ladies are at home, and none are better judges than their mothers. Whenever you find a mother particularly anxious to observe her daughter's motions during the dance, and that daughter equally anxious to reach the side of her mother after its conclusion, you may take it for granted that some well-complied-with stipulation has alone guaranteed her appearance at the ball, and that some private domestic reason exists for the use of this discreet caution. Now, these suspicious mothers, by arranging themselves in certain situations within the pen, as you call it, can command a fair view of everything transacting therein, which it would be impossible to do on the outside. The dutiful daughter is bound by the stipulation aforesaid (on pain of forfeiting the pleasures of the next cotillion party) to make her appearance within the limits and remain under the watchful eye of her mother, until inclination to dance with her—inclination to dance with himself or the want of a better partner—prompts some bowing Adonis to rescue her from bondage. . . . The second purpose is diametrically opposite to the first. It is to be rationally supposed that all mothers are not equally careful of their daughters' manners, and that the spirits of all daughters do not require equal restraint. I know, to the contrary, there is a class of maidens, notoriously extensive, and technically termed "wall-flowers"—from the astonishing pertinacity with which they adhere to that inanimate substance in spite of the animated capers and nimble pigeon-wings of everything else young and movable in the room. I must, however, do them the justice to observe that whenever a tempestuous night, a rival party, or other fortuitous circumstance renders their services indispensable in the formation of a cotillion, there is not an instance upon record in which they have not, in the very essence of accommodation, cheerfully acquiesced in the wishes of the gentlemen and joined in the dance. And so grateful are these last for favors thus undeservedly conferred upon them that they take special care never to put them to further trouble than they can possibly avoid. You observe them now, seated opposite the great entrance, only distinguishable in color from the composition figures above. The gratitude of the gentlemen will prevent their molestation, as their services are not requisite this evening. But I have not yet informed you of the second purpose, which is simply to afford these easy mothers an opportunity of ruining their good husbands by playing half-dollar rubbers of whist. All these accommodations afforded to the matronizing part of the community are the result of long and deep thought on the part of the managers. The more inducements held out to them, the fewer objections to their daughters' appearance. This is all perfectly understood and skillfully acted upon. Now, as to the third,—and, many have averred, the most necessary purpose,—that, sir, is our supper-room,' he continued, pointing toward the inclosure.

"'Supper-room!' I exclaimed. 'Impossible! You cannot seriously tell me that the assembled wealth, fashion, and nobility of the first city in the United States are reduced to the pitiful necessity of fencing off a corner of their ball-room for that purpose?'

* * * * * * * * * * * *

"'Yes, sir! In that space, which you have worthily denominated a "pen," seated at a dozen small tables, sup what you are pleased to call "the nobility of Philadelphia." Nor can they even thus humbly enjoy the frugal repast. "Hungry expectants" are gathered around, watching the slow progress of mastication, on the republican principle of "rotation in office must be respected," before the appetite is barely excited.'

* * * * * * * * * * * *

"'Hold, Mr. Hermit! You have not yet heard all. What do you imagine the supper consists of?'

"'It is impossible to conjecture.'

"'Pickled oysters, and bread and butter! . . . But,' he continued, 'the want of accommodation is the reason assigned to these "supper apologies," as they are generally called. There is not a building in the great city of Philadelphia sufficiently extensive to furnish at the same time a ball and a supper-room, with the exception of the Washington

The English traveler, Francis Hall, in 1818, describes a dancing-party at a private house in such terms that we fail to recognize the gay, witty belles, and intellectual society-men of Philadelphia, described by so many unprejudiced foreigners. Did Mr. Hall attempt to hoax his readers, or was he himself the victim of a hoax? He says,—

"Chairs are arranged in a close semicircle, the ladies file into the room and silently take their seats beside each other, the men occupying the chord of the segment, *vis-à-vis* to their fair foes (for such their cautious distance and rare communication would indicate them to be). The men, in this situation, discuss trade and politics, the ladies, fashions and domestic incidents, with all the quiet and gravity becoming the solemnity of the meeting. Tea and coffee are handed about, and in due process of time, cakes, lemonade, etc. Should there be no dancing, the forces draw off after having for several hours thus reconnoitred each other. When they dance, the men step forward, and, more by gesture than word, indicate their wishes to their fair partners. Cotillions then commence with a gravity and perseverance almost pitiable. 'Dancing,' says the Marquis De Chastellux, 'is said to be at once the emblem of gayety and of love.' Here it seems to be the 'emblem of legislation and marriage.' The animation displayed by the feet never finds its way into the countenance, to light up the eye or deepen the rose on the cheek—

'Which hangs in chill and lifeless lustre there,
Like a red oak-leaf in the wintry air;
While the blue eye above it coldly beams
Like moonlight radiance upon frozen streams.'

One conceives, on these occasions, how dancing may become, as it is among the Shakers, a religious ceremony."

A rival association, called the Columbian Dancing Assembly, was organized in 1823, and gave its first ball at the saloon in Library Street, in December. In the succeeding years the Columbia's balls were held at the Masonic Hall.

The earliest mention of a dancing-school in Philadelphia is in the advertisement of Mrs. Ball, who, in 1730, kept a school in Letitia Court. "French, playing on the spinet, and dancing," were among the accomplishments in which young ladies were instructed in that establishment. In 1738, Theobald Hacket advertised his dancing-school. In 1742, Richard Kynall, the fencing-master, also taught dancing, and in 1746, Kennet, another professor of the small-sword, gave instruction in the art of Terpsichore. Bolton, another dancing-master, flourished about the middle of the century, and Tioli and his assistant, Godwin, about 1770 or 1772. In 1785, Mr. Patterson and Monsieur Russell, both members of the Ryan & Wells Company, taught dancing. Russell was the first dancer that introduced the "pigeon-wing" step in Philadelphia ball-rooms. John Durang succeeded Russell as a teacher. Mr. and Mrs. Byrne, English dancers, who came here in 1793, with the first Chestnut Street Theatre Company, opened a dancing-school at Oeller's Hotel in 1800. After teaching one season they returned to England.

B. Quesnet, an artist of merit, came in 1796 as ballet-master to Hallam and Henry's company, at the South Street Theatre. He set up a school, about 1800, in Harmony Place, and gave dancing parties at Kerr's ball-room, in Fourth Street. In the succeeding year he engaged Baconnais as his assistant, and the dancing academy was removed to No. 64 South Fourth Street, and some years after to No. 30 South Sixth Street. When, in 1810, Mathew Carey built a large printing-office on Library Street, opposite the Bank of the United States, the second story of this building was fitted up as an assembly-room, and Quesnet became the lessee. In 1817 he had his dancing academy at Washington Hall. He announced a great ball for the 22d of February, in honor of Washington's birthday; but there happened to be two other balls in preparation for the same day and object, one by the citizens and one by the military. Quesnet put off his ball until a later period of the season, the citizens' project was abandoned, and the field left to the military, who gave a very fine birthnight ball. The managers on this occasion were Capt. Thomas I. Wharton, Capt. John Swift, Capt. Thomas Anthony, Lieut. John B. Dickinson, Lieut. Cephas C. Childs, Cornet E. S. Fullerton, and G. Fairman.

Quesnet died in 1819, after a very successful career in a profession in which he had few, if any, superiors.

William Francis, comedian, was for a few years another successful dancing-master. He came here in the latter part of the last century. In 1800 he taught "the last new minuet as performed at the Grand Opera-House, Paris, the minuet de la cœur, the gavoto, waltzes, strathspeys, Highland reels, with the steps peculiarly adapted to those favorite dances; the Philadelphia, Baltimore, New Bath, and London cotillions, hornpipes, and the American country dances, after the most approved and fashionable styles." In 1803 his balls were given at the new assembly-room, adjoining the theatre, Sixth and Chestnut Streets. Francis entered into a copartnership with John Durang in 1806. In 1808 they gave their "farewell ball," but their academy was still kept open at Harmony Hall. They were assisted in the management by Durang's young sons, Harris and Charles, who gave a ball in 1810.

Monsieur Sicard commenced to teach dancing as early as 1790. That he was popular as a teacher is evident from the fact that he retired from the profession with a competency about 1812. He lived in Philadelphia for some years afterward, his name being set down in the Directory with the affix "gentleman." Dupuy assisted Sicard in 1809, when they gave a ball for the benefit of distressed mariners.

The year 1800 seems to have been particularly prolific in dancing-masters. In addition to those already mentioned, the following-named made their appearance in that year: Auguste Auriol, "late from Paris," announced himself as a teacher of the art, and became an assistant of Quesnet, but before the year was out he established his own dancing academy. He taught until 1809, giving balls regularly every season. He then went to France, and was absent one year, during which time Mr. Audrale managed the academy. Auriol returned in 1810, and remained in Philadelphia until 1818, when he was succeeded by Mr. Shira. Auguste Auriol came from a family of famous dancers.

In October, 1800, Henry Paul Nugent, "formerly principal dancer at the theatre," proposed to give lessons in literature and the art of dancing. In a long and curious advertisement, Nugent says of himself,—

"He was regularly bred to letters and the ornamental arts, by which alone he has supported himself for several years. He was a pupil to Mr. Sheridan, the author of 'The Art of Reading,' and has taught the classics in a reputable academy near London. The art of dancing he learned in France and England, and he practiced as an assistant to the most eminent dancing-master in Bath. The languages Nugent is acquainted with are the English, French, Latin, and Greek. These he has been accustomed to teach; but he wishes to teach the English language alone, as there are fewer skillful teachers of that language than of the others, as he has made it his principal study, and as the improvements which pupils make in their vernacular tongue, if properly instructed, render the task of the teacher no way irksome."

Insisting upon the necessity of teaching children to read with propriety, he incidentally states that "many young ladies of good abilities, on leaving an expensive boarding-school, have been found by their parents strangely deficient in reading and writing English," a remark which is lamentably true in the present time.

Ignace Fraisier, a French gentleman of good family

and education, and who had held an officer's commission in the American army during the Revolutionary war, opened a dancing-school in 1801. From some motive of sensitive pride he dropped his family name, and was commonly known as Monsieur Ignace. In 1802 he announced that in addition to lessons in dancing, he proposed "to instruct about twelve scholars in the French language, and to act as interpreter." His success as a teacher of French was so great that for some years he devoted most of his attention to this branch, although he did not give up his dancing-school. In 1823 he gave instruction to ladies and gentlemen in music and dancing, and in the French and English languages, and also gave notice that he was a sworn interpreter. Mr. Fraisier died in 1825, aged seventy-eight years. The fact that he had served his adopted country as an officer was not generally known until his obituary notice was published. As the obscure Monsieur Ignace, he had won the respect of the community among which he had labored so industriously during a quarter of a century.

Mr. Warrell, of the theatre, kept a dancing academy for a short time in 1804. Monsieur Epervil, in 1808, made an attempt to introduce masquerade balls in Philadelphia. He published the programme of a series of three balls, but only two were given. Public opinion was decidedly opposed to this kind of amusement, and within two weeks of the publication of Epervil's programme an act of Assembly was passed declaring masquerades and masked balls to be common nuisances. The penal provisions of the bill were very stringent, showing that the evil to be suppressed was considered a serious one. Section 1 of the act provided that—

"every housekeeper within this Commonwealth who shall knowingly permit and suffer a masquerade or masked ball to be given in his or her house, and every person who shall set on foot, promote, or encourage any masquerade or masked ball, and every person who shall knowingly attend or be present at any masquerade or masked ball in mask or otherwise, being thereof legally convicted, . . . shall for each and every offense be sentenced to an imprisonment not exceeding three months, and to pay a fine not exceeding one thousand nor less than fifty dollars, and to give security in such sum as the court may direct to keep the peace and be of good behavior for one year."

This had the immediate effect of putting a stop to Mr. Epervil's preparations to initiate the Philadelphians into the follies of the Parisian *Bals de l'Opéra*, and he left for other parts, deploring the want of (bad) taste of the legislators.

In 1809, F. C. Labbe, "late from Paris," announced himself by giving a grand ball at the City Hotel, and a few days later opened a dancing academy. About the year 1812 he gave up dancing to embark in the calico-printing business, but was probably not very successful in that enterprise, for in 1818 he returned to his old profession, and took Auriol's old ball-room, in Spruce Street. Shortly after he moved to Carey's building, hitherto occupied by Quesnet, who now retired. This building was destroyed by fire in 1820, and Labbe transferred his ball-room and school, temporarily, to Washington Hall. When Carey's building was rebuilt he returned to his old quarters, which were elegantly fitted up. Mr. Labbe continued in the exercise of his profession for some years after this, and is still well remembered by old Philadelphians. He is described as "small in stature, with bushy black hair, and jet-black eyes. He was very graceful in his carriage and manners, and very nimble on his feet."

Monsieur Trigant & Son opened a dancing academy in 1809; they were also associated with Monsieur L. Auguste in a fencing academy. In 1816 they were joined by Monsieur Gigion. In 1820, B. Auguste succeeded to the dancing interests of this school. In 1821 he opened a French academy in addition to his dancing-school. In 1825 he was teaching dancing at reduced rates, from which it is to be supposed that he was not as successful as some of his competitors. A Mr. Hipolite taught dancing in 1809, together with the broadsword and small-sword exercises. He gave, in the spring of that year, a grand exhibition, which was called "a grand tournament and ball." He does not appear to have made a long stay in Philadelphia.

Thomas Whale, an Englishman, kept a dancing-school from 1809 to 1812, when he either died or removed from the city. He was the father of Master Henry Whale, who, in 1809, was attached to the Chestnut Street Theatre Company as a dancer, and appeared under the title of the "Infant Vestris." On the 27th of November of that year *The Tangram* said of Whale, "Considering that Englishmen are not reputed for the elegance and grace of their movements, he promises fair to be the head of his profession, for, laying aside the gentility of his address and the politeness of his phraseology, he powders his hair, which is at least respectably, if not elegantly, done." In September, 1825, notice was given that "Henry Whale, known some twenty years ago as the Infant Vestris,—having danced on the Philadelphia stage with much *éclat*, though very young then,—now proposes to open a dancing academy." He stated that he had been teaching dancing in New York and Albany. He opened his dancing-school at the northwest corner of Seventh and Chestnut Streets.

The dancing-masters who practiced their art in Philadelphia in the early period were mostly, as it has been shown in the preceding sketches, dancers attached to a theatre company, or professional dancers, who, in many instances, taught also the art of fencing. The French Revolution and, to a still greater extent, the exodus from San Domingo of white families who had escaped massacre at the hands of the revolted blacks brought to the various American ports numerous refugees, who, in this hour of their misfortune, turned to account the accomplishments acquired in better days with no other view than that of shining in the polished society in

which they moved. Fencing, dancing, and music were indispensable arts with the French gentleman of the old *régime*. Some added to these a fair knowledge of drawing and painting, while not a few, whose fathers had adopted Jean Jacques Rousseau's ideas concerning education, were lucky enough to know some genteel trade and could turn or carve wood and ivory, engrave on metal, etc. They set themselves to work bravely, and by steady industry managed to eke out a support for themselves and their families. Their native politeness, their industry, and the cheerfulness with which they accepted poverty after having known all the advantages of wealth and social position, won the regard and sympathy of the people among whom fate had made them cast their lot.

Philadelphia had her full share of these worthy refugees. Of such was Victor Guillou, who, about 1810, had a dancing academy at No. 294 Market Street. His ancestors were originally from Brittany, and of very ancient lineage. Keradec Guillou left France in 1697, and settled in San Domingo, where he purchased land, and in a few years was known as a wealthy sugar and coffee planter, the proprietor of vast estates. Victor, his great-grandson, was born in 1776. In accordance with the custom prevailing among the wealthy San Domingans, he was sent to France at the tender age of seven years to receive the education befitting his station,—an education which included a complete course of artistic accomplishments. The stormy beginning of the French Revolution did not hinder Victor Guillou from pursuing his studies, but when, in 1794, the Convention decreed the emancipation of the blacks, already in open rebellion, in San Domingo, the young man returned immediately to the colony and joined the military force organized by the planters for the protection of their homes and families. Love claims its supremacy even in the most troublous times: two years after his return home Victor married the amiable daughter of Dieudonné de Las Casas, a French nobleman, who had been banished by Louis XV. The young couple were not allowed very long the peaceful enjoyment of the honeymoon. Matters had grown worse in the colony, the fine plantations of the valley of the Artibonite were sacked and burned by the blacks, and whole families of whites massacred. Capt. Guillou's wife and the female members of his family were saved almost by a miracle, his father losing his life while protecting their flight. The young soldier succeeded in placing these terrified ladies on board of a vessel bound for Philadelphia; bidding them God-speed, he returned to his post. It was not until after the last hope of the planters was destroyed by the capitulation of the French expedition to the English, in 1803, that Guillou could think of joining his wife and family in Philadelphia. Here he resorted to giving lessons in dancing as a means of support. To this he soon added the teaching of fencing and the French language. In later years he assisted his wife in conducting a large boarding-school for young ladies, in which establishment he was among the first teachers in the United States to introduce the Jacotot or Pestalozzian method of instruction.

Guillou's dancing academy was transferred to Masonic Hall in 1812. In 1819, this building having been destroyed by fire, the academy was removed to Washington Hall, but Guillou returned to his old quarters as soon as Masonic Hall was rebuilt in 1820. In 1821 he announced his practicing ball for February 3d, in honor of which was introduced a great novelty: "His ball-room will be brilliantly illuminated with gas, the light representing a fanciful firework, which will be represented as the bat's wing, oak-leaf, and honeysuckle flower." On the 8th of January, 1823, Mr. Guillou gave a grand military ball at Masonic Hall, to celebrate the battle of New Orleans and Gen. Jackson's victory. This was perhaps the first commemoration of this day by a ball. In December, 1824, Mr. Guillou removed his dancing-school to Musical Fund Hall, and gave notice that he would leave this country in the following spring. He recommended as his successor F. D. Mallet, a teacher of eighteen years' experience. Mr. Guillou joined in 1827 with Gen. Henry Lallemand, who married a niece of Stephen Girard, in a scheme to induce French emigration to Florida, then recently acquired by the United States. This failing, he bought a plantation in the island of Porto Rico, but he was unfortunate in this venture, and after three years of trouble and disappointment, he returned to Philadelphia in 1828, and resumed his profession of dancing-master. But he still longed for that pleasant planter's life, to which he had been brought up, as a reward for his laborious exertions, and in 1836 he purchased a sugar estate in Cuba, and removed to that island. He died there in 1841.

In 1813, Louis Arnal, from Paris, had a dancing academy in Gofforth Alley. Mr. and Mrs. Ferdinand Durang gave their annual ball at Quesnet's, in Library Street, in April, 1814. Mr. Durang was a son of John Durang, a member of the old American Theatre Company; and the lady was Miss Plane, an actress attached to New York and Charleston theatres.

A. Bonaffon opened his academy in 1819. In September, 1824, he gave a grand ball at the Masonic Hall, on the evening of the arrival of Gen. Lafayette, and illuminated the saloon with gas and transparencies of Washington at Trenton and Lafayette at Yorktown.

M. Fedelon, "lately from France," and Monsieur J. Pauppinelle both opened dancing-schools here in 1822.

The Quakers and rigid Presbyterians who, in the early days, frowned down dancing and other "frivolous amusements," could not be expected to countenance the introduction of the drama in Philadelphia. So when Murray and Kean's company of Thespians

made their appearance, in 1749, they were not permitted to make a long stay, but were ordered off as soon as the worthy rulers of the city's morals realized the fact that their entertainments possessed irresistible attractions. So Murray and Kean went to New York, and for five years the Philadelphians did not see a play. During this time, however, the population had increased, and the ruling influence was divided. A very large proportion of the citizens, among whom were not a few men of wealth and position, advocated more liberal ideas as regarded public amusements. They could not admit that it was sinful to laugh at a good farce, or even to weep over the tragic fate of the virtuous hero or heroine. Whether a play is meant to show the inevitable defeat of villainy and punishment of crime, or it merely holds up to ridicule the foibles and follies of society, it contains a good moral lesson,—our old plays did, at all events, and the playwright's motto, "*Castigat ridendo mores*," was true then, if it has ceased to be so now. In the year 1753, Lewis Hallam's English company, after traveling a year in the Southern colonies, and performing in various places in Virginia and Maryland, went to New York, where they opened their theatre in the month of September. The report of the great success of their talented actors awakened a desire among the most liberal-minded Philadelphians that Hallam should visit the Quaker city. The matter was not arranged without opposition, and a goodly quantity of printer's ink was used in arguments pro and con; but the required license had been obtained from Governor Hamilton, upon the recommendation of a number of gentlemen of influence, and Hallam's company came to Philadelphia.

On the 25th of April, 1754, they gave their first performance in a large brick warehouse of William Plumsted, situated in King or Water Street, between Pine and Lombard Streets. The house extended through to Front Street, on which there was an entrance by means of stairs placed on the outside of the building. This house remained standing until the year 1849, when it was pulled down. The opening piece was the tragedy of "The Fair Penitent," followed by the farce, "Miss in her Teens." Mr. Rigby spoke a prologue, and Mrs. Hallam an epilogue written for the occasion, in which, after defending the stage from the accusation of sinfulness, and alluding to the effect produced by the tragedy upon the audience, she asked,—

"If then the soul in Virtue's cause we move,
Why should the friends of Virtue disapprove?"

This temporary theatre was neatly fitted up. Over the stage glittered the motto, "*Totius mundus agit histrionem*." On the opening night the house was very full. The audience was in the best of spirits, but an unpleasant disturbance occurred when it was discovered that one of the unfriendly opponents of the theatre occupied a seat in the pit. Instead of being allowed to sit the play through, with the chance of his becoming converted to a more liberal course, he was summarily ejected. The Governor's license was for twenty-four nights. This number was extended to thirty, and the theatre closed on the 24th of June, after having had a brilliant and profitable season. One of the performances was given for the benefit of the charity school.

The members of this company, whose performances were as the introductory chapter of the history of the stage in Philadelphia, were Mr. and Mrs. Hallam, Miss Helen Hallam, and her two brothers, the Masters L. and —— Hallam, Messrs. Malone, Clarkson, Rigby, Singleton, Adcock, Miller, and Bell, and Mesdames Adcock, Rigby, Becceley, and Clarkson, and, possibly, Mr. and Mrs. Love and Mr. Hewlet, who were members of the company when they performed in New York. The pieces performed, so far as ascertained, were (beside the two already named), "Tunbridge Walks; or, the Yeomen of Kent;" "The Country Wake; or, Hob in the Well;" "The Gamester;" "Tamerlane;" "A Wife well Managed;" "The Careless Husband;" "Harlequin Collector" (a farce); and "The Provoked Husband."

Hallam's company came back to Philadelphia in 1759, to occupy a permanent theatre, erected for them in Southwark, at the corner of Cedar (or South) and Vernon Streets, on Society Hill, which was just outside of the corporated limits. David Douglass, who had married the widow of the elder Hallam after the latter's death in the West Indies, was the director. He had contracted with Alexander, a blacksmith, and William Williams, painter, for the erection and decoration of this theatre, and leave had been obtained from Governor Denny to that effect. The Quakers, the Presbyterian Synod, the ministers and elders of the German Lutheran congregation, and the Baptist congregation, respectively, petitioned the Assembly to prohibit the building of the theatre. The Assembly passed a bill to suppress lotteries and plays. Alexander and Williams, the contractors, who had progressed with their work, petitioned the Governor to take their case into consideration. The Governor, however, signed the bill, and it went to England, where it was repealed by the king and Council, as had always been most of the provincial laws against popular amusements. This theatre was opened on the 25th of June, 1759, but either because the house was too small and not well fitted up, or because the opposition had a discouraging effect, the company only played in it one season. They left Philadelphia, and remained away more than five years. On their return a new house, much larger than the first one, was built, at the corner of South and Apollo Streets. This new theatre was opened on the 12th of November, 1766. The company, which formerly had been designated as "a company of comedians from London," now assumed the title of "The American Company." It was at this theatre, and by this company, that the first play by an Amer-

ican author performed on any regular stage was given, on the 24th of April, 1767. This was "The Prince of Parthia," by Thomas Godfrey, Jr., of Philadelphia.

Mr. Graydon, in his "Memoirs," speaks with praise of the various members of this company, especially of Lewis Hallam, although he admits that the latter's declamation, in tragedy, was "either mouthing or ranting," and that having once ventured to appear in "Hamlet," either at Drury Lane or Covent Garden, his acting had not been to the taste of a London audience, "though he was admitted to be a man of pleasing and interesting address." Mr. Graydon adds that "he was, however, at Philadelphia, as much the

OLD SOUTHWARK THEATRE, COR. SOUTH AND APOLLO STS.

soul of the Southwark Theatre as ever Garrick was of Drury Lane; and if, as Dr. Johnson allows, popularity in matters of taste is unquestionable evidence of merit, we cannot withhold a considerable portion of it from Mr. Hallam, notwithstanding his faults."

The "American Company" again performed at the Southwark Theatre in the winters of 1768 and 1769–70. They returned in 1772, and reopened the theatre on the 28th of October; the performances closed in April, 1773. During this season "The Conquest of Canada; or, the Siege of Quebec"—the second original American drama ever performed on the stage—was produced (Feb. 17, 1773). Great effect was given to this play by the introduction of soldiers from the barracks, sailors from the king's ships in port, with artillery, boats, etc. In January of that year Francis Mentges, who became an officer in the United States service during the Revolution, made his first appearance as a dancer, under the name of Monsieur Francis, at the Southwark Theatre. The company was again at the theatre in November, 1773, but the season only lasted two weeks. Mrs. Douglass died, and the company left the city.

The troublous times had come, and the momentous questions which filled the public mind left little room for any thoughts of amusements. Among the earliest resolutions passed by the Provincial Congress when it assembled, in September, 1774, was the following:

"That we will discourage every species of extravagance and dissipation, especially horse-racing, and all kinds of gaming, cock-fighting, exhibition of shows, plays, and other expensive diversions and entertainments."

When the company arrived, in October, they had nothing to do but to re-embark, which they did, going to the West Indies. The only performance at the theatre that season was on the 19th of September, when the "Lecture on Heads" and the recitation of "Bucks have at ye all," were given by Mr. Goodman, of the American Company, and Mr. Allen, of the Theatre Royal, Edinburgh. Mr. Goodman was a young man, who, after reading law for some time with Mr. Ross, had felt an irresistible vocation for the stage, and had joined the American Company, probably in 1770 or 1772.

The Southwark Theatre remained closed until it was opened by the British officers during their occupation of the city in 1777–78. These amateur performers gave regular plays, for which tickets of admission were duly sold, the proceeds going to the widows and orphan children of the soldiers. The ill-fated Maj. André and Capt. Delancy painted the scenes and other decorations. The curtain, representing a waterfall scene, the work of young André, remained in use until the theatre was burnt down, May 9, 1823. After the return of the Continental Congress, a company of actors, whose names are not now known, gave some performances at the Southwark Theatre, in September and October, 1778. Congress, at this time, passed a resolution prohibiting "any person holding an office under the United States" from attending play-houses and theatrical entertainments, and in March, 1779, the Legislature of Pennsylvania passed a new act upon vice and immorality, in which was incorporated a provision against theatrical performances and shows of every kind. Various efforts were made during the succeeding years to have this provision repealed, but with little success. Lewis Hallam, with the old American Company, was very near obtaining a repeal during the session of 1784–85, but eventually failed. He then opened the theatre on the 1st of March, 1785, for miscellaneous entertainments and singing. Growing bolder, he gave, at a later period of the year, exhibitions or readings of scenes from plays.

Hallam was assisted by Mr. and Mrs. Allen, of the old American Company, who aided in recitations and songs, John Durang, a native of Lancaster, who was popular as a dancer, and Charles Busselot, formerly an officer of the French army. The entertainments were recitations, scenes from plays, pantomimes, songs, and scenic illusions, accompanied by mechanical effects. The entertainments were carried on till the 29th of July.

Notwithstanding the determination of the Assembly to prohibit theatrical exhibitions, the indefatiga-

Google

ble Hallam always found some new subterfuge by means of which he and his company could appear before the public without incurring the penalty of the law. Thus, in June, 1787, on their return from New York, where they had been performing, they opened at the Southwark, with a "Concert, vocal and instrumental," in which was introduced "The Grateful Ward; or, the Pupil in Love," and the "musical entertainment" of "The Poor Soldier." The theatre was designated in the bills as the "Opera-House, Southwark." This entertainment was for the relief of the American captives in Algiers.

Hallam and John Henry, who were now partners, continued the struggle, petitioning year after year for authority to open a new theatre, and for the repeal of the law against theatrical exhibitions, in the mean time evading that law by giving operas and musical pieces and occasionally plays, disguised under the title of "Lectures." Thus, "The Gamester" was announced as a "serious and moral lecture, in five parts, on the vice of gaming," while "Hamlet" was introduced as "a moral and instructive tale, called 'Filial Piety Exemplified in the History of the Prince of Denmark.'" The contest came at last to a crisis in 1789, when a petition, signed by nineteen hundred citizens, asking the repeal of the prohibitory provision relating to theatres, was presented to the Legislature. The religious community took the alarm. A remonstrance against the repeal of the law, signed by three thousand three hundred and ten persons, was taken to the Assembly by a committee, headed by all the ministers of the gospel of the Protestant sects in the city, viz., Right Rev. Bishop White, Rev. George Duffield, Rev. William Rogers, Rev. Henry Helmuth, Rev. John Meder, Rev. Joseph Pilmore, Rev. Ashbel Green, and several elders of the Society of Friends.

Counter petitions were immediately gotten up by the friends of the theatre, the proceedings on their part being conducted by a society called "The Dramatic Association," for whom Gen. Walter Stewart, Dr. Robert Bass, Dr. John Redman, Maj. Moore, John Barclay, William Temple Franklin, Jacob Barge, and William West, acted as a committee.

The newspapers, as might be expected, discussed the question at length, and every means was used to arrive at a true expression of public opinion. When the question came up for final settlement, it was found that six thousand citizens had signed the petitions in favor of the theatre, and four thousand against it. The restrictive portion of the act was accordingly repealed, and an act was passed authorizing licenses to be issued for theatrical entertainments for three years, and subjecting unauthorized exhibitions to a fine of two hundred pounds, so that improper or scandalous plays should not be performed.

Hallam & Henry opened the Southwark Theatre on the 6th of January, 1790, with "The Rivals" and "The Critic." Their company consisted of Ryan, Vaughan, Lake, May, Harper, Wignell, Wools, Head, Biddell, Robinson, John Durang, Gay, Hallam, and Henry; Mrs. Wools, Mrs. Henry, Miss Took (afterward Mrs. Hallam), Mrs. Hamilton, and Mrs. Harper. Mr. Kenna, Mrs. Kenna, with Master and Miss Kenna, arrived from London during the season, and strengthened the company. In December, 1790, when they reopened, some changes had taken place in this list of performers. Four American plays were produced that season: Dunlap's "American Shandyism," Trumbull's "Widow of Malabar," "Constitutional Follies," a comedy, by Mr. Robinson, a member of the company, and "The Recess," a translation and adaptation by a citizen of Philadelphia, name unknown. The theatre was fashionable, and the return of Congress to Philadelphia insured a good attendance. The season was unusually brilliant.

Charles Durang, in his "History of the Philadelphia Stage," says,—

"The east stage-box in the South Street Theatre was fitted up expressly for the reception of Gen. Washington. Over the front of the box was the United States coat of arms. Red drapery was gracefully festooned in the interior and about the exterior. The seats and front were cushioned. Mr. Wignell, in a full dress of black, hair powdered and adjusted to the formal fashion of the day, with two silver candlesticks and wax candles, would thus await the general's arrival at the box-door entrance, and, with great refinement of address and courtly manners, conduct this best of public men and suite to his box. A guard of the military attended. A soldier was generally posted at each stage-door, and four were posted in the gallery, assisted by the high constable of the city and other police officers, to preserve something like decorum among the sons of social liberty, who, as Lingo says, in speaking of American notions of independence, 'The very babes, nursing on their mothers' laps, are fed with liberty and—pap!'"

Wignell withdrew from the company that year, and Henry went to England to engage new actors. He brought back John Hodgkinson and wife, the former a dashing light comedian and his wife a lively singing actress, Mrs. and Miss Brett (the latter afterward Mrs. King), Mrs. Pownell (celebrated on the London stage for many years as Mrs. Wrighton), Mr. King, Samuel and James West, Prigmore, Chambers (vocalist), Luke Robbins (actor and scene-painter), and Floar (an ingenious machinist and propertyman).

The firm of Hallam & Henry was dissolved in 1793, and Hallam formed a partnership with Hodgkinson for the season of 1794. Among the attractions presented were the celebrated tragic actress, Mrs. Melmoth, the popular dancer and pantomimist, Monsieur Quesnet (already spoken of in these pages as a successful dancing-master), and the beautiful Madame Gardé, a French *danseuse* of merited reputation.

This was the last season of the old Southwark or "American Theatre" as a fashionable theatre. Hallam & Hodgkinson left Philadelphia for New York. They felt that the old building on South Street had had its halcyon days, and could not compete with a rival which offered the public vastly superior accommodations and elegant improvements until then undreamt of. They were wise, for from

that time the popularity of the Southwark Theatre gradually faded away before the rising glory of the Chestnut Street Theatre. It could scarcely have been otherwise; the old theatre, according to the reminiscences of "Lang Syne," was "an ugly, ill-contrived affair outside and inside; the stage lighted by plain oil-lamps without glasses. The view from the boxes was intercepted by large square wooden pillars supporting the upper tier and roof. It was contended by many at the time that the front bench in the gallery was the best seat in the house for a fair view of the whole stage." Such was the place where the most brilliant array of fashion had assembled during a quarter of a century. The new theatre in Chestnut Street was fitted up in the interior with two rows of boxes and a gallery above, supported by fluted Corinthian columns highly gilt, a crimson ribbon twisted from the base to the capital. The tops of the boxes were decorated with crimson drapery. The panels were of pale-rose color, adorned with gilding.

So the name of Hallam, which had been connected with theatrical affairs for the last forty years, disappeared from the boards. Yet it has remained indelibly written in our annals, for if the elder Hallam be not entitled to the appellation, "Father of the American Stage," conferred upon him by Dunlap, he has an undisputed right to that of "Founder of the Philadelphia Stage." His son continued his work and gave us the best interpretations of the old English drama, now forsaken for the clumsy adaptations of French pieces by modern playwrights, who have discovered that it is easier to imitate than to create, and—it pays better.

The old Southwark, after this, ceased to have regular seasons, but it was opened from time to time to the performances of transient companies, amateurs, or temporary combinations of seceders from different companies and actors out of work. In the spring of 1800 "The Orphans" and "The Irish Widow" were played at this theatre by an association of amateurs, called the Thespian Society. John Durang and his family, assisted by a few others, occupied the theatre in the summer months following. In August, 1801, a portion of the Chestnut Street Theatre Company announced the opening of a summer season at the South Street Theatre. Almost simultaneously with this announcement there appeared one by Messrs. Barrett, Placide & Robertson, who, singularly enough, had also engaged the theatre. The two companies, instead of quarreling over the possession of the stage, very wisely agreed to join their forces,—an advantageous combination which increased the chances of securing good audiences, for while the Chestnut Street actors were prepared for tragedy, high comedy, and English opera, their new associates were particularly strong in recitations, dancing, and pantomime, and they could boast of having in their ranks "that wonder of the world, the Antipodean Whirligig," Mr. Robertson, "late from London." Robertson was a great attraction, and thousands viewed with never-ceasing wonder his great whirling feat. He appeared with his head protected by a sort of metallic cap, lined inside with felt, and mounting a strong table, the legs of which were made fast to the floor, he was fixed head downward in the centre. He immediately began a rotary motion of his body, increasing in rapidity until he looked more like a piece of machinery than like a man. "Indeed," says Durang, "he was so very rapid that you could not observe by the eye his figure; you could only discern a perpendicular object like the axle of a wheel, going around with immense rapidity." Sometimes he would have fireworks attached to his heels and other parts of his person. Placide performed the extraordinary feat of playing the fiddle with the bow in his mouth, the instrument being held behind his back and over his head. There was no lack of talent in the dramatic company, which counted among its members Mr. Fullerton, from the Theatre Royal, Liverpool; William B. Wood, Cain, Francis, Warren, Blissett, Prigmore, L'Estrange, Mrs. Snowden, and Mrs. Shaw. During the season "The Battle of Bunker Hill; or, the Death of Gen. Warren," was played in very good style. In July, 1802, another company, formed from the Chestnut Street actors, had a short season at the South Street Theatre. Among the plays which they brought out was "The Federal Oath; or, the Independence of 1776," a pantomimical sketch, interspersed with songs. In this troupe were Warren, Wood, Cain, Bernard, Usher, Blissett, Francis, Milbourne, Miss Westray, Mrs. Jones, Misses Arnold, K. Solomon, Hunt, Screven, and others.

In the month of July, 1803, Mr. McGinnis, under the title of "A Theatric Lounge," opened a miscellaneous entertainment, consisting of songs and recitations and scenes from "The Mountaineers,"—*Octavian*, Mr. McGinnis. After an unsuccessful experiment, in August, at a place opposite the Lombardy Garden, McGinnis returned to the old theatre, and brought out "The Virgin Unmasked," the characters in which were taken by McGinnis, Durang, Parsons, Shaefer, "a gentleman," and Mrs. Brumley.

During the summer of 1804 there was a short season at the old theatre by the Chestnut Street Theatre Company. On the 4th of July was produced a piece written by James Workman, entitled "Liberty in Louisiana." Mr. Wood delivered an oration "in honor of Louisiana and the United States." The house was opened for a single night in October, when Mr. Story, from the London and Charleston theatres, presented "The Point of Honor" and "The Spoiled Child."

The Manfredi family opened this theatre in February, 1806, and gave a series of tight-rope performances, ballets, pantomimes, etc. They were succeeded by a portion of the Chestnut Street Company, among which were Mr. and Mrs. Poe, the latter formerly Miss Arnold. It was then and there Spencer H.

Cone made his first appearance on any stage. He played with much success *Achmet*, in "Barbarossa." Cone became a favorite afterward at the Chestnut Street Theatre, where he played during several seasons. In the midst of a successful career he suddenly left the stage and went to Baltimore, where he became associate editor of *The American*, exchanged his quill for a sword when the war with Great Britain broke out, and served as a captain of artillery; returned to the stage after the restoration of peace, and again left it, finally this time, to become a minister of the Baptist Church, in which last profession he continued until the time of his death. Kate Claxton, one of the most deservedly popular actresses of a later time, is a granddaughter of Spencer H. Cone.

In 1807 the first French dramatic company that had ever appeared in Philadelphia opened at the South Street Theatre for a short season, playing varieties and vaudevilles. Their advertisements show that they performed several good pieces of the old French *répertoire*, which required actors of a fair average of talent. "Le Directeur dans l'Embarras" (The Perplexed Manager), "L'Avocat Pathelin," by Palaprat, "On fait ce qu'on Peut, en non pas ce qu'on Veut," "Heureusement," by Rochon de Chabannes, "Le Sourd, ou l'Auberge Pleine," and several lighter pieces and farces were produced. In March, Manfredi came back to the old theatre, and the French company removed to Sicard's ball-room. Daudet, one of the principal actors, was the manager. His name and that of Monsieur Bridan are the only ones that have come down to us.

In the summer of that year John Durang opened at the old theatre with a company of which his three sons, Augustus F., Ferdinand, and Charles, and his daughters, Catharine and Charlotte, formed part, with Baillie, Taylor, Drummond, Wright, and Miss M. Mullen. Old Hallam, who owned the theatre, played occasionally. This company was considerably strengthened in September by the accession of Giles Leonard Barrett, Wilmot, McKenzie, Johnson, Williams, Yeates, George H. Barrett, Mrs. Wilmot, and others. They brought out several heavy pieces.

The name of Durang has occurred several times in these pages, and it is fit that it should form the closing chapter of the history of the old South Street or Southwark Theatre, with which it was so closely connected. John Durang was connected with Hallam's company ever since 1785. Engaged at first for his merits as a dancer, he became a useful member of the dramatic company. His children were brought up to the stage. One of his sons, Charles Durang, was born in Philadelphia, and appeared for the first time in a ballet in 1803. He was then only nine years old. He was destined to perpetuate the name of Durang in the annals of the Philadelphia stage long after his father had gone to rest in the silent city of the dead, near his old manager and friend, Hallam. Charles Durang, after being an actor, ballet-master, and manager, lived to write the history of that stage[1] of which his father had been one of the pioneers, and on which he himself had passed his life from boyhood through to manhood and old age, renouncing it only when his infirmities prevented his further prosecution of his profession. The "stars" of more than half a century had been his associates, and he had witnessed the first efforts of actors and actresses since famous. Who better than he could write a truthful, interesting narrative of reminiscences of the stage? He had played his part honorably on another stage beside that consecrated to Melpomene and Thalia: when the last war broke out between England and the United States he flew to the defense of his native land, and was one of the little garrison which guarded the six-gun battery at the battle of North Point, Md. This fight was immortalized by Francis S. Key's glorious song of "The Star-Spangled Banner," which was sung for the first time in public by Ferdinand Durang, in a building adjoining the Holliday Street Theatre, Baltimore, Charles Durang leading the chorus.

On the 10th of October, 1807, notice was given in the newspapers that there would be a performance of "Douglas" at the South Street Theatre, "to bring forward a boy of thirteen, who has been for some time past the admiration of New York, Charleston, and Virginia, under the title of the 'Infant American Roscius.'" Another "Infant Roscius," said to have been born in Walnut Street, Philadelphia, Jan. 18, 1802, and consequently only six years old, was brought forward in 1808. "Having found it impossible to get a room for exhibition," this young prodigy, it was announced, would "wait on families in their houses and give recitations." John Howard Payne was also called the "American Roscius," and he has been erroneously identified by some with the first "Infant American Roscius" of 1807. Payne, according to the biographical sketches of him, made his first appearance at the Park Theatre, New York, Feb. 26, 1809, as *Young Norval*. He was then sixteen years old. During the spring of 1808 the old theatre was "opened for public amusement." The performances were legerdemain, balancing, ventriloquism, imitations, etc. The place must have deteriorated when the manager found it necessary to announce that "smoking cigars is not allowed in the theatre."

An amateur association gave performances at various times in 1812 and afterward at the old theatre. This society was known as "The Moretonians," and took its name from John Pollard Moreton, a young American actor of merit, who was a native of Saratoga, N. Y. He had been in India and England, and was brought over by Wignell to be a member of the first Chestnut Street Theatre Company in 1793. He made his first appearance in Philadelphia in 1794, and died in 1798. No public notice was given of these amateur performances.

[1] History of the Philadelphia Stage, by Charles Durang.

In 1812, Mr. Beaumont, who had been manager of the Edinburgh Theatre, brought out his wife's nieces, the Misses Abercrombie, two fine dancers. Failing to negotiate with Warren & Wood, managers of the Chestnut Street Theatre, for their appearance, he organized a company and opened the old South Street Theatre. Beaumont had with him, besides his wife and two nieces, Mrs. Morris, Mr. Fell, Jr., Mr. Fisher, and James Abercrombie. During the season several performers of note joined this company, none of whom had ever played in Philadelphia. Among them were Mrs. Goldson, of the Haymarket Theatre, London; Mrs. Riddle, mother of Cordelia and Eliza Riddle; Mr. William Jones, afterward one of the managers of the Arch Street Theatre; and Joseph Hutton, schoolmaster and playwright. The ballet pantomime of "Little Red Riding-Hood" was produced for the first time in America by this company.

The Abercrombie sisters created such a *furor* by their admirable dancing that the managers of the Chestnut Street Theatre found it their interest to offer them an engagement, and the South Street Theatre season came to a close on the 30th of January, 1813. "The Theatrical Commonwealth," a company composed of seceders from various theatres, and which had been organized in New York by Twaits, opened the old place on the 13th of April, 1813. The members of this company were Messrs. Clark, Burke, Caulfield, and Anderson; Mesdames Burke and Clark; Miss Clark, of the Charleston Theatre; Messrs. Twaits, Jacobs, Fisher, Hathwell, and Fennell, Jr.; Mrs. Twaits, and Mrs. Goldson. Mr. Leigh Waring and old Mrs. Morris soon joined the company.

Mrs. Burke (afterward Mrs. Joseph Jefferson) made her first appearance in Philadelphia as *Leonora*, in "The Padlock." This lady, the mother of the two comedians so eminent in later times, Charles Burke and "Joe" Jefferson,[1] was a daughter of Monsieur Thomas, a planter of San Domingo.

Probably the last performance at this old theatre was on the 7th of June, 1817, when Higgins and Bernard, who had opened it for a few nights, after it had remained unoccupied some years, brought out "Manuel," a tragedy, by Rev. C. R. Maturin, the author of "Bertram." The old South Street Theatre was destroyed by fire on the 9th of May, 1821. The event caused little excitement; the very existence of the old place was almost forgotten,—*sic transit gloria mundi.*

An old dwelling-house on Apollo Street, running from South to Shippen, between Fourth and Fifth Streets, was fitted up in 1811, and opened as "The Apollo Street Theatre." It was an unfortunate undertaking, although the house had been prettily fitted up and arranged, the scenery well painted, and the company good, being composed of members of the Chestnut and Walnut Street Theatres. Among them were Webster (a vocalist of some reputation), Cross, Lindsley, Anderson, Morgan, Lucas, Legg, old Mrs. Morris, Mrs. Bray (formerly Miss McMullin), Miss Williams, Mrs. Roberts, and Mrs. Sweet. On the opening night an address, written for the occasion by a gentleman of Philadelphia, was spoken by Mr. Webster. Mr. and Mrs. Wilmot joined the company after the season commenced, but did not remain long. John Hodgkinson's play of "The Man of Fortitude" was performed there on the 19th of July, shortly after which the Apollo Street Theatre closed its doors forever.

In the year 1791 the Kenna family, which had performed at the South Street Theatre for a time, opened a theatre in the Northern Liberties, on Front Street, near Pool's bridge, and not far from the Noah's Ark Tavern. Being subsequently reinforced by some actors out of employment, they took the name of "The New American Company," and played tragedies and light pieces. Doneganni's troupe of tumblers and posturers, and Monsieur De Moulin's company of dancers afterward performed at this theatre, closing finally in May, 1792.

The great event in dramatic circles in 1794 was the opening of the new theatre on Chestnut Street, above Sixth, on the 17th of February. When Thomas Wignell separated from Hallam, at the close of the season of 1790, he associated himself with Hugh Reinagle, a musician, and the two determined to establish a new theatre. While prepared to supply the necessary funds to engage the best performers from Europe and to procure scenery, dresses, and everything concerning the internal arrangements of the theatre, they required assistance to purchase the ground and to erect the necessary buildings. They proposed, therefore, to create a stock of sixty shares, at three hundred dollars each share. Six per cent. interest and a season ticket to each shareholder were the inducements offered. Ten shares were to be redeemed and paid off annually. The stock was readily taken up by the liberal patrons of the drama,[2] and the building was

[1] There have been three actors of that name. The first Joseph Jefferson, a great favorite in his time and one of the most valuable members of the Chestnut Street Theatre company, was not only a great comic actor of versatile talent, but a fine singer. His son, Joseph the second, who played at the same theatre, was an actor of ordinary merit, but an artist and scene-painter. He married Mrs. Burke, and was the father of Joe Jefferson, third of the name—so well known for his personation of "Rip Van Winkle"—who has inherited his grandfather's genius, and moves the present generation from tears to laughter with a single glance or a change of intonation,—irresistibly comic, yet never vulgar or coarse.

[2] The following were the original subscribers, each for one share: Robert Morris, Henry Hill, J. Swanwick, J. Swanwick (for W. Mackenzie), Walter Stewart, Mark Prager, Jr., J. L. (for C. Febiger), Joseph Rivari, Matthew McConnell, Samuel Anderson, Robert Bass, Pearson Hunt, Samuel Hays, William Bingham, C. Richmond, James Lyle, William Cramond, Edward Tilghman, John Travis, James Cramond, John Ashley, Thomas M. Taylor, George Padst, Robert S. Bickley, John Vaughan, Thomas Fitzsimons, Michael Prager, John Duffield, Richard Potter, John Brown, Thomas M. Willing, Matthew Saddler, Robert Patton, John Leamy, Robert Rainey, David Cay (for Andrew Clow), David Cay, Thomas Rushton, James Glentworth, John Lawrence, Samuel Anderson (for a friend), John Mitchell, John Dunlap, Isaac Franks,

commenced in the year 1791. The corner-stone was laid, with Masonic ceremonies, by Mr. Reinagle, who was a master mason. Jared Ingersoll delivered an address on the occasion.

The plan of the building, which was a perfect copy of the Bath Theatre, was furnished by Mr. Richards, of London, a brother-in-law of Mr. Wignell. The theatre had so far progressed in February, 1793, as to permit of its being opened to the public for one night, when a grand concert, vocal and instrumental, was given. The interior decorations were finished, and they excited the admiration of the spectators, but, outside, the building was far from presenting the fine appearance it did some years later, when the colonnade was added. The following description, taken from "The Picture of Philadelphia," by James Mease, M.D., will give a correct idea of a structure which was acknowledged to be the finest theatre in America at the time:

"The theatre on Chestnut near Sixth Street was founded in the year 1791; and enlarged and improved, as it now stands, in 1805. It presents a handsome front on Chestnut Street of ninety feet, including two wings of fifteen feet each. The centre building is ornamented with two spirited and well-executed figures of tragedy and comedy (by Rush) on each side of a great Venetian window, over which, in two circular tablets, are emblematical insignia. The top of this centre building is crowned by a pediment. The wings, opened by large windows, recede a little from the front above, but project below, twelve feet to the line of the street, faced with marble; these pavilions are decorated by emblematic figures in tablets, and connected together by a colonnade of ten fancy Corinthian columns. The extreme depth of the theatre is one hundred and thirty-four feet; the interior is judiciously and handsomely arranged. In the wings are the green-rooms, dressing-rooms, scene-rooms, etc. Through the projecting wings or pavilions, you pass to the stairs of the galleries; under the colonnade, the left-hand door leads to the pit, but to the boxes you ascend in front by a flight of marble steps, enter the lobby, and pass to the corridors which communicate with all the boxes. Those in front of the stage are disposed in form of an amphitheatre; the seats of the whole, with those of the pit and gallery, are arranged so as to give the spectator the greatest advantages. The stage occupies a front between the boxes of thirty-six feet, and runs back upwards of seventy-one feet. Over the stage, occupying part of the entablature and plafond of the front scene, is an emblematic representation of America encouraging the drama, under which are the words, 'For useful mirth and salutary woe.'"

This theatre was computed to hold about two thousand persons, of which number nine hundred could be accommodated in the boxes.

The company was very strong, both as to number

INTERIOR FIRST CHESTNUT STREET THEATRE, 1794.

and combination of talent. Wignell went to England in 1796, to replace some of his actors who had left him. Among those whom he engaged were Thomas A. Cooper, afterward famous as a tragedian, and William Warren, of equal merit as a comedian. Mr. and Mrs. Byrne, the dancers, also came with him. John A. Bernard, already in this country, and who had acquired celebrity in light comedy, was engaged by the manager on his return. Wignell died in 1803, after seeing his enterprise a continued success. His widow entered into partnership with Reinagle, and Warren and Wood became the stage managers.

Joseph Jefferson, the elder, made his first appearance in Philadelphia at the commencement of the season of 1803, in the characters of *Frank Oatland* and *Dr. Lenative.*

The melodrama, which for a number of years may be said to have almost driven regular tragedy from the stage, was first introduced in Philadelphia in 1804, when "A Tale of Mystery," by Holcraft, was produced at the Chestnut Street Theatre.

Thomas A. Cooper, whose fame as a tragedian was now well established, came back to the Chestnut in 1804. During the season of 1808–9 he acted twice

a week in New York, and twice a week in Philadelphia. Master John Howard Payne, afterward celebrated as the author of the song "Home, Sweet Home," made his first appearance on the 5th of December, 1809. Durang says of him,—

"His youth, figure, and beauty of features were highly prepossessing. But sixteen years of age, and petite in stature, yet he appeared the epitome of a *Prince Hamlet* in soul and manner. His face beamed with intelligence, and his bearing was of the most courtly mould. He was vigorous with rant; chaste, but not dull. He portrayed all the quick thought, restless disposition, and infirm philosophy of *Hamlet* with great judgment and tact."

Reinagle died in Baltimore Sept. 21, 1809. A partnership was then formed between Warren—who had married the Widow Wignell—and Wood. The firm of Warren & Wood continued until 1826.

In 1811 the theatre-goers of Philadelphia were thrown into a fever of excitement, such as had never been known before, by the arrival of George Frederick Cooke, the English tragedian. He was engaged for twelve nights, and made his first appearance, on the 25th of March, as *Richard III.* There were no reserved seats in those days, and it was not an unusual thing to see a servant, or some one hired for the purpose, rush into the house as soon as he could gain admittance, drop into some desirable seat, and occupy it until his master or employer came to claim it. On the occasion of Cooke's first appearance, which was on a Monday, such precautionary measures were of little avail. As early as Sunday evening—as related by Charles R. Leslie in his "Autobiography"—the steps of the theatre were covered with men who had come prepared to spend the night there, that they might have the first chance of taking places in the boxes. Some actually took off their hats and put on nightcaps. When the doors were opened at ten o'clock, Monday morning, the street in front of the theatre was impassable. The rush was tremendous. Men literally fought their way through, coats were torn off the backs of their owners, hats knocked off and mashed; one fellow, swinging himself up by means of the iron bracket of a lamp, ran over the heads of the crowd into the theatre. By evening the crowd that besieged the doors was so dense and tumultuous that it was evident ticket-holders, and especially ladies, could not make their way through it without danger.

"A placard was therefore displayed stating that all persons who had tickets would be admitted at the stage-door, before the front doors were opened. This notice soon drew such a crowd to the back of the theatre that when Cooke arrived he could not get in. He was on foot, with Dunlap, one of the New York managers, and he was obliged to make himself known before he could be got through the press. 'I am like the man going to be hanged,' he said, 'who told the crowd they would have no fun unless they made way for him.'"

In *The Cynic*, by "Growler Gruff," the following notice of Cooke's acting appeared in 1812:

"His *Richard III.* was received with shouts. His death-scene was truly appalling. As he lifted his left arm over his forehead, and gave the last withering look at *Richmond*—the expression of his eyes as they for a moment vividly rolled, then became fixedly glazed, and all vision seemed gone—was peculiar, and thrilled the audience. His style was quiet, but astonishingly impressive. You felt everything he did. The face fixed your attention at once. The words that followed riveted your attention, and absorbed all objects else. Your mind dwelt on naught beside. You did not see Cooke. You only saw the character. He never lost the feeling of his part. The coloring of the passion was preserved in graphic tints to the end. We think that Kean bottomed much of his *Glos'ter* on that of Cooke. The basis of his acting bore a strong resemblance. But Kean made more detached points. In action he was more of the melodramatic school. Their performances were alike, yet distinct."

The receipts on Cooke's first night were $1348.50. The highest receipts during his engagement were $1434; the lowest, $778. He was re-engaged for four nights, with as good results. In the succeeding month Cooper and Cooke played together. The highest receipts were, on the first night, $1604; the lowest, $1183. These were large receipts when the prices were,—Box, $1; pit, 75 cents; gallery, 50 cents.

Durang says that "the performance of 'Othello' was the most magnificent effort ever witnessed on the American boards. It never has been surpassed to our recollection."

In the season of 1812–13, John Duff made his first appearance in Philadelphia; he was then a handsome young man, scarcely over twenty-one years of age; his wife (Miss Dyke), a sister of the wife of the poet, Thomas Moore, was about eighteen, and very beautiful. She played light parts. In her more mature womanhood she revealed herself as one of the finest tragic actresses that ever trod the American stage. In the same season Holman and his daughter, Miss Holman, were among the Chestnut Street stars.

James N. Barker's play of "Marmion" was brought out during the following season, with Duff as *Marmion*. The feeling toward Great Britain was not very friendly at that time, for all saw impending war in the difficulties then existing between the two countries. Resistance to England formed the theme of "Marmion," and the sentiments expressed by the Scots found an echo in the breasts of the Americans. Hence an incident, as related by Durang, which occurred on the first night the piece was played. The scene was between *King James* and *Marmion*. Gen. John Barker, the father of the author, was seated in the stage box. *King James* replies to *Marmion* as follows:

"My lord! my lord! under such injuries,
How shall a free and gallant nation act?
Still lay its sovereignty at England's feet—
Still basely ask a boon from England's bounty—
Still vainly hope redress from England's justice?
No! by our martyred fathers' memories.
The land may sink, but, like a glorious wreck,
'Twill keep its colors flying to the last!"

Old Mr. Barker, swinging his cane over his head and rising up in the box, exclaimed, "No, sir! no! We'll nail them to the mast, and sink with the Stars and Stripes before we'll yield!" This patriotic effusion brought the audience to their feet, and the shouts

and applause continued for upward of ten minutes. When, at last, the actors could proceed with the scene, every patriotic sentiment they uttered was received with rounds of applause. "Marmion" became a very popular piece which never failed to draw a good house.

The success of George Frederick Cooke had awakened a desire among English actors of note to cross the ocean in order to win the plaudits of American audiences and, what was still more acceptable, a respectable pile of American dollars. This laudable desire has been perpetuated since, and the parabolic course of the "stars" which shoot annually from the theatrical heavens of the Old World is invariably directed to the United States. Success is not always certain, however, as Mr. Betterton, of the Covent Garden Theatre, discovered in 1817, when he came to the Chestnut. He had been, at one time, considered the first among great English actors, but he failed to make an impression on the Philadelphians.

The Chestnut Street company counted enough able singers among its members to give vocalists a good support, so the operas gave as much satisfaction as the comedies. Henry Wallack made his first appearance as *Don Juan*, in "The Libertine," a musical play adapted to the music of Mozart's opera, in December, 1818. Mr. Jefferson, as *Leporello*, sustained him with excellent effect. James Wallack appeared as *Rolla* on the 8th of January, 1819. He played *Macbeth*, *Hamlet*, *Shylock*, and some melodramas during his engagement, and created great excitement. Robert C. Maywood, of the Theatre Royal, Drury Lane, followed the Wallacks, and played with success the first-class parts of *Shylock*, *Othello*, and others. Mrs. Bartley, a tragic actress of great reputation in England, played a two weeks' engagement in February. Her husband, who accompanied her, played comedy parts, such as *Falstaff*, *Puff*, etc. The season closed on the 13th of April, with John Howard Payne's tragedy of "Brutus." In October, 1819, Arthur Keene, a lively young Irishman, with a very fine voice, but utterly ignorant of musical notes, commenced an engagement and played in several musical pieces.

This season, which closed on the 27th of March, 1820, was the last of the fine theatre erected by Wignell & Reinagle. The company had gone to Baltimore, when, on Easter Sunday night, April 2d, the building was totally destroyed by fire. An old eight-day clock, an antique mirror, and the old sick-chair which was used in the business of the stage, were the only articles saved from the flames. The wardrobe destroyed included the principal part of Lord Barrymore's private wardrobe, court costumes, and costly dresses. The beautiful drop-curtain, which was the admiration of every artist and connoisseur, was lost. It was the work of Wignell's brother-in-law, the celebrated Richards, and was commonly called "Richard's Drop." The subject was a Grecian triumphal arch, with a most exquisitely-wrought Italian sky in the perspective, relieved with variegated foliage.

The burnt-out company went to the Olympic Theatre in the fall of 1820. Meanwhile the stockholders adopted means to have the Chestnut Street Theatre rebuilt without delay. They created new stock, at six hundred dollars per share, which was readily taken, and they contracted with the able architect, William Strickland, for the construction of the new building. On the 2d of December, 1822, the new theatre opened with "The School for Scandal" and "The Wandering Boys; or, the Castle of Olival," with a very strong cast.

There was some criticism upon the design of the theatre, particularly the front, which was said to show architectural incongruity. Thus said "Microsmus Philadelphicus,"—

"Its columns Corinthian, in Italy sculptured,
Attest how the arts 'mongst ourselves have been cultured;
Fluted off and got up without flaw or disaster,
What a shame they omitted to flute the pilaster!
Their arrangement is neat, and supporting—but, rot it!—
A pediment, only the builder forgot it!"

The niches in the wings were decorated with the statues of Tragedy and Comedy, cut by Rush, which were in front of the first theatre when destroyed, but which were saved from the wreck. They had much spirit and expression.[1]

Junius Brutus Booth made his first appearance at this theatre on the 17th of February, 1823. Little was known about him; he was from the Royal Drury Lane Theatre, he had had a contest in London with Edmund Kean, he had come to America and had played an engagement in Richmond, Va.,—that was all. The Philadelphia public, which had applauded so many stars that had come heralded by the trumpets of fame, but which also had shown discernment in not always accepting as "great" all who came thus heralded, failed to discover the mighty power of this unknown man, who was soon to be recognized, in Philadelphia and elsewhere, as one of the most successful tragedians on the American stage.

Durang says of Booth's first engagement,—

"Junius Brutus Booth made his first bow to a Philadelphia audience with very poor prospects of success. Nobody knew anything about him, nor did anybody seem to care for him. His reception was extremely lukewarm. The house was poor, the applause was poorer. A few saw merit. The verdict of his jury was 'No go!' During his engagement he played *Richard III.*, with which he opened, *Sir Edward Mortimer*, *Sir Giles Overreach*, *King Lear*, *Reuben Glenroy*, *Octavian*, and *Orestes*, in 'The Distressed Mother.' These he played with his usual excellence, winning moderate applause from those who were present, but not drawing large houses, such as were due to his merit and great excellence."

[1] The niches not being very deep, Mr. Rush was compelled to treat the figures somewhat as if they were in high relief. They showed from the wall of the niche the front and about three-fourths of the body. The backs could not be finished, and the sculptures, which were of wood, actually presented nothing but a shell. But so skillfully and effectively was the work done that the spectator, who was ignorant of the device, could not, from the view taken from the street, suppose that the figures were not solid and complete. When the theatre was taken down, in 1854, these masks were sold to Edwin Forrest, and were placed by him in his library. Since his death they have been removed to the Actors' Home, near Holmesburg.

The day was not distant, however, when the great tragedian was to conquer this indifference of the public, and change it to a lasting admiration of his genius. The season of 1823–24 commenced on the 2d of December, Booth going through an engagement with a moderate degree of success. But in January, 1824, a performance was to be given in aid of a fund to assist the Greeks in their war against the Turks. The matter was under the control of a committee of leading citizens. Booth volunteered his services to play *Hamlet*. They were accepted. Sympathy with the Greeks was general, and in consequence the house was crowded by an unusually intelligent audience, many coming for the sake of the Greeks, who had never seen Booth, and did not care who played *Hamlet*. The effect produced by the wonderful rendering of this part, one of the most difficult among the creations of Shakespeare, can only be described by the word "astonishment." The spectators were not prepared for this sudden revelation of genius; it burst upon them and carried them by storm. When the play ended there was neither misgiving nor doubt: Junius Brutus Booth was recognized as a tragedian without superior. Henceforth he could always be sure of a full house and enthusiastic audience. The public made ample amends for its past indifference.[1]

Previous to this victory of Booth's, that is, in February and March, 1823, that most humorous of comedians, Charles Mathews, played seventeen nights to crowded houses. He had just concluded a long and successful engagement in New York, and so many anecdotes of his wit and mimic powers had appeared in the newspapers that every one was anxious to hear him. His success was immense. After his départure the English burletta of "Tom and Jerry" was brought out for the first time, Jefferson playing *Bob Logic*.

In January, 1824, Mr. Pearman, an English vocalist, played, with moderate success, an engagement of two weeks, during part of which Vincent De Camp, a brother of Mr. Charles Kemble, acted with him. Conway, a London actor, appeared toward the end of the season; he did not justify the appellation of "great," with which he had been announced. The succeeding season was opened by Booth as *Richard III.* He was followed by Clason, from the Theatre Royal, Drury Lane, but who was a native of New York. Clason displayed no extraordinary ability as a comedian. The event of the season was the production of Von Weber's "Der Freischütz," with the original overture and choruses. The orchestra was doubled in size. The parts, sung by the regular actors of the company, were well rendered, yet "Der Freischütz" did not draw more than four or five nights.

Stanislaus Surin, whose success in the management of the Tivoli Garden has already been noticed, leased a large building, which had been erected for a cotton-factory, on Prune Street between Fifth and Sixth, and fitted it up as a theatre. This house was opened in 1820, under the name of the Winter Tivoli Theatre, and ran two seasons with fair success. The company was very well composed. There were Charles S. Porter, a talented actor, who was afterwards a member of the Chestnut Street Theatre, and at one time manager of the Arch Street Theatre; James H. Caldwell, a fine actor, and a man of uncommon ability, who in after-years became manager of the St. Charles Theatre in New Orleans, and introduced gas into that city, of which he was elected alderman and subsequently mayor; Mrs. Williams, who afterward became the wife of Robert C. Maywood, one of the managers of the Chestnut Street Theatre; Mrs. Riddle, a well-known actress, the mother of Mary and Eliza Riddle, two beautiful girls. Eliza married Joseph M. Field, an actor, who became a humorous writer, and was editor of the *St. Louis Reveille*. The well-known writer, Kate Field, is their daughter. Beside these, there were in the company Messrs. McCleary, Laidley, Bard, Campbell, Thornton, Morrison, Mestayer, Parke, Still, Hall, Bloom, Simpson, Klett, Mesdames Mestayer, Still, Allen, and Miss French. "The Mountain Torrent," a new American drama, by S. B. Judah, of New York, was brought out on the 20th of December, and "The American Captive; or, the Siege of Tivoli," by a gentleman of Boston, was played for the first time April 5, 1821. Mr. Adamson, from the Theatre Royal, Bath, made his first appearance as *Peter*, in "The Stranger," and Mrs. Smith made her first appearance as *Adelgitha*. Among the actors who strengthened the

[1] In 1827 there appeared at the Chestnut Street Theatre a young man by the name of Delarue, who had a peculiar talent for imitating the style of other actors. His most successful imitation was that of Booth, owing to his perfect resemblance with the latter. In size, features, voice, and action he was his perfect counterpart, and the resemblance even went farther, for he was very eccentric. It was rumored, probably with no better foundation for the story than this astonishing feat of nature, that Delarue was Booth's natural son. Rees, in his "Life of Edwin Forrest," tells the following anecdote of Delarue:

"On another occasion, in company with several gentlemen, Forrest visited the 'Castle of St. Angelo.' Originally it was called the Mausoleum of Hadrian, a rounded pyramid of white marble. For a while they stood entranced, so much to see, so much to admire and comment upon. All around them were the traces of former greatness. Rome, with its majestic ruins; Rome, in the solemn grandeur of its churches and palaces; Rome, with its endless treasures; Rome, with its Church of St. Peter's, built at the expense of the whole Roman world; Rome, the glory of modern architecture, loomed up before them. The Pantheon, the most splendid edifice of ancient Rome; the Vatican, the palace of the Pope, all these were more or less visible to the eye as they stood gazing in wonder and awe. In one of the pauses of their conversation a voice came up from behind a ruined column bearing upon its surface the impress of ages, saying, 'Mr. Forrest, have you been to see the ruins of the Coliseum?' Forrest turned around at these words to see from whom they proceeded. There, lying at full length on another pillar, was a young man whom none of the party knew. He went on, 'It is a splendid ruin, sir! They say it held one hundred thousand people.' 'You know me, it seems?' said Forrest. 'Know you? Why, certainly! Don't you remember Delarue? I played Richard III. at the Walnut Street Theatre in imitation of Mr. Booth.' 'What! you here? Get up, man, and let me have a good look at you.' Up jumped the eccentric individual; and as he stood before the group he appeared a fac-simile of the great tragedian he could imitate so admirably."

company the second season were Joseph Hutton, playwright; John Augustus Stone, who afterward wrote the tragedy of "Metamora;" Messrs. Herbert Williams, Bloxton, Sinclair, Klett, Mrs. Higgins, Miss Riddle, and others; Misses C. and K. Durang appeared in fancy dances; Adamson and Stamp sang comic songs. Mr. and Mrs. Pelby joined the company toward the end of the season. Stone brought out "Montrano; or, Who's the Traitor," an original drama of his composition. Louis De Hebrach also produced an original drama, "Oolaita; or, the Indian Heroine."

In 1822, Charles S. Porter assumed control of the Winter Tivoli Theatre, and opened it under the name of the City Theatre. Mr. Porter was stage manager, and in the company were Messrs. Meer, Mestayer, Forbes, Hamilton, Webb, D. Eberle, Irwin, Klett, Mrs. Smith, Mrs. Mestayer, and others. This was not a very successful enterprise. Porter had no ambition to make another trial, and at the end of the season the history of this theatre was closed.

Pepin & Breschard, who had built the circus at the corner of Walnut and Ninth Streets, bought additional ground and enlarged the building in 1811, so as to combine stage and ring performances. The house was opened on the 1st of January, 1812, and called the "Olympic Theatre." On this occasion Mrs. Beaumont, a fine English actress, made her first appearance, supported by Mr. Knox, of the Park Theatre. The theatrical company was good, and the equestrian performances brilliant. The first season was a fair success, but the second was bad and came to a premature ending. Pepin & Breschard had gone heavily in debt to build the theatre, and creditors were pressing. Finally, the whole establishment was sold by the sheriff on the 5th of February, 1813. Pepin & Breschard opened the house once more in the month of August following, for circus performances only. In 1814, Twaits' Commonwealth Company played there a short, unprofitable season. Except for some rope-dancers' exhibitions, the house remained unoccupied until August, 1816, when Pepin & Co. opened it for equestrian, pantomime, and ballet performances. In November, West's splendid circus company, from England, made their appearance at the Olympic. Ferdinand Durang made quite a hit in "Timour the Tartar." In the spring of 1818 the Alexandria and Washington theatrical companies, under Managers James H. Caldwell and James Entwistle, made a coalition with Pepin, and opened the Olympic for the performance of light pieces and dramas in which horses could be used, with occasional variations in the ring. In 1818 a stock-company was formed, at Pepin's suggestion, to purchase the theatre property and make necessary repairs and improvements. One hundred and sixty-nine shares of two hundred dollars were subscribed.[1] The following-named trustees were to hold the property for the benefit of the association: Dr. John Redman Coxe, William Meredith, and Frederick Ravezies. William Meredith was chosen president; Frederick Ravezies, Richard Ashhurst, John R. Neff, John Meany, John Swift, and William Montelius, superintending committee; George Davis, secretary and treasurer.

The season of 1818–19 was not a very profitable one. Among the new performers who appeared this season was Mr. Lamb, of the English Opera-House, London, who was afterward with Coyle (the scene-painter), manager of the Chestnut Street Theatre; John Green, subsequently famous in Irish characters; and John Blair, also an Irish comedian, came out during the season.

The house was not reopened after this until the destruction of the Chestnut Street Theatre, in 1820, led to the leasing of the Olympic by Warren & Wood. The house, refitted and improved by the lessees, was opened on Nov. 10, 1820, as "The Walnut Street Theatre," a name by which it was, except during a brief period, afterward popularly known, although during the several years that Francis C. Wemyss was manager he called it "The American Theatre." A memory forever connected with the Walnut Street Theatre was the appearance upon its boards, during that first season, of the great tragedian of whom America, and more especially Philadelphia, will ever be justly proud. On the 27th of November it was announced that *Young Norval* would be performed "by a young gentleman of this city." His

[1] The whole number of shares subscribed for originally was one hundred and ninety-five. This number was reduced in 1821 to one hundred and sixty-nine, and it was then agreed that the association should continue until the 1st of June, 1828. The following were the shareholders: Richard Ashhurst, Laurence Astolfi, Samuel Allen, John Benners, Peter Bousquet, John Binns, John Breban, John Bernard, John L. Baker, Thomas Bloxton, George E. Blake, Joseph Beylle, John Byerly, Samuel Badger, Thomas Brown, James N. Barker, William Bargh, Richard Bache, Edward Barry, John R. Coxe, Edward D. Corfield, Anthony Chardon, George H. Cooke, William Campbell, Edmund T. Crawley, Isaac P. Cole, Charles Carpenter, Jr., Daniel B. Charpentier, Clement E. Chevalier, Fortune Clapier, John M. Chapron, Robert Desilver, John T. David, Lewis Duval, Simon Dance, Joseph Donath, Louis de la Croix, George Davis, Thomas Desilver, Lewis Desauque, Lewis Desauque, Jr., William Delany, John Dutton, John Ducker, Leonard Englebert, Adolph Ehringhaus, John J. Edwards, Andrew Farionlh, Peter Gaudichauld, Thomas Hope, Wilson Hunt, John Hart, Peter Hutz, Alexander Hampton, George Harrison, William Irwin, John Jackson, John Knox, Ambrose Laumatt, John Leadbeater, James Lyle, Paul Lajus, John Meany, Horatio L. Melcher, Anthony Michel, Jr., Charles Magner, Jacob Martin, Henry Meyers, Charles Mercier, Samuel A. Mitchell, Thomas S. Manning, Robert P. McCulloh, James P. Moore, James Maxwell, James J. R. Malanfant, Richard McKenzie, William McDonough, Louis R. F. Marotti, John U. Meynie, Alexander McCalla, William Montelius, William Meredith, John R. Neff, Stephen F. Nidelet, Matthew Newkirk, Bayse Newcomb, James Nixon, Eleazar Oswald, William A. Peddle, George Pfeiffer, Richard C. Potter, James Potter, Joseph Randall, Frederick Ravesies, John Rea, Richard S. Risley, Joseph Robard, William Renshaw, William W. Smith, John Swift, Frederick Seckle, James W. Sproat, Thomas Sergeant, William T. Stockton, Benjamin Sharpnack, David Seeger, William Short, Joseph Sevelinge, John Sibbet, Mrs. Ann Townes, Anthony Teisseire, John C. Tillinghast, John B. Wallace, Charles C. Watson, Reuben M. Whitney, Robert Welford, Samuel H. Williams, William Woods. The largest number of these subscribers were generally owners of one or two shares. Ann Townes had sixteen shares; Louis R. F. Marotti, ten shares; John R. Neff, ten; Adolph Ehringhaus, six; Richard Ashhurst, six; Richard C. Potter, four; John Swift, four.

performance met with such success that he repeated it on the 2d of December. On the 29th of the same month was presented "Lovers' Vows," altered from Kotzebue by Mrs. Inchbald,—"*Frederick*, by the young gentleman who performed *Douglass*." On the 6th of January, 1821, a benefit was given to the *débutant*, which was announced to be "for Master Forrest's benefit." The play was "The Mountaineers," *Octavian*, Master Forrest. The playbill said,—"After the play . . . an epilogue, in the character of a harlequin (written by Dr. Goldsmith), will be spoken by Master Forrest."

Edwin Forrest was then fourteen years of age. He was born in George Street [now Guilford Street], in a small frame house, bearing No. 51.[1] His father, William Forrest, was runner for the old United States Bank. Little Edwin was employed for a time in the office of the *Aurora* newspaper, which he left to go to a cooper-shop. There, it is said, he was in the habit of turning a tub upside down, mounting upon it, and making speeches to the great amusement of the workmen. We afterward hear of him as a youthful clerk in the store of Baker & Sons, importers, Race Street. But his passion for the stage was too strong, and he joined a Thespian society. He is said to have appeared at the old South Street Theatre in the part of *Rosalia De Borgia* in the melodrama of "Rudolph;" then, in 1817, at the Apollo Theatre as *Lady Anne* in "Douglass," and subsequently as *Young Norval* at the Tivoli Gardens. Howbeit, his first appearance on a regular stage was at the Walnut Street Theatre. In this theatre he also made his last appearance on the stage in Philadelphia in 1871. His first appearance as a "star" was at the Chestnut Street Theatre July 5, 1826, as *Othello*. He had had a varied experience of the stage, however, before he attained such eminence. He had gone West after his *début* in Philadelphia, and had played Shakesperian tragedy, low comedy, negro characters, and had even joined a circus company as a rider and tumbler,—a strange prelude to the honors he was to win in the service of the tragic muse. Mr. Forrest died on Dec. 12, 1872, in the fine house at the corner of Broad and Master Streets, which he had bought in 1855, when he resolved to retire into private life. This resolve was broken in 1860, when he was prevailed upon to return to the stage, but he kept his much-loved Philadelphia home, and he died, as he had wished, in the city of his birth. He left his fortune to less fortunate members of his profession, for the Edwin Forrest Home, at Spring Brook, was "instituted for the support and maintenance of actors and actresses decayed by age or disabled by infirmity, etc." A noble foundation perpetuating a name already too famous to be forgotten.

Edwin Forrest

Two days after young Forrest's benefit another notable event happened at the Walnut Street Theatre,—Edmund Kean made his first appearance in Philadelphia in the character of *Richard III*. At first he did not make a very great impression; people remembered the inimitable rendering of *Richard* by George Frederick Cooke, and the comparison was not favorable to Kean; but as the play went on, the great actor's power revealed itself, and the rapturous applause which greeted the last scenes was a final verdict from which there was no appeal. The fourteen nights of his engagement and two benefit nights which he played were so many triumphs. Kean came back in April, and played a second engagement. It was very successful until the last night, when "Venice Preserved" was given, Kean playing *Jaffier*. Kean must have been taken with a sudden fit of insanity, or he had been drinking more than was good for him, for Durang, describing the incident, says, "He commenced *Jaffier* in a very impressive manner, but soon fell into eccentric contrasts, doing strange things, so palpably nonsensical that the audience, especially the box portion, began to wince, and at length to express disapprobation more decidedly." Kean perceiving this, treated this manifestation with such offensive

[1] Mr. Bernard Reilley says in a communication to the *Dispatch*, "I and my family moved into that house on the day that the great ship 'Pennsylvania' was launched at the navy-yard, and lived there until the 7th of March, 1844, when it was burned down. Several horses were also burned in a neighboring stable. I think it was in the winter of 1839 that Mr. Forrest and a lady came in, and she, taking a look at the humble appearance of the place, with a smile, said, 'So, Ed, this is the house you were born in?' He replied, 'This is the house.' One of my little boys was playing on the floor. Mr. Forrest inquired if he, likewise, was born in that house. My wife answered in the affirmative. He then put his hand in his pocket and gave the child a silver dollar."

Digitized by Google

hauteur that hisses and cries of 'Off! off!' came from every part of the house. Availing himself of a lull in the general uproar, the infuriated actor addressed the audience in the most insulting manner, calling them 'cowards' and other hard names. He had raised a tempest, and pretty soon he had to seek safety in flight. A riot ensued, and the lights had to be put out before it could be quelled."

That Kean had "a bee in his bonnet" is well known. During his second visit to America he played at Quebec. Four Huron chiefs who had witnessed his magnificent acting were introduced to him, and expressed their admiration. Mutual compliments followed; Kean presented each of the noble savages with a silver medal, and they proposed to him to become a member of their tribe. He accepted, and was dubbed a Huron chief, under the high-sounding name of Alantenaida (or Alantenoidet, as some have it).

Dr. Francis, an ardent friend and admirer of Kean, furnishes an interesting sequel to this incident:

"Some time after, not aware of his return to the city, I received a call to wait upon an Indian chief by the name of Alantenaida, as the highly-finished card left at my house had it. . . . I repaired to the hotel, and was conducted up-stairs to the folding-doors of the hall. . . . I entered, aided by the feeble light of the moon; but at the remote end I soon perceived something like a forest of evergreens lighted up by many rays from floor-lamps, and surrounded by a stage or throne, and seated in great state was the chief. I advanced, and a more terrific warrior I never surveyed. Red Jacket (or Black Hawk) was an unadorned, simple personage in comparison. Full dressed, with skins tagged loosely about his person, a broad collar of bear-skin over his shoulders, his leggings with many stripes, garnished with porcupine quills; his moccasins decorated with beads, his head decked with the war eagle's plumes, behind which flowed massive black locks of disheveled horsehair; golden-colored rings pendent from the nose and ears, streaks of yellow paint over the face, massive red daubings about the eyes, with various lines in streaks about the forehead, not very artistically drawn. A broad belt surrounded his waist, with tomahawk; his arms, with shining bracelets, stretched out with bow and arrow, as if ready for a mark. He descended his throne, and rapidly approached me. His eye was meteoric and fearful like the furnace of the cyclops. He vociferously exclaimed, 'Alantenaida!' I was relieved. It was Kean!"

The eccentric actor had his portrait painted in full Huron costume, and had visiting-cards made with his own English name engraved on the one side, and his Indian name, with a miniature likeness of himself in Huron dress, on the other. In later years this portrait puzzled many people, who thought that it was intended to represent the actor in some Indian character performed by him on the stage. The following anecdote, in connection with this portrait, is told by W. Grattan, in a note to the "Life of Edmund Kean:"

"When I first called on him at Humman's, one day early in 1827, he was sitting up in his bed, a buffalo-skin wrapped around him, a huge, hairy cap, decked with many-colored feathers, on his head, a scalping-knife in his belt, and a tomahawk in his hand. He was making up his face for a very savage look, a tumbler-glass of white-wine negus stood at his bedside, two shabby-looking heroes were close by, with similar potations within reach, and a portrait-painter was placed before an easel at the window, taking the likeness of the renowned Alantenoidet,—a name in which the chieftain (most sincerely) rejoiced. I was announced by a black boy in livery. I saw Kean's eye kindle somewhat, perhaps with pleasure, at my visit, but more so, I thought, from the good opportunity of exhibiting himself in his savage costume. He gave a ferocious roll of his eyes and a flourish of his tomahawk, then threw off his cap and mantle, and cordially shook me by the hand. The painter quietly retired and the satellite visitors soon followed," etc.

After Kean's first engagement in Philadelphia, Mrs. Allsop, a daughter of the celebrated Mrs. Jordan, of Drury Lane, played a round of light comedy characters at the Walnut Street Theatre. Then came Mrs. John Barnes, the leading heavy-tragedy lady of the Park Theatre. Her engagement was renewed when her husband, John Barnes, joined her, playing low comedy and eccentric characters. About the same time, David C. Johnson, a native of Philadelphia, made his first appearance on any stage at the Walnut Street Theatre. Mr. Johnson afterward became celebrated as a designer, caricaturist, and engraver. For some years he published annually, under the title of "Scraps," a very popular series of comic drawings.

At the opening of the season of 1821–22, Warren & Wood's company was strengthened by the performances of Mrs. Bloxton, Mr. and Mrs. Burke, Mr. and Mrs. H. Wallack, and Mr. Nicholson, of the Charleston Theatre. The latter made his first appearance on the 15th of November as *Count Belino* in "The Devil's Bridge." William Pelby made his first appearance on the 21st of November as *Macbeth*, and played *Rolla*, *Bertram*, *Hamlet*, *Pierre*, and *Brutus*. The tragedy of "Damon and Pythias" had a run of four nights. "Undine" was performed for the first time on the 1st of January, 1822. Edwin Forrest made his fifth appearance in Philadelphia on the 2d of February, as *Zaphna*, in "Mohammed the Impostor." Le Basse and Tatin, French dancers and pantomimists, appeared three nights in a ballet, and the first elephant that had ever trodden the boards of a Philadelphia stage appeared as a star of the first magnitude in the "Forty Thieves." The season closed on April 23, 1822, and Warren & Wood closed their lesseeship of the Walnut Street Theatre, to prepare for the opening of the new Chestnut Street Theatre. During this last season they had bought many new plays, among which were the tragedy of "De Montfort; or, the Force of Hatred;" "Yusef Caramalli; or, the Siege of Tripoli;" "Marion; or, the Hero of Lake George," and "She Would be a Soldier," both by M. M. Noah; and "The Spy; or, Neutral Ground," by a gentleman of New York.

Stephen Price and Edmund Simpson, lessees of the Park Theatre, New York, now leased the Walnut, refitted it for equestrian performances, in order to bring out a circus company, they having brought out West's circus stock, and restored the old name, "The Olympic," to the theatre. They opened with an equestrian and dramatic company, and produced several good pieces during a season of about twelve weeks, closing the house four days before the new Chestnut Street Theatre was opened. William C. Drummond, formerly of the Chestnut Street Theatre, was stage manager; Lawson was master of the circle, and John

Parker was ballet-master. Among the equestrians were Yeamans, Tatnall, and Walter; Williams, slack-rope dancer and clown; Mrs. Williams, slack-wire dancer and pantomimist; Champlin, balancer and wire-dancer. A novel attraction which created great excitement was the bareback act without saddle or bridle, by Hunter, an English equestrian from Astley's Amphitheatre, London. This feat had never been seen before, and was considered wonderful. It drew crowds to the Olympic. Tatnall, a member of the company, with his pupil, Chârles La Forrest, undertook to find out if the feat was as difficult as it appeared. They practiced in secret, and succeeded much more easily than they had expected. Tatnall then proposed to perform the feat in the ring with his pupil. Hunter took exception at this, and complained to Price & Simpson, at New York, and Tatnall and La Forrest were prohibited from undertaking the bareback act. Tatnall made an appeal to the public, and succeeded in creating a strong feeling in his behalf. On his benefit night, having the right to make up his own programme, he introduced the bareback act, proving that an American rider could perform any feat attempted by an English equestrian.

James Roberts, afterward a very popular comic actor, made his first appearance on any stage, during the season, in a piece written by himself, in which he gave imitations of popular actors.

When the season of 1823 opened, Simpson & Price being still the managers, George Blythe, formerly director-general at Astley's, was director of the ring, and Daniel Reed acting as manager; William Lawson was succeeded as riding-master by Asten. The company was nearly the same as in the previous year. William Dinneford, from London, a young actor, joined the theatrical company. Master Turner, afterward a popular equestrian, made his first appearance. The two novelties this season were a melodrama, called "Ali Pacha; or, the Greek Struggle for Liberty," brought out by Hunter for his benefit, and a patriotic drama, called "The Two Sisters; or, the Heroines of Switzerland," written by W. Barrymore. Another season was opened in the fall, with the same company. Joseph Cowell was the chief manager, under Price & Simpson, during the fall season of 1824. The melodramatic manager was Mr. Gale; equestrian-master, George Blythe; ring-masters, Lawson and Rogers; prompter, T. Honey; ballet-master, John Parker; scene-painters, Henry Wilkins and Henry Isherwood. The latter was an artist of no mean talent, and the new landscape scenery which he painted was much admired. James Stoker, a slack-rope performer, horrified the public by a new trick, hanging himself by the neck as if he were on the gallows. Although this repulsive exhibition was denounced, it did not fail to draw the crowd to the Olympic,—a morbid taste for the horrible will always exist among the masses. "Lafayette; or, the Castle of Olmutz," by Samuel Woodworth, of New York, was performed on the 1st of October. "The Cataract of the Ganges" was brought out in grand style, real water being introduced on the stage. At Cowell's benefit the play, so popular in London, of "Tom and Jerry" was brought out. Roberts made a hit in the character of *Bob Logic*, which was the foundation of his popularity.

The spring season of 1825 was short and unimportant; there being no theatrical company, the performances were limited to equestrian feats and pantomimes. The fall season, however, presented a more varied programme by a stronger company. Among the engagements for the circus were Collingbourne, a native of London, who was a dancer and pantomimist; Master Collet, a rider and performer of boys' parts in melodramas; James Kirby, of Drury Lane Theatre, clown and scene-painter; John Hallam, comedian, who made his first appearance in this theatre as *Joe Steadfast*, in "The Turnpike Gate;" Palmer Fisher and his wife, the latter afterward Mrs. E. N. Thayer; Miss Aspinall, a dancer, and Harry Moreland, a vocalist, who afterward married her.

The great success of the season was the harlequinade of "The Talking Bird," which was produced on the 14th of October. The scenery, which was very beautiful, was painted by Kirby and Williams. Kirby acted two parts in the play, *The Talking Bird* and the *clown*. Durang says of this piece, "The scene of 'The Dancing Waters and the Bird's Palace' was a supernatural ideal of Paradise. The entire scene revolved in the multitudinous colors of the kaleidoscope. The wings reflected transparent water pyramids and water-flowers, all revolving in various colors. The machinery of this piece was never surpassed in this country, if indeed equaled."

The familiar old name of "Walnut Street Theatre" was restored to the Olympic, the house was entirely rearranged and fitted up, and was opened by Inslee & Blake on the 1st of January, 1829. It is now the oldest theatre in Philadelphia, the old Chestnut Street Theatre having been torn down in 1855. The limits of this chapter will not admit of more than a cursory notice of the other places of amusement established after 1825.

Washington Museum Theatre, in Market Street, east of Second, was opened by Archbold, May 27, 1826. On the 23d of June, of the same year, Archbold opened the Pennsylvania Museum Theatre, in Market Street above Eighth, south side, but abandoned it after one month's experiment.

Maelzel's Hall was opened in 1827, in a portion of the old Lailson Circus, on Fifth Street. It was fitted up expressly for Monsieur Maelzel, mechanician, artist in automaton figures, etc., who had one of the most complete collections ever exhibited. The principal exhibition was that of Napoleon's expedition to Moscow, embracing the marching of the troops, the battles and skirmishes, the occupation of the city, its abandonment, and its destruction by fire. This place

was afterward occupied by Titus, June & Angevine's Menagerie. It was injured by fire about 1845.[1]

Arch Street Theatre was opened in Arch Street, west of Sixth, north side, by William B. Wood, on the 1st of October, 1828. It was built by Haviland, the architect,[2] had a handsome front, and was well fitted for a theatre, with a seating capacity of fifteen hundred. The interior was torn out and rebuilt, and the house reopened Sept. 12, 1863. At various times it was under the management of Jones, Duffy, Forrest, and William E. Burton.

Washington Amphitheatre and Circus, old York road, above Buttonwood Street, was opened in 1829 by Fogg & Stickney.

In 1834 the Sansom Street Circus, in Sansom Street above Eighth, was opened by Weeks.

In October of the same year Joseph Jefferson, Jr., opened the Northern Exchange Theatre, in Third Street below Green.

In 1835 the Hall of Industry was opened at Fotterall's Hall, northwest corner of Fifth and Chestnut Streets. It was afterward known as the American Museum, J. H. Myers, manager. This place was burned down in December, 1854. It was rebuilt and occupied as Thomeuf's Varieties, 1856–59.

On Nov. 7, 1836, the Pennsylvania Theatre, in Coates Street, west of Second, north side, was opened by Logan & Wemyss.

Cooke's Equestrian Circus, on Chestnut Street, below Ninth, was opened by T. Cooke on the 28th of August, 1838. Cooke's company performed there for some time, then it was taken to Baltimore; there it suffered heavy losses in horses, costumes, etc., by the burning of the Front Street Theatre, where it was playing. Cooke came back to Philadelphia with the remnants of his stock, and performed at the Walnut Street Theatre. In the mean time William E. Burton fitted the circus on Chestnut Street for dramatic performances, and opened it in August, 1840, as the National Theatre. A correspondent sent to the *Dispatch* some years ago the following interesting reminiscence of the opening night:

"I was one of five hundred or more persons who squeezed themselves into the cheapest part (the pit) of the National Theatre, in Chestnut Street, below Ninth, when it was first opened by William E. Burton, on the 31st of August, 1840. I give the date because I preserved the playbill, and have it now. It cost me 'three levvies' to get into the pit, which now, being called the parquet, is considered the best part of the theatre. The play was 'The Rivals,' in which Burton did *Bob Acres*, Richings, *Captain Absolute*, and Tom Placide, *Fag*. Charlotte Cushman made her first appearance in this city as *Lydia Languish*, and her pretty sister, Susan, as *Julia*. The after-piece was 'A Roland for an Oliver,' *The Hon. Alfred Highflyer*, Mr. Richings; *Maria Darlington*, Charlotte Cushman, 'with a song' (what do you think of that?), 'When Harmony Wakens.' Burton abolished the old green curtain, and introduced instead a canvas curtain representing the American flag, painted in drapery style by W. Russell Smith. It was very showy. But the act-drop was one of the most beautiful things I have ever seen. I do not consider that it was excelled by the effective drop at the Academy of Music, painted by George Heilge, who in this proved his merit. The subject was 'The Cottage of Claude Melnotte, on the Lake of Como.' There was chance to introduce the finest landscape effects. The beauty, the clearness of the water, the rich foliage of the shore, the rocks, the mountain peaks, and all the accessories were splendid. The sky had the effect of distance and clearness. It seemed as if you could see the scenery of the lake and shore stretching out for miles. When this magnificent picture was unrolled at the end of the first act of 'The Rivals,' it came down and opened so unexpectedly in its beauty that the whole house was startled—I think I may use the word—by the unexpected effect. The audience sat as if spell-bound for a moment or two, when simultaneously, as if acting under command, there broke forth such peals of applause that the sound was perfectly deafening, and it was kept up for a long time. The triumph of the artist must have been the most gratifying of his life."

Burton was not successful in his enterprise. He failed, and was sold out by the sheriff. The magnificent act drop,—which had met with an accident, having been torn in two, but had been mended so as to conceal effectively the rent—was brought to the hammer, and was purchased for the use of the Walnut Street Theatre. The "National" subsequently became Welch's Amphitheatre, and was quite successful in that line of performance. It was destroyed by fire, July 5, 1854. On the same evening the Philadelphia Museum building, at the northeast corner of Ninth and Sansom Streets, was burned down.

The year 1839 saw the opening of the Assembly Buildings, corner of Tenth and Chestnut Streets. This place was burned March 18, 1851, but was rebuilt and reopened in 1852.

McAran's Garden Theatre, Filbert Street, between Seventeenth and Eighteenth Streets, was opened June 13, 1840, by Ward & McIntosh. The Athenæum Museum and Theatre, afterward known as Barnum's Museum, at the southeast corner of Seventh and Chestnut Streets, was opened by Taber & Co., Dec. 25, 1845. It was burned down on the 30th of December, 1851.

The Academy of Fine Arts, or Peale's Museum Theatre, Masonic Hall, Chestnut Street, between Seventh and Eighth, was opened by John Sefton in August, 1846. It closed in July, 1847. "The company at this little theatre was a superior one, and nowadays would be called 'a star company.' Among the members were Joseph ('Rip Van Winkle') Jefferson, John Sefton, David P. Bowers, John E. Owens, Barney Williams, Charles Burke, half brother of Jefferson, and a better comic actor than the latter, with his wife, one of the liveliest actresses of the day, E. N. Thayer, Mrs. Russel (afterward Mrs. John

[1] The large factory building of the Tathams, lead-pipe manufacturers, now occupies the site.

[2] The question having been raised some years ago as to whether the Arch Street Theatre was built by Strickland, a correspondent wrote as follows to the *Philadelphia Dispatch*:

"In a Philadelphia guide-book, published by Carey & Hart in 1830–31, is a description of the Arch Street Theatre. The compiler says, 'Mr. Strickland was the architect of this beautiful theatre, which was first opened on the 1st of October, 1828.' 'The Album,' published in 1828 or 1829, has an engraving of the Arch Street Theatre, and I am sure Strickland is mentioned as the architect. Strickland was the architect of the capitol at Nashville, Tenn. In constructing the dome of that building he left a niche for his sepulchre. He died at Nashville, April 7, 1854, and his remains were placed there in accordance with his request. On a slab in the dome is this inscription,—'William Strickland, architect of this building, born at Philadelphia, 1787, died at Nashville, April 7, 1854.'"

Hoey), Miss Mary Gannon, Miss Mary Taylor, Mr. and Mrs. Charles Howard, and others. This splendid galaxy could be seen at any time at this theatre for twenty-five cents.

Sansom Street Hall, opened in 1848 for concerts, balls, etc., was closed as a place of amusement in 1863.

T. V. Turner & Co. opened the American Circus, on Fourth Street, between Brown and Poplar, in January, 1849.

The Melodeon was opened in 1852 in the old Bolivar Hotel building, on Chestnut Street, between Sixth and Seventh, north side. In 1854 it became Wood's Museum, and was opened on the 17th of December by Col. J. H. Wood. It was destroyed by fire in 1857.

Ballard & Stickney opened a menagerie and circus on Walnut Street, west of Eighth, in December, 1853, which afterward became Welch & Raymond's Circus, and, still later, the Continental Theatre. This theatre was destroyed by fire June 19, 1867, and was rebuilt the same year. The City Museum Theatre, on Callowhill Street, between Fourth and Fifth, was opened by Ashton & Co. on the 11th of September, 1854. It was burned, also, on the 25th of November, 1868.

National Hall, Market Street, between Twelfth and Thirteenth, was opened on Jan. 8, 1856, with a concert given by the Musical Union. In November, 1862, it was fitted out as a circus, and opened by Gardner & Hemmings. In 1873 this place was turned into a theatre, and opened, October 21st, by J. H. Johnson & Co., under the name of the Olympic Theatre. It was burned Jan. 29, 1874. Jayne's Hall, Chestnut Street near Seventh, was also opened in 1856 with a concert.

The National Guards' Hall, on Race Street, between Fifth and Sixth, opened with a ball and promenade concert, Nov. 17, 1857. McDonough's Gaieties, on Race Street, between Second and Third Streets, was opened by J. E. McDonough, Jan. 19, 1859; the following year it opened as McDonough's Olympic Theatre. The Theatre of Art was opened by J. Sanderson, in Jayne's Commonwealth Building, north side of Chestnut Street, between Sixth and Seventh. This place is now used for business purposes.

The new Chestnut Street Theatre, on Chestnut Street, between Twelfth and Thirteenth, north side, was opened on the 26th of January, 1863, by William Wheatley. The interior of this theatre was rebuilt in 1874.

Adam Forepaugh opened the Philadelphia Circus and Menagerie, on the southwest corner of Tenth and Callowhill Streets, Nov. 27, 1865. In the same year a private amateur company opened the Amateurs' Drawing-Room, on Seventeenth Street above Chestnut. On the 29th of May, 1867, Horticultural Hall, Broad Street above Spruce, opened with a floral exhibition. On the 18th of September of the same year, Tunison & Parsons opened the Philadelphia Opera-House, on Seventh Street below Arch. The name was afterward changed to "Seventh Street Opera-House," later, to "Philadelphia Opera Comique," and finally to "Adelphi Variety." The building was originally the Second Presbyterian Church.

The Arch Street Opera-House, on Arch Street west of Tenth, which had been opened by Simmons and Slocum on the 20th of August, 1870, was burned on the 20th of March, 1872. It was immediately rebuilt, and reopened Aug. 26, 1872. The American Museum, Menagerie and Theatre, at the northwest corner of Ninth and Arch Streets, was opened Nov. 23, 1870, by Simpson, Carncross & Dixey. This place afterward became Wood's Museum. On the 17th of December, in the same year, Robert Fox opened Fox's New American Theatre, on Chestnut Street between Tenth and Eleventh, north side. Another theatre, Harmonie Hall (German), was opened at that time in Coates Street, near Seventh, by the Maennerchor Musical Society. Its existence was brief, it being destroyed by fire March 8, 1871. Sanford's Opera-House, Second Street, above Poplar, was opened in 1871 by S. S. Sanford. It had scarcely commenced the season when it took fire and was burned down, Oct. 17, 1871.

Thus, from 1799 to 1871, nineteen theatres, circuses, and museums were destroyed by fire, being over one-third of the total number of such places opened during that period, and a little less than one-fourth of all such places of amusement, together with music halls that existed at any time since 1749. It is a remarkable fact that so many fires in places of public resort were not attended by any loss of life among the audiences. Rensselaer Albert Shephard, an actor, was caught in the falling ruins of the National Theatre, Chestnut Street, July, 1854, and burned to death.

CHAPTER XXX.

INNS, TAVERNS, ORDINARIES, COFFEE-HOUSES, AND HOTELS.

In olden times, such a thing as the modern hotel, with its fashionably-dressed and all-important clerk, its vast smoking-room, carpeted parlors, gilt mouldings, and other luxurious appointments, was unknown. The modest inn accommodated "man and beast," and the jolly landlord welcomed the wearied traveler,—and fleeced him, too, when the occasion offered,—and an active, bright-eyed barmaid waited on him, and provided those simple comforts,—a pipe, a pair of slippers, a glass of hot punch or a tankard of foaming ale, and a cosy corner near the tap-room fire. If the cloth was coarse it was generally white and clean, at least in respectable establishments, and the plain deal table groaned under the weight of

viands which, if they presented no great variety, were well cooked and wholesome. Our fathers were great eaters and stout drinkers, and there was no need of a French *menu* and wines with high-sounding names to whet their appetites; roast beef, a leg of mutton, ham and cabbage, a fat fowl, were the solid dishes laid before them; ale, port or Madeira wine, and a glass of Jamaica rum and hot water to top off, left them in a pretty good condition to find sleep on the clean bed,—sometimes a hard one,—prepared for them in the small room, whose bare floors, whitewashed walls, and plain curtains, did not invite dreams of palatial splendors.

The tavern, though it accommodated guests with bed and board, had more of the character of a drinking-house. The inn was rural in its origin, the tavern originated in the city, and was frequented not merely by topers and revelers, but by quiet citizens, bachelors having no fireside of their own, and men of family who went there to meet neighbors and discuss business or the news, while enjoying a quiet glass and pipe. The ordinary was an eating-house, something between the restaurant and the boarding-house of our day. Coffee-houses, so called, which dispensed intoxicating drinks as well as the fragrant decoction of the Arabian bean, made their appearance later; they were but taverns in an aristocratic disguise.

Philadelphia had quite a large number of these establishments for a city of its size, yet this fact was not due merely to the drinking habits of the inhabitants. It is more truly accounted for by the surprisingly rapid increase of the population from immigration during the first half of the eighteenth century, and the continual influx of strangers during and after the Revolution. These people had to be provided with food and lodging. It was a paying business, and many embarked in it. Nor does the increase in the number of taverns indicate an increase in drunkenness. We have related in another chapter the complaints and fears of the serious-minded citizens of ante-Revolution times, that the people were fast becoming a community of drunkards, yet, during those trying years of the war of independence, although folly and extravagance were the marked characteristics of fashionable society, there is nothing to show a greater tendency to intemperance. After the war, when the era of peace and prosperity commenced, quite the reverse is apparent. Through some unexplained cause or influence the people have turned to the ways of temperance, and there is not more drunkenness—not as much, perhaps—in Philadelphia than in any other large city in the Union.

Many interesting memories are attached to the old taverns and inns, important events and illustrious names are connected with the history of many of them, others awaken a curious interest by their quaint signs and rhymed mottoes and sentiments. They form part of the history of the city, and should not be forgotten. The generation which saw the most of them is fast passing away, and for the facts concerning some of those mementoes of a time not yet very distant, we have already to rely on tradition.

The oldest inn or tavern in Philadelphia was the Blue Anchor, built by George Guest in 1682, at least it "was not finished (says R. Proud) at the time of the proprietor's arrival" (in that year). It was there

BLUE ANCHOR INN AND DOCK CREEK.
[From an old drawing in Philadelphia Library.]

William Penn landed, the first house in which he broke bread on the soil that was to be Philadelphia. This house was the southwestern one in a row of houses on Front Street, which was known as "Budd's Long Row." It formed what is now the northwest corner of Front and Dock Streets. It was subsequently called the "Boatman and Call."

The next oldest, probably, was the Penny Pot-House, at Front and Vine Streets, it being also built at a landing to which it gave its name. It was a two-story brick house of good dimensions. It was still standing in the earlier part of the present century, but the name had been changed to the Jolly Tar Inn. In the year 1701, William Penn set forth and ordained that "the landing-places now and here-

PENNY POT-HOUSE AND LANDING.
[From an old drawing in Philadelphia Library.]

tofore used as the Penny Pot-House and Blue Anchor shall be left open and common for the use of the city." There were other houses of entertainment opened, however, very soon after William Penn's arrival, for in a letter, written in 1683, he says, "We have seven ordinaries for the entertainment of strangers and workmen that are not housekeepers,

Digitized by Google

and a good meal is to be had for sixpence sterling." How fast the number of taverns and drinking-houses increased after the incorporation of the city is shown by the grand jury reports. In 1709 many tippling and disorderly houses were presented; in 1714, thirty-five true bills were found, in one session, against unlicensed taverns; in 1744, there were upward of a hundred houses licensed; in 1752, there were a hundred and twenty taverns with licenses, and one hundred and eighteen houses that sold rum by the quart. During all this time, and until 1759, justices of the peace heard and decided causes at public inns, and the Common Council itself had held its sittings occasionally in those places.

The first public-house designated as a "coffee-house" was built in Penn's time by Samuel Carpenter, on the east side of Front Street, probably above Walnut Street. That it was the first of its kind, the only one, in fact, for some years, seems to be established beyond doubt. It was always alluded to in old times as "ye Coffee-House." Samuel Carpenter owned also the Globe Inn, which was separated from the Coffee-House by a public stairway running down from Front Street to Water, and, it is supposed, to "Carpenter's wharf." The Coffee-House was a great place in those early days; it was there the ship-captains and merchants congregated to discuss the commercial and political news, and many interesting scenes must have taken place there of which no account has been preserved.

CLARK'S INN.
Facing the State-House, on Chestnut Street.

Clark's Inn, the Coach and Horses, was in Chestnut Street, opposite the State-House, before the Revolution. Here assemblymen, Governors, and public officers, with judges, perhaps, refreshed themselves in the good old times.

Enoch Story's Inn, at the sign of the Pewter Platter, which gave its name to Pewter Platter Alley, was a place much frequented by the young bloods in Governor Evans' time, and was the scene of many a bacchanalian revel. It was there young Penn and his friends had the fight with the watch which led to their being presented by the grand jury.

The Crooked Billet Inn, on the wharf above Chestnut Street, was the first house entered by Benjamin Franklin when he came to Philadelphia in 1723. It was already an old house. Not so old, however, as the Indian King Tavern, in High Street, near Third. This house, which was famous in its time, was selected by Franklin and his friends as the club-house of the Junto.

The Three Crowns Tavern, in Second Street, adjoining the City Tavern, was celebrated for its excellent table and perfect management under the supervision of the worthy hostess, Mrs. Jones. Entertainments were given there to Richard Penn and other Governors. Peg Mullen's "Beefsteak House," on the east side of Water Street, at the corner of Wilcox's Alley, was another house celebrated for its cookery. Mr. Watson was informed by the late Col. Morris that it was the fashionable house in his youthful days. Governor Hamilton and others held their clubs there. The Freemasons held their lodge meetings at Mrs. Mullen's, which was also a favorite place for public entertainments and meetings of societies.

The London Coffee-House has been described at length in another chapter. Its successor in the public favor was the City Tavern. This house was finished in 1773, and was advertised as a new house in Second Street, near Walnut. It was intended to be kept as a genteel tavern. "It contains several large rooms, two of which, thrown into one, makes a room fifty feet long. Also several lodging-rooms." Inquirers were requested to address their communications to Hugh James. In 1774 it was advertised that the long room at the City Tavern was divided into boxes fitted with tables and elegantly lighted.

On his arrival in Philadelphia, on the 4th of September, 1774, Gen. Washington supped at the "New Tavern," which was then kept by Mr. Smith. "On Monday, 5th of September, 1774," says Mr. Bancroft, "the members of Congress, meeting at Smith's Tavern, moved in a body to select a place for their deliberations." On the 20th of October, in the same year, "a grand entertainment was given by the Assembly of the province to all the delegates from the different provinces, at this time in the city, at the New Tavern."[1] It was at the City Tavern Monsieur Gerard, the first accredited representative of France near the government of the United States, gave his grand entertainment in honor of Louis XVI.'s birthday. At the time of the riot known as the Fort Wilson affair, the friends of James Wilson assembled at the City Tavern and sent word to President Reed of the danger apprehended. When the rioters commenced their demonstration, they marched first to the City Tavern, expecting to find there some of the obnoxious merchants. The gentlemen had already left the tavern, and the baffled party went up to Wilson's house.

The bull's head was a very common sign. There were several houses of that name in existence at

[1] Christopher Marshall's Diary.

Google

different periods. In 1704 the Governor, attended by several members of the Council, met the representatives of the lower counties, "where they were met at *the Bull's Head in Philadelphia*." Mr. Watson surmises that this was probably in Strawberry Street or the one west of it. The "Bull's Head Inn" in Second Street, north of Poplar Street, has an interesting memory attached to it. Thomas Leiper had connected his quarries on Crum Creek with Ridley Creek by a railway, evidently the first ever constructed in this country. He invited several gentlemen to meet him at the "Bull's Head," and there, in the yard of the inn, he exhibited the plan of his railway. Professor Robert M. Patterson, Callender Irvine, and John Glenn were among the interested citizens present on this occasion. "Reading Howell was the engineer, and the original draught of the railway was made by John Thomson, a native of Delaware County, whose son, the late John Edgar Thomson, president of the Pennsylvania Railroad Company, not long ago presented it to the Delaware County Institute of Science."[1]

The *Aurora* of Sept. 29, 1809, devotes an editorial to this interesting exhibition.

The Indian Queen, on the east side of Fourth Street, below Market, was another ancient inn. Some time after 1800, Woodside painted a new sign for it, which was in his best style. There was another old Indian Queen Inn, a favorite place of resort, which was more generally named the Centre House, from its being near Centre Square. In 1808 it was kept by Samuel Hoffman, and at some other time by Job Whipple. The Indian Queen Inn first mentioned was kept before 1800 by John Francis, who again took it in 1803, when he left the Union Hotel. It was afterward kept by Samuel Richardet; then, at later periods, by Robert Smith, Margaret Thompson, and James Coyle. In 1822, Thomas Heiskell was proprietor.

Fort St. David's Inn, the old tavern at the Falls of Schuylkill, had on its sign a representation of the fish-house of Fort St. David's, which was near by.

The Wigwam, out Race Street by the Schuylkill, which was at one time the resort of the St. Tammany Society, obtained a new name in consequence of its connection with that association; but it was injured considerably in attraction by having been made a hospital and place of refuge during one of the yellow fever seasons before 1800.

The Lemon-Tree, also called the Wigwam, was on the west side of Sixth Street, and extended from Noble to Buttonwood Street, and westward nearly to Seventh. William Wray was the keeper of the Wigwam. James Harvey became the proprietor in 1812. It was kept by Bartholomew Graves, who was a famous Democrat. The Lemon-Tree was the headquarters of butchers and drovers, and was the scene of political meetings, ox-roasts, and Fourth of July dinners.

[1] Townsend Ward, in *Pennsylvania Magazine*, No. 16.

In 1804 Rowland Smith established a new Wigwam in Spring Garden, on North Sixth Street, not far distant from the Lemon-Tree. On Nov. 15, 1806, upon an occasion of some popular demonstration, the weather was unusually stormy, yet there were three hundred Democrats present, who were kept warm by the Wigwam being closed on all sides to keep out the weather, and being floored over and warmed with stoves. On this occasion Dr. Michael Leib presided, and Stephen Girard gave a barrel of gunpowder to be blown away by the cannon as salutes in honor of the toasts. Enos Eldridge succeeded Smith as landlord in 1807, and Mrs. Saville afterward became proprietress.

Harry Epple's Inn, in Race Street, was a fashionable resort during the Revolutionary period. An assembly party was given there, which was graced by Mrs. Bingham's presence. Washington, it is chronicled, was an occasional guest at Epple's, so was Louis Philippe d'Orleans, while he lived in Philadelphia. The George Inn, at the corner of Second and Mulberry Streets, was the stopping-place of the New York and Baltimore mail coaches. The sign represented St. George on horseback, armed with a long spear, killing a dragon. It was kept at one period by John Inskeep, who was for a time mayor of Philadelphia. But the most celebrated of its landlords was Michael Dennison, an Englishman, who had the name of "the biggest landlord in the city." Mr. Dennison's genial disposition and his solicitude for the comfort of his guests made him very popular with traveling Englishmen and Americans. "Lang Syne" furnished Mr. Watson with some reminiscences of the "George," among which were the following lines of poetry made upon Dennison's giving up business to return to his native England. These lines were published in vol. i. of Watson's "Annals of Philadelphia."

"LINES ON MICHAEL DENNISON.

"His bulk increased by ale and venison,
Alas! we soon must lose good Dennison.
City of *Penn*, his loss deplore,
Although with *pain* his bulk you bore!
Michael, farewell! Heaven speed thy course,
Saint George take with thee and thy horse;
But to our hapless city kind,
The watchful Dragon leave behind.
Michael! your wealth and full-spread frame
Shall publish Pennsylvania's fame.
Soon as the planks beneath you crack,
The market shall be hung with black.
Michael! her stores might sure content ye;
In Britain, none boast greater plenty;
The Bank shall with the market join,
To weep at once,—thee, and thy coin;
Thy guineas, ranged in many a pile,
Shall swell the pride of Britain's Isle;
Whilst England's Bank shall smiling greet,
The wealth that came from Chestnut Street."

The Black Bear Tavern, on the southeast corner of Fifth and Merchant Streets, was a well-known old place, much frequented by the farmers, for whose convenience there was a large yard on the Merchant

Street side, where they could put up their wagons. The "Butchers' Arms," at the old drove-yard, was on the north side of Vine Street, between Lawrence [now Franklin] and Eighth Streets. The site is now occupied by the Star Brewery.

The names and figures of certain animals were to be found on many signs. They seemed to have been specially adopted by innkeepers in America as well as in England. The "white horse" and the "black horse," "black" and "white bears;" lions, red, white, and blue; bulls and bull's heads, were very common. But there were other subjects of a more local or national interest, and a still greater number presenting quaint devices, the whimsical creations of the sign-painter, and generally accompanied by some suggestive doggerel rhymes. The sign-painter of olden time was often an artist of no small merit. Woodside's signs were famous. Matthew Pratt, a native artist who had studied under Benjamin West, at London, painted many of these signs with an artistic execution that would have made them worthy of a place in a picture-gallery, but in those days picture-galleries were not common, and artists found their best patrons among the tavern- and store-keepers. It is said that the equestrian figure of Frederick the Great, on the sign of the King of Prussia Inn, was painted by Gilbert Stuart in one of his eccentric spells. He permitted the painting to be used as a sign, with the understanding that his name should be withheld. Some years later the landlord, or his customers, did not think Stuart's picture suggestive enough, and an "improvement" was decided upon. A painter was hired, who, like the schoolboy who writes under his first attempt at copying nature, "This is a horse," or "This is a cow," painted under the Prussian hero's portrait the words, "The King of Prussia Inn."

One of Matthew Pratt's most famous signs, perhaps the best for the artistic skill displayed in the execution of so vast a subject, was the picture of the Convention seated in Independence Hall, which he painted for the "Federal Convention of 1787" Inn, kept by Hanna, and afterward by George Poppal, at No. 178 South Street, between Fourth and Fifth. The figures in this picture were striking likenesses of the members of the convention. In the *Portfolio* of 1824 this sign was thus described:

"The room itself was correctly represented as it stood at the time—richly wainscoted, with pediments over the doors, and Ionic pilasters supporting a full entablature of the order beneath a coved ceiling—though all these appropriate accompaniments of a public apartment have since been taken down by some ruthless commissioner of repairs, to be replaced with naked walls and meagre door-cases, which now disappoint the expectations of those who visit this memorable council-chamber, which has not been inaptly denominated 'the cradle of American independence,' and which ought to have been scrupulously preserved in its pristine state to future ages. On one side of this highly-interesting historical composition the President, George Washington, was seen in the chair, under the lofty central panel at the east end of the room, which was then ornamented with the arms of Pennsylvania. On his right, Judge Wilson occupied the chair with that imposing air which was natural to him, and which had strongly impressed the delineator; while on his left, and immediately under the eye of the spectator, sat the aged Franklin in his arm-chair, which must have been placed so near the bar that the venerable sage, then in his eighty-third year and suffering under a peculiar infirmity, might approach his seat in the sedan-chair he had bought in Europe, and which was the only mode of conveyance he could then support. On the other side of this contemporaneous memento the House was depicted in committee, and no particular feature of the scene is now recollected, but on both sides was inscribed the following quaint prognostication of their patriotic exertions, which has since been so happily fulfilled,—

"'These thirty-eight men together have agreed
That better times to us shall very soon succeed.'"

In the beginning of the century there stood on Second Street, between Race and Vine Streets, an ancient tavern, with the sign of the "Federal Procession," commemorating the great procession of the 4th of July, 1788.

As was natural, the name and portrait of Gen. Washington were among the most popular sign-symbols. The oldest, probably, was that of the General Washington Hotel, started immediately after the war by Capt. Jacob Mytinger, who had served under Washington. It was in Vine Street, between Second and Third. Capt. Mytinger kept this house until 1793, when he died of the yellow fever.

The Washington Tavern, at the corner of Sixth and Carpenter [now Jayne] Streets, was opened about 1790. Who was its first landlord does not appear, but in 1795 it was kept by Lewis Young. In 1810, Peter Evans became the landlord. He was succeeded in 1815 by James Stell. In 1822 it was leased by John Chase, who changed its name to the New Theatre Hotel. Woodside painted a handsome sign for the hotel, which represented Warren in the character of Falstaff. Beneath the figure was inscribed the appropriate quotation, "Shall I not take mine ease in mine inn?" How, by a third transformation, the old Washington Tavern became the "Falstaff Inn," is thus told by a correspondent in the *Dispatch*:

"Chase did not keep the place very long, and we are not able to trace the succession of the subsequent tenants. Its principal uses were in renting its rooms for arbitrations, the use of juries, audits, and other legal proceedings, and as a meeting-room for societies. There was only one occupant of this tavern who could have made it anyways famous, and that was William Warren, the actor, who, after he had fallen into the sere and yellow leaf, and had ceased to be a manager of the Chestnut Street Theatre, was induced to lease the Falstaff Inn, in the expectation that he might do a good business there. It was a mistake. Even Warren could not draw to the house such a custom as would make it worth while for him to remain. He was there but a short time. This was about 1830. He afterward kept a tavern in Baltimore, and died, in 1832, at Washington. Isaac Anderson kept this tavern in 1834 and for some years afterward. In time the original Woodside sign of the Falstaff faded out. It was replaced by a plain, painted board, on which were the words, 'Falstaff Inn.' This was succeeded by a new painted sign, which was so roughly done that it was not to be compared with the old work of Woodside, and might be justly denominated a daub. It is probable that the persons who put up that sign never had seen the old one. The motto, so very appropriate, and which poor Warren perhaps thought would induce patronage enough to make him comfortable in his old age, was changed to 'Bring me a cup of sack, Hal,' which was not near so appropriate, neither to host nor to guest, as that which was upon the first sign. The place was a horrible old rattletrap, and there ought to be no regret that it was demolished."

At the corner of Eighth and Zane [Filbert] Streets was an old tavern dating from the time of the Revo-

lution, and which, in the origin, had for its sign a "Golden Lion," standing on its hind legs. Whether the sign-painter had not done justice to the king of animals, or exposure to the weather had made the picture indistinct, or our patriotic predecessors wished to show their contempt for the British Lion, is not clearly shown; but in course of time the "Golden Lion" became the "Yellow Cat." This change of name has led to much discussion, and the "reminiscences" of old gentlemen have not thrown much light on the matter, for while some maintained that they had ever heard this old tavern designated as the "Golden Lion," others stoutly contended that they had never known it by another name than the "Yellow Cat." Our surmise that in its youth it was a lion, and when age effaced somewhat its bold outlines it was adjudged a cat, seems plausible, inasmuch as both animals have the feline aspect. Howbeit, the place was a famous resort in 1794. An old Philadelphian gives his recollection of it as follows:

"It was held in high repute for its well-drawn beer and porter, and was much resorted to by mechanics and working people to quaff the finest malt liquors from the then fashionable pewter mugs. At that time the President's house (late the University) in Ninth Street was being built, and many of the workmen and contractors—my father being one of them—would meet at the tavern in the evenings for the purpose of paying and receiving their pay. Many of them being from the old country, they adopted, or rather pursued, their old habits here. Governor Mifflin, Gen. Knox, and many others of the committee took their mugs of beer there, and it is probable that Gen. Washington did likewise."

Another describes it as it was at a later period, when it was kept by the Holohans,—

"It was until within fifteen or twenty years famous for its being kept in old-fashioned style. There was a huge ten-plate stove in the middle of the room. The bar was boxed up with rails, reaching to the ceiling. The sanded floor was worn, but clean; the tables were scrubbed every day until they were as white as snow, and tallow candles illuminated the room long after plate-glass, gilding, and gas distinguished the flashy city 'saloon.' But 'The Yellow Cat' was attractive as an old-fashioned place, by its dissimilarity to other places, and Susan, the ancient maiden who brought up the beer in pewter mugs upon an antique pewter salver, accompanying the presentation of each mug with the inevitable pretzel, will not soon be forgotten by the middle-aged gentlemen of the present generation."

As far back as 1750, there was a tavern at the corner of Front and Chestnut Streets, having for its sign a Turk's head, with the name "Kouli Khan." Thamas Kouli Khan was a Persian partisan of great valor, who drove away the Afghans from his country, and defeated the Turkish invaders. His prowess was rewarded by the crown of Persia. The fame of the victorious patriot and monarch became world-wide, and his head made a popular tavern-sign. But some time later he became a tyrant, and signalized the closing years of his reign by the most atrocious cruelties, which led to his assassination. The sign of the Kouli Khan, having survived the original many years, those who were not aware of how long it had been standing felt puzzled and somewhat indignant that the image of such a bad man should have been chosen for a sign. The proprietor of the old inn did not, perhaps, observe the change that took place in his hero after the latter had reigned some years, or if he did, he concluded wisely that his sign was a good sign, and as it was not his fault if Kouli Khan had lost the good opinion of mankind, he let it stand. The "Turk's Head," meanwhile, had acquired popularity from its gorgeous coloring, and several other taverns adopted it.

The Harp and Crown Tavern of ante-Revolutionary times was at the corner of Third Street and Elbow Lane; during the Revolution the name was changed to the Harp and Eagle; and some time after the tavern was removed to the east side of Third Street, below Arch. It was a well-patronized place. The house was torn down some time afterward, and an elegant structure erected by Heiskell, who gave it the name of the City Hotel. This establishment was considered one of the finest hotels in the city, and soon became the favorite. A public dinner was given there on the 27th of November, 1813, to Capt. Bainbridge, in honor of his capture of the British frigate "Java." Chief Justice Tilghman presided on this occasion, assisted by Charles Biddle, Alexander J. Dallas, and John Smith. It was at the City Hotel that, on the 24th day of June, 1833, at a quarter before twelve o'clock, John Randolph, of Roanoke, departed this life. The hotel at that time was kept by the late Edmund Badger. That same month President Jackson came on a visit to Philadelphia, and was quartered at the City Hotel.

The old building occupied by the Harp and Eagle, at Third Street and Elbow Lane, became the Robinson Crusoe, and was embellished with a well-painted representation of De Foe's hero.

A popular place of resort in those days is thus described:

"David Weaver's house was situated on the north side of Poplar Street, about where Ninth Street now goes through. In those days Poplar Lane only ran out as far as Fifth Street. Beyond that were farms. David Weaver's was a place of great resort for military companies for target-shooting; and it was a great place for sports of all kinds, such as bear-baiting, bull-baiting, foot-racing, pig-chasing, fox-chasing, badger-baiting, climbing a greased pole, wheeling a barrow blindfolded to a stake, and many other sports. Madam Johnson, the great aeronautist, attempted to make an ascension in her balloon from that place twice, and failed on both occasions. At that time there was a man by the name of John Runner, whom the Philadelphians thought could not be beaten at running one hundred yards. A race was made up between him and a Virginian. When the race came off there were five thousand persons on the ground, and great excitement was manifested; but the Virginian beat Runner easily."

Many of these taverns, on the edges of the town, were places of amusement, which enjoyed great popularity. The Yellow Cottage was one of these well-known taverns. It was situated in the lower part of Southwark, and had originally been built for a country house. It was on the east side of Second Street near Greenwich. The sign swinging in front told that the tavern was kept by Thomas B. Steele, and contained the following invitation:

"Rove not from sign to sign, but stop in here,
Where naught exceeds the prospect but the cheer."

An old citizen contributed to the *Dispatch* a description of the place and its ways, which is copied here *in extenso*, as giving a graphic and interesting picture of the popular amusements in vogue at the time. Says this correspondent,—

"Visitors passed through a large double gate on a gravel walk to the cottage, which was surrounded on three sides by a brick pavement, five or six feet wide, edged with lilac bushes and Washington bowers, concealing the lower story, except, perhaps, the door of the entrance. The bar was directly to the right as you went in, and, passing through to another room, a door opened out to a porch extending across the eastern side of the house, above the level of the ground, sufficient to walk in and out of the basement on the slope of the hill. This slope continued to descend for about one hundred feet beyond the cottage, or one hundred and fifty feet from Second Street. Then the ground began to rise gradually to the end of a large lot which had a plain board fence across it, with an opening, and a post and pivot cross-pieces, to pass in and out on Front Street. Near the fence, on the hill, stood a large poplar tree. Beyond the lot it was all an open space to the Delaware River. On the right (along the Second Street fence) of the main entrance there was a row of sheds, a stable, a chicken-house, and a few hog-pens, where there was usually to be seen an immense fat hog, a fat ox, or something else to attract patronage. Occasionally shooting parties enjoyed themselves here. The rifle and target were used for prize-shooting for a pool, for chickens, and sometimes for a fat hog. Quoits, throwing of an axe, large stones, and fifty-six-pound weights, were also indulged in. But the most amusing entertainment was walking up the hill to the tree blindfolded. A man would start off. For a few steps he appeared to go direct toward the tree; then he would slide off to the right or left and walk till he thought he had accomplished the feat, or until he was tired. He then removed the handkerchief from his eyes, to behold, amidst loud shouting, that he had walked in a circle to the place from which he had started, or that he was in the bushes, farther from the tree than ever. The novelty was sometimes changed by trundling a wheelbarrow to the tree blindfolded. Old-sledge, all-fours, and dominoes were indulged in on the porch, which was shaded by the house and by a few trees. A good southerly breeze could be enjoyed, together with a charming view of the river."

One square below the Yellow Cottage, already described, was the "Purple and Blue" Tavern, kept by a Frenchman named Lutier. It took its name from a sign representing a large bunch of purple grapes painted on a blue ground. This place was a favorite resort for military companies. A Mr. Douglas succeeded Lutier, and changed the name of the tavern to "The Quiet Woman," but the ungallant fellow had a sign painted which represented a woman without a head. His joke cost him dear, for the denizens of Southwark and "the Neck," however they might appreciate the company of a quiet woman, would not countenance this libel upon the fair sex; they withdrew their patronage, and the discomfited landlord removed himself and his sign to other parts.

More touching was the idea that inspired the painter of "A Man full of Trouble," in the small alley which runs from the north side of Spruce Street into Dock Street. The sign of this very ancient tavern represented a man on whose arm his wife was leaning heavily, while a monkey was perched on his shoulders and a parrot on his hand; the woman carried a band-box, on the top of which was a cat. Quite a family picture!

The proprietor of a tavern on Thirteenth Street above Locust, whose wooden walls were painted in cerulean hues, announced his business in the following quatrain:

"I, William McDermott, lives here;
I sells good porter, ale, and beer;
I've made my sign a little wider
To let you know I sell good cider."

There was a sign in Southwark representing a group of dogs baying at the full moon, which is believed to have been painted by Pratt. Beneath was the motto,—

"Ye foolish dogs! Why bark ye so?
When I'm so high and ye're so low."

The Lebanon Tavern, better known as the Lebanon Garden, was at the former country-seat of the Emlen family, at the southeast corner of Tenth and South Streets. It had a handsome sign, painted by Pratt, which represented on one side Neptune in his sea-chariot, surrounded by Tritons, with the following inscription:

"Neptune with his triumphant host
Commands the ocean to be silent;
Smooths the surface of its waters,
And universal calm succeeds."

On the other side of the picture there was a marine scene, sailing ships, etc., with the following lines:

"Now calm at sea and peace on land
Have blest our Continental stores.
Our fleets are ready, at command,
To sway and curb contending powers."

Over the door of the tavern were these words,—

"Of the waters of Lebanon,
Good cheer, good chocolate and tea,
With kind entertainment,
By John Kennedy."

George Brown kept the Lebanon Inn in 1817.

The Sorrel Horse was once a famous old tavern in Kensington, at the intersection of Shackamaxon Street and the Frankford road. Dancing was one of the principal amusements that brought patronage to the tavern, and old Kensingtonians remember hearing the sound of the violin and tambourine as they passed by the Sorrel Horse. There was another well-known tavern sign, the "Lady Washington," on the Frankford road, opposite Bedford [Wildey] Street. The Odd-Fellows or Masons had a large room with a frescoed ceiling in the third story of the building,—an old brick house, which may be still standing.

Another famous sign, "Shooting the Deserter," swung in front of Peter Boon's Tavern, at the foot of Shackamaxon Street, on the Delaware. "Penn's Treaty" tavern sign was on Beach Street, below Marlborough. The sign of the "Landing of Columbus," painted by Woodside, was on Beach Street, one door from Laurel. On Second Street, between Thompson and Master Streets, west side, was a sign of Daniel O'Connell, under whose bust was inscribed these lines,—

"'Hereditary bondmen! who would be free,
Themselves must strike the blow.'"

The Bolivar Tavern and Garden (formerly the Columbian Garden) was on the square bounded by

what is now Market, Filbert, Merrick, and Fifteenth Streets. The grounds were inclosed by a high fence and contained many fine old trees. The house was built in the centre of the lot, and could be seen from afar, the space around being open. The seclusion of the "Bolivar," the orderly regulations adopted for its management, and the many attractions of the place made it a favorite resort for the most respectable people. Quoits, tenpins, shuffle-boards, and other games of the kind were provided for the entertainment of visitors. The First City Troop had their drill-ground there.

Muirheid, who succeeded George Parkinson at the Burns' Head, in Bank Street, opposite Elbow Lane, had upon his swinging sign a very good portrait of Scotia's bard, beneath which were the following lines:

"Tak' a Scotsman frae his hill,
Clap in his cheek a Highland gill,
Say, 'Such is Royal George's will,
And there's the foe;'
He has nae thought but how to kill
Twa at a blow!"

On the other side of the sign there was no painting, but the following was set out in large gilt letters:

"'Twas thus the Royal mandate ran,
When first the human race began:
'The friendly, social, honest man,
Whate'er he be,
'Tis he fulfills great Nature's plan,
And none but he.'"

There was a tippling-house near the navy-yard, on whose sign were painted a tree, a bird, a ship, and a mug of beer, with the following quaint lines:

"This is the tree that never grew;
This is the bird that never flew;
This is the ship that never sailed;
This is the mug that never failed."

In the same locality was another sign representing a cock in the act of crowing, with the motto, "The old cock revived." Whether the resuscitated ancient rooster was emblematical of the host's commercial resurrection, or of some event in the history of the tavern, tradition sayeth not.

On Shippen Street, between Third and Fourth, there used to be a tavern sign representing a sailor and a woman, separated by these two lines,—

"The seaworn sailor here will find
The porter good, the treatment kind."

The thirsty tars found, doubtless, this invitation irresistible. A tavern-keeper at the corner of South and Vernon Streets, in 1794, who was of a philosophical turn of mind, had on his sign a woman sitting before a tub, from which protruded the woolly head and bare shoulders of a negro boy; in her raised hand she held a brush in an attitude indicative of hard scrubbing, while a scroll issuing from her mouth informed the passers-by that 'twas "Labor in vain to wash blackamoor white."

The Three Jolly Sailors was the sign of a tavern on Water Street, above Almond. One of the tars was busy strapping a block, and the motto below made him say,—

"Brother sailor! please to stop,
And lend a hand to strap this block;
For if you do not stop or call,
I cannot strap this block at all."

The Caledonia Tavern, on South Street near Front, had on one side of its sign a thistle, and on the other side two men shaking hands, with the motto, "May we never see an old friend with a new face."

There used to be a singular sign near the corner of Second and Union Streets. It represented a gate, with the following lines painted beneath:

"This gate hangs well,
It hinders none;
Refresh and pay,
Then travel on."

A tavern on Sixth Street, below Catharine, bore the puzzling name of "The Four Alls." The sign, five feet long and four feet wide, represented a palatial abode, on the steps of which stood four figures, a king in his royal robes, a general officer in full uniform, a clergyman with his gown and bands, and a peasant in the plain garb of his station. The riddle was explained by the following inscription:

"1. *King*.—I govern all.
2. *General*.—I fight for all.
3. *Minister*.—I pray for all.
4. *Laborer*.—And I pay for all."

The sign of the Huntsman and Hounds, kept by Widow Sarah Brown, on Arch Street, west of Sixth, represented a deer hunt. Beneath were these lines,—

"Our hounds are good, and the horses too;
The buck is near run down;
Call off the hounds, and let them blow,
While we regale with Brown."

After a time the "Huntsman and Hounds" was designated by the briefer name of "The Buck." The well-known anecdote of Sir Walter Raleigh's servant finding him surrounded with a cloud of smoke from his pipe, and throwing water over him to put out the fire, formed the subject of the sign of the Sir Walter Raleigh Tavern, on Third Street. Near the entrance to the barracks, on Second Street, near Buttonwood, was a tavern with the figure of Hudibras painted on its sign. An inscription beneath the figure informed the public that—

"Sir Hudibras once rode in state;
Now sentry he stands at barrack's gate."

A small, one-story house with a high-pitched roof, whose quaint style of architecture and ancient look made it appear to date almost as far back as its neighbor, the old Swedes' Church, used to stand on Christian Street above Swanson. Over the door was a sign representing an old hen with a brood of young chickens, and, hovering over them, as if to protect them, an eagle holding a crown in its beak, with this pithy inscription, "May the wings of Liberty cover the chickens of freedom, and pluck the crown from

the enemy's head." To represent freedom under the semblance of an ancient domestic fowl was a rare flight of fancy, and the "Hen and Chickens" was doubtless a much-admired sign. The grading of the street in later years had brought the house much below the surface level, and customers had to descend three steps to get to the bar-room. This apparent sinking of the building made the height of its walls entirely out of proportion with the high roof, and added to the quaintness of its general appearance.

The sign of "The Man making his way through the World" required no inscription, for the ingenious artist had painted on it a terrestrial globe from which the head and shoulders of a man protruded, not unlike a young chick forcing its way out of its egg-shell. The old tavern of the Bird-in-Hand was a blue frame house, on Fourth Street below Callowhill. On one side of the sign a sportsman was represented, holding a dead bird in his hand, on the other side were painted two birds in the bush, with the motto, "A bird in hand is worth two in a bush."

The Heart, on Frankford road, had a large heart painted in natural colors on its sign. It gave its name to Heart Lane, called Hart Lane, through euphonic corruption of the word, after the old sign had disappeared.

About fifty years ago there was a tavern called the Bee-Hive, which was kept by Edward Kelly, at the northwest corner of Sixth Street and Middle Alley. Its sign, a bee-hive with the busy bees going in and out, had for its motto, "By Industry we Thrive," a sentiment applicable perhaps to the industrious tavern-keeper, but certainly not to the thirsty "bees" who left their money on his counter. Another Bee-Hive, kept in Frankford some years later by Patrick Keegan, was more practically frank in this inviting inscription:

"Here in this hive we're all alive,
Good liquor makes us funny;
If you are dry, step in and try
The flavor of our honey."

A sign which stood in Franklin place, below Market Street, was very suggestive. It was oval in shape, and set on top of a fifteen-feet post, so as to be seen from afar. On one side was painted a smartly-dressed man mounted on a handsome steed, with the legend, "Going to Law." On the other side, the same personage, much dilapidated in person and garments, was seen on his horse, now jaded and worn out, and the legend read, "Coming from Law."

On John Upton's tavern sign, on Dock Street, above Second, the artist had represented fish, game, meats, etc., painted with such fidelity to nature that, the story has it, a dog passing by was so tempted by these delicacies that he made a bold spring to purloin some of them, and bumped his head against the sign-board, which so discomfited him that he ran off with his tail between his legs. An imitation, probably, of the story of the birds pecking at the grapes painted by Zeuxis. If true, Woodside the industrious sign-painter must rank with the famous Athenian artist.

A tavern on Third Street, above Shippen, had on its sign, "X 10 U 8." The riddle excited some curiosity, until some one read it,—"The Extenuate House." The learned, if they smiled at this ingenious puzzle and passed on, stopped complacently to read the inscription painted on the wall over the door leading to Prosser's cellar in Market Street, above Eighth. It said, very appropriately, *Facilis descensus averni, sed revocare gradum—hoc opus, hic labor est.*" McClain, who kept a cellar in Third Street, below Vine, was not familiar with the language of Cicero, so he told his customers, in plain English, on his door-sign,—

"Oysters opened or in the shell,
Of the best I keep to sell;
Walk down and try them for yourself,
That D. McClain may gain some pelf."

Such direct invitations to public patronage were not uncommon. They were sometimes in prose, but much oftener in verse.

In 1816, James Carson, of the Washington Inn, Holmesburg, issued the following address to the public:

"Ye good and virtuous Americans, come!—whether business or pleasure be your object—call and be refreshed at the sign of Washington. Here money and merit will secure you respect and honor, and a hearty welcome to choice liquors and to sumptuous fare. Is it cold? You shall find a comfortable fire. Is it warm? Sweet repose under a cool and grassy shade. In short, every exertion shall be made to grace the sign of the hero and statesman who was 'first in war, first in peace, and first in the hearts of his countrymen.'"

Who could resist such an appeal?

In 1819, George Parkinson, who had formerly kept the Burns' Tavern, became the lessee of the Pennsylvania Arms, in Chestnut Street. Although the old sign remained, the house, in consequence of its front having been painted green, was thereafter called "The Green House." Mr. Parkinson announced his new undertaking in the following advertisement:

"GREEN HOUSE,
"No. 161 CHESTNUT STREET.

"A generous public's patronage and favor
Call me once more to make my best endeavor
At one low bow of thanks, unfeigned, though rude—
Not framed by courtesy, but gratitude.
And here I take the liberty to mention
A few things not unworthy of attention:
And first ye gentlemen, officers and volunteers,
Whom duty calls to drill, lend me your ears:
Now that the summer, with its cloud of dust
And parching sunbeams, hastens nigh, you must
Seek shelter somewhere while you march and drill.
Now, I've a place where, snug as mouse in mill,
You may manœuvre coolly in the shade,
And, when you tire, sit down to lemonade,
Or wine, or whiskey,—what, in short, you please
To drink,—or eat, from pies to bread and cheese.
I should be tedious if I tried to tell
The names of all the liquors that I sell.
A few may serve to make the mind elastic:
I've whiskey, rye and apple,—all domestic,—
And genuine Irish, too, and Holland fine,
And the best of Europe's gen'rous wine.

Then, just adjoining, Mrs. P. has store
Of pies and creams, and cakes and fruits, and more
Of all such things than I can mention,—all
As good and cheap as e'er in store or stall
Have been exposed to sale; she likewise sells
Nice jellies and richly-flavored cordials.
Snug parties are accommodated here
With dinners, suppers, and all kind cheer.
Of all my patrons' wishes most obedient,
I am their faithful, most obedient servant,
"G. PARKINSON."

The baking and confectionery establishment of Mrs. Parkinson, alluded to in the latter part of these lines, subsequently dominated in interest and profit; so that Mr. Parkinson gave up the tavern and became a confectioner. In after-years his establishment was the best known and the most fashionable in the city.

But the best thing of this kind was the advertisement in which George Helmbold, publisher of *The Tickler and Independent Balance*, announced his intention of forsaking the press for the bar (room). It appeared in October, 1815, and was as follows:

"G. Helmbold, hitherto baffled in all his exertions to attain a decent competence, owing to the freaks and vagaries of 'outrageous fortune, has at last resolved to court her smiles in the humble vocation of a tavern-keeper. To make his approaches in a regular and scientific manner, he has rented and obtained license for that compactly commodious house, No. 1 George Street (which leads from Sixth to Seventh, between Chestnut and Walnut Streets), where he will open on Wednesday, the 1st of November, the Minerva Tavern, or Legitimate Owls' Nest. The moment the sun is over the fore-yard, Gen. —— (who has kindly consented to do duty as officer of the day) will give the signal for firing a salute at the bar. 'Mine host' of the Minerva will furnish visitors with the best liquors that can be procured in the city, from Imperial Tokay to genuine 'Holland tape' and humming beer. His larder shall always afford the choicest bill-of-fare that can be furnished in our markets.

"G. Helmbold will feel grateful for the visits of his late fellow-officers and companions in arms, be they sane or deranged.

"'Drink just enough; 'twill raise your merits
To prime and not to charge your spirits;
For he that drinks not but a prime
Will live to drink another time;
But he that drinks till life shall stop
Will never drink another drop.'
'JUDY BRASS.'

"Southern and Western Pennsylvania bank-notes taken at—*bar*. The highest premium for specie or treasury notes paid in *liquid stimulants*.

"P.S.—To facilitate the equitable liquidation of the demands of his old and patient *creditors*, G. Helmbold earnestly solicits such distant subscribers to his quondam paper, *The Tickler*, as are indebted to him, either to call personally, whenever they visit Philadelphia, or else to forward him the amount of their respective dues as speedily as possible, so that he shortly may be enabled to pay his debts to '*the uttermost farthing*.'"

In August, 1820, the following advertisement appeared in the *Independent Balance:* "UNION HOTEL.—Samuel E. Warwick respectfully informs his friends and the public generally that he has opened a house of entertainment at the northeast corner of Seventh and Cedar Streets (or South Street), and has copied for his sign Mr. Binn's beautiful copper-plate engraving of the Declaration of Independence by that justly-celebrated artist, Mr. Woodside.

"'Whate'er may tend to soothe the soul below,
To dry the tear and blunt the shaft of woe,
To drown the ills that discompose the mind—
All those who seek at Warwick's Inn shall find.'"

The sign of Rolla carrying the child, which was attributed to Woodside, was at the corner of Front and Catharine Streets. The figure of Rolla is generally believed to be a portrait of George Frederick Cooke. A correspondent of the *Dispatch*, however, protests earnestly against this belief, as Cooke was "too intensely British to perform an American hero, and he was insulting at all times to Americans;" he says in support of his opinion that Dunlap, in his "Life of Cooke," does not mention Cooke performing Rolla. He asserts confidently, moreover, that "the sign represented Mr. Forrest, and the tavern was kept by Capt. Koehler, father of the late Edwin Forrest Koehler, of the Philadelphia bar." As the Rolla sign on Catharine Street was there in 1817, that is, before Mr. Forrest appeared on the stage, it is possible there was another tavern of the same name with Forrest's likeness.

The Phœnix Tavern, at the intersection of Germantown road and Sixth Street, was a favorite place of resort for persons who could come in their own carriages and wagons. The grounds were pleasant, and Cohocksink Creek, then a bright and attractive stream, ran through them. Out of compliment to the tavern the street on its south side, when first opened, was called Phœnix Street, a name which it bore until within a few years. The house was built about 1810, by Samuel Hymas, who also kept a grocery-store at that place. He was an Englishman. The Phœnix Tavern was afterward kept by Joseph Knox. When he gave up the Phœnix he went to the Lamb Tavern, on Fifth Street, below Arch.

On the west side of Sixth Street, a few doors above "The Four Alls," already described, there was a small tavern called "The Ram's Head Headquarters." Its sign was a huge ram's head, with crooked horns, which was nailed to the wall. A correspondent tells the following anecdote in connection with this place:

"This was about the year 1840. One Sunday evening in the Methodist Church (Catharine Street, above Sixth Street), the pastor, Rev. 'Billy' Barnes, the Shakespearian pulpit orator, was seen to walk slowly up the eastern aisle and go into the pulpit. When there he turned around and gazed at the congregation for a few seconds, and then spoke thus: 'While walking to this house of worship, I was pained to see men going in "The Ram's Head Headquarters,"—a rum-shop,—headquarters for rams! Oh, brethren; what a contrast,—the lambs of heaven and the rams of hell.' This caused some little merriment among the curious, which was increased by Barnes, upon his doubling up his fists with a pugilistic attitude, stamping upon the floor, and daring the devil to come right out and fight him,—'here! here! in this pulpit!'"

A curious conceit was the sign of William Newton's Tavern, at the corner of Eighth and Buttonwood Streets, erected in the fall of the year in which David R. Porter was elected Governor of Pennsylvania. The tavern was diagonally opposite the old school-house, where at that time the elections were held, and the sign in question was a large log of wood cut into the shape of a bottle and swung on a hickory pole. This was called the "Porter-Bottle." The "Adam and Eveses' Garden" (so the sign read) had a picture of Adam and Eve in Eden. This tavern was on Sixth Street, above Berks.

The Cock and Lion—emblematically France and England—was the sign of a famous old tavern at the corner of Coates and Second Streets, which was frequently used for political meetings. It was kept for several years by Davis Kerlin, and after the death of the latter by his widow. She retired from business some years later, and the sign of the Cock and Lion was transferred to a tavern on Fourth Street, north of George Street, kept by —— Grundlock.

The sign of the Woodman Tavern on Germantown road, near Fifth Street, represented a woodman with an axe. Beneath the picture were the following lines:

"In Freedom's happy land,
My task of duty done,
In Mirth's light-hearted band
Why not the lowly woodman one?"

At the corner of Sixth and South Streets was the tavern of the Patriot Brothers. The sign represented the Temple of Liberty, with various implements of war. On the steps of the temple a soldier and a sailor grasped each other's hand. Over this group was the motto, "Where Liberty dwells there is my country."

A curious anecdote is told about the Rotterdam Tavern. This famous old house was kept by John Hay, at No. 118 North Third Street. In 1801 he removed to Fourth Street, between Race and Vine, and took the sign of the Rotterdam with him. He sold out in 1815, and in 1817 Buel Rowley set up the same old sign at 118 North Third Street,—the identical place where it was originally kept by John Hay. It often happened that a tavern-keeper, upon changing his place of business, took his sign with him and set it up at his new house. This was particularly the case where the old house had enjoyed much popularity. The sign was identified with its owner and the success he had achieved, and not with the locality. Hence an uncertainty in locating many old taverns, and the disputes between old gentlemen whose recollections of those old places conflict. Each equally sure of the description of a sign and the name, perhaps, of its owner, they disagree totally as regards the street and the house. If dates could always be remembered, the tavern-keeper might be followed in his migrations and all contradictions would cease to exist.

On the other hand there were sometimes changes in the signs. Much importance was attached to these symbols, and if one was found not to "draw," the landlord sought by some new device to attract customers. Then, the tavern might change hands and the new proprietor would substitute a new name and new sign more to his taste and fancy. Thus, the Washington Tavern, before mentioned, was changed to the New Theatre Hotel, and finally became the Falstaff Inn; the name of the Bull's Head, in Sixth Street, was changed to the Oley Wagon before 1822; in that year the tavern changed hands, and the new landlord, Bartholomew Graves, restored the old name and sign of the Bull's Head; some years later, another man bought the place and called it The Montgomery House.

The great variety of tavern signs in Philadelphia could not fail to attract the attention of travelers, and the Englishman Palmer, who visited the city in 1818, noticed it. He says,—

"We observed several curious tavern signs in Philadelphia, and on the roadside, among others, Noah's Ark; a variety of Apostles; Bunyan's Pilgrim; a cock on a lion's back, crowing, with the word 'liberty' issuing from his beak; naval engagements, in which the British ships are in a desperate situation, etc. The most common signs are eagles, heads of public characters, Indian kings, etc."

Yet, with the large number of houses of entertainment existing at that early period, we hear nothing of the drinking habits so often complained of in ante-Revolution times. The testimony of travelers would tend to show an almost total disappearance of those habits.

Lieut. Francis Hall, who traveled in 1817, says,—

"The innkeepers of America are, in most villages, what we call, vulgarly, 'topping-men,'—field-officers of militia with good farms attached to their taverns, so that they are apt to think, what, perhaps, in a newly-settled country is not very wide of the truth, that travelers rather receive than confer a favor by being accommodated at their houses. They always give us plentiful fare, particularly at breakfast, when veal-cutlets, sweetmeats, cheese, eggs, and ham, were most liberally set before us. Dinner is a little more than a repetition of breakfast, with spirits instead of coffee. I never heard wine called for. The common drink is a small cider. Rum, whiskey, and brandy are placed upon the table, and the use of them left to the discretion of the company, who seem rarely to abuse them. Tea is a meal of the same solid construction as breakfast, answering also for supper. The daughters of the host officiate at tea and breakfast, and generally wait at dinner."

Several of the inns and taverns of some consequence in the early part of this century were opened in houses of historical interest, old mansions, once the homes of some of the founders of Philadelphia, or within whose walls some of the great men of the Revolution were temporary dwellers or casual visitors. In 1800, John Francis, who had kept the Indian Queen on Fourth Street, opened the Union Hotel in the house built by Mrs. Mary Masters, about 1762, on Market Street, between Fifth and Sixth Streets. This elegant mansion had had many illustrious tenants; the residence of Lieutenant-Governor Richard Penn previous to the war, it became the headquarters of Gen. Howe during the occupation of Philadelphia by the British; scarcely had it been vacated by Gen. Howe, when Maj.-Gen. Benedict Arnold took possession of it; later it was occupied by John Holker, consul-general of France, became the home of Robert Morris, the financier, who gave it up to President Washington. President John Adams afterward occupied it. Whether the memories attached to this noble mansion awed the guests of the Union, or they felt too keenly their smallness in those rooms where the giants of the Revolution lived, thought, and acted, or for the more prosaic reason that such a fine house could not be made to pay, the landlord gave it up after a two years' trial, and returned to the Indian Queen.

Benjamin Franklin's house, in Franklin Court,

also became a hotel. It was opened in 1802 by John Cordner, who does not seem to have been luckier than John Francis, for he did not keep it very long; and in 1805, Daniel Dunn gave notice that he had leased this house for a number of years, and would keep in it a tavern, beefsteak, and oyster-house. In the first year of John Cordner's tenancy a dinner was given to Thomas Paine, in the room which had been Dr. Franklin's library.

The Bingham mansion, on Third Street, where that leader of society, the charming Mrs. Bingham, was wont to collect around her the beauty and wit of Philadelphia, became a public-house after the death of its owners. William Renshaw leased it in 1806. He proposed to make a place of resort for merchants and business men generally. He was to keep a marine diary and a register of vessels for sale, to receive and forward ships' letter-bags, and to have accommodations for the holding of auctions. He even published proposals for keeping the Exchange Coffee-House, and solicited subscriptions for its support, but finding that he could not compete successfully against another establishment of the same kind, the Merchants' Coffee-House, kept by James Kitchen, he gave up the exchange plan and opened the Mansion House Hotel in 1807. In 1812 he left it to open the "New Mansion House Hotel," in Market Street, but came back to it in 1814, and kept it until it was destroyed by fire, March 17, 1823.

A traveler who published "An Excursion through the United States and Canada during the Years 1822–23, by an English Gentleman," bore testimony to Renshaw's good management, and to the very moderate prices charged by such a first-class hotel as the Mansion House. The cost of keeping a hotel must have terribly increased since 1823, judging from the rates of the present day. This traveler said,—

"Philadelphia, for so large a town, is very ill provided with hotels, or, to use the American word, taverns. The only good one in the city is that one at which I put up, the Mansion House, kept by a Mr. Renshaw. At this, as at all taverns in the United States, the stranger is boarded at so much a week or day. Indeed, the tavern-keepers will not receive you on any other terms; and you cannot have your meals by yourself, or at your own hours. This custom of 'boarding,' as it is termed, I disliked very much, as it deprived me of many a meal when I was desirous of going to see sights. If a traveler stay at a hotel only one day, and, from having friends in the place, neither dines nor sups, he is charged, nevertheless, with a whole day's board. The terms of boarding are, however, very moderate at the Mansion House, only ten dollars per week. The table is always spread with the greatest profusion and variety, even at breakfast, tea, and supper; all of which meals, indeed, were it not for the absence of wine and soup, might be called so many dinners."

Joseph Head, who some years later became the landlord of the Mansion House (it had been repaired after the fire and opened by Chester Bailey), had been a gentleman of leisure and means, moving in the first circles of society. Having been so unfortunate as to become suddenly impoverished, he decided to turn to account his epicurean tastes and experience, and opened a "Private Gentlemen's Restaurant and Club-House" at the corner of Columbia Avenue [now Seventh Street] and Walnut, in what had been the McClellan and afterward the Randall family mansion. During the visit of Gen. Lafayette, in 1824, the First City Troop gave him a splendid entertainment in this house. Mr. Head was very successful in his undertaking, and after remaining some years in the McClellan mansion, he took the Mansion House, as better adapted to his largely-increased business. This establishment commanded the public favor until it was badly injured by fire in 1847, when it ceased to be used as a hotel. Among its guests were Mr. and Miss Kemble during their sojourn in Philadelphia in 1832 and 1833, and Mr. and Mrs. Charles Kean, who were staying there at the time of the fire, in 1847.

The old family mansion of the McCalls, at the northwest corner of Second and Union Streets, was turned into a hotel in 1809. Joseph B. Barry opened it under the name of the City Hotel. On the occasion of this opening, on the 11th of June, he gave a grand dinner in honor of the revival of commercial intercourse with Great Britain. The *Philadelphia Gazette*, speaking of the affair, said,—

"The *début* of the hotel was such as to give ample promise of making a very conspicuous figure, and of proving very useful to the public. . . . The building is second to nothing that our country contains. Indeed, when we take into view the number, convenience, dimensions, and excellence of the apartments, it is perhaps not too much to say that it is the foremost house of the kind in the United States. This house, besides a public dining-room and a coffee-room, contains a ball-room."

John McLaughlin succeeded Barry as proprietor of this house in the latter part of the year 1813. The house was not successful, and was abandoned as a hotel about 1815.

The handsome head of the Bard of Avon was a favorite sign. There were several "Shakespeare" inns, the principal one being that on South Sixth Street, between Market and Chestnut Streets, kept by David Irvin, and later (1805) by William Smith. A much more fashionable establishment, however, was the Shakespeare Hotel at the northwest corner of Sixth and Chestnut Streets. It was kept in 1804 by Joseph Vogdes, who was succeeded in 1806 by Lewis Young. David Barnum, of Columbus, Pa., leased this hotel in 1808, but he was not very successful, although in his announcement of the opening he had stated confidently that, "To those who know the accommodations of the house, the size of the rooms, and the manner in which they are fitted up, it would be superfluous to say anything upon the subject." Samuel Hymas afterward kept the Shakespeare Hotel for some years.

The Robin Hood Tavern, in Poplar Street below Fourth, was a popular dance-house, and also famous for bear- and bull-fights on holidays. There was also a Robin Hood Inn on Ridge road, near Laurel Hill, which was established long before the Revolution.

The Silver Heels was the nickname of another tavern and dance-house, situated in Tammany Street, between Fifth and Sixth Streets. The sign of "The Four Nations," in Coates Street, near Fairmount, represented four forts, flying respectively the flags of

the United States, England, France, and Spain. On Beach Street, near the Cohocksink Creek bridge, Kensington, was a sign of "Washington Crossing the Delaware," after Sully's famous picture.

The sign of the "State Fencibles Second Company" was in front of a yellow frame public-house on Third Street, below Coates. This house was kept by John Christine, a lieutenant in the Second Fencibles. On Callowhill Street, below Water, was a sign surmounted by the model of a ferry-boat, with a bird-box on top. The swallows used to make their nests in this box.

After the first decade in the present century, we see no new *inns;* the modern appellation of "hotel" is more general. The first house constructed in Philadelphia especially for the purpose of a hotel was the new Mansion Hotel, at the southeast corner of Eleventh and Market Streets. It was erected by Thomas Leiper, the owner of the lot, for William Renshaw, who left the Mansion House (Bingham's) and opened the new house in 1813. Although provided with every convenience known at that time, and elegantly furnished, the new Mansion House did not prove to be a very profitable venture, owing, probably, to its remoteness from the business quarter of the city, and Mr. Renshaw, after a year or two of trial, returned to his former hotel. Ford Cutter, of New York, then became the lessee, but he could not accomplish what Renshaw's experience and ability had failed to achieve, and his experiment, also, was of short duration.

Judd's Hotel, No. 27 South Third Street, was opened in 1819, by Anson Judd. The building, which was formerly the post-office, had been enlarged, and presented a very fine appearance, being four stories high, with a large front. This hotel did a very good business. Dana Judd Upson succeeded Anson Judd in the management, and in 1824 the hotel passed into the hands of James Bradley. There was an adjoining lot which fronted on Chestnut Street, upon which a hotel was built in 1826 with two entrances, one on Third Street and one on Chestnut Street. This building, with its double extension, had the shape of an "L." It was called Congress Hall.

The Bell Tavern, on South Eighth Street, might have been, but probably was not, named after the old bell that hung in the State-House. In its earlier days the Bell was a great resort for politicians, and was said to have been the first house in Philadelphia where Andrew Jackson was named for the Presidency. When in the great fire of 1854 the whole block, including the museum and the National Theatre, was destroyed, the "Bell" was the only building that escaped the flames. It had already fallen from its high estate, and had become a "three-cent shop," frequented by blacks and whites.

The Cornucopia Eating-House and Restaurant, in Third Street, below Arch, west side, was opened in 1832, by Robert Manners, who sold it in 1836 to Robert Harmer. It was a first-class establishment. The St. Charles Hotel was erected on the same site.

The Golden Swan Tavern was on the banks of the Schuylkill River, near Point Breeze. It was kept during a few years by Abraham McGee, after which the property was sold and became a private residence.

William Trotter kept for many years the Richmond Hotel, at Port Richmond. It was a place much frequented by sportsmen, and Charles J. Wolbert, who occupied it in 1821, announced that, in addition to his large stock of catfish, he had received about fourteen hundred others from the cove opposite Richmond. "The fowler and fisher are informed that there are no better gunning or fishing grounds than those adjoining the above hotel."

The Decatur Inn was started in October, 1813, by George Schoch, in Carpenter Street. This house was originally known as the German Hall. The sign was a representation of the hall of the German Society near by, on Seventh Street, below Market. Before Schoch took it, Jacob Nice kept an eating-house there. As the "Decatur Inn," it won the patronage of quiet-loving people, and became quite prosperous. It gave its name to Decatur Street, which was originally called Turner's Alley.

The Union Hall Hotel, at the corner of Chestnut and Front Streets, formerly kept by J. E. Beauson, having passed into the hands of T. Thomas, the new lessee advertised as an attraction to customers that his rooms were "kept warm with *Lehigh coal.*"

After the completion of the Market Street bridge a tavern, known as the Ferry House, was built on the west side of the Schuylkill, north of Market Street. A large hotel, which received the name of "The Schuylkill Hotel," was erected on the north side of Market Street. It was kept in 1810 by Peter Evans. Buell Rowley succeeded him in 1815, but kept the place only one year. It then passed under the management of R. Smith.

The Upper Ferry Hotel, on the west side of the Schuylkill, at Fairmount, was kept by Jacob Horn in 1820. Richard Harding became the landlord some years later. The Lower Ferry House, known as Gray's Ferry and Garden, was kept in 1800 by George Weed, in 1804 by James Coyles, formerly of the Indian Queen, Fourth Street, and in 1805 by Curtis Grubb. In 1825, D. Kochersperger became the landlord.

Mendenhall's Ferry Tavern was on the west side of the Schuylkill, below the Falls, and opposite a ford which landed on the east side and ran up to the Ridge turnpike. The lane still remains between North and South Laurel Hill Cemeteries. Mendenhall's was a famous catfish-and-coffee tavern upon the river-road drive, and was popular.

Among the taverns of a more recent date than those already described, was one with the picture of Gen. Washington, on Second Street, near the corner of Lombard Street, some forty years ago, which at-

tracted attention by the peculiar arrangement of its sign, rather a novelty at the time. It was one of those signs with perpendicular strips or slats so combined that while one has a good front view of the subject when standing opposite, an equally correct view of some other portrait is had when approaching the sign from either side. Another tavern, on Chestnut Street above Sixth, had a sign made in this style, but the three views showed three different pictures. Another of these signs, on a brewery in Fifth Street below Market, presented the names of the three partners who conducted the business.

A tavern at the southwest corner of Tenth and Arch Streets had a large sign of Gen. Washington, and was generally known as the "Washington Soup-House," being famous for the excellent soups and pepper-pots with which the proprietor, William Raster, tempted his epicurean customers.

"Our House" was the name of a handsome drinking-saloon established by John Vasey & Co., in 1839 or 1840, on the south side of Library Street, between Fourth and Fifth, in the building known as Military Hall, which was originally constructed by Mathew Carey for his printing-office. It was subsequently occupied by J. H. Fennimore, and called the Union House; later it was used by Labbe as a dancing-saloon, and afterward taken by certain military companies for an armory. Here used to meet the State Fencibles, Capt. James Page; Second State Fencibles, Capt. Murray; Washington Blues, Capt. W. C. Patterson. Here Frank Johnson, the black musician, who as a performer on the bugle had no superior at the time, practiced his band, which was the only band of music for some years in Philadelphia. It was after this that Vasey & Co. took it.

"Head Quarters," on Franklin Place above Chestnut, succeeded it, and was opened by Charles Alexander probably about 1836. It was rich with cosmoramas, pictures, busts, etc., and many original views of buildings in Philadelphia, by Breton. There was quite an extensive reading-room, well supplied with newspapers, being the "exchanges" of the *Daily Chronicle* and other publications of which Alexander was the proprietor.

The Wasp and Frolic, at the corner of Garden and Vine Streets, was some years older than the above described. The following anecdote is related in connection with this tavern: "One evening, in 1829, a party of butchers and drovers were at this place, a short time after the robbery of the Kimberton mail, when one of the latter said that he was going to leave the city that night. One of the butchers told him that he had better look out for the mail-robbers. The drover, a big, burly fellow, swore that no three men could tie his hands behind him. That night the Reading mail left the city. When it arrived at Turner's Lane, the horses were suddenly swung around that lane by one of the robbers; another pointed his pistol at the head of the driver, and ordered him to remain quiet; the third robber opened the door of the stage, and said, 'Gentlemen, I wish you to get out, one at a time.' The boasting drover was the first one called upon to get out, which he did, without uttering a word. His hands were tied, and his pockets were emptied. The others were served in the same manner. One of the passengers objected to having his tobacco taken from him. This created some merriment, in which the robbers joined. Another passenger, taking advantage of the merriment, requested the return of his watch, which he said was a family keepsake. It was handed to him. That drover was ever after known under the sobriquet of the 'Reading Mail.'"

The California House, which was the scene of a riot on election night, October, 1849, was situated at the corner of Sixth and St. Mary Streets.

The Sans Souci Hotel was opened by William Debeaufre, in the former country-seat of the Say family, a delightfully romantic place on the cliffs near Gray's Ferry, on the west side of the Schuylkill. It was afterward kept by Othwine, who already had a tavern on the east side of the river. The Sans Souci, which promised to become a favorite resort owing to its situation, had, however, but a short life. The opening of the Philadelphia, Baltimore and Wilmington Railroad had caused it to spring into existence, and the widening of this railroad a few years later compelled its demolition; it was in the way, like so many older landmarks.

Carel's tavern and restaurant, at the sign of "Gen. Simon Bolivar," was in Chestnut Street above Sixth, between the theatre and the Arcade. Some twenty-five or thirty years ago there was exhibited in this house a curiosity which attracted crowds of visitors. This was the mummy or dried-up remains of a so-called native of South America, found in the guano deposits of Peru. A gentleman who went to see this curiosity several times says, "The whole body was the color of an old saddle, and through its breast still stuck a part of the spear that had killed what looked to me to once have been a Portuguese. The remains were shriveled up; and the person had been, when living, not more than five feet four inches in height." Some naval officers who visited it in his company insisted that the body was that of an ancient Peruvian, and perhaps five hundred or six hundred years old.

There was a tavern kept by Eady Patterson at the southwest corner of Eighth and Lombard Streets, which had two very flashy signs, representing a half sun with radiating rays and stars surrounding it, one being on Lombard Street and the other on Eighth Street. This was a very respectable house, and was well patronized. Mr. Patterson died in 1832, and the "Rising Sun" double sign disappeared.

The most conspicuous, and for a long time the principal hotel of the city, was the United States Hotel, on the north side of Chestnut Street between Fourth and Fifth, opposite the United States Bank. It was orig-

inally built by alteration and addition to two large dwelling-houses, spacious and wide, with side yards and gardens. As it increased in popularity it was enlarged by an extensive addition on the east, so that in the upper stories the hotel took up the front space of seven ordinary brick houses. John Rea, an upholsterer, built this hotel, which was opened for guests in the year 1826. The host was Richard Renshaw.[1]

The United States Hotel for thirty years was the house to which strangers of distinction were sent, foreign travelers and others. It was in this hotel, upon the first visit of Charles Dickens to this country, that a small, self-appointed lot of Philadelphians assured the author of "Pickwick" that they came as representative Philadelphians, "with our hearts in our hands." The western part of the United States Hotel property in 1856 was sold to the Bank of Pennsylvania. The present Philadelphia Bank stands on the spot.

A well-known first-class hotel for many years was the North American, sometimes called the Union Hotel, on the south side of Chestnut Street between Sixth and Seventh. It was a patched-up affair, made by the alteration of dwelling-houses. It was opened by Mrs. C. Yohe, then fell into the management of John A. Jones, and was commonly called Jones' Hotel for many years. Bridges and West were proprietors toward the end of its career.

The Columbia House, on the north side of Chestnut Street, adjoining the Arcade on the west, also aspired to be a hotel of the first class. It took possession of the mansion of Mrs. Elizabeth Powell after her death, and was kept by Badger, by Bagley McKenslie, and Ferguson. It was not a successful house, although it made a brave struggle for business.

Petry's restaurant, on Walnut Street above Third, was opened in April, 1858, in one of the finest old mansions in the city. It was built about 1793, for Judge Richard Peters, who occupied it for ten or fifteen years as a city residence, his country-seat being at Belmont, now Fairmount Park. After Judge Peters left it, the house was occupied by Charles Chauncey, attorney-at-law, who was succeeded by Elihu Chauncey, and Chauncey and Chester. The following interesting recollections about this old mansion appeared in the *Dispatch* some years ago, when Petry's restaurant was closed:

"This house was, in its time, the resort of the very best society in the city. Judge Peters was generous and convivial, entertained liberally, and had many visitors. Among them, no doubt, during the time that Congress sat in Philadelphia, were Washington, John Adams, Thomas Jefferson, James Madison,—perhaps Andrew Jackson, who was a member of Congress before the capital was removed to Washington,—and all the distinguished people of the time. In the neighborhood were some notable residents. Bishop White lived next door, on the west. Dr. Benjamin Rush, signer of the Declaration of Independence, lived, in 1791, at the northwest corner of Walnut and Third Streets, where the *Dispatch* office now stands. He was succeeded, in 1795, by Nalbro Frasier. Dr. John Redman Coxe, professor in the University, afterward lived in the house. Mrs. Mary Harrison, mother-in-law of Bishop White, lived next door to the corner in 1791. At the southwest corner of Third and Walnut Streets was the house of James Wilson, sometimes called 'Fort Wilson.' He was a signer of the Declaration of Independence, and afterward judge of the United States Supreme Court. William Lewis, a celebrated lawyer, afterward lived in that house. Opposite the Peters mansion were two stately houses with high steps, adjoining the old Quaker almshouse, on the east. They were occupied, from 1791 until after 1800, by Benjamin Chew, Jr., son of Chief Justice Chew, who lived in No. 68, and afterward by Sanson Levy, in the same house. No. 70 was the mansion of Edward Stiles, formerly a sea captain, who had his country-seat at Green Hill, now in the neighborhood of Broad and Poplar Streets."

That fine hotel, The Aldine, was opened in 1877, in the old Rush mansion, on Chestnut Street, above Nineteenth. It was the residence of the late Dr. James Rush, the founder of the Rush Library. Dr. Rush's wife, a leader in fashionable and literary circles, was the daughter of Jacob Ridgway, the millionaire. Dr. Rush was a son of Dr. Benjamin Rush, of Revolutionary memory, and for some time the surgeon-general of Washington's army.

In noticing the principal inns and taverns of Philadelphia, and such as have some historical or pleasant local memory attached to them, several may have been inadvertently omitted. It could hardly have been otherwise in a work of this kind. Individuals who recollect interesting facts concerning a tavern, a house, or a street, are often surprised that these facts are not mentioned in the history of the city. Yet, there is nothing strange in the omission. In the first place, that which is a very pleasant recollection to a private individual may not be of sufficient interest to the public at large to justify its insertion in a history, or it may not have come to the knowledge of the historian. Then, the abundance of matter which has to be sifted and condensed in writing local history, renders omissions unavoidable. Otherwise, a volume would hardly suffice for a subject which must be treated within the limits of a chapter.

Below will be found a list of the inns and taverns existing in the city at different periods. In preparing this list the personal recollections of many old residents have been added to such information as could be gleaned from old directories, newspaper files, and other publications. This list, of course, is not given as complete. Some inaccuracies may also have crept in it, and some repetitions, but these are due mostly to changes of proprietors and of localities,—a tavern changing hands and its sign being removed to some other house.

Among the taverns that were known during the first half of the eighteenth century, the following are remembered: The Plume of Feathers, Front Street, by George Champion; Prince Eugene, Front Street, by Garrigues; the White Horse, by Owen Humphries; the George Inn, by John Steel, Second and Arch Streets; the Bear, by Nicholas Scull; the Queen's Head, Water Street; the Centre House, near the

[1] After Richard Renshaw, the proprietors of the United States Hotel were David Dorrance, who kept the house for many years, Noah W. Bridges, Thomas C. Rea, a son of the owner of the property, M. Pope Mitchell, Capt. Charles H. Miller, and C. J. McClellan.

old Centre Square; Pewter Platter, Front Street; the Indian King, Market Street, by Owen Owen; the Lion, Elbow Lane, by George Shoemaker; the Black Horse, Black Horse Alley; King George on Horseback; the White Horse, upper end of Market Street; the Dolphin, Chestnut Street; the Buck, Germantown, by Anthony Nice; the Mariners' Compass and Four Horseshoes, Strawberry Alley, by Elizabeth Walton; Two Sloops, Water Street; the Boatswain and Call, at the Drawbridge, by Philip Herbert; the White Hart, Market Street, by Richard Warder; the Three Mariners, Front Street; the Half Moon, by Charles Stow, Market Street; Crooked Billet, by Barbara Lewis, King Street; Red Lion, Second Street, by Sampson Davis; London Coffee-House, near Carpenter's wharf (between Chestnut and Walnut Streets); King's Arms, opposite Christ Church parsonage, by William Whitebread; Rose, in Arch Street; Conestoga Stage Wagon, Market Street, by James Gray; James' Coffee-House, Front Street; London Prentice; the Jolly Trooper, Arch Street; the Fleece, Front Street; the Jolly Sailors, Front Street; Roberts' Coffee-House; the Bear, Frankford; the Blue Bell, Frankford; the Free Mason, Front Street, by Thomas Jarvis; Rising Sun, Germantown road, by A. Nice; the Swan, Chestnut Hill; the Black Bull, Market Street, by John Chappel; the Three Crowns, Water Street; the Royal Standard, Market Street; the Hen and Chickens, Chestnut Street, by Widow Brientnall; Plow and Harrow, Third Street, by John Jones; Three Tuns, White Marsh, by Christopher Robbins; the Harp and Crown, Third Street, below Arch; the West India Coffee-House, by Margaret Ingram; the Lion, Wicaco, by Michael Israel; Seven Stars, Elbow Lane; Anchor and Hope, Black Horse Alley; the Swan, Spruce Street, west of Front, by John Ord; the Brig and Snow, Strawberry Alley; the Queen of Hungary, Front Street.

The following date from that period and the Revolution: Crooked Billet and Ball, by John Stricker, upper end of Second Street; One Tun, Chestnut Street, by Joseph Coburn; Black Boy and Trumpet, by William Forrest; Royal Anne, Second Street; Death of the Fox, Second Street, by Richard Wagstaff; Ship, Frankford road; Sloop, by Thomas Hill, Kensington; Royal Standard, Market Street, by Rebecca Pratt; Amsterdam, Second Street, between Race and Vine, by John Grubb; George, Second and Arch, by John Luckin; Blue House, by John Crozier; Boar's Head, Pewter Platter Alley; Black Horse, Black Horse Alley, by John Pickel; New Boar's Head, Keyser's Alley, by Joseph Templar; The Gun, Moyamensing, by Joseph Kepach; White Horse, Robeson; King's Arms, by William Whitbread, Second, opposite Church; Black Horse, Black Horse Alley, by Henry Duff; Black Swan, Walnut Street; Indian King, Hendrick, Third near Market; Bull's Head, upper end of Market Street, by Widow Gray; Lamb, Market, between Fourth and Fifth; Horse and Groom, Fourth Street, by William Gardiner, Noah's Ark, Poole's bridge, by Thomas Foster; Admiral Warren; Boar's Head, Pine, near the new market; Rising Sun, Fourth Street, by Joshua Mitchell; Conestoga Wagon, Market Street, by Charles Jenkins; Harp and Crown, by Mrs. Stevens, Third Street; Brigantine, South Street, by Amos Jones; City of Dublin, upper end of Front, at Keyser's Alley; Ship Wilmington and George, Society Hill, by Anthony Whitely; Ship Aground, Water, above Market; Unicorn, near the Drawbridge, Water Street; Stars, Elbow Lane, by John Etris; Horse and Dray, Market Street; White Horse, Elbow Lane; Valiant Dragoon, Front, opposite Black Horse Alley; Queen's Head, Water Street, by Robert Davis; Phœnix, Society Hill; Tun, Water Street, by Thomas Mullan; Salutation, Front Street; Sassafras-Tree, Race Street; Golden Ball, Elm, between Second and Third, by John Barnhill; Bird in Hand, Shippen Street, by John Crozier; Cooper's Arms, by Issachar Davids; Twelve Cantons, Spring Garden, by Christopher Shiefly; Rainbow, upper end of Second Street, Northern Liberties; Bowling Green, at the Centre; Unicorn, Prune Street, by John Chabord; Admiral Keppele, Southwark; Jolly Sailor, Moyamensing, by Valentine Smith; St. George and the Dragon, by Widow Cummings, Frankford; Golden Fleece, Second, opposite Taylor's Alley; Danish Flag, Society Hill, by John Brandt; Marquis of Granby, Northern Liberties, near the barracks, by Isaac Corrin; Queen Charlotte's Head, Water near Market, by Samuel Francis; City of Frankfort, Catharine Street, by John Fritz; Red Lion, in Moreland; King David and Harp, Water Street, near Market, by Thomas Griffith; Orange-Tree, Moyamensing, by John Belts; Ship Pennsylvania, corner of Front and Pewter Platter Alley; Highlander on Horseback, by Abel Carpenter, upper end of Front Street; King of Prussia, by Francis Shires, Society Hill; King of Prussia, Market Street, by Michael Huts; Buck, on Rowse's road, Southwark; Crooked Billet, Passyunk road, by Peter Kleckner; City of Manheim, Passyunk road, by Peter Hackner; City of Colerain, Walnut Street; Robin Hood, Wissahickon road; Lord Loudon, Front, below the Drawbridge; Nag's Head, Front, below the Drawbridge; Rising Sun, Germantown road; Boatswain and Call, near the Drawbridge; Highlander, by Abe Carpenter, Front, below the Drawbridge; City of Philadelphia, Society Hill; Royal George, Front, below the Drawbridge; Boy and Boat, Arch Street Ferry; Blue Bell, Society Hill; Angel, near the sugar-house, above Poole's bridge, by Caspar Stoles; Wheat Sheaf, Bristol road; Siege of Louisburg, Front, below the Drawbridge; Bottle and Glass, opposite Mr. Philip Hurlburt's, Society Hill; Mead House [mead, fresh cheese, and pies every night]; Saddler's Arms, Germantown, by Widow Macknett; Leopard, Front, near the Drawbridge, by Issachar Davids; Gen. Blakeney's

Head, Front Street, by Elizabeth Gant; Red Lion, Second Street, by Jacob Magg; City of Philadelphia, Society Hill, by George Leadbeater; Stars, Elbow Lane, by Thomas Rogers; Jolly Post Boy, near Frankford; Ship "Hero," Front Street, by Widow Malaby; Bunch of Grapes, formerly Bull's Head, Third, below Arch, by Josiah Davenport; Horse and Dray, Passyunk road, half mile from the city, afterward Whittington and Cat; Upper Ferry, Ashton's; King of Prussia, near the market, Germantown; Wagon, Race Street, opposite Moravian Alley, by Yost Eberth; Seven Stars, Second, near Arch, by Diedrick Rees; Admiral Keppele, between the Swedes' Church and the fort, fronting the river; Cross Keys, Chestnut Street, by Joseph Ogden; Buffalo, Race Street; White Horse, Elbow Lane, by John Cowpland; Pennsylvania Farmer, by Charles Dilworth; Indian Queen, Fourth, between Market and Chestnut, by John Little; Marquis of Granby, Market Street, next door to Presbyterian meeting-house; Golden Swan, Third, above Arch; Pennsylvania Farmer, near the new market, by Samuel Chesnut; Gen. Wolfe, Southwark; Anvil and Double Cross Keys, by Benjamin Armitage, corner Fourth and Chestnut; Vauxhall, on the agreeable banks of the Schuylkill, at Passyunk, by Thomas Mullan, formerly of the Tun, on Water Street; Blue Bell, Kingsessing, by Samuel Smith; Drove of Cattle, upper end of Race Street, by Lewis Saisengen; Sign of Dr. Franklin, southwest corner of Walnut and Fifth, by William Hornby; Huntsman and Hounds, old York road, Abington, by John Webb; Jolly Post, Southwark; Rose, Third and Arch, by Ludwick Kuhn; Fort, Society Hill, by John Thomas; Queen of Hungary, by James Gilchrist; Cheesecake House, Fourth Street; Masons' Arms, Walnut Street; Roebuck, Germantown; Conestoga Wagon, Market Street; Globe, south side of South Street, near the new hospital, by Clayton Biddle; King of Denmark, Second Street; Britannia, Walnut, near Front, by Ann Jones; Fountain, Market Street, by Mary Biddle; The Row Galley, Front Street; Green Tree, Race, between Second and Third; Prince of Orange, Second Street; Albemarle, Northern Liberties, by Caspar Stawl; Gen. Wolfe, upper end of Front Street, by Godfrey Lonberger.

The following were in existence in 1785: The Struggler, by Edmund Conner, Water Street, between Spruce and Pine; Cork Arms, by John Conner, Water Street, below Walnut; Black Horse, by Isaac Connelly, Market Street, between Fourth and Fifth; Plow, by Matthew Conrad, Third Street, above Market; Cordwainers' Arms, by James Culbertson, Walnut Street, below Second; Harp and Crown, by William Carson, Third Street, above Market; Dusty Miller and White Horse, by John Clemens, Chestnut Street, above Second; Strap and Block, by Cook Lawrence, Arch Street wharf; Saint George, southwest corner of Second and Arch Streets; Blue Ball, Elbow Lane, near Third Street; Boatswain Hall, Front Street, between Walnut and Spruce; Bull's Head, by John Evans, Strawberry Alley; Dr. Franklin, by John Fiegele, corner of Race and Second Streets; Bear, Second Street, between Race and Vine; Black Horse, by John Fritz, Second Street, between Vine and Callowhill; the Rose, by Mrs. Fourrage, Race Street, between Fifth and Sixth; Sportsman, by Charles Gordon, Water Street, between Walnut and Spruce; Red Lion, by David Gordon, Race Street, between Fourth and Fifth; Leopard, Spruce Street, between Third and Fourth; General Washington, Front Street, between Arch and Race; King of Prussia, by Michael Hay, Race Street, between Third and Fourth; Butchers' Arms, by Edward Handle, New Market Street, above Callowhill; the Salute, by William Hood, Third Street, between Chestnut and Walnut; American Soldier, South Alley, between Fifth and Sixth Streets; Red Cow, Water Street, between Race and Vine; Blue Ball, corner of Sixth and Market Streets; Samson and Lion, by John Eisenbrey, corner of Vine and Crown Streets; Cross Keys, by Israel Israel, Third and Chestnut Streets; Green Tree, by Andrew Kesler, Third Street, between Arch and Race; Plow, Market Street, between Seventh and Eighth; Seven Stars, by Charles Kugler, Fourth and Race Streets; Buck, Michael Kraft, Second Street, between Race and Vine; Golden Fleece, by Luke Ludwig, corner of Fourth and Lombard Streets; Harp and Crown, Front Street, between Market and Chestnut; Fountain, by James McCutcheon, Second and Lombard Streets; Seven Stars, by John McKinley, Fourth and Chestnut Streets; Jolly Sailor, by Robert Moffett, Second and Lombard Streets; Mermaid, Second Street, between Pine and Lombard; Rose, South Street, between Fourth and Fifth; Noah's Ark, by Ingellert Minzer, Second Street, between Vine and Callowhill; Jolly Sailor, Eighth Street, between Chestnut and Walnut; White Horse, Market Street, between Sixth and Seventh; General Washington (Jacob Mytinger), Vine Street, above Second; Conestoga Wagon (Samuel Nicholas), Market Street, above Fourth; King of Poland (Philip Oellers), Vine Street, between Fifth and Sixth; Lamb (Francis Oskullion), Second Street, below Lombard; Seven Stars, Market Street, between Front and Second; Dragon and Horse, Walnut Street, between Front and Second; Green Tree, Water Street, between Race and Vine; Indian King (Mrs. Sidney Paul), Market Street, between Second and Third; Hen and Chickens (Valentine Pegan), Spruce Street, between Front and Second; Louis the Sixteenth, South Street, between Fifth and Sixth; Three Tuns (Sarah Potts), Vine Street, between Seventh and Eighth; Ship, Water Street, near Chestnut; Kouli Khan, Chestnut and Front Streets; Horse and Groom, Sixth Street, between Market and Chestnut; Bunch of Grapes (John Razer), Third Street, above Market; General Wayne (Tobias Rudolph), Penn

and Pine Streets; Harp and Crook, Water Street, near Spruce; Rising Sun (Sarah Stimble), Market Street, above Front; Kouli Khan (Robert Stephens), Chestnut Street, below Second; Horse and Groom, Strawberry Alley; Jolly Tar (John Stafford), Water Street, below Race; White Horse, Second Street, between Vine and Callowhill; Moon and Stars (Mary Switzer), Second Street, above Vine; Eagle, Fifth Street, above Race; Organ (William Shedecker), Spruce Street, above Fourth; White Horse, Strawberry Alley; Three Jolly Irishmen, Water and Race Streets; Cross Keys, Race Street, between Sixth and Seventh; Darby Ram, Church Alley; United States, Water Street, near Spruce; Indian Queen, Fourth Street, below Market; Rising Sun (Samuel Titmus); Wilkes and Liberty, Market Street wharf; Boar's Head, Elbow Lane; Cumberland, Front Street, near Poole's bridge; Turk's Head (Adam Weaver), Chestnut Street, above Second; Eagle (George Weiss), Third Street, between Race and Vine; Fox and Leopard, Pine and Penn Streets; Cross Keys, Water Street, between Market and Arch; Buck (George Yoe), Callowhill Street, between Second and Third.

The following are of later date: The Taking of Major André, Second Street, above Tammany; the Seven Stars, Fourth Street, above Race; William Tell, Race Street, above Twelfth; General Warren, Sixth Street, below Pine; the Constitution and Guerrière and Landing of Columbus, both on South Third Street; General Lafayette, Thirteenth and Callowhill Streets; Cross Keys, Fourth Street, above Market; the Indian Queen, below Market on Fourth Street; Bust of Columbus, Chestnut Street, below Seventh, on Columbia House; Robert Fulton, Water Street and Chestnut; Delaware House, sign of ship at sea, opposite Robert Fulton, on Chestnut Street; Pennsylvania Farmer, Race Street, above Fourth; White Swan, Race Street, below Fourth; Golden Swan, Third Street, above Arch; Penn's Treaty, at the monument ground, Kensington; The Hornet and Peacock, an old frame building next to St. George's Church, Fourth Street; Bull's Head, Third Street, above Callowhill, east side; Black Bear, Front Street, west side, near Callowhill; Commodore Porter, Callowhill Street, below Second, east side; and First Ward Northern Liberties Hotel adjoining; Penn Township Guard, corner Willow Street and Ridge road; sign of Second Company of Fencibles, southeast corner of Third and Coates Streets; iron sign, Third Street, below Coates, east side; Franklin, Third Street, above Buttonwood, east side; Wagon and Horses, now Military Hall, Third Street, near Green. Later still we have Governor Simon Snyder, northeast corner of Crown and Callowhill Streets; Cross Keys, southwest corner of Race and Ninth Streets; Wounded Tar, north side of Vine Street, above Eighth; Bald Eagle, west side of Third Street, above Callowhill; Tiger Hunt, north side of Vine Street, below Fourth; Lion, west side of Second Street, below Noble; Girard Bank and Surroundings, west side of Dock Street, below Third (McGowan's); Simon Bolivar, north side of Chestnut Street, above Sixth (full length); the White Horse, Market Street, above Thirteenth, in front of the Tivoli Circus; the Sorrel Horse, Market Street, below Thirteenth; the Golden Horse, Market Street, below Twelfth; the Plow, Third Street, opposite Church Alley; General Montgomery, Sixth Street, near South; General Brown, kept by Simpson, northeast corner of Fifth and Buttonwood Streets; the Three Tuns (three wooden barrels strung crossways on an iron rod), Vine Street, below Eighth, where the church now stands; Eclipse and Sir Henry, Broad Street and Centre Square, where the Tabernacle Presbyterian church now stands; Constitution and Guerrière, kept by William Herlick, afterward famous as a militia-fine collector; Samson and the Lion, southwest corner of Vine and Crown Streets; the Bull's Head, said to have been painted by Benjamin West, Strawberry Street; Washington, Lafayette, and Franklin, a slatted sign, Chestnut Street, opposite the old Chestnut Street Theatre, above Sixth Street, afterward Second Street, below Lombard; the Seven Presidents, Coates Street, above Ninth; the Volunteer (Vanstavoren), Race Street, opposite Franklin Square; Robert Fulton, northeast corner of Front and Chestnut Streets; Kouli Khan, northwest corner of Chestnut and Front Streets; Coat of Arms of the States of the Union, Callowhill Street, below Second; Top-gallant (Hammitt), Cherry Street and Bryant's Court; Bird Pecking at Grapes, southwest corner of Third and Chestnut Streets, in the basement; Patrick Lyon, Sixth Street, below Race; Sheaff, Second Street, between Race and Vine; Barley Sheaff, Fourth Street, below Vine; General Washington (Von Buskirk), Market Street, south side, between Seventh and Eighth Streets.

Philadelphia at the present time (1884) can boast of some of the finest hotels in the country. The Continental Hotel, located at the southeast corner of Chestnut and Ninth Streets, occupies the site of two famous buildings,—the old Philadelphia Museum, which occupied the southern portion of the lot on Sansom Street, and the Cooke Equestrian Circus Company, which occupied that portion of the lot fronting Chestnut Street. The circus was opened to the public Aug. 28, 1837. The building subsequently became the National Theatre, under the management of William E. Burton. Messrs. Welch & Lent and Raymond & Waring occupied the theatre building for some years as an amphitheatre. The museum and circus were both destroyed by fire, with much adjoining property, on July 5, 1854. About 1858 the lot was secured by the Continental Hotel Company, and the hotel opened for the reception of guests Feb. 16, 1860. The building is six stories in height on Chestnut and Ninth Streets, and eight stories in the rear on Sansom Street, and covers forty-one thousand five hundred and thirty-six feet of ground. The principal

story is supported by ornamented cast-iron piers; the first floor level with the street, which is used by the hotel, occupies twenty-four thousand six hundred and twenty feet of the whole area. The total number of rooms in the Continental is about seven hundred, with accommodations for about twelve hundred guests. The Continental Hotel Company is under the management of the following directors: Daniel Haddock, John Baird, John Hunter, Charles Ninth; the St. Cloud, on Arch Street, above Seventh; the Bingham, on the corner of Market and Eleventh Streets; the Merchants', on North Fourth Street (this hotel was the largest in the city in 1837, when it was first opened); the American, Chestnut Street, between Fifth and Sixth; St. Stephen's, Chestnut Street, between Tenth and Eleventh; the Washington, Chestnut Street near Seventh, and Grand Central, Market Street.

THE CONTINENTAL HOTEL,
J. E. Kingsley & Co., Chestnut Street, corner of Ninth.

Reed, and Mr. Seltzer. J. E. Kingsley is the sole lessee. His son E. F. Kingsley and H. S. Brown are associated with him in the management of the hotel.

The Girard House, directly opposite the Continental, on the north side of Chestnut Street, has accommodations for about one thousand guests. It occupies the site of the Fisher and Leaming mansions. It was built by Messrs. George W. and J. G. Edwards, in 1851, and opened in the following year. The architect was John McArthur, Jr., who also designed the Continental and the La Pierre House.

The La Pierre, or Lafayette Hotel, located on the west side of Broad Street, between Chestnut and Sansom Streets, was also originally built by George W. and J. G. Edwards. It was opened for guests in October, 1853, and was greatly enlarged and improved in 1883.

Among the other hotels of the city we have the Colonnade, southwest corner of Chestnut and Fifteenth Street; the Irving, on Walnut Street, above

CHAPTER XXXI.

MILITARY.

POWDER-HOUSES AND MAGAZINES—BARRACKS—ARSENALS—ARMORIES AND FORTS.

Powder-Houses and Magazines.—The danger which might result from the careless storage of gunpowder began to make some impression upon the minds of the people about the year 1724. For three or four years previously legislation was sought for the purpose of reducing the danger of loss of property by fire. An act to prohibit the breaming of any vessel in any dock in the city with hot pitch, tar, etc., except at such places as should be appointed for that service by the city corporation, was passed in 1721. The keeping of fire on board of vessels, candles excepted, when lying in port after eight o'clock in the evening was prohibited, except upon permission by the mayor in case of sickness or extraordinary occasion. The

Digitized by Google

old practice of cleansing city chimneys by setting fire to them and burning them out at the top, by which not only the house in which the practice occurred, but others in the neighborhood, were in danger, was prohibited under fine. Also the firing of squibs, serpents, rockets, and other fire-works in the city without the Governor's special license. In 1725 petitions were presented to the Assembly calling attention to the necessity of having a magazine for the storing of gunpowder. That dangerous article was frequently kept in stores and houses by merchants and others. Such of them as were very careful frequently placed it on board of vessels lying upon the water. But as sailors were generally reckless, there was danger in that practice. In consequence of these representations an act of Assembly passed on the 24th of August, 1725, which, after stating in the preamble the necessity of the establishment of some suitable magazine for the storage of gunpowder, recited that William Chancellor, sailmaker, had been encouraged by some of the magistrates, merchants, and others "to build a suitable powder-house or store for the receipt of all the gunpowder which shall or may be imported into the said city on a piece of ground he lately purchased from Daniel Pegg, lying near the north end of the said city, adjoining to a swamp on the south side, and upon the king's high road upon the east end thereof." The location was north of Pegg's Run, south of the present Noble Street, west of the present Front Street, and east of the present New Market Street. The lot was on the west side of the king's high road to New York, and nearly on a line with a passage now called Emlen's Court, a portion of which was the old highway. It was in sufficient nearness to the river to allow the easy loading or unloading of the powder. Under the act Chancellor was appointed the keeper, upon the direction that he should build "a good, substantial, tight, and secure powder-house or store for gunpowder, of brick or stone, . . . to be well boarded and covered, and so fit and capacious as may reasonably be expected will contain all the gunpowder to be from time to time imported into the said city."

In consideration of these undertakings Chancellor was given authority to keep the magazine, he being accountable to the owners of the powder, "lightning and other unavoidable accidents excepted." Attendance was necessary to be given daily at the powder-house between nine and eleven in the morning, and one and three in the afternoon, and upon other occasions when necessary. The keeping of more than twelve pounds of gunpowder at any time within the city, or within two miles thereof, except at "the powder-store," was prohibited under penalty of ten pounds. Captains of vessels arriving in port were also obliged to deposit their powder with him upon arrival or coming to anchor. For his care Chancellor was allowed to charge for storage twelve pence per barrel per month, and proportional rates for half-barrels and casks for the first six months, and sixpence per barrel and proportionately for smaller quantities after the first six months. For delivery, for twelve pounds or lesser quantity, sixpence above the storage. Penalties were denounced against the keeper of the powder-house for negligence. Under an act passed in 1701 "for preventing accidents that may happen by fire in the towns of Bristol (formerly called Buckingham), Philadelphia, Germantown, Darby, Chester, New Castle, and Lewes within this government," it had been declared that not more than six pounds of gunpowder should be kept in houses, shops, or warehouses, unless it be forty perches distant from any dwelling. This provision was repealed. The new act was directed to continue in force and effect for twenty-one years. The act of Assembly by which Chancellor was granted this power conferred the authority upon him, his executors and assigns. After the house was built Chancellor died, and this franchise remained in the family. Elizabeth Chancellor, daughter of William, petitioned the Assembly in 1746 for a renewal of the privilege. She stated that her father was dead, and there were no other means of supporting his orphan children except from the profits of the office. She asked that the right of keeping the powder-house should be renewed. In the mean while the district of the United States had increased in population, and the inhabitants considered the continuance of the powder-house in their neighborhood detrimental to their interests. A protest to the Assembly against the renewal of the powder-house right to Miss Chancellor was sent. The remonstrants represented that if the magazine were removed many good tenements with wharves and stores would soon be begun; that a market-house would be established in the place laid out for that purpose (at the intersection of Callowhill and New Market Streets); and that the prosperity of the neighborhood would be thereby insured. These remonstrances prevented immediate action, but on the 8th of May, 1747, an act was passed in which the original grant to Chancellor was recited, and it was declared that Elizabeth Chancellor, acting executrix under the will of her father, on behalf of herself and her orphan brothers and sisters, should be entitled to all the perquisites, fees, and rewards secured by her father under the previous act, for one year, "and from thence until some future provision be made by act of Assembly, and no longer." Capt. William Hill was the deputy under William Chancellor and his daughter.

In June, 1748, there being considerable fear of the coming up the river of hostile privateers, it became a matter of prudence to guard the magazine. The Provincial Council, upon the rumor that there were three privateers in the river, took some action:

"*Order'd*, That the Keeper of the Powder House be sent for; & being come and examined as to the condition of the Powder house & the number of men who had watch'd there & how many were necessary to guard it

as a watch; it was order'd by the Board that the Windows shou'd be stopp'd up & that four or five Men shou'd be kept in Pay at four shillings per Day for a Guard."

In April, 1754, Dr. William Chancellor sent a petition to the Assembly asking that the profits arising from the management of the powder-house should be continued to his two younger sisters and William Hill, who had hitherto been chiefly supported and maintained thereby. This petition was laid upon the table. The last act of the Assembly secured the right to Miss Chancellor until a new law was passed. As the Assembly did nothing in relation to Dr. Chancellor's petition on behalf of his younger sisters, the opinion became prevalent that the powder-house grant to the Chancellors had expired. The Contributionship Mutual Insurance Company (Hand-in-Hand), by petition, in 1760, stated that, in consequence of the belief that the powder-house act was no longer in force, it was a common practice to store gunpowder among the buildings in the city, and to draw it through the streets without protection by covering the casks, a practice very dangerous and the cause of much uneasiness to the people. Notwithstanding these representations, the Assembly made no enactment upon the subject. The magazine remained in use for the storage of gunpowder, although the placing of the material there was not compulsory, as formerly. In 1776, before the Declaration of Independence, gunpowder then had become so great a necessity that the building of powder-mills was encouraged.[1]

[1] The following powder-mills were offered to be built under the patronage of the Committee of Safety, who offered to lend each builder one hundred and fifty pounds on security, and to supply each mill with fifty tons of saltpetre per week. A premium of one hundred dollars was offered for the first mill put in operation, fifty dollars for the second, and thirty dollars for the third, and it was promised that these three mills first erected should have a preference during the year in contracts over the others. The following offers were made to the committee by the persons named, the situations proposed for the mills being also stated.

Dr. Robert Harris, on Valley Stream or Crum Creek, twenty-five miles from the city.

George Lush, Stony Run, Philadelphia County, fifteen miles from the city.

George Lush, Mill Creek, Philadelphia County, ten miles from the city.

Henry Hubback (or Huber), Swamp Creek, Lower Milford, Bucks Co., on the Bethlehem road, thirty-seven miles from the city.

John Flack, on a stream emptying into the Neshaminy, Buckingham, Bucks Co., twenty-five miles from Philadelphia.

Thomas Heimberger, near the Yellow Spring, Windsor township, Chester Co.

William Thompson, on the Neshaminy, Bucks County, twenty-two miles from the city.

Dr. Van Leer, of Gloucester County, N. J., proposition to turn a fulling-mill into a powder-mill.

Harris, Heimberger, and Lush built their mills, and received their loans. It is doubtful whether the others did anything. In February the Assembly resolved that it was necessary to erect a powder-mill under direction of the Committee of Safety. Congress also ordered the erection of a Continental powder-mill. The Province of Pennsylvania paid for it. It was established on French Creek, Chester County. Proposals were published for the discovery of "sulphur ore." They brought reports of the discovery of the substance supposed to be wanted near York, Pa.; from Jacob Frees, ten miles from Elizabethtown, N. J.; from Elias Boudinot, and also from Joseph Borden, at Bordentown.

Lewis Nicola, in March, 1776, prepared a plan of a powder-magazine. That which was in existence, he said, "was very unfit for the purpose for which it was erected. . . . As badly situated as possible in a low, swampy place, unprotected by a surrounding wall or fence, and not secured from fire, accidental or designed, whereas magazines should as much as possible be placed in dry. airy situations, so as to admit a free circulation and at the same time well guarded against fire." A description of the proper building for a magazine, with the drawing of a plan, was given. The walls were to be of a proper thickness, with contrivances for free ventilation to keep the powder dry, the magazine to be vaulted and covered above the arch, with a roof leaving a space within. The whole to be surrounded by a brick wall, at the two diagonal corners of which were to be placed sentry-boxes, each of which would command a view of two sides of the magazine. "The most suitable place I know of near this city is a piece of waste ground on the west side of Fourth Street, opposite the barracks; this situation is airy and convenient for the security of the magazine, as sentries could be supplied from the Barrack Guard, which would save ye trouble and expence of a particular guard for the security of the Powder."

The Committee of Safety, on the 13th of April, ordered a new powder-magazine to be built by Isaac Coats and William Melcher, capable of holding a thousand barrels of powder. The place selected is not stated in the minutes of the Councils, but it was upon the northeast corner of Franklin Square. Storehouses were procured for the storage of salt, saltpetre, and other provincial supplies at Germantown. Later in the year a committee appointed to ascertain the best place for a magazine of military stores reported that the heights on the north side of Wissahickon Creek afforded a very convenient situation, and were capable of being defended at great advantage, and that a fort on the hill on the Ridge road just above Van Derin's mill (at the mouth of the Wissahickon) would command a wide space of country. In 1787 an act was passed to secure the city of Philadelphia against danger from gunpowder, which forbade the storage of a greater amount than thirty pounds of powder at a time in any place but the magazine in the public square between Sixth and Seventh, Race and Vine Streets, under a fine of twenty pounds.

In April, 1790, the necessity of removing the powder-house was considered; the Assembly passed resolutions in favor of that course. The Council selected a lot on Walnut Street, bordering on the river Schuylkill, which belonged to Col. John Patton, which was valued at five hundred and sixty-five pounds specie. A committee of the Supreme Executive Council, to which the matter was referred, reported the following plan in May of the same year:

"The walls round the yard of the magazine to be brick, and on a line with the north side of Walnut Street, and the west side of Ashton Street, and to be eight feet high besides the capping, which is to be stone.

"The powder-house, or magazine, to be forty feet east and west, and sixty feet north and south, and to stand back from the wall on Walnut Street twenty feet clear, and from Ashton Street the north and west walls of the yard fifteen feet clear.

"The two gable-end walls to be two feet thick of stone, and the two side walls two feet six inches thick of stone, or if double, two feet thick of stone, opening three inches, and a four and a half inch wall inside all round.

"The height from the floor to the spring of the arch to be eight feet, small arches to be turned all under the lower floor in order to keep it dry. The height of the first floor to be six inches above the level of the yard.

"A small house for the keeper at the southeast corner of Walnut and Front Street, on Schuylkill, to be fifteen feet six inches on Walnut Street, and fifteen feet on Front Street, two stories high, the first story to be eight feet in the clear, and the second story seven feet three inches in the clear, with a cellar under the whole, and to be finished plain."

The officers of the city corporation were opposed to the establishment of the powder-magazine at that place. A memorial was sent to the Supreme Executive Council requesting that the building of the magazine might be postponed until the next session of the Assembly. There was postponement accordingly, but the original plan was adhered to. Patton was paid for his lot, in December, £664 14*s.* 1*d.* in paper money, which was equivalent, at fifteen per cent. discount, to £565 specie. The magazine and keeper's house was paid for shortly afterward, and cost £1706 3*s.* 7*d.* The lot thus purchased was a full square, and contained about four acres three quarters and thirty perches of land.

In April, 1795, an act was passed for the inspection of gunpowder. It was stated in the preamble that Joseph Leacock, of Philadelphia, had invented an engine called "a pendulum powder-proof, with a graduating arch and catch-pull, by which it is conceived that the force of gunpowder may be proved by actual experiment." David Rittenhouse, Francis Gurney, and Thomas Proctor were appointed commissioners. They were directed to purchase at least two pendulum powder-proofs, settle the standard of gunpowder, and mark the graduations in the arch. After that was done the inspector of gunpowder, an officer created under the act, was ordered to ascertain the strength of manufactured gunpowder by means of the standard. It was also ordered that all gunpowder manufactured in the State should be placed in barrels of certain sizes and deposited in the magazine. From the Northeast Square the powder-house was removed to Walnut Street wharf, Schuylkill, in 1791. On a map published in 1794, the site of this building is marked at the northwest corner of Ashton [now Twenty-third] and Walnut Streets. It did not remain there very long without exciting apprehension. The Legislature was memorialized in 1806, by citizens as well as by Councils, against the continuance of the magazine at that place.

In the succeeding year, Thomas Leiper, Matthew Shaw, Stephen Decatur, Sr., and John Swigor, were appointed commissioners to sell the powder-magazine building and lot, at Walnut and Ashton Streets, and build a new one or two buildings if necessary. One was not to be more than a mile from the city, for the accommodation of traders, and not to contain more than ten tons of gunpowder. The other, or others, were to hold the article in larger quantities, and might be built at a distance of not less than four miles from the city. The next year the commissioners reported that they had located a site for the powder-magazine about four miles from the city, and the Assembly made an appropriation of about five thousand dollars for the construction of the building. The place selected was upon Power's Lane, in the neck, near the Schuylkill, called afterward Magazine Lane. The building, of stone, massive and strong, was secluded from the ordinary route of travel. Trees were planted around it, and apparently every care taken to prevent accident.

In order to prevent danger as much as possible, it was directed, in 1818, that the manner in which powder should be removed from vessels in the Delaware River to the magazine or arsenal on the Gray's Ferry road should be by landing at the wharf above the Point House on the Delaware, commonly known as the powder-wharf. That it should be carried along Keeler's Lane westward along said lane and the boundary of Southwark; thence up said road to Passyunk road; thence up the said road to the Federal road; thence west along the same to Gray's Ferry road; thence up the same direct to the arsenal on the east bank of the Schuylkill. Gunpowder brought down the river Delaware was directed to be landed at Conoroe & Co.'s wharf, in the village of Richmond; thence up Ann Street west to Frankford road; down that road to the Black Horse and Mud Lane [Montgomery Avenue]; thence to Sixth Street; down the latter to Hickory Lane [Poplar Street]; thence west, crossing the Ridge road, to Broad Street, and to the Callowhill turnpike road; then west to Schuylkill Front Street [Twenty-second]; down the same, and by way of the Gray's Ferry road, to the destination. The intention was that the powder should be carried at a distance from the built-up portions of the city. Vessels bringing powder down the Delaware were required to keep in the midway of the channel until the time of landing. Gunpowder brought from the west side of the Schuylkill was obliged to pass by Gray's Ferry, or, if it could not be passed with safety by Lancaster bridge, by Callowhill Street; thence by Schuylkill Front Street to Gray's Ferry road. By act of Assembly, passed in 1856, it was ordered that "every carriage used for conveying gunpowder or gun-cotton within the city of Philadelphia . . . shall . . . have painted on each side thereof, in letters distinctly legible to all passers-by, the word 'gunpowder.'"

The magazine was abandoned by the State under authority of the act of April 29, 1874, by which it was ordered that the possession of the rented premises situated on Magazine Lane, near a branch of the Pennsylvania Railroad, in the city of Philadelphia,

now used and occupied as a State powder-magazine, be surrendered within twelve months, and the lease canceled, and that the office of superintendent be discontinued. The ground on Power's Lane, belonging to the magazine, was directed to be sold at public sale.

Barracks.—In 1755 the expedition against Fort Du Quesne (Pittsburgh), then held by the French, set out from Fredericksburg, under Maj.-Gen. Edmund Braddock. Two regiments of foot, the Forty-fourth, under Col. Sir Peter Halkett, and the Forty-eighth, under Col. Thomas Dunbar, had been sent from Ireland, and arrived at Alexandria, Va., in March. Governor Dinwiddie, of Virginia, had notified Governor Robert Hunter Morris, of Pennsylvania, of the expected coming of these troops as early as the preceding January. The necessity for supplies was pointed out, and assistance was asked from the Assembly of Pennsylvania. As that body was in a chronic state of controversy with the Governor, little help was to be expected. The Assembly had before that time attempted to borrow five thousand pounds on its own credit, and it was proposed that a portion of the money should be laid out in the purchase of flour to be sent to the mouth of the Conococheague, for the use of the British troops. The quartermaster-general, Sir John St. Clair, requested that roads should be opened from the inhabited parts of the Province of Pennsylvania westward toward the Ohio, to facilitate the movement of the troops and the transportation of supplies. The Assembly delayed compliance, but finally passed an act to appropriate twenty-five thousand pounds in bills of credit for the king's use. There had been a dispute about such a bill in the previous year. The Assembly had sanctioned it, but the Governor would not approve of it. The new bill was of the same character, and for twenty-five thousand pounds. But the Governor, who was quite as stubborn as the Assembly, again refused his attest, so that there was no assistance to the royal troops. Governor Morris went to Alexandria in April, and took part in a council composed of Gen. Braddock, Admiral Keppel, and the Governors of five of the colonies. The plan of the campaign was resolved upon. There was a disposition on the part of the Assembly of Pennsylvania to give assistance to the king, provided the method of doing it was according to the desires of the majority. The House resolved to borrow ten thousand pounds on its own account and without reference to the approval of the Governor. But lenders could not be found. In the emergency the Assembly took another plan, and resolved to issue paper money to the amount of fifteen thousand pounds; and although the Governor refused to give his sanction, the notes were issued and put into circulation. Active measures were taken to assist Gen. Braddock. The road westward was opened as far as possible, and as rapidly as circumstances would permit. Benjamin Franklin and others obtained a large number of horses and wagons in the interior of the province for transportation. Braddock commenced his march from Fort Cumberland on the 12th of June. Governor Morris appointed the 19th of June as a day of fasting and of prayer for the success of the British arms.

On the 9th of July the advance of the British and Provincial troops, with which was Halkett's regiment, were attacked by the French and Indians within sight of the Monongahela River. The invading force was defeated with great slaughter. Braddock and Halkett, with sixty-two other officers, were killed. Gen.

GEN. BRADDOCK'S GRAVE.

Braddock was buried near where he was killed, in what is now called Wharton township, Fayette Co., Pa. A large number of soldiers were killed or wounded. Of eleven hundred and fifty men in the action, it was estimated that not more than three hundred escaped without injury. They retreated and fell back upon Dunbar's division, stationed in reserve at Little Meadows. A panic prevailed even there. The artillery was destroyed, and the whole force pushed on to Fort Cumberland. When the news of this disaster reached Philadelphia great consternation prevailed. Governor Morris convened the Assembly. A bill was passed immediately to raise fifty thousand pounds for the king's use by a tax on all persons and property in the province. Then was renewed the standing quar-

Digitized by Google

rel between the Governor, representing the proprietary, and the Assembly. Morris was quite willing that the people should be taxed in their persons and their property, but he would not sanction any measure that would lay taxes on the proprietary estates. While this dispute was in progress a number of citizens agreed to subscribe five thousand pounds, which would be about equal to the tax on the proprietary estates, and tendered the amount for public assistance.[1] The Assembly would not receive the money, but sent the proposition to the Governor "as a further security if he would give his consent to the fifty-thousand-pound bill." He did not accede. There was recommendation of a voluntary subscription of ten thousand pounds, but nothing was done to forward a collection.

While these controversies were raging the fugitives under command of Col. Dunbar were marching slowly toward Philadelphia. The necessity of quarters for the troops was evident. As the Assembly could not be relied upon, Governor Morris, on the 1st of August, made application to the mayor and Common Council of the city, stating that he had been apprised by Col. Dunbar of his intended coming, and that he would require quarters for about one hundred officers and twelve hundred men. The city corporation was applied to to furnish these conveniences. A hospital was needed and lodging for the soldiers. The reply from Mayor Plumsted, Recorder Francis, and aldermen Strettel and Mifflin, was very brief. They said, "We know of no law that authorizes us to make such provisions, and therefore have it not in our powers to obey your orders." The Assembly was appealed to, and replied by reference to the act of Parliament for the maintaining and billeting of soldiers. The troops under Col. Dunbar reached the city about the 29th of August, and encamped between Pine and Cedar Streets, west of Fourth. The house of Jacob Duché, at the northeast corner of Third and Pine Streets, was rented for a hospital at fifteen pounds for six months. The soldiers did not remain long in the city. They were ordered to Albany. After a rest of about four weeks, during which they made illuminations and kindled bonfires in honor of the victory of Gen. Johnson over the French at Lake George, which was followed by an entertainment and ball given by the officers at the State-House, they closed their visit with a review of the whole force, during which the simple people of the city, unused to military display, were much amazed by the proficiency of the artillerists, who fired a field-piece "ten times in one minute." The soldiers took up the line of march about the end of September, being much rested and improved, and having been kindly treated by the inhabitants of the city.[2]

In the latter part of the year the city corporation remonstrated to the Assembly in regard to the state of the province, a misfortune made more apparent by the fact that the defeat of Braddock had stimulated a rising among the Indians on the western frontiers of the province and the slaughter of defenseless inhabitants. A strong remonstrance was sent by the city corporation, the result of which was authority for the association of companies of volunteers. Under this power, before the end of December, 1755, there were eighteen companies in the association, beside five independent companies of artillery, foot grenadiers, and horsemen.

How these troops were accommodated as to armories, arsenals, places of meeting and drill is not known. In the succeeding year, upon the occasion of the review of the city regiment, under Col. Benjamin Franklin, "each company met at the house of its respective captain," then marched down Second Street and to the new market below Pine Street. The first company halted, and as the second company approached, fired and retreated, and was followed by the second also firing. This movement was imitated by the other companies in succession, the intention being to exercise the soldiers in street firing. There were four cannon attached to the regiment. On the 12th of August the proclamation of war between England and France, which was declared in May, 1756, was republished in the city. Shortly afterward Lord Loudon, commander-in-chief in America, wrote from Albany to Governor Denny, stating that a considerable body of troops for the defense of North America were to be sent over from England, that it was required that the colonies respectively should provide for all such charges as would arise from furnishing quarters and other necessaries for the troops, the means of conveyance and the transportation of supplies, the formation of a general service-fund, promotion of enlistments, etc. It was

[1] These public-spirited persons were William Plumsted, Samuel McCall, Sr., John Wilcox, Samuel and Archibald McCall, William Allen, Thomas Cadwalader, Alexander Huston, Amos Strettel, Joseph Turner, Joseph Sims, John Kearsley, David Franks, John Kearsley, Jr., John Gibson, John Wallace, George O'Kill, Samuel Mifflin, Townsend White, Joseph Wood, and John Bell.

[2] Duncan Cameron, a private soldier in this expedition, whose journal has been published, spoke gratefully of the assistance received by the troops from the country people during their march and upon the road. He said, "The same tender compassion and humanity continued when we arrived and encamped on the south side of Philadelphia. The Philadelphians' hearts and houses were opened to us in the most affectionate and tender manner, and I must not forget the tender compassion of their good housewives; for they being informed that our living had been chiefly on flesh, the women of Market Street and Church Alley, as I was told, formed an Association for regaling us with apple pies and rice pudding, which they generously affected; and their example was followed by a great many women in the city, and though some may think little of this, yet certainly it was a great refreshment to some of us. And, indeed, during our whole stay, there was scarcely a day passed but our sick and prisoners were refreshed through their humanity. And I must not forget mentioning that one of our soldiers being condemned to be hanged for some misdemeanor, which they apprehended did not deserve death, was, through the intercession of some women of good credit and note in that city, pardoned of his offenses; and, indeed, a great number of the inhabitants of all ranks and degrees joined in application for the same purpose. For the people of that province are so humane and tender-hearted that they cannot bear to see any person put to death for scarcely any offense but murder."

also said, "and as his Majesty is at present graciously pleased to make such allowance toward victualling his troops as must greatly remove all Difficulty of Quartering as to that Article, I must expect that in the article of Lodging and such other nesessarys as are furnished in Quarters in Great Britain in Time of war, Your Province will more chearfully make full and proficient Provision. I must therefore beg of you that you will acquaint the People of your Province, but when I shall have occasion to put his Majesty's Troops into Quarters that I do and must expect to find such as are necessary in your province."

"The Assembley endeavored to evade compliance by adopting two British acts in regard to Mutiny & Desertion and the quartering and billetting of soldiers for the payment of their quarters in England." The latter the King's Council said was inapplicable "to a colony in the time of war, in the case of troops raised for their protection by the authority of the Parliament of Great Britain." In October, Lord Loudon again wrote to Governor Denny, "that it was necessary for him to look out for winter quarters for the troops, and that he would send to Phila., one battallion of Royal Americans, and 2 independent companies, and that he desired quarters to be furnished." The Assembly prepared a bill which was nearly the same as that which had already been repealed in England. In this emergency application was made to the city corporation. The act of Assembly directed the billeting of its soldiers on the public-houses. The Common Council ascertained that there were one hundred and seventeen taverns in the city. There were about five hundred and fifty men in the Royal American Sixty-second Regiment, and an independent company. Capt. Tullekin, of the Sixty-second, came in advance of the battalion to make arrangements for the quarters. He wanted the use of a place for a hospital, also a store-house and a guard-room. The keepers of the public-houses at first supposed that they would receive a shilling a day for each soldier, and they were tempted to misrepresent the extent of their accommodations. A message on the subject was sent to the Assembly, which refused to do anything but to pass the bill determined upon. While this controversy was in progress, the troops had arrived under the command of Col. Bouquet.

On the 15th of December the Governor represented to the Council that "the King's Forces still remained in a most miserable condition, neither Assembly, Commissioners, nor Magistrates having done anything to relieve them, though the weather grew more pinching and the Small Pox was increasing among the Soldiers to such a Degree that the whole Town would soon become a Hospital. That Col. Bouquet, being a Foreigner,[1] was loath to take violent Measures; but if something was not instantly done he hoped the Governor would issue a Warrant to the Sheriff to assign him Quarters in private Houses. That the Public House keepers were in general miserably poor, and had no Beds or necessaries, and were not in Ability to provide them. In short, that he was cruelly and barbarously treated, and urged the Governor to come to Resolutions instantly that the Soldiers might be instantly relieved, and an Hospital provided. He added that the new Hospital [Pennsylvania Hospital] was promised to him by the Managers, but they drew back from their promises, and he could neither get the new Hospital nor the old one,[2] nor any House for an Hospital." An effort was made to obtain additional accommodations in the public-houses, but with no success. The Governor then sent for James Coultas, the sheriff, and informed him that he was about to order him to quarter the soldiers in private houses. Coultas asked leave to inform some of his friends that such a step would be taken, representing also that, in case quarters were not provided, "there might be an easy accommodation, as there were plenty of empty houses in town, and none but straw beds were required, with a few necessaries that might be very soon provided." The sheriff showed this warrant, which had been intrusted to him but not served upon him, to some persons, and leading members of the Assembly became aware of the intention to issue it. The result was a message from the Assembly to the Governor, expressing surprise at the intimation as to what was intended to be done, and hoping that he would act according to the law passed a few days before.[3] Members of the Council were inclined to go into a long discussion. The Governor said he would have no altercation, and himself penned the following imperative message:

"GENTLEMEN,—The King's troops must be quartered. With respect to the Insufficiency of the late Act I refer you to my Message of the Eighth Instant, delivered immediately after the passing of it; and I see no Reason from any Thing that has occurred since to alter my Opinion.

"WM. DENNY.

"Dec. 18, 1756."

[1] Col. Henry Bouquet was a native of Switzerland, and was born at Rolle in 1719. He had been in the Dutch service and in that of Sardinia, and entered the British army as lieutenant-colonel in 1756. Under an act of Parliament, passed in the latter year, the Royal American Regiment (Sixty-second) was authorized to be formed of four battalions, each of one thousand men, to be recruited from German and Swiss settlers in America. The officers were of necessity required to be proficient in the German language, and the act authorized the appointment of foreign Protestants, who had served abroad as officers of experience, to rank as such in America only. Col. Bouquet, in co-operation with Gen. Forbes, repulsed the French and Indian attack at Loyalhanna, Oct. 12, 1756, and participated in the operations which were succeeded by the capture of Fort Du Quesne. Sent from Canada with troops for the relief of Fort Pitt, he defeated a large Indian force Aug. 5-6, 1763, and reached the fort with supplies. He commanded the famous expedition against the Ohio Indians in October, 1764, as a result of which the Shawanese, Delawares, and others were compelled to make peace at Tuscarawas. He was made brigadier-general for this service in 1765, and died at Pensacola, Fla., in 1766.

[2] The new hospital was at Eighth and Ninth and Spruce and Pine Streets. The old hospital was the building first occupied by the managers on Market Street, near Fifth.

[3] This was "an act for extending several sections of an act of Parliament passed in the twenty-ninth year of the present reign, entitled 'An Act for preventing mutiny and desertion, and for the better payment of the army and their quarters.'" It was substantially a re-enactment of the act of 1755, which had been repealed in England.

When the Assembly received this mandate it created astonishment. The day was Saturday; the House remained in session all the afternoon, and did not adjourn until Monday, as had been usual. There was a session on Sunday, on which day a message was sent to the Governor, in which it was represented that the members did not fully understand all the particulars, and that the Governor had not given full information. They protested that they were desirous that the troops should have good quarters. The Assembly had lately "shown their Regard for the Soldiery by voluntarily presenting Conveniances and Refreshments to the Officers, and furnishing provisions and Cloathing for the Soldiers of the King's Forces to the Amount of Many Thousand Pounds." The Governor replied that moderation was agreeable to him, notwithstanding which, "*There might have been a Governor* who would have told you the whole Tenor of that Message was indecent, frivolous, and evasive; That the Reception of His Majesty's Troops in this City shows want of Humanity and Gratitude, for you will please to remember that they were raised by Parliament for the Defence of these Colonies.[1] For my Part, Gentlemen, I shall always avoid Disputes, but am determined to do my Duty to my King and Country." The Governor added that sixty-two beds were wanted for one hundred and twenty-four men, who lay upon straw, and quarters for recruits who arrive every day. There was a committee of conference sent by the House, through which there was a great deal of protestation and explanation. In conclusion the report upon the Council minutes says, "Upon the whole there was an abundance of breath, Passion, and Rudeness on the part of the committee." A letter was sent to the mayor by Governor Denny, and that officer represented that he was doing the best he could to accommodate the soldiers. The mayor's official return afterward still showed that there was a deficiency in the number of beds and other accommodations for soldiers. A guard-room, a store-room, and hospital were provided as a result of this quarrel without much delay, but beyond that the officers and soldiers were compelled to get along as well as they could at the public-houses. The latter were furnished by the provincial commissioners, who were named in the act of December, 1756. They were William Masters, Joseph Fox, John Baynton, John Hughes, and Joseph Galloway. In the estimates of expenses for 1757, the cost of constructing the barracks was set down at ten thousand pounds. Some time afterward the commissioners, under authority of the act of Assembly, proceeded to erect barrack buildings for the accommodation of the troops. The location determined upon for the site of the barracks was a lot on the south side of Mulberry or Arch Street, west of Tenth. The foundations were dug out, and the plans were agreed upon, but the agent of the proprietary who owned the lot made objection. The commissioners therefore abandoned that ground and bought a large lot in the Northern Liberties bounded on the east by Second Street, and northward by Green Street, named after Thomas Green, an early owner of the ground. Southward the ground extended toward Bloody Lane [Noble Street], and westward beyond Third Street. It was substantially of a square form, but the lines were irregular upon the south and west. Afterward, when Third Street was opened, a portion of the lot, an irregular strip of ground, was on the west side of that street, and when Tammany Street was opened, after the barracks were no longer in military use, a narrow gore, no wider than two or three feet, at Second Street, extended on the south side of Tammany Street, toward Third, gradually widening to the westward. The title was taken in the name of Joseph Fox, by two conveyances, Sept. 17, 1757. The northern portion of the ground was purchased from Anthony Wilkinson, and the southeast portion from Michael Hillegas. Here the commissioners proceeded to erect buildings for barracks. In doing so they acted independently of Governor Denny, with whom they had no communication. They were members of the Assembly, representing and carrying out the will of that body. They had no consultation with the Governor, but settled upon a plan to suit themselves.

Col. Haldiman, of the Second Battalion, Sixty-second or Royal Lancers Regiment, was of opinion that the plan adopted was not a good one. His second objection was that he disapproved of the place where the barracks were to be situated. The only reason he (Col. Haldiman) gave against the place was that he thought the buildings should be so situated that, in case of need, there might be some possibility of throwing up an intrenchment around them, "from whence," said Lord Loudon, "it occurs to me that in case you should have any thoughts of making a Fort hereafter by the Town, you ought to benefit by those Barracks, so as to build them where you propose to have the Fort by which you will have so much of your Work ready done without creating an additional Expence. The thought can do you no harm, altho' I foresee that probably in the first place all the Ground near the Town is granted away, and in the second the Province will build those Barracks, with a view to turn them, after the War is over, either to Storehouses or a Manufactory."

In September, 1757, the Second Battalion of the Royal Americans (Col. Haldiman), *en route* to Carlisle, Pa., stopped in this city during the march. On that occasion the manner in which the barracks were being constructed was submitted to the colonel's judgment, as to the propriety of the plan. Lieutenant-Governor Denny, in September, gave to the Council a statement in reference to this business; "the Governor likewise related to the Council the strange Conduct of the Commissioners with respect to Bar-

[1] An allusion to the aid given to Braddock and Dunbar.

racks, that they had made Choice of the Ground, dug the Foundation, entered into Contracts with Workmen, agreed upon a Plan, then changed their Minds, chose another Place, altered the Plan, purchased a Quantity of Ground, and were at work with many hands, without so much as consulting him on any one article. But these things came to his Knowledge by Accident, whereupon he had sent for the intended Plan, which was in the Hands of Mr. Loxley, who came with it, and after shewing it to Col. Haldyman, and considering it, they were both of Opinion it was defective, and many Objections lay against it, on which his Honour had wrote the Commissioners a Letter to stop the work till he should approve the Plan, and know if it was an healthy spot, and that he proposed to desire Lord Loudon by the Post to spare him an Engineer to view the Situation, and concert with him a proper Plan; That Three Physicians had, at his Instance, viewed it, and reported there was no reasonable objection to it on the account of Health; That notwithstanding this Injunction the Commissioners still went on with their Work, and had the *Imprudence* never to give him an Answer to his Letter; That he had detained his Letter to Lord Loudon till he should receive their Answer, but believing they would not give any, he would send his letter by the Post." In the next month Lord Loudon sent Lieut. Meyer to the city to "give his Assistance in relation to the Construction of the Barracks, and desired those who would direct the undertakers of the Barracks would be obediant to the orders of Lieut. Meyer." Whether this application was successful is not known. Before the middle of the summer of the succeeding year the barracks were partially completed and must have been occupied by troops organized under authority of the province, since in July of that year orders were sent to the commanding officer of the barracks to place a guard at Wicaco Fort. This authority could not have been undertaken to be exercised over the royal troops.

Neither is it probable that more than a portion of the buildings were in condition to be occupied at once. In February, 1758, the tavern-keepers of the city petitioned for the removal of the soldiers quartered upon them "to the barracks *now* finished." In the succeeding month quarters were demanded by Brig.-Gen. Forbes for seventeen hundred and fifty-two men. The public-houses were not sufficient in accommodations to lodge so large a number. Governor Denny asked of the House if the barracks could not be made ready. The House ordered the Provincial Commissioners to provide quarters. On the 3d of May the House elected Joseph Fox barrack-master, "with full power to do and perform every matter and thing which may be requisite for the comfortable accommodation of his majesty's troops within the Barracks lately erected in the city."[1]

The Thirty-fifth Regiment of foot appears to have been in the city either during the winter of 1757 or the spring of 1758, since, on the 25th of April of that year, the wives of soldiers belonging to that regiment, "lately sent to Halifax," petitioned the Assembly, setting forth their destitute condition, and asked that they should be sent to their husbands. The House agreed to pay the expense if the Governor would consent. Whether these soldiers had been quartered at the barracks cannot be ascertained.

Brig.-Gen. Forbes left at Philadelphia in July, 1758, in the care of Benjamin Loxley, a very extensive amount of ordnance, ammunition, and stores belonging to the king. There were six brass field-pieces, mounted, with all the apparatus connected therewith, empty shells, muskets, bayonets, halberts, drums, pistols, carbines, tents, round shot, gunpowder, and large numbers of other articles.

Gen. Forbes at barracks, Raystown Camp, in October, 1758, wrote to the Governor, stating that he would be compelled to send down to the inhabited parts of the country the greater portion of twelve hundred men, being the force under his orders. The object was to enable the soldiers "to recruit and fit themselves out for the ensuing campaign; for were I to leave the whole during the winter in the uninhabited parts of the country, these corps would not be in a condition to march on service early in the spring." Among the things named by Col. Forbes as necessary "for making the soldiers' lives comfortable in this severe climate during the winter" were for each man a second blanket in lieu of a bed, a flannel jacket, a new pair of breeches, two pairs of stockings, and a pair of shoes. In November, 1758, Col. Forbes wrote from Fort Du Quesne, which had just been captured, requesting that the barracks should be put in good repair and proper lodgings for the officers, and provision in winter-quarters was required for Col. Montgomery's battalion of thirteen hundred men, and four companies of Royal Americans. The Assembly was appealed to by Governor Denny, but there was no immediate response. In 1759, Gen. Jeffry Amherst stated to Governor Denny that Lieut.-Col. Morris had informed him "that some small difficulties had arisen at Philadelphia in relation to quartering." Upon which he sent a copy of the agreement entered into between the deputy quartermaster-general for the king and the selectmen of Boston. This had been made a standing rule by Gen. Amherst for the other provinces. That officer was pleased to say, "I have no reason to think that Pennsylvania would be deficient in their care and

[1] In the provincial accounts are charges for payments, May 15, 1757, to Plunkett Fleeson, £381 16s. 8d. for bedding supplied to the Indians and soldiers at the hospital and barracks; John Rowan, for beer supplied to the soldiery, £50 13s. 6d.; Sept. 15, 1757, to Joseph Fox, for erecting barracks, £8000. The latter may be assumed to have been the cost of the buildings and lot. 1757, November 8th, Joseph Fox, wood for the barracks and rent of the King's Hospital, £350. Fox was paid at first £60 per annum out of the fund for his services and £50 per annum from the general fund. After two or three years there is note only of payment of £50 per annum on the general provincial expenses.

regard for the troops sent for their defense and protection. I make no doubt that upon sight of the before-mentioned agreement, they will cheerfully comply with it, and cause every difficulty that may have arisen immediately to subside."

The Assembly was much more interested in considering the Indian question in connection with complaints relative to the walking purchase, of 1737, than in making preparation for the comfort of troops. Alleging that the plan of operations for the year 1759 had not been received from Great Britain, the House in February adjourned for two weeks. The next month complaints were made that attempts had been made in the county of Lancaster to extort billets from the magistrates, and that the soldiers had been quartered in private houses. Gen. Forbes died in Philadelphia in 1759, and Brig.-Gen. Stanwix was appointed in his place, and came to the city in March. Gen. Amherst himself arrived in April of the same year, and the Assembly being slow and obstinate about passing the supply bill, he sent for the Speaker and some of the members, and told them "that he would withdraw the king's forces in case they did not raise the same number of provincials as served last campaign." Governor Denny represented these things to the Assembly, and received from the members the usual justification of their conduct. By way of set off, complaint was made of the quartering of troops at Lancaster. The House said that the measures taken there were unjustifiable and arbitrary, "that there was a commodious set of barracks erected near the city of Philadelphia capable of receiving all of his Majesty's Troops in the province. That the building of the Barracks there was occasioned by the officers refusing to quarter the troops anywhere else than in or near the city, that they had formerly refused to quarter them at Lancaster, and that if they had been willing a portion of the Barracks would have been erected there. That a number of Rooms in the Barracks are now, and have been during the Winter, empty, and ready to receive all the Soldiers thus oppressively, unnecessarily, and illegally quartered in that place." The House was stubborn, and would not pass the supply bill unless it retained a provision to tax the proprietary estates. In this emergency, Gen. Amherst solicited Governor Denny "for the good of the common cause to waive the proprietary instruction, and give his consent to the bill, as had been done at the request of the Earl of Loudon on a previous occasion," promising to inform the king's ministers of the necessity of his so doing, that no inconvenience might arise to him by his action.

In 1761, Vaughn's regiment was sent by Gen. Amherst to Philadelphia. In 1764 some of the Indians who were the objects of the animosity of the Paxton Boys were at the barracks, but were removed for greater security,—perhaps it would be better to say, so that they might more easily escape to Province Island. While they were at that place there were consultations as to what might be most proper to secure their safety. The Council was of opinion that the best method would be to send them to Sir William Johnson, at New York. It was observed as a particularly fortunate circumstance that there was in town a detachment of Highlanders, under the command of Capt. Robinson, on their march to New York, who, at the instance of the Governor, readily agreed to escort the Indians as far as that city. These soldiers actually proceeded to execute the agreement, and the Indians were taken upon the march into New Jersey. But they were not received at New York. Orders were given that they should be stopped before entering the province. About the same time Governor John Penn had applied to Gen. Thomas Gage for the stationing of some troops in Philadelphia. The latter ordered three companies of the First Battalion of Royal Americans to come to the city. They were ordered to meet the Highlanders in New Jersey to receive from them the Indians and escort them back from Amboy. Capt. Schlosser had command of this detachment, and, having reached Trenton, waited for instructions. He was desired to resume his march and bring the Indians to the barracks, where they could be better protected than anywhere else. After they arrived the rumors in relation to the assembling of the Paxton Boys, and of their intention to march to the city, became more alarming. The Governor was advised to give written instructions to Capt. Schlosser to defend the Indians to the utmost of his power, and to oppose any attempt to destroy them, "the riot act first being read by a proper civil officer." A meeting was ordered to be held at the State-House, at which the inhabitants of the town were invited to assemble with request to immediately take up arms, and put themselves under the command of the Governor for the defense of the government. It was proposed also that one hundred and fifty gentlemen should assist the soldiers in guarding the barracks on the night of February 4th. It was also recommended that, "upon any alarm made by the ringing of the bells, the inhabitants would turn out with their arms and repair to the barracks; or, if the town should be attacked, that they would meet at the court-house and defend the city." Arms and ammunition were ordered to be sent to the barracks, with four cannon and artillery stores from the State-House. A number of carpenters were directed to be employed to erect some works at the barracks to make them more defensible. Spies were dispatched up the different roads to observe the motions of the rioters, and bring intelligence of their approach. The condition of affairs was considered critical. There was great alarm. But the Paxton Boys got no farther than Germantown, where, being met by a delegation from the city, there was a parley. They were remonstrated with, and finally, being under no authoritative leadership, weakened and dispersed and returned to their homes.

The disposition of the Indians became, after the excitement had quieted, a matter of embarrassment to the authorities. Governor Penn again wished to send them to Sir William Johnson, but Gen. Gage objected that by such disposition they might prejudice the Six Nations against the English. It was the desire of that officer that they should remain at Philadelphia, or be sent to the barracks at Burlington, where they would be removed out of the way of the people of Pennsylvania and proper care be taken of them.

The Indians left the barracks in 1764, after having remained there for more than a year. In an address made to Governor Penn, on the occasion of their departure, they said that they were going back into the wood of Machelusing, on the Susquehanna, to settle there. "We think it is our first Duty to take a friendly leave from you by presenting our hearty Thanks for your great Goodness to us. We do not come with a String or Belt of Wampum agreeable to the custom among Indians, and as we cannot speak your tongue we must endeavor to express our grateful hearts by this Writing. Hoping you will accept of it from your poor Indians. . . . These Words come from us who have subscribed this address & from all the Indian Men, Women, & Children now at the Barracks, and we are your true and faithfull friends." This address was signed with the marks of John Pepunhang, Joshua, Anton, and Samy Evans.[1]

In June, 1766, a detachment of the Royal Highland Regiment which had been in service in the Illinois country, and had arrived at New York from Pensacola, was ordered by Gen. Gage to march to Philadelphia. This was but a single company of one hundred and fourteen officers and men. Gen. Gage two months afterward desired that provision should be made for a full battalion, the strength of which was five hundred officers and men. In 1768 the Assembly passed an act for appropriating a sum of money for building the middle house on the west side of the barracks, in the Northern Liberties of the city of Philadelphia.[2] In 1768 the Eighteenth Regiment, Lieut.-Col. Wilkins, arrived in Philadelphia on their march to Lancaster and Cumberland, and put up for a short time at the barracks. Gen. Gage wrote to Lieutenant-Governor Penn in June, 1769, that the Thirty-fourth Regiment, quartered in Philadelphia, were shortly to embark for Ireland going from the city. Capt. Chapman, of the Eighteenth, was there in 1772. Gen. Frederick Haldiman wrote to Governor Penn in July, 1773, that transports with his majesty's royal regiment of artillery had arrived at New York; that one company was to be stationed at Philadelphia, and requested that the barracks should be placed in order for their reception. The Eighteenth or Royal Irish Regiment was at barracks for some time, and left for Boston in September, 1774. It is probable that they were not succeeded in the tenancy of the building by any other British troops.

On the 1st of November, 1775, the Assembly of Pennsylvania directed that Mr. Miles and Mr. Dougherty should deliver to Joseph Fox, the barrack-master, the following order for providing necessaries and quartering troops:

"IN ASSEMBLY, Nov. 1, 1775.

"Upon Motion: Ordered that the Barrack-Master do forthwith put the Barracks near this city into proper repair for receiving the Troops now raising in this Province, and that the said Barrack-Master do in future receive and Comply with such orders from the Committee of Safety as they may find necessary to Issue for quartering Troops in the said Barracks

(Signed) "CH'S. MOORE, *Cl'k Ass'y.*"

The same committee was ordered to ascertain how soon the barracks would be ready for the reception of troops, and what number of firelocks were made for the county. These directions mark the period when, from the occupancy of the regular British troops, the barracks passed into the tenancy of the soldiers who were opposed to them. Barrack-Master Fox, who afterward became a Tory, had not yet shown his disaffection. He reported that the barracks would be ready for the reception of the troops in about ten days. Capt. Thomas Proctor, of the artillery, was allowed admission to the barracks on the 7th of November with his company, and it was directed that he should be furnished with the bedding lately belonging to the royal artillery company.

The Council of Safety three weeks afterward granted to Maj. Anthony J. Morris the use of the large house at the barracks "for the field-officers of the Pennsylvania battalion now raising." The board gave directions to Barrack-Master Fox to deliver the key of the said house to Maj. Morris.

In August, 1776, the deputy quartermaster-general was directed, if he could not obtain sufficient quarters for the troops which were coming to the city, to place them in the several places of worship in the city in turn. Notice of this intention was ordered to be given to the wardens or elders of the various congregations. Authority was also given to occupy private houses which were empty for the same purpose. Maj. Lewis Nicola succeeded Fox as barrack-master as early as the middle of March, 1776, at which time he was directed to deliver to Col. Arthur St. Clair and other officers of battalions such necessaries as they might want from the supplies at the barracks.

An estimate of the expense of converting the old jail into a barracks in 1776 is found in the Pennsylvania Archives, vol. iv. page 715. It was evidently intended for a small number of men, not more than sufficient for a city guard. The estimates were for about one hundred and twenty-one bedsteads, one of them of

[1] In "Unitas Fratrum," No. 4, are the names of fifty-five Indian men, women, and children who died at the Barracks during the occupation, and were buried by Moravians.

[2] The middle house fronted on Third Street, and was occupied as officers' quarters; in later times it was universally known as the Commissioners' Hall of the Northern Liberties.

rather large proportions, a mess-table and bench of generous size, and twenty other tables, with forty benches.

Bucks County militia were lodged at the United States barracks in September, 1777, at which time orders were issued to them to send a guard of four men to Robin Hood Ford (Garrigues, afterward Mendenhall's Ferry) over the Schuylkill, four men to the Upper Ferry, four men to the bridge (Middle Ferry), and four men to Gray's Ferry, to take care of the artillery at those places.

As appurtenances to the barracks, in 1777, before the British occupancy, there were two hospitals; that which was used for ordinary diseases was in Front Street, opposite the Noah's Ark Tavern, at the corner of Bloody Lane, or Noble Street, and probably upon the barrack grounds; the Smallpox Hospital was in Pine Street, exactly where is not known. It was under the care of the barrack-master, and nurses were employed to take care of it. Dr. Glentworth, in January, 1777, was superintendent of a "smallpox hospital, 2 doors above Peter Knight's." The sick quarters in January, 1777, were at Semple's store, Sproat's store, which was immediately opposite Semple's, and McElroy's store, also at John Shields' house. Mary Traker was a nurse at John Shields', and was frequently spoken of as a nurse at the Pine Street Smallpox Hospital. There were sick soldiers at Smeiler's, at the corner of Seventh and Arch Streets, and at Sneider's, in Front Street, and also at Evan Morgan's, on the common.

Occasional glimpses of the condition of the barracks after they came into the possession of the commonwealth of Pennsylvania are to be had in the reports published by Col. Nicola. Thus he said, in August, 1776, "The troops that daily come to the barracks are much displeased at not having necessarys to dress their victuals. Potts I have enough in store, but they will not take unless cleaned, yet constantly return them dirty. There is a great deficiency of buckets." In November of the same year he mentions that a consultation was held among the officers, with Col. Hampton and others, as to the disposition of rooms, from which it appears that the place was crowded. "It was agreed that room should be made in the wing occupied by the German battalion for Capt. Doyle's company, and that the cellars should be filled with men. This arrangement will make 20 rooms as soon as the Flying Camp men march out, and 50 cellars for the reception of Troops. In consequence of this I have directed that the cellars should be cleaned and fitted for the reception of men. . . . 18 wagons with sick men from the camp and 4 this morning came to the barracks. The men say more wagons are on the road, and 2 shallops are coming down the river." A few days afterward the barrack-master wrote, "As these unsettled times may occasion many removes in the Barracks, and that most of the rooms are supplied with bedsteads, tables, and benches, which cannot be removed into store-rooms, it is necessary to have them fastened up. As locks are attended with much inconveniency, occasioned by the men's loosing the keys and putting the locks out of order, I prefer padlocks, which may be taken into the stores whenever the rooms are occupied. I have hitherto found it impossible to procure the number I want. I propose advertising this day for them, in expectation that some smith in the neighborhood will undertake it." Three days afterward he complained that Capt. Doyle had not returned one-half of the bed-cases received from the German battalion, and that certain utensils had not been returned. After Nicola became town-major he issued standing orders to the garrison of Philadelphia in regard to returns and other matters (Penna. Archives, vol. iv. page 184). Among them were the following:

"V. When any Troops belonging to the Garrison, or on their way to Camp are quartered out of the Barracks, a sergeant or corporal from each corps is to attend constantly at the Barracks to be ready to carry Orders to their respective corps, for which purpose a room in the Barracks must be appointed for their Reception.

"VI. An adjutant in rotation is constantly to remain in the Barracks from which he is not to depart on any account till relieved, except when he goes to the Town-Major to receive orders, but be ready to receive and distribute orders.

"VII. Whenever the Drummer beats the Adjutants' call, or first part of the Troop, all the Adjutants in the Barracks and orderly Sergeants or corporals from corps quartered out of the Barracks, are to repair to the Parade, receive orders, and distribute them to their respective corps.

"IX. A Field-Officer whenever there are four in Town, when not a captain, to attend daily at the Barracks and do the duty of the Officer of the day."

When the British army entered Philadelphia the barracks were again occupied by the royal troops, whether by regiments or companies is not known. Soldiers were encamped in the open fields near, north, south, and west of the more luxurious quarters. There is no record by which may be ascertained what regiments or organizations were accommodated at the barracks.

Discipline was rather loose in the Northern Liberties after the British evacuation, and the soldiers were sometimes unruly. In December, 1779, complaint was made to the Supreme Executive Council "of great irregularities at the barracks and destruction of the buildings; and also that there is danger of bloodshed from the disputes between the soldiers and the neighboring inhabitants, and that the same are owing to the neglect of the proper officers providing wood." Measures were taken to prevent further mischief. The supply of fuel was a great difficulty at this time. In order to prevent, in some degree, the scarcity, the Council had ordered that the wood growing on a tract of land on the west side of the Schuylkill, belonging to some persons residing in Great Britain, should be cut down and brought to the city for the use of the poor, the same to be valued and accounted for when required. In pursuance of these orders, William Bradford, Tench Francis, James Ash, Isaac Melchor, William Hall, Andrew Tybout, David Dun-

can, William Miller, William Forbes, Thomas Shields, and Joseph Copperthwaite had cut down considerable quantities of the wood for those uses. They found themselves confronted by a person called William Wood, who made claim to the property, and took possession of some of it. The Supreme Executive Council proceeded promptly, and ordered Wood to be arrested and brought before them by the sheriff of the county. The consequence was that Wood was soon convinced of his error, "made some acknowledgments," and being reprimanded, was dismissed. Probably some of this wood went to the barracks. The necessity of the case and the want of fuel led to considerable destruction there. A committee of the Council, which had been detailed to make an examination of the condition of the barracks, made a very unpleasant report:

"That they find them in a very ruinous condition, all the Bedsteads (except a few in the Invalid quarter) missing having been burned, as we are informed, for want of Wood. Almost all the Glazing of the windows broken, plastering pulled down, the laths & partitions cut up to light fires. The floors much cut up and injured. The soldiers having brought their wood into the rooms, and there cut up for their fires; the rooms & galleries are so full of filth and ordure as to render these places extremely offensive; in short the whole of the buildings are in very bad order. . . . That upon a speciall inquiry what Wood had been served out, and what prospects there are, it appears to the committee that great part of the Fall & Winter there has been only half allowance, and that irregularly served. That they have been occasionally 2 days without Wood, even to cook their victuals, By which means the Buildings and Fences in the neighborhood had Suffered, which had occasioned great disturbance among the Inhabitants, so as not only to break the peace, but to endanger the lives of both soldiers and citizens; that there is not at present any stock of wood or any other supply than from day to day, and that so insufficient that unless there is some effectual reform in case of bad roads or bad weather which may be expected at this season, they will be destitute, and the like abuses on the buildings and in the neighborhood probably renewed."

The number of soldiers who might be accommodated at the barracks was not stated, nor the number of soldiers who were in quarters at that time. In regard to the officers there were more than enough. Isaac Melchior was barrack-master; Gen. Gibbs Jones, chief barrack-master and captain of artillery; Christian Schaffer, assistant barrack-master and superintendent of the carpenters; John Fauntz, assistant barrack-master. Beside these principal officers there were three superintendents of wagoners and wood-cutters, an issuer of wood, two clerks, and teamsters to an unknown number. There were twenty-one teams at the barracks, and twelve at Bristol, besides several more at the same place whose number was not ascertained. Col. Melchior and his assistants had a number of riding horses for their own use, and the affairs of the establishment were conducted at an extravagant rate. On the last day of December the barrack-master reported that a body of Continental troops were marching into the city, and unprovided with barracks or other cover, from which it would seem that the barracks were filled to their capacity. He asked assistance from the Council so that they might be secured suitable quarters. Orders were issued to the justices of the peace of the city and liberties to billet the troops in the public-houses, proportioning them according to the size of the house. Measures were taken also to recompense citizens who lost their wood when the troops were "constrained" to use that article. The barrack-master was ordered to replace it in the following proportion: "for twenty men one-eighth of a cord of wood for every twenty-four hours, and so on in proportion for a greater or lesser number of men."

The use of the barracks was given up to the United States at some time before the end of 1779, at which period the report above quoted was made. Consequently, there were disputes whenever the State authorities undertook to interfere. The report of the condition of the buildings was sent by the Council to the delegates of Pennsylvania in Congress, and the Council said, "Should there be any attempt to refer the correction of these abuses to the authority of the State, we desire you would object to it. We cannot think of involving ourselves in any further disputes with these officers, who, being under the immediate appointment of Congress, resent our interference, and in consequence treat us with very little respect or decency. . . . At all events we decline acting farther than giving you information as members of Congress, being resolved never again to commit ourselves as parties or accusers, and with the officers of Congress incur the imputation of indulging private resentment when we have only the public interests in view." The representations made produced no result. So that some months afterward President Reed wrote to the delegates in Congress stating that the abuses and mischiefs continued, "so that in a little time these buildings will be useless to the publick." One thousand pounds in gold, it was said, would not repair the damages that those buildings had sustained during the previous year. The Council, therefore, determined to take the buildings under their own care, and appoint a barrack-master. They requested the delegates in Congress to move in that body for an order to the Continental officers to pay due regard to the barrack-master within his department. Matthew McConnell was appointed town-major after this, and Leonard Cooper was superintendent in 1781. In January of the same year, a considerable number of officers belonging to the Pennsylvania line being in the city, were unprovided with decent quarters. Orders were given that they should be billeted by the Deputy Quartermaster-General.

In 1781, Col. Lewis Nicola, who was formerly barrack-master and at that time town-major, appears to have been in authority sufficient to take charge of the barracks again. He was directed to appoint a trusty sergeant to assist him in preserving the barracks from "being damaged by the soldiery that may be quartered therein from time to time." Various repairs were placed upon the barracks during that year.

In November, Robert Morris, superintendent of finance, and Richard Peters, executing the duties of

the War Department, wrote to President Moore stating that a regiment of Federal troops would be stationed in the city during the ensuing winter, and that upon their arrival the militia doing duty would be discharged. Therefore they applied for the use of the barracks, and requested that a barrack-master should be appointed and the buildings put in order.

Col. Nicola was discharged from his duty as town-major in February, 1782, there being practically no further occasion for his services.

After the conclusion of the Revolution, as soon as public officers became settled down to peaceable thoughts, it was considered necessary to dispose of much of the property acquired for military purposes during the struggle. On the 1st of April, 1784, the Assembly passed an act authorizing the sale of the barrack lots in the Northern Liberties. The money realized was to be appropriated toward the payment of the sums agreed to be paid to the late proprietaries. The Supreme Executive Council appointed Michael Hillegas and Tench Francis commissioners "to apportion and lay off the ground whereon the barracks are situate into as many lots as may be necessary, with such and so many streets and lanes that the interest of the State and the convenience of the inhabitants may be best promoted, and to make sale thereof." The commissioners opened on the south side of the barrack-ground a new street, to which they gave the name of Tammany Street. As early as 1772 a street had been laid out through the Coats property, north of Green Street, running northward, which was called St. John Street. This highway was continued by the commissioners through the centre of the barrack lot from Green to Tammany Street. Near the Germantown road, Pitt Street was in line of St. John Street. South of Pegg's Run, Ann Street extended on the same line from Vine Street to Cohocksink Creek. The route of St. John Street was confirmed from Pegg's Run to Germantown road in June, 1793. East and west of St. John Street, between Second and Third, small and narrow streets were laid out, to which the commissioners, with delicate taste, gave floral names. Rose Alley was east of Third Street and Lily Alley west of Second Street.

It was the opinion of Messrs. Hillegas and Francis that the best plan to dispose of the property would be to rid it of all the barrack buildings except the centre house for the officers. The materials would bring fair prices. The bricks, in consequence of scarcity, could be sold for nearly as much as new bricks. The lumber might be used, and other material, such as floors, window-sashes, etc. The lots thus being made vacant could be sold at a better price than if incumbered with inconvenient buildings.

The destruction of the barracks was found to be inconvenient in after-years for the want of some place at which the troops might be lodged. In 1788 a contingent being necessary from Pennsylvania, Lieut.-Col. Josiah Harmer was placed in Capt. David Ziegler, upon recruiting service, was embarrassed for want of quarters. In this emergency the Supreme Executive Council applied to the managers of the House of Employment, requesting them "to permit Capt. Ziegler to occupy an apartment in the Bettering House for the reception of such soldiers as he may enlist during his stay in this city." The application was not successful, and an order was issued to Clement Biddle to procure a house for the purposes of Capt. Ziegler on the best terms that he could.

The barracks became, as soon as they were erected, a place in which the inhabitants of the city took much interest. Except the militia and volunteer associations, organized under authority of the Lieutenant-Governors, there had been few regular soldiers seen in Philadelphia from the time of the settlement up to 1755, when the remnants of Halkett's and Dunbar's regiments marched back in retreat, it might be said, after the disaster of Braddock's Field. The Royal American regiment, although composed principally of emigrants from Germany and Switzerland, who had been settled in America some of them perhaps for many years, were commanded by officers thoroughly instructed in the military methods of Continental Europe, governed by obedience to such British methods as were considered necessary to be observed by superior authority. Halkett's and Dunbar's regiments were almost entirely composed of soldiers born in Great Britain. Col. Bouquet must have introduced some peculiarities founded upon his experience in the Dutch and Italian armies. Col. Montgomery's Highlanders were objects of great curiosity. Their peculiar costumes, their pipers and music, even their speech, so difficult to be understood by persons not used to cosmopolitan communications, were strange. Subject to proper precautions incident to military organizations, visitors to the barracks were welcome, at least at particular times, when it was understood that the sentries could be passed and access to the premises occupied by the troops was unrestricted. The parades and reviews were matters of continued interest. There was always something going on at the barracks which was worth looking at. It was a popular place to be visited by young people, and even by elderly and grave citizens.

The commissioners who erected the barracks are not known to have made any formal report as to their plans or description of the buildings. It is known that the barracks were of brick, that they had cellars under them, and occupied a parallelogram bounded on the west by Third Street, probably a little back from that highway, the middle building or officers' quarters being possibly in front of the barracks proper, which were of brick, and faced a ground for parade and exercise.[1]

[1] Among the collection of curiosities in possession of the Historical Society of Pennsylvania is a powder-horn upon which is engraved a ...sentation of the city, with a sort of a map and other details suffi-

So far as noted, the battalions of British troops quartered at the barracks were infantry or foot soldiers. Yet there was artillery there. The king's birthday, in June, 1772, was celebrated at the barracks by a discharge of twenty-one cannon. After the barrack lots were laid out, the little street running from Second to Front, below Green, and known as Duke Street, was popularly called Artillery Lane. This was in allusion to the storage of cannon near there, either upon the barracks lot or upon the line of Duke Street. The presence of the troops in the Northern Liberties gave to that portion of the county a new nickname. It was called Camping-town and Camp-town for many years. In time this appellation was shifted northward, and was generally known as a name applied to Kensington.

State Arsenals.—There was no place for storage of arms at the time when the trouble commenced with Great Britain, which ended in the Revolution, other than at the barracks and in the sheds on the State-House lot, at Fifth and Sixth Streets, and in the State-House yard. After the battle of Lexington the Assembly, although somewhat under proprietary influence, was compelled to go with the people. The association for defense, entered into by citizens immediately after the beginning of hostilities, was approved by resolutions of the Assembly. June 30th, it was also resolved that if the Committee of Safety should consider it necessary, it would be lawful for the Associators to enter into service to repel "any invasion or landing of British Troops or others ... in this or the adjacent colonies during the present controversy," or if "any armed ships or vessels shall sail up the River Delaware in any Hostile Manner." The pay of the officers and privates was "not to exceed that of the army raised by the Congress of the United Colonies for the defense of the liberties of America." It was recommended to the officers of the city and county of Philadelphia, and to officers in other counties of the province, to provide "a proper number of good new firelocks with bayonets fitted to them; cartridge-boxes, with twenty-three rounds of cartridge in every box, and knapsacks, not less than fifteen hundred of each article for the city and county of Philadelphia," and three thousand for the other counties in the State. It was ordered "that the firelocks to be provided, as aforesaid, be of one bore with steel rammers. Locks well fitted to the same, and that patterns of the said firelocks, rammers and bayonets, be immediately made in the city of Philadelphia, and sent to the different counties." The manufacture of saltpetre within the province was encouraged by a bounty; a provincial saltpetre works was in operation in the city in April, 1776. To defray the expenses, bills of credit to the value of thirty-five thousand pounds were ordered to be issued. The committee got to work without delay. Col. John Cadwalader and Samuel Morris, Jr., were directed to provide patterns of muskets, bayonets, cartridge-boxes and knapsacks, to be sent to the different counties. The muskets were to be three feet eight inches long, with a bore of sufficient size to carry seventeen balls to the pound, and the bayonet sixteen inches long. Messrs. Robert Morris, Robert White, and Thomas Wharton, Jr., were appointed a committee to procure powder and saltpetre, and to buy two thousand stand of firearms. The first mention of the acquisition of military stores was made on the 18th of July, when Thomas Savidge "was ordered to be employed to take care of the cannon and military stores in the daytime, or until he be relieved by the guard placed for that purpose." Resolution of Congress of July 18th recommended that each soldier should be furnished with a good musket that would carry an ounce ball, with a bayonet, steel ramrod, worm priming-wire and brush fitted thereto, a cutting sword or tomahawk, a cartridge-box that will contain twenty-three rounds of cartridges, twelve flints, and a knapsack. The first anxiety about gunpowder arose the next month, when a night-guard was set over the powder in the new jail. The provincial muskets which had been in use previously to the Revolution were taken in charge by the associators at once. Robert Towers was commissary, and appears to have had charge of some portions of the powder, and made return of possession of two thousand two hundred and forty-four and a half pounds, in magazine, the greater part of which was immediately delivered for service. The return in the middle of August showed that powder was stored at the new jail, at the powder-house, and at Germantown, and there were twelve thousand flints and five hundred-weight of lead stored in the State-House. It is probable that for the latter purpose the frame build-

---

cient to authorise the inference that it was the work of a British soldier who was in Philadelphia before the Revolution. From the manner of spelling the name Front Street ("Frond Street") it seems probable that this work was done by a foreigner, a German or Swiss soldier belonging either to Bouquet's or Haldiman's battalions. There is a rude but perfectly obvious representation of the barracks exactly where they would be, in reference to other localities on the map or plan. According to this representation the barracks were one-storied buildings with a pitched roof, which possibly may have been available lofts for sleeping purposes, although there are no marks of garret-windows. Doors at intervals appeared to have been placed on the west parallel. Chimneys are also marked. The description by Watson does not agree with this rude sketch. He says that "the houses were all of brick, two stories high, and a portico around the whole hollow-square." The view which Mr. Watson publishes shows a gallery above the first story and on a level with the floor of the second story, stretching around the three sides of the quadraugle. The number of soldiers who could be accommodated is also a matter of doubt. Mr. Watson says that they were tenanted "by three thousand men, all in the same year." ("Annals of Philadelphia," vol. i. page 415.) This is a doubtful phrase, and may mean that altogether, in one year, three thousand individual soldiers had tenated the building. If it meant that three thousand men were at one time quartered there, the statement may be suspected to be an exaggeration. It has already been shown that in March, 1758, Gen. Forbes demanded quarters for seventeen hundred and fifty-two men. Montgomery's battalion of Highlanders in the winter of 1758–59 consisted of thirteen hundred men, and there were four companies of Royal Americans, probably not more than four hundred men, altogether seventeen hundred men. No larger numbers than these are spoken of on the scanty records which remain to show the use of this building.

ings at the corners of Fifth and Sixth Streets and Chestnut were put in use.

A few days afterward saltpetre and round shot were stored at the State-House. There were already provided for the great guns of the armed boats one thirty-two-pounder, four twenty-four-pounders, and three eighteen-pounders. Carriages for the field-pieces were prepared; also pikes for the use of the armed boats. Two tons of gunpowder were sent to Gen. Washington in September, and in the same month considerable quantities of round shot were stored at the State-House. Muskets, bayonets, scabbards were soon added to the collection. In September a supposed spy, who had been "*frequently* observed to take an account of the cannon and carriages in the State-House yard, and had made inquiries respecting the different construction of machines, boats, etc., for the defense of the province," was brought before the Committee of Safety. But he succeeded in proving by papers and otherwise that he was actuated by no bad intention and was governed by curiosity. Racks for keeping the arms in good order were directed to be set up in the State-House in December. A guard over the artillery and military stores at the State-House was ordered to be placed early in the succeeding month, January, 1776. Three months afterward another application was made from the officers of the city battalions asking that there should be "a guard at the powder-house and cannon at the State-House, and another on the fire-rafts and magazines at the lower end of the town." Two field-pieces from the State-House yard were ordered to be sent to Gen. Washington, under charge of Capt. Newman, in November, 1776, when the British were in New Jersey. Joseph Blewer and Joseph Dean were appointed a committee in January, 1777, to collect all the cannon in the city and suburbs that were suitable for service and to mount them on trucks and carriages as soon as possible. In March of the same year it was ordered that a smith-shop should be erected at or near the public works now in the possession of this board, at the corner of Chestnut and Fifth Streets, that a sufficient quantity of iron and coal be purchased for that purpose, and that a master workman be employed to superintend the same. This was probably on the portion of the State-House yard on which the city hall was afterward erected. In October, 1778, Capt. Stiles was ordered to take possession of the old workhouse (at Third and Market Streets) "for the purpose of casting ball, &ca., as soon as the guard now there shall be removed, and that he take possession of and fit up the long room in the State-House for a magazine of small-arms."

On the 8th of April, 1785, the first action was taken toward building an arsenal for the storage of arms free from connection of the powder-magazine. The following entries appear upon the minutes of the Supreme Executive Council:

"Council taking into consideration the propriety of erecting a building for the purpose of covering the cannon and other parts of State ordnance from the injuries of the weather, &ca., &ca., an order was taken that Mr. Commissary Stiles be instructed to erect a frame building not exceeding eighty feet in length and eighteen feet in breadth, upon the lot of public ground bounded by the from Delaware." It appears from a subsequent entry that the lot intended to be appropriated for that use was on Eighth Street between Spruce and Locust Streets. In the succeeding month this intention was reconsidered, and the following conclusion was made: "*Ordered*, That the said arsenal be constructed upon the corner of the public square between Thirteenth Street and Juniper Alley." The site chosen was below Market Street, about half way to Chestnut, and the lot extended through from Thirteenth to Juniper Street, immediately opposite Centre Square. The building was probably completed by end of December, 1785. Up to that time Commissary Stiles had been paid £250 upon account of the construction, and Edward Pole, for ironmongery for the arsenal and the State-House, £34 *5s.* *7d.* specie. In May, 1788, three appropriations, amounting to over £114, were made by the Supreme Executive Council "for repairs done to the cannon-carriages belonging to the artillery battalion of this city." These payments were made to Valentine Hoffman, Christian Beackley, Jervis & Morrell, and George Flake, painter. John Nicholson, gunsmith, and Abraham Morrow were paid for the repair of arms. John & George Rowan, and others, were paid for similar services in 1788. In April of the same year, Capt. Joseph Stiles, superintendent of the powder-magazine, reported that a vessel had arrived with gunpowder, and that the magazine was full. He was given authority to store the same in the guard-house adjoining the magazine. The militia musters were expensive. Col. William Henry, lieutenant of city and liberties, drew from the treasury in the autumn of 1788 over three hundred and twenty-two pounds for the expense of the fall training. Three barrels of gunpowder were set apart to be used in the drill. Fifty pounds of gunpowder, ten yards of flannel, to be made up into cartridges, were directed to be served out to the artillery battalion about the same time, for the purposes of a *feu de joie* on the occasion of the inauguration and proclamation of the President and Vice-President of the State.

The arsenal remained as originally constructed in 1785, and was found to be insufficient for public use after twenty-eight years. The necessities of the war between the United States and Great Britain, which commenced in 1812, led to the adoption of measures for increased accommodations. By act of Assembly, passed 29th of March, 1813, it was ordered "that there shall be a brick arsenal erected on the lot on which there is now a frame arsenal, which shall be

large enough to hold twenty-eight pieces of artillery and apparatus, one thousand muskets, one thousand tents, six thousand knapsacks, and one thousand camp-kettles." The first story was directed to be arched, and the roof covered with slate or tiles. The cost of the building was not to exceed fifteen thousand dollars, and it was ordered that it should be completed in December of the same year.

The arsenal buildings stood in an inclosure on the north side of the lot. They were of brick, three stories high. At the first story there were arched piers, fitted with wooden doors. The cannon were housed there. The upper portion of the building was fitted up with racks and other fixtures necessary for the securing and accommodation of the muskets, pistols, swords, and accoutrements. The arsenal yard was south and east of the building, and extended to the line of Juniper Street. A brick wall, with gate on Thirteenth Street, a similar gate being on Juniper Street, were the means of entrance for troops if necessary, and for the convenient taking out or in of the artillery and munitions of war.

In 1839 an act of Assembly was passed authorizing the Governor to negotiate with the President of the United States for the purchase of the United States Arsenal on the Schuylkill, situate on Gray's Ferry road. If the purchase could be effected, the Governor was authorized to sell at public auction the State Arsenal on Thirteenth Street. This negotiation was not concluded. Some years afterward the State purchased ground on the south side of Filbert Street, extending from Schuylkill Seventh [Sixteenth] to Schuylkill Eighth [Fifteenth]. A very large building was erected, occupying the whole length of the square. It was not in use very long. After the breaking out of the Rebellion, the Legislature passed a law transferring the State Arsenal to Harrisburg. The building on Filbert Street was eventually sold, and when the Pennsylvania elevated road was built the walls were utilized for purposes of a depot.

In 1853 the officers of the Pennsylvania Railroad Company determined that the piece of ground at Thirteenth and Market Streets would be convenient for the purpose of a freight depot. The State was willing to sell that portion of the lot which was in use by the arsenal. An act of Assembly was passed April 19th, authorizing the Governor to sell the arsenal property, on Juniper Street and Thirteenth, for a price not less than thirty thousand dollars, and with the proceeds erect an arsenal elsewhere.[1] At this juncture the City Councils, in order to retain the establishment in the city, undertook to grant to the commonwealth the use of a lot of ground, on the south side of Filbert Street extending from Sixteenth Street eastward toward Fifteenth Street, a distance of one hundred and eighty-seven feet, and in depth one hundred and six feet to Jones Street. The premises were taken up on ground-rent, and the city guaranteed to pay the rent as often as it should fall due. These arrangements were perfected by authority of the act of May 6, 1857. A large building was erected of which it may be substantially said that, after it was finished, it was never occupied for the purposes of the construction. While it was being built the military stores had been removed to Harrisburg, and they were not brought back. A few military companies had their armories in it after it was finished, but there were no conveniences for exercise and drilling. As a "soldiers' home" the building was put to some practical use for a time; eventually it was sold and made a portion of the Sunbury and Erie Railroad Depot, on Market Street, and when the Pennsylvania Elevated Railroad was built, the upper portion was readily altered in the upper stories for the purpose of a roofed starting-place for trains.

Schuylkill Arsenal, Gray's Ferry Road.—About the time the Secretary of the Navy of the United States purchased the grounds in Southwark for the site of the new navy-yard, the Secretary of State in the same manner, without any authority from Congress, purchased a piece of ground on the west side of the road to Gray's Ferry, about opposite to the place where Carpenter, Washington, and Ellsworth Streets now come through. It was alleged by opponents of his action that this proceeding was without authority. But there were some acts of Congress under which his course was justified. By act of April 2, 1794, it was directed that "for the safe-keeping of the military stores there shall be established, under the direction of the President of the United States, three or four arsenals with magazines, as he shall judge most expedient, *in such places* as will best accommodate the different parts of the United States. Either or both of the arsenals heretofore used at Springfield and Carlisle to be continued as part of the said number at his discretion." Four hundred and twenty-one thousand eight hundred and sixty-five dollars were appropriated to carry out the design of this act. The greater portion was to go for the purchase of arms, ammunition, and military stores; only fifty-nine thousand dollars were appropriated for erecting and repairing the arsenals and magazines. Possibly the act was only temporary, as it was directed that the sums appropriated should "be paid out of the duties on imports and tonnage to the end of the present year." This act was passed at the time when the Algerine piracies were agitating the people, when it had been determined to establish a national navy, and to fortify harbors and works exposed to danger of attack from sea; it was also immediately before the breaking out of the Whiskey Insurrection, which was a menacing trouble for some time before it was necessary to proceed against the insurgents. By an act

[1] The property, with that of the Central High School, and other premises adjoining, was purchased by the Pennsylvania Railroad Company for a freight depot. That company was given authority to make track connections with the railroads on Broad and Market Streets, by act of Feb. 16, 1854.

passed May 4, 1798,—war with France then seeming to be a possibility,—Congress appropriated eight hundred thousand dollars to the President of the United States "to purchase as soon as may be a sufficient number of cannon, also a supply of small-arms and of ammunition, and of military stores, to be deposited and used as will be most conducive to the public safety and defense, at the discretion of the President of the United States." Under this act one hundred thousand dollars additional were appropriated for the hire, purchase, and employ of premises to be used as foundries and armories, and to that end the President was also authorized to purchase or to lease one or more suitable place or places where cannon and small-arms might be advantageously cast and manufactured. He was also given authority to "establish foundries and armories." By an act passed in 1800, regulating public arsenals and magazines, it was made an offense punishable with fine or imprisonment to entice any artificer or workman to leave his employment in an arsenal or armory of the United States.

Work upon the buildings on Gray's Ferry road was commenced about the same time that work on the navy-yard began. In 1802 it was reported to Congress that the cost of the buildings at "the laboratory," or barracks, as the buildings were called, was up to that time (they being unfinished) $152,608.02; they were finished in 1806. There were four large store-houses of brick set at some distance apart, three stories high, and forming a hollow square. There were also on the premises several other buildings, including a brick house for the residence of the commanding officer, a powder-magazine, and other constructions. If arms were stored in these buildings they were placed there shortly after its construction, and there was a cessation of such employment in the establishment as soon as the United States Arsenal was established at Frankford. The Gray's Ferry road buildings were in use as a depot for storage as early as 1806. For more than seventy years the establishment has been used as a place of manufacture for supplies for the army, in which everything connected with the comfort of the soldier, his uniform, clothing, bedding, blankets, tentage were prepared and stored. Coats, shirts, pantaloons, stockings, overcoats, shoes, gloves, mittens, caps, helmets, plumes, and ornaments have been prepared there in immense quantities. For many years the Schuylkill Arsenal was a great workshop, at which the cloth and other material for clothing, etc., were cut and made up on the premises or delivered to tailors and tailoresses outside, who made them up and delivered them. Frequently from seven hundred to twelve hundred women were employed at this work, and from one hundred to one hundred and fifty men. During the Rebellion the disbursements at this depot were from twenty to thirty-five millions of dollars a year. The amount of property on storage is frequently very large and valuable. The area of the ground is eight acres.

Frankford or Bridesburg Arsenal.—In 1816, during the term of James Madison, President of the United States, a purchase was made from Frederick Fraley and wife of twenty acres and thirty-four rods of land on Frankford Creek for $7680.75. In 1837, Martin Van Buren being President, three acres and six perches additional were bought from Robert Kennedy for three thousand dollars. During the Presidency of Zachary Taylor, Dec. 4, 1849, thirty-two acres and over were purchased from Dr. William S. Haines and wife for a consideration of twenty thousand dollars, thus increasing the size of the entire property to sixty-two acres and eighty-two square rods. The situation of the ground is at the confluence of Frankford Creek and the Delaware River, in the Twenty-third Ward, extending along the northern boundary of the creek to Bridge Street, the main thoroughfare from Frankford to Bridesburg. The northern boundary is the Tacony road and the eastern the Delaware River.

The buildings are computed to be thirty-six feet above the level of the Atlantic Ocean, latitude 40° north and 77.08° longitude west from Greenwich, five miles distant from the State-House in the city, nineteen miles from Fort Mifflin, and eighty-seven miles from Fort Delaware.

The buildings are two brick houses three stories in height, with capacity for four offices; a two-story brick barracks with capacity for one hundred men, two buildings with quarters for twelve enlisted men and their families, eight large store-houses of stone and brick, a magazine with capacity to hold one thousand barrels of powder; a hospital, dispensary, twelve frame laboratories for manufacture, office, guard-house, and other buildings. The grounds are kept in beautiful order, cultivated with grass, trees, and shrubbery, so that the buildings and surroundings are very attractive. Originally the arsenal, beside being a place of storage, was principally used as a depot for the repair of artillery, cavalry, and infantry equipments, the repair and cleaning of small-arms and harness, the manufacture of percussion powder, friction primers and brushes, musket-balls, and for the proving and inspecting of gunpowder. In 1851 was introduced the manufacture of small-arms and fixed ammunition, with the cleansing, repairing, and packing small-arms, and the manufacture of cavalry, infantry, and artillery equipments. Instruments of precision, inspection, and verification, standard gauges, scales, weights, calipers, measures of proportion, etc., for use in government shops throughout the country are also made here. Cartridges are prepared from the plain copper to the priming, loading, and making ready for discharge, and packing away until called for. The conveniences for the purpose of testing the explosive force of powders and the velocity of balls, the strength and character of small-arms, are very complete. The principal buildings are rough-cast, and present a striking appearance from the road. The officers

in charge are, of necessity, thorough in scientific knowledge and experience. The cost of the grounds and improvements of a permanent character up to the 30th of June, 1834, was $1,197,037.42, and for repairs, $208,471.27. The value of the property manufactured since the works were in operation is immense. The commandants of this arsenal have been as follows:

—— 1816, to Feb. 6, 1821, Capt. James H. Rees.
Feb. 6, 1821, to Sept. 30, 1824, Lieut. Martin Thomas.
Sept. 30, 1824, to Feb. 28, 1827, Lieut. Thomas J. Baird.
Feb. 28, 1827, to April 8, 1828, Lieut. Constant M. Eakin.
April 8, 1828, to Dec. 21, 1830, Lieut. O. Mellon.
Dec. 31, 1830, to Sept. 30, 1832, Brevet Lieut.-Col. J. B. Walbach.
Sept. 30, 1832, to Jan. 19, 1835, Brevet Lieut.-Col. William J. Worth.
Jan. 19, 1835, to Sept. 30, 1838, Capt. Alfred Mordecai.
Oct. 5, 1838, to Aug. 25, 1845, Capt. George D. Ramsey.
Aug. 25, 1845, to Oct. 6, 1845, Maj. H. K. Craig.
Oct. 6, 1845, to March 18, 1848, Lieut. A. N. Dearborn.
March 18, 1848, to Oct. 10, 1848, Lieut. L. A. B. Wabach.
Oct. 10, 1848, to Sept. 10, 1851, Brevet Maj. G. B. Ramsey.
Sept. 10, 1851, to July, 1860, Brevet Maj. Peter V. Hagner.
July, 1860, to April, 1861, Capt. J. Gorgas.
April, 1861, to April, 1862, Lieut. T. J. Treadwell.
April, 1862, to August, 1864, Maj. T. T. S. Laidley.
August, 1864, to Oct. 11, 1869, Brevet Lieut.-Col. S. V. Benet.
October, 1869, to 1879. Brevet Lieut.-Col. T. J. Treadwell.
—— 1879, to —— 1880, Maj. James M. Whittemore.
—— 1880, to ——, Maj. S. C. Lyford.

State Armories.—Armories for volunteer organizations after the Revolution were necessary for meetings and for drill. But where they were established has not been generally recorded. In the history of the First Troop Philadelphia City Cavalry it is said, "before the spring of the year 1779 the records of the Troop fail to show where its meetings either for business or pleasure were held." For civil business or social purposes meetings were held at the City Tavern, Second Street, north of Walnut, kept by Edward Moyston between 1779 and 1787. Occasionally, at intervals, they were held at Ogden's Middle Ferry, a good distance for a clever two-mile trot from town. In 1794 at Louth Hall, Richardet's, in Tenth Street above Arch, was a place of meeting. Once the Troop met at the Castle of the State in Schuylkill, on the west side of the river, somewhat north of the present Girard Avenue. For drilling the Troop met at the *manège* of Thomas Swann in 1798. It was on the north side of George [Sansom] Street, between Eighth and Ninth. Swann taught horsemanship and the use of the broadsword. The company engaged his services in that instruction, and their drills took place three times a week at the early hours of from five to seven in the morning at the "parade," in Chestnut Street, and on the days when the weather would not permit of exercise at that place, they were gone through with at Swann's *manège*. The site of the parade is not known. It was not, probably, far west of Ninth Street. Between the years 1808 and 1810 foot drills were held in the long room at Barnum's Hotel, Shakespeare Buildings, northwest corner of Sixth and Chestnut Streets, and the mounted drills at Swann's *manège*, which had moved in the meanwhile from George [Sansom] Street. In 1828 the Troop rented a room for an armory or hall in the north end of the Shakespeare Building, at the southwest corner of Sixth and Carpenter [now called Jayne] Streets. The room was given up in a year and the furniture sold. In 1852 the Troop held its mounted drills at the riding-school of John Ellis, in Westmoreland [now Lardner] Street, west of Broad Street. In the succeeding year the armory was again established in the front room, third story, of the Union building, northeast corner of Eighth and Chestnut Streets. After remaining there for six years the company rented a room in the third story of the building on the west side of Twelfth Street, south of Chestnut. While occupying that armory under rent a movement was made toward securing a special building for the use of the company not only for meetings, but for mounted exercise. A committee to which the matter was referred reported a plan in 1863 for the purchase of ground and the erection of a building. Certificates of loan bearing an interest of four per cent. were authorized to be issued, and a deed of trust was executed in the names of Thomas Smith, Harrison T. De Silver, and Dr. Paul B. Goddard. The loan was taken up almost entirely by members of the Troop. The lot cost five thousand dollars and the building about fourteen thousand dollars. The Troop bought a lot of ground on the west side of Twenty-first Street, south of Market, at the corner of Ash Street. The corner-stone was laid on the 12th of August, 1863. The armory was occupied in January, and formally opened Feb. 22, 1864. The lot ran westward toward Twenty-second Street. The new armory took up about three-fourths of the inclosure. There was an iron fence on Twenty-first Street inclosing an open space of ground with a flag-pole in the centre. The front of the building stood back from the street. It was of brick, two stories high, and quite plain. In this part of the structure was the meeting-room of the company. In the rear, extending for a considerable distance, was the riding-hall, one story in height, roofed in, and having a turf floor and every convenience for exercising horses.

In the fall of the same year, under the influence of Mr. De Silver, the largest holder of the armory loan, holders were induced to present their certificates of loan to the Troop as a free gift. A few certificates, which had been transferred to other parties, were purchased by the Troop, so that before the end of the year the company was out of debt, with the exception of the mortgage on the ground. John W. Grigg, who died in 1869, bequeathed to the Troop ten thousand dollars, and from that arose a proposition to increase the size of the armory, which was found too small for the use of the company. The expense was estimated to be eighteen thousand dollars. Before it was raised, Mr. H. T. De Silver died, Sept. 10, 1870, leaving a bequest of ten thousand dollars to the company, not immediately available, being sub-

ject to a life interest. The subscriptions were not sufficient, and the project lingered for four years, at which time a new committee was appointed, which was more successful in raising the money. Designs were made for the new building by Furness & Hewitt, architects. The Troop rented the Skating Rink building, at Twenty-third and Chestnut Streets, in May, 1874. The corner-stone was laid for the new building on the 4th of July. The armory was finished on the 15th of November, formally opened by a reception to guests on the succeeding evening, and dedicated, in "commemoration of the one hundredth anniversary of the Troop," on the 17th of November, 1874. The building in front presents the appearance of a fortress in the style of the Middle Ages, having a square tower, battlements, with loop-hole windows, and a broad gateway, with portcullis and other peculiarities. It is built of Leiperville stone and brick. The building covers the entire area of the lot of ground, sixty-six feet in width and one hundred and eighty-eight feet in depth. The riding-hall is on the ground, measures one hundred and sixty-six feet in length, and is eighteen feet high to the spring of the roof-beams. It is lighted by a skylight along the peak of the roof and by windows on three sides. At night it is lighted by gas. There is a large target at the western wall, a rifle-range near the southern wall. The front building is used for the accommodation of the company at meetings, storage of ammunition, accoutrements, uniforms, and other purposes. The main meeting-hall, on Twenty-first Street, in the second story, is fifty feet in width by thirty-two in depth, a portion of the latter being gained by an overhang above the riding-floor, supported by a Howe truss.[1]

It was stated when the dome of Lailson's circus, on Fifth Street near Prune, fell in, July 8, 1798, that a company of cavalry had been exercising in the ring a short time previously. It was during the period that

---

[1] First City Troop is the modern name of a company organized in anticipation of hostilities breaking out between America and Great Britain by twenty-eight gentlemen of Philadelphia, on the 17th of November, 1774. They adopted the title of the Light Horse of the City of Philadelphia. The original members were Abraham Markoe, Andrew Allen, Samuel Morris, James Mease, Thomas Leiper, William Hall, Samuel Penrose, Samuel Howell, James Hunter, James Budden, John Dunlap, John Mease, Robert Hare, William Pollard, Henry Hill, John Boyle, William Tod, John Mitchell, George Campbell, Samuel Caldwell, Levi Hollingsworth, Blair McClenachan, George Graff, Benjamin Randolph, Thomas Peters, George Fullerton, Andrew Caldwell, William West, Jr.

These persons, equipped at their own expense, chose their own officers, and volunteered their services to the Continental Congress. The officers were as follows: Abraham Markoe, captain; Andrew Allen, first lieutenant; Samuel Morris, second lieutenant and adjutant; James Mease, cornet; Thomas Mease, first sergeant; William Hall, second sergeant; Samuel Penrose, third sergeant and quartermaster; Samuel Howell, first corporal; James Hunter, second corporal.

The uniform adopted at the organization was a dark-brown short coat, faced and lined with white; white vest and breeches; high-top boots; round black hat bound with silver cord; a buck's tail, fastened in front or at the side of the hat; housings brown, edged with white and the letters "L. H." worked on them. The arms were a carbine, with white belt, a pair of pistols and holster, with flounces of brown cloth trimmed with white; a horseman's sword, with white belt.

Capt. John Markoe presented to the company, in the early part of 1775, a handsome silk standard, which embodied the earliest use of the thirteen stripes to symbolize the American colonies or States. The flag was forty inches long and thirty-four inches [illegible] was twelve and a half inches long and nine and a half inches wide. The field of the flag was yellow, the achievement in the centre of the flag is azure, a round knot of three interlacings, with thirteen divergent, wavy, bellied, double-foliated ends, or the scrolled edging of the shield was gold, with outer and inner rims of silver. The crest, without a wreath, was a horse's head bay, with a white star in the forehead, bitted and bridled. One supporter was an American Indian, with bow and quiver, grasping a gold rod upholding a blue liberty-cap. The other supporter was an angel, or a figure of Fame blowing a trumpet. The motto beneath the shield, on a floating silver scroll, upon the upcurled ends of which stood the supporters, was "For these we strive." The monogram "L. H." was above the shield. A running vine bordered the flag on all sides except that nearest the staff. The outside fringe was of silver bullion twist. The canton of the flag is "barry" of thirteen *azure* and *argent* (blue and silver). There are seven azure and six argent stripes. The staff was of rich dark wood in three ferruled divisions, screwing together with an upper ferrule and spear-head of solid silver. The knot of thirteen ends, the canton of thirteen stripes, are of most interesting historical significance, because they present the first idea of thirteen stripes for a national flag. This flag was paid for in two separate bills, one on the 8th, and the other on the 16th, of September, 1775. It was probably finished some time before that period. In 1797, Mrs. Elizabeth Powel presented to the Troop a standard of bright blue satin. The device, the same on both sides, was an eagle with outspead wings, painted in gold shaded with purple and red, and holding in its mouth a ribbon, on which is inscribed the words "*ad astra.*" A shield on the breast of this eagle has painted upon it the arms of Pennsylvania.

A detachment of the Troop was sent, in October, 1775, under command of Quartermaster Levi Hollingsworth, to Fort Ticonderoga with "a quantity of money for Gen. Schuyler." About the same time Private Samuel Caldwell, with a detachment, escorted a wagon with five hundred thousand dollars' worth of money for the use of the army in Massachusetts Bay. A detachment of the company served under Brig.-Gen. Hugh Mercer in New Jersey in August, 1776. The Troop was in service during the operations in Pennsylvania and New Jersey, which resulted in the battles of Trenton and Princeton in 1776 and 1777. They were discharged by Washington Jan. 23, 1777. The corps was in service again in September, 1779, and marched as far as Princeton. The members were under orders in June, 1780, and were employed frequently in escort duty and other service during the Revolutionary war.

In the campaign of 1794 against the insurgents of the western counties of Pennsylvania, who had opposed the excise laws of the United States (commonly called the whiskey war), the Troop was in service three months, and marched as far as Pittsburgh. In 1799 the Troop marched upon the Northampton expedition (the hot water war), and was on duty seventeen days.

In 1810 there were six troops of horse in the city, and they formed a regiment of cavalry, of which Robert Wharton, who had been captain of the Troop, was elected colonel.

In 1814, during the war with Great Britain, the Troop was upon vidette duty in Delaware and Maryland. They stretched over from Mount Bull at Turkey Point, on Chesapeake Bay, thirteen miles below Elkton, over to the Delaware. It was their duty to transmit any important intelligence, upon which, the alarm being sent to Fort Mifflin and the arsenal, six signal guns were ordered to be fired in quick succession, and the drums of the city were to be beat to arms. Upon this the orders by Brig.-Gen. Joseph Bloomfield, commanding the Fourth District, were that the militia should parade completely equipped for the field "right upon Chestnut extending southwardly on Broad Street." The company was in service from the 28th of August to the 12th of December, 1814. There were sixty-seven officers and members engaged in that duty.

At the breaking out of the Southern Rebellion the Troop tendered its services to the government on the 15th April, 1861. Over four thousand dollars was subscribed for the purchase of horses and uniforms for new members, minor officers, and the company's servants, and also to form a company fund. The troopers were mustered into the service of the United States for ninety days on the 13th of May. The ordinary company uniform was very handsome, but was now laid aside. The dark-blue and orange of the United States dragoons, regular cavalry service,

war existed between the United States and France. There were a large number of volunteer military organizations at the time. The cavalry found no difficulty in the pleasant seasons of the year in obtaining lots and fields not far from the city for purposes of drill exercise, and might occasionally, as was done by the First City Troop, occupy a riding-school. It would be interesting to know what armory accommodations there were for the large regimental and battalion organizations which existed after the Revolution. McPherson's Blues was composed of artillery, grenadiers, and light infantry, probably fifteen hundred men. Shee's Legion included a large number of independent companies. During the war of 1812, and afterward, there were seven companies of Washington Guards, two companies of Union Guards, and many independent single companies. These organizations had headquarters somewhere. The companies had places of meeting and drill, probably in the public rooms of taverns. In spring, summer, and autumn the broad walks in the State-House yard were much used, especially in the evenings, for marching and other exercises of volunteers.

Public-houses were the usual places for company armories, and as most of those organizations were scarcely ever in membership up to regulation, closets for accoutrements and racks for muskets would not take up much space.

One of the earliest volunteer companies to establish an armory of its own separate from the accommodations of a public-house, was the National Grays, Capt. Peter Fritz. The second story of the building at the southeast corner of Dock Street and Bank Alley [Gold Street] was secured for that purpose, and fitted up neatly with racks for arms and other military necessities. There was not much room for company drill, but for the preparation of ordinary parades the space was sufficient. About 1860 the company removed its armory to the southwest corner of Walnut and Ninth Streets. For the three months' service, in 1861, the Grays sent two companies, which were attached to the Seventeenth Regiment, Col. F. E. Patterson, viz., Company B, Capt. Peter Fritz; Company H, Capt. John Maxwell.

About 1830, and afterward, the Washington Blues, Capt. William C. Patterson, and State Fencibles, Capt. James Page, occupied the third story of the building in Library Street, between Fourth and Fifth, formerly occupied by Labbe's saloon and dancing-school, and then used as a tavern, and called, by reason of its tenancy by volunteer organizations, "Military Hall." The Second State Fencibles, Capt. Murray, the Union Fencibles, Capt. Robert M. Lee, and other companies occupied that building. Just before the outbreak of the Rebellion, the Washington Blues, then commanded by Capt. John M. Gosline, had their armory in the third story of the building at the northwest corner of Sixth and Chestnut Streets, and there was recruited the regiment known as Gosline's Zouaves, Pennsylvania Volunteers.

After the first company of State Fencibles removed from Military Hall it established its armory in the Union Building, northeast corner of Eighth and Chestnut Streets. Subsequently the company removed to an upper story of the large iron-front building belonging to William M. Swain, of the *Public Ledger*, on the north side of Chestnut Street, west of Fifth, and immediately opposite the State-House. The Fencibles were drilling and exercising in that room at the outbreak of the Rebellion, and a contingent consisting of two companies were enlisted there for the three months' service.[1]

The Light Artillery Corps Washington Grays, under the command of Capt. Thomas P. McAdam and others, established their armory at the Union Building, corner of Eighth and Chestnut Streets, about 1837–38. They occupied the northern room in the fourth story, which was long and convenient for drill and exercise. The Philadelphia Grays, Capt. George Cadwalader, had

was worn. The Troop marched from the place of rendezvous on a lot back of the Academy of Music, on the 30th of May, took cars by Pennsylvania Railroad, and proceeded to Carlisle, where it was attached to the Second United States Cavalry, commanded by Col. (afterward Maj.-Gen.) George H. Thomas. In subsequent movements the Troop was attached to the division operating in Northern Virginia, under Maj.-Gen. Robert Patterson. It remained in service until August 14th, and was then sent home.

The following is the roll of captains of the Light-Horse, which, after the Revolution, was known as the First Troop Philadelphia City Cavalry: 1774–76, Abraham Markoe; 1776–86, Samuel Morris; 1786–91, Samuel Miles; 1792–94, Christian Febiger; 1794–1803, John Dunlap; 1803–11, Robert Wharton; 1811–17, Charles Ross; 1817–25, John R. C. Smith; 1825–27, Lynford Lardner; 1827–42, William H. Hart; 1842–47, John Butler; 1850–63, Thomas C. James; 1866–69, Fairman Rogers; 1869–77, M. Edward Rogers; 1877–78, A. Loudon Snowden; 1878, Edward Burd Grubb.

[1] The company of State Fencibles was organized in 1813 by Capt. Clement C. Biddle, and marched on the 26th of August, 1814, under orders to the State of Delaware. After this company and others had arrived at Camp Bloomfield, at Kennett Square, Pa., the first regiment of volunteer infantry was organized at camp. Capt. Biddle of the Fencibles was elected colonel, and resigned his company command. At this time the following were the officers: Hartman Kuhn, captain; Henry J. Williams, first lieutenant; Isaac W. Norris, second lieutenant; Peter A. Canonge, third lieutenant; John M. Call, ensign; William Ker, William L. Sontag, Joseph B. McKean, William Young, William Phillips, sergeants; Thomas C. Rockhill, Edward D. Coxe, P. F. Fontanges, Thomas Willing, Jr., Joseph T. Clement, and John C. Patton, corporals.

Besides these sixteen officers there were one hundred and twelve privates and one musician. The company served as part of the advance Light Brigade, under Brig.-Gen. Thomas Cadwalader, from the latter part of August until December, and some of the soldiers until January, 1815. Capt. Kuhn was succeeded in command by James Page, who was a private at Camp Bloomfield. He was at the head of the company for many years. The organization was spirited and popular. It was effective on many occasions when the presence and support of military force was necessary for the preservation of the public peace. Capt. Page resigned in 1860. In 1861 the company took its part in the three months' service, upon the requisition of the general government; first company under the command of Capt. John Miller; second company, Capt. Theodore Hesser. They were attached to the Eighteenth Infantry Regiment, commanded by Col. Francis E. Patterson. After the conclusion of the war, John W. Ryan was elected captain, and the Fencibles grew so strong that a battalion was organized, of which Maj. John W. Ryan was for some years commander.

the adjoining room on the same floor to the south. These companies in uniform accoutrements were so nearly alike that the easiest method to distinguish them was by the device on the diamond-shaped plate in front of their caps, or by the fact that one company had a brass guard-chain on the back of the cap while the other had no such ornament. The Washington Grays removed after some years to the Franklin Building in Sixth Street below Arch. They occupied that room, which was spacious, and extended over the whole building, for some years. At the outbreak of the Rebellion two companies were raised there for the three months' service. Subsequently the Grays removed their armory to the upper story of a building in Lardner [now Westmoreland] Street, between Broad and Fifteenth, adjoining Horticultural Hall. The company occupied that apartment for drill and exercise at a time when practically, by virtue of an order under authority of the commander-in-chief of the National Guard, its distinctive organization—historic in character, dating from 1824, of which its members had cause to be proud—was broken up, and the Washington Grays became only an ordinary company in a regiment, and distinguished by a letter.[1]

After the Philadelphia Grays left Eighth and Chestnut Streets, they fitted up an armory over a forwarding warehouse and depot in Market Street above Eighth, but were not long at that place. The resignation of Capt. George Cadwalader resulted practically in the breaking up of the company, not immediately, but as a necessary consequence. He had spent individually a great deal of money to keep up the spirit of the organization, and to make it prominent among local corps. The flying artillery drills, for which the Philadelphia Grays were celebrated about 1842–43, were costly in the expense of horses, drivers, ammunition, etc. Those exercises usually took place on the west side of the Schuylkill, back of Harding's Tavern, at the Upper Ferry, and beyond the narrow confines of Mantua village, which was then near the Schuylkill. The artillery had command of a large field of from twenty-five to thirty acres, where there was plenty of room for horses and men. The drills were usually witnessed by thousands of spectators.

The infantry corps, National Guards (now Second Regiment), was originally organized as a company on the 11th of December, 1840, by a number of citizens of what was then the district of Spring Garden. On the 7th of January of the following year (1840), Thomas Tustin was elected captain. The company made its first parade on the 22d of February, 1841, and mustered forty-eight muskets. In 1845, Capt. Tustin was succeeded in command by Stephen B. Kingston, and he in turn gave place, two years later (1847), to Peter Lyle, who was orderly sergeant of the original company, to whose efficient administration the corps owes its deservedly high reputation as a military organization. Capt. Lyle tendered the services of the company for the Mexican war, but, owing to the supply of troops being greater than the demand, the government declined the offer.

After a score of years' prosperity, the corps, on the twentieth anniversary of its organization (Dec. 11, 1860), was formed into the Second Regiment of eight companies, with Peter Lyle as its colonel. On the 16th of April, 1861, the regiment, increased to ten companies, entered the three months' service as the Nineteenth Pennsylvania Volunteers, with Peter Lyle, colonel; D. W. C. Baxter, lieutenant-colonel; and Jeremiah W. Fritz, major, and remained in service twenty-two days over its term of enlistment. The captains were,—A, John T. Durang; B, A. J. Sellers; C, Harmanus Neff; D, Joseph Ellis; E, James M. Leddy; F, William A. Gray; G, William H. MacFerran; H, William A. Thorp; I, Charles F. Maguire; K, George Magee, Jr. On the 3d of September, 1861, the regiment was again mustered into service for three years, as the Ninetieth Pennsylvania Volunteers, with Col. Lyle still at its head. During the period of its enlistment the regiment participated in the following battles: Cedar Mountain, Rappahannock Station, Sulphur Springs, Thoroughfare Gap, Bull Run, Chantilly, South Mountain, Antietam, Fredericksburg, Fitzhugh House, Chancellorsville, Gettysburg, Mine Run, Wilderness, Todd's Tavern, Spottsylvania, Laurel Hill, Guinea Station, Tolopotomy, North Anna, South Anna, Bethesda Church, Cold Harbor, White Oak Swamp, Petersburg, Jerusalem Plank Road, Weldon Railroad, Poplar Springs, Ream's Station, and Hatcher's Run. On its return home its muster-out roll showed

[1] The Light Infantry Corps Washington Grays was established April 19, 1822. The first commander was Capt. John Swift. He was succeeded by Cephas G. Childs. Among subsequent commanders were Joseph Worrell, Cephas G. Childs a second time, Thomas McAdam, Peter C. Ellmaker. On the 12th of June, 1827, the name of the corps was changed from Light Infantry to Light Artillery Corps Washington Grays. In 1843 the company was attached to the First Regiment of artillery. Although occasionally exercising with light artillery, the most of the services of the company was as infantry.

In 1861, Thomas P. Parry was commander, and in service during the three months' campaign in Virginia on the first requisition for troops in 1861, and attached to Col. F. E. Patterson's Seventeenth Pennsylvania Regiment. A second company was commanded by Capt. Alexander Murphy.

This company, by its fine military appearance, particularly attracted the attention of Gen. Lafayette on his visit to Philadelphia in 1824, and elicited some complimentary remarks. The corps elected Lafayette an honorary member at his request, and escorted him out of the city when he proceeded on the tour through the United States. Among the military services of the company were those given during the "Buckshot War" at Harrisburg in 1838, assistance in suppressing the riots in Southwark and Kensington in 1844, and at other times. The company tendered its services during the Mexican war, but the government did not accept. Several of its members and officers served with distinction in that contest. The company served in the field during the rebel raids in Pennsylvania in 1862 and in 1863. The Grays being an exceedingly well-drilled and disciplined body of soldiers in time of peace, proved to be when the Rebellion broke out a school for officers. The corps furnished to the United States army during the war seven generals and one hundred and seventy-nine field and line officers, seventeen of whom were killed in battle. On the 19th of April, 1872, the Grays dedicated a monument to the memory of their comrades killed during the Rebellion at Girard Avenue and Broad Street.

twenty-one men of the original enlistment as the remnant of nearly nineteen hundred recruited or drafted and forwarded to the regiment.

From the Second Regiment sprang other organizations that did excellent service during the war. The Philadelphia Fire Zouaves, known as the Seventy-second Regiment, Pennsylvania Volunteers, Col. D. W. C. Baxter, was principally recruited and officered from the members of the old National Guards. They also organized, with the aid of the Union League, a battalion, in 1862, under Maj. Jeremiah W. Fritz; Fifty-second Regiment, Pennsylvania Militia, under Col. W. A. Gray; One Hundred and Ninety-sixth Regiment, Pennsylvania Volunteers, under Col. Harmanus Neff; and Two Hundred and Thirteenth Regiment, Pennsylvania Volunteers, under Col. J. A. Gorgas, all of which organizations rendered efficient services during the war. It has been computed that over one thousand officers have graduated from the ranks of the Old Guards, where they received their first instruction in the school of the soldier.

The company of National Guards was organized principally among persons engaged in the transportation service of the State on the Columbia Railroad. Their headquarters were originally in the neighborhood of Vine and Broad Streets. The company at a subsequent period had its armory in an upper story of the large iron-front building on Chestnut Street above Fifth, which belonged to William M. Swain. About the beginning of the year 1856, the company being flourishing, the members resolved to take measures to build and furnish an armory for their own use. The first step was to obtain a charter of incorporation. This was granted by act of April 9, 1856, by which Peter Lyle, George Magee, D. W. C. Baxter, Robert B. Quayle, Jeremiah W. Fritz, F. E. Wilcox, Alfred J. Sellers, John T. Durang, William B. Carlisle, John S. Davis, William P. Davis, David P. Weaver, William Lindsay, and their associates, then members of the company, and all other persons who should thereafter become members, were incorporated as the "Infantry Corps of National Guards of the City of Philadelphia." Among other powers they were authorized to acquire "a suitable lot of ground with building thereon for the purposes of an armory and other proper and needful ones connected with the affairs thereof, with the necessary and convenient furniture, fixtures, and appliances." Under this authority the company, in the year 1857, purchased a lot of ground on the south side of Race Street, between Fifth and Sixth, being sixty feet front and one hundred and thirty feet deep. A large, high three-story brick building was erected, occupying the entire lot, and quite imposing in appearance. On the first floor the passageway is in the middle. On each side are rooms for officers' regimental headquarters, reading- and writing-rooms, drilling, dressing, meeting, and store-rooms. On the second floor is a large hall with a high ceiling, occupying nearly the whole space from Race Street to Cresson's Alley. It has been used for a drill-room and other regimental purposes, inspections, and occasionally as a public hall for lectures, fairs, concerts, and meetings. The third story is a large drill- and equipment-room for company accommodations. This building, popularly known as the National Guards' Hall, cost with the ground a large amount of money. It was not only the muster-place of the regiment for the three months' service during the war, but also for a three years' regimental organization, and during a portion of the war was occupied as a United States army hospital. After the reorganization of the militia of Philadelphia County, after the conclusion of the war, the National Guards resumed its old number, the Second Regiment of Infantry.

At the outbreak of the war of the Rebellion there was great excitement in the city. On the 19th of April City Councils passed resolutions "extending the hospitalities of the city of Philadelphia to Maj. Robert Anderson, his officers and soldiers;" also "resolutions of sympathy with the citizens of Baltimore and Governor of Maryland;" also "an ordinance to provide for the families of the volunteers in the service of the United States;" also an ordinance for the protection and defense of the city; also a resolution appropriating the city halls for military purposes; also a resolution recommending citizens to form companies for the purpose of drilling. The ordinance for the defense and protection of the city was prefaced by a preamble, which declared "at this unparalleled crisis in our national affairs, it is eminently proper that the city of Philadelphia should be placed in a condition of defense against any attack that might be made. And as arms and other munitions of war may be required here for the proper equipment of the Home Guard that are at our own disposal and can be used, should the occasion arise, for our own defense. Serving also as a means of drill to such companies as might wish to practice, and thus be well prepared at any moment to respond to their country's call as efficient artillerists." Fifty thousand dollars were appropriated for the purchase of arms or other munitions of war for the use of a Home Guard, or any other company that may hereafter be formed for the defense of the city. One week afterward two hundred thousand dollars were added to the appropriation. Volunteering for the Home Guard soon followed, and much more than a company was embodied. There were a sufficient number of companies to form a brigade, for which there was a brigadier-general and staff. An act of Assembly, passed May 16, 1861, authorized such a measure. The question of armories became of immediate importance. The city was in possession of two large market-houses, in the neighborhood of Broad and Race Streets, which had been unsuccessful as business enterprises. It was determined to put these buildings to military use. By ordinance of the 14th of November, 1861,

these premises, one of them at the southwest corner of Juniper and Race Streets, and the other on the east side of Broad Street, below Race, were appropriated to the uses of the Home Guard of the city, under the direction of the mayor and the Committee of Defense and Protection. Three thousand dollars were appropriated to pay for the necessary alterations. The building upon Race Street was appropriated to arsenal purposes and the storage of batteries of cannon. The first piece placed in that building was a handsome cannon with full equipments and ammunition presented to his native city by James McHenry, then residing at London. A few days afterward, two rifled cast-steel guns were presented to the city by James Swaim, also a native of Philadelphia and residing abroad. They were manufactured in Prussia, and when received were placed in the Race Street armory.

By ordinance passed in June, 1862, it was directed that such portions of Spring Garden Hall, Southwark Hall, Kensington Hall, and the Town Hall of Germantown, not at that time profitably employed by the city, should be appropriated as armories and drill-rooms for companies of the Home Guards. Mayor Henry vetoed this bill upon the ground that the buildings named were in use by the police, and could not be occupied by soldiers without much inconvenience. This veto was sustained. Before the war was closed the Home Guard had ceased to be of importance, its strength had been much reduced by the more active recruiting for regiments in the field. Two fine new regiments, the Gray Reserves and the Blue Reserves, were attached to the State militia. They kept up their organization with much zeal, and during the invasions of Pennsylvania they had gone promptly to the front, and had been of service. Before the war was closed in February, 1865, the City Councils passed a resolution requesting the Legislature to repeal all laws respecting the Home Guards.

By act of April 8, 1862, the armory company of the Gray Reserves was created. The corporators were Peter C. Ellmaker, Napoleon B. Kneass, Charles H. Graff, Robert P. De Silver, Jos. T. Ford, William H. Kern, Albert R. Fœring, Charles S. Smith, Charles M. Prevost, J. Ross Clarke, Jacob Laudenslager, Jos. N. Piersol, George W. Wood, George W. Briggs, Charles P. Warner, C. Frederick Hupfeldt, and Francis P. Nicholson. The capital was one hundred thousand dollars, divided into eight thousand shares, at $12.50 each. The corporation was authorized "to erect and maintain a suitable building for the accommodation of the companies composing the First Regiment of Infantry, Gray Reserves, or any other organizations desirous of occupying the same."

The enterprise languished for some years for two reasons. The funds collected were not sufficient to authorize the institution of measures necessary for the construction of the building. The city had endeavored to dispose of the two buildings at Broad and Race Streets at public sale, but the bids made upon the property were at rates which, if accepted, would have rendered necessary a very considerable pecuniary sacrifice. Therefore, the effort to sell was abandoned. The Race Street Armory was given up to the use of the commissioners of the fire department for the storage and repairage of apparatus. In the Broad Street Armory the First Regiment was permitted to remain. About 1881 the First Regiment, formerly the Gray Reserves, began to move in support of a proposition to make some actual commencement of the work, which had been so long delayed. Subscriptions were received to a liberal amount, fairs and other methods of raising money were resorted to. A large lot of ground was purchased at the southeast corner of Broad and Callowhill Streets, and there, on the 29th of March, 1882, ground was broken for the armory building of the First Regiment. The corner-stone was laid on the 19th of April by the Grand Lodge of Pennsylvania with Masonic ceremonies. An oration was delivered by Col. William McMichael. There was a military parade and review, and a reception in the evening at the Academy of Music.

The Third Regiment National Guards of Pennsylvania is a recent organization, composed of companies the headquarters of which are mostly in the lower part of the city. The various organizations met for drill and company purposes at the company armories. In 1882 the City Council granted to the Third Regiment the use of a portion of the public ground originally appurtenant to the county prison (Moyamensing), a part of the parade-ground, and situate at Twelfth and Reed Streets. Here was constructed a long brick building, principally of one room in the interior, and well suited for drill purposes for that reason. The regiment took formal possession on the 29th of December, 1881. The building was dedicated with religious services by Bishop Stevens, of the Protestant Episcopal Church, on the 9th of April, and was opened the next evening by a reception of citizens. Col. S. Bonnaffon was at that time in command of the regiment.

As soon as it became apparent that the armory of the First Regiment, at Broad and Callowhill Streets, would be completed, probably in the early part of 1884, the battalion of State Fencibles, under Maj. John W. Ryan, made application for the use of the old armory, at Broad and Race Streets, by that corps. Councils made a grant of the property on a nominal lease. The battalion raised a fund, and announced that as soon as the building was vacated by the First Regiment the Fencibles would rebuild and remodel the armory in front and in the interior.

The Keystone Battery, which had used the armory on Race Street for the storage of their guns and accoutrements, were ousted from that place by the appropriation of the building for the use of the fire department. For a time their guns and caissons were

stored in a wooden shed, at the northwest corner of Brown Street and Corinthian Avenue, on a lot used by the commissioners of city property. The ground being sold, the artillery and accoutrements were stored in a vacant room of the City Hall, at Broad and Market Streets. In 1883 Councils made grant of a site for an armory for the battery, on a portion of the ground appurtenant to the almshouse in West Philadelphia. Liberal contributions have been made toward the construction of the building, and the company expects to erect and finish a commodious and appropriate armory in the course of the year 1884.

Forts.—The earliest building erected by the Europeans on the Delaware was intended for defense. The settlement trusted for protection to the fort, and when new stretches of country were occupied the block-house or battery was erected. When the Dutch came in 1623, they built Fort Nassau, "about fifteen leagues up the river on the eastern shore." The site of Fort Nassau was immediately opposite the territory afterward occupied by the city of Philadelphia. It is supposed by Mickle to have been in the neighborhood of the present Gloucester Point, and at the mouth of the most northerly branch of Timber Creek, then called Sassackan. Edward Armstrong, in 1853, located it on a tongue of land between Big and Little Timber Creeks. Fort Nassau was for a long time the citadel of the Dutch power on the Delaware, and by its position and strength dominated the entire territory. The name of this fort was derived from the German house of Nassau, which occupied the throne of the Netherlands. In 1651 the Dutch, under Stuyvesant, conceived that Fort Nassau was "too far up and laid too far out of the way." It was, therefore, resolved to abandon Nassau and erect a new fort near New Castle, which was afterward finished and called Casimir. The directors of the Dutch West India Company were much surprised at the actions of Stuyvesant, and they doubted whether its demolition was an act of prudence.

FORT UPLAND, the second in construction on the Delaware, was built by Capt. Peter Heysen, of the ship "Walrus," near the mouth of Horenkill (now known as Lewes) Creek. It was a house surrounded with palisades, and a settlement near it was called Zwandludael or Swanendael,—the Valley of Swans. The settlement was taken and burned by the Indians shortly afterward.

FORT BEVERSREDE was, as far as known, the first building of any kind constructed by Europeans within the bounds of the future city of Philadelphia. It was erected upon ground purchased of the Indians by Arent Corssen, the Dutch commissary at Fort Nassau, probably in 1633. Upon that territory Fort Beversrede was built. Exactly when is not known. Probably soon after the purchase, as one of the reasons for buying the Schuylkill lands was that it was a place remarkably well situated, and named thus on account of the beaver-trade which was carried on there very briskly with the natives and wild Indians. The sale to Corssen was confirmed by Indian chiefs, in 1648, at Fort Beversrede, which must therefore have been built before that time. The situation of Beversrede is supposed to have been on the east bank of the Schuylkill River, within the limits of the present First Ward of Philadelphia, in the old district of Passyunk, upon the east bank, on a bold shore above the Penrose Ferry bridge, where it would command the stream called the Minquas, or Mingo, which was connected with the series of streams that flowed out of and between Darby and Bow Creeks. Beversrede was a palisaded fort, with an armament of great guns. The Swedish Governor, John Printz, in 1648, took the curious method of rendering Fort Beversrede unimportant, by building in front of it, on the Schuylkill, a house, about thirty to thirty-five feet long by twenty feet broad. This obstruction made Beversrede harmless. Boyer, who commanded there in 1648, complained that by the new house "our liberty on said water is obstructed so that our vessels, which come into anchor under the protection of our fort, can discover said fort with difficulty. . . . The back gable of the house is only twelve feet from the gate of the fort, so that the house is placed within the water-side and our fort." By this means the imaginary guns of Beversrede seem to have been effectually muzzled.

In 1648 the Dutch said of the Swedish house, then called a trading house, that it was "right before the gate" of the company's fort, Beversrede, not being a rod from the gate, "thereby depriving us altogether from the view of the common route, so as to deprive the company of the beaver trade, and to effect this they are using every effort." In 1648 Alexander Boyer wrote that Beversrede was garrisoned with only six men who were in good health and able to make defense, and that with that fort he was expected to defend two forts, Nassau being the other.

FORT CHRISTINA was the first Swedish post on the Delaware. It was built by Peter Minuit, in 1638, and named in compliment to the young queen of Sweden. It was near the creek afterward called Christiana, and near the present city of Wilmington. It was described in 1645 as being about half a mile (Dutch), or two and a quarter miles English, "within the creek, and nearly encircled by a marsh, except on the northwest side, where it can be approached by land." At the southwest it touches the kill. Mr. Ferris has located this fort at a point long known by the name of the Rocks, which here forms a natural wharf of stone, at that time being one of the bases of Christina, and so called in the ancient records of the country. In 1655, after the surrender of Fort Casimir to the Dutch, Fort Christina was besieged by Peter Stuyvesant, director-general of the New Netherlands. Governor John Rysingh, of the Swedish forces, defended the fort valiantly for fourteen days, and then capitulated upon honorable terms, by which the property of

the Swedish crown and of the Swedish company it was agreed should not be confiscated. The garrison was allowed the honors of war, and it was agreed that they should "march out of the fort with beating of drums, fifes, and flying colors, firing matches, balls in their mouths, with their hand and side arms." The name of the stronghold was changed by the Dutch to *Fort Altona*. In 1657 swords and fire-arms were sent to Altona sufficient for twenty persons. In that year it was said "for a long time no garrison has been there, and, as it was rather decaying, they knew not what to do either in regard to their lodgings and victuals." He thought that seventy-five men should be sent to Altona. In 1663, in consequence of rumors of a new Swedish expedition, all the guns were removed from Altona to the fort at New Amstel. The garrison at that time consisted of ten persons.

NEW GOTTENBERG was built by John Printz, Swedish Governor, in 1643, upon the island of Tenaka (Tinicum). It was constructed "by laying very heavy hemlock (greenen) logs the one on the other," and was "pretty strong." On the same island Printz built his mansion or palace, and had his orchard and other conveniences, and called the place Printz Hall. Fort New Gottenberg commanded the Schuylkill River, which opened just above it, and being south of Fort Nassau, the passage of the Dutch up the river could be prevented. In 1655, the Dutch being triumphant upon the Delaware by the capture of Fort Casimir and Fort Christina, New Gottenberg was compelled to surrender. Campanius says, "The Dutch proceeded to destroy New Gottenberg, laying waste all the houses and plantations within the fort, killing the cattle, and plundering the inhabitants of everything that they could lay their hands upon." The name of the fort was changed to Island Gottenberg. It probably ceased to be of any importance as a military post after the Dutch power was established on the Delaware.

FORT ELFSBORG was erected by the Swedish Governor, John Printz, in 1643, on the east bank of the river, on or near the mouth of the Asamohackingz, called afterward by the English "Indian Creek." This fort was mounted with eight cannon of iron and brass, and had also one potshoof. The garrison was a lieutenant and twelve men. The main object of this post was to visit when required or to annoy the Dutch vessels which passed, "and oblige them to lower the colors, which greatly affronted them." The fort also was useful to salute Swedish vessels when they arrived. Washington Irving, in "Knickerbocker's History of New York," gives a funny narrative of the driving out of the Swedish garrison by swarms of mosquitoes.

FORT CASIMIR was built in 1651, a short distance north of the town afterwards called by the English New Castle. Why it was so called by Stuyvesant is unknown. The Swedish Company when they heard of it were surprised, because it was "rather a Swedish than a Dutch name." When Governor John Printz heard of the erection of this fort he protested against it, but without effect. In 1654 the Swedish Governor, John Rysingh, sailed up the Delaware in the good ship "Aren" with three hundred men, among whom were twenty or thirty armed soldiers, and appeared before the fort. The Dutch, who were under the command of Gerritt Bikker, were much surprised, as well at the coming of the ship, which was unexpected, as by what followed. The soldiers landed on the beach; the door of the fort being open, they marched in. When within the fort, Capt. Swensko demanded the surrender of the river as well as the fort. Surprised at this, Bikker sent two commissioners on board the vessel to inquire the authority of Rysingh. The latter was not disposed to explain; two guns were fired over the fort, and the soldiers, of which there were ten or twelve, were disabled, and Rysingh took possession of the work. The result was that a forcible surrender by the Dutch was compelled, and the Swedes took possession of the fort on Trinity Sunday, for which reason the work was renamed *Fort Trefalldigheet*, or *Trinity*.

When the directors of the Dutch West India Company heard of this proceeding they were very angry. They resolved to fit out an expedition for the recovery of the fort and the restoration of the Dutch power on the river Delaware. In September, 1655, Peter Stuyvesant sailed from New Amsterdam (New York) with seven vessels, having on board six to seven hundred men. Arriving before Trinity Fort, an officer, with a drummer, was sent on shore, demanding "direct restitution of our own property." Rysingh was absent. Lieut. Swen Schute, who was in command, requested time for consideration. There was a parley. The Dutch in the meanwhile had been raising breastworks. On the following day the fort was surrendered, and the Dutch marched in with flying colors on the 11th of September, 1655, the articles of capitulation being signed on board the man-of-war the "Weightscales," or "Balance." Instead of retaining the old name, Casimir, the Dutch, in the succeeding year, called the fort by the new name, "New Amstel." The post was put under command of Capt. Martin Krygier, with a force of soldiers. The fort and the ground appurtenant were transferred, in 1657, to Jacob Aldrakes, in behalf of the colony of the city of Amsterdam, there to be planted. In 1664, the English having captured New Amsterdam, to which they gave the name of New York, Sir Robert Carre was ordered to proceed to the Delaware River and reduce the Dutch, who had "seated themselves at Delaware Bay, on His majesty of Great Britain's Territories, without his majesty's consent." Carre sailed in the frigate "Guinea," accompanied by the "William" and "Nicholas," with a force of soldiers, and appeared on the 11th of October, 1664, before Fort New Amstel. The Dutch were not in position to resist, and they prudently

surrendered on the 14th. The English gave another name to the fort, which they called New Castle.

In 1673 a Dutch expedition under Evertse and Benkes recaptured New York from the English. Antony Colve was appointed Governor on the Delaware in behalf of the Dutch, and Fort New Castle fell again into possession of the New Amsterdam authorities. By the treaty of Westminster, between England and the States-General, signed on the 19th of February, 1674, it was agreed that "whatever countries, islands, towns, posts, castles, or forts have or shall be taken on both sides since the time the late unhappy war broke out, either in Europe or elsewhere, shall be restored to the former lord or proprietor in the same condition they shall be in when the peace itself shall be proclaimed." Under this treaty New Castle again passed into the hands of the English, and Fort New Castle ceased to be a post of importance. It was ordered to be repaired in 1678. In that year there were eight iron guns mounted, and musket and other ammunition. After the arrival of Penn the fort must have fallen into disuse. It was a matter of complaint against Governor John Evans in 1707 that the fort at New Castle undertook to fire at vessels sailing up and down the Delaware. But it clearly appears that the fort at that place was established by the Governor and the Assembly of the Lower Counties, by virtue of an act passed "for erecting and maintaining a fort for her Majesty's service." It is probable that this work was either old Fort Casimir rebuilt or erected upon the same site.

FORT KORSHOLM.—Acrelius says that this fort "was at Passyunk, where the commander, Swen Schute, had his residence." The date is not given. It was probably erected before 1648, and afterward burned and destroyed by the Indians. It was on the east side of the Schuylkill, north of Fort Beversrede, and probably on the highlands at Point Breeze.

"FORT MANAYUNK," says Acrelius, "was a fine little fort of logs, having sand and stone filled in between the wood. It was situate upon Manayunk (or Manasonk) Island, at the east corner of the work, and surrounded by palisades, four Swedish (twenty-seven English) miles from Christina, eastward by the Schuylkill River, and the Delaware River north and west of League Island."

FORT MECOPONACKA (or UPLAND) was the second of the latter name. Acrelius says that it was "two Swedish miles from Christina and one mile from Gotheburg, on the river shore, on the same plan (with some houses and a fort)." Ferris suggests that the building was a block-house,—a place of refuge and defense, always, in those days, erected near a settlement. The site was somewhere about the present town of Chester. The time that it was built is unknown. It was before 1648.

FORT GRIPSHOLM was built by the Swedish Governor, John Printz, on an "island in the River Schuylkill," within gunshot of its mouth. The precise situation is unknown. Ferris conjectures that it was on the high point of land near Bartram's Botanic Gardens, near Gray's Ferry, and that the mouth of the Schuylkill at that time, in consequence of the islands and low grounds of the Neck, was covered with water, so that the mouth of the Schuylkill was between Point Breeze and Bartram's Garden. This conjecture can scarcely be sustained by known facts. There were transfers of land on the west side of the Delaware and Schuylkill, from Bow Creek up, in the early jurisdiction of the Upland Court. It would have been folly at that time, when ground was so plenty, for any one to have taken up submerged islands and marshes. The description of Gripsholm by Huddy, the Dutch officer, is that it was "a fort on a very convenient spot on an island near the borders of the kill, secured from the west by another creek, and from the south-southeast, and at each side, with underwood and valley lands. It lies about the distance of a gunshot in the kill. On the south side, on this island, beautiful corn was raised. . . . This fort cannot control the river, but has the command over the whole creek, while this creek is the only remaining avenue with the Minquas, and without it this river is of little value." The creek spoken of must have been the Minquas (or Mingo), with the streams connected therewith leading from Darby and Cobb's Creeks. This stream was in early time said to be the regular passageway of the Indians coming from the west to the Schuylkill and Delaware Rivers.

The Dutch Fort Beversrede was built immediately opposite the Minquas, or Mingo, or Eagle's Nest Creek, to command the trade in furs (skins) brought that way by the savages. It is most likely that Fort Gripsholm was situated on the west side of the Schuylkill, upon the ground afterward known as Province Island, or State Island.

WICACO BLOCK-HOUSE.

WICACO BLOCK-HOUSE stood near the Delaware River, it is believed, about the site afterward occupied by the Swedish Church Gloria Dei, now south of Christian Street on the west side of Swanson Street.

Google

The block-house was built for defense against the Indians in 1669, and is usually described as having loop-holes for defense. It is believed that the first Swedish Church ordered by Upland Court, in 1675, to be erected at Wicaco, was established in this block-house, which was fitted up for the purpose in 1677. The building was torn down in 1698, when the old brick Swedes' Church building, dedicated July 2, 1700, was commenced.

ASSOCIATION BATTERY AT WICACO.—In 1747, the province of Pennsylvania being defenseless, and Great Britain being at war with France, much anxiety existed among the inhabitants of the city of Philadelphia who were not members of the Society of Friends in fear of the visits of hostile privateers or ships of war, there being no garrisoned fort or other military defense on either side of the Delaware from the capes all the way up. The proprietary government under the Penns was in sympathy with any warlike measure necessary for defense. But members of the Society of Friends, who were in majority in the Assembly, would not consent to any measures of a warlike character. Finally the proprietary government determined to encourage the formation of a volunteer military force. It was determined to form what was called "The Association for General Defense." In May, 1748, President Palmer, of the Provincial Council, said, "Many thousands of the inhabitants having voluntarily entered into the most solemn engagements for that purpose, in consequence whereof arms have been provided," had "likewise at considerable expense erected batteries on the river of such strength and weight of metal as to render it very dangerous for an enemy to attempt the bringing of any ships before the city." Thomas Penn wrote from England March 30, 1748, "Whenever any company shall be made in Pennsylvania for establishing a militia and erecting a battery, we shall be very ready to show our concern for the safety of the city by giving cannon for such a battery." The Association in the city was embodied in regiments. There were liberal subscriptions, by means of which the battery was built, and cannon to mount it borrowed from Governor Clinton, of New York. A lottery was promoted for the raising of funds, and with the profits the managers bought some guns in England. In 1753 the Association Battery mounted twenty-seven pieces. The site of this work was southward of Swedes' Church, and is believed to have been exactly where the first United States navy-yard was afterwards built. In 1758 the Association Battery was placed under guards, and they were ordered to use the cannon against any vessel which might attempt "to break through the embargo." From the absence of any record of use of the Association Battery afterward, it is presumed that it was untenable and had fallen into decay before the commencement of the Revolutionary war.

SOCIETY HILL BATTERY was built in April, 1748, on the wharf of William Atwood, then mayor of the city. It was probably situated between Lombard and Cedar [South] Streets, or below the latter. It was built in two days. "The breastwork is eight or ten feet thick, composed of timber and plank filled in with earth, and rammed down. The building of the breastwork and merlons, laying the platforms, etc., was done by a number of the house-carpenters of this city, who voluntarily and generously offered their labor gratis, and performed the work with the greatest alacrity and surprising dispatch." This battery mounted thirteen guns, but there was no occasion to use them.

FORT CHRISTIANA was built in 1748, about the same time as the Association and Society Hill Batteries. It was begun and finished in a few days on the presumed site of the old Fort Christina, "on the rocks of Christiana (near Wilmington, Del.), with a bomb-proof magazine, and calculated for mounting ten guns." This was in July, 1748.

BATTERY AT NEW CASTLE.—This was erected in 1748. In May of that year a Spanish privateer with fourteen carriage-guns came up the Delaware as far as Elsinborough, and caused much alarm. Capt. Balliet, of H. M. S. "Otter," which had been sent for the defense of the Delaware, was appealed to, but unluckily his ship was unrigged, and his cannons were on shore. A battery was thrown up and the guns placed upon it, so that when the privateer approached New Castle many shot were fired at her from four mounted guns, "most of which passed her." Immediately afterward a fine battery was erected "a little below the town of New Castle."

FORT AT BILLINGSPORT.—In 1776, under the sanction of the Committee of Safety of Philadelphia, Robert Smith, carpenter and builder, commenced to build a fortification at Billingsport on the Jersey side, about twelve miles below Philadelphia. Thaddeus Kosciusko, the celebrated Polish patriot, drew the plan of the works, and arranged the means of defense, for which service he was paid fifty pounds. One of the principal objects of this work was to protect the *chevaux-de-frise* which were sunk in the Delaware River, to prevent hostile vessels from passing up to the city. The Continental Congress sanctioned, February, 1777, the building of the fortifications at Billingsport under direction of the Council. Col. John Bull and Blathwaite Jones, who had previously been superintending the construction of the work, were appointed to command, the former as colonel, and the latter as chief engineer with the rank and pay of lieutenant-colonel. A considerable number of men were employed in building these works, but they had not been finished in June, 1777. Gen. Mifflin and M. Du Coudray, who were appointed at that time to examine the work, reported that six or eight weeks might be sufficient to finish it. Those officers were authorized to complete the works, and there were a considerable number of soldiers and garrison. Col. Jehu Eyre was ordered to Billingsport in Sep-

tember, 1777, with two companies of militia artillery. In October, Col. William Bradford and Col. Will were at the fort with about two hundred and sixty-two men. On the 8d the British landed from five hundred to one thousand men on Raccoon Creek, and on news of their coming Bradford evacuated the fort, ordered the people to Fort Island (Mud Fort or Fort Mercer), carried off some of the cannon spiked, the rest took off the ammunition, and set the barracks and bake-house on fire. The British Highlanders and Marines took possession of the works, and set fire to them as well as to all houses that were left, and abandoned the premises on the 7th of October. After the British army evacuated Philadelphia in 1778, Col. Bull was ordered by Council to erect a battery of eleven guns at Billingsport, and temporary barracks for the accommodation of the garrison. A force was maintained there during the remainder of the war. In 1784 there were five eighteen-pounders, one twelve-pounder, and one four-pounder mounted and four other guns dismounted. At that time the keeper of the fort desired the privilege of establishing a public-house there.

FORT MERCER (Red Bank) was constructed under authority of the Council of Safety of Pennsylvania for the protection of the city of Philadelphia. It was on the east side of the Delaware River, in the State of New Jersey, north of Billingsport, and was constructed for the purpose of defending the *chevaux-de-frise*. The work was commenced by recommendation of Maj. Thomas Proctor, of artillery, given to the Council of Safety Dec. 23, 1776, under the authority of Maj.-Gen. Putnam, of the Continental army. The engineer by whose direction the fortifications were laid was the Polish patriot, Kosciusko. It was built principally by Col. Bull in 1777. Monsieur Du Coudray, while commending, with few exceptions, the manner in which the fort was built, was of opinion that it could not be made of much use in obstructing the passage of the river, and recommended that nearly all the guns should be carried to Billingsport, leaving two or three cannon at Red Bank as sufficient. When Gen. Howe got into Philadelphia, in 1777, he considered the reduction of the Red Bank fort as a matter of importance. Col. Count Donop was sent, with from two thousand to two thousand five hundred troops, chiefly Hessians, across the river Delaware, and marched to the fort on the 23d of October, this operation being part of a combined attack to be made by the troops on land, and the "Augusta" frigate, of sixty-four guns, with the frigates "Merlin," "Roebuck," and others. The American galleys, under Commodore Hazelwood, contested the passage of the ships. Mud Fort (Mifflin) engaged in the cannonade. Donop, on arriving before the Red Bank fort, summoned the commander, Col. Christopher Greene, of Rhode Island, and his little garrison of four hundred men to surrender. They refused, although they had but fourteen guns mounted for defense. Donop made an attempt to carry the works by storm, but was repulsed and his men slaughtered, principally by the effects of grape-shot and musketry. The conflict was short. The Hessians were defeated, leaving three or four hundred of their comrades behind them. The American loss within the fort was eight men killed, twenty-nine wounded, and a captain taken prisoner while reconnoitering. The Hessians retreated to Haddonfield. Donop was mortally wounded, and died the next day. Congress highly applauded the gallantry of Col. Greene, and voted that a sword should be presented to him. He did not live to receive it. He was murdered at his quarters, near the Croton River, in New York, by Tories and British dragoons, under Col. De Lancey, who surprised the post. After the death of Donop, Gen. Varnum commanded at the fort, with supporting troops at Woodbury. After Fort Mifflin was evacuated, the British sent five thousand men against Fort Mercer. They were commanded by Cornwallis and Gen. Sir Thomas Wilson. They occupied Billingsport without resistance, and Varnum, whose force was far inferior, prudently withdrew from Red Bank.

On the 22d of October, 1829, several uniformed volunteer companies of Philadelphia and New Jersey erected a monument on the ground occupied by the fort at Red Bank in remembrance of the patriotism and gallantry of Lieut.-Col. Christopher Greene and his men.

Exactly when this fort was called Mercer is not known. It must have borne the name before the attack by Donop. On the 18th of November, 1777, a communication to Commodore Hazelwood by Maj.-Gen. Arthur St. Clair and Baron De Kalb and Brig.-Gen. Henry Knox, of the artillery, is dated at Fort Mercer.

MUD FORT, afterward called FORT MIFFLIN, was situate upon Mud Island, "about eight miles down the river" Delaware. This work was commenced before the Revolution, without anticipating the use to which it would be put in resisting the power of Great Britain. The General Assembly of Pennsylvania, in 1773, appointed commissioners "to apply and dispose of fifteen thousand pounds toward the building of such fortifications as might be necessary for the security and defense of the city of Philadelphia." With a portion of this money they purchased Mud Island, which immediately became known as Fort Island. A skillful engineer, recommended by Gen. Gage, planned the works, and some portion of the fortifications was completed before the beginning of the year 1774. The fact that the fort had already been commenced naturally seemed to render the sinking of the *chevaux-de-frise* in this portion of the Delaware a matter of necessity. In the operations of the 21st of October, when Donop was killed, the British frigates "Roebuck," "Augusta," and "Merlin" were engaged by the fort at Mud Island, as well as by the Pennsylvania galleys, floating batteries, and fire-ships. The loss of two of these vessels somewhat crippled the attacking

force. Being in possession of the city, a regular siege was attempted. The British erected batteries on the east and west banks of the Schuylkill River near the mouth. They mounted twenty guns,—twenty-four- and twenty-two-pounders, which had been borrowed from ships belonging to the British fleet. About the 27th of September the attack commenced. Mud Fort was gallantly defended by Lieut.-Col. Samuel Smith, of Maryland, with his small garrison.

On the 10th of November the British batteries on the Schuylkill, with six frigates belonging to the fleet, with galleys and smaller vessels, commenced the bombardment. There were but three hundred men in the fort. The force against them was at least two hundred and sixty-three guns. Mud Fort answered gallantly. The Pennsylvania armed boats and State vessels assisted. Fort Mercer, at Red Bank, and a new American battery, built on the Jersey shore, took part in the fight. Col. Smith, being wounded on the 11th, was succeeded by Lieut.-Col. Russel, of the Connecticut troops, who resigned the command after one day's fighting. During six days it was computed that ten hundred and thirty cannon-shot had been fired at the fort by the British. The worst destruction was made by the "Vigilant," an East India ship, which was razeed, and turned into a floating battery, carrying sixteen twenty-four-pound guns. This vessel, with another hulk, armed with three guns, managed to get on the west side of the fort, between the island and the shore. Here, where no attack was expected, the works were weak, and the execution of the enemy's guns was most severe. The palisades were beaten down, the parapet destroyed, the guns dismounted, and the block-house leveled. Of the three hundred men, two hundred and fifty were killed and wounded, and on the night of the 16th of October, Maj. Simeon Thayer, with forty men, the remainder of his garrison, embarked in boats, set fire to the barracks and buildings which remained, and gained the shelter of Red Bank.

After the evacuation of the city by the British, Col. Bull was sent to Mud Island with workmen and laborers to repair the banks and sluices, and complete barracks sufficient for fifty men. It was occupied by various officers with small numbers of men during the Revolutionary war. The fort remained under the jurisdiction of the State of Pennsylvania until April 15, 1795, when an act of Assembly was passed, ceding the fort and island to the United States, provided the same should be accepted within one year; also that the State might at all times occupy the island and fort whenever the same should not be held by a military force under the United States. The gift was ratified, and Mud Fort passed under the jurisdiction of the Federal government; about this time it began to be called Fort Mifflin. Money was appropriated to make the work strong for defense. Maj. Peter Charles L'Enfant was appointed temporary engineer, and the design for the new Fort Mifflin was furnished by Col. Tousard. In 1806 the fort was described as "a regular inclosed work, with batteries, magazines, and barracks, principally erected in 1798, 1799, and 1800. During the war of 1812 with Great Britain Fort Mifflin was occupied, during March and April, 1813, by the Independent Blues, Capt. William Mitchell, and the Junior Artillerists, Capt. Jacob H. Fisler, with one hundred and sixty men. Capt. James N. Barker, of the United States army, commanded at the fort in 1813. From 1844 to 1853 there was a company of United States artillery stationed at the fort, which mounted fifty-three guns.

Liberty Island.—In 1776 the Committee of Safety of Pennsylvania authorized the building of a fort on Liberty Island, which was in the Delaware River. Robert Allison and George Worell undertook the work. It is probable that this island was afterward called Bush Island.

Continental Forts and Batteries.—In the latter part of 1776, when the movements of the British army in New Jersey menaced the city of Philadelphia, there was considerable alarm because there were no defenses which would prevent the enemy from marching into the city by a northern route. Maj.-Gen. Israel Putnam was therefore sent by Gen. Washington to Philadelphia, it being the opinion of the commander-in-chief that a line of defenses might be thrown up, reaching from the heights at Fairmount and Springettsbury, on the Schuylkill River, over to the Delaware. The lines were marked out, and work commenced in December, but in consequence of the defeat of the Hessians at Trenton, on Christmas-day, and the retreat of the royal troops, but little could have been done to the fortifications except preliminary work.

Fort at Darby Creek.—A battery seems to have been erected near this stream, in 1777, for the defense of the city. The exact location is unknown. It was probably south of the creek, and below Mud Fort. Dr. Smith is of opinion that it was built on the island of Tinicum. In September, 1777, the State Navy Board recommended that ninety or one hundred men should be placed in this fort.

British Batteries during the Revolution.—As soon as Lord Howe and the royal army entered the city of Philadelphia, on the 26th of September, 1777, immediate measures of defense against the American fleets and galleys were undertaken. A battery was commenced near the shores of the Delaware, one redoubt being in the vicinity of the present Reed and Swanson Streets. The old Association Battery was utilized by the mounting of three guns. Another wharf-battery was built near Swanson and Christian Streets. At Kensington a battery was built on a wharf above Cohocksink Creek. All these batteries were brought into effectual use on the 27th of September, when the "Delaware," frigate, Capt. Charles Alexander, mounting twenty guns, the frigate "Montgomery," the "Fly," sloop, with a number

of galleys and boats, appeared before the city. The "Delaware" anchored within five hundred yards of the lower battery and opened fire. The "Montgomery" and other vessels engaged the Association Battery and that at Christian Street. The result was unfortunate. The "Delaware" grounded, and was forced to strike her flag. A schooner was disabled and run ashore. The "Montgomery," "Fly," and the gondolas attempted to pass up the Delaware River, when they were forced to abandon the attempt, the "Montgomery" and a schooner having their masts carried away. The others succeeded in making their way to Mud Fort, under the guns of which they were in safety.

As soon as Gen. Howe had recovered from the effect of the battle of Germantown, and had withdrawn his troops to the city and liberties, intrenchments and field-works were constructed on the lines laid out by Gen. Putnam, between the Delaware and the Schuylkill. There were ten redoubts with small batteries between the lines, being further defended by abatis and stockades constructed of apple-trees and other timber cut down in the neighborhood. In many places there were lines of intrenchment and ditches behind the abatis. Taking present localities as ready means of location, the principal British works were as follows:

Battery No. 1, east of Front Street, above Cohocksink Creek, of a square shape, commanding the river and the Front Street road, with a small two-gun battery south of it. Intrenchments and abatis extended nearly along the line of the present Maiden Street to Germantown road. Saw-shaped redans, each calculated to hold three men, were at the northwest angle of the Germantown road and Maiden Street.

No. 2, square redoubt, west of the Germantown road, little north of Poplar Street.

No. 3, between Third and Fourth above Poplar Street.

No. 4, northwest of No. 3, but near Poplar and west of Fourth.

No. 5, near southwest corner of Sixth and Poplar, as at present open. There were no streets between Fourth Street and the Wissahickon or Ridge road, but beyond No. 4 was a small redan which would hold a few men.

No. 6, east of Ridge road, and not far from Coates Street.

No. 7, north of the Hamilton Mansion at Bush Hill, and near Eighteenth and Coates Street.

No. 8, near Twentieth Street and Francis Lane or Coates Street [now called Fairmount Avenue]. This was the most northerly of all the redoubts.

No. 9, near Lemon Hill. A short distance above where the Reading Railroad crosses Coates Street.

No. 10, on the northwest side of Fairmount Hill, and on a line with Green Street. Also a small battery on the northeast slope of the hill, and a barbed battery of three guns on the west side which commanded the Upper Ferry.

HALF-MOON BATTERIES.—In advance of the main line of redoubts and abatis were batteries of observation near the great roads. One of these was on the west side of old York road, below the upper branch of Cohocksink Creek, and probably between Fifth and Sixth, and near Germantown Avenue. A larger half-moon was on the east side of Ridge Avenue a little below Girard College, near Thompson Street.

In the western part of the city a fascine redoubt of six brass guns was built near the foot of Chestnut Street, Schuylkill, which commanded the Lower Ferry. A fascine redoubt was built on the hill above Market Street, and near the Schuylkill. A redoubt was placed on the hill on the west side of the river Schuylkill, near the old graveyard above Market Street, somewhere about the western end of the Pennsylvania Railroad bridge. The Middle Ferry floating bridge, which had been built by the British to replace the old bridge which had been removed by the Americans, was also defended by the British with eight iron cannon mounted on the ferry wharf.

FORT DELAWARE (Peapatch).—In 1813, during the excitement arising from the fact that the Delaware was blockaded by British ships, the United States government purchased the Peapatch Island in the river Delaware below New Castle for the defense principally of the city of Philadelphia. The Secretary of War then addressed the City Councils and promised that fortifications should be erected on the island if the city of Philadelphia would loan the United States government fifteen thousand or twenty thousand dollars for that purpose. An ordinance was accordingly passed, despite the opposition of Select Council, making the appropriation. In 1814 the city asked that a battery of thirty-two twenty-four pounders should be erected on the Peapatch and suitable fortifications at Newbold's Point and Red Bank. Capt. Babcock, of the engineer corps, was of opinion that he had no greater authority than to erect two martello towers. Councils were averse to the towers. Plans were adopted subsequently for fortifications and for the inclosure of the islands; but one of the towers was built in the Northern Liberties in the course of the year. Subsequently the United States built a very strong and formidable-looking fortification there. During the war of the Rebellion Fort Delaware was used as a place of confinement of Confederate prisoners.

FORTIFICATIONS IN THE WAR OF 1812.—In August, 1814, the Committee of Defense of Philadelphia, appointed at town-meeting, resolved that it was necessary to "immediately erect field fortifications on the heights and most important passes to the entrances of the city, to wit, from the west side of the Schuylkill." Gen. Jonathan Williams was requested to act in connection with the United States engineers in locating the proper places. Under this resolution

the able-bodied citizens of Philadelphia marched daily in great numbers to the ground marked out for the forts, where they entered upon the most laborious service, digging, carrying away dirt, and other hard work. Masters and journeymen in the various mechanical trades marched out together. Societies, persons of various nationality, together with physicians, artists, clergymen, and church-members assisted in this work. Between the 3d of September and the 1st of October, when the works were finished, it was estimated that fifteen thousand persons had contributed their labors toward their completion. These fortifications were principally laid out and directed by Col. L. Foncin, a French officer, who had lived in Philadelphia for many years. The forts were as follows:

Gray's Ferry, on the east side of the Schuylkill, on Gray's Ferry road, commanding the floating bridge.

Fort Hamilton, at junction of Gray's Ferry and Darby roads.

Redoubt on the west side of Schuylkill, on the Gray's Ferry road, opposite Hamilton's Grove.

Redoubt upon the Lancaster road, west of Market Street bridge.

Redoubt on the southern side of the hill at Fairmount, which commanded the bridge at the Upper Ferry, and also the bridge at Market Street.

Fortifications during the Rebellion.—Some time after the commencement of the war against the Confederacy, under a suggestion that the city was not free from danger of attack, a few small works were erected at various places, but were never occupied by any garrison. They were situated as follows:

A redoubt on the hill in Fairmount Park, at the intersection of the main drive from Lemon Hill and Girard Avenue, at the head of Girard Avenue bridge. The embankments were leveled at the close of the war, and exactly where the citadel was planned the statue of Humboldt is now placed.

A small half-moon on the north side of the Gray's Ferry road, between the United States arsenal and the Schuylkill River.

A redoubt on the rocks formerly known as the Cliffs, on the west side of the Schuylkill, near the end of the Philadelphia, Wilmington and Baltimore Railroad bridge at Gray's Ferry. The fort and the rocks have since been obliterated by railroad operations.

An earthwork on the north side of Market Street, on the rise of the hill west of Thirty-sixth Street.

CHAPTER XXXII.

ART AND ARTISTS.

Art can find congenial surroundings only in old communities where wealth permits leisure and invites culture. It is not strange, therefore, that we hear so little of artists in the early history of this country.

The colonies did not present a very inviting field to the painter or sculptor. There was no inducement for him to settle there, even if, prompted by curiosity, he ran the risk of a long and hazardous voyage across the ocean to study American scenery. A few did come, doubtless, who traveled over the country, visiting the principal cities, where they left, as marks of their passage, the portrait of some wealthy citizen, or of the blushing beauty, his daughter. Some of these old-time portraits are to be found in Philadelphia families; but in many cases the name of the painter is unknown. Poor artist! struggling for bread, perhaps, yet with a faint hope that he might attain fame. The features he fixed upon the canvas are there still to tell of his cunning art, but he—his very name is forgotten.

Among the works of these anonymous painters are the following: A portrait of Edward Shippen, first mayor of Philadelphia, who died in 1712; a portrait of Edward or Joseph Shippen (there is some uncertainty as to the first name), son of Edward the first. Edward, the son, died in the same year as his father (1712); Joseph died in 1741. These likenesses, which are in the possession of the Shippen family, were painted prior to the time of any artist whose name is remembered. Joseph's picture might indeed have been done by John Watson, who came to America in 1715, and settled in Perth Amboy, N. J., and who is *supposed* to have made occasional excursions to Philadelphia, or by John Smybert, a resident of Rhode Island, who is also *supposed* to have visited Philadelphia between 1728 (date of his arrival in this country) and 1751; the supposition being based upon the fact that Smybert painted portraits in New England and New York during that period. But it is more likely that the three Shippen portraits were painted by one and the same unknown hand.

Also two life-size portraits, one of George McCall, merchant, who came to Philadelphia in 1701, and died in 1740, and the other of his wife, Mrs. Anne McCall, daughter of Jasper Yeates. A portrait of Governor Patrick Gordon, in the possession of the Historical Society of Pennsylvania, and a fine likeness of James Logan are also among the works left by unknown artists. The same obscurity surrounds the engravers of the wood-cuts used in the newspapers and almanacs of that early period. A well-executed copper-plate, accompanying Franklin's account of the Pennsylvania fireplace, is believed to have been engraved here, but by whom it is not known.

The Historical Society of Pennsylvania has in its possession two drawings by Watson. They are portraits of Governor Keith and his wife, in India ink. These portraits were made probably between 1717 and 1728. Watson died at Perth Amboy, Aug. 22, 1728.

Although no real artist is known to have settled in Philadelphia before 1746, there were certainly some "painters," whose ambition did not aim higher than

the execution of a tavern or shop sign. If many of these signs were mere daubs, some gave unmistakable proof of artistic taste and skill. In our chapter on Inns and Taverns we have described some of these signs, and mentioned some sign-painters whose names belong to the history of art and artists, but they belong to a later period than that of which we are presently speaking. In 1702, or thereabout, one or those pseudo-artists executed a painting,—the earliest known to have been done in Philadelphia,—which is in the possession of the Historical Society of Pennsylvania. It represents the royal arms, and bears Queen Anne's motto, "*Semper eadem.*" It was doubtless made, "by order," to hang behind and above the seat of the judges in the old court-house. The workman who did the job was, to all appearance, but a second-rate sign-painter.

Another memento of those bygone days is to be seen in the Philadelphia Library. It is a view of the city of Philadelphia, roughly done in bright colors, and shows the painter to have been ignorant of the laws of perspective and the contrasts of light and shadow. This picture had found its way to England, and it was discovered in an old curiosity-shop by the Hon. George M. Dallas while he was minister to England. Mr. Dallas purchased it and presented it to the Library Company of Philadelphia. Much interest is attached to this picture, notwithstanding its want of artistic merit, as one of the oldest pictorial relics connected with the history of Philadelphia. It had been the subject of a communication to the Antiquarian Society of London, and was spoken of by James N. Barker in an historical essay published many years ago. The painter of this old view of Philadelphia was Peter Cooper, whose history is briefly told in the minutes of the City Council, where it is entered that "Peter Cooper, painter," was admitted a freeman of the city in May, 1717. In the same year Peter Luolie, Aaron Huliot, and Samuel Johnson, all painters, were also admitted.

William Dunlap, in his "History of the Rise and Progress of the Arts of Design in the United States," says that there were few artists in the country prior to 1751, and mentions Blackburn, Green, and Theus as having been in the colonies in 1750. But as early as 1746, Robert Feke and William Williams, two painters of merit, resided in Philadelphia. Feke is supposed to have been the descendant of a Dutch family which settled at the head of Oyster Bay, N. Y., at an early period. That he resided in Philadelphia some years can be a matter of but little doubt. His signature is upon a portrait of Mrs. Willing, wife of Charles Willing, mayor, 1748–49, in the possession of Dr. Charles Willing, a descendant. A portrait of Tench Francis, attorney-general, signed "R. Feke, 1746," is in the possession of Joshua Francis Fisher.

A writer in the *Historical Magazine*, vol. iii., speaking of Feke, says, "The portraits (Mrs. Willing and Tench Francis) referred to are rather remarkable for drawing and expression, and the coloring, which is still fresh and natural, gives reason to think the painter must have been well taught. It is hardly possible that a native self-educated artist could at that time have done so well." The portrait of Tench Francis is a kitcat (size of life), in a handsome full dress of the time (1746).

Another writer in the *Historical Magazine* makes out Feke's history to be somewhat romantic. According to this writer, Feke, although of Dutch descent, was a Quaker, who joined the Baptist Church, and thereby gave offense to his father. The young man then embraced a seafaring life, and in one of his voyages was taken prisoner by the Spaniards and carried off to Spain. While a captive in that far-off land, he sought to relieve the tediousness of a long imprisonment by some rude attempts at painting. The sale of these poor pictures, after his release, procured him the means of returning to America. He then settled at Newport, R. I., painted portraits, and is said to have several times visited Philadelphia. If this be true, young Feke while a prisoner must have had the good fortune to study with some of the Spanish masters. He died in Bermuda, at the age of forty-four years. Among his pictures yet remaining are those of Rev. John Callendar, of Newport, and the wife of Governor Wanton.

William Williams was an English painter of some merit. He must have been in Philadelphia long enough to earn a reputation as an artist of experience and taste, since it was to him Mr. Pennington brought Benjamin West, then a mere boy, for instruction in his art. The precise date on which this took place is not known, but it must have been prior to 1750, since West commenced portrait and historical painting in 1753; he was then only fifteen years old. When young West was introduced to Williams he had never seen an oil painting, except his own crude attempts made in Chester County. He gazed with admiration on a painting in oil colors, made by Williams for Samuel Shoemaker. Williams felt interested in this boy-artist; he instructed him in the first rules of his art, permitted him to study his own pictures and drawings, and loaned him the works of Fresnoy and Richardson. Williams was one of the contractors for the erection of the second theatre built in Southwark. Some efforts having been made to prevent the building of this theatre from being completed, Williams represented to Governor Denny that he had contracted to provide a new set of scenery for this theatre, and had painted them; that the cost was upward of a hundred pounds, which would be lost to him if the theatre were interfered with. So we know him to have been a scene-painter as well as a portrait-painter,—two widely-different branches of the same art. Williams must have left Philadelphia some time after this, for in an advertisement published in January, 1768, he announced that he had returned from the West Indies, and was to be found

in Loxley's Court, at the sign of Hogarth's Head, where he was prepared to do painting in general.

Hesselius, an English painter, whom Mr. Dunlap mentions as having settled in Annapolis in 1763, was in Philadelphia in 1751, and he must have lived there for some years prior to that date, unless we are deceived by a similarity of names, for "John Hesselius" was one of the subscribers to the Philadelphia Dancing Assembly in 1749. The signature "Hesselius, 1751," is on three fine paintings once in the possession of John William Wallace, also a portrait of Joshua Maddox, merchant, and for some years justice of the peace for Philadelphia County; a portrait of Mrs. Maddox, his wife; and a portrait of Mrs. Wallace, one of the belles of the Dancing Assembly of 1748. A writer, describing these family pictures, says, "These paintings are of considerable merit. The countenances are delineated with taste and delicacy of coloring. The drapery is finely done, the shadows being broad and bold." Hesselius is said to have been a painter of the school of Sir Godfrey Kneller, the broad shadows characteristic of Sir Godfrey's style being remarkable in the pictures signed "Hesselius." This and other marked characteristics have caused several pictures to be assigned to Hesselius, although they bear no signature. Such is the case with a portrait of Miss Mary McCall, daughter of George McCall, which belonged to the Misses Plumsted. Miss McCall was born in 1725. She married William Plumsted, mayor of the city, in 1750, who was the son of Clement Plumsted, also mayor. The Misses Plumsted had another valuable family picture, the portrait of Mrs. Clement Plumsted, painted by Sir Peter Lely, probably one of his latest works, since he died in England in 1680.

Hesselius went to Maryland some time after 1751. The portraits of Joseph Pemberton, son of Israel, and Anne, his wife, daughter of Joseph Galloway, of Anne Arundel County, Md., are assigned to Hesselius, for having the characteristics of his style, before mentioned. These portraits were in the possession of the Pemberton family, of Philadelphia. They are three-quarter lengths, life-size. The Walton family had in their possession two portraits by Hesselius.

Benjamin West, the boy artist, revealed his precocious talent in Lancaster, where, it is said, he made drawings on poplar boards for Mr. Wayne, and even executed a painting for William Henry, an ingenious mechanic of that town.[1] He commenced painting portraits in Philadelphia in 1753, and left that city for New York in 1758. He must have been constantly engaged in painting during these six years, for quite a large number of his pictures, dating from that period, are in the possession of old Philadelphia families. It is asserted in the "Shippen Memoirs" (Balch) that the first professional work of young West was the portrait of Charles Willing. As Mr. Willing was a merchant in Barbadoes, and he only moved to Philadelphia after his marriage, in 1760, it is probable that he had his likeness taken during a prior visit. West was living with Mr. Clarkson, and had won the warm interest of Rev. William Smith, who befriended him in many ways. Besides painting portraits and historical pictures, the industrious lad must have made sketches of scenery in the neighborhood. The "Treaty Tree" at Shackamaxon forms a conspicuous feature in his painting of the treaty of William Penn with the Indians, which he executed in England in after-years, and the resemblance is too perfect to admit of his having painted it from memory.

Among the portraits and pictures painted by West during his residence in Philadelphia are the following: Portraits of Mr. Peter Bard and Mrs. Dinah Bard, of New Jersey; one of the Morris family, of Philadelphia; a portrait of the Rev. William Smith, in the attitude and style of St. Ignatius, after Murillo; and a historical picture of "The Trial of Susannah," for Mr. Cox; a portrait of Eleanor Swift, who was born July 8, 1732, and who married Andrew Elliott—probably between 1750 and 1755—together with her daughter, Eleanor Elliott, while a child; a picture of St. Agnes and the Lamb, and a head,—in the possession of Edward Shippen; a portrait of Jenny Galloway, born in the year 1745, who married Joseph Shippen in 1768, and died in 1801,—in possession of John Shippen, of Pottsville.

A portrait of Chief Justice William Allen, who was on the bench in 1754, was painted by Benjamin West before he left Philadelphia, and is thus described by Brown, in the "Forum," vol. i. pages 248, 249:

"It is a three-quarter length portrait, and is taken standing. He has a curled wig and ruffled sleeves, but is otherwise dressed as plainly as possible. The costume for the whole dress is apparently of one color,—a not very good shade of brown; the colors may have faded. The face is round, with rather straight features, and is distinguished by *bonhomie* and good sense rather than by intensity of intellectual action, or by anything æsthetic."

A portrait of Dr. Benjamin Rush, painted by West. while Rush was prosecuting his studies in London, belong to Dr. W. Kent Gilbert. It is a kitcat, and handsomely executed.

Portraits of Hon. James Hamilton, Mr. Hare, Robert Hare, and Dr. Preston, in the Philadelphia Library, are ascribed by Tuckerman to this artist.

West's object in removing to New York, where he hoped to obtain better prices for his pictures than he had obtained in Philadelphia, was to earn enough money to enable him to realize the dream of his boyhood,—to visit Italy and study the works of the great

[1] Dunlap says that the Pennsylvania Hospital possessed some of the earliest efforts of West, painted on panel. "The largest is his own composition, and consists of a white cow, who is the *hero* of the piece, and sundry trees, houses, men, and ships, combined in a manner perfectly childish. The other is a sea-piece, copied from a print, with a perfect lack of skill, as might be expected."

masters. This hope was not disappointed. The young Quaker was destined to be one of those rare examples of genius recognized and encouraged by warm-hearted and liberal men until it has attained the summit and justified their opinion. This *luck*, as some of his rivals called the spontaneous homage paid to the godly gift of the artist, never failed West. In New York he painted many portraits, among others that of Mr. Kelly, a wealthy merchant. While engaged on this last work, West learned that Mr. Allen, of Philadelphia, was loading a vessel with flour for Leghorn. He mentioned to Mr. Kelly his intention of leaving New York as soon as the latter's portrait was finished, to take passage on that ship. Mr. Kelly, who treated the young painter with much friendliness, made him talk of his plans, and when the portrait was finished, paid him the price agreed upon and asked him to take charge of a letter for his Phila-

BENJAMIN WEST.

delphia agents. On delivering this letter West learned, to his surprise and delight, that the liberal New York merchant had instructed his Philadelphia agents to pay the young painter the further sum of fifty guineas to help him carry out his studies in Italy. But this was not all: Mr. Allen's son was West's traveling companion on the ship, and when they reached Leghorn the artist was introduced to Messrs. Rutherford & Jackson, the correspondents of Mr. Allen, and these gentlemen gave him letters of recommendation to Cardinal Albani and other patrons of art in Rome, thus smoothing for him those obstacles which, as a stranger seeking an introduction in artistic circles, he would have found difficult to overcome unaided.

Scarcely had he arrived at Rome when he made the acquaintance of Mr. Robinson, an Englishman, who turned out to count among his friends most of the gentlemen for whom West had letters of introduction. Mr. Robinson undertook to present the young painter to Cardinal Albani. Mr. Dunlap relates an anecdote of this first interview with the Roman prelate which is highly creditable to the young painter's powers of observation. The cardinal had made up a party "to witness the impression which the sight of the *chef-d'œuvres* of antiquity would make upon a native of the New World. The Apollo was first shown him, and his exclamation was, 'How like a young Mohawk warrior!' The Italians, on having the words translated by Mr. Robinson, were mortified. But West, at that gentleman's request, described the Mohawk in his state of native freedom, as seen in those days, his speed, his vigor, his exercise with the bow. When Mr. Robinson interpreted the words, 'I have seen a Mohawk standing in that very attitude intensely pursuing with his eye the flight of the arrow just discharged from the bow,' his auditory were delighted by the criticism of the stranger and applauded his untutored acumen."

West was well received by Pompeio Battoni and by Mengs, the two leading painters in Rome at the time. Battoni, who in contemplating his own work was wont to exclaim, "E viva Battoni!" took pleasure in showing his pictures to the young Quaker artist, in whom he did not recognize a possible rival. Mengs gave West some practical and disinterested advice. He told him to stay in Rome only long enough to copy a few statues, then to visit Florence, Bologna, Parma, and Venice, to study the works of the Caracci, of Correggio, Tintoretto, Titian, and Paul Veronese, and having compared the styles of those masters, to come back to Rome and paint a historical picture. West saw the soundness of this advice and carried out the programme, notwithstanding the loss of eleven months, during which he was confined in Florence, in consequence of a fever contracted in Rome. On his return he painted his pictures of "Cimon and Iphigenia" and "Angelica and Medora," which obtained the academical honors of Rome. Before starting on this artistic tour he had painted the portrait of his new friend, Mr. Robinson. Here, again, his good fortune manifested itself; says Mr. Dunlap, "The applause bestowed on the portrait of Mr. Robinson was mentioned in a letter from Rutherford & Jackson to Mr. Allen, of Philadelphia, and the letter read by him to an assemblage of gentlemen at his dinner-table, among whom was Governor Hamilton. Allen mentioned the sum deposited with him by West before his departure, adding, 'As it must be much reduced, he shall not be frustrated in his studies for want of money: I will write to my correspondents to furnish him with whatever he may require.' This generous declaration produced a demand from the Governor that 'he should be considered as joining in the responsibility of the credit.' The consequence was that while West was waiting at Florence for the sum of ten pounds for which he had written to his friends at Leghorn, he received notice from their bankers that they were instructed to give him unlimited credit."

Having accomplished his object in Rome, West determined to visit England before returning home.

Digitized by Google

This determination changed his whole future; the success that awaited him in London was to separate him forever from his native land. Leaving Rome he stopped at Parma to finish his copy of St. Jerome, a fine picture which has remained in the possession of the family of Mr. Allen, the early and generous friend of the artist. From Parma West proceeded to Paris, where he made but a short stay, and thence to London. Here his first care was to have his pictures hung up in the public exhibition-room in Spring Garden. The result of this exhibition was the acknowledgment of his rare merit as an historical painter and immediate employment for his pencil. He painted for Dr. Newton the "Parting of Hector and Andromache," and for the Bishop of Worcester, the "Return of the Prodigal Son." Dr. Drummond, Archbishop of York, requested him to make him a painting of Agrippina landing with the ashes of Germanicus, as described by Tacitus, and was so delighted with his rendering of that subject that he asked the king's permission to present the artist and his picture. George III. showed his admiration of this fine painting by ordering another, the subject of which, "The Departure of Regulus from Rome," he selected, and read himself aloud the description of that touching scene from Livy. The royal favor won on that day was never withdrawn during the king's life. He had taken a liking for the young American artist, and became his warm friend as well as his patron. When George III. founded the Royal Academy, this painting of Regulus was the first picture exhibited in it. West's reputation was now established, he had more commissions than he could attend to. The king was a liberal patron, who left him little time to paint for others. The "Death of General Wolfe," the "Death of Epaminondas," the "Death of Chevalier Bayard," "Cyrus Liberating the Family of the King of Armenia," "Segestes and his Daughter brought before Germanicus," were all painted by order of his Majesty.

Afterward came a great work, suggested by West, and which was an undertaking such as few painters could plan and carry out with success. This was the painting of a series of pictures on the progress of revealed religion, divided into four dispensations,—the Antediluvian, the Patriarchal, the Mosaical, and the Prophetical. This vast conception comprised thirty-six subjects. They were all sketched, and twenty-eight were executed, when the mental disease which fell upon the king put it in the power of the artist's enemies to show their rancor, and he was informed that he must suspend his work until further orders. While working at this religious gallery he had executed several other pictures for the king, among others a series of national subjects taken principally from the reign of Edward III., to wit: "Edward the III. embracing the Black Prince after the Battle of Cressy;" "The Installation of the Order of the Garter;" "The Black Prince receiving the King of France and his son prisoners at Poictiers;" "St. George vanquishing the Dragon;" "Queen Philippa defeating David of Scotland in the Battle of Neville's Cross;" "Queen Philippa interceding with Edward for the Burgesses of Calais;" "King Edward forcing the passage of the Somme;" "King Edward crowning Sir Eustace de Ribeaumont at Calais." Besides these pictures, which are of large size and among the best of his works, West painted his famous "Battle of La Hogue" and several portraits of the king and royal family.

On the death of Reynolds, in 1792, the academy selected West for their president. He occupied that honorable position until his return from his visit to Paris, in 1802. George III. no longer reigned, West had ceased to be "painter to the king," and the peace of Amiens opened the doors of the French capital to English visitors. West went to Paris, taking with him his masterpiece, on a small scale, of "Death on the Pale Horse." He was greeted with genuine enthusiasm by David and other artists of that time; nor were the public men of the French republic—then ruled by Bonaparte as first consul—remiss in their attentions. This reception by foreigners must have been as balm to his wounded feelings, but he had not emptied the cup of bitterness: on his return to London the animosity shown him by the academy, of which he had been the inspirer and over which he had presided to the general satisfaction, led him to retire from the president's chair. Wyatt was elected in his place, but ere long a revulsion of feeling took place, and the academy again selected West to preside over their labors. West was no longer the "young" painter, but in the winter of his age he still showed the sacred fire and energy of his youth. He painted a series of great works that show no declining talent, but the conceptions of a powerful mind executed by a firm, masterful hand. His "Christ Healing the Sick," painted as a present to the Pennsylvania Hospital of Philadelphia,[1] the "Descent of the Holy Ghost on Christ at the Jordan," the "Crucifixion," "The Ascension," the "Inspiration of St. Peter," the "Christ Rejected," and the wonderful composition of "Death on the Pale Horse," enlarged from the small picture already mentioned, all date from those late years of his life.

We have not given anything like a complete list of West's numerous works, and this short notice of a life spent abroad is not presented as a biography. We have merely outlined the high eminence to which the young Quaker artist rose far from his native land. When he went to England, Pennsylvania was a British colony. The Revolution came, and he still remained in London, but he remained an American at heart, and his biographers all agree that George III., who loved the artist, respected the opinions of

[1] The original of this picture, first intended for the hospital, was purchased by the British institution for three thousand guineas. The copy sent to Philadelphia is perhaps superior to the original, from which it differs materially in some respects.

the man. Nor is there any inconsistency in West loving his royal friend while his sympathies were with the revolting subjects of that friend. Should he have thrown aside brush and easel and crossed the ocean to shoulder a musket in his country's defense? The void caused by his absence was unnoticed; his peaceful pursuit of his work threw a new lustre on the American name, for it gave it a high place in the annals of art.

American students were always sure of a hearty welcome and the best friendly advice from Mr. West; the needy found that he was as prompt to assist as to advise. Charles Wilson Peale studied under him from 1771 to 1774; Gilbert Stuart, Joseph Wright, and John Trumbull were with him during portions of the American war, and all of them have testified to his kindly disposition and sympathy. Mr. Leslie, in one of his letters, quoted by Dunlap in his "History of the Arts of Design," says, "Mr. West was, as you know, at all times delighted to receive Americans, and no subject of conversation interested him more than the present greatness and future prospects of the United States. His political opinions were known to be too liberal for the party who governed England during the regency and the reign of George IV. Whether owing to this cause or not, he was certainly out of favor with the court during all the time of George III.'s long seclusion from the world. It was to the credit of that monarch that he never allowed the political opinions of Mr. West to interfere with his admiration of him as an artist and his friendship for him as a man. The king died while Mr. West was confined to his bed with his last illness. Raphael West endeavored to keep the newspaper from him, but he guessed the reason, and said, 'I am sure the king is dead, and I have lost the best friend I ever had in my life.'"

Martin Archer Shee, in his "Elements of Art," says of West, "Posterity will see him in his merits as well as his defects; will regard him as a great artist, whose powers place him high in the scale of elevated art; whose pencil has maintained with dignity the historic pretensions of his age, and whose best compositions would do honor to any school or country."

Benjamin West died on the 11th of March, 1820, aged eighty-two years. His beloved wife, Elizabeth Shewell, who fifty-five years before had crossed the ocean, under the protection of his father, to keep her plighted troth,—the then young artist being unable to leave London,—had left him a widower in 1817. From that moment his strength had begun to fail, though his mental faculties remained unimpaired to the last. "He was buried beside Reynolds, Opie, and Barry in St. Paul's Cathedral. The pall was borne by noblemen, ambassadors, and academicians; his two sons and grandson were chief mourners, and sixty coaches brought up the splendid procession."[1]

[1] Dunlap's History of the Arts of Design.

Cosmo Alexander, an old Scotch painter who visited this country some years before the Revolution, traveling for his health, and who, it is said, "painted for his amusement," is supposed to have been in Philadelphia about 1770–71. A portrait of John Ross seated in his library, with a table near him,—the property of J. Meredith Read,—was painted by this artist. Alexander was in Newport, R. I., in 1772, and taking a fancy for Gilbert Stuart, then a mere boy, gave him lessons in painting, and on leaving Newport took him with him to South Carolina, and thence to Scotland.

One of our earliest native painters, who was cut off by death ere his undoubted talent had matured and secured to him fame and profit, was John Meng, born in Germantown, Feb. 6, 1734. He was the fifth son of Christopher Meng, a German, who left his native town of Manheim and came to Philadelphia in the year 1728. John Meng, from early boyhood, had evinced a decided vocation for the painter's art. He was gifted by nature with artistic tastes, and soon acquired no little skill with the pencil and brush. But the practical old German, his father, did not approve of his son's choice of a profession. This opposition made things unpleasant for John; moreover, he felt that he must have better tuition than he could get in Philadelphia. He left home and went to the West Indies. He was probably not there more than a year or two, and died about 1754. He was only twenty years old. A very fairly painted portrait of himself, done in oil, was in possession of Charles S. Ogden, who also had the following works of John Meng: A portrait of his father, Christopher Meng, half size; a portrait of a lady, full length, name unknown, which was commenced in the West Indies, but which was left unfinished. These pictures are upon canvas. A likeness of Meng, painted upon pasteboard, is also preserved. There is reason to believe that there are other pictures by this early Philadelphia artist in the possession of old Germantown families.

Dunlap mentions James Claypoole as a painter in Philadelphia in 1756, and the instructor of Matthew Pratt, from whom he (Pratt) "learned all the different branches of the painting business, particularly portrait-painting, which was his particular study from ten years of age."

This is all we know about Claypoole, who may have been a very good instructor. His pupil, however, acquired both fame and substance. Matthew Pratt was born in Philadelphia, Sept. 23, 1734. He was the son of a goldsmith, and having shown some disposition for painting was apprenticed, in 1794, to Claypoole, who was in all probability a sign-painter. Having served his apprenticeship, Pratt gave his attention to portrait-painting, while not refusing to paint pictorial signs for taverns or stores. Many of those signs, in the execution of which the hand of the true artist was recognizable, have been described in our chapter on Inns and Taverns. In 1760, Matthew Pratt married

Elizabeth, daughter of Charles Moore, of Philadelphia. Loving his art, and feeling that to perfect himself in it he must have better instruction than he could obtain at home, he went to England in 1764. There he met Benjamin West, and made arrangements to study with him. He practiced his profession for some time in Bristol, and finally returned to Philadelphia in 1768. He opened a studio at the corner of Front and Pine Streets, and being well known, had no lack of employment. He, however, again crossed the sea in 1770, and went to Ireland, where he painted a full-length portrait of Rev. Archdeacon Mann in his canonicals. This picture was put on exhibition with the collection of the Dublin Society of Artists, and received much praise. Pratt remained abroad only a few months, and returned to Philadelphia in the same year.

At some time before the Revolution he painted a life-size portrait of Governor Hamilton, a copy of which is now in the possession of the Historical Society of Pennsylvania. But portraits were probably not so much in demand as picturesque signs, and Pratt had acquired much fame in this branch of his art. There were not then, as there are now, wealthy amateurs, ready to pay hundreds or thousands for a good picture. Patronage did not go much beyond the ordering of a few family portraits. Private collections were rare, although Dunlap states that Governor Hamilton possessed a collection of pictures, among which was a St. Ignatius, by Murillo. The true artist will not be content with reproducing on canvas the venerable wrinkles of *paterfamilias* or the rosy cheeks of the incipient belle; he must needs give play to his fancy, and give shape and color to some of the conceptions of his brain. In the age of pictorial signs the street became his picture-gallery, where he could exhibit his works. The tavern-keeper, perhaps, if his patrons approved of it, congratulated himself upon having made a good bargain when he paid a few extra dollars to the painter of that sign, but the stranger with artistic eye passing by paused to look more carefully at the painted piece of board, and, as in the case of Pratt's "Cock in a Barnyard," which for many years graced a beer-house in Spruce Street, recognized the hand of a master. He was, indeed, no mean artist who painted that other remarkable sign, "The Convention of 1787," with its number of likenesses so life-like, which caused crowds of admiring people to assemble at the corner of Fourth and Chestnut Streets, where it was first put up. Pratt had given proof of his skill and artistic taste as a decorative painter when, in 1785, he executed the paintings for the grand hall in which the Chevalier de la Luzerne gave his brilliant *fête* in celebration of the birth of the dauphin of France. The national symbols, the allegorical groups, and mythological figures were so well executed, and the coloring and disposition of the figures formed a harmonious whole so pleasing to the eye that they elicited the warm commendation of the chevalier, certainly a good judge in such matters.

Matthew Pratt ended a well-spent life on the 9th of January, 1805. He was then in his seventy-first year. He was the father of Henry Pratt, merchant, well known in his time as the owner of Pratt's Gardens, at Lemon Hill, and of Thomas Pratt, who died some years ago at an advanced age.

John Singleton Copley, of Boston, probably visited Philadelphia, and painted some portraits there before he went to England. He was in New York some time previous to his departure, and might well have made an excursion to Pennsylvania. At all events, a fine portrait of William Plumsted, mayor of Philadelphia, painted by this artist after the year 1750, is in the possession of Mayor Plumsted's descendants. Dunlap mentions the painter Woolaston as having painted portraits in Philadelphia in 1758, and in Maryland in 1759–60. Francis Hopkinson published some verses in praise of Woolaston in the *American Magazine* for September, 1758. Bernard Wilton, an English artist, was in Philadelphia in 1760. He was engaged principally, it seems, in sign-painting. His claims to fame consist in the painting of a fine sign representing a bull's head for a tavern in Strawberry Alley, which sign, from its superior execution, was for many years attributed to Benjamin West.

Henry Bembridge was born in Philadelphia in 1750, of wealthy parents, who encouraged his taste for art. While yet a youth, he painted the panels of a room in his father's house with historical designs, executed with so much skill as to attract attention. He went to Rome in 1770, and studied there for some time under Pompeio Battoni and Mengs. On his return to America, about 1774, he settled in Charleston, S. C. He came back to Philadelphia some time afterward, and married a Miss Sage. Several small pictures of Commodore Truxton and family are attributed to Bembridge, whose son had married a daughter of the commodore. According to Mr. Dunlap, Bembridge died in Philadelphia "in obscurity and poverty." The same author states that James Peale, a brother of Charles Wilson Peale, painted miniatures and oil portraits in Philadelphia, about 1775.

Charles Wilson Peale, the versatile genius who, without attaining the fame of West, yet did more toward spreading a taste for art in Philadelphia than any other painter, was born at Chestertown, Md., April 16, 1741. He was bound apprentice to a saddler in Annapolis while quite a young lad, and served his term of apprenticeship; but his active, inquiring mind would not permit him to devote his whole attention to one trade; from making saddles he got to making carriages, then he took to making clocks and watches. He had a natural facility for all kinds of mechanical employment, and if anything suggestive caught his attention he was ever ready to investigate and imitate it. Thus, having gone to Norfolk on some business, he casually saw the paintings of a Mr.

Frazier, and was struck with the sudden idea that he might do as well, although he had had no greater experience in painting than he might have acquired in his trade of coach-making. The result of this idea, which was a true revelation, was that on his return home the young tradesman shut himself up with canvas, brush, and colors, and a looking-glass, and succeeded in painting a portrait of himself. From that day Peale was a painter. He went to Philadelphia and made purchases of materials for portrait-painting and books of instruction in the limner's art. Hesselius, who about this time had settled in Annapolis, gave him some valuable advice. In 1768–69 the young painter made a voyage to Boston, where he met Copley, already successful as a portrait-painter, who kindly permitted him to copy one of his pictures and otherwise encouraged him. On his return home, Peale had decided that a voyage to England was indispensable if he wished to acquire a proper knowledge of the art and to merit the name of painter. Several gentlemen of Annapolis, interested in the young man, made up a subscription, and raised a sum sufficient for the carrying out of his views, the loan to be paid back in portraits. Peale, leaving his young wife and family, — he had married before he was twenty-one,—proceeded to London. He had a little money, a great deal of confidence and determination, and some letters of introduction to West. He remained in London from 1770 to 1774, studying with West, who kindly invited him to his house when his funds were exhausted. Not satisfied with studying painting while in London, Peale found time to learn modeling in wax, moulding and casting in plaster, painting in miniature, and engraving in mezzotinto.

C W Peale

Peale returned to Annapolis in 1774; but Philadelphia presented a wider field, and there he took up his abode in 1776. The times were unpropitious for the arts, and, besides, the artist was also a patriot; he was elected a captain of volunteers, joined Washington, and fought gallantly at the battles of Trenton and Germantown. Yet the sword had not banished the pencil, and while the captain of volunteers did his duty manfully, the artist found time to paint the likeness of his brother-officers. These portraits were the foundation of the gallery of national portraits, which was to be the principal feature in "Peale's Museum" after the war. He preserved on canvas the features of the most illustrious participants in the Revolutionary war. Washington he painted repeatedly. Rembrandt Peale says that the first portrait of Washington, at the age of forty-one years, was painted at Mount Vernon in 1772, by Charles Wilson Peale, who also executed others in 1778, 1781, 1783, 1786, 1795. Peale painted a portrait of Washington for the State of Pennsylvania in 1779. It was placed in the Council chamber in the State-House. In 1781 some persons unknown broke into the Council chamber, and defaced and totally destroyed the picture. While sitting for one of these portraits (a miniature for his wife), Washington received dispatches communicating the news of the surrender of Burgoyne. One of the best and most famous of Peale's portraits of Washington was painted in the building of the American Philosophical Society, Fifth Street, below Chestnut. It was painted by request of a committee of Congress, then sitting in Philadelphia. By the time the picture was finished some discussion had taken place in Congress about the price agreed upon by their committee, — eight thousand dollars,—which, it was held by some members, was more than the country could afford to pay for a picture. Mr. Peale declined to deliver the picture, and hung it up in his museum. In August, 1780, the following advertisement was published in the *Pennsylvania Packet:*

"The subscriber takes the liberty of informing the public that he has just published a mezzotint print in poster size (fourteen by ten, beside margin) of his Excellency, General Washington, from the original picture belonging to the State of Pennsylvania. Shopkeepers and persons going to the West Indies may be supplied at such a price as will afford them a considerable profit, by applying at the southwest corner of Lombard and Third Streets, Philadelphia.

"CHARLES WILSON PEALE.

"N.B.—As the first impressions of this sort of print are the most valuable, those who are anxious to possess a likeness of our worthy general are desired to apply immediately."

This was certainly the first instance of mezzotint engraving in Philadelphia. The picture thus reproduced represents the general in uniform, leaning on a

Digitized by Google

field-piece taken at Princeton, with the British prisoners in the background.

Peale painted, with great industry, soldiers, statesmen, philosophers, and eminent foreigners who visited America. His portrait of Benjamin Franklin was engraved, and was for a long time the accepted likeness of that eminent man. A very fine full-length of Gerard, first minister from France to the United States, was elaborate and finely finished. In his eighty-second year Peale painted a fine full-length portrait of himself,—a picture handsomely executed, representing a museum scene in the background, which was striking in the management of the subject.

Peale's portrait of Jefferson—engraved by Aiken & Harrison, Jr.—is perhaps the best likeness of that statesman ever executed. Portraits of John Paul Jones, Peyton Randolph, Rittenhouse, and John Dickinson,—executed in 1778,—and of Timothy Matlack and many others remain to attest the industry and skill of this artist.

In the winter of 1818–19 he made a trip to Washington City for the special purpose of painting the portraits of some of the distinguished men of that period. He returned with fifteen likenesses. Among them were portraits of President James Monroe, Vice-President Daniel D. Tompkins, Gen. Andrew Jackson, Col. Richard M. Johnson, John Quincy Adams, John C. Calhoun, and Henry Clay. These were added to the collection in the museum. Mr. Peale was at this time in the seventy-eighth year of his age. In his eighty-first year he painted "Christ Healing the Sick at the Pool of Bethesda." It was of large size—eight feet by six feet three inches.

In the year 1791, Mr. Peale attempted to form an association as an Academy of Fine Arts in Philadelphia, but failed to get a sufficient number of artists to carry out his project. Another attempt made three years later met with no better success. In 1809 he was very active in promoting the association known as "The Pennsylvania Academy of the Fine Arts," about which Benjamin West, in a letter to Charles W. Peale, expressed his satisfaction at the establishment of an academy in Philadelphia "for cultivating the art of delineation." Mr. Peale died in Philadelphia, Feb. 27, 1827, at the age of eighty-five, active and industrious to the last. He was certainly a man of uncommon gifts, and would have attained greater fame as a painter had he concentrated in the cultivation of one art the wonderful energies wasted in so many different pursuits. Yet, taking in consideration his surroundings, the difficulties which beset him, the troubled condition of the country during those years of his manhood which should have been the golden period for peaceful and serious study, and above all the condition of American art at that time, it must be conceded that he achieved more than could have been expected of any man. Mr. Dunlap will not admit of a comparison between Peale and West; he recognizes "*sublime* genius" in the latter, while the "*genius*" of the former "was devoted to making money." West was a truly great artist, but supposing him to be in Peale's place, taking up art when he had reached manhood and had a family to support, serving his country in the field and in its counsels,—for Peale's biographer says he represented Philadelphia in the Pennsylvania Legislature in 1779,—then, instead of having royal patrons to reward and encourage his talent, having to create a taste for art in a community scarcely recovering from a long war, it is doubtful if Mr. West would have become famous. Had Peale gone to Rome to study, had he found protectors and remained in Europe, devoting his whole energy to his art, who can tell what the result would have been? As it was, the duties of the man and patriot crippled the genius of the artist, but his works show that this genius did exist. Whether or not fame grants it a niche in her sanctuary, the name of Peale will live in Philadelphia, and be ever mentioned with gratitude. He published an essay on "Building Wooden Bridges" in 1797, "Lectures on Natural History" in 1800, "Preservation of Health" and "Domestic Happiness" in 1813, "Address to the Corporation of Philadelphia" in 1816, and "Economy of Fuel" in *Transactions of the American Philosophical Society*.

Mr. Peale had several children, and he gave to most of them the names of famous painters. He was an enthusiast in art, and probably cherished the fond idea that the boys he named Raphael, Rembrandt, Vandyke, Titian, and Rubens would some day attain the fame of their great patrons, and his eldest daughter become a second Angelica Kaufman. But Raphael and Rembrandt were the only ones who adopted the artist's profession. Rembrandt, born in Bucks County, Pa., Feb. 22, 1778, showed artistic dispositions at a very early age; he commenced drawing at the age of eight years, and at thirteen left school to devote himself to art. He studied and worked with his father, and acquired no little skill at portrait-painting. Washington sat to him in 1795. In 1796, Charles Wilson Peale relinquished portrait-painting in favor of his son Rembrandt, who was then only eighteen years old. In 1800, Rembrandt Peale decided to abandon his surname, and published the following curious advertisement in the newspapers:

"REMBRANDT.
The use of names being merely to distinguish individuals, and whereas few persons discriminate between the peculiar names of my father, uncle, brother, or myself, which creates a confusion disadvantageous to the distinct merit of each as an artist, I am induced to obviate this inconvenience on my part in being known only by my first name, Rembrandt, the adjunct Peale serving only to show of whom descended. Therefore, ladies and gentlemen desirous of viewing a few specimens of my style of painting may find me by the following direction:

REMBRANDT,
Portrait painter in large and small,
head of Mulberry Court, leading from Sixth, three doors above Market Street."

The experiment could not have been a very satisfactory one, for Rembrandt, not very long after this,

removed to Charleston, S. C. From that city he proceeded to London, where he placed himself under the guidance of Benjamin West, and studied diligently to improve in his art. From London he went to Paris, and after a short stay in that gay capital returned to Philadelphia in 1804. He paid another visit to Paris in 1807, for the purpose of painting the portraits of some of the celebrated characters of the time. Among the likenesses which he brought back to Philadelphia and exhibited at the museum in 1808 were those of the famous naturalist and French academician, Baron Cuvier; Abbé Hauy, the learned mineralogist; Bernardin de Saint-Pierre; the traveler, Denon; and the great sculptor, Houdon. He also painted the portraits of Count Rumford and Gen. Armstrong. But Rembrandt had not devoted so much time to the study of the masterpieces in the London and Paris galleries for the mere purpose of improving his skill as a portrait-painter; in 1812 he exhibited "The Roman Daughter," a much-admired picture; this was followed by the "Ascent of Elijah," and in 1820 by his grand composition, "The Court of Death," the subject of which was suggested to his mind by Bishop Porteus' poem on "Death."

The idea which governed the artist was thus described in the pamphlet published for the use of persons who visited the picture:

"The picture of 'The Court of Death' is an appeal to the public taste by a native artist. It is an attempt to introduce pure and natural allegory (or rather *painting by metaphor*) in the place of obsolete personification and obscure symbols. It is a demonstration of the science of painting applied to its noblest purpose,—the expression of moral sentiment. It is a discourse on 'Life and Death,' equally interesting to all ages and classes, delivered in the universal language of Nature—the eloquence of the painter's art—which speaks not by the slow progression of words; and is calculated to remove the misconceptions of prejudices and terror, and to render useful the rational contemplation of death.

"The most impressive idea of death was excited by the appearance of a dead body which received the strongest ray of light in the picture. It was the body of a man in the prime of life by some accident rendered lifeless. The power of death was personified as an attribute of Deity 'by an antique form coeval with man,' the head representing the Egyptian feature, the form one of strength and power, covered with massive drapery, and seated on a shroud. On the right hand was a group expressive of War, in which were represented allegorical figures of Want, Dread, Desolation, the Warrior and his Victim, and Infant and its Mother. Pleasure, Youth, Remorse, and Suicide occupy another group. In another group were the victims of luxury and intemperate pleasures, —Gout, Dropsy, Apoplexy, Hypochondria, Fever, and Consumption. In the centre was Old Age supported by Virtue."

Rembrandt gives an interesting account of how he obtained the models for the figures in this picture:

"My good and venerable father stood as the representative of Old Age, modified by the antique bust of Homer. One of my daughters stood in place of Virtue, Religion, and Hope; and another knelt to the attitude of Pleasure, I borrowing a countenance from imagination. My friend and critic, John Neal, of Portland, impersonated the Warrior, beneath whom a friend consented to sink to the earth in distress, and thus appeared as a mother of a naked child, which I painted from my then youngest daughter. The corpse was the joint result of a study from the subject of a medical college and the assistance of my brother Franklin, lying prostrate with inverted head, which was made a likeness of Mr. Smith, founder of the Baltimore Hospital. My brother also, though of irreproachable temperance, stood for the Inebriated Youth. My wife and others served to fill up the background. It may be worth while to mention that for the figure of Famine following in the train of War I could find no model, though I sought her in many a haunt of misery, and I therefore drew her from my brain; but, strange to say, two weeks after the picture was finished, a woman passed my window who might have been sworn to as the original."

The canvas of this picture was twenty-four feet in length, thirteen feet high, and it contained twenty-three figures, larger than life.

In June, 1824, Rembrandt Peale exhibited his equestrian portrait of Washington in the old Apollodorean Gallery, on Swanwick Street. In the notice of the picture, in December, 1824, it was said that "Washington is represented seated on horseback, in the midst of a group of mounted officers, Lafayette, Knox, Lincoln, and Rochambeau. He is in the act of giving an order relative to the opening of the trenches before Yorktown."

This was a very fine picture, but about the same time Rembrandt completed another portrait of Washington, which he considered his greatest work. This was the picture—purchased by the United States in 1832 and placed in the capitol—in which the hero is represented in senatorial costume. Rembrandt, in his autobiography, speaking of this picture, says that, commencing with the original portrait of Washington, painted by him from life in 1792, he was still dissatisfied, as well with his own work as with the existing portraits of Washington, those by C. W. Peale, Pine, Wertmuller, and Stuart. He made sixteen attempts to paint this likeness. "I determined, in 1823, to make a last effort, and under an excitement even beyond the 'poetic frenzy' which controlled me during the three months to the exclusion of every other thought, and to the grief of my father, who considered it a hopeless effort, I succeeded to his conviction." Before its purchase by Congress, Rembrandt Peale's Washington was exhibited in various cities of the United States, and taken by the artist himself to Europe, in 1829, when it was exhibited in Naples, Rome, Florence, Paris, and London.

Rembrandt Peale painted and exhibited in Philadelphia a large picture of "Napoleon on Horseback," "The Death of Virginia," "Lysippa on the Rock," and many other pictures, landscapes, and portraits. His "Jupiter and Io," which he painted in 1813, was not publicly exhibited, owing to the figures being partly nude; it was made the subject of a special exhibition, and received the praise of the connoisseurs who visited it. After an absence of about ten years in Baltimore, Mr. Peale returned to Philadelphia in December, 1823, and resumed the practice of his profession at his old gallery on Swanwick Street. During the winter of 1859–60 he lectured in the principal cities on the portraits of Washington. He published "Historical Disquisition on the Mammoth," in 1803; "Notes on Italy," in 1831; "Portfolio of an Artist," in 1839; "Biography of C. W. Peale;" "Reminiscences of Art and Artists;" and a small treatise on elementary drawing, entitled "Graphics," in 1845. He contributed to the *Cincinnati Literary Gazette* in 1824. He died in Philadelphia, Oct. 3, 1860.

Raphael Peale, the first-born son of Charles Wilson Peale, came out as a portrait-painter, in oil and miniature, in 1800. He was not very successful in his profession, for while, in 1804, his prices were,—portraits in oil, fifty dollars, and miniature portraits, painted on vellum paper, ten dollars, in 1811 and later he offered to paint portraits in oil for fifteen dollars; in crayon, and miniatures on ivory, ten dollars: and profiles, colored, on ivory paper, as low as three dollars. He paid considerable attention, however, to paintings from still life, and was eminently successful in this particular branch of the painter's art, which Dunlap says "he was the first, in point of time, to adopt in America." Many of Raphael Peale's pictures of fruit, game, and fishes have been preserved in the collections of amateurs, and are highly prized. He died in Philadelphia, March 4, 1825.

Titian, the fourth son of C. W. Peale, seems to have turned his attention almost entirely to the drawing and painting of subjects connected with natural history. He drew the figures of birds engraved in the first volume of Bonaparte's "American Ornithology," and a part of those in the fourth volume. His first pictures on exhibition at the Academy of Fine Arts, in 1821, were water-color drawings of buffaloes, striped squirrels, Missouri bears, butterflies, etc.

Another branch of the Peale family has also produced several artists. James Peale, a brother of Charles Wilson Peale, who persuaded him to give up his trade and study painting, became quite a respectable portrait-painter. He essayed his skill on some works of more importance, and was quite successful. In 1811 he painted a picture representing "A Rencontre between Col. Allen McLane and Two British Horsemen," which occurred during the Revolution, near Philadelphia. This painting was for many years an ornament of Peale's Museum. One of his most ambitious works was a full-length portrait of Washington. He also painted "A View of the Battle of Princeton." In 1818 he painted "A View of Belfield Farm, near Germantown," the country-seat of his brother. James Peale died in 1823.

His daughter, Miss Anna C. Peale, exhibited her first picture—a fruit piece—in 1811. She devoted her attention for some years to painting still-life subjects, but afterward took to miniature painting. She painted miniature portraits of the French Gen. Lallemand; also of the "celebrated Albiness," Miss Hervey, President James Monroe, Maj.-Gen. Jackson (1819), James Peale (1820), and Commodore Bainbridge, of the United States navy.

Another daughter, Miss Maria Peale, commenced to paint vegetables and still-life subjects about 1810. It does not appear that she attempted portrait-painting.

Miss Sarah M. Peale, still another daughter of James, made herself known in 1816 as a painter of flowers. Still-life subjects—peaches, grapes, muskmelons, jelly, and cake—were exhibited by her in 1819. Afterward she took to painting portraits in oil. In 1820 she executed a portrait of the Rev. William Ward, missionary to Serampore, and one of Commodore Bainbridge in 1822. In 1825 Lafayette accorded her four sittings. Miss Peale afterward removed to Baltimore and Washington, where she painted the portraits of many senators, congressmen, and others.

James Peale, Jr., also followed his father's profession, but does not appear to have given any attention to portrait painting. A view of High Street bridge, by this artist, was hung up in the exhibition-room of the Columbian Society of Artists in 1813. Very soon after this first production of his pencil he painted a view of an engagement near Pernambuco between the privateer schooner "Cornet," Capt. Boyle, of Baltimore, and a Portuguese sloop-of-war and three vessels under her convoy; "View of Germantown" (1820), "View of Water Gap and breaking away of a Storm" (1824), "Fairmount Water-Works" (1824).

Pierre Eugène Du Simitière, already mentioned in these pages as a collector of curiosities and a writer, was also a painter of some talent, and practiced his profession in the city from 1760 to his death, in 1788. He was the designer of the frontispiece of the *United States Magazine*, published in 1779, and of an allegorical vignette for the *Pennsylvania Magazine* (1775), representing the Goddess of Liberty, etc. He painted a portrait of Silas Deane, which was engraved by B. Reading, London, in 1783. Shortly after the Declaration of Independence, Du Simitière was employed by a committee of Congress, consisting of Benjamin Franklin, John Adams, and Thomas Jefferson, to furnish designs for a seal for the new republic. After several consultations with the committee, each member of which had his own idea of a suitable subject, the following device was thought satisfactory: The shield, with six quarterings, was charged with the rose of England, the thistle of Scotland, the harp of Ireland, the lily of France, the black eagle of Germany, and the crowned red lion of Holland, these being allusions to the different nations by which America was peopled. Du Simitière proposed, as supporters, the Goddess of Liberty, with the pole and cap, and an American rifleman, with a rifle and tomahawk. Over the shield was the All-Seeing Eye. Motto, "*Bello vel pace.*" Franklin desired to propose a device of Moses lifting his wand and dividing the Red Sea, and Pharaoh and his host overwhelmed in the waters. Adams proposed the choice of Hercules between Virtue and Pleasure. Jefferson suggested the children of Israel in the wilderness, led by a cloud by day and a pillar of fire by night, and on the other side effigies of Hengist and Horsa, the Saxon chiefs, whose political principles were claimed to be the foundation of the system of government of the United States. Jefferson was desired to combine these ideas, and he did so by adopting the shield and quarterings of Du Simitière. The supporters were the Goddess of Liberty wearing a corselet of armor,

and holding the spear and liberty-cap, and the Goddess of Justice, with sword and balance. Crest, the All-Seeing Eye in a radiant triangle. Motto, "*E pluribus unum.*" The borders of the shield were formed by thirteen white escutcheons, linked together by a golden chain, and bearing the initials of the thirteen States. The device on the reverse was to be Pharaoh attempting to follow the Israelites through the Red Sea. The motto, "Resistance to tyrants is obedience to God." Congress took no action on this project when it was reported, in 1776, and a new committee was appointed in 1779, to report a design for a seal. Du Simitière proposed the following: The shield—bow, thirteen diagonal stripes, alternate red and white; crest, a radiant constellation of thirteen stars; supporters, Peace with the olive-branch, a mailed warrior with sword; the supporters holding over the shield a linked chain. Motto, "*Bello vel pace.*" Reverse, the Goddess of Liberty, seated. Motto, "*Virtute perennis.*"

This design was not adopted; another design, furnished in the succeeding year by William Barton, was not more satisfactory. Finally, the present device of the seal was adopted; it was sent to the President of the United States by John Adams, and is said to have been designed by Sir John Prestwich, baronet, of the west of England, an accomplished antiquarian, and a friend to America during the Revolution.

Du Simitière painted miniatures in water-colors, and had many of his portraits engraved in Paris, among them Washington, Arnold, Silas Deane, Gates, Laurens, Huntington, Morris, Steuben, Charles Thomson, Gerard, and Joseph Reed. He was an ardent patriot and a well-informed man, and collected materials for a history of the American Revolution.

Thomas Spence Duché, son of the Rev. Jacob Duché, rector of Christ Church and St. Peter's, was born in Philadelphia about 1766. He went to London with his father, when the latter left Philadelphia (during the British occupation of the city in 1777–78), and studied painting with West. Very little is known of his life, but such of his works as have been brought to this country are evidences of his fine artistic talent. He painted a portrait of Bishop Seabury, of Connecticut, while the latter was in London, in 1783. The original of this picture, well known from Sharpe's engraving of it, is now at Washington College, Hartford, Conn. A portrait of Bishop Provoost, of New York, which is in possession of the family of the late Cadwallader Colden, an "Infant Saviour," and two pieces for public charities, are also the productions of Mr. Duché's pencil.

Robert Fulton, who was to acquire undying fame as the introducer of the steamboat, began life as a portrait-painter in Philadelphia, in the year 1782; he was then seventeen years old, having been born in Little Britain, Lancaster Co., in 1765. As a boy he had shown great attachment to mechanics as well as a fondness for drawing and painting, and it is likely that he adopted the latter as a profession because it would bring immediate pecuniary returns, for he was poor and without friends. Yet, he managed by untiring industry to save enough in four years to purchase a small farm in Pennsylvania, where he established his widowed mother. The good son, having thus secured his parent against possible want, felt free to seek that improvement in his profession which would give him fame, for he could not but see that his pictures lacked the artistic touch which well-directed studies alone would enable him to give them. He went to England to seek instruction from Benjamin West, —the Polar Star toward which all young American artists turned. "That Mr. West justly appreciated the character of his young countryman," says Mr. Dunlap, "is attested by his presenting him with two pictures; one representing the great painter, with his wife's portrait on his easel, and the other Fulton's own portrait."

ROBERT FULTON.

While practicing the art of painting, Fulton had his attention again attracted to his old favorite science of mechanics, and in 1795 he gave up a profession in which he had never attained very great eminence. His subsequent career, however interesting, has nothing to do with art. Mr. Dunlap says of one of his paintings, "In 1793 was published a print, engraved by Sherwin, from a picture by Fulton, of Louis XVI. in prison, taking leave of his family. The only copy I have seen is possessed by my friend Dr. Francis; it is now a curiosity." Fulton painted a very good portrait of his friend, Joel Barlow. He directed and superintended the execution of the fine plates of Barlow's "Columbiad." Mr. Colden, in his "Life of

Google

Fulton," says, "He paid about five thousand dollars for the paintings, the plates, and letter-press, which gave him a property in the publication. He relinquished, by his will, all his right to the widow of Mr. Barlow, with the reservation of fifty of the proof and embellished copies of the work. It was printed in Philadelphia, in quarto, and published in 1807; it is dedicated by Mr. Barlow to Mr. Fulton in such terms as evinced the strong attachment which subsisted between these men of genius. The original paintings, from which the prints of the 'Columbiad' were engraved, form a part of the handsome collection which Mr. Fulton has left to his family."

Though Fulton had ceased to paint, his love of art never changed. His affection for his kind instructor, West, and admiration for that great artist's talent are attested by his purchasing, at a high price, the pictures painted by West from "Lear" and "Hamlet" for Boydell's "Shakespeare." He also bought a fine picture by Raphael West from "As you like it." He went further and tried to persuade the citizens of Philadelphia to purchase such pictures of West as were at that artist's disposal. In his letter accompanying the catalogue he remarked, "No city ever had such a collection of admired works from the pencil of one man, and that man is your fellow-citizen." Fifteen thousand pounds sterling was the price set on the collection, "a sum," said Mr. Fulton, "inconsiderable when compared with the objects in view and the advantages to be derived from it."

If Robert Fulton was not a great artist, he had a great mind and a great heart. He died on the 24th of February, 1815. He had married, in 1806, Miss Harriet Livingston, daughter of Walter Livingston, of New York, from which he left issue one son and three daughters.

Two old advertisements tell all we know of two artists who were in Philadelphia for a short time. In the *Pennsylvania Packet* of January, 1781, is the announcement that "Austin Florimont, limner, lately arrived in this city, who is peculiarly happy in his likenesses, paints miniature and crayon pictures of all sorts at very reasonable prices," and in the *Pennsylvania Gazette* of Jan. 20, 1782, "Mr. Verstille, at Mrs. Ford's, in Arch Street," informs us that he "will take miniatures, for two months, for two guineas."

In 1781, George Rutter painted the arms of the State of Pennsylvania over the seats of the judges of the Supreme Court, in the room since called Independence Hall, and Martin Jugiez carved the ornamental frame of the coat of arms. These artists, it appears, had not been properly authorized to do this work, for the Assembly resisted their claim, which was not finally settled until 1799.

In the latter part of 1782, Joseph Wright, an American artist, lately from London and Paris, came to America. At Princeton, in 1783, he painted portraits of Washington and Mrs. Washington, and was employed by Congress to take a plaster cast of the features of the former for the purpose of sending it to Europe as a guide for a sculptor to make a statue. Washington submitted to the disagreeable operation, but Wright having unluckily broken the mould after he had removed it, the general would not consent to his trying a second cast. In the winter of 1783–84, Wright was in Philadelphia, and painted a portrait of Washington, which the latter presented to Count de Solms. This nobleman had formed a collection of portraits of distinguished military characters, and was anxious to place among them the likeness of the glorious American general. Wright went to New York after this, but returned to Philadelphia when Congress came back. He resided here until 1793, when he died of the yellow fever. During that period he executed, among other works, a portrait of Madison and a picture of Madison and family. Wright was a native of Bordentown, N. J. His mother, Patience Lovell, became celebrated as a modeler in wax. Mrs. Wright, after the death of her husband, Joseph Wright, Sr., took her children to London, where she devoted herself to her work of modeling. She became famous in this art, and both in London and Paris made enough money with her wax-work exhibitions to pay for the education of her children. Joseph, who had a taste for painting, studied with West; he was also aided in his efforts by Hopner, who married his sister. He profited in his studies, and before he left England had painted some good portraits, among others that of the Prince of Wales, afterwards George IV. Mrs. Wright placed her son under the protection of Benjamin Franklin, in Paris, during part of the winter of 1781–82, and the young artist received several commissions for portraits from the aristocratic families of the Faubourg St. Germain, which he executed before his return to America. Wright had learned from his mother the art of modeling in wax and clay. During his residence in Philadelphia he taught William Rush, the sculptor, how to model in clay. He had also learned die-sinking, and he was appointed die-sinker to the United States Mint a short time before his death. "His children [his wife died during the same epidemic of 1793] have a picture painted by him in Philadelphia, representing in small full-lengths himself, wife, and three children;" also "a chalk drawing of his head, done from the mirror, which is more like, and very skillfully drawn."[1]

Robert Edge Pine, an English painter, who had acquired much fame in his native country, being considered one of the best portrait and historical painters in England before the arrival of West, came to Philadelphia in 1784. His object in coming to this country was to obtain portraits of noted personages and sketches of places of historical interest, to be afterward combined in historical paintings of American

[1] Dunlap's History of the Arts of Design.

subjects. His first portrait painted in America was that of Francis Hopkinson. He was extremely desirous of painting Washington, and Mr. Hopkinson feeling interested in him and his plans, wrote to the general, then at Mount Vernon, and obtained this privilege. Pine's portrait of Washington was painted in 1785. The artist had not much opportunity to paint during the short time he lived in Philadelphia, yet several good portraits by him have been preserved. A beautiful portrait of Sarah Livingston (Mrs. John Jay) is in possession of the Jay family at New York. A picture of Mrs. Richard Caton (Polly Carroll) belongs to the McTavish family of Maryland. The artist occasionally visited Virginia and Maryland, and painted portraits during these excursions. He executed full-length portraits of Charles Carroll of Carrollton, Charles Carroll, his son, and the daughters, Mrs. Caton and Mrs. Hooper; groups of the Patterson and Smith families of Maryland, and portraits of George Read, of Delaware, and of Thomas Stone. Robert Morris took an interest in Pine, and is said to have procured for him the use of a house on Eighth Street, above Market, where the artist died, Nov. 19, 1788. Mary Pine, his widow, presented a petition to the Legislature of Pennsylvania, stating that her husband came to America with a view of representing, in several large paintings, the principal events of the late American war, and that he had brought with him original historical paintings, engravings, drawings, and designs. A building was erected for the reception thereof, but the debts were not yet paid upon it. She therefore prayed for permission to dispose of her husband's pictures by lottery. The Assembly granted her prayer, and the pictures were disposed of, many of them falling into the possession of Daniel Bowen, who exhibited them at his museum, and afterward removed them to Boston.

Concerning Pine's merit as an artist, it is said that his drawing was weak, but that his coloring was excellent. Allston said of him, "In the coloring of the figures his pictures in the Columbian Museum at Boston were my first masters. Pine had certainly, as far as I can recollect, considerable merit in color."

Joseph Hopkinson says of Pine,—

"He was a very small man; morbidly irritable. His wife and daughters were also very diminutive; they were, indeed, a family of pigmies. After his death his family went back to Europe. . . . He brought with him a plaster cast of the Venus de Medici, which was kept *shut up in a case*, and only shown to persons who particularly wished to see it, as the manners of our country, *at that time*, would not tolerate a public exhibition of such a figure. This fact shows our progress in civilization and the arts."

Mr. Dunlap mentions Edward Savage, a native of New England, as having lived in Philadelphia before 1789. It is said of this artist that "he painted poor pictures, and made still poorer engravings from them." One of his pictures, however, "Washington and his Family," is extensively known through the country by the many engravings and lithographs which have been made from it. It represented the general, Mrs. Washington, George Washington Parke Custis, his sister, afterward Mrs. Lewis, and Billy, a favorite servant. He also painted, while in Philadelphia, a profile portrait of George Washington upon wood, which was said to be a good likeness. A portrait of Robert Treat Paine, by Savage, is among the likenesses of "The Signers of the Declaration of Independence," engraved by Longacre. Engravings from portraits of Gen. Anthony Wayne and William Smith, of South Carolina, by Savage, were published in 1801. The first panorama ever exhibited in Philadelphia was shown by Savage in 1795. It represented the cities of London and Westminster.

In 1791, the Earl of Buchan presented to Washington, whom he admired above all men, the historical box made out of the oak-tree which sheltered Sir William Wallace, after his defeat at the battle of Falkirk, by Edward I., in the fourteenth century. Archibald Robertson, an English painter, was the bearer of this box, and obtained the privilege of painting a portrait of Washington in miniature. He also took a miniature likeness of Mrs. Washington, from which he afterward painted her portrait in oil and sent it to the earl. These miniatures were painted in 1792. Mr. Robertson did not prolong his stay in Philadelphia, but went to New York, in which city he resided principally while in this country.

C. Milbourne, who was brought from England by Wignell, in 1793, as scene-painter for the Chestnut Street Theatre, was gifted with a correct artistic taste. For his benefit, in December, 1794, he painted some local scenes to illustrate a pantomime called "The Elopement." Among these scenes, a view of Arch Street wharf, with a boat sailing on the Delaware, and a view of Third and Market Streets were remarkable for their excellence. James Cox, another Englishman, came to Philadelphia in 1794. He had been a colorer for Boydell, the famous London print-seller, and excelled in drawing and painting flowers. He was very successful in Philadelphia as a drawing-master.

In 1794 there came to Philadelphia that famous portrait-painter and most eccentric genius, Gilbert Stuart. A native of Rhode Island, he was connected with one of the old Philadelphia families, his mother being a sister of Joseph Anthony, of this city. Gilbert Charles Stuart, or Gilbert Stuart, for he dropped the middle name when he became a painter, had shown at a very early age a decided taste for drawing, and after copying pictures had even attempted likenesses in black lead, many of which were considered successful, when he was little over thirteen years of age. In our notice of Cosmo Alexander we have related how that artist, after giving lessons to the boy Gilbert, had taken him with him to South Carolina, and thence to Scotland. Not very long after their arrival in that country Mr. Alexander died. Stuart then became a pupil of Sir George Chambers, but

this gentleman also died shortly after, and the young American was left without friends in a strange country. What befell him there is not known. We next hear of his arrival in Nova Scotia, in great distress and poverty, having, it is believed, worked for his passage on board the collier that brought him there. From Nova Scotia he managed to get back to Newport, R. I., where he was some time in getting over the effects of the hardships he had suffered. But his travels had not been profitless, he had learned something of drawing and painting, and he resumed with renewed ardor his favorite occupation.

About this time his uncle, Joseph Anthony, came to Newport on a visit to his relatives, and was much struck by a portrait of his mother, which Gilbert, the grandson, had painted from memory, the old lady having died when he was ten years old. Mr. Anthony gave a commission to his nephew to paint the portraits of himself, his wife, and two children, and showing these to his friends, succeeded in obtaining for the young artist orders for the painting of several other portraits. The warm interest felt by Mr. Anthony in his young kinsman and the encouragement he gave him were most valuable. This was the painter's first start in life, and pretty soon he had as many portraits to paint as he could attend to. But the Revolutionary contest with Great Britain was approaching; the clouds of war were already gathering, and art, to flourish, needs a peaceful sky. Stuart, besides, wished better opportunities for study than he could find at home. He resolved to follow his schoolmate and dear friend, Dr. Benjamin Waterhouse, who had gone to London a few months before. He was not well provided with money, but he counted on his friend or on his own luck. He arrived in London in November, 1775, and learned, with what feelings of disappointment may well be imagined, that Waterhouse had gone to Edinburgh. He was a stranger, alone, friendless, almost penniless, in the great metropolis. He had suffered in Scotland, and now England had no better welcome for him.

GILBERT STUART.
[After the engraving by D. Edwin from Neagle's painting.]

That the young painter's first experience of London was a hard one is beyond doubt; but Gilbert Stuart was not the man to give way to despondency; he was possessed of that hopeful temperament ascribed to Mr. Micawber by Dickens, and often "waited for something to turn up." Nor was he deceived in his hope, though he had dark hours which would have made a less sanguine man despair. Stuart was a fine musician, noted particularly for his skill on the organ. This was fortunate, for music gave him the means of support before his pencil had found employment. The circumstances, related by Stuart himself to Mr. Charles Fraser, of Charleston, S. C., and Mr. Thomas Sully, of Philadelphia, and given at length by Dunlap, in his "History of the Arts of Design," were as follows: In that first period of trial, as Stuart was walking the streets listlessly one day, revolving in his mind the problem of how to pay his landlord for board and lodging, he heard the sounds of an organ issuing from the open door of a church in Foster Lane. Several persons were going in, and of one of these he inquired what was going on. He was informed that several candidates for the vacant position of organist were to exhibit their skill in presence of the vestry, who sat as judges. Entering the church, he placed himself as near as he could to the vestrymen, and after listening a while, asked one of them if he, a stranger, might try his skill and become a candidate for the place. Receiving an affirmative answer, he took his seat at the organ, and drew from it such sweet sounds that the delighted judges were unanimous in giving him the preference over his rivals. After due inquiry he was engaged at a salary of thirty pounds a year, which enabled him to support himself while pursuing his studies as a painter.

Strange as it may seem, Stuart did not get acquainted with West until the summer of 1778. His reception by that great artist is described in Stuart's own words to Mr. Fraser.[1] He said "that on application to Mr. West to receive him as a pupil, he was welcomed with true benevolence, encouraged, and taken into the family; that nothing could exceed the attention of that artist to him; they were, said he, paternal." Stuart studied for some years with West, whose kindness to him he never forgot, and at last, by his friend and master's advice, commenced painting as a professional artist. His first portrait, that

Digitized by Google

of Mr. Grant, being put on exhibition, attracted general attention. In a short time he had become famous, and his pictures occupied the best places at the annual exhibitions of the Royal Academy. Indolent and industrious by fits, loving pleasure, fond of society in which he was hailed as a most agreeable companion, whose conversation sparkled with wit and humor, Stuart did not derive from his great success the material advantages they should have brought a man of ordinary prudence. Even when his pictures commanded the highest prices, he was often in debt. He returned to the United States in 1793, and settled in New York. There he painted many portraits. Dunlap mentions as particularly fine those of the Pollock and Yates families, Sir John Temple and some of his family, the Hon. John Jay, Gen. Matthew Clarkson, John R. Murray, and Col. Giles.

Stuart now conceived a great desire to paint the portrait of President Washington. He obtained a letter of introduction from John Jay, and came to Philadelphia (1794). Here he painted his first portrait of Washington, but only finished the head. This unfinished portrait he kept, and used it as a model for many other portraits of Washington, which he executed in after-years. The President, by the persuasion of Mrs. Bingham, it is said, consented to sit for the full-length portrait, which, engraved by Heath, of London, became generally known as Stuart's Washington. This portrait was the cause of a quarrel between the painter and Mr. Bingham. It had been painted for Lord Lansdowne, and Mr. Bingham persuaded Stuart to sell it to him in order that he might present it to that nobleman. Mr. Bingham, when he sent the portrait to Lord Lansdowne, neglected to reserve the right of the painter to have it reproduced by engraving. It was engraved by Heath, and Stuart had no share in the profits of the operation. He reproached Mr. Bingham with having sacrificed his interests, and they parted in anger. Stuart was then painting a very beautiful head of Mrs. Bingham; he left it unfinished, and never touched it afterward. Dunlap calls Heath's a "vile" engraving, "a libel upon Stuart and Washington."

Stuart took up his residence at Germantown, where he remained until Congress removed to Washington, when he went to that city. During his stay in Philadelphia he painted portraits of Judge Shippen, Judge (afterward Governor) McKean, three portraits for Peter Wager, wine merchant, and others. Volney, the French traveler and author, sat for his portrait to Stuart. Dolly Paine, afterward the wife of James Madison, was painted by Stuart. A portrait of A. J. Dallas, from the pencil of this artist, and of Timothy Pickering, are generally known by the existence of engraved copies. Stuart also painted the portraits of Eleanor Curtis (afterward Mrs. Lawrence Lewis), Sally McKean (afterward the Marchioness De Yrujo), and Elizabeth Willing (afterward Mrs. William Jackson). A portrait of John Nixon, by Gilbert Stuart, was in the possession of Henry Cramond. Ricketts, the circus-rider, sat to him, and the artist becoming angry at the equestrian, who gave him a good deal of trouble by his want of promptitude and the delays which occurred, is said to have dashed his paint-brush into the face of the portrait, declaring that he would have nothing more to do with him. A portrait of Mrs. Benedict Arnold (formerly Peggy Shippen), by Stuart, was in possession of Edward Shippen of this city. A very fine portrait of Provost William Smith, of the University, belongs to Dr. Brinton.

Gilbert Stuart died in Boston in July, 1828, in the seventy-fifth year of his age. He died a poor man, after enjoying merited celebrity for nearly half a century. He preserved his brilliant faculties to the last. We will close this brief notice of the great portrait-painter with a last extract from Mr. Dunlap's work: "If we judge by the portrait of the Hon. John Quincy Adams, the last head he painted, his powers of mind were undiminished to the last, and his eye free from the dimness of age. This picture was begun as a full-length, but death arrested the hand of the artist after he had completed the likeness of the face, and proved that, at the age of seventy-four, he painted better than in the meridian of life. This picture has been finished—that is, the person and accessories painted—by that eminent and highly-gifted artist, Mr. Thomas Sully, who, as he has said, would have thought it little less than sacrilege to have touched the head."

Benjamin Trott, an American artist, who came to Philadelphia with Stuart in 1794, was one of the best miniature painters of his time. Stuart had become acquainted with him in New York, where he had been practicing for some time, and liking his style, recommended him when miniature copies of his portraits were wanted. In Philadelphia, among other works he made an excellent copy, on ivory, of Stuart's Washington. He left the city in 1805, but came back in 1806, and remained until 1819. He and Thomas Sully were for some years joint tenants of a house, each pursuing his respective branch of art. Trott was extremely sensitive, and at the same time given to making caustic remarks, which may account in some measure for his not achieving any great success, notwithstanding his acknowledged skill in portrait-painting. In a notice of some miniatures of his which were exhibited at the academy in 1812, a writer in the *Portfolio* remarks, "The works of this excellent artist are justly esteemed for truth and expression. In examining his miniatures we perceive all the force and effect of the best oil pictures; and it is but fair to remark that Mr. Trott is purely an American: he has never been either in London or Paris."

The Swedish painter, Wertmuller, also settled in Philadelphia in 1794. He was in the maturity of his age and talent, and had already acquired some fame in Europe. He brought with him some of his paint-

ings, which, being much admired, brought him several commissions. He painted Washington, and, it is said, recopied for James Hamilton the portraits of the Hamilton family, and then Hamilton destroyed the originals. Wertmuller returned to Europe in 1796, but having lost much money through some unlucky investment, he bethought him of Philadelphia and of his success there, and came back in 1800, bringing with him his celebrated painting of "Danae." This being a nude figure, could not be exhibited publicly, yet the curiosity to see this masterpiece was such that its private exhibition brought to the artist quite a handsome income. Wertmuller lived some years in Philadelphia, where he married a lady of Swedish descent, and finally removed to Marcus Hook, Pa., where he died in 1812. His pictures were sold at auction after his death and commanded very good prices, a copy of his "Danae" selling for five hundred dollars.

Samuel Jennings, a native of Philadelphia, painted a large and imposing allegorical picture in the year 1792, which he presented to the Philadelphia Library. It is called "The Genius of America Encouraging the Emancipation of the Blacks." It was long exhibited in the room of the Loganian Library, but now is in the main room of the Philadelphia Library. It is a showy picture, but is not a work of high art. Jennings went to London, and Dunlap says that he was there in 1794, and degraded his talent by "manufacturing old pictures for the knowing ones,—a degradation which could lead to no other result than poverty and wretchedness."

Quite a number of foreign artists, mostly unknown to fame, visited Philadelphia during the last years of the eighteenth century. The young American republic naturally attracted the attention of the world. Travelers sought the seat of government, where they might become acquainted with the great men of the Revolution, and be allowed to contemplate that wonderful man who had successfully led his countrymen to victory and liberty,—George Washington. Artists were eager to copy his august features. We doubt if any man was ever painted, engraved, and lithographed so often as our Washington was during that period and the following decade. It is not very long since an aged Philadelphian gave his recollection of the arrival of a vessel from Canton, which "brought to this port a few likenesses of Washington, executed on glass, in a superb and masterly style, by an eminent Chinese artist. It is said that the resemblance was striking, and approached very much to Stuart's happiest efforts." Those artists, though unknown to fame, deserve a brief notice as having contributed each, in his modest way, to the history of art in Philadelphia.

John James Barralett, an Irishman, born of French parents, came to Philadelphia about 1795. His principal occupation was that of designing engravings for books. He also made picturesque drawings, and a specimen of his style is preserved in a view of Centre Square. His most important work was a portrait of the French Gen. Moreau, which he painted when this celebrated man was in Philadelphia. Barralett added some fancy decorations to the plate of Robertson's miniature portrait of Washington when it was engraved by the Englishman, R. Field, himself an excellent miniature-painter as well as engraver. Barralett was described as "a man of talent, without discretion or anything like common prudence, prodigally generous, and graspingly poor. . . . He had the wildest portions of the French and Irish character vindictively united in him. He had some mechanical genius. He invented a ruling-machine,—the first used in the United States by engravers. He also devoted much time to the improvement of ink for copper-plate printing."

A young painter of the name of Bartello, probably an Italian, was employed by T. B. Freeman, in 1796, to paint portraits from which engravings might be made. Duvivier & Son kept an academy of drawing and painting, on North Second Street, in 1797. Mr. Duvivier, it was stated, "painted on silk and satins." Lawrence Sully, an elder brother of the famous artist, Thomas Sully, painted miniatures and fancy pictures, at No. 58 North Fifth Street, at that time. On Washington's birthday, Feb. 22, 1796, there was an exhibition of "The Temple of Minerva," with a statue of the goddess contemplating a bust of Washington, all of which was the work of Joseph Peruani, an Italian painter and architect. Woolley, an English painter, divided his time between New York and Philadelphia. He painted small portraits in oil, and other pictures. John Joseph Holland, who was brought from his native city of London, by Wignell, in 1796, as scene-painter for the Chestnut Street Theatre, also drew and sketched landscapes. A view of Philadelphia from the west side of the Schuylkill, near the upper ferry, was drawn by Holland about 1797, and engraved by Gilbert Fox. It shows the Fairmount hill, and gives a curious view of the city from an unusual point of observation. Holland taught Hugh Reinagle and John Evers, distinguished scene-painters.

James Sharpless, also an Englishman, visited Philadelphia in 1798. He painted in oil and in pastel, and traveled over the country, making the portraits of distinguished people for a collection of his own, and generally getting orders for copies from the persons he thus proposed to immortalize on canvas or pasteboard. As he could paint a portrait in two hours, and his charges were fifteen dollars for a profile and twenty dollars for a full head, he made money, but cannot be said to have filled Pennsylvania homes with masterpieces of art. A part of his collection, however, is now in the National Museum in Philadelphia. The Irishman, Gallagher, who, according to Dunlap, painted portraits in Philadelphia in 1800, painted signs when he had no other work. In 1798 he painted a standard for the First Volunteer Cavalry, com-

manded by Capt. McKean. "He had a dashy, sketchy manner, and had been well instructed in the rudiments of drawing." James House, who afterwards entered the United States army, rose to the rank of colonel, and commanded a fine regiment in 1814, is said to have practiced portrait-painting in Philadelphia about 1799. John Eckstein was living in Philadelphia in 1800, and for some years after. According to Sully, as quoted by Dunlap, he was more of a drudge than an artist: "he could do you a picture in still life, history, landscape, or portrait. He could model, cut a head in marble, or anything you please." Eckstein painted, among other historical pictures, "The Roman and Sabine Combatants separated by the Sabine Women." In 1812 he exhibited a model of an equestrian statue of Gen. Washington in Roman costume.

Jeremiah Paul is said by Jarvis to have been painting in Philadelphia about the year 1800, in partnership with Pratt, Clark (a miniature-painter), and Rutter (a sign-painter). Jarvis said, "They all would occasionally work at anything; for at that time there were many fire-buckets and flags to be painted. When Stuart painted Washington for Bingham, Paul thought it no disgrace to letter 'the books.'"

Among the members of the equestrian company brought out by the manager (West) in 1792, was an Englishman named Lawrence Sully, who was accompanied by his whole family, consisting of four sons and several daughters. Some of these children showed a strong disposition toward art; one of them, the boy Thomas, was destined to fill a high place among Philadelphia artists. Thomas was nine years old when he came to America, and even at that early age he expressed a determination to become a painter like his elder brother, Lawrence, who had settled in Richmond, Va., as a miniature and device painter. One of the Sully girls had married Mr. Belzons, a French gentleman, who painted very well for an amateur, having no professional experience. Mr. Belzons encouraged his little brother-in-law's efforts, and gave him such instructions as he could. The boy was passionately fond of his art, and derived much benefit from this instruction, however incomplete, but, unfortunately, he had a quarrel with his brother-in-law and master, whose temper was not of the best, and the poor lad (he was then sixteen years old) found himself cast adrift in the world. He went to his brother Lawrence, in Richmond, and became his pupil. When, two years later (in 1801), Lawrence removed to Norfolk, Va., Thomas had acquired considerable skill in miniature-painting. In Norfolk he became acquainted with Henry Bembridge, who gave him his first lesson in oil-painting. After a season of study in Norfolk Thomas returned to Richmond, where his brother had preceded him, and remained in that city until after Lawrence's death, in 1805–6. He then went to New York, and received some instruction from Turnbull and Jarvis. While in New York he painted a portrait of Mrs. Merry (afterward Mrs. Wignell, and later, still, Mrs. Warren), at that time the most popular actress in America. From New York, Sully went to Boston, to study with Stuart, and finally came back to settle in Philadelphia, his first home in America.

The young artist, who had taken unto himself a wife, found the times very dull in Philadelphia. Portrait-painting barely supported the young *ménage*, and Thomas was dreaming that dream of all young American artists, a visit to Europe, where he could perfect his taste by the study of the old masters. Fortunately for Sully, he had a warm and true friend in Benjamin Wilcocks. This gentleman succeeded in interesting six others in subscribing each two hundred dollars toward a fund to send the artist to London, each subscriber to be repaid with a picture copied by Sully from some of the old masters. Leaving the greater part of the fourteen hundred dollars thus raised with his wife for her maintenance during his absence, Sully went to Liverpool in 1809.

He had very little money, and he intended to follow a complete course of study in London. This was a difficult undertaking, but the young artist was frugal, prudent, and industrious; he accomplished it. He had from William Rawle a letter of introduction to Benjamin West, and was sure of a kind reception from that generous artist. But he first went to deliver another letter of recommendation to the art-student, Charles B. King. Kind fate had led him to a friend immediately after his arrival in the strange city. The following passage from Dunlap tells us more of this spontaneous friendship and of the character of the two friends than we could learn in a volume of particulars: "When Sully first saw King in England, there was an immediate reciprocity of feeling that produced a frank interchange of thought, without hesitation or disguise. King had been some years studying in London, and could appreciate Sully's inexperience. 'How long do you intend staying in England?' 'Three years, if I can.' 'And how much money have you brought with you?' 'Four hundred dollars.' 'Why, my good sir, that is not enough for three months. I'll tell you what, I am not ready to go home, my funds are almost expended, and before I saw you I had been contriving a plan to spin them out and give me more time. Can you live low?' 'All I want is bread and water.' 'O, then, you may live luxuriously, for we will add potatoes and milk to it. It will do. We will hire these rooms, they will serve us both. We will buy a stock of potatoes, take in bread and milk daily, keep our landlady in good humor, and (by the by) conceal from her the motive for our mode of life by a little present now and then, and work like merry fellows.' And so they did, thus making themselves excellent artists by a system of labor, economy, and independence as honorable as it was efficacious."

With such determination, and such a friend to

guide and counsel him, Sully could not fail to make a profitable use of his time. King introduced him to the council chamber of the Royal Academy, and the first impressions made upon the inexperienced young American, and which he consigned to a note-book, reveal a keenness of observation seldom met with. A student who could be thus impressed by the works of famous painters was a true artist, worthy of a place among those whose peculiar gifts and faults he could so well understand and analyze.

Here are Sully's remarks upon the pictures deposited by the academicians on their election, and which Mr. Dunlap quotes "by permission:" "The room is well stocked with works by Reynolds, Gainsborough, Fuseli, Stubbs, West, Lawrence, Owen, and many others. Owen's manner pleases me much. It is cool, broad, and firm, in some respects like Reynolds. The color is laid on in great body and with large brushes, so that no markings or hatchings are visible. His coloring is cool in the lights and warm in the shadows, beginning from almost pure white to vermilion tints to the cool half-tint, from that graduated to a greenish half-tint which looks like ochre-black and vermilion, and which perhaps is rendered more green when finished by glazing with asphaltum, the main shade of black and vermilion broken with the green tint. In some places Indian-red is used instead of vermilion.

Tho. Sully

"Gainsborough's manner struck me as being exactly as Reynolds describes it. There is some resemblance to it in Stuart's manner, only that Stuart is firmer in the handling. His dead colorings seem cool and afterward retouched with warm colors, used then so as to resemble the freedom of water-color painting. Many light touches of greenish and yellow tints are freely used, and although on inspection the work looks rugged and smeared, and scratched, yet, at a distance, it appeared to me the most natural flesh in the room. The specimens of Reynolds' pencil disappointed, and Opie's seemed raw, crude, and dirty; Copley more hard and dark than usual; Lawrence's too much loaded with paint, and the red and yellow overpowering. The ceiling of this room is painted by West and Angelica Kaufman, by far the most delicate coloring I have yet seen of the President's, and Angelica has closely imitated it."

Sully's introduction to West was beneficial in more than one sense to the young artist. The venerable painter received him with fatherly kindness, showed him his pictures, and gave him excellent advice; but very soon he did more, he rendered him an important service. Sully had to fulfill his engagement with his Philadelphia friends by painting seven copies of pictures by the old masters, and although he had been introduced to many artists and John Hare Powel, of Philadelphia, who was then in London, had obtained for him access to many fine collections, he had no opportunity of copying pictures. He was making up his mind to go to Paris, where students have free access to the artistic treasures collected by the government and may work as long as they choose in the galleries, when Mr. West, hearing of his difficulties, put his whole collection, old and new, at his service. Sully painted the seven copies, according to agreement. He then obtained an order from John Coates, of Philadelphia, for copies of certain landscapes in possession of the Penn family, which helped to replenish his almost empty purse. He finally returned to Philadelphia in 1810, having remained only nine months in London. But he had made the most of his time; he had worked hard, had seen the best collections of paintings in the British metropolis, and had studied with keen judgment and critical eye the manner of the most famous painters.

On his return home, Sully found that his most profitable employment would be portrait-painting, and he devoted his principal attention to this branch of the profession. His portraits were artistic; there was a magic touch in his pencil, which embellished what it reproduced on canvas, without going too far from the truth, so that, looking at the picture of some homely person, one recognized it, and yet muttered, much puzzled, "I had no idea that he (or she) was good-looking!" Among his portraits were Cooke, comedian, 1811; William B. Wood, as *Charles de Moor;* a full-length portrait of Cooke as *Richard III.*, 1811; Governor Tompkins, of New York, 1814; Dr. Benjamin Rush, 1814; also a full-length of the same subject in the same year; a full-length of Samuel Coates,

Digitized by Google

President of the Pennsylvania Hospital, presented to that institution by the artist; James Ross, of Pittsburgh, three-quarter length, 1814; a full-length of Gen. Jonathan Williams, 1815; Elias Boudinot, 1817; Mrs. Wallack, 1819; Dr. N. Chapman, 1819; Maj.-Gen. Andrew Jackson, 1819; John Vaughan, 1824; Capt. James Biddle, U.S.N., 1825; William MacClure, 1825.

Sully, while he painted portraits as the surest means of making money, did not, however, neglect those other branches of painting where the artist may give sway to his imagination, and on which he generally rests his hopes of fame. Poetry and romance present a rich field to the imaginative painter; Sully found in them the subjects of many good pictures. He painted "Pylades and Orestes," "The Landing of Telemachus and Mentor on the Island of Calypso," a copy from West, 1811; "Contemplation," 1811; "Lady of the Lake," 1812; "Miranda," from Shakespeare's "Tempest," 1815; "Death of Long Tom Coffin," from "The Pilot," 1824. He also turned his attention to historical painting, and produced some valuable pictures of events in American history. His "Capture of Major André," painted in 1812, is widely known from the large engraving which F. Kearney made from it.

One of Sully's most important works, on which he doubtless based hopes of fame and profit,—his large picture of "Washington Crossing the Delaware,"—turned out to be a source of much disappointment and pecuniary loss. The history of this picture is singular. In 1818, Mr. Sully received an order from the State of North Carolina for two full-length portraits of Washington. The artist's mind was bent on producing some grand historical picture. Here, then, was his opportunity: instead of a simple portrait, he would represent Washington in some well-known episode of his patriotic career. He communicated this plan to the Legislature of North Carolina, and suggested "The Crossing of the Delaware before the Battle of Trenton" as a fit subject. His proposition was accepted, and he set to work with enthusiastic ardor, devoting himself to his task to the neglect of all other work, even refusing some valuable orders for portraits. But a most important point had remained unsettled. The picture must necessarily be quite large, the figures represented being of life size; the artist had mentioned the dimensions of his canvas, and no objection had been raised,—the Legislature had probably paid no attention to this trifling detail,—but when the picture was finished, after nearly two years of constant labor and considerable expense, the Legislature of North Carolina refused to receive it, upon the ground that there was no place in the public buildings where it could be put. It was exhibited in Sully's gallery in 1820, and much admired, but its large size hindered its admirers from thinking of purchasing it. At last this work of great merit, which had cost the artist so much thought and labor, was sold to John Doggett, of Boston, for five hundred dollars, not enough to cover the actual cost of canvas, paint, and models' hire. Mr. Doggett subsequently sold the "Washington Crossing the Delaware" to the Boston Museum.

A more profitable piece of work was the copy of Granet's famous "Capuchin Chapel." Granet had painted ten copies of his picture, and one of them was purchased by Mr. Wiggins, of Boston. There was much curiosity in the art-loving public concerning this masterpiece, and Mr. Wiggins was constantly annoyed by applications to see it. Sully went to Boston, obtained an introduction to Mr. Wiggins, and applied for permission to copy the picture for the purpose of exhibition. This being willingly granted, he worked steadily ten hours a day for three months, and made such an admirable copy that it was said that connoisseurs, seeing the two pictures side by side, could not tell which was Granet's and which Sully's. The industrious artist derived considerable profit from the exhibition of "The Capuchin Chapel" in various cities.

Sully's trusting disposition caused him to suffer another disappointment with his full-length portrait of Lafayette, now the property of the city of Philadelphia. While Lafayette was present, in 1824, a project was set on foot to secure his portrait for the city. The expense was to be met by subscription, and some names were readily obtained. Mr. Sully, confiding in the result of this scheme, obtained a sitting from Lafayette, and having succeeded in producing an excellent likeness, proceeded to paint the full-length, life-size portrait. Meanwhile the "*Héros des deux Mondes*" left Philadelphia, the subscription, started in a moment of enthusiasm, was abandoned as a failure, and Sully's picture—one of the best portraits of Lafayette ever painted, and remarkable for the fidelity of the resemblance as well as for the artistic execution—remained on the hands of the artist. Failing to find a purchaser for it, he presented it to the Academy of Fine Arts. Years afterward the academy exchanged this picture for West's "Paul and Barnabas at Lystra."

Among the best portraits painted by Sully about that period was a full-length of Thomas Jefferson for the Military Academy at West Point, in 1821.

In 1837 the St. George Society of Philadelphia commissioned Sully to go to England and paint a full-length portrait of the then youthful Queen Victoria, who had just ascended the throne. This commission was executed in an admirable manner. That portrait was Mr. Sully's last important work, yet up to within a short time of his death the artist continued to produce charming pictures, especially of women and children. As a colorist he had no superior in this country. His style was that of Sir Thomas Lawrence, especially in his portraits of women. His portraits of Cooke, Mrs. Wood, the singer, and Fanny Kemble, are among the most successful of his efforts.

Mr. Sully died at his residence in Fifth Street above Chestnut, Nov. 5, 1872, at the ripe age of a little more than eighty years. Mr. Sully's life was blameless. He indulged in the practice of music, of which he was passionately fond, and it became a solace to his declining years. Some of the best citizens of Philadelphia who enjoyed his society made his old age cheerful by their companionship. His kind disposition and engaging manners endeared him to his family and friends. Two of his daughters and his son, Gen. Alfred Sully, a distinguished officer of the United States army, were his constant attendants.

Alexander Wilson, who conquered a place in the history of art with his "American Ornithology," was a native of Scotland, who came to this country in 1794. He began life by being bound apprentice to a weaver, but, a born poet and dreamer, he was ill suited for this trade, and the only distinction he earned during his five years of apprenticeship was the nickname of the "lazy weaver." At eighteen years of age, having served his term at the loom, he began the rambling life of a peddler, but his rambles only increased his taste for poetry, and a satire upon the vices of the aristocracy caused him to be prosecuted and imprisoned. Disgusted with his native land, he sailed for America. Landing at New Castle, Del., he started on foot for Philadelphia, where he found employment as a weaver, and also worked as a copper-plate printer. But he had higher aspirations, and after traveling for some time as a peddler and earning a little money, he set up a school in New Jersey, which he managed successfully for some years. He was still poor, however, and his restless spirit led him to change his residence several times, and try his fortunes, with no better result, in various places. At last he came back to Philadelphia, and opened a school near the residence of the well-known naturalist, William Bartram, within four miles of the city. This circumstance was the turning-point in his life. Already an enthusiastic lover of nature, Wilson found a congenial disposition in Bartram, and the two neighbors soon became fast friends. Mr. Dunlap says that Alexander Lawson was the first to suggest drawing to Wilson as a means of diverting him from the melancholy thoughts caused by his poverty and disappointment. From drawing and painting birds he was led to study their habits. He had found his true vocation,—he had become an ornithologist. With time, as he improved in his art and studies, Wilson conceived the idea of publishing the ornithology of Pennsylvania and, if possible, of the United States. This was a stupendous undertaking for the self-taught artist. The engraving of the plates alone would require a small fortune, and he was poor. Fortune at last favored him in this extremity. He was engaged as assistant editor, at a liberal salary, by Samuel F. Bradford. Ere long Mr. Bradford, recognizing the merit of Wilson's valuable work, undertook to publish it. Lawson engraved the plates.

The publication was commenced in 1808. Wilson then traveled through various parts of the United States in search of subscribers, availing himself of the opportunity to add new treasures to his collection of birds. In 1813 seven volumes had been published, and the author had just completed the letter-press of the eighth when death put an end to his labors. He was then forty-seven years of age.

Mr. Dunlap says of Wilson, "The admirable trait in Wilson's character is his undeviating adherence to, and innate love of, truth. He was strictly honorable in his dealings, and in all trials through life rigidly a virtuous man. His fault, and I learn but of one, was irritability, which perhaps counteracted, in some measure, the good effect which his high moral character produced." From a long letter of Dr. John W. Francis to Mr. Dunlap we quote the following: "When the Dukes John and Charles of Austria attended a *conversazione* at Sir Joseph Banks', in 1816, the royal visitors expressed a desire to examine the library and vast collections in natural science of the venerable president of the Royal Society. 'I have nothing worthy of your special examination,' said Sir Joseph, 'except the American Ornithology of Wilson;' and further inquiries were dropped upon the inspection of this extraordinary work. 'Our Radcliff Library is deficient,' observed Dr. Williams, the Regius Professor of Botany; 'we have had no opportunity of procuring the American Ornithology, by Wilson; we learn the work is terminated, and it is remarkable that no Edinburgh or Quarterly has taken notice of it. In what way can we soonest obtain a copy from your country?' Thus the sod had scarcely covered the grave of the lamented Wilson ere his matchless efforts as Nature's historian were the theme of popular and scientific admirers in regions far remote and distant from each other. While, therefore, his earthly remains have commingled with their kindred dust, like the delightful solo of that chief of songsters, 'The Mocking-Bird,' among the feathered tribe, whose vocal powers amid the fragrant magnolia he has so eloquently described as unrivaled, his own surpassing labors will ever command the admiration of the disciples of nature in every part of the habitable globe."

John Paradise, a native of New Jersey, studied for a short time under Volozan, and came out as a professional portrait-painter in Philadelphia in 1803. He left this city in 1810 to settle in New York, where he was engaged in his profession for many years. He died in New Jersey in 1833.

If Jacob Eichholtz, of Lancaster and Philadelphia, did not rise to eminence, it was not from a lack of perseverance or even of talent. He had no opportunities; no protecting hand guided his first efforts; whatever he succeeded in doing was accomplished by his own strong will. He was a not uncommon example of ·t obstinacy of purpose, characteristic of the Amer-

icans, to which our country owes so much of its present greatness. Eichholtz was born in the town of Lancaster in 1776. At the early age of seven years he showed his vocation by covering the walls of the paternal garret with rude attempts at delineating objects that took his fancy. The elder Eichholtz, a practical man, of German descent, as the name indicates, was not disposed to encourage such nonsense, yet as he saw the child's delight when his persistent efforts to copy objects were crowned with success, he kindly consented to give him a teacher, a common sign-painter, who committed suicide when he had barely taught his pupil the first rudiments of drawing. Little Jacob made the most of those few lessons, and went on copying everything he saw, from the house cat to his father's horn spectacles and porcelain pipe. The child grew to be a lad, and was apprenticed to a coppersmith. He served his apprenticeship, went into the coppersmith business on his own account, and took to himself a wife, yet during all this time he gave to his favorite occupation of drawing every spare moment he could have out of the shop. How long he might have continued darkening his walls with uncouth charcoal sketches, had not fate sent Mr. Sully to Lancaster, is hard to tell. His acquaintance with this eminent artist was a revelation. It decided his future. He had attempted portrait-painting, dividing his attention between this occupation and his coppersmith business. He now dropped the shop entirely, resolved to support his family by painting faces. He attempted a portrait of Nicholas Biddle, president of the United States Bank, and having been urged to visit Gilbert Stuart at Boston, he took this work of art with him to show the great portrait-painter what he could do. Stuart received him kindly, and gave him some good advice; but poor Eichholtz saw enough to convince him that he was but a tyro in the art of delineating "the human face divine." On his return home he removed to Philadelphia, where he could find means of improvement as well as more lucrative employment for his pencil. He painted portraits of T. B. Freeman, Commodore Gale, and others, became favorably known, and acquired a decent competence, with which he returned to Lancaster after a ten years' residence in Philadelphia.

Sully, in a letter quoted by Dunlap, speaks thus kindly of Eichholtz: "When Governor Snyder was elected, I was employed by Mr. Binns to go on to Lancaster and paint a portrait of the new chief magistrate of the State. Eichholtz was then employing all his leisure hours, stolen from the manufacturing of tin-kettles and copper-pans, in painting; his attempts were hideous. He kindly offered me the use of his painting-room, which I readily accepted, and gave him during my stay in Lancaster all the professional information I could impart. When I saw his portraits a few years afterward (in the interim he had visited and copied Stuart), I was much surprised and gratified. I have no doubt that Eichholtz would have made a first-rate painter had he begun early in life with the usual advantages."

John Lewis Krimmel, who came from Germany to Philadelphia in 1810, to join his brother in commercial enterprise, but threw up trade to become an artist, was a young man of extraordinary gifts, who, had he lived to know that maturity of years which is also the maturity of talent, would probably have been proclaimed a second Hogarth. To a thorough knowledge of drawing and the use of colors, acquired in his native country, he added quick perception, an inventive and fanciful genius, and an equally strong sense of the humorous and the pathetic. He began by painting portraits, but soon became known for his pictures of popular subjects. The first which attracted attention was an artistic delineation of that peculiar Philadelphia character, the "Pepper-pot Woman." A copy, in oil, of Wilkie's "Blind Fiddler," "Blind-man's-buff," "The Cut Finger," "Celadon and Amelia," "Aurora," "Raspberry Girl of the Alps of Würtemberg,"—a reminiscence of his native land,—followed in quick succession, eliciting general admiration. In 1812 he exhibited in the Pennsylvania Academy of Fine Arts a picture representing a crowd in Centre Square, which revealed the hand of a master.

His last work was a great composition of several hundred figures in miniature oil, which Mr. Dunlap says were "executed with a taste, truth, and feeling both of pathos and humor, that rivals, in many respects, the best works of this description in either hemisphere." And he adds, "This picture I have seen. It is a Philadelphia election scene on Chestnut Street, in front of the State-House. It is filled with miniature portraits of the well-known electioneering politicians of the day. It has a portrait of the venerable building within whose walls the independence of America was declared. The composition is masterly, the coloring good, every part of the picture carefully finished, and the figures, near or distant, beautifully drawn. This picture was either painted for or purchased by Mr. Alexander Lawson. . . . ." The young artist was engaged to paint a picture of Penn's treaty with the Indians, but had not yet commenced this important work when he was drowned while bathing with some young friends in a mill-pond near Germantown.

Philadelphia may justly claim that great artist, Charles Robert Leslie, as one of her gifted sons, though London was his native city, and he acquired his fame in England. Leslie's parents, both Americans, were on a visit to the old country when the child was born; when they returned home with him he was not quite five years old. His first efforts at wielding the pencil were made in Philadelphia; his taste was inherited from his father, an amateur artist, whose drawings of ships and machinery were very much admired. The elder Leslie followed the trade

of watch-maker, but being passionately fond of art, he wished to encourage in his little son all that would tend to develop his artistic disposition, and on sending him to a boarding-school in New Jersey he stipulated that the child should be permitted to draw as much as he pleased when not engaged in his other studies, a permission of which the boy availed himself to the exclusion of all other recreation. From the little school young Leslie passed to the University of Pennsylvania, to pursue his studies; then his father died, and his mother not having the means of giving him the education of an artist, he was bound apprentice for seven years to Bradford & Inskeep, booksellers. This last circumstance, which seemed to shut off all hope of the lad's following his vocation, proved to be the very means of his adopting the profession in which he was to earn so great distinction. Mr. Bradford was a man of generous disposition and sound judgment. He saw the marks of genius in the sketches which his young apprentice continued to draw in his leisure moments. This genius must not be smothered, but encouraged; Charles could not continue in the shop; but the lad had not the means to devote years to the study of art. The warm-hearted bookseller solved all these difficulties. He headed a list of subscription to raise a fund for Leslie's maintenance during two years in England, and invited some other liberal-minded citizens to join him in his good work. The amount was raised; Leslie's indenture was canceled (he had been an apprentice three years), and the young man left Philadelphia, in 1811, with Mr. Inskeep, Bradford's partner, who was going on a business visit to London. Provided with letters for West and other leading artists, Leslie, on his arrival in the British metropolis, soon found friends. He there commenced his career under bright auspices, which his success fully justified.

But, even at the very height of that success, the artist never forgot those who had befriended him in his youth and given him the means of devoting himself to art. In a letter to Mr. Dunlap, who had written to him for such information as would be used in writing a biographical sketch of him, Leslie speaks feelingly of those Philadelphia friends, and gives a list of their names. They were S. F. Bradford, Mrs. Eliza Powel, J. Clibborn, J. Head, Joseph Hopkinson, J. S. Lewis, N. Baker, G. Clymer, E. Penington, William Kneass, Alexander Wilson, the ornithologist, G. Murray, engraver; one hundred dollars was also voted by the Pennsylvania Academy of Fine Arts. The grateful artist also mentions Mr. Sully, who, "with his characteristic kindness," gave him his first lessons in oil-painting. "He copied a small picture in my presence to instruct me in the process, and lent me his memorandum-book, filled with valuable remarks, the result of his practice." Sully also gave him letters to several artists in London. Of the friends found in England he says the earliest were "Messrs. King, Allston, and Morse. With the latter gentleman I shared a common room for the first year, and we lived under the same roof until his return to America deprived me of the pleasure of his society. From Mr. West, Mr. Allston, and Mr. King" (all Americans) "I received the most valuable advice and assistance. . . . My employers at that time were almost entirely Americans, who visited or resided in London." Mr. Leslie died in 1859.

John Eaves, portrait- and miniature-painter, commenced to practice his art in Philadelphia in 1809. He had views taken from nature in England, Ireland, Wales, the Western Islands, Madeira, and North America, and was prepared to give instruction "in a new style of water-color drawing." How far successful he was in his profession, we cannot say.

Edward Miles, portrait- and miniature-painter in 1810, found it more advantageous to devote his attention to teaching his art than to continue painting portraits. He was for a long time connected with art in the city, and was an active member of the Academy of Fine Arts. Abram I. Nunes was a portrait-painter in 1810. William Groombridge, a native of Tunbridge, England, who had studied with Lambert, lived in Baltimore, but made frequent visits to Philadelphia, and painted various landscape subjects near the city. He exhibited, in 1811, "A View from a Public Road near Germantown; time, sunset; season, the approach of autumn;" "The Woodlands, seat of William Hamilton," "Middle Creek Falls, Pennsylvania," "Dover Cliff," and some fruit pieces; "A View on the Schuylkill," "View at the Mouth of the Wissahickon," and "American Autumnal Scene." They were the last of his works, as he died in Baltimore, May 24, 1811, in his sixty-third year. Thomas Bishop applied himself to landscapes and enamel painting. He produced "Lodona" (1811), and "A Flemish Village" (1812). He rarely exhibited his works publicly.

Thomas Birch, the son of William Birch, enamel painter, commenced by painting landscapes. He was born in London about 1779, and established himself in this city about 1800, and commenced the painting of profiles. In 1811 he exhibited at the Society of Artists. "A Fisherman's Hut on the Schuylkill, above the Falls," "The Woodcutter Asleep," "A Foggy Morning," "Snow Piece," "Frost Piece," "The Natural Bridge in Virginia," several views of the Schuylkill, and many other pieces too numerous for mention here, bear evidence of his skill as a landscape-painter. He also did something in the way of animal painting, as shown in his "English Setter" (1813), "Portrait of a Dog" (1817), "A Group of Pointers" (1823), "Landscape, with Dogs" (1825). Among his best marine pictures were "A View of a Bay" (1812), "Sea Storm and Shipwreck" (1811). He also painted "Engagement between the 'Constitution' and 'Guerrière,'" "'Constitution' and 'Java,'" "'United States' and 'Macedonian,'" "'Hornet' and 'Peacock,'" "The Ship-

wrecked Sailor" (1813), "Perry's Victory on Lake Erie" (1814), "Battle of Lake Champlain," "Storm," "Sea Breaking over a Rock," "The Wreck of the Packet Ship 'Albion'" (1823), "Pilot Boat off the Hills of Navesink" (1825), "Ship of War Dismasted" (1825). He died in Philadelphia, Jan. 14, 1851.

Denis A. Volozan, a Frenchman, was a historical painter, and quite prominent in matters relating to art up to the year 1820. Among his characteristic pictures were "Homer Singing his Poems;" "Angelica and Medor, from 'Orlando Furioso';" "Death of Cleopatra;" "Rinaldo and Armida, from 'Jerusalem Delivered';" "Testament of Eudamides, of the City of Corinth," copied from M. Poussin; "Antigone, the Affectionate Sister;" "Henry IV. under the Walls of Paris;" "Jupiter and Leda;" "Jupiter and Calista," and "The Last Moments of Œdipus." Volozan painted a few landscapes also, and some portraits. Among the latter were "General Washington" and "St. Joseph," in crayon, and "Victor Moreau," drawn in 1806.

Another Frenchman, Pierre Henri, was a miniature-painter, who moved to Philadelphia from Richmond, Va., in the early part of this century. In 1811 he painted a portrait of Mrs. Beaumont in the character of "The Grecian Daughter." Charles Knight painted miniatures and taught drawing for several years after 1800. He came from England with a certificate from the Royal Academy of London. John Crawley, portrait-painter, contributed to the Society of Artists, in 1811, two landscapes and a view near Norristown, with two portraits. In 1844 he painted "A View on Red Clay Creek." Crawley was born in England, during a visit paid to that country by his parents. His father was an Englishman, who had emigrated to America before the Revolution; his mother, a Miss Van Zandt, of New York. The boy John, after his parents' return, was sent to school at Newark, N. J. He studied art under Edward Savage, in New York, and Archibald Robertson. Crawley was a successful artist. He married, and left Philadelphia to settle in Norfolk, Va.

Pietro Ancora came from Rome in the year 1800. He taught drawing and painting, but never executed any pictures for exhibition in Philadelphia. He was the first who engaged in the importation of European paintings for exhibition and public sale in this country. This business he commenced in 1819, in partnership with Charles Bell. Mr. Ancora lived for many years, always successful, and much esteemed as a teacher.

Miss Eliza Leslie, a sister of Charles R. Leslie, had some taste for painting. She exhibited a copy from Salvator Rosa of "Ruins with Banditti" in 1812. Not very long after this she gave up painting for literature, and became quite celebrated as a writer of fiction. A younger sister, Ann Leslie, took to painting and drawing, and became noted for her work in later years. Joseph Wood came from New York in 1813, and painted miniatures for some years in Philadelphia. Among his noted likenesses were portraits of Commodore Perry, Rufus King, Judge Bushrod Washington, and Gen. John Armstrong, from the originals; Maj.-Gen. Harrison, from the original, 1814; Col. Richard M. Johnson, of Kentucky, 1817; and James Madison, 1818.

J. Exilius drew landscapes and local views. A "View from Flat Rock Bridge looking up the Schuylkill River," "Conrad's Paper-mill on the Wissahickon," "Egglesfield, the seat of Richard Rundle" (1813), are among the works of this artist. Charles B. Laurence removed from Bordentown, N. J., to Philadelphia about 1813. He painted a portrait of Bishop Moore, of Virginia, in 1819; of M. Poletica, Minister from Russia, in 1822; a portrait of the Abbé Correa about 1822 or 1823; of Col. Allen McLane, of Wilmington, Del.; and Countess Charlotte de Survilliers in 1824. Laurence is represented to have studied with Stuart and Rembrandt Peale. He also painted some landscapes, which, Dunlap says, were without merit.

Bass Otis came to Philadelphia in 1811 or 1812. He executed several of the likenesses which were engraved for the use of Delaplaine's "National Portrait Gallery." In the Academy of Fine Arts exhibitions he displayed portraits of James Madison, late President of the United States, Joseph Hopkinson, Commodore Truxton, Charles Thomson, Dr. Caspar Wistar (1817), Samuel Adams (copied from Copley), Thomas Jefferson (1818), the Washington family (1819), Bishop White, Gen. Arthur St. Clair, Gen. Wilkeson (1823), Rev. Dr. James P. Wilson (1824), Rev. Ezra Styles Ely (1825), Rev. J. J. Janeway (1825). Otis exhibited copies of Vernet's "Storm and Calm" in Vauxhall Garden in 1817. His "Interior of a Foundry," which Dunlap says is a view of the scythe-maker's shop where Otis worked as an apprentice before he studied art, was first exhibited in 1819. Otis was the inventor of the perspective protractor, an instrument which was offered to the public in 1815, and which received the commendation of Sully, Birch, Lawson, and other painters and engravers. A. A. Vignier, a landscape-painter, exhibited in 1813 "A Storm," "A View in Switzerland" in 1819, and a "River Scene, Calm," in 1823.

Mrs. P. Barnes was a skillful painter of flowers and still life. She exhibited peaches in 1813, and in 1814 flowers. George Strickland, brother of William Strickland, painted at the age of seventeen years (1814) a scene from the "Lay of the Last Minstrel." He drew in sepia the designs to be engraved for "Childs' View of Philadelphia in 1825–26."

Benjamin H. Latrobe, the architect and engineer, had some taste for landscape drawing. He exhibited, in 1812, a "View of the River Schuylkill" and a "View of the Seat of Miers Fisher."

Beck sketched "A View of Mr. Hood's Place, near the Robin Hood Tavern, on the Ridge road;"

"The Woodlands, seat of William Hamilton;" "View on the Juniata, Pennsylvania;" and three views on the Kentucky River, 1814. He sketched and drew scenes in all parts of the country. Among them were "North River, near Wyhawk Ferry, N. Y.;" "View near Lexington, Ky.," and in other parts of that State.

John Robinson, an Englishman, came to Philadelphia in 1817. He brought with him from London his own miniature of West, representing the picture of "Christ Rejected" in the background. He painted portraits of James Lyle, Mrs. Sterling, Nicholas Biddle (1819), and Capt. Dallas, U.S.N. (1823). Dunlap says he was an artist of "some skill." Robinson was something of a critic. He wrote a long description of West's "Christ Healing the Sick," with remarks and criticisms which seemed sensible and reasonable.

John A. Woodside, the great sign-painter of his day, and the worthy successor of Pratt in that particular line, was an artist of no ordinary merit. He sent pictures of a tigress and a horse to the exhibition of the academy in 1817, and still-life paintings of apples, pears, peaches, and grapes in 1821. His frontispieces for hose-carriages, side and front and rear gallery paintings for fire-engines, were beautiful. He copied engravings in the best manner, and was a careful worker, finishing everything with great perfection. Hugh Bridport, a Londoner, who had studied at the Royal Academy with C. Wilkin, miniature-painter, came to Philadelphia in 1816. He was very successful from the start, being an excellent painter. He exhibited, in 1817, landscapes in water-colors, a "View of Haubden Lake," the "Port of Snowdon and Cader Idris, from Balla Lake, in North Wales," and a portrait of his brother, George Bridport. He afterward finished likenesses of Chief Justice Tilghman, Peter A. Browne, Joseph Hopkinson, and Bishop Henry Conwell, from Neagle's large portrait. In 1818 he joined John Haviland, architect, in the management of an evening school of architecture and drawing. His brother George, who had assisted him in this business previously, had retired in 1817.

Francis M. Drexel devoted himself principally to portrait-painting, but in 1818 he exhibited pictures entitled "Love," "A Magdalen," and "The Beggars," also heads of Homer, Diana, Caracalla, and Niobe's Child in chalk. In 1824 he exhibited a portrait of Gen. Alexander Ogle. At a later period Mr. Drexel gave up painting and went into business as a stock- and exchange-broker. This was the foundation of the banking-house of Drexel & Co., so well known in America and Europe.

William Albright, in 1818, ranked as a landscape-painter. He exhibited a copy of Rubens' painting of "The Watering Place."

Alexander Rider was a historical and portrait-painter, and exhibited some of the productions of his pencil in 1818. Among them were "The Fortune-Teller," a copy of Wilkie's "Rent Day," "Penn's Treaty with the Indians," "The Soldier's Return" (1819), and "The Reception of General Lafayette at the State-House" (1825).

H. Magenis, a portrait-painter, in 1818 copied Sir Joshua Reynolds' painting of "The Holy Family" and portrait of Lord Byron. Edmund Brewster, a portrait-painter of the same period, exhibited a portrait of himself. Hugh Reinagle, a son of Frank Reinagle, lessee of the Chestnut Street Theatre, studied scene-painting with John J. Holland, but subsequently turned his attention to landscapes. He painted many very pleasant pictures, among which are "A View of the City of New York," "A Panorama of New York," "Falls of Niagara from the New York Side," "Mount Ida Falls on the Hudson River," "Niagara Falls from the Canada Side" (1818), "Catskill Landing, New York," and "Village and Fort of Michilimackinac, New York, from Hell Gate." Mr. Reinagle, notwithstanding his success as a landscape painter, went back to scene-painting after a time. He died in 1834, in New Orleans, whither he had gone (in 1830) as scene-painter for Manager Caldwell.

Caroline Schetky, the daughter of the musician, George Schetky, of the Chestnut Street Theatre, was a very good miniature-painter. Among her best portraits was that of Signor Arfossi, of the Italian Opera-House, London. She paid also some attention to landscapes, and executed many views of English scenery. In 1822 she painted, in water-color, "New York, from Governor's Island." She painted flowers from nature, and her "Wild Geranium" and "Spring Crocus" were much admired.

Madam Plantou, wife of Dr. Anthony Plantou, dentist, painted the national picture of the "Treaty of Ghent," which was exhibited at her husband's house, on Third Street, in 1818. It was a fine, large, allegorical composition in oil, eleven feet long and seven feet high. This painting, it was said, "would be considered as worthy of the first collection in the world." It attracted much attention. Madam Plantou was a pupil of the celebrated French painter, Renaud. She exhibited in 1822 her original picture of "Christ Disputing with the Doctors." Her portrait of Bishop Conwell, painted in 1825, is well known by the engraving which was afterward made of it.

N. M. Hentz, in 1819, exhibited a portrait of a creole lady. Daniel Dickinson, of Connecticut, a self-taught artist, exhibited miniatures in 1819. He painted a portrait of Henry Wallack in 1823. He had quite a taste for fancy painting, illustrating female beauty. About 1830 he turned his attention to painting portraits in oil, and gradually devoted himself to that branch of art. Charles S. Le Seur, better known as a naturalist than as an artist, painted subjects in natural history, among which were "A Casoar, from New Holland, painted from nature"

(1819), "A Suffolk Boar," and "Brittany Cows," belonging to Reuben Haines, painted in 1821.

Joshua Shaw painted everything, from a tavern sign to a landscape; in the latter he was most successful. He exhibited at the academy in 1819 the "Isle of Wight by Moonlight." In 1820 he was commissioned by the government to accompany the party which was about to explore the country up the Missouri River, and make sketches of the scenery. He exhibited "A Storm and Shipwreck" in 1821, and "A Landscape and Lake" in 1825. He was a busy man among his professional brethren for some years, and was active in forming "The Association of American Artists." Yet he gave up art, and became interested in the sale and improvement of fire-arms. In 1822, and afterward, he took several patents for new models of fire-arms.

John Neagle, although he had had but a few months' instruction from Pietro Ancora and Bass Otis, became famous for his portraits, and was employed by the leading citizens. The list of his portraits is too long for insertion here. The first portrait which attracted general attention was that of Rev. Joseph Pilmore, D.D. But his masterpiece was the portrait of Patrick Lyon, the blacksmith and fire-engine maker, whom, at his own request, he represented at work in his shop. Dunlap says that it established Mr. Neagle's "claim to a high rank in his profession, by the skill and knowledge he has displayed in composing and completing so complicated and difficult a work. The figure stands admirably; the dress is truly appropriate; the expression of the head equally so; and the arm is a masterly performance. The light and indications of heat are managed with perfect skill. In the background at a distance is seen the Philadelphia prison, and thereby hangs a tale." He married a daughter of Sully, the artist, in 1820. He was eight years president of the Artists' Fund Society. Among his best portraits are Washington (in Independence Hall), Gilbert Stuart, Mrs. Wood as *Amina*, Mathew Carey, Henry Clay, Dr. Chapman, and Commodore Barron. He died in 1865.

Miss E. Neagle sent some flower-pieces to the exhibition in 1819. In 1821 she contributed a mill, waterfall, and river, in water-colors.

George Catlin was born in the Wyoming Valley, Pennsylvania. He painted miniatures, among which are noted "Ariadne," after Sir Joshua Reynolds, Napoleon (1821), Timothy Pickering, Captain Morgan, U.S.N., "Persico," and "Madonna and Child" (1822). Catlin conceived the idea that accurate portraits of Indian chiefs and warriors would form a valuable collection; he went West, and lived eight years among the savages, visiting no less than forty-eight tribes. The result of this arduous undertaking was three hundred and ten portraits in oil-colors, and two hundred other pictures illustrative of Indian life. After exhibiting his pictures in the principal Atlantic cities, in 1839, he took them to London and the Continent in 1840. He published "Illustrations of the Manners, Customs, and Condition of the North American Indians," etc., with three hundred steel-plate illustrations, London, 1841; "The North American Portfolio of Hunting Scenes and Amusements of the Rocky Mountains and Prairies of America," with twenty-five drawings and notes by the author; and "Notes of Eight Years' Travel and Residence in Europe," 1848. Mr. Catlin married in Philadelphia. He died in Jersey City, Dec. 28, 1872.

Borthwick exhibited, at No. 171 Chestnut Street, in 1821, "The Capuchin Chapel," which he called "the great American painting." The picture seems to have been a copy of Sully's copy of the original painting by Granet. Borthwick shortly afterward painted a portrait of Robert Burns, which he presented to the Burns Club, which met in the Burns Tavern, which was kept by Muirheid in Bank Street.

J. C. Schetky exhibited "Bass Islands," "Frith of Forth," "River Gallejos," "Gale on the Atlantic," water-colors, in 1821.

Thomas Doughty, born in Philadelphia, July 19, 1793, devoted himself almost entirely to landscapes, and acquired fame in that particular branch of art, although he was twenty-eight years of age when he resolved to adopt the painter's profession, and he had had but little instruction in drawing. He worked assiduously, and improved until he was, Dunlap says, "the first and best [landscape-painter] in the country." Benjamin says ("Art in America"), "There have been greater landscape-painters than Doughty, but few have done so well with such meagre opportunities for instruction." He practiced his profession for many years in the United States, and also in London and Paris, but died in New York, July 24, 1856. Among his best pictures are "Peep at the Catskills," "View on the Hudson," "Lake Scene," "Old Mill," "Near the Delaware Water Gap," and "Scene on the Susquehanna."

Countess Charlotte Julie de Survilliers, daughter of Joseph Bonaparte, although not a professional artist, had considerable skill and taste, and delighted in exhibiting her pictures, which were of sufficient merit to entitle them to admission to the annual exhibitions of the Academy of Fine Arts. Her works commenced in 1822, with a landscape and a waterfall. She produced landscapes in sepia, miniatures and landscapes in oil, crayon studies from nature, hollyhocks, peonies, tulips, and other flowers in water-colors and oil (1823), and "Falls of the Passaic" (1824). She was the designer of eleven views of American scenery, which were lithographed by Joubert, and published as "The Picturesque Views of America" (1825).

The introduction of the engraver's art in Philadelphia is surrounded with as much mystery as the introduction of painting. As we find signs and even portraits painted by unknown artists, so do we find cuts in wood and metal in the old almanacs and news-

papers, which must have been done here, although no name is attached to them. It is probable that the demand for engravers' work was not sufficiently great to justify those artists in devoting themselves entirely to their profession; they made a living in some other way, and if a newspaper heading or a wood-cut was wanted the job was given to them, and they did not attach enough importance to it to affix their signature to the engraving. Alexander Anderson, mentioned by Mr. Dunlap as the first professional wood engraver known in this country (he came from England to New York in 1775), says that "engravings for letter-press had been executed on type-metal in various parts of this country long before the Revolution." He believed that Dr. Franklin "cut the ornaments for his 'Poor Richard' almanac in this way." A well-done copper-plate of the Pennsylvania fireplace accompanied Franklin's account of his invention. It can hardly be supposed, however, to be the great philosopher's handiwork, but must be attributed to one of those nameless artists. The same may be said of the wood-cut in "Plain Truth," published in 1748, illustrating the fable of "The Wagoner and Hercules." A large engraving, published in 1764, entitled "The Paxton Expedition: inscribed to the author of the Farce by H. D.," is believed, on good grounds, to be the work of H. Dawkins, who lived for some years in Philadelphia. To this artist are also ascribed "The Old Ticket" and "The Election," published in 1765. Dawkins seems to have visited various parts of this country. In 1774 he was working in New York, where he was noticed by Mr. Dunlap.

In the *American Magazine* for January, 1769, is an engraving of "A Curious Manner of Fowling in Norway." The engraver is unknown. Unknown also are the engravers of numerous caricatures published, in 1764, against Franklin, Israel Pemberton, and others. The first professional engraver who acquired fame in Philadelphia was the Englishman James Smithers, who settled here in 1773. As Mr. Dunlap remarks, "He was the best, for he stood alone." He executed all sorts of engraving, and it is more than likely that the caricaturists of the time required the assistance of his graver. He was employed in illustrating the *American Magazine*, published by R. Aitken. He engraved the blocks for the Continental money, and, says Dunlap, "afterwards imitated them for the British." Smithers returned to Philadelphia with the British troops, and went away with them in 1778. He came back after the Revolution, for Lawson bought from him, and cut into smaller plates, three large plates of a ground-plan of the city of Philadelphia, which Smithers could scarcely have engraved during the war times. Smithers died in Philadelphia after 1829, at an advanced age.

But Smithers did not "stand alone" very long. Robert Aitken, the publisher of the *Pennsylvania Magazine*, was a good engraver; he executed some very fair illustrations for his magazine. J. Poupard also engraved, for the *Pennsylvania Magazine*, a head of Dr. Goldsmith. He engraved several plates for the second volume of the "Transactions of the American Philosophical Society," and a curious seal for a burlesque "High Court of Chancery," which is in possession of the Historical Society of Pennsylvania. J. Norman, a pupil of Godfrey Kneller, and the early instructor of Charles Wilson Peale, was living in Philadelphia prior to and during the Revolution. He executed several battle pieces. His "print-seller and engraver" establishment was on Second Street near Spruce. Robert Scot came to Philadelphia about 1780. He engraved the architectural plates for Dobson's "Encyclopædia" and Peale's Washington at full length. He was the first regular engraver of the Mint, receiving his appointment in 1793. John Trenchard studied engraving with Smithers, and was one of the firm who started the publication of the *Columbian Magazine*, in 1786. He engraved several plates for this magazine. Lawson says of these engravings that "they were poor scratchy things, as were all the rest of his works." Notwithstanding, he was the instructor of his son Edward, and of Thackara and Vallance. Edward Trenchard visited England for the purpose of obtaining further instruction in his art, but it does not seem that he attained his object. He never was much of an artist. Soon after his return he gave up engraving and went into the United States navy,—a wise step, for he became an officer. While in London, Trenchard induced young Gilbert Fox, an apprentice to the well-known engraver, Medland, to come with him to Philadelphia. Fox taught Trenchard the art of etching, which was then little known here. He also obtained employment as drawing-master to a young ladies' boarding-school, but having fallen in love with one of his pupils, and persuaded her to marry him, he lost his situation and damaged his prospects generally. He then went upon the stage, and was the actor who first sung "Hail Columbia," this song having been written for him by Joseph Hopkinson. Among the etchings of Fox is a curious view of Philadelphia from the west bank of the Schuylkill, done in aqua-tinta. James Thackara and John Vallance were partners. Their principal works were the plates for Dobson's "Encyclopædia." Vallance engraved in 1795 the plates in "Transactions of the Philosophical Society." Thackara became in later years the keeper of the Pennsylvania Academy of Fine Arts.

James Peller Malcolm, a native of Philadelphia, born in August, 1767, commenced painting and engraving about 1787–88. He went to England, and studied at the Royal Academy three years. He then gave up painting, and devoted himself to engraving, but, although he was industrious and untiring, he never attained great eminence in his profession. He returned to Philadelphia for a short time, about 1792–93, and did some work here; among others, an inside view of Christ Church. He went back to London,

where he worked for the *Gentlemen's Magazine* and drew and engraved plates for historical and antiquarian works. He died in London, April 5, 1815. His ancestor, James Peller, was an emigrant with Penn. Malcolm published "Londinum Reditum, or an Ancient and Modern Description of London," 4 vols. 4to; "Letters between the Rev. James Granger and many Eminent Men," 8vo; "First Impressions, or Sketches from Art and Nature," 8vo; "Anecdotes of the Manners and Customs of London," 4to; "Miscellaneous Anecdotes," 8vo; "An Historical Sketch of the Art of Caricaturing," 4to.

Alexander Lawson, already mentioned in these pages, was a Scotchman, who came to Philadelphia in 1794. He worked with Thackara and Vallance, also with Barralett, whose designs he engraved, and did some plates for Dobson's "Encyclopædia." Although a self-taught engraver, Lawson rose to the highest rank in his art. He was the engraver of the beautiful plates in Wilson's and Bonaparte's "Ornithology," and of the plates designed by Barralett for the poems of the Rev. J. Blair Linn.

A true artist was William Russell Birch, who came to Philadelphia, from his native England, in 1794. He first announced himself as an enamel painter, and did some work in that branch, but he soon conceived the project of a great work, which he carried out with great industry. Turning to account his taste for architectural drawing and his knowledge of the engraver's art, he drew and engraved upon copper, in the best style, a series of plates, twenty-eight in number and forming a volume, which was issued on the 31st of December, 1800, with the title "Views of the City of Philadelphia in 1800." This was a work of great value for its excellent execution. It is still more valuable at this day, as giving a true picture of the city and its people as they were nearly a hundred years ago.

One of the most important matters connected with these pictures is in the delineation of street-scenes in the neighborhood of the buildings, which are the principal subjects of the plates. The varieties of the costumes of the men and women are interesting, curious, and amusing, showing the fashions of the day. The occupations of persons who ply their callings in the streets are shown, and even the amusements of the time, life, animation, industry, and the social differences between artisans, laborers, and people of fashion are clearly distinguished. The Birch views are actual panoramas of street-life in the city, and the more valuable upon that account.

In addition to this volume of twenty-eight plates, Mr. Birch published several other engravings of views of Philadelphia and its vicinity. At a later period he issued, by subscription, a series of views of country-seats in the United States. Many of these views were taken in the vicinity of Philadelphia, several of the places represented being now within the bounds of Fairmount Park. Mr. Birch died in Philadelphia in 1834.

David Edwin, of whom Dunlap says, "this eminent artist was the first good engraver of the human countenance that appeared in this country," came to Philadelphia in December, 1797. He was an Englishman, the son of John Edwin, a celebrated comedian, and had been articled, when quite a youth, to the Dutch engraver, Jossi, an artist of superior ability. Edwin followed his master to Holland in 1796, but did not remain long in that country. Without money or friends he could not find the means of returning to England, and a ship bound for Philadelphia happening to be in the harbor of Amsterdam, the young artist determined to go to America by working his passage as a sailor before the mast. The ship was five months reaching its destination. Immediately after his arrival in Philadelphia young Edwin sought T. B. Freeman, a countryman of his, who carried on the business of book-publisher, and solicited employment. He came opportunely, for there were not many good engravers to be had, and Mr. Freeman set him to work on the title-page of a collection of Scotch airs selected by Benjamin Carr. Some idea of the difficulties with which an engraver had to contend in practicing his art in Philadelphia at that time may be formed from Mr. Edwin's account of his own experience. He says,[1] "Copper-plates were finished rough from the hammer. No tools to be purchased, he (the engraver) had to depend upon his own ingenuity to fabricate them for himself, or in directing others qualified for the work. But worse than all was the slovenly style in which printing was executed. Often have I, in extreme cold weather, waited hours for a proof, till the paper, oil, and even the roller could be thawed. The work-shop of the principal printer in Philadelphia was little better than a shell and open to the winds. I once insisted that the printer should have the plank of his press planed and leveled, as it was impossible in the state it was now in to take off a tolerable impression; and the plate I wished printed had cost me much trouble in the execution. The printer resisted all my arguments for a long time, being himself perfectly satisfied with the state of his press. At length, and only in consideration of my paying the expense, it was that he gave his consent." Edwin's first work was done with an old graver, which he happened to have in his seaman's chest, and the shank of which he sharpened into the shape of an etching point, using the two ends of the tool alternately to etch and then to finish his plate.

Yet, some very good engraving was done in those times, and Dunlap, speaking of Edwin's works, says, "His portraits from Stuart, in the stippling style, are unrivaled to this day." Edwin became famous as an

[1] Letter quoted by Dunlap, "History of the Arts of Design," vol. ii. p. 68.

engraver of portraits; yet he never acquired wealth, and at one time was glad to get employment as a clerk in an auction-store, doing at his leisure hours such small jobs in engraving as he could get. The last, and one of the best portraits he engraved, was the head of his friend and patron, Gilbert Stuart, painted by John Neagle. Edwin died in Philadelphia Feb. 22, 1841, in the sixty-fifth year of his age.

Freeman, the publisher, gave employment to other engravers beside Edwin: George Isham Parkyns, an Englishman, whose specialty was aquatint engraving, and Houston, an Irishman, a red-chalk engraver, worked for him. Graham, an Englishman, mezzotint engraver, was working in Philadelphia about the same time. Houston engraved a portrait of Washington for the *Philadelphia Monthly Magazine* in 1798. John J. Barralett, the eccentric Franco-Irishman, already mentioned as a painter, was also an engraver; many of his prints appeared in the *Portfolio*. Barralett was the inventor of a ruling-machine for the use of engravers. He also succeeded in making a valuable improvement in the preparation of copper-plate printers' ink. Cornelius Tiebout did a great deal of work as an engraver in the early part of this century. A cottage scene, after a painting by W. Bigg, which he furnished the *Portfolio* in 1810, attracted much attention for being larger than the usual size, a mechanical contrivance of Tiebout's invention enabling the artist to execute most of the work without using the common graver. One of his most conspicuous works is a "View of the Water-Works at Centre Square," after a design by Barralett. John Aiken also practiced engraving about that time. William Harrison was engaged principally in engraving bank-notes. His son Samuel studied the art with him, and succeeded him in the business. John J. Plocher, historical and landscape engraver, came to Philadelphia about 1815. He engraved in line the fine picture of the Upper Ferry bridge, from a painting by Thomas Birch. Benjamin Tanner and his brother, Henry S. Tanner, both natives of New York, formed a copartnership for the publication of maps and other engravings about 1806. In 1816 they joined Vallance, Kearney & Co., in the business of bank-note engraving. Benjamin Tanner was the engraver of many fine pictures. Henry S. Tanner contrived a new mode of engraving bank-notes, so as to increase the difficulties of counterfeiting.

George Murray, a native of Scotland, who had studied engraving with Anker Smith in London, came to Philadelphia about this period, and got work on Dobson's "Encyclopædia." He was engaged, in 1813, with Gideon Fairman and Cornelius Tiebout, in issuing a new print of "Perry's Victory on Lake Erie," totally different from the designs of Birch, Barralett, and Strickland. He had associated himself previous to this with Fairman, Draper, and others, bank-note engravers. The firm of Murray, Draper, Fairman & Co. became celebrated as the finest bank-note engravers in the country, and made a great deal of money. Murray, however, made unwise investments, and died comparatively poor in 1822. W. Haines is known for a portrait of Dr. Caspar Wistar, engraved in 1805. Francis Kearney, a native of New Jersey, who had studied the art of engraving with Peter R. Maverick, of New York, came to Philadelphia in 1810, and found employment upon book-work. In 1820 he became a partner in the firm of Tanner, Vallance, Kearney & Co., bank-note engravers. He withdrew from the firm in 1823, and resumed portrait engraving. The finest of his pictures were a portrait of Chief Justice Marshall and a copy of Raphael Morghen's print of Leonardo da Vinci's famous picture of "The Last Supper." He has also left some large prints of naval engagements from designs by Birch and others. Francis Shallers, an engraver, who died in 1821, is remembered for his valuable work, in two volumes, the "Chronological Tables for Every Day in the Year, Compiled from the Most Authentic Documents," more than for any specimen of his skill as an artist. William Kneass, who was a member of the firm of Kneass & Dellaker, and at another time of Kneass, Young & Co., exhibited at the academy in 1813 a fine aquatint of Strickland's sketch, "A View of Quebec." From that time to 1820 he engraved several pictures, and did a good deal of work on illustrated books. In 1824 he succeeded Robert Scot as engraver at the United States Mint. He died Aug. 27, 1840.

Charles Goodman, a native of Philadelphia, and Robert Piggott, a New Yorker, both pupils of Edwin, formed a partnership and published many engravings, portraits of celebrated men and prominent citizens. Goodman relinquished engraving about 1819, studied law, and was admitted to the Philadelphia bar. Some years later Piggott also gave up art. He studied theology, and was admitted to orders in the Protestant Episcopal Church. Gideon Fairman, a native of Connecticut, began life as a blacksmith. He attempted engraving with rude tools of his own construction, and gave such evidences of native talent that Brunton, an English engraver, encouraged him to study the art. He went to Albany, N. Y., and bound himself an apprentice to the brothers Hutton, jewelers and engravers. Fairman, having become proficient in his art, came to Philadelphia in 1810, and was associated with George Murray and others under the firm-name of Murray, Draper, Fairman & Co. Jacob Perkins, who had discovered the process of transferring engravings to copper and steel plates, and of applying lathe-work to dies, was subsequently taken into the firm as a partner. In 1818, Fairman went to London with Perkins and Asa Spencer, and some workmen, to compete for a premium of twenty thousand pounds, offered by the Bank of England for a plate which could not be counterfeited. An English engraver having succeeded, after many efforts, in imitating their lathe-work, upon the use

of which they rested the impossibility of counterfeiting their plates, they did not secure the twenty thousand pounds, but the directors of the Bank of England awarded to them five thousand pounds voluntarily, in consideration of the value of their process. The party returned to Philadelphia with the exception of Perkins, who remained in London. The principle of the geometric lathe was in reality discovered by Christian Gobrecht, but its practical use as a security against counterfeiting was due to the ingenuity of Perkins and Asa Spencer, of Connecticut. Perkins suggested the idea and Spencer invented the machine. Most of Fairman's work was upon small figures and vignettes for use on bank-notes, but he was also a good engraver of portraits. Mr. W. S. Baker mentions two portraits of Washington from Stuart's painting, and one of Governor Moultrie of the Revolution, as being engraved by Fairman. Gideon Fairman died March 18, 1827, aged fifty-one years.

William Strickland, the architect, was also an engraver; most of his works are in the aquatint method. Several landscapes and battle pieces by this artist were published in the *Portfolio* in 1814, 1815, and 1816. John Boyd engraved principally in the stipple manner. His first notable work, "St. Francis," was published in 1810. He executed several good pictures between that date and 1821, and some fine portraits, among which were one of Fisher Ames, from Stuart's picture, and one of Elias Boudinot, after Sully.

In engraving, as in painting, native talent now began to reveal itself. James W. Steel, line-engraver, was a Philadelphian by birth. While a youth he learned his business with Benjamin Tanner, and worked at engraving bank-notes for Tanner, Vallance, Kearney & Co. He afterward worked for George Murray, and, having become proficient in his art, set up for himself. He engraved portraits of Gen. Washington, Commodore James B. Allen, John Vaughan, Samuel Slater, Rev. Gregory T. Bedell. Three pictures in Childs' "Views in Philadelphia," "The University of Pennsylvania," "Widows' and Orphans' Asylum," and "Friends' Meeting-House, Merion," were done by Mr. Steel; but one of his best works is that very pretty little picture, "Gray's Ferry in the Olden Time." Mr. Steel died, much respected, June 30, 1879, at the venerable age of eighty-eight years.

Another Philadelphian, David Claypoole Johnston, acquired some celebrity in a particular line of engraving. He was born in the city in March, 1797, and commenced studying the art when he was sixteen years old, with Francis Kearney, and remained with him until he became of age. His sense of humor made the business of book- or plate-work irksome to him, and he adopted the specialty of original caricature engravings, a rich field for one of his temper. His caricatures of the dandies and exquisites of the day, of the pompous, would-be-martial officers of the local militia, made people laugh, and found a ready sale; but, alas! these caricatures were exaggerated portraits, but they were portraits still, and the originals were easily recognized and pointed out. Loud were their complaints and threats. The print- and book-sellers were scared by prospects of innumerable libel suits, and declined to invest their money in those dangerous prints, or to expose them in their shop windows. "Othello's occupation was gone," for the nonce, and the caricaturist went upon the stage. He made his *début* at the Walnut Street Theatre, March 10, 1821, as *Henry* in "Speed the Plow," which was followed by *Master Slender* in the "Merry Wives of Windsor." Johnston remained with the company three seasons, occasionally engraving a political caricature to keep his hand in. In 1825 he accepted the offer of an engagement at the Boston Theatre, with the hope of finding an opportunity to practice his art which was denied him in Philadelphia. At the close of the first season he gave up the stage and set up an engraver's office. In 1830 he began the publication of "Scraps," an annual of five plates, each containing nine or ten separate humorous sketches. Still more comical was the language attributed to the figures represented. These sketches, sparkling with wit and humorous conceit, became known all over the country, and were eagerly sought by all lovers of fun. The caricaturist became famous and made money, a very acceptable companion to fame. Johnston was the nephew of Mrs. Rowson, the author of "Charlotte Temple." He died at Dorchester, Mass., Nov. 8, 1865. His son, Thomas Murphy Johnston, inherited his father's ability.

Some years before Johnston's first attempt, William Charles had set up as a caricaturist. He, in partnership with S. Kennedy, proposed to publish a monthly sheet, each number to contain four original caricatures, at $1.50 per number to subscribers. The project fell through for want of support, although Charles showed some talent as a caricaturist. Among the few known specimens of his skill is a caricature done in the manner of Gilray, representing "Stephen Girard frightened at the ghost of a silver dollar," a memento of the shinplaster times. William R. Jones (1811) is known for engraved portraits of James Montgomery, Capt. Thomas Truxton, Cornwallis, Maj.-Gen. Harrison, and others; Richard Harrison (1815), for a pretty vignette (a water and coast scene) for the title-page to the *Portfolio*, vol. v. J. Cone, in the early part of the century, engraved "Philadelphia from Kensington," for Childs' "Views," after Birch's drawing, and "Fairmount Water-Works, from west bank of Schuylkill," by Doughty. James Neagle, who practiced his art in Philadelphia from 1818 to 1822, when he died, engraved a portrait of Dr. Nathaniel Chapman, from Sully's painting. John L. Frederick commenced engraving in Philadelphia

in 1817. He continued in this business until the time of his death, in 1880–81.

John Hill, an aquatint engraver, came to Philadelphia in 1816. He was already known here as having aquatinted some six hundred groups of small figures in landscapes, which were etched by W. H. Pine, and published in "The Microcosm, or a Picturesque Delineation of the Arts, Agriculture, Manufactures, etc., of Great Britain," originally issued in London. In 1820, Hill associated himself with the painter Joshua Shaw, in an undertaking of some magnitude. This was a collection of about twenty large folio prints, colored, of views of interesting spots, such as "Washington's Tomb," "The Spot where Gen. Ross Fell," "Jones' Falls, near Baltimore," "Falls of St. Anthony," "View near Wissahickon," etc. This fine work bore the title of "Picturesque Views of American Scenery," published by M. Carey & Son, from paintings by Joshua Shaw and aquatints by J. Hill.

Cephas G. Childs, line-engraver, was a native of Bucks County, who first studied with George Fairman, whose partner he afterward became. Among his early works are many pretty views and engravings from paintings. Between 1827 and 1830 he published "Views of Philadelphia." After a trip to Europe, in 1821, he formed a partnership with Henry Inman, portrait-painter, to carry on the business of lithography, employing Albert Newsam as their principal artist for portraits. About 1835, Mr. Childs dissolved partnership with Inman, and became the publisher of the *Commercial List*, a mercantile register and journal. He died at Philadelphia, July 7, 1871.

T. Drayton, about 1819–20, was engraving, in aquatint, views by Miss C. Schetky, of "Edinburgh," "Naples," "The Cottage of St. Leonard's," "Konigstein on the Elb, Saxony," "Falls of the Peddlar, Virginia," "Natural Bridge, Virginia." Drayton went to Washington, and was for many years in the employment of the United States government as draughtsman. He was the father of Henri Drayton, the opera singer.

George B. Ellis, a pupil of Kearney, commenced to engrave in 1821. His specialty was fine work for magazines, annuals, and books. His first noticeable productions were copies of English engravings illustrating "Ivanhoe." John B. Neagle, line-engraver, was an Englishman by birth, but came to this country when a youth. He executed, with much skill, small work for books and almanacs, but, in the latter part of his life, was engaged principally in engraving bank-notes. He died about 1866, aged sixty-five years. Neagle engraved Smirke's design for the "Columbiad" of Joel Barlow, "Cruelty presiding over the Prison Ship," "Nelson wounded at the Island of Teneriffe," from Westall's painting, "Telemachus and Calypso," by Stoddart.

George S. Lang, a native of Chester County, Pa., learned engraving with George Murray. He was not long in the business, and, while he followed it, was principally engaged in bank-note engraving. He engraved "Washington crossing the Delaware," after Sully's picture, the figures being etched by Humphries. Charles H. Parker, who was considered one of the finest engravers of maps, writing, and ornamental letter-work of his day, was born in Salem, Mass., and studied under Fairman. He went to Europe to improve himself in art; came back in 1812, and established himself in Philadelphia. At the time of his death (1819), at the early age of twenty-four years, he was engaged in engraving Washington's Farewell Address. He was a young artist of much promise.

The name of Joseph Delaplaine belongs to the history of art, although he was not himself an artist. In 1813 he commenced the publication of "Portraits of Eminent Men and Women," a series of engravings, four by five inches, each accompanied with a biographical notice by a good writer. The first portrait issued was that of Benjamin West; this was followed by portraits of De Witt Clinton, John Jay, Governor Joseph Heister, Governor William Findlay, and others. The project was good, and it was beneficial to the cause of art, but the pecuniary results were far from satisfactory. Mr. Delaplaine subsequently exhibited his gallery of painted portraits, from which the engravings had been made. He died in 1824.

Joseph Perkins commenced engraving in Philadelphia in 1820. In 1825 he engraved a large picture commemorating Lafayette's visit to this country. The plate was twenty by sixteen inches. Robert Campbell is principally known for his engraving of Thomas Birch's picture of "Fairmount Water-Works," published by Edward Parker. Asa Spencer and Thomas Underwood, both members of the firm of Draper, Underwood, Bald, Spencer & Hufty, were skillful bank-note engravers, but not much known for other work. Richard Fairman, in 1820, had his office in the same building with Gideon Fairman, whose son he probably was. He died in 1821, aged thirty-three years. He left no notable work that we know of.

James B. Longacre was born in Delaware County, Pa., Aug. 11, 1794. He was a bright boy, and gave early indications of artistic genius, which awakened the interest of John F. Watson. The kind-hearted author of the "Annals of Philadelphia" took the lad into his family and book-store, and afterward placed him with George Murray, the engraver, in Philadelphia. Young Longacre justified all Mr. Watson's hopes of his artistic gift. Having made himself master of his art, he left Murray and began engraving on his own account in 1819. From that time to 1831 he engraved many illustrations for books and quite a large number of portraits. W. S. Baker gives a list of twenty-nine of these portraits. The first work by Longacre which attracted attention was his fine engraved portrait of Maj.-Gen. Andrew Jackson, from Sully's picture. This was in 1820; then came, among others, the portraits of Rev. Henry

Kollock; Maj. Nathaniel Greene (1822); Napoleon; Timothy Pickering; Edward Rutledge, of South Carolina, in India ink; John Adams, from Stuart's picture; George Clymer, from Trott's miniature; Dr. Physick, in India ink (1824); James Wilson and Lafayette, in sepia; Robert Morris, in water-colors (1825); Alexander Hohenlohe; Governor Wolcott, of Connecticut; John C. Calhoun (1825),—all of which are done in the best style. Mr. Longacre now conceived the idea of a work of considerable magnitude, which, successfully carried out, gave employment to many engravers and a new impulse to the art of engraving. He originated, with James Herring, portrait-painter, of New York, the publication of the "National Portrait Gallery of Distinguished Americans." There were one hundred and forty-seven portraits done in the very best style, and a biography of each person represented, written by literary men of established reputation. Many of these portraits were drawn from life by Longacre himself, and he engraved twenty-four of them. The first volume appeared in 1834, the others following from year to year. Herring withdrew from the association in 1839, and Longacre continued the work alone until he brought it successfully to its completion. In 1845, Mr. Longacre was appointed engraver at the United States Mint. He designed all the pieces struck after that period up to the time of his death, which occurred Jan. 1, 1869. A year or two before his death he finished for the government of Chili the remodeling of the entire coinage of that country.

The branch of engraving on steel known as mezzotinto was first introduced and practiced as a regular profession in America in the year 1830, by John Sartain, of Philadelphia. Occasionally, however, works in this style had been produced before that time, but only in an experimental sort of way, by amateurs, without being followed up in any instance.[1]

This artist was born in London, England, in 1808, and was educated to be an engraver in what is called the line manner, in which style he produced very many of the plates in Ottley's folio work entitled "The Early Florentine School," published in 1826, presenting examples of the best masters successively, from Cimabue in 1260, and Giotto, his pupil, down to Luca Signorelli in 1500. In 1828, Mr. Sartain commenced the practice of mezzotinto, and thereafter seldom resumed the art he had first learned in its purity, but mingles both styles, with the addition of stippling, in all his plates.

Besides engraving he has engaged professionally in painting in oils, in water-colors, and in miniature on ivory. In water-colors he had as instructor the eminent artist, John Varley, and in oils Joshua Shaw. Figure painting in oil was taught him by Manuel J. De Franca, and miniature and figures in water-colors by Henry Richter. For some time he was employed by Draper, Underwood & Co., the well-known bank-note firm, to make designs for the vignette pictures that embellished their notes, and he also designed on wood for that branch of engraving.

In 1843 he became editor and proprietor of *Campbell's Foreign Semi-monthly Magazine*, in which publication he was the first in America to print "The Song of the Shirt," "The Bridge of Sighs," "The Drop of Gin," and other pieces of a kindred nature, which afterward became so widely known; and Agassiz' article, entitled "A Period in the History of Our Planet," he printed as early as October, 1843, when the name of that eminent scientist was hardly known on this side of the Atlantic. During the same year he had an interest in the *Eclectic Museum* along with the Rev. John H. Agnew and E. Littell, which work was continued by Mr. Agnew alone as the *Eclectic*, and Mr. Sartain thereafter simply engraved the plates that embellished the monthly numbers. In the fall of 1848 he purchased a one-half interest in the *Union Magazine* (also a New York periodical), and it became widely known throughout the country as *Sartain's Magazine*, during the latter part of its career Mr. Sartain being also its editor. It was finally merged into another monthly of the sister city. Besides the literary labors inseparable from these engagements, he has been frequently called on to exercise his pen on various subjects, more particularly those having relation to art.

His industry has been untiring, and his capacity for continued labor a surprise to those who possessed opportunities of knowing his habits. Very many years ago he had, beyond a doubt, already executed with his own unassisted hand a greater amount of work than had ever been accomplished by any one in the profession during a long lifetime. Many still living remember the time when the annuals were in fashion that there was hardly a volume of the kind to be met with that had not all its plates from his prolific burin. *Graham's Magazine* during the first and best years of its existence had a plate every month by him, so too the *Eclectic*, and his own semi-monthly one every two weeks; all this in addition to his other engraving and literary work. His rapidity under pressure may be judged from the manner in which the portrait-plate of Espartero was produced in a sudden emergency for the number of the semi-monthly for November, 1843. Beginning on the uniform black mezzotinto ground at past midnight, the plate was finished, lettering included, when the printers came to work at daylight the same morning. Again, the portrait of Sir Robert Peel, in the October number, 1850, of the *Eclectic*, was begun at ten minutes before two, from the same state as the preceding, and at five the same afternoon a finished proof was mailed to New York. But this was during a period when his engravings were almost purely in mezzotinto, and also when he controlled the printing of his own

[1] As already shown, the first mezzotinto portrait of Washington, by Charles W. Peale, was published in August, 1780.

Digitized by Google

plates. Such rapidity is incompatible with his present method of procedure, in which the mezzotinto is made to form the smallest portion of the process. All the plates referred to so far were for books; we will now turn to more important works.

His large framing prints, too, are quite numerous, several of them as much as three feet in length; but to attempt only a mere catalogue would occupy much space. Prominent among them are "Christ Rejected," after West; "The Iron-worker and King Solomon," after Schussele; "Civil War in Missouri," after Bingham; "Homestead of Henry Clay," after Hamilton; "John Knox and Mary, Queen of Scots," after Leutze; "Men of Progress, American Inventors," after Schussele; "The County Election in Missouri," after Bingham; "Zeisberger Preaching to the Indians at Gosgoshunk," after Schussele; "The Battle of Gettysburg," after Rothermel (this last a work of enormous labor), and many others.

Much of his time and attention has been given to numerous associations in which he held membership. As a controller of the Artists' Fund Society, from 1835 on, he was always an active member of exhibition and other committees, and filled successively all the offices in its gift from president down. For twenty-three years as director of the Pennsylvania Academy of the Fine Arts, he was its most active laborer, first under the presidency of Henry D. Gilpin, then under that of Caleb Cope, and lastly under that of James L. Claghorn. During his travels in Europe, undertaken for his own pleasure and study, he saw personally the honorary members of the institution, and delivered to them their diplomas; this in Spain, Italy, Germany, France, Belgium, Holland, England, and Scotland, and availed himself of the opportunity thus afforded of making better known and appreciated the oldest academy of the fine arts in the United States. In many other prominent institutions of Philadelphia he has been a manager or director, and vice-president of the School of Design for Women, having positively declined the presidency of it, which was tendered him. Many years ago he was elected an honorary member of an art society in Amsterdam, entitled the "Arti et Amicitiæ." In addition to many medals received from different quarters, the king of Italy conferred on him the title of *Cavaliere*, with a decoration and the appointment of "Officer of the Equestrian Order of the Crown of Italy," corresponding to the English grade of knighthood. This was on account of services rendered to Italian art during his management of the art department of the Centennial Exhibition at Philadelphia; but a decoration received from another foreign prince was solely in recognition of his artistic skill, namely, "Chevalier d'honneur," and Commander in the Royal Order of Mélusine.

Without entering particularly into his multitudinous occupations, it ought not to be omitted that his architectural knowledge and taste have been frequently called in aid of important projects. Among them, the plans for the arrangement of the galleries and rooms of both floors of the Pennsylvania Academy of Fine Arts are from his drawings, prepared at the request of the building committee of the directors. He designed the lofty granite monument to Washington and Lafayette in Monument Cemetery, Philadelphia, and superintended its construction; modeled the two colossal medallion heads from which the bronze likenesses were cast, and is the author of the two admired inscriptions cast in bronze and placed on opposite sides of the pedestal. Other monuments of importance in the same cemetery are from his designs, as is also the steeple on the buildings at the entrance to the grounds on Broad Street.

After the organization had been completed for holding the great International Exhibition, in commemoration of the hundredth anniversary of the Declaration of Independence, Mr. Sartain was selected to fill the important and responsible position of chief of the bureau of art. The manner in which the arduous duties were discharged was deemed worthy of the highest praise, while the economy in its management made it infinitely less costly than any other department of the exhibition. The title and decoration from the Italian sovereign was marked evidence of appreciation in that quarter.

In the midst of all these occupations, in the course of a long, industrious life, he has not neglected opportunities, as they presented themselves, of forming collections of pictures, prints, and other art materials of value in his profession, as well as a considerable accumulation of autograph letters from distinguished men. The first named were dispersed under a reverse of fortune in 1852. Among the list is a noteworthy epistle from Bayard Taylor, dated at Kennett Square, Chester Co., Pa., when he was in his seventeenth year, asking Mr. Sartain to receive him as an apprentice. Thus we see how near the late representative of the nation at the German court came to earning distinction in a path so widely different from that on which his reputation now rests.

John Sartain has three children, who are quite distinguished in art. Samuel Sartain, his eldest son, born in Philadelphia Oct. 8, 1830, is both a mezzotinto and line engraver on steel; he studied under the direction of his father and at the Pennsylvania Academy of Fine Arts. Before he was seventeen years of age he engraved a "three-quarter length" portrait (ten by thirteen inches) of Benjamin West, after the picture by Harlow. In 1854 he was commissioned by the Art Union of Philadelphia to engrave for their annual distribution prints a large plate (eighteen by twenty-three inches) entitled "Clear the Track," a winter coasting scene, after the painting by C. Schussele. This engraving secured for him a silver medal at an exhibition of the Franklin Institute, and at the World's Fair in New York an "honorable mention, with special approbation." Prominent among his

numerous engravings are "One of the Chosen," after Guy; "Christ Stilling the Tempest," after Hamilton; "The Song of the Angels," after T. Moran; "Christ Blessing Little Children," after Eastlake; "Evangeline," etc. His chief work for many years past has been portraits on steel for books. Many examples of this class of engraving by him will be found in these pages. Samuel Sartain has been honored by the continuous re-election for twenty-three years as treasurer of the Artists' Fund Society. He also fills the same position in the Franklin Institute, having been one of the board of managers of that body for the past eighteen years.

A younger son of John is William Sartain, the artist, now residing in New York, who has become eminent as a painter, and also a professor in the leading art schools of that city.

Miss Emily Sartain, daughter of John Sartain, has achieved distinction first as an engraver, and since as a painter in oil. She studied in the Pennsylvania Academy of Fine Arts, and also in Paris for several years under Luminais.

She has exhibited pictures in the Paris *Salon*, and has twice received the "Mary Smith prize" for the best picture by women in the annual exhibition of the Academy of Fine Arts. She filled the position of art editor of *The Continent* from the beginning of that journal until 1883, when she withdrew to make a five-months' trip to Paris.

Wood engraving, as a specialty, was introduced in Philadelphia in 1810, by William Mason, of Connecticut. He had learned the art of engraving on copper from Abner Reid, of Hartford. Alexander Anderson, of New York, was the only skilled wood engraver in the country, and some of his cuts inspired Mason with the desire to attempt that branch of the art. He worked industriously with clumsy tools, and succeeded in making some rude illustrations for toy books (1808). He had the sense to see the faults in his work, and the courage to persevere. He procured better implements, worked hard, and at last produced a creditable picture. He then came to Philadelphia and began to practice his art. His brother, David H., came with him, but not having the same skill or the same taste for wood engraving, soon set up as an engraver on brass and copper, giving his attention principally to engraving cylinders for the use of calico-printers. After some years he became the partner of Matthias W. Baldwin in the business of engraving for calico-printers. He was interested in the first locomotive built by Mr. Baldwin. William Mason was represented in the exhibition of 1811 by a portrait engraved on wood, and in 1814 by a figure called "Spring." He executed, among other ornamental work, a small eagle for a bank-check, which was superior to anything of the kind the printer (William Fry), who ordered it, had ever seen. Charles H. Bulkeley, in his "Recollections," says that Mr. Fry, on receiving the cut, told him with a grave emphasis, "Sonny, tell Mr. Mason that if he had called a jury of painters, they could not have produced a design which would have pleased me more than that does." In 1818, Mr. Mason, in partnership with his brother Alva, who had joined him in Philadelphia, set up an establishment as engravers on brass, to which they added the manufacture and sale of philosophical instruments. In the latter part of his life William Mason became teacher of drawing in the Franklin Institute. He was a well-informed man and a student of natural history, particularly ornithology and entomology. He died Feb. 28, 1844, aged fifty-five years.

On going into the brass engraving business with his brother, Mr. Mason left his wood-engraving establishment to his pupil, George Gilbert. This young artist's work was almost entirely confined to book illustrations. He was kept very busy making wood-cuts for Sunday-school books, geographies, and spelling-books. Later, when wood-cuts were used to illustrate magazines, Gilbert was constantly employed. The *Casket* was probably the first magazine illustrated by him.

John Binns, editor of the *Democratic Press*, published, in 1819, an engraved copy of the Declaration of Independence, which said the *Portfolio*, "far surpasses anything that the pencil and burin have hitherto produced in this country." Mr. Binns had had this work in contemplation for several years, and he completed it amid many discouragements. His work was copied on a smaller scale by a workman in the school of one of the artists he had employed, and he could obtain no redress in the courts, as there was no provision in the acts of Congress on this subject, where the parties belonged to the same State. But the facts were too well known, and public opinion avenged Mr. Binns' wrongs. The writing part of this copy was engraved by Charles H. Parker, a young artist, who was a pupil of George Fairman, and who died soon after this work was finished. The portraits of the Presidents of the United States were from drawings by Sully.

The *American Magazine* for 1797–98 had some engravings by T. Clark, among them portraits of Lafayette, Helvetius, Dr. Fothergill, Molière, Loyola, and Abbé Chappe; also a "View of the Bastille" and the frigate "United States." In the *Universal Magazine* for 1797 are Clark's engravings of a "View of the River Wear," a portrait of Kosciusko, and emblematic figures of "Prudence" and "Justice." Some of these are very fair specimens.

W. Harrison, Jr., was the engraver, in the *American Magazine*, of a portrait of Franklin, and Barker of a plate of a semaphore telegraph.

The *Philadelphia Monthly Magazine* for 1798 contains a portrait of Washington, engraved by Houston, and also the "Elevation and Ground Plan of the Jail of Philadelphia," engraved by J. Bowes.

Allerdice was engraver of plates in the third volume

of the "Transactions of the American Philosophical Society." He was a pupil of Robert Scott.

Fevret de St. Memin, a French *émigré*, who had been an officer in the army of the princes, came to the United States in 1793, and to Philadelphia in 1798. He engraved portraits by the physiognotrace process, an invention of the French engraver Queneday before the commencement of the French Revolution. By means of a machine the likeness was traced on copper, and so much work was done that it only required the finishing touches by the graver to complete the picture, so that the profiles were produced rapidly and cheaply. De St. Memin engraved many portraits of prominent persons—several hundred in number—in New York, where he remained from 1793 to 1798, and in Philadelphia. Before coming to this city he made a short stay in Burlington, N. J., and engraved a few portraits there. He remained in Philadelphia until 1803, after which he visited several other cities and went back to France, but returned in 1812 to New York. There he lived three years, painting portraits and landscapes in oil, having given up engraving. He finally returned to France in 1815. After the death of St. Memin a large collection of his American portraits, nearly seven hundred in number, were bought at Dijon by James B. Robertson, of New York. They were exceedingly valuable by reason of nearly all the names of the originals being written above them by St. Memin himself. This collection was made up of proofs which the artist had retained. It does not contain all the known pictures of St. Memin. There are several portraits which exist in this country that are not in the collection. Probably fifty or more of the number are of Philadelphians, and many of them the only known likenesses of the originals now extant.

An emblematical picture in remembrance of Washington, "America Leaning on his Tomb and Lamenting her Loss," was engraved by Aikin & Harrison, Jr., in 1800. George Helmbold engraved a full-length portrait of Jefferson in 1801. Samuel Folwell, an artist of whom little is known, was living in Philadelphia in the latter part of the last and beginning of the present century. An original silhouette likeness of Gen. Washington by this artist was in the possession of Dr. Joseph Carson. Folwell is designated in the Directory for 1800 as a "miniature-painter and fancy hair-worker." He designed and engraved the vignette frontispiece of the "Philadelphia Repertory" in 1811, in which the lanky bodies of the allegorical figures are provocative of laughter.

Edward W. Clay, who was for more than twenty years a noted caricaturist, was born in Philadelphia in 1792, and died in New York Dec. 31, 1857. He was a relative of Henry Clay; had a liberal education, served as a midshipman under Commodore Perry, then turned his attention to the law, and was admitted to the Philadelphia bar March 12, 1825. His artistic taste, however, led him to Europe, and he studied the old masters for three years. On his return to the city he sketched a caricature of "The Rats Leaving the Falling House," on the dissolution of Jackson's cabinet, which brought him into considerable prominence. Failure of eyesight caused him to accept the offices of clerk of the Chancery Court and of the Orphans' Court, Delaware, which he held for several years.

Felix O. C. Darley, the celebrated artist, was born June 23, 1822. His taste for art and an inclination to make it his profession were shown in his boyhood. At fourteen he was placed in a mercantile house in the hopes that his thoughts might be diverted into another channel. Viewing with positive distaste the dull routine of the counting-room, he spent his spare moments in drawing, in which he made rapid improvement. The subjects that first interested him were figures of firemen, and other types of city life, which brought him considerable revenue, and finally induced him to give up his mercantile occupation and devote himself to art. Receiving from the publisher of the *Saturday Museum* a then handsome sum for a few designs, he applied himself wholly to that pursuit. For several years he was employed by large publishing houses, and soon acquired reputation. The series published in the "Library of Humorous American Works" was very popular in the Southern and Western States. In 1848 he removed to New York, where he has acquired eminent distinction.

Charles Deas, another eminent American artist, was born in Philadelphia in 1818. His maternal grandfather was Ralph Izard. He was educated by John Sanderson, and early devoted himself to his art. He studied under the auspices of the National Academy, and afterward traveled extensively among the Indians of the Northwest, and practiced his art successfully many years in St. Louis, Mo. Among his pictures are "The Turkey Shoot," "Walking the Chalk," "Long Jake," "The Wounded Pawnee," "Indian Guide," "A Group of Sioux," "Hunters of the Prairie," and "The Last Shot." His principal work is "Council of the Shawnees at North Bend," an incident in the life of Gen. George Rogers Clarke.

Among the later artists Samuel Sloan, the architect, is deserving of mention. He was born in Chester County, Pa., in March, 1815, and, establishing himself in Philadelphia, he designed many important edifices. Among them are the Blockley Hospital for the Insane, Philadelphia, and the State Insane Hospital at Montgomery, Alabama. He published "The Model Architect" in 1850–51; "City and Suburban Architecture" in 1859; "Homestead Architecture" in 1860, and "Constructive Architecture," 4to. In 1868 he began the *Architectural Review*.

Joseph Wright, portrait-painter, died in 1793, of yellow fever. Appointed by Washington first draughtsman and die-sinker in the United States

Mint, the first coins and medals of the United States were his handiwork.

Die-sinking and seal-engraving form a peculiar branch of art which does not bring the artist's name before the public so speedily as painting and the various other modes of engraving. While, therefore, it was practiced by many of the engravers we have noticed in this work, few made it a specialty, and it is only after the beginning of the century that we hear of any renowned die-sinkers. As early, however, as 1790, an advertisement appeared in the *Freeman's Journal*, in which "an artist" proposed "a subscription for a medal of Gen. Washington," said medal bearing "a striking and approved likeness, and such inscriptions or allegorical figures as shall best suit so great a character." Subscriptions were received at Wilmington by Mr. Peter Rynberg, and by J. Manly to the care of Robert Patton, Esq., postmaster, Philadelphia. Accompanying this announcement was the following certificate: "We, the undersigned, have seen the medal of Gen. Washington, and think it a strong and expressive likeness, and worthy the attention of the citizens of the United States of America." Signed by Thomas Mifflin, Governor of the State of Pennsylvania; Richard Peters, Speaker of the House of Assembly; Christian Febiger, treasurer of the State; and Francis Johnston, colonel of the late American army. What success the subscription to the Washington medal met, is a matter for conjecture.

John Reich, of whom Dunlap says that he was "the best artist in his line that Philadelphia had had," was a die-sinker, frequently employed by Robert Scot, the engraver of the United States Mint, to prepare the dies for the national coin. In 1806, Reich executed, in silver, a medal in commemoration of the retirement of Washington. The design for this medal was by William Sansom, who caused to be prepared a series of fine historical medals, which were struck in silver, bronze, and white metal. One of the medals prepared by Sansom was a likeness of Franklin, from Houdon's bust, with the inscription, "Lightning averted; Tyranny repelled." On the reverse was a design of "the American beaver nibbling at the overshadowing oak." Motto: "British power on the Western continent, 1776." Reich was the artist engaged to cut the medal presented to Commodore Edward Preble, in 1806, under vote of Congress, for his services at Tripoli. Reich, after many years' practice of his art in Philadelphia, moved West, it is said, in consequence of ill health.

Moritz Fuerst, or Furst, die-sinker and engraver of seals and medals, was a native of Hungary. He had been instructed in his art by Wurt, die-sinker in the mint of Vienna, and Megole, superintendent of the mint of Lombardy at Mauckculries, and was thoroughly acquainted with all its branches. He was appointed die-sinker of the mint in 1808. In addition to his duties in that office, he had, after 1812, considerable work upon medals voted by Congress to military and naval officers who had distinguished themselves in the war with Great Britain. After the peace, Fuerst moved to New York, where he continued to work in his profession. He was residing there in 1834.

Christian Gobrecht, die-sinker and seal- and medal-engraver, was born in Hanover, York Co., Pa. He began life as an apprentice to a clock-maker at Manheim, Lancaster Co. Having learned his trade he went to Baltimore, where he gradually became an engraver of headings for newspapers, punches for type-founders, seals and dies. In 1836 he was engaged as a die-sinker at the United States Mint, and he became chief engraver after the death of William Kneass, in 1840. He held that office until his death, in 1844. Mr. Gobrecht was the inventor of the geometrical lathe for ruling plates, which Perkins and Asa Spencer turned to practical uses, as we have mentioned in our notice of these artists. Among Gobrecht's portraits mentioned by Baker were those of Washington, Franklin, Rittenhouse, Dr. Benjamin S. Barton, and Abraham Reese. His medal for the Franklin Institute, with the head of Franklin, is considered extremely fine.

Robert Lovett, an engraver upon stone and metals, came to Philadelphia in 1816. His principal work was upon seals and dies. He removed to New York in 1825, but returned to Philadelphia in after-years. J. Danby, engraver on copper, brass, wood, gold, and silver, settled in Philadelphia in 1822. He came from London.

The first specimen of lithography done in Philadelphia was drawn and printed on stone by Bass Otis, in 1818. This picture, which appeared in the *Analectic Magazine*, resembled a line engraving much more than a modern lithograph. The stone was presented to the American Philosophical Society by Thomas Dobson. The first practical lithographer was John Meer, a painter, who gave notice in April, 1825, that a specimen of engraving on stone, done by him, was on exhibition.

The first etching on glass done in America, it is claimed, appeared in the first volume of the *Emporium of Arts and Sciences*, 1812. It was done by Dr. John Redman Coxe, with fluoric acid, and printed from the glass. The original plate broke after seven hundred copies had been struck off, and a new etching had to be made.

The history of Albert Newsam, the deaf and dumb lithographer, is quite a romance. One day in May, 1820, passers-by stopped to see a little boy of about eleven years, who, with a piece of chalk, was sketching a street scene upon the side of a watch-box, at the corner of Fifth and Market Streets. The correctness of the drawing, the fidelity with which the familiar scene was reproduced under the deft fingers of so young an artist, awakened the curiosity and ad-

miration of the crowd, and some inquiries were made. The boy was deaf and dumb. Accompanying him was a man, also a deaf mute, who claimed to be his brother. They had resorted to this exhibition as a means of obtaining assistance to proceed on their journey. This information was obtained from the man, who gave his name as William P. Davis. Among the inquirers was Bishop White, of the Protestant Episcopal Church, who was the president of the newly-founded Institution for the Deaf and Dumb. Struck with the boy's cleverness, and touched by the destitute condition of a child of such tender age, the good bishop immediately apprised the managers of the society of these facts, and proposed to admit the little wayfarer to the institution, if his brother would consent. Davis, on being approached on this subject, showed much reluctance to part with his brother, but finally consented to leave him in the custody of the managers. He was going to Richmond, Va., he said, and on his return would claim his "little brother" and take care of him. This was the last ever seen of William P. Davis.

The boy Albert was very intelligent; he learned rapidly, and his artistic tastes, developed under proper tuition, left no doubt as to his future vocation. He was a born artist. But a very puzzling mystery was now found to surround the little fellow's past. It was ascertained from him that Davis was not his brother, but he did not know his father's name; nor could he tell the name of the town from which he came. He often drew scenery from memory. One of these pictures was a town on the margin of a river. A visitor who came from Steubenville, Ohio, recognized it as a view of that town. Mr. Wright, another citizen of Steubenville, came to the asylum some time after this, and was shown this boy. A gleam of recognition lighted up Albert's face, but Mr. Wright had no recollection of ever having seen him. The boy seized his pencil, and sketched rapidly a dwelling-house, in which the visitor, to his great astonishment, recognized his own home. Meanwhile the little artist went on drawing an adjoining street and a particular house in it, which, Mr. Wright at last remembered, was formerly occupied by a woman who had a deaf and dumb son; her name was Newsam. Here was a clue at last. It was followed up, and the truth came out. Albert was born in Steubenville in 1809. His father, William Newsam, a boatman on the Ohio, was drowned shortly after the birth of his deaf and dumb child. His mother died some years later, and the orphan boy was taken care of by a kind-hearted innkeeper named Thomas Hamilton. When he was about ten years old a deaf mute, who gave his name as Davis, stopped at the inn, and was much struck with the child's talent for drawing. The little fellow was always sketching things and places with marvelous correctness. Davis represented himself as a man of means, and persuaded Hamilton to let him take charge of the boy and provide for his education. The rascal had other plans. On the way from Steubenville to Philadelphia he compelled little Albert to show his talent by drawing with chalk on any available board, or with a stick upon the soft ground, and when people collected round them he begged money to enable him to take his little brother to Philadelphia, where he was going to place him in an institution for the instruction of deaf mutes, in which last assertion Davis unwittingly spoke the truth. The directors of the asylum wisely concluded that such a rare gift as that possessed by their young charge should not be neglected, but properly developed. They placed Albert under the professional instruction of Mr. Catlin, a portrait-painter, and Bridport, the miniature-painter. When he attained seventeen years of age he was placed in the office of Col. Cephas G. Childs, where he served until he was twenty-one, learning the art of drawing upon stone for lithography, in which he afterward became greatly celebrated. Newsam's work was not only admired for its perfect finish, but for the fidelity of the likenesses; he never lost that accuracy of touch and sight which had enabled him, when a mere child, to establish his identity by drawing scenes faithfully preserved by his memory. He died Nov. 20, 1864, aged fifty-five years.

If we study the history of the introduction and development of the arts in this or any other new country, we find that painting ever takes precedence of sculpture. This is but natural; the use of paint is a necessity; we paint the woodwork of our houses to preserve the wood, as much as to beautify its appearance; then we require a name to be painted on a sign; next comes the desire to have some symbol represented on the sign, and here we have the first step toward art. The demand for these street pictures increases, and the ingenuity of the artist is exercised to depict some suggestive subject; he improves with practice, and the public taste is improved in proportion: symbolic signs are the first picture-gallery of the people. Then there is the laudable desire to preserve the features of some dear member of the family, and the portrait-painter is welcome. All this has been a gradual preparation to the revelation of art in its highest form. It is not so with sculpture. We are not gradually made familiar with it, and it is not popular with the uneducated masses. The color in painting adds to the naturalness of the subject: it looks more life-like. To one who has no artistic training, and to many who have, a portrait will always be more pleasing than a bust. Where we find statuary adorning the public places and galleries, we know that we are among a cultivated people, who read the history of past ages and are writing their own in bronze and stone. The condition of sculpture in this country at the present time is one of the many evidences of the wonderful development attained by our young nation in the course of one century.

One name figures in the annals of art in Philadel-

phia, from the time of the Revolution until far into the present century, at the head of the list of sculptors. William Rush was the creator of his art in America. In 1800 he had already attained considerable reputation as a carver and sculptor in wood, and time in maturing his talent only brought it nearer to perfection. Benjamin H. Latrobe, in an oration delivered before the Society of Artists, in 1811, said, speaking of Rush's figures for the head of prows of vessels, "There is a motion in his figures that is inconceivable. They seem rather to draw the ship after them than to be impelled by the vessel. Many are of exquisite beauty. I have not seen one on which there is not the stamp of genius." Among the most admired ship-carvings executed by Rush were the emblematic statues, nine feet high, adorning the prows of the American frigates "United States" and "Constellation." For the latter, the subject was Nature, her forehead crested with fire, and her hair and drapery loose and flowing. The zone was ornamented with the signs of the zodiac, and the figure stood on a pyramid of stones, emblematical of the union of the States. The "Genius of the United States," a female form in classic drapery, with appropriate ornaments and national emblems, graced the prow of the frigate "United States." A life-like portrait-bust of John Adams was cut by Rush for the sloop-of-war bearing the name of that statesman. Busts and figures of Rousseau, Voltaire, and other French philosophers for the vessels of Stephen Girard, a head of Fingal, full-length figures of William Penn and Benjamin Franklin, a figure of an Indian orator, and a statue of Montezuma, in the Aztec costume, gave evidence of the artist's skill in reproducing the peculiar characteristics of different races in features and expression, as well as of his creative genius in purely imaginary subjects. Nor did he confine himself to carving figures for ships. "Winter," represented by a child shrinking from the cold, won general admiration and praise. So did the figures of "Exaltation" and "Praise," and cherubim encircled by glory, which he sculptured in wood, as ornaments for the organ of St. Paul's Protestant Episcopal Church. His beautiful group, "Leda and the Swan," executed in 1809 for the decoration of the fountain at Centre Square, and since removed to the rocks over the pool at Fairmount, is well known.

Many other exquisite figures that were carved by him may still be seen in Philadelphia. Some, like the recumbent figure of Agriculture, that once adorned the eastern entrance of the Market Street permanent bridge, and the life-size figure of Christ on the Cross, executed for the Roman Catholic Church of St. Augustine, were destroyed by fire. The number of busts which he modeled in clay, beginning with that of William Bartram, in 1812, and ending with that of Gen. Lafayette (the best of his works of that character), in 1824, is quite large. It includes many prominent men and public characters. But the most famous statue executed by Rush was the full-length figure of Washington, which was first shown at the exhibition of the Academy of Fine Arts, in May, 1815. This work alone would have sufficed to establish the reputation of the sculptor. Rush, in modeling the features of the hero, aided his own recollection by a study of the portraits of Stuart, Pine, and Peale, and of the admirable bust executed by the French sculptor Houdon, on his visit to Philadelphia. This statue was put up in Independence Hall, upon the occasion of the reception of Gen. Lafayette, in 1824, and was greatly praised by Washington's faithful friend and ally. City Council purchased it from the artist in 1831, for five hundred dollars. Among the later work of Mr. Rush was the carving of two recumbent figures, one male and one female, intended to represent the Schuylkill under the two aspects of a navigable river, and of the source of the water supply of Philadelphia. These figures, finished in 1825, surmounted the entrance to the wheel-houses at Fairmount.

Besides Houdon,[1] who was but a visitor who came for the express purpose of making a bust of Washington, and Rush, who was for so many years at the head of his profession, but few names of sculptors are to be found in the early history of Philadelphia. John Dixey, an Irishman by birth, and a student of the Royal Academy, is mentioned in the "Familiar Sketches of Sculpture and Sculptors," published in 1854, as one of the earliest sculptors in America. He came to this country in 1789, and in 1801 he was a resident of Philadelphia, and was elected vice-president of the Pennsylvania Academy of Fine Arts. He afterward lived in New York, and all his known works were executed in that city. He is said to have had an ardent love of sculpture, and to have labored zealously to promote the neglected art. It is probable that he did not find sufficient encouragement in Philadelphia at the time he came here. Rush was carving his figures for ships, and no other kind of statuary was in demand. Dixey died in 1820.

Yet, James Traquair, a stone-cutter, who had some taste in sculpture, produced a bust of William Penn, in white marble, which he presented to the Pennsylvania Hospital in 1802. Traquair made it a business, and employed practical sculptors to cut his busts. In 1804 he advertised for sale several busts of Gen. Washington, cut in the best Carrara statue-marble, copied from Houdon's cast. Also busts of William Penn, Washington, and Franklin, in marble, half as large as life, for book-cases. He also produced a large bust of Alexander Hamilton. Traquair died April 5, 1811, aged fifty-five years.

Much of the success of Traquair's undertaking was

[1] The original terra-cotta models of the busts of Washington and Franklin, made by Houdon in Philadelphia, were taken to Paris. They were in the possession of Mr. Walfredin, nephew of Diderot, the encyclopædist, in 1869-70. After the death of Mr. Walfredin they were sold to Monsieur De Montbrison.

due to the talent of the Italian, Giuseppe Jardella, whom he employed to do his finest work. Jardella excelled in ornamental sculpture. He was brought originally from Italy to assist in decorating the mansion of Robert Morris, on Chestnut Street, under the superintendence of the French architect, Maj. Pierre Charles L'Enfant, and had executed several pieces of work, principally in bas-relief, for that building, when the failure of Morris put a stop to the work. It is believed that Jardella was the artist who executed the semicircular pieces in relief, representing Tragedy and Comedy, which were over the windows in the wings of the old Chestnut Street Theatre. They were prepared for the Morris mansion, and were adopted by Latrobe, the architect of the theatre, as appropriate ornaments for that building. Notwithstanding his undoubted talent as a sculptor, Jardella probably became discouraged by the little profit it brought him, for he finally gave up the higher branches of art to follow the business of stonecutter. He was, until 1817, the partner of Christopher Hocker, in a marble-yard on Race Street.

John Eckstein was both painter and sculptor, but showed more genius in the use of the chisel than in that of the pencil. In 1811 he was represented at the exhibition of the Association of Artists by two Cupids in clay, statues of "Pomona," "Charity," and "Milo," with "Samson and the Lion," a design in clay for a monument to Gen. Washington, and two bas-relievos of bacchanals and children. He modeled the "Genius of America" figure in 1813. In 1806, Eckstein designed a model of an equestrian statue of Washington. It was in Roman costume.

George M. Miller came into notice about 1812. He executed bas-reliefs in wax and other materials, which were life-like in color. Among these were heads of Albert Gallatin and Mrs. Madison, which he executed in 1813. He modeled, in 1814, original busts of Bishop White, C. W. Peale, and Commodore Bainbridge, a head of the Venus de Medici, and a copy of Houdon's bust of Washington, also a bust of the wife of Jerome Bonaparte. In 1821 he made a bust of Talbot Hamilton. Miller's most noted work was a life-size figure of "Venus" in wax, colored to nature. It was exhibited in the Apollodorean Gallery in 1818. Dunlap says that Miller, unable to make a living by art, threw it aside for the more profitable profession of a gold-beater.

The only title of George Magragh to a place in the annals of art is some carved musical trophies which were admitted to the exhibition of the Society of Artists in 1811. G. Merlini, in 1813, advertised that he executed "carving of all kinds of statues, ornamental, etc., in any wood that might be preferred." He also offered for sale "the original bust of a distinguished American statesman." Louis Stegagnini, another Italian ornamental sculptor, came to Philadelphia about 1820. He devoted himself principally to making monuments, urns, vases, and mantel-pieces, which, if they did not increase his fame as an artist, put money into his pockets.

Henrico Causici, an Italian sculptor, who claimed to be a pupil of Canova, came to Philadelphia in 1816 to obtain, by subscription, assistance in the preparation of a model of an equestrian statue of Washington, to be presented to the Academy of Fine Arts. While this project was being canvassed, the artist took likenesses in alabaster, in basso- or alto-relievo. Failing to obtain subscriptions in Philadelphia, Causici removed to New York, where (according to Dunlap) he succeeded, after ten years of effort, in finishing his model. That Causici was an artist of no little merit is evident from the fact that it was he who executed the fine full-length statue of Washington which surmounts the Washington monument in Baltimore. This great statue, which attracts the attention of all strangers visiting Baltimore, is sixteen feet high, and was wrought in three separate pieces from one block of marble, weighing thirty-six tons.

In 1824, E. Luigi Persico, another Italian, executed a colossal bust of Lafayette, which he exhibited at the Athenæum. He also modeled a bust of Washington and a bust of Dr. N. Chapman,—the latter by request of the doctor's private pupils. Persico designed a head of Liberty for United States coins in 1825.

Abraham Chevalier, a French sculptor, proposed, in 1825, to execute the "resemblance of some allegorical subject in glory of Lafayette." Whether he obtained encouragement to carry out his idea is not known. Chevalier had lived twenty years in Baltimore before his visit to Philadelphia, and had executed in the former city, he claims, "all there is of sculpture in wood or stone, at public or private buildings, until 1813." In Baltimore Chevalier executed the basso-relievos of the Union Bank, and he designed the façade of the Maryland Insurance buildings.

In March, 1827, it was stated that a full-length statue in marble of Napoleon Bonaparte, executed by an Italian artist of the city, was on exhibition at the Merchants' Coffee-House. The sculptor displayed this work as a specimen of his ability in art, and had ready a subscription for a full-length statue of Washington.

Benjamin Paul Akers, the distinguished sculptor, established himself in Philadelphia about 1860, and died here May 21, 1861, of consumption. He was born in Saccarappa, Me., July 10, 1825, and during his life executed about forty busts and statues, besides some marble copies from the antique. His best works are "Benjamin in Egypt," which he exhibited at the New York Crystal Palace in 1853; "Una and the Lion," statue of "St. Elizabeth, of Hungary," the "Dead Pearl-Diver," and an ideal head of Milton, his last, and perhaps his best, production in Rome. He produced busts of Judge McLean, Edward Everett, Gerritt Smith, and Samuel Houston, and in 1859

he modeled a statue of Commodore M. C. Perry for the New York Central Park.

Joseph A. Bailly, another prominent sculptor, came to Philadelphia about 1850. Among his chief works are "Adam and Eve," "Eve and her Two Children," the monument of Washington, placed in 1869 in front of the State-House, and a beautiful and graceful figure of "Time," a female form, which for many years adorned the front of Bailey's jewelry establishment on Chestnut Street west of Eighth.

The most noted architect in Philadelphia before the Revolution was Robert Smith, a native of Glasgow, Scotland, and a member of the Society of Friends. He built the steeple of Christ Church, and was the architect of Carpenters' Hall, for which he drew a plan-sketch as early as 1768, and was appointed chairman of the building committee in 1770. He was also the architect of the original Zion Lutheran Church at Fourth and Cherry Streets, and of the Walnut Street prison; the largest building which, up to that time, had been constructed in the colonies. He also built Nassau Hall, Princeton, and constructed the *chevaux-de-frise* for the obstruction of the Delaware. Mr. Smith was very young when he came to Philadelphia; at the time of his death, in 1777, he was only fifty-five years old. He was an early member of the American Philosophical Society.

John Thornhill, one of the most active members of the Carpenters' Company, was, according to his obituary notice published in Oswald's *Gazetteer* for January, 1783, "one of the most celebrated mechanics of this or of any other State; celebrated for his ability as an architect."

Samuel Blodget, of Philadelphia, who, though not a professional architect, was a gentleman of much taste, drew the plan of the Bank of the United States. When the building was occupied, in 1797, the newspapers paid some very handsome compliments to the amateur architect. In one of the notices of the building it was said that "the portico, in its proportions, nearly corresponded to the front of the celebrated Roman temple at Nismes." Mease, in his "Picture of Philadelphia," in 1810, said that the front of the bank was "said to be nearly a copy of the Dublin Exchange." Mr. Blodget was a native of Massachusetts.

Dr. William Thornton, a native of the West Indies, and long a resident of Philadelphia, was another amateur architect, who displayed a taste and skill in building which would have done credit to a regular member of the profession. He furnished the plans for the Philadelphia Library, and those for the first capitol building at Washington, D. C., the construction of which edifice he also superintended. He was the first superintendent of the Patent Office, and held that position until his death. Dr. Thornton was a man of science, and a member of the American Philosophical Society.

Maj. Pierre Charles L'Enfant came to Philadelphia when Congress removed to the city. He was well known, having rebuilt the New York City Hall, in Wall Street, for the accommodation of the Federal Congress in 1789. His principal architectural work in Philadelphia was in designing and superintending the building of Robert Morris' mansion, which, owing to the failure of Mr. Morris, was not finished. It was supposed that the extravagance of the architect's plans for that palatial residence had much to do with the celebrated financier's misfortune; but the charge was unfounded. Mr. Morris had the means and the wish to have a grand residence, such as was planned; his losses in unfortunate land speculations caused his ruin, but they were not influenced by his contracts with L'Enfant. Maj. L'Enfant subsequently displayed his talent and the soundness of his judgment by designing and executing the plan of the city of Washington. He was one of the first foreign architects who came to this country, but notwithstanding his talent and industry, and the reputation he acquired, he died poor.

Benjamin Henry Latrobe, one of the best architects and civil engineers who ever came to Philadelphia, was an Englishman by birth. He entered the army of the King of Prussia, in 1785, but after serving as an officer in one campaign, he resigned and went back to England, where he studied architecture. He came to the United States in 1795, and until 1798 resided in Virginia. During that time he built the penitentiary at Richmond, and afterward served as engineer in laying out the Dismal Swamp Canal. During a visit to Philadelphia, in 1798, he casually sketched out a plan for a bank building, in answer to some inquiries of the president of the Bank of Pennsylvania. Some time afterward he was notified that his plan had been adopted, and he was invited to come to Philadelphia. The result of his genius was the construction of a beautiful building of marble in the Ionic style of architecture, with porticoes on Second and on Dock Streets, which was for a long time considered one of the finest buildings in the United States. Latrobe also was the engineer who constructed the first water-works in Philadelphia. He afterward went to Washington, and finished the public buildings in that city. During a useful life he executed other important works.

After Mr. Latrobe's departure for Washington there was no architect of note in Philadelphia until Robert Mills, of Charleston, S. C., came in 1809. He soon made himself known, and obtained profitable employment. Few architects have executed so much work in Philadelphia. He drew the plans for the Sansom Street Baptist Church, the First Unitarian Church at Tenth and Locust Streets, in 1811, and the Upper Ferry bridge in 1812. In the latter year he projected certain changes at the State-House buildings which were important, and he was the architect who drew the designs for the wings for the accommodation of public offices adjoining the State-House. He also proposed very material improvements to the

main building. Mr. Mills designed the block of buildings running from Walnut Street to Locust, and from Ninth to Tenth, which was called "Washington Square." He was the architect of the First Philadelphia Bank, at the southwest corner of Fourth and Chestnut Streets. It is supposed that he designed the Gothic mansion in Chestnut Street, between Twelfth and Thirteenth, once occupied by Dorsey. He drew the designs for the hall of the Washington Benevolent Association, on Third Street, above Spruce. This was one of the finest buildings in the United States at the time of its erection, in 1814. When that elegant hall was burned, the second building on the same site was partially constructed on the plan of Mills. He was the architect of many buildings of taste and utility in various parts of the United States. He drew the plan for Thomas Jefferson's mansion at Monticello, in Virginia. He drew the designs of the State-House building at Harrisburg. He designed the Washington monument at Baltimore, and the monument at Bunker Hill. He built, in various parts of the country, churches, prisons, hospitals, public offices and edifices, and was for some years in permanent employment in Washington, where he designed and superintended the buildings of the Patent Office, the Treasury, the General Post-Office, and many other edifices. He died at Washington City, on March 3, 1855.

James Finley erected the chain bridge at the Falls of Schuylkill. Joseph Ramie devoted himself principally to the improvement of houses and landscape gardens. In 1813 he drew a plan of Union College, Schenectady, N. Y. Thomas Pope, architect, had some peculiar plans for the construction of bridges. He lived in Philadelphia in 1812. He exhibited the model of "Pope's Flying Pendant Lever Bridge," suitable for the East River, at New York, one hundred and twenty feet high, so that ships could sail under it.

William Strickland, born in Philadelphia in 1787, studied architecture under Latrobe, and became the most noted native architect of his time. His first important work was the Masonic Hall on Chestnut Street. The corner-stone of this building was laid in April, 1809, and the hall was opened for service in December, 1810. The style was Gothic, and the building was crowned with a steeple and spire. His next work of importance was the United States Bank, on Chestnut Street. The plan was that of the Parthenon at Athens, the flanking columns being dispensed with, together with extraneous ornament. The corner-stone of this building was laid on April 19, 1819, and it was completed and ready for use in August, 1824. Strickland was the architect of the new Chestnut Street Theatre, west of Sixth Street, which replaced the building destroyed in 1820. This house was opened on Dec. 2, 1822. He was architect of the first custom-house building for the United States, in Second Street, below Dock, and the New Jerusalem Temple, southeast corner of Twelfth and George [now Sansom] Streets. St. Stephen's Protestant Episcopal Church, on Tenth Street, was designed by Strickland; also the Jewish Synagogue, Cherry Street, near Third, and the Friends' Lunatic Asylum, near Frankford. In after-years he was architect of the Merchants' Exchange, at Third, Walnut, and Dock Streets, the United States Mint, the United States Naval Asylum, on Gray's Ferry road, St. Paul's Protestant Episcopal Church (rebuilt), and the Blockley Almshouse.

Mr. Strickland turned his attention to the construction of railroads, and he went to Europe to study the system. He was the engineer of the New Castle and Frenchtown Railroad. He died in 1854, while engaged in superintending the construction of the State-House at Nashville, Tenn. The Legislature of Tennessee voted that a crypt should be prepared for his remains in that splendid edifice, and there they have since remained.

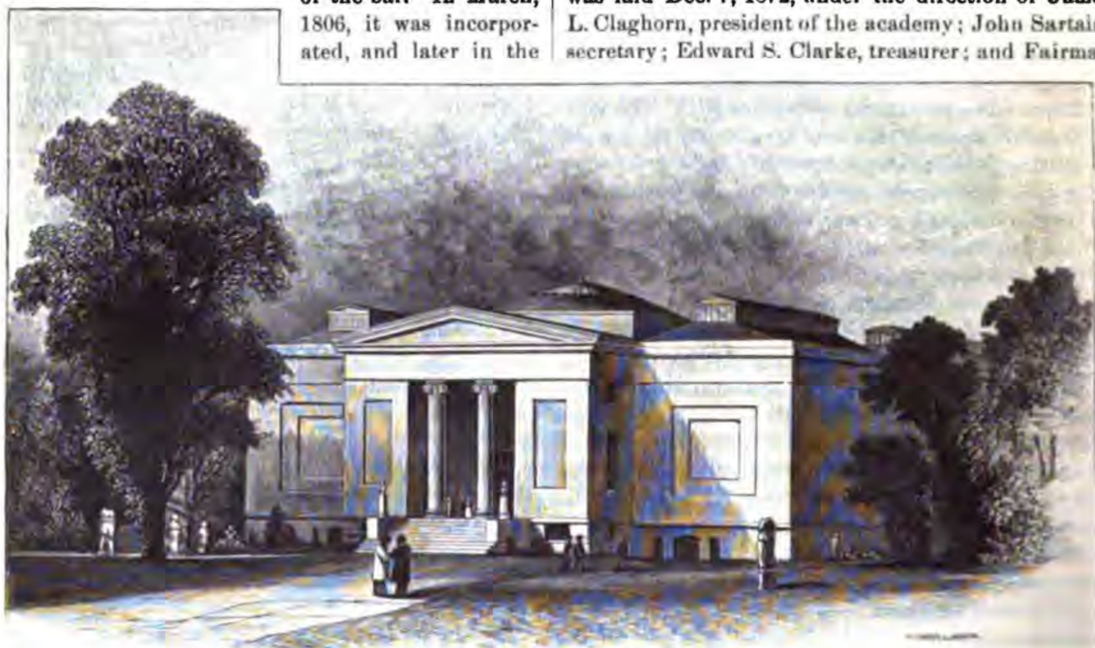
John Haviland, a native of England, came to Philadelphia in 1817. He became associated with Hugh Bridport in the management of an architectural drawing-school, and they published, in 1818, "The Builders' Assistant, for the use of Carpenters and Others." Mr. Haviland's first important design was that for the First Presbyterian Church, at Seventh and Locust Streets. Shortly afterward he drew the plans for St. Andrew's Protestant Episcopal Church, in Eighth Street. His grandest work was the Eastern Penitentiary. He was the architect for the Pennsylvania Institution for the Deaf and Dumb, at the corner of Broad and Pine Streets. The building of the Eastern Penitentiary increased his reputation greatly as a designer of prison buildings, and he did considerable work of that kind in various parts of the country. He died in Philadelphia, March 28, 1852.

As we close these brief and imperfect sketches of the men who have labored in the various branches of art in Philadelphia, we cannot but revert to those early days (1791), when Charles Wilson Peale attempted to found "A School for the Fine Arts," a scheme in which he found but one coadjutor, Cerachi, the Roman sculptor, and wonder at the change that less than one century has brought in the condition of art. It is the more surprising when we reflect that artistic taste is generally the result of, rather than the aid to the material progress of, a community, and that, moreover, our sketches stop at a period already distant from the present, and since which art has continued to move with the same gigantic strides. If Peale, the promoter of the abortive "School for the Fine Arts," the more successful founder of "The Columbianum," could see the noble Academy of Fine Arts, of which he was one of the most active promoters in 1805, in its present development, the noble specimens of statuary and architecture which adorn our streets and public places, our magnificent libraries, the splendid galleries of paintings, and the exhibitions, so different

from the first exhibition given by the Columbianum in the Senate chamber, he might say, with grateful exultation, "At last my dearest wish is gratified, the wish I expressed in my letter to Hawkins, in 1807,—'I wish Philadelphia to be the seat of art and science in America.'"

Of course the history and progress of the arts of a city are intimately associated with the organization of the societies intended to promote its welfare, and for the accomplishment of those things which separate individuals could not do. Among those which have from time to time been established in Philadelphia the "Pennsylvania Academy of the Fine Arts" holds the most prominent position. It was organized in 1805, at a meeting in Independence Hall, by seventy-one gentlemen, a majority of whom were members of the bar. In March, 1806, it was incorporated, and later in the same year a building on Chestnut Street, between Eleventh and Twelfth, was completed and occupied, thus forming the oldest academy of the fine arts in the United States. Its first president was George Clymer. The first annual exhibition of the academy, in conjunction with the Society of Artists, was made in May, 1811, and consisted of above five hundred productions. At this time the board of directors were George Clymer, William Tilghman, P. F. Glentworth, William Meredith, Joseph Hopkinson, William Rush, Samuel F. Bradford, Zaccheus Collins, James Gibson, Charles J. Wister, William Poyntell, Reeve Lewis, and Rembrandt Peale. In 1810 the first annual discourse was made to the society by Mr. Hopkinson.

The first structure, after many additions had been made to it, was partially destroyed by fire in 1845, when quite a number of valuable works of art perished, among them a fine original picture of Murillo of the "Roman Daughter," which had been presented by Joseph Bonaparte, ex-king of Spain, and the entire gallery of fine casts from the antique, a donation from the first Napoleon, besides many other works, original models, etc. In 1846 a new building was erected on a much larger scale than the first, and was made in great measure fire-proof. But the growing wants of the academy very soon demanded more space, and finally, in 1870, the property was sold, and the Chestnut Street Opera-House now occupies the site. Immediate steps were taken to erect a new building for the Pennsylvania Academy of Fine Arts, and a lot was secured on the southwest corner of Broad and Cherry Streets for the purpose. The corner-stone was laid Dec. 7, 1872, under the direction of James L. Claghorn, president of the academy; John Sartain, secretary; Edward S. Clarke, treasurer; and Fairman Rogers, John Sartain, Henry C. Gibson, Henry C. Morris, and Matthew Baird, building committee. The architects were Messrs. Furness and Hewitt. The ceremonies attending the laying of the corner-stone consisted of prayer by Rev. Dr. Morton, reading a letter by Mr. Claghorn from Horace Binney, brief remarks by Caleb Cope, followed by a very able address from Fairman Rogers. The president next introduced Theodore Cuyler and Rev. Dr. W. H. Furness, who made brief addresses.



OLD PENNSYLVANIA ACADEMY OF THE FINE ARTS.

The academy building has a front of one hundred feet on Broad Street, with a depth of two hundred and sixty feet on Cherry Street. It is built of brick and stone, of the Byzantine or Venetian style of architecture, and is thoroughly fire-proof. Over the broad portal on Broad Street stands a mutilated colossal statue in marble of the goddess Ceres, which

Digitized by Google

was dug up at Megara, Greece, and presented to the academy by Commodore Patterson.

The schools of the academy are conducted on the liberal plan of offering all their advantages gratuitously, merely obliging the applicant to show a drawing indicating sufficient capacity. Lectures on artistic anatomy form an essential feature, and perspective and a general knowledge of architectural styles are imparted, the whole being directed by competent professors. The fundamental principle of the institution is that of a joint-stock company, and this is the root of all its conflicts with the professors of art, which began with its birth and to all appearance must continue to the end; the artists insisting that it is only those practicing art can know how to conduct schools of art, or properly arrange the works themselves contribute to the exhibitions. A public-spirited lover of art, now deceased, has bequeathed in his will a very large sum of money to the academy, sufficient to endow it for the public good for all time, but it is on the condition that this feature of joint-stock shall disappear. This is not calculated to operate detrimentally to stockholders, because it would only be a change of name to that of contributor, all the privileges remaining the same except one, namely, the right to sell out the academy.

James L. Claghorn, the president of the Pennsylvania Art Academy, is a native of Philadelphia, where he was born July 5, 1817, being the second son of the late John W. Claghorn. At the age of fourteen he entered the establishment of Jennings, Thomas, Gill & Co., auctioneers and commission merchants, in which his father was a partner, and applied himself early to the work by which he expected to make his way in the world. Five years afterward, Mr. Jennings having died, the elder Claghorn and Mr. Myers (another partner) withdrew, and formed the firm of Myers & Claghorn. In 1840, John W. Claghorn withdrew, and then the subject of this sketch, together with Samuel T. Altemus, entered into a new combination with Mr. Myers, and continued the business, on Market Street, between Sec-

ond and Third. There they went on with various changes until Dec. 31, 1861, when James L. Claghorn retired. Up to this time so steady had been his devotion to business that, for the whole twenty-one years during which he had been a partner in the concern, not a single entry appeared in the ledger which was not made with his own hand. Throughout this period he had entire charge of the finance department, which was no small matter. In those days, to do a business of ten million dollars a year meant even more than it does now. After close application covering a long period of years, he might reasonably desire a respite, and, though not intending to quit active life, he planned an excursion abroad, to enjoy his well-earned leisure. But just at the time when he was ready to carry this out, the state of the nation had become so threatening that he could not find it in his conscience to turn his back on the popular struggle just entered upon, with the issue still doubtful. Instead, he resolved to devote his whole time and energies, just set free from business, to aiding, so far as he could, the cause of the Union. It is rather a remarkable fact that both he and Mr. Myers were invited to join the Union Club, which was formed in November, 1862, for the purpose of consolidating the loyal gentlemen of Philadelphia and counteracting secession sympathizers. It embraced but a little over forty members at first, and the selection of two persons from one firm was a pronounced compliment. Not long afterward, on Dec. 27, 1862, the Union Club evolved that larger body which took the name of Union League, and played so important a part in creating a popular support for the war. Immediately on its organization, Dr. John F. Meigs, William H. Ashhurst, George H. Boker, and James L. Claghorn were chosen on the executive committee. The last named was appointed treasurer, and has held that office ever since down to the present, except while absent for a time in Europe. Recently, upon the twenty-first anniversary of his incumbency of the treasurership, he was presented with a handsome gold medal, as a token of the appreciation of his services entertained by his fellow-members of the League. The pecuniary management of the League, so essential to its welfare, has always been successful, and for this fact its treasurer certainly deserves the credit.

Besides this he was very active in obtaining those large subscriptions which the Leaguers individually raised for various purposes, such as publication and recruiting. He became treasurer of each of the important committees, and kept all their accounts, besides those of the League itself. Some idea of their extent may be had from the fact that the enlistment committee alone disbursed one hundred and eight thousand dollars in two years. "I didn't give much time to my own affairs in those days," he once admitted in conversation, "and in that way lost some good opportunities. But that was not of much importance. The first business was to get the country out of its scrape. It was pretty hard work, though, and some nights when the League House was threatened I stayed there all night."

In 1865, on the 1st of November, peace being fully restored, he started for Europe, with his wife, on the steamer "Scotia," and two years to a day from that time re-embarked on the same vessel for America. Before his departure he received various complimentary dinners, at one of which T. Buchanan Read recited a spirited and graceful poem of his own, composed for the occasion.

Ever since he had been a young man Mr. Claghorn had been charged with financial trusts. He had not been in this country many days, after returning from Europe, before he was elected president of the Commercial National Bank, having previously been a director of the Philadelphia Bank, as his father had been before him, and also of the Girard Bank.

While Mr. Claghorn is prominently known to Philadelphians by reason of his identification with the city's financial and commercial interests, yet he is equally as well known as a leader in all that pertains to the development of the higher arts and to æsthetic culture in its fundamental aspect. The love of art was born in him. He began by making a collection of paintings. At one time he bought only American paintings, and had in his house three hundred pictures of native artists. Then he sought foreign works, and he still retains a number of both kinds. But his chief attention has been given to engravings, and he was one of the founders of the American Art Union, which strove to foster this branch of the fine arts. At present he devotes himself to keeping up the modern engravers and acquiring a representative variety of their works in the best state.

In his house on West Logan Square are everywhere seen the evidences of his love of the beautiful in art. The drawing-room and its adjoining cabinet are filled with pictures and other objects of rare artistic interest. Opening out of the first apartment is a spacious engraving-room, built on an adjoining lot and lighted from above through glass, as well as by rows of gas-jets lower down, for the darker hours. Here there is spread upon the walls a series of etchings and other prints, illustrating the history of the graver and burin from the best specimens of early German art in the fifteenth century down to the elaborate work of modern France, Italy, and England. At one end of the room the panels on which the pictures are hung are so arranged as to slide upward out of sight, bringing into view another array behind the first; and back of these there is still another set. A large bronze relief of Rembrandt is placed above against the cornice, and at the opposite end of the gallery another of Van Dyck. Gallery is hardly the right word, for there is no sense of coldness and vacancy as in so many rooms set apart for pictures. Comfortable furniture is disposed here and there; charming works in oil, by Diaz, Michel, and others, rest upon

James L Claghorn

Digitized by Google

low easels; and as you wander about to look at the engravings, you come upon specimens of Japanese or royal Worcester ware of extraordinary rarity and beautiful design. In one corner is the grand piano, silently suggesting another taste cultivated amid these charming objects; near by stands a long row of sumptuous books on art, behind low glass doors, and in two angles of the walls are set pretty beaufets, filled with delicate and glittering products of the potter's wheel and the glass-furnace.

But the engravings here are merely a selection from the immense stores collected in the house. Without invading privacy too far, a word may be said of the "print-room" up-stairs, approached through a long passage, the walls of which are panoplied with cuts, both wood and steel, from skirting-board up to ceiling. In the room itself there is every appliance known to the collector. Chiffonieres, well stocked with examples of divers masters; broad tables, ample portfolios, racks for exhibition and revolving shelves, loaded with volumes of reference on the subject for which the room exists, and ready to fire off their information at the touch of a hand. Within this small space are assembled indescribable treasures, which have cost years of patient accumulation, loving study, and doubtless a good deal of money. But Mr. Claghorn is not one to value his treasures merely for their cost; they must be beautiful and meritorious as well. He is a connoisseur, and, more than that, a genuine enjoyer. The whole atmosphere of the house and this room shows that he has collected not from a sordid desire for possession, but so that he might live among artistic things and imbibe daily their refining and refreshing influence. In all Mr. Claghorn owns some fifty thousand engravings. Among them are two exquisite pieces by the rival claimants to the invention of mezzotint,—Rupert, Count Palatine, and Col. Von Siegen. Albert Durer is exceedingly well represented by a large group of impressions from steel and wood, and several complete series; and most of Whistler's best etchings are found in the collection. The accumulation of mezzotints is ahead of any other in America.

But Mr. Claghorn is not simply a collector of pictures, a patron of artists. In every local movement looking to the advancement of the cause of art, whether in the promotion of art education or in the city's adornment, he has been an active, generous leader. A few years since he was chosen president of the Academy of Fine Arts, of which he had been a director for a number of years. Mr. Claghorn lent all his influence to the work, and chiefly by his exertions there were obtained over twenty-three subscriptions of ten thousand dollars each, and seven of five thousand dollars each, within six weeks, making a total of two hundred and sixty-five thousand dollars. There are not many men who have the tact or can command the confidence to accomplish a feat like this. In this way the fund was raised which brought the academy into its present effective and commodious building. He is also connected with other art institutions.

It is more than thirty years since he attended the first meeting of the School of Design for Women. Subsequently he became a director and then treasurer of that institution, and finally he was made president. The influence of one such man, catholic in taste, and appreciating the æsthetic in a variety of forms, can hardly be estimated until after the lapse of years.

Mr. Claghorn's personal appearance and characteristics are too well known to need much description. Stout, hearty, white-haired, but active and keen in his enjoyment of all the good things of life, he retains at sixty-four all the zest of a young man, and nothing gives him more pleasure than to see those around him thoroughly happy, and to add to their ideal pleasures as well as to their material comforts. He is a striking example of how, in our American society, faithful devotion to business may be combined with sincere cultivation of the beautiful, generous encouragement of art and whole-souled patriotism, by simply carrying out the promptings of a large, frank, and unaffected manhood.

Besides the Pennsylvania Academy there have been several other institutions established in Philadelphia for the purpose of promoting the interests of the profession, and these were managed by artists themselves, with one exception, "The Artists' and Amateurs' Association," in which the control was by a mixed body, as its title indicates. The first of these in the order of date was entitled "The Columbianum," which was established in 1794, through the efforts of Charles Wilson Peale. The second was called "The Society of Artists of the United States," and was organized in May, 1810, four years after the Pennsylvania Academy had obtained its charter. An attempt was made to harmonize the interests of the two associations, but the joint-stock feature of the academy made it impracticable. Subsequently an arrangement was arrived at by which it was agreed that the Society of Artists should pay into the treasury of the academy the sum of two thousand dollars (which they did), and the directors passed a resolution which says, "The Society of Artists shall have the right of making their annual exhibition in the rooms of the academy for six weeks." After enumerating certain expenses to be paid out of the proceeds, the law goes on to say, "The residue of the moneys then received shall be equally divided between the academy and the society." Schools were provided for out of a portion of the proceeds of the exhibition, but difficulties arose about the management of them, and the affairs of both institutions languished. At length the Society of Artists dissolved.

In 1824, and again in 1828, attempts were made by the artists to obtain concessions from the academy to the end that matters purely professional should be confided to professors of art, but this was refused.

The result was the establishment, in 1834, of "The Artists' Fund Society of Philadelphia," with John Neagle at its head, but the chief promoter of the movement was Joshua Shaw. The act of incorporation bears date "the twenty-ninth day of April, one thousand eight hundred and thirty-five, and of the commonwealth fifty-ninth," signed, "James Findley, Secretary of the Commonwealth." This society added to the usual features of an exhibiting body and an academy that of a benevolent fund for the relief of artists needing assistance, hence the title adopted. This association continues to exist, but only in its beneficial and social character.

"The Artists' and Amateurs' Association of Philadelphia" was formed in 1839 through the exertions of Joshua Shaw, and held its first exhibition the year following in the upper galleries of the Arcade, situated on the north side of Chestnut Street, below Seventh, in the same apartments that had been occupied by Peale's Museum. The prominent feature of this institution was that of an art union, then a novelty here, and which had been devised in Germany about seven years before. It succeeded in popularizing art, and was found to be useful to such a degree that the plan was very soon adopted in England and other European countries, and was introduced into America by the Apollo Association of New York, and the Artists' and Amateurs' Association. Its exhibitions ceased on the second year.

"The Art Union of Philadelphia" succeeded, and was organized in March, 1843, with James McMurtrie as president. In the following year it received its charter. It made the sixth regularly established society in the city; but its sole purpose was the distribution of native art productions among the people at moderate cost, and the employment and encouragement of home talent. It became widely popular here, as it had previously been everywhere that the system had been tried, and was found very useful in the direction of its aim. After a number of years of marked success it was allowed to decline, and was dormant for a long time. But in 1882 it was resuscitated in a modified and, it is believed, an improved form, Its president was John Baird, and the annual distribution to the members was made in the Academy of Fine Arts.

The seventh and last on the list has for title "The Philadelphia Society of Artists," and held its first annual exhibition in 1879 in the north galleries of the Pennsylvania Academy, which were engaged for the purpose, but difficulties arose as usual, and their annual exhibitions are now held in galleries of their own, on Chestnut Street below Eighteenth.

Many of the profession continue to exhibit with the academy, although they now possess galleries of their own; but from the time of the establishment of the Artists' Fund Society, in 1835, the academy suspended its annual exhibitions altogether, a period of ten years. When the academy directors were about to reconstruct their new edifice, after the disastrous fire of 1845, they purchased from the artists their building, which stood in front, obstructing the view of the academy building from the street, and from that time on the artists contributed their works to the academy exhibitions, most of the time the exhibition committee of arrangement being composed one-half of representative artists, elected by the profession.

The building referred to was erected by the Artists' Fund Society, on space rented from the academy, over the stores on the Chestnut Street front. It was first opened with the fifth annual display of the society, in May, 1840. The Rev. Dr. Bethune delivered the inaugural address, and it may be appropriate to quote a few words from it in closing: "The opening of your new and commodious hall of exhibition, on a site generously secured to you by the Academy of the Fine Arts, warrants the best hopes for the future. You need no longer complain that you are without a resting-place and a home, and the scandal of seeming alienation between a society of artists and a society of the friends of art has ceased. Kindness has been proffered, and kindness has been accepted, and the academy have shown their willingness that you should be set before the public in a good light, even at the expense of being thrown themselves into the background.

"The fact that, as associated artists, you are conscious of strength to assume the entire management of your own interests is in itself cheering. For it is true that since the painters of Sienna were chartered in 1355, whose admirable statutes for the government of the profession, for truth and clearness, have never been surpassed, artists have proved themselves to be the best judges of what the honor of the arts may demand. It should also be remembered that in their earlier infancy they have always needed and sought kindly nurture from those who have the taste to admire and the means to reward what they have not the happy genius to execute."

The Philadelphia Sketch Club, founded in 1861, has a fine gallery of paintings. The School of Design, established in 1850, occupies a building at the southwest corner of Broad and Master Streets, Edwin Forrest's old mansion, which was enlarged and extended back to Carlisle Street. This institution is designed for the instruction of women in drawing, sculpture, and painting, and is maintained by the contributions of members of the society. The institution originated under the patronage and assistance of the Franklin Institute. The Fairmount Park Art Association, organized in 1872, is devoted to the embellishment of Fairmount Park with objects of art. The members make an annual payment of five dollars each, and have contributed to the park several valuable works of art. Beside these art associations there are several others in the city doing good work in the same commendable direction. There are also many private art collections in the city that

deserve mention, among which may be named those of William B. Bement, Henry C. Gibson, Fairman Rogers, James L. Claghorn, and George Whitney.

CHAPTER XXXIII.

MUSIC, MUSICIANS, AND MUSICAL SOCIETIES.

THERE was no music in the Quakers. Even from their worship they excluded the hymn of humility and the psalm of praise. They were a peculiar people, more so upon this subject than the Puritans. The latter, while opposed to instrumental music in their churches, encouraged the utterance of vocal praise. The precentor was an important church officer in the Presbyterian worship. The manner in which he led the tunes was nearly as important as the text and method of the sermon. Congregational singing was a duty and an observance among the Presbyterians. In his house usually the member of that sect abstained from the use of musical instruments himself, and did not permit such enjoyment to his family. Here then were two great influences among the early Pennsylvanians against the cultivation of the art of music for purposes of enjoyment. On the other side was the limited influence of the Swedes, whose religious services, framed upon those of the Catholic Church, imitated the original as closely as Protestant doctrines would admit. When Christ Church was founded the hymn, psalm, and anthem were immediately adopted, according to the fashions of the Church of England. The Baptists used the hymn in their meetings. The German Reformed and the Lutherans were of similar taste. The Moravians shocked the early Quakers and Presbyterians, who denominated organs "whistle-boxes," by introducing that instrument, and accompanied it with profane brass, wind, and stringed instruments,—the trumpet, the clarionet, the harp, and even the violin and bass viol. When the Catholic chapel of St. Joseph's was opened the musical periods of the service were cultivated under the care of Father Harding and his successors. The choir might have been weak at times, but they must have fostered it with care and sought the acquisition of new voices whenever there was opportunity. Whatever musical taste there might have been among the early settlers had been acquired before they had come to America, and much of it was only a memory.

In a community in which the predominant feeling was in opposition to amusements, even harmony could hope for little encouragement. Such amusements as were common were of the rougher sort; horse-racing, swimming in summer and skating in winter, hunting, fowling, and fishing. In the first year after the foundation of the city the gravity of the grand jury was shocked by juvenile delinquencies. They spoke "of the great rudeness and wildness of ye youth and children in ye town of Philadelphia. . . . That they daily appear up and down ye streets gaming and playing for money." Except such recreation as was physical, or might be procured from games of chance or address, there was little that could interest children, and still less for the amusement of grown people outside of the cold hard work of life, and the performance of religious duties. Friends' Yearly Meeting, in 1716, advised against Friends "going to or being in any way concerned in plays, games, lotteries, *music*, and dancing." In the succeeding year there was a "pronouncement against races, gaming," or needless and vain sports and pastimes, "for our time passeth swiftly away, and our pleasures and delights ought to be in the law of the Lord." For nearly sixty years music in the city must have been a chance gratification and a novelty. It is known that in 1740 an association for musical purposes was formed in the city, and also a dancing assembly, which was composed of men of large figure in the affairs of the time, nearly all of them being members of the Church of England.

In 1749, John Beals, music-master from London, "at his house on Fourth Street near to Chestnut, adjoining to Mr. Linton, collar-maker," taught the violin, hautboy, German flute, common flute, and dulcimer, by note. His lessons were given to young ladies who desired it at their own houses. And he notified the public he "likewise produces music for balls or other entertainments."

The first attempt at anything like the performance of a musical drama or opera was made by Hallam's company at the new theatre on Society Hill, Southwark, under the management of Hallam, in the autumn of 1759. Mrs. Love, a member of that company, Mrs. Harman, and her husband were the principal singers of the troupe. They brought out the first musical feast, "Theodosius; or, the Force of Love," with all the vocal and instrumental music. "The Beggar's Opera," by Gay, followed,—*Macheath*, Mr. Harman; *Polly*, Mrs. Love; *Lucy*, Mrs. Harman. In December there was "an interlude of concert music" performed by "some gentlemen of the city," who had provided a harpsichord for the occasion. This is the first recorded appearance of musical amateurs upon the stage. The performers must have been men of some position, because the object of the entertainment was "for purchasing an organ for the College Hall in this city, and instructing the college children in psalmody." David Douglass succeeded Hallam as the manager of the new theatre (the second built) at Cedar [South] and Crab or Apollo Streets in the winter of 1766–67. This company had some fair singers. "The Beggar's Opera" was performed on the 28th of November; Miss Wainwright as *Polly*, *Macheath* Mr. Wools. Miss Cheer, a member of the company, who acted the principal light comedy characters, was also a good singer, and achieved some local reputa-

tion. Douglass, in the season of 1769–70, introduced "Midas" (an operatic burletta), Milton's masque of "Comus," and Shakespeare's "Tempest," altered by Dryden, all of which required the use of instrumental as well as vocal music. In 1765 the concert separate from theatrical representation was introduced. "A concert of musical glasses" was given in that year. The performers at the theatre led off in the first of the vocal and instrumental concerts given, it is believed, in the city; Miss Wainwright, Miss Cheer, Miss Hallam, Mr. Wools, Mr. Wall, and others, assisted. In 1770, Signor Gualdo, an Italian performer, it may be supposed, gave the first recorded concert by one of his nation "of vocal and instrumental music, solos and concertos, on various instruments,—the favorite mandolin not excepted." Gualdo afterward gave a concert and ball at the Freemasons' lodge in Lodge Alley. In order to quiet the consciences of the persons who would like to attend the concert but would violate their profession if they remained at the ball, Signor Gualdo had an admirable arrangement to secure both sorts of custom: "Admission ten shillings. If any lady or gentleman chooses to go away after the concert, the porter will return one half a crown."

At the outbreak of the Revolution Congress adopted puritanical objections to amusements, and prohibited theatrical entertainments as well as other vain diversions. When Hallam, in 1780, desired to open the theatre for dramatic performances, he found great difficulty and objection. He was obliged to avoid the scandal of an open announcement that he would not perform plays, and resorted to the subterfuge of opening the South Street Theatre as a "temple of Apollo," for concerts of vocal and instrumental music. With them he mingled recitations and even performances of plays, which were called "readings." In May he performed "A Monody in behalf of the Chiefs who nobly fell in the American Cause." Growing bolder, afterward he advertised "Lectures, being a mixed Entertainment of Representation and Harmony." In 1787, Hallam advertised "*Spectaculum Vitæ;* at the Opera-House, Southwark, for the relief of our fellow-citizens enslaved at Algiers; on Monday next will be performed a concert, vocal and instrumental." This musical entertainment consisted of the presentation of "The Grateful Ward; or, the Pupil in Love," and the musical entertainment of "The Poor Soldier," ending with "A Vaudeville." In 1789, the law still continuing, Hallam performed the operas of "The Duenna," "The Poor Soldier," the comic opera of "Lethe" beside; and under the title of lectures such tragedies as "The Gamester" and "Hamlet," and the comedy of "The West Indian." The law prohibiting theatrical representations was repealed in 1789, and the Governor permitted to license theatres. When Wignell & Reinagle opened the new theatre in Chestnut Street, above Fifth, on the 2d of February, 1793, the entertainments were a concert of vocal and instrumental music. This company was strong in talent. Reinagle was a musician, and led the orchestra in an overture. Boulay performed on the violin, Saloman on the harp, and Guenin on the piano. They were probably musicians attached to the orchestra. The songs were by Mrs. Morris and Mrs. Chambers, and Messrs. Mallet, Harper, and Chambers. The yellow fever of 1793 postponed the opening of the new theatre for dramatic performances for some months, the company having been driven to Annapolis, where they remained until late in the winter. On the opening night, Feb. 17, 1794, the first piece performed was Keefe's opera of the "Castle of Andalusia."[1] The musical character of this company had been looked to with care by Wignell and his partner. The foundation of the organization was the orchestra. The musicians were considered equal in general ability to the stage artists. There were twenty of them. Reinagle presided at times, and usually chose the piano for his instrument. George Gillingham, the leader, had been celebrated in London as a violinist.

In the dramatic company the most celebrated vocalist was Mrs. Oldmixon. She had been popular on the London stage as Miss George, and was a burletta vocalist, filling the line of singing chambermaids and sprightly girls at the Haymarket and Drury Lane Theatres. She took the leading characters, especially in comic operas. She was the first to sing in Philadelphia the simple ballad (now so very old, but known to everybody), "The Blue Bells of Scotland," in which she was encored night after night. Sir John Oldmixon, her husband, performed tolerably on the violin. Mr. Marshall, a vocalist of fine powers, was the principal tenor in opera. Mrs. Marshall, excellent in romps and country girls, was possessed of a melodious, powerful, and extensive soprano voice, which she used with skill and musical precision. Morton was an excellent performer of concertos and pieces on the piano-forte. Mr. and Mrs. Warrell, with capable voices, were good in minor parts and in choruses, which, by their taste and ability, they strengthened greatly. Miss Broadhurst was a singer of respectable talent, generally sustaining the second parts in opera. Darley was a tenor who had, Durang says, stood well beside Incledon, and Darley, Jr., was also a fine tenor. Wignell and Reinagle relied, in considerable degree, upon the musical talents of their company. Several musical pieces of the English opera type, partly dialogue and partly songs and choruses, were brought out in the first season, among which, pronounced a great performance, was "Robin Hood;" also "Comus," in which Mrs. Oldmixon, Mrs.

---

[1] The cast shows that the managers had several performers whose musical abilities were at least respectable. The characters were as follows: *Don Scipio*, Finch; *Don Cæsar*, Darley; *Don Fernando*, Marshall; *Don Juan*, Morris; *Don Alphonso*, Morton; *Pedrillo*, Bates; *Strado*, Wignell; *Sanguino*, Green; *Philippo*, Darley, Jr.; *Banditti*, Harwood, Francis, Cleveland, Warrell, Blissett; *Victoria*, Mrs. Warrell; *Lorenzo*, Mrs. Marshall; *Isabella*, Mrs. Bates; *Catalina*, Miss Broadhurst.

Marshall, Miss Broadhurst, with the two Darleys and the Warrells, sustained the principal parts. "The Spanish Barber," with Dr. Arnold's music and accompaniments by Carr, was translated from the famous piece by Beaumarchais, upon which Rossini constructed his opera of "The Barber of Seville." In the year 1793 there was an addition to the resident population of the city by the arrival of two professional musicians who were not engaged in connection with the theatre company. One of these was Benjamin Carr, from the London Ancient Concerts, who established himself in a music-store at No. 118 Market Street. The other was Raynor Taylor, afterward frequently before the public in concerts and musical entertainments.[1]

On the 5th of May, 1794, what might be denominated the first professional and amateur concert took place at Oeller's Hotel, under direction of George Gillingham, leader at the theatre, Menel, and Benjamin Carr. Gillingham played a concerto on the violin, Carr sang one or two songs, but the great novelty of the evening was the performance by the orchestra of the celebrated composition afterward, for a quarter of a century and more, pounded to death on pianos, "The Battle of Prague." This was performed for the first time in America, and adapted for the band by George C. Schetky, who was a capital musician and long known to the Philadelphia public. Kenna, a vocalist, with his wife and daughter, sang at the Harrowgate Garden in afternoon and summer-night entertainments during this year. Benjamin Carr had been educated in music under the celebrated composers, Dr. Samuel Arnold and John Wesley, a nephew of the famous Methodist preacher. He was a brother of Sir John Carr, an Englishman of some literary education. A fine musician, he was a successful composer. As an organist he was one of the best performers of which the city could boast, and his services in Roman Catholic and Protestant Episcopal Churches were always in demand. He was religiously inclined, and when he performed in compositions of sacred music, he was exalted with emotion and feeling. His compositions were generally of a sacred cast.[2] He published, in 1820, "The Chorister," a collection of chants and harmonies, selected, arranged, and composed by himself. He was the leader of the Musical Fund Society orchestra, and conductor of the first concert at Washington Hall, in 1821. He was the leader at the first representation in Philadelphia of selections from Handel's "Messiah" and Haydn's "Creation," which embraced the principal solos and choruses of those pieces. The performance was under the direction of Benjamin Carr, Raynor Taylor, and George C. Schetky. It took place in June, 1810, at the Roman Catholic Church of St. Augustine. The principal soprano was a young lady pupil of Mr. Carr and Mr. Schetky; the principal tenor, Thomas Carr, of Baltimore; the principal bass, Shapter, of New York. Thirty-four ladies and gentlemen sang in principal parts and chorus. The orchestra was exceedingly strong, much beyond the general numbers of the orchestras of the day. Mr. Gillingham was leader of the band. The organists were Raynor Taylor, Benjamin Carr, Thomas Carr, and T. Meinecke, of Baltimore. Memminger, of Baltimore, led the twenty-one violins. There were six violas, four clarionets, six flutes, five violoncellos, three bassoons, three double basses, four trumpets and horns, and one kettle-drum. This performance was the most celebrated of the time and referred to frequently. The great number of the participants was unexampled in the previous history of the city. It was excelled by what was called a grand oratorio, but really a selection from oratorios, presented in 1820 for the benefit of the Widows' and Orphans' Asylum and the Bible Society. There were one hundred and thirty performers, of whom the larger proportion were instrumental.

BENJAMIN CARR.

The first performance of a full oratorio took place on the 9th of April, 1801, in the hall of the University of Pennsylvania, on Fourth Street below Arch. Dr. Shaw was the conductor, and he essayed the bold experiment of producing Handel's "Messiah." It

[1] They were buried in St. Peter's churchyard, where the Musical Fund Society have erected suitable monuments to their memory.

[2] Mr. Carr died May 21, 1831, aged sixty-two years. His companions of the Musical Fund paid this tribute to his virtues on his tombstone:
"Charitable without ostentation. Faithful and true in his friendships. To the intelligence of a man he united the simplicity of a child."

Digitized by Google

would have been impossible to obtain vocalists competent for this work from amateur ranks. Dr. Shaw went to the theatre. He engaged for the principal parts Mrs. Oldmixon and Miss Broadhurst, John Darley, Darley, Jr., and Taylor, with others, the theatrical company making up the chorus. Gillingham was the leader of the orchestra, and Taylor the organist. How successful this performance was in a pecuniary point of view is not told in the journals of the day.

For many years the theatre supplied the concert-room with singers, and with most of the orchestral performers as well. The ladies of the theatre frequently added to their income by a yearly concert performance. Mrs. Oldmixon probably first resorted to that expedient in 1800, after she had sung with Miss Broadhurst and Mr. Carr, in two concerts given by Miss Chateaudun, a juvenile wonder ten years old, who, "considering her age, had a wonderful proficiency on the harp." Mrs. Oldmixon's concerts were regularly given for some years. Her fine musical education and good voice, and her experience in musical performances (she was the original *Wowski* in "Inkle and Yarico") rendered her popular. She had the advantage that she needed very little assistance from other performers. She could fill a programme herself. Wolfe played the clarionet for her in 1800. Soissons breathed for her on the flute in 1802. Gillingham was leader of the orchestra in 1808. In 1812 she was more liberally assisted than for many years. Mr. Smalley sang for and with her, Gillingham and Schetky played the violin, Pfeiffer the piano, the Carusi brothers on the French horns, and another Carusi and French on the clarionet. This occurred at Masonic Hall in February, 1814. On that occasion Mrs. Burke sang for her. Mrs. Oldmixon withdrew from the stage and opened a boarding-school at Germantown, which was quite successful. Mrs. Burke, of the theatre, afterward married Joseph Jefferson. She was an elegant singer, and was always an attraction at a concert. Mrs. French, a native of Philadelphia, was a popular vocalist, but not upon the stage. She gave her first concert in 1818, and was assisted by Taws on the piano-forte; Gillingham, violin; Gillies, violoncello; Schetky, bass; Blondan, flute; and others. A writer in Poulson's *Advertiser*, who said that he had seen and heard Mrs. Billington, Catalani, and Mrs. Mountain, then very famous in Europe, declared that Mrs. French was a better singer than either of them, and more scientific than Catalani, who at that time was considered the best singer in Europe. Mrs. French gave concerts and sang in concerts with others until the end of the year 1821.

Miss De Brueys gave concerts in 1805–8, part of the time with Mr. De Brueys. They took place at the Assembly Room, Shakespeare Hotel, Chestnut Street, at Auriol's dancing-school, and other places.

Mrs. Le Folle gave her first concert in the city at the old academy, Fourth Street below Arch, in December, 1808. She was the first wife of Le Folle, a leading musician connected with the Chestnut Street Theatre. This lady, who was no actress, should not be confounded with the second Mrs. Le Folle, who was a Miss Wrighton, daughter of a famous actress on the English stage, afterward known as Mrs. Pownall. Miss Wrighton was the second wife of Alexander Placide, and mother of the Placides, Henry and Thomas, and of daughters one of whom afterward became Mrs. Mann, and another Mrs. William R. Blake. Mrs. Le Folle, the vocalist, was a fine singer, and popular. Perhaps the next Italian after Signor Gualda who gave a concert at which the principal food was airs from the Italian operas was Mr. Comoglio, whose entertainment was given at the City Hotel, Nov. 7, 1809. One of the best established and successful musical associations which endured for some years was "the quartet party," originally consisting of Gillingham, J. C. Homman, Le Folle, and Schetky. They gave nine concerts in 1809, and were occasionally assisted by vocalists. Charles Hupfeld was admitted to the party, which became a quintet, although continuing under the old name, in 1810. The concerts continued several years longer, and were in operation in 1818.

The first of the theatrical star performers who shone in opera was Incledon, the English vocalist, who appeared at the Chestnut Street Theatre in 1818. He gave a full round of the English operas popular at the day,—"Love in a Village," "Lock and Key," "Castle of Andalusia," "The Waterman," etc. Incledon was equally effective in serious or sentimental songs. Mr. Henry Phillips, of the Lyceum Theatre, London, followed Incledon in the same year. He brought out for the first time the melodramatic opera of "The Devil's Bridge," "The Siege of Belgrade," "The Duenna," and other pieces. He had no difficulty about filling the minor parts. McFarland, Barrett, Burke, Jefferson, and Abercrombie, of the theatre, were good singers. More pleasing and excellent were Mrs. Burke, Mrs. Le Folle, Mrs. Anderson, and Mrs. Bloxton. Mr. Pearman, an English vocalist, came in the beginning of 1824, and introduced "The Devil's Bridge," "The Siege of Belgrade," "Fontainbleau," "The Barber of Seville," "Clari, the Maid of Milan," in which "Home, Sweet Home" was first sung, and others. Henry Phillips, in 1822, brought out in March, at the Walnut Street Theatre, Rossini's "Barber of Seville," his first appearance upon the American stage, translated from the Italian libretto, and rendered with the music of Rossini.

Charles F. Hupfeld also gave concerts on his own account in 1812, and annually thereafter nearly up to the time of his death in January, 1819. On these occasions there were songs by Gillingham, Blissett, Stewart, Jefferson, Mrs. Green, and Mrs. Burke.

Francis Blondau, celebrated as a performer on the

flute, gave a concert in 1814, and others up to 1823. At one of these Hupfeld presented an original composition, a "concerto militaire." Mrs. Green, Mrs. Burke, and Mrs. Placide sang for him. Mrs. Green was a Miss Williams, and an original member of the Chestnut Street Theatre Company in 1794. She married William Green, a member of the same company. He was manager of a Richmond theatre at the time of the great fire in 1811, and lost his only daughter by that calamity. Madame Knitel, from Paris, gave a concert at Masonic Hall in 1824. She was a performer upon the clarionet, an instrument not often played upon by a woman. She resided in the city for some years, and frequently appeared on musical occasions.

Arthur Keene, a young Irishman, "from the New York and Boston theatres," gave a concert in 1819. He was one of the company which supported Garcia, afterward Madame Malibran, at the Bowery Theatre, New York, in 1827. Miss Victoria Boudet, an American girl of French parentage, born at Savannah, gave several concerts in 1820, singing in Italian and English. She was then not sixteen years old. It was said of her, a comparison perfectly understandable at the time, that "her voice has the lowest tones of contralto, and the highest soprano tones of Mrs. French." Four years afterward this lady married a merchant of Norfolk, Va., and withdrew her attractions from the concert-room.

Willis, of West Point, leader of the military band there, celebrated as a performer on the Kent bugle, gave an example of his skill in 1820 at a few concerts, Mrs. De Luce taking the vocal parts.

One of the finest musicians that had come to the city was Anthony Philip Heinrich, known in the latter part of his life as "Father Heinrich." He was an enthusiast in music; he was a native of Schonlinde, in Austrian Bohemia. He had been a merchant and an extensive banker, and was believed to be a man of fine fortune. Music was his passion; he neglected his business to amuse himself by visiting places where he could hear and enjoy the best performances. As a consequence his business went to ruin, and he, who had been a wealthy amateur, was compelled to take up the bow and seek a livelihood as a professional musician. He was in Philadelphia when the European banking-houses of which he was proprietor failed in 1805, and after that he became a wanderer. He left and went West, where he remained in solitude for some time; then to London, where he received an engagement as principal violinist at Covent Garden and Drury Lane Theatres. Returning to Philadelphia in 1821, he sought relief from his poverty in concerts, and led a varied life. Heinrich was known all over the country. He was the author of over one hundred works, oratorios, symphonies, overtures, concerted pieces and songs, many of which were distinguished for great originality, varied expression, and patriotic sentiment.

Edward R. Hansen, a native of Denmark, became a permanent resident and teacher of music in the year 1822. He had the advantage over most members of the profession in the fact that he could play excellently on the flute, violin, piano, and flageolet. He was a figure in musical affairs in the city for some years.

Mr. Huerta, performer on the guitar, gave two concerts in 1824.

The first translation of Von Weber's romantic opera of "Der Freischütz" took place at the Chestnut Street Theatre on the 18th of March, 1825. The orchestra was doubled, and embraced nearly all the professional musicians and some amateurs. The text was spoken by several of the performers, but there were competent singers,—Wallack, *Caspar;* Darley, *Wilhelm;* Jefferson, *Killian;* and Mrs. Burke, *Bertha.* These artists saved the piece, which, taken altogether, was not a success. The music, it was said, was of too high and scientific character to be understood by the ordinary public, which had not been educated up to the full enjoyment of music, or to a liberal cultivation of taste.

The first regular opera company came to the Chestnut Street Theatre in 1827; the manager was Davis, of New Orleans. It was a French troupe which performed in that city in the winter season. The principal performers were Richard, Alexandre, Notaire, Rochfort, Le Blanc, Tabary, Theodore, and Mesdames Alexandre, Milon, Charlotte, and Bolze. This company introduced a knowledge of the methods of the operatic stage. During September and October they sang the following operas in the French language: "Joconde," "Robin des Bois" (Robert the Devil), "Der Freischütz," "Jean de Paris," "La Dame Blanche," "Le Macon," "Werther," "Thérèse," "Rendezvous Bourgeois," "Du Solitaire," and "Aremia." The same company performed at the Chestnut Street Theatre in 1828. They presented most of the operas of the previous season. "Mosè in Egitto" was among the novelties brought forward at this time. Mr. Hunt and Miss Phillips, in December, 1828, sang in English operas and in concerted pieces. Diamond's opera of "Native Land" was brought out during this engagement.

Mrs. Austin, a London vocalist, accompanied by C. Horn, Pearman, and Jones, introduced the English opera at the Chestnut Street Theatre, in the season of 1827–28. She performed in many of the old English musical pieces, and during her engagement introduced for the first time on the American stage "Cinderella" in English, with the original music by Rossini, and Dr. Arne's opera "Artaxerxes," in which she took the character of *Mandane.* Kotzebue's play of "The Cossack and the Volunteer" was produced at the Chestnut Street Theatre in the season of 1827–28 as an opera. It was probably the first American opera performed in Philadelphia. The composer of the music was Braun, a member of the theatre

company, and his wife, who was a singing actress, took the principal part.

Madame Fearon, in December, 1828, came with great reputation from London. Together with Madame Brichta, C. Horn, Signor Rosich, and Signor Angrosani, they produced the first Italian opera, "La Trionfa della Musica," on the 5th of May, 1829. "Justina," an American opera, by John Clemens, of Philadelphia, was performed at the Walnut Street Theatre in the season 1829-30. The New Orleans French Opera Company was again at the Chestnut Street Theatre in September, 1829. They brought out "La Fiancée," music by Auber; also "La Dame du Lac," and "Le Calife de Bagdad." The French Opera Company came again in 1829. There were some changes. Mrs. Alexandre had retired; Letterlière was added to the company, with Mesdames Boudoulot and St. Clair. They gave no new operas.

Madame Feron (not Madame Fearon mentioned in 1828) appeared in the fall season of 1830. On the 12th of November was brought out, for the first time, the grand operatic drama of "Aladdin," the character of *Nourmahal* being sustained by Madame Feron, *Aladdin* by Mrs. E. Knight, and another by Mrs. Willis. The company was without a principal tenor or bass voice, and much of the music, which was by Bishop, had to be omitted.

The French opera opened in September, 1831, with a fine company, in which were Madame Berdoulet Paradol, Monsieur Des Champs, Madame St. Clair, and M. St. Aubin. They brought out for the first time the opera of "La Muette de Portici" (Masaniello), by Auber, and his comic opera of "Fra Diavolo." *Masaniello* was sustained by M. St. Aubin; *Fenella*, Madame Berdoulet; *Elvira*, Madame St. Clair; *Fra Diavolo*, St. Aubin; *Zerlina*, Madame St. Clair. During this season were also brought out "Guillaume Tell," by Grétry; "Le Petit Chaperon Rouge," by Boieldieu; "Le Barbier de Seville," by Rossini; "La Gazza Ladra" and "Der Freischütz." Another American opera were brought out at the Arch Street Theatre Jan. 2, 1832. The words and music were by John Clemens, the leader of the orchestra. It was called "The Fiend and Fairy; or, the Rock of Utrich." Clemens was the author of the negro song "Coal-Black Rose," which was first sung at the Walnut Street Theatre in 1829, by William Kelly, and was afterward taken up by George Washington Dixon and others. The air of this piece became immensely popular. It was sung in parlors, hummed in offices, whistled in the streets, and performed by bands. No single piece of music had ever been so treated, and it continued in favor long after it had become to those who liked variety a nuisance.

A "national operatic drama," "The Red Branch Knight," written by George Pepper, editor of *The Irish Shield*, published in Philadelphia, was brought out at the Arch Street Theatre in April, 1832. The music was not original. The tunes were those of old Irish airs, but the singing of Miss Rock gave great satisfaction.

Mr. Sinclair, the English vocalist, made his first appearance at the Chestnut Street Theatre Oct. 17, 1831, in "Rob Roy." Sinclair was the pride of the English stage at one time, but when he came to America his voice was used up. He brought out during his engagement "The Cabinet," "Guy Mannering," and other pieces.

The opera of "Cinderella" was produced at the Arch Street Theatre, Nov. 28, 1831. *Prince Felix*, Mr. Jones; *Baron Pompolino*, John Jones; *Alidor*, Rowbotham; *Cinderella*, Mrs. Austin; *Clorinda*, Mrs. Rowbotham.

Sinclair Reynoldson, a bass singer, from London, and Miss Hughes, appeared at the Chestnut Street Theatre in the spring of 1833, in "Cinderella," "Fra Diavolo," and some other pieces.

A regular Italian opera company, known as the "Montressor Troupe," made its first appearance at the Chestnut Street Theatre, Jan. 23, 1833. This was the first full Italian company that had performed in Philadelphia. The artists were Giovanni Battista Montressor, tenor; Count Arnaldi, basso; Fornasari, baritone; Orlandi, buffo; Sapignoli, Pracei, and others; *prime-donne*, Signorina Adelaide Pedrotti, Enrichetta Salvioni, Placi, Verduce, Sacomani. This company sang "Elisa e Claudio," "L'Italiana in Algieri," "Il Pirata," "Cenerentola," "Otello." The houses were good, and fashion began to incline to Italian opera. The leader of the company was Signor Antonio Bagliola; leader of the orchestra and first violin, Signor Micheli Rappetti.

Miss Phillips, a vocalist from London, with Latham, a buffo, Jones, tenor, and Miss Watson (afterward Mrs. Bailey, and a great favorite in Philadelphia), made their first appearance at the Chestnut Street Theatre, December, 1834, in the "Marriage of Figaro," which was not a successful engagement. Miss Watson's voice was a contralto of extensive range.

Mrs. Wood, formerly Miss Paton, and Lady Lennox, of London, her husband, Joseph Wood, a tenor with a sweet voice, and William Brough, a splendid basso, deepened the impression of the merits of opera at their first engagement at the Chestnut Street Theatre, Jan. 18, 1835. They made their appearance in "The Maid of Judah,"—*Ivanhoe*, Mr. Wood; *Cedric*, Brough; *Rebecca*, Mrs. Wood. This lady had a magnificent voice, ranging from mezzo-soprano to the highest soprano register. In ability to reach the top of the scale with pure intonation and force she has not been exceeded by other celebrated singers in opera, whether in English, French, or Italian. This company brought out "Cinderella," "Guy Mannering," and, on February 14th, for the first time, Bellini's delightful opera "La Sonnambula,"—*Amina*, Mrs. Wood; *Rodolpho*, Brough; *Alvino*, Wood; *Alessio*, Walton; *Lisa*, Mrs. Rowbotham. This opera was a great success. It held the theatre for fifteen nights. The managers

were so much impressed with their good fortune that they commissioned Thomas Sully to paint a full-length portrait of Mrs. Wood as *Amina*. He produced a splendid likeness, and the picture decorated the lobby of the Chestnut Street Theatre for many years. This company, on the 11th of January, 1841, at the Chestnut Street Theatre, produced, for the first time in Philadelphia, Bellini's opera of "Norma." The translation of the *libretto* was by J. Reese Fry and William H. Fry, and they gave great attention to the scenery, costumes, and accessories. The chorus numbered eighty voices. The orchestra, greatly enlarged by the accession of competent amateurs, was composed of sixty musicians, and led by Leopold Meignen. The cast was *Norma*, Mrs. Wood; *Elberta* (a new name for *Adelgiza*), Mrs. Bailey; *Claudian*, Wood; *Oroveso*, Brough. Burton was managing the National Theatre, on Chestnut Street, near Ninth, at this time, and endeavored to supplant the piece at the Chestnut Street by bringing out another version of "Norma" on the same night, in which Madame Anna Sutton took the principal part. His experiment did not succeed. By his tactics he managed to injure the performance by the Woods, which was not financially a success.

On the 15th of October, 1839, a new opera company opened at the Chestnut, with Mrs. Martyn (late Miss Inverarity), Miss Poole, and Messrs. Gubelei, Martyn, and Manvers. The opening piece was "Cinderella," but they brought out on the 21st, for the first time in the city, Beethoven's masterpiece, "Fidelio,"—*Leonora*, Mrs. Martyn; *Florestan*, Manvers; *Don Pizarro*, Guibelei. "La Gazza Ladra" followed.

On the 14th of January, 1838, Miss Sherriff, Mr. Wilson, and Mr. Seguin made their first appearance in the city in "La Sonnambula," which was followed by "Amilie," a piece which had been previously performed at the Walnut with great success by Madame Otto, Brough, and T. Wilson. Mr. Horncastle was added to the company during the season. Seguin became popular at once, and held the public favor during many subsequent years of performances.

Among the vocalists who appeared in the concert-room at this period (the Musical Fund Hall being the place) was Madame Caradori Allan, a finished Italian singer. The veteran Braham appeared at Burton's National Theatre in 1840. He had at one time been the boast of the English stage, but was still an impressive shadow of himself. In this engagement were performed "Guy Mannering," "The Devil's Bridge," "Love in a Village," "Masaniello," "The Siege of Belgrade," "The Slave," and "The Cabinet." Braham, although *passé*, was still a fine singer, and managed to hide his defects with considerable skill.

The celebrated Italian buffo singer, Signor Giuseppe de Begnis, for want of a supporting company, sang at the Chestnut Street Theatre May 6, 1842, giving scenes and costumes. He frequently appeared in concerts afterward.

In November, 1839, Mr. Seguin, who had been pleased with his experiences in the country, came back with his wife, and, with Mr. Latham and Horncastle, opened at the Walnut Street Theatre, in March, in "Der Freischütz." They played the "Marriage of Figaro," and some other pieces, in English. This was the beginning of the Seguin Opera Troupe, an organization successful for many years. In April, 1844, Mr. and Mrs. Seguin opened at the Chestnut Street Theatre, then under the management of E. A. Marshall. Besides the Seguins, the company consisted of Mrs. Phillips, Shrival (tenor), and Peter Richings, with some others. They brought out "La Sonnambula," "Norma," "Anna Boleyn," "Barber of Seville," and "Fra Diavolo." In 1845, Mr. Fraser became the tenor. Others succeeded during the career of the company. Fraser made his first appearance as *Thaddeus* in "The Bohemian Girl,"—*Count Arnhein*, Brough; *Arline*, Mrs. Seguin; *Devilshoof*, Seguin, who was an excellent comic actor, and made more out of the part by his drollery than by his singing.

A new Italian troupe was at the Chestnut Street Theatre in February, 1848. It was composed of Signora Biscaccianti (late Miss Ostinelli, a native of Boston), Signorina Amalia Patti, contralto; Signorina Teresa Truffi, Signoras Lietti, Rossi, and Avogadro; Signors Rossi Corsi, Benedetti, tenor; Beneventano, baritone; Avignoni, Arnoldi, Piamontesi, Strini, Morra, bassos; with Lietti and Barili Patti, father of the *prima-donna* (the lady a fine contralto), and also of Adelina Patti, the famous singer in after-years. This company opened with Donizetti's "Gemma di Vergi." They performed "Lucia di Lammermoor," the heroine by Biscaccianti, who made a great impression; "Lucrezia Borgia," in which Truffi was much admired. "Ernani," by Verdi, was brought out on the 15th of March with a cast scarcely equaled and never exceeded,—*Elvira*, Signorina Truffi; *Don Carlos*, Beneventano; *Ernani*, Arnoldi; *Ruy Gomez da Silva*, Rossi. This company was the finest that had yet appeared in the city. They brought out "Il Giuramento," by Mercadante. A new season of Italian opera commenced on the 6th of June, 1848, with Biscaccianti as the *prima-donna*, Signor N. Perelli as the tenor, and Signor Novelli basso, aided by Signor Avignone. It was a short season. The weather was getting too warm for opera. Another company, with Signora Lietta Rossi as *prima-donna*, Signors Avietti, Rossi Corsi, Sanquirico, and others, tried a short season in the summer at the Walnut. There was more attraction in two members of the orchestra,—Arditi, violinist, and Bottesini, contra-bassist. They were artists of the highest grade on their respective instruments.

Edward P. Fry, son of William Fry, publisher of *The National Gazette*, and brother of J. R. and W. H.

Fry, who were engaged in the production of the opera of "Norma" by the Woods, was as enthusiastic a lover of music as the former. Fired with ambition to improve musical taste, he undertook the engagement of a company and the production of Italian opera at the Astor Place Opera-House, New York. He brought his company to Philadelphia, and opened the Chestnut Street Theatre, Oct. 14, 1848. There were one hundred and forty persons in this troupe, the chorus being fifty. Fry's company was composed of Signorina Patti, Truffi, Madame Laborde, Benedetti, Salvator Patti, Valtellina, Monsieur Laborde, Rossi, Guibelei, Du Breul, and Sanquirico. Madame Laborde was a fine singer of the French school, thoroughly cultivated, and possessing talent as an actress. She made her appearance October 6th in Donizetti's comic opera, "L'Elisire d'Amore," as *Adina; Nemorino*, Laborde; *Belcore*, Du Breul; *Dulcamara*, Sanquirico. This was charmingly done. Madame Laborde became at once popular, and her sudden success created feelings of jealousy in the company. The Italians, strong in admiration of their countrywoman Truffi, spoke disparagingly of Laborde, who they said was very good in comic opera, but incompetent for any grand part. She had her revenge before the war was ended by an appearance in *Norma*, in which as a singer she exceeded Truffi, and as an actress far surpassed her in earnestness and intensity of passion. Max Maretzek, afterward for many years a manager of opera, was leader of the orchestra, it being his first appearance in that capacity.

In the summer of 1847 a small Italian opera company opened at the Walnut Street Theatre in "Saffo," by Pacini. It was composed of Signorina Fortunato Tedesco, Signora Sofia Marini, Signora Carandi Da Vita; tenor, Natali Perelli, L'Bataglani, R. Novelli, L. Perozzi, and others. During the engagement they performed "Ernani," "I Lombardi," "I Due Foscari," "Romeo e Giuletta," and the oratorio of "Mosè in Egitto," at the museum building.

In June, 1845, "Leonora," an original opera, the first truly worthy of the name composed by a Philadelphian, was brought out at the Chestnut Street Theatre by the Seguin Company. It was composed by William H. Fry. The story was that of "The Lady of Lyons," and the whole of it was put into recitative, solos, duets, concerted pieces, and choruses. The libretto as well as the music was by Mr. Fry. This piece was produced in elegant style. Mrs. Seguin performed the character of *Leonora; Fraser*, of *Julio;* Richings, of *Claude Melnotte*. Seguin and Brunton were in the cast. The leader was Leopold Meignen. This piece had a good run of sixteen nights. The receipts probably were not equal to the expenses.

Madame Anna Bishop first appeared at the Walnut Street Theatre on the 22d of November, 1847, in the character of *Norma*. During the season she appeared in "Lucrezia Borgia." In her company were William H. Reeves, tenor, Signor Valtellini, and Mademoiselle M. Korsinska.

On Dec. 10, 1850, Max Maretzek commenced an Italian opera season, the business department of which was conducted by E. L. Walker. Maretzek had a fine troupe. The *prime-donne* were Teresa Parodi, Appolonica Bertucci (who afterward married Maretzek), and Teresa Truffi, soprano; Amalia Patti and Perrini, contralto; the tenors were Benedetti, Forti, and Lorini; basso, Beneventano, Avignone, Novelli, and Rossi; Sanquirico, buffo. Parodi was a splendid singer, and was for many years afterward popular in the concert-room. The company opened with "Lucia di Lammermoor." "Don Giovanni" was performed for the first time in Philadelphia,—*Donna Anna*, Truffi; *Zerlina*, Bertucci; *Donna Elvira*, A. Patti; *Don Giovanni*, Beneventano; *Don Ottavio*, Forti; *Leporello*, Sanquirico; *Commandatore*, Rossi. This opera of Mozart's, requiring three competent *prime-donne*, had never before been performed in the city. Parodi appeared during the season in the characters of *Lucrezia Borgia*, *Norma*, *Elvira*, and *Gemma di Vergi*. The opera of "Parisina" was brought out for the first time, also "Il Giuramento." This was a splendid season in the character of the performances, but probably not remunerative to the management.

Pader's Havana Opera Troupe appeared at the Chestnut Street Theatre in September, 1850. It was the finest company that had visited the city. The male performers were of the highest rank. Salvi, a tenor, was famous throughout Europe; C. Badiali, a baritone, possessed a voice of pure melody from the lowest to the highest notes; Marini, the basso profundo, had a deep voice of noble power. The sopranos were Steffanone and Bosio. The former was an actress of great power in tragic parts. The latter had a voice that was clear and silvery. Signora Vietti, the contralto, was very competent. The second tenors, Lorini and Vietti, were of the first class, and Tedesco was in the troupe. This company presented no new operas, but the works performed were perfect in all respects.

Max Maretzek brought his Italian Opera Company to the National Theatre, Chestnut Street, in September, 1851. It was composed of Bosio, *prima-donna*, Steffanone, Truffi; Signor Bettini, tenor; Badiali, baritone; Coletti, basso. Salvi, Rossi, and Marini were in this company, and Miss Virginia Whiting, who afterward married Lorini, made her first appearance in Philadelphia. Madame Rose De Vries, a superior artist, made her *début* in the city at this time as *Norma*. Maretzek brought out no new pieces, but performed with great acceptance "old favorites."

Madame Anna Thillon and Mr. Hudson began an engagement at the Chestnut Street Theatre in October, 1851. There were no other professional singers connected with them except Mr. F. Meyer, a basso. Madame Thillon was a very pretty woman, and better

as a light-comedy actress than as a singer. Hudson was usually an actor of Irish parts, who had a fair singing voice. They drew very well; their principal pieces were "The Crown Diamonds," by Auber, now first done in English, "The Daughter of the Regiment," "Black Domino," and "The Enchantress."

The celebrated European contralto, Marietta Alboni, made her first appearance in Philadelphia, Feb. 27, 1853, on the stage of the Walnut Street Theatre, and appeared for four nights, as *Marie*, in "La Figlia del Reggimento," *Cinderella*, *Amina*, *Norma*, and *Rosina*. She gave some successful concerts at Musical Fund Hall.

Madame Anna Bishop, at the Walnut Street Theatre, in June, 1853, introduced Augustus Braham, son of the famous John Braham, as a tenor singer.

Caroline Richings, adopted daughter of Peter Richings, who had been on the stage for a period as an actress, determined to perform in opera. She made her *début* Feb. 9, 1852, as *Marie*, in "The Child of the Regiment." The cast included Thomas Bishop and Seguin. During an engagement, which was continued a short time afterward, she appeared as *Adina*, *Amina*, *Linda*, *Norma*, *Madelaine*, in the "Postilion of Lonjumeau," and *Louise Muller*, in an opera founded upon a composition of Schiller. This lady afterward, as a member of opera companies and manager of others, under her maiden name and that of her husband, Pierre Bernard, sang in nearly every theatre and opera-house in the country.

Madame Anna Bishop, with Augustus Braham, sang at the Walnut Street Theatre in December, 1853. Rosa Jacques sang with her, and Mrs. Barton Hill, and Messrs. Guidi, Leach, Strini, and Rudolph. During the engagement, on December 10th, was presented for the first time in Philadelphia Von Flotow's opera of "Martha," adapted for the English stage by Mr. Bochsa,—*Lady Harriet*, Madame Bishop; *Nancy*, Rosa Jacques; *Plunkett*, Leach; *Lionel*, Braham. "Martha" was quite attractive, and had a run of ten nights.

Madame Henrietta Sontag, Countess Rossi, a European celebrity, gave her first concert at Musical Fund Hall, Oct. 14, 1852, assisted by Badiali, Pozzolini, Rocco, Paul Julian, Carl Eckert, and Alfred Jael. In the succeeding spring Sontag, with Pozzolini, Rossi, and others, performed in a series of operas at the National Theatre with great success.

The Louisa Pyne English Opera Troupe made its first appearance Oct. 20, 1854, at the Walnut Street Theatre. Miss Pyne was an Englishwoman, and a singer of taste and excellence. W. Harrison was the tenor, Borrani and Mr. Meyer the bass, and the second soprano parts were executed by a sister of the *prima-donna*, known on the bills as Miss Pyne. They brought out a pleasant variety of pieces,—"The Bohemian Girl," "Maritana," "Crown Diamonds," "Fra Diavolo," and a work that had not been heard in the city for many years, Gay's "Beggar's Opera,"—*Capt. Macheath*, Harrison; *Mat of the Mint*, Borrani; *Peachum*, Whiting; *Polly*, Louisa Pyne; *Lucy*, Mrs. Ada King.

The world-renowned *prima-donna*, Madame Giulia Grisi, and the equally celebrated tenor, Signor Mario, performed at the Walnut Street Theatre, Jan. 2, 4, and 6, 1855. They opened with Bellini's opera of "I Puritani,"—*Elvira*, Madame Grisi; *Lord Arthur Talbot*, Mario; *Sir Richard*, Badiali; *Sir George*, Susini; *Lord Walter*, Signor Candi; *Henrietta*, Madame Mona. This was a good company, and there was a competent chorus. The artists sang with great effect. They afterward appeared in "Norma" and "Lucrezia Borgia."

The last operatic performances in the Chestnut Street Theatre took place in September, 1854, under the management of Max Maretzek. The company included among the *prime-donne* Signora Manzini, Madame Bertucca-Maretzek, Signora D'Ormy, Signora Badiali, Graziani, Coletti, Taffanelli. They performed "Maria de Rohan," "Louisa Miller," "I Puritani," "Lucrezia Borgia," "Lucia di Lammermoor," and "La Muette di Portici."

Rosalie Durand (real name Durang, and a daughter of Ferdinand Durang, an actor), who graduated as a dancer at the Chestnut Street Theatre, performed for a short season with a company of rather indifferent material, first appearing at the City Museum, June 11, 1855. On the 14th of January, 1856, the Paine Italian Opera Troupe, so designated after the name of the manager, appeared at the Walnut Street Theatre in "Lucrezia Borgia." This was a company of more than ordinary merit. It embraced Madame Anna de la Grange, a vocalist of the finest reputation, Mademoiselle Nantier Didiee. On this occasion first appeared in Philadelphia Signor Pasqualino Brignoli, who held the position of leading tenor on the operatic stage for a quarter of a century following; Elise Hensler, contralto, also for the first time; Signor Amodio, "fat and funny," the finest baritone of his period. This company opened in "Il Trovatore," the first performance of that opera in Philadelphia. This was a season of only two nights. The second performance was "Norma," the *Priestess* by Madame de la Grange; *Adelgiza*, Miss Hensler. Salviani, a new tenor, made his appearance as *Pollione*. This company performed two weeks in February and March, presenting "Lucrezia Borgia," "Linda di Chamounix," "Lucia di Lammermoor," "Don Giovanni," "La Favorita," and "I Puritani."

The opening of the American Academy of Music, in 1857, changed the centre of musical entertainments. The Musical Fund Hall, despite its splendid capacity and perfection as a concert-room, had been going down in popularity, chiefly in consequence of the unfavorable location of the building. Concert Hall, in Chestnut Street, had taken away a good deal of the patronage which formerly could not go anywhere else than to the old hall. Jayne's Hall, in Chestnut Street

east of Seventh, made a determined bid to givers of amusements. It was only partially successful. The room was large, but its acoustic properties for the comfortable hearing of music were miserable. Sansom Street Hall tried for a time to make up a concert custom, but failed. The Academy of Music was like a new revelation; large, elegant, comfortable in the seating, bright and attractive, there was the additional advantage that it was admirably constructed for hearing. Every auditor could enjoy the lowest notes, whether vocal or instrumental, in opera or in concert. The seat of musical art was therefore transferred to the Academy of Music. It was for years the only allowable temple of Italian opera, and it was largely employed for German, English, and French opera and concerts of the first class, as well as balls and other amusements.

The corner-stone of the Opera-House, or "American Academy of Music," was laid on the 26th of July, 1855, at the southwest corner of Broad and Locust Streets, in presence of a large throng of deeply-interested spectators; Robert T. Conrad, then mayor of Philadelphia, making an impressive speech on the occasion. The opening took place on the 26th of January, 1857, and was celebrated by a magnificent ball. On the 25th of February, following, the house was opened for its legitimate use by E. A. Marshall with Italian opera.

The Academy of Music[1] is an edifice of which Philadelphia is justly proud, and a brief outline of its history will not be out of place here. "The charter and prospectus" was issued in 1852, with an appeal to our wealthy citizens to subscribe to the stock of the company. This appeal met with but little response at first, but the board of directors[2] then formed were untiring in their efforts, and their zeal and perseverance were finally rewarded with success. In the spring of 1855 the requisite amount of stock, two hundred and fifty thousand dollars, was fully taken. Then, and only then, the building committee deemed it advisable to enter into any contract for the erection of the building. The plans submitted in 1854 by the eminent Philadelphia architects, Messrs. N. Le Brun and G. Runge, had been accepted, and a contract was made with John D. Jones for the principal construction of the building. "The architecture of the exterior is designed in the Italian Byzantine school, such as is frequently to be met with in the northern parts of Italy. Its character is massive and imposing, although exceed-

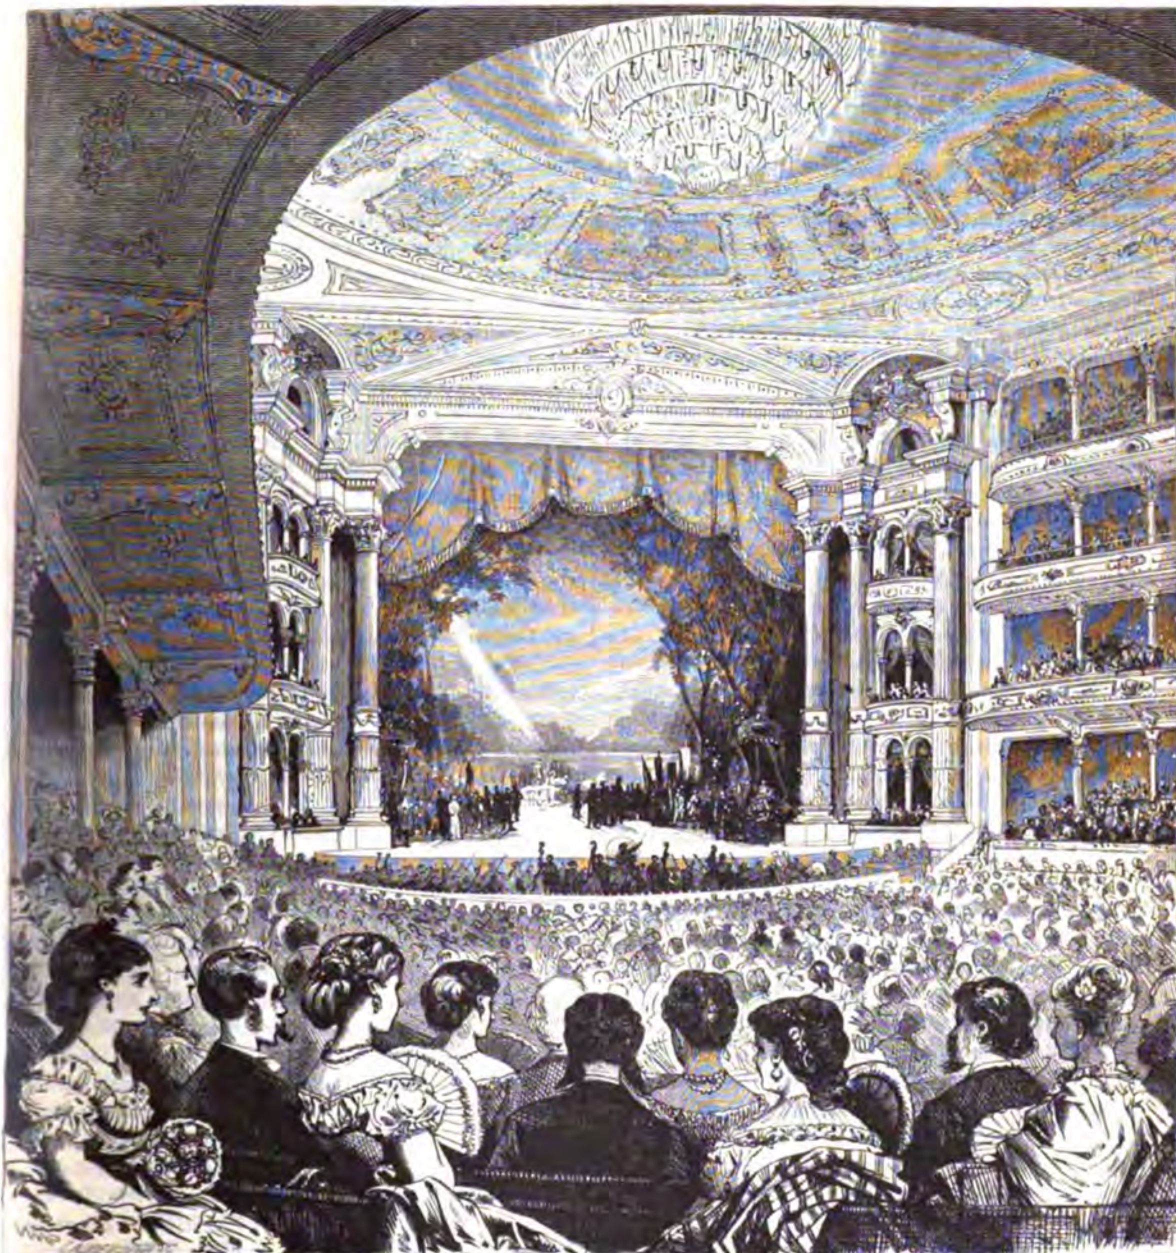
ingly plain, with window-frames shaped in a manner approaching the Gothic, which is peculiarly calculated to produce a pretty effect in the evenings when the interior of the building is illuminated. . . . The keystones over the five principal entrance-doors on Broad Street are ornamented with carved symbolical heads. In the centre is Poetry, represented by Apollo; over the adjoining doors on either side, Music and Dancing, and at the extremes, Tragedy and Comedy, are severally personified. In the pediment, over the centre of the main cornice, on Broad Street, is a lyre ornamented with flowers, as an appropriate symbol for the opera. The whole height of the fronts from the pavement is sixty feet. It is built of brick and brownstone. The width of the front on Broad Street is one hundred and forty feet, the depth on Locust Street two hundred and eighty-eight feet." Five principal doors (each nine feet wide) on Broad Street lead into the outer entrance-hall, where are located the ticket-offices at either end. This hall is seventy-three feet long, ten feet wide, [illegible] feet high. Crossing this



ACADEMY OF MUSIC, INTERIOR VIEW.

we enter the grand vestibule, seventy-three feet long, twenty-seven feet wide, and eighteen feet high, at each end of which is a magnificent stairway thirteen feet wide. We are now in the interior, and can examine the admirable arrangements, in which elegance, safety, and comfort have been combined; spacious lobbies, corridors, and staircases, numerous exits, easy of access, a grand foyer or saloon, which may be employed independent of the theatre, and which communicates with the restaurant in the basement. The auditorium is remarkable for the comfort of accommodations, spacious passages, and freedom of vision; but it is still more so by the successful application of the laws of acoustics in its construction. The architects may be proud of the fact, admitted by every singer of eminence who has sung at the Philadelphia Academy of Music, that there is not a better house for the voice either in Europe or America. Many proclaim it the best. The seating capacity is two thousand nine hundred seats, with standing room for six hundred persons more. The stage at the curtain is fifty-one feet wide by seventy-three deep. The *proscenium* is arranged in a rather novel manner, viz., two Corinthian columns, standing apparently free, support the proscenium architrave, behind which the curtain is suspended, and four other columns of the same order are placed in front of the proscenium boxes on both sides, which contain balconies corresponding to the fronts of the adjoining tiers. The style of architecture is a florid *renaissance*, rich and effective, without being overloaded with ornaments. Over the entablatures of these columns are placed four colossal caryatides, representing kneeling giants, supporting the arched pediments over the proscenium boxes. Under these pediments, at the right and left of the stage opening, are sculptured the arms of the city and State in bold relief, and below them are the keystones of the lower arches, in the shape of two masks, representing Tragedy and Comedy. The first drop curtain, used on the opening night, was a rich crimson drapery ornamented with heavy golden fringes, ropes, tassels, etc., designed and executed by J. R. Martin, the scene-painter from Berlin. The entr'acte drop was a beautiful landscape, representing a view on Lake Como, painted by the talented Philadelphia artist, Russell Smith. The design and fresco-work of the ceiling were executed by Mr. C. Kaiser, and the panels filled with beautiful oil-paintings by Mr. C. Schmolze.

The opening opera, on the 25th of February, 1857, was "Il Trovatore,"—*Leonora*, Madame Gazzaniga; *Azucena*, Miss Phillips; *Manrico*, Brignoli; *Di Luna*, Amodio. "Lucrezia Borgia" followed. "La Traviata" was brought out for the first time in the same season,—*Violetta*, Gazzaniga; *Germont*, Brignoli; *Georgio*, Amodio. "Ernani" was afterward produced, the character of *Ernani* by Bottardi; *Ruy Silva*, Tagliafico. Ronzani's ballet troupe followed with the ballet pantomime of "Faust." In 1858, La Grange and D'Angri, Bignardi and Tafanelli sang, also Mademoiselle Parodi, Madame Strakosch, Signors Brignoli and Amodio. Madame Colson sang in the same year. "Don Giovanni" was brought out in splendid style,—*Anna*, Madame de la Grange; *Elvira*, Caridori; *Zerlina*, D'Angri; *Giovanni*, Gassier; *Leporello*, Carl Formes; *Ottavio*, Labocetta; *Masetto*, Rocco. "Rigoletto," "Robert le Diable," "The Barber of Seville," and "I Puritani" were performed in the same year. In 1859 one company embraced Madame Poinsot, Ghioni, and Piccolomini. In the same year another company consisted of Adelina Patti, Signor Stigelli, Ferri, Quinto, and Muller; another of Colson, Gazzaniga, Junker, Stigelli, and Amodio. "The Huguenots" was produced with the following cast: *Marguerite*, Madame Laborde; *Valentine*, Madame Poinsot; *Marcel*, Carl Formes; *Raoul*, Tamaro; *De Nevers*, Colletti. In 1860, Colson sang in "Ernani," with Striglia, Ferri, and Susini. "The Barber of Seville" was sung by Adelina Patti,—*Figaro*, E. Barili; *Almaviva*, Brignoli; *Bartolo*, Colletti; *Basilio*, N. Barili. In 1861, Colson sang in "Un Ballo in Maschera," with Miss Hinkley, Miss Phillips, Brignoli, and Ardavani. Kellogg appeared in the same year, with Miss Hinkley, Madame Strakosch, Brignoli, and Mancusi. In 1862, Kellogg, Brignoli, and Morentsi sang in "La Traviata," with other pieces. Miss Kellogg and Sulzer, with Mazzolini, Bellini, and Colletti, appeared in 1863. There was a continuation of *prime-donne* of the first class, who appeared at various times, among them Signorina Medori in 1863, Zuchi and Bosisio in 1865, Carmen Poch and Miss Hauck in 1866, Parepa Rosa in 1867, Madame Anna de la Grange and Isabella McCullough in 1868, Torriani in 1873, Albani and Anna Louise Cary in 1874, Belocca, Palmieri, and Titiens in 1876.

The opera "Faust" was brought out in 1872,—*Marguerite*, Madame Christine Nilsson; *Faust*, Signor Capoul. In the same year Nilsson produced "Mignon." "Aïda" was first produced in 1873,—*Aïda*, Torriani; *Amneris*, Cary; *Rhadames*, Campanini; *Amonasro*, Morrell; *Ramfis*, Nannetti; *King*, Scolara. A German company[1] brought out "Fidelio," during Mr. Marshall's management, with several other pieces, which were sung with great effect. In this company, besides Madame Johansen, were Madame Pappenheim, Madame Rotter, Madame Scheller, and Von Berkel, and Messrs. Habelman, tenor, Herr Formes, Herr Hermans, Herr Pickaneser, Herr Steinecke, and Herr Wachtel. The great Ronconi, one of the finest artists of Europe, appeared as *William Tell* in 1858. "Hamlet," by Ambroise Thomas, was first brought out by Nilsson in 1872, and "Lohengrin," by Nilsson, in 1874.

"Notre Dame of Paris," a new American opera, by

[1] This company performed at various times "Der Freischütz," "Mason and Locksmith," "Martha," "Czar und Zimmermann," "A Night in Granada," "Der Waldschütz," "Stradella," "Tannhäuser," "The Merry Wives of Windsor," "The Magic Flute," and many others.

one of the Frys, was brought out in 1876; afterward "Rip Van Winkle," an American opera, and "The Doctor of Alcantara," an original work. Madame Parepa Rosa sang in English, and with her was Zelda Harrison, who afterward married Edward Seguin, a son of the elder Seguin. Castle was the tenor, Campbell the baritone, with occasional changes in the cast. For a time between 1860 and 1870 the French opera bouffe held the stage. The principal pieces of Offenbach, "La Grande Duchesse," "La Belle Hélène," "Barbe Bleue," "Geneviève de Brabant," "La Fille de Madame Angot," and other operas of like character, were quite popular, the principal performers being Madame Aimée, Madame Irma, Madame Tostée, with a very competent corps of male singers and actors. Since 1879 the academy was not in requisition for musical purposes as much as formerly for opera, some of the companies, displeased with the regulation which gave free admission to the stockholders, preferring to go to the theatres. The Chestnut Street Opera-House, which was an alteration of Fox's American (variety) Theatre, had the most of this business.

Her Majesty's Opera Company, under the management of Col. Mapleson, was the principal tenant for musical purposes in 1883. Among the instrumental performers who have given concerts at the academy are the following: Ole Bull, Vieuxtemps, Rubinstein, Wieniawski, Von Bülow, Sauret, Moreau, Legendre, Gottschalk, Marie Krebs, Anna Mehlig, Teresa Careno, Madelaine Schiller, and Arabella Goddard. Dramatic companies have sometimes performed at the academy, but not with entire satisfaction. Charles Mathews made the first essay with a small company Oct. 26, 1857, in "Married for Money" and "Patter *vs.* Clatter." He found that the house was too large for his voice. Although perfect in acoustic quality for the performance of music to the perfect hearing of the lowest note, it is not so good for speaking. Occasionally dramatic representations have been given by Edwin Forrest, Charlotte Cushman, and special companies embodied for the performance of particular plays.

Many concerts were given during the period that opera became common. It was an ordinary thing for the operatic artists to alternate their performances on the stage with tastes of their quality in the concert-room. In some cases the artists did not appear at the theatre at all. This may be said to have been the common rule with violinists, pianists, trumpeters, and song and ballad singers. There were some exceptions, however, even in cases where the persons were accustomed to the stage. One of the latter, notable by the exception, was that of the singer whose fame afterward filled Europe, Signorina Maria Felicia Garcia, afterward Madame Malibran, and later Malibran de Beriot. She had made an appearance with great success at the Italian Opera-House, London, in 1822, and came to New York in 1825, where she made her *début* at the Park Theatre as *Rosina*. This lady remained in the United States about two years. The New York Operatic Company did not come to Philadelphia, but Garcia gave two concerts at Musical Fund Hall in June, 1827. High prices for admission may be said to have commenced with this vocalist. Tickets were two dollars, and at the last concert there were one thousand tickets reported to have been sold.

The famous Norwegian violinist, Ole Bull, created a great excitement throughout the country. He first appeared at the Chestnut Street Theatre Dec. 4, 1843, and drew an immense house. His entertainment was afterward transferred to Musical Fund Hall, where he frequently performed.

Camille Sivori, a violinist, preceded him in 1841, and Henri Vieuxtemps, also celebrated as a violinist, came afterward, in 1845.

The Distin family, performers on the sax-horn (a sort of trumpet), performed at Musical Fund Hall in February, 1849.

Jenny Lind, "the Swedish Nightingale," shrewdly engineered by Barnum, created a great *furor* in 1850. She made her first appearance at the Chestnut Street Theatre on the 15th of October. She was assisted by Signor Belletti, Miss Pintard, a lady of Philadelphia, and Joseph Burke, once a juvenile Roscius, who settled down as a violinist, and was leader of the orchestra. The tickets were held at tremendous prices,—seven dollars for a seat in the first tier and parquet. Besides this, Barnum had shrewdly started an auction for the privilege of choice of the first seat. The ticket for this was bought by Marcus A. Root, a daguerrean artist, for six hundred and twenty-five dollars. It was supposed to be a good advertisement for him, but probably was not remunerative. The amount realized at the first concert was said to be twelve thousand dollars. Succeeding concerts were given at Musical Fund Hall, November 27th, 29th, 30th, and December 6th. After her tour of the United States, Miss Lind came back to Philadelphia, and opened at the National Theatre, June 9, 1851. She was greatly offended at the choice of this place. The theatre had lately been used for circus performances, and behind the scenes the smell was like that of a stable. A rupture with Barnum followed, and she commenced to give concerts on her own responsibility. The first of these took place at the museum building on the 4th of July. Another series of concerts was given at Musical Fund Hall, December 16th, 19th, and 22d. She left for Europe in May, 1852.

The Steyermarksche Company, a superior band of instrumental musicians, whose execution was simply perfect, were in the country about this time, and gave a series of concerts at the Musical Fund Hall, which were much enjoyed.

Alfred Jaell, a pianist of merit, gave several concerts in 1852 and afterward.

The Sontag concerts and Alboni concerts occurred

in October, 1852; Ole Bull's and Sontag's in 1853. Monsieur Jullien's band, a splendid set of trained musicians, offered several enjoyable entertainments in 1853 and afterward. Jullien had been fashionable in London, and he brought out several superior instrumental performers, among them Koenig, who played the trumpet in a surpassing style. His pianist, Leopold de Meyer, was a physical artist, who pounded on the keys as if they were drums, and sometimes, to produce a great effect, almost sprawled over the piano. Paul Julian, quite a boy, had much reputation as a violinist.

Sigismund Thalberg, reputed to be the master of the piano, gave his first concert in Philadelphia at Concert Hall, Nov. 28, 1856. He was assisted by Madame Cora de Wilhorst, an American lady belonging to an opulent family of New York, who had made an unfortunate marriage. At a later date Morris Gottschalk, a young American, born in New Orleans, achieved great reputation as a pianist. He made his first appearance at Musical Fund Hall, March 1, 1853, and in after-years gave many concerts. Adelina Patti, afterward the *prima-donna par excellence*, made her first appearance at Musical Fund Hall, together with Paul Julian, at a concert given in 1854. This was some time before she went upon the stage in opera.

Katherine Hayes, an Irish lady, who had a brilliant voice, gave her first concert at Musical Fund Hall on Dec. 6, 1851. She was a great favorite, but never appeared in opera in America.

The few friends of music that could be found in a city in which art was less cultivated than in any other part of the United States, would naturally become acquainted with each other, and be tempted for pleasure and practice to embody themselves in clubs and societies. As knowledge of church music only was diffused among the majority of people, it was natural that a society for the cultivation of this branch of the art should be earliest established. The Uranian Society, for the improvement of church music, the first of these societies known to have been formed, was established in 1787, and continued its meetings until after 1800. The Uranian rooms were at the corner of Third and Market Streets. About 1802 the Harmonic Society was formed, also for the study of sacred music. A clergyman, the Rev. Andrew Law, was chiefly concerned in promoting the organization. The Harmonics met for some time in a building on the north side of Norris Alley, between Front and Second Streets. This association aspired to concert, and usually gave at least one in each year. The places of performance were at the Second Presbyterian Church, Third and Arch Streets, in 1802, hall of the University, Fourth Street, 1803; hall of the Uranian Society, South Fourth Street, 1805, and other places. This association was in existence as late as 1817. The members were worried, in 1807, by another association which called itself the Harmonic Society, and gave two concerts in 1808, both of sacred music, assisted in each of which by one hundred and thirty performers. There was a Harmonic Society of St. John's English Lutheran Church, meeting, in 1819, at the corner of Sixth and Race Streets, William Binder being the secretary. At the same time the Independent Harmonic Society, Joseph McIhenny, president, met at Fourth and Vine Streets. The Union Harmonic Society, of the same period, met in the old Harmonic rooms in Norris Alley; James Weir was president, George W. Tryon secretary, and Henry Wrigley treasurer. The Associate Harmonic Society was in existence in 1820. The Germantown Harmonic Society, established in 1821, gave concerts in the churches of that village for several years. The Haydn Society in 1819 held weekly meetings at the corner of Fourth and Vine Streets. The managers were Rev. John R. Goodman, Joseph George, and George Emerick; secretary, Martin Gaul. It was announced "the object of this society has been for many years to introduce and improve themselves in psalmody."

The Handelian Society, in May, 1814, gave a vocal and instrumental concert at the academy (old university in Fourth Street). The organist was Rene Taylor; leader of the band, De Luce; leader of the choir, Samuel Dyer. In March, 1815, this society gave a concert for the benefit of the poor, at the Tabernacle Church, which yielded, after the payment of all expenses, the extraordinary return for that time of $1017.95. The St. Cecelia Society, established in 1824, had its hall in South Fourth Street. The first president was John Neagle, the artist. He was succeeded in that office, in 1825, by Col. (afterward Brig.-Gen.) Andrew M. Prevost. Edward R. Hansen was leader, and Thomas Carr, vocal conductor. Secular music was not as much cultivated as sacred music in the early part of the century. A Catch Club met at Hardy's Hotel in 1800, and devoted itself to the unmusical performance of dining. The stewards of this club who directed the feast were William Francis, William M. Biddle, broker, Thomas Hale, Richard C. Jones, Morris Rogers, and Robert S. Stevens. The Sons of Apollo, a club which met at the Shakespeare Hotel in 1807, was composed of amateurs and professionals. Among the latter were people from the theatre. Woodham was director; Webster, a popular singer; Bray and Robbins, Gillingham, and Reinagle, of the theatre orchestra, were also members. "The Amateur Concerts" were given by subscription, between 1810 and 1817, usually at Masonic Hall or other fashionable rooms. Nine or ten of these concerts were given several years. In 1815, in an announcement of a charity concert, the managers named were Charles N. Buck, William Schlatter, Thomas Kittera, Silas E. Weir, P. Lechleitner, and John Bohlen. These were men of great respectability. Kittera was a lawyer; the others merchants in good business.

The Musical Fund Society was established in 1820,

the object being much more broad and comprehensive than had been attempted by any association previously formed. The members aimed at the highest development of the art of music, and the performance of the compositions of the great masters, whether they were sacred or secular was of no importance. The charter stated that the object of the society was "the relief of the distressed musicians and their families, and the cultivation of taste and the proficiency of the musical art." The first object was to be attained by a pecuniary provision from the society funds for musicians, members of the association, who from age and infirmity were unable to support themselves and their families. Musical cultivation was secured by concerts given to and by the members every fortnight during the winter season, two or three of which might be open to the public. There were two classes of members, composed of professors of music and of amateurs. Some of the latter were musicians of unusual proficiency. At times the orchestra at public performances consisted of eighty, one hundred, and one hundred and twenty members.[1]

It will be noticed that two ladies were among the professional members. There might be twelve performers of that sex elected. Beside the professional membership, there was an organization to conduct the financial and business affairs of the society. This could be composed of members of either class. In 1825 the fund was managed by Dr. William P. Dewees, president; Francis Gurney Smith, treasurer; and W. McIlhenny, secretary. The Musical Fund Society was first established in Carpenters' Hall. The first concert was given at Washington Hall, April 24, 1821. There were one hundred performers, instrumental and vocal, and they had in use an organ. The first great work brought out by the society was Haydn's oratorio of "The Creation," April 20, 1822. The society was prosperous, and in 1824 was rich enough to purchase ground and erect a hall of its own. A lot and building on the south side of Locust Street, west of Eighth, which latter had been constructed for the use of a Presbyterian congregation of Rev. Mr. Burch, was purchased for seven thousand five hundred dollars. The cornerstone of the new building for musical purposes was laid on the 25th of May, 1824, and the hall was finished and opened on the 24th of December of the same year. The actual cost of lot, building, and furniture was $23,547.08. The music-room, in the second story, by lucky fortune, was constructed of the proper proportions. Its acoustic qualities were simply perfect. Long and large, it was the best hall for hearing ever constructed in the city, and for these qualities it was often asserted it had no superior in the world. For many years it was the only place at which a concert of music could be acceptably given. Here the finest European artists sang by necessity. Its records could show the leading names in musical art in two hemispheres; among them Garcia (Malibran), Mrs. Wood, Braham, Catharine Hayes, Alboni, Grisi, Mario, Jenny Lind, Mr. and Mrs. Seguin, and generally the best performers in opera, with eminent violinists, pianists, and performers on other instruments. Placed in a neighborhood which was always unpleasant and unpopular, Musical Fund Hall held its own against all rival places until the erection of the Academy of Music turned the tide of fashion to the west.

During the time that the Musical Fund Hall was in constant requisition for concerts and like purposes, some other societies for cultivation of the art of music were in operation. The Harmonia Sacred Music Society of Philadelphia was incorporated May 4, 1852. It probably grew out of the Philadelphia Sacred Music Society, which gave concerts during several years, and was generally under the leadership of Henry Knauff. The Philharmonic Society was established more for the purpose of insuring two or more musical concerts annually during the fall, winter, and spring seasons than for the performance of music by the members. The latter were generally amateurs, but the society manifested a disposition, for some years, toward the encouragement of native talent. Many American singers and instrumental performers made their *début* at the Philharmonic concerts and afterward became famous. The Handel and Haydn Society was devoted, as the union of the names of the two great composers show, to the performance principally of their compositions. Many concerts were given by this society. Eventually it leased the upper portion of the large building at the northeast corner of Eighth and Spring Garden Streets, extending to Green Street, built by Joseph Harrison, Jr., and which building, popularly known as Handel and Haydn Hall, was the place at which the members of the society practiced and gave concerts, which latter were varied at times by the engagement of much larger and more popular places, such as Musical Fund Hall, Concert Hall, and the Academy of Music.

The fondness for music which exists among the Germans began to show itself after 1830, when persons of that nativity were beginning to be sufficiently numerous to claim some right in directing their own amusements. Love of music led to the organization, Dec. 15, 1835, of the Mannerchor Music Society, the

---

[1] In 1822 the following were the professional members of the society who performed at concerts. Some of them were amateurs engaged in other callings, who did not make a living by musical pursuits, but who were competent instrumental performers at concerts: Allyn Bacon, L. F. Burnhardt, George E. Blake, Miss H. Blaney, Samuel Cantour, Benjamin Carr, S. Carusi, J. Cheer, Jr., J. P. Cole, Benjamin Cross, George Catlin, Francis Cooper, John B. Dubree, Charles N. Danenberg, Samuel Dyer, A. Farroulih, J. L. Frederick, John Furs, P. Gillies, Titan Greland, Mrs. Ann Gillies, Abraham Hart, John C. Hommann, John C. Hommann, Jr., Thomas Hupfeld, John Hunniker, Wilfred Hall, C. Clem, Thomas Loud, Philip Loud, John Loud, George Miller, Henry Morse, —— Pilkinton, John Read, George Schetky, Thomas Sully, R. Taylor, Joseph C. Taws, John Wheeler, George Willig, William Whitesides. Directors of the Board of Music, Chairman, Benjamin Carr; Secretary, George Schetky; Conductors of the Vocal Music, B. Carr, B. Cross, and T. Loud; Curators, J. B. Dubree, Franklin Peale, G. Smith, and I. P. Cole.

first choral organization of male voices entirely in the United States. The founders were P. M. Wolsieffer, E. Ludeking, C. Liebrich, J. C. Schuellerman, H. Rutz, J. Fabian, M. Beck, F. Shreiber, and C. F. Wesselhoeft. This association was carried on for over thirty-three years as a private society, during which time there were given innumerable concerts at the hall of the society in the Northern Liberties, at Musical Fund Hall, Academy of Music, and other places. The Mannerchor balls in fancy dress were annual recurrences, and very popular. They took place at the museum building, Musical Fund Hall, Academy of Music, and other places. Frequently they were attended by two, three, and four thousand persons. The society was not incorporated until March 19, 1868. The corporators were William J. Horstmann, M. Richards Mucklé, J. M. Richard, J. P. Steiner, Lorenz Herbert, J. Henry Camp, Frederick Steed, Richard T. Schmidt, Frederick Baltz, Peter Baltz, Jacob Kemper, A. Weihnmayer, and F. Seelhorst. The Mannerchor, ever since its organization, has been at the head of musical movements among the German population. Beside its own concerts and balls, it has been prominent in celebration of *fête* days and holidays, and was always at the front in the great saengerfests, some of which brought delegations from all the musical societies in the United States to the regular concerts in some popular hall, winding up always with picnics and beer at Lemon Hill, Engel & Wolf's farm, or Scheutzen Park. The example of the Mannerchor was followed by the institution of various other German societies, the names of which are too numerous to mention. Among these was Die Junger Mannerchor, which was a split from the original society, the Liedertafel, the Cecilien Verien, in which ladies and gentlemen were singers, and a large number of others. The Mannerchor, after moving about from place to place, became permanently located at the northeast corner of Franklin Street and Fairmount Avenue, where it has remained for several years. The building here includes an audience-room, suitable for concerts and balls, and a large yard, which in summer-time is used for open-air evening concerts. The Young Mannerchor for some years occupied the old building erected as the session-room of the Second Presbyterian Church, on the south side of Cherry Street, west of Fifth. The Germania Musical Society was an orchestral organization composed of professional musicians, all of them of great merit. The society commenced a grand series of concerts at Musical Fund Hall, April 11, 1852. Alfred Jaell, the Viennese pianist, performed with them. This association was in operation for many years as a favorite orchestral combination, and the same name has been kept up until 1884.

Many musical associations have blossomed and faded during the period of fifty years, the very names of which are now unknown. They were generally small, numbering from a simple quartet to fifteen, twenty, or thirty. Some were for instrumental performance only. One of the best of those clubs was the "Amphion Musical Society," which for many years had its own rooms for practicing in Sansom Street, between Ninth and Tenth. Of glee clubs the number is beyond computation. An association of this kind may last two or three years, and sometimes exist to the venerable age of five years, but usually ceases before the latter extreme period is reached.

"The Cecilian Musical Society," composed of ladies and gentlemen, was organized about the year 1875, and called to its service as conductor of its concerts Michael H. Cross, a musician of merit and experience. This society practiced at Philadelphia Institute Hall, corner of Eighteenth and Chestnut Streets. Usually the grand concerts are given at the Academy of Music, frequently with choruses of five or six hundred singers, and with great perfection, according to the judgment of competent musical critics. In 1882 the Music Festival Association was organized, for the purpose of insuring musical entertainments of the first class. The first musical festival took place at the Academy of Music, May 9, 1883, and continued until May 12th. There were four evening and three afternoon concerts, fourteen principal solo singers, one hundred orchestra performers, and a chorus of five hundred voices.

Negro minstrelsy began to attract attention about 1837. There had been performers who sang negro songs in white faces from an early period. Some of these attained a certain degree of popularity. Graupner appeared in negro characters at the Federal Street Theatre, Boston, in 1799. He sang a song called "The Gay Negro Boy." About 1824-25, when there was considerable talk in the United States about the settlement of Hayti by the emigration of blacks to that island, there was a song quite popular in Philadelphia and Baltimore sung by a vocalist dressed as a negro,—

> "Bredern, let us leab
> Buckra land for Hayti.
> Dar we be receib,
> Grand as Lafayettee."

William Kelly brought out the song of "Coal-Black Rose," as heretofore noted. George Washington Dixon took that song and made the most of it. Thomas D. Rice made his first appearance in a negro song at Ludlow's Theatre, in Louisville, and sang "Kitty Co-blink-a-ho-dink! Oh! oh! Roley Boley—Good-morning, ladies all!" Shortly afterward Rice obtained or composed the song of "Jim Crow," which attained great popularity at the West. Rice made his first appearance at the Walnut Street Theatre in the summer of 1832, and was received with enthusiasm by crowded houses. He afterward went to London, where he was the rage for a long time. After the success of Rice, Dixon—"Coal-Black Rose" having become stale—brought forward a new song, "Zip Coon," which he sang at the Arch Street Theatre on the 19th of June, 1834. By this time it began

to be seen that there was money in "the Ethiopian business." Small parties for singing negro songs and choruses were formed. One of the earliest of these was the Virginian Serenaders, the leader of which was the violinist, J. Richard Myers, commonly called "Ole Bull" Myers and "Dick" Myers. There were associated with him James Sanford, Edward Kelley, Edward Deaves, John Diamond, W. Horn, Tony Winnemore, and Master Proctor. They were singing at Temperance Hall, Northern Liberties, in 1847, at which time they were joined by Eph Horn, a native of Philadelphia, who had been an attaché as a "subject" in Professor Rogers' lectures on mesmerism. In 1847, Horn joined the company, which shortly afterward appeared at the Chestnut Street Theatre as the Virginia Serenaders. Sanford became quite famous, as did Horn. There was an immense deal of genius in their performances.

On the 1st of August, 1853, Samuel S. Sanford opened the first Ethiopian permanent opera-house in the second story of a large building in Twelfth Street, below Chestnut. This place was burned on the 9th of December in the same year. In 1855, Sanford reopened the Sanford Opera-House, at Cartee's Lyceum, in Eleventh Street above Chestnut. This building was erected as a house of worship for the First Presbyterian Reformed Church, of which Rev. Samuel B. Wylie was pastor. After some years the congregation removed to their new church, on Broad Street, and the Eleventh Street church was purchased for account of the Portuguese Synagogue Mikveh Israel. This congregation, however, never occupied it, having concluded to erect a synagogue on Seventh Street above Arch. The church building was then sold, and the purchasers altered it and fitted it up as a place of amusement. H. S. Cartee opened it as "The Lyceum" on the 4th of December, 1854. One of the features of Cartee's performances was a burlesque upon the performance of Jullien's Band. In Cartee's company were Wilkes, Dixey, Cotton, Paul, little Anna Kneass, La Petite Marie, and others. After the first season Cartee retired. Cotton & Dixey succeeded Cartee, and opened what they called the Eleventh Street Opera-House, March 19, 1855. Their season was short, not of more than two weeks' duration. Samuel S. Sanford, with his opera troupe, was performing at the Musical Fund Hall at that time. He became the lessee of the Eleventh Street Opera-House, and opened it as the New American Opera-House, April 23, 1855. The company was composed of Sanford, Cool White, Kavanagh, Lynch, Rainer, Buruff, and Dixey. Sanford remained in management of this house for several years. He was succeeded by Carncross & Dixey, who also retained the house for several years. Finally Mr. Dixey retired, and Mr. Carncross remained sole manager, and is still at his post in 1884. After thirty years' performance of Ethiopian minstrelsy within those walls the house remains, with popularity and commanding a good business. The reason for this has been that a cheap and agreeable entertainment has been furnished, always delightful and amusing, and kept by strict censorship over the performers free from vulgarity or cause of offense.

The name of Sanford is closely connected with the history of Ethiopian minstrelsy. As far back as 1830 we hear of negro melodies and dances by performers with blackened faces, but never of character scenes or plays acted by a combination of performers. A Brooklyn (N. Y.) paper of May 4, 1875, published the following:

"Prior to 1842 individual performers, who were specialty performers as a general thing, were numerous,—as they are now. The first band of minstrels was organized in 1842 at Mrs. Brock's boarding-house, in Catharine Street, New York City. It consisted of Dan Emmett, Frank Brower, Billy Whitlock, Dick Pelham, and G. G. Sanford. The members performed for the first time in public at the benefit of Pelham, given Feb. 17, 1843, at the old Chatham Theatre, and afterward at the old Bowery Amphitheatre. From thence they went to the Park Theatre, where they performed for two weeks under the management of Messrs. Rockwell and Stone. From the Park Theatre they went to Boston, and from there to Europe."

The veteran minstrel, Samuel S. Sanford, makes the organization date one year later. He says,—

"In the winter of 1843, at the Park Theatre, New York, on the occasion of Dick Pelham's benefit, a party of volunteer singers and dance men conceived the idea of all going on together, as each contended for the first appearance. The dispute was most severe between Pelham, who was a dancer for Dan Emmett, and Whitlock, who was a dancer for Brower. Finally, to settle it, Pelham said, 'Let's all go on together.' They did so, and were highly successful, and from that circumstance arose the idea of a troupe of performers. Each of them had his instrument. Frank Brower was *Bones*, Pelham was *Tambo*, Whitlock was *Banjo*, and Emmett, the author of 'Dixie,' was *Violin*. In the spring of 1844 I traveled with Hugh Lindsey, and we gave the first minstrel performances in the State of Pennsylvania. The company was composed of Dan Merrick, Dan Rice, Tom Young, and myself, at the close of the season. I brought out John Diamond, Major Winn, and Dave Lull. We opened at Commissioners' Hall, Southwark. The commissioners made us vacate the room in a few days. We then opened at Temperance Hall, Northern Liberties, during the holiday season of 1844–45. I afterward left and joined the 'Boston Serenaders,' which was the first company that sang at Masonic Hall. Afterward we played at the Assembly Rooms, Tenth and Chestnut Streets. On leaving the city I took the management *en route* for New Orleans. Thence we went to England, and remained there until the fall of 1848. We returned as the 'New Orleans Serenaders,' and opened at Musical Fund Hall. During our absence the 'Virginia Serenaders' came to the front, in 1846–47. They introduced Eph Horn, with Jim Sanford, Dick Myers, Kelly, Winnemore, Kavanagh, Solomon, and others. Bill Horn was agent. Speaking of Eph Horn, I may state that his first appearance as *Bones* was at Carlisle, Pa., the day after Governor Shunk's inauguration, which was in December, 1844. Any one who dates the introduction of minstrelsy into this country previous to these dates is wrong. We had song-and-dance men, banjo-players, people as Lucy Longs, and such like, long before, but no minstrels."

This is very positive testimony. Minstrel performances were given at different times at our various theatres, but Sanford's or Carncross & Dixey's Eleventh Street Opera-House has long been their principal headquarters. The Ethiopian minstrelsy of old times cannot be judged by the modern caricatures of negro humor. It was something original; the performers, many of them men of culture and talent, used their native wit and their experience of the stage in the delineation of the old "plantation

darkies" and "city nigger,"—studies from life,—with just enough exaggeration thrown in to make them excessively funny. These unique exhibitions attracted attention by their novelty, and the real merit of the performers made them very popular. Some of those actors were fine singers, and more than once the touching pathos of some plaintive melody, sung by a rich voice, has moved the heart-chords of the spectator who had enjoyed a hearty laugh. The once famous Buckley family was composed of excellent singers and fine musicians. Our modern minstrels may be well gifted, but Ethiopian minstrelsy is an exhausted subject, which leaves room for repetition, not invention.

In 1870, Simmons & Slocum, who had long been favorite performers at the Eleventh Street Opera-House, seceded, formed a partnership, purchased property, and erected the Arch Street Opera-House, on the north side of Arch Street, west of Tenth. They opened Aug. 20, 1870, and were successful during the remaining seasons until the house was burned March 20, 1872. It was rebuilt and reopened August 26th of the same year.

Military bands were for many years mostly composed of drummers and fifers. The cavalry usually turned out with one and sometimes two or three trumpeters. In 1805 the Republican Greens, Capt. William Duane, established a band of twenty musicians who wore the same uniform as the company. Capt. S. E. Fotteral, of the Independent Blues, in 1808, had a fine band. After the war of 1812 the third company of Washington Guards established a military band composed of colored men. The leader was Frank Johnson. This was substantially a reed band, with clarionets, flutes, one or two bassoons, a serpent, cymbals, triangle, bells, one or two French horns, and bugles, to give force and weight to the air, and a bass drum. There were a tenor drummer and a fifer who never played with the band, but filled up the intervals of the march while the other musicians were resting. After the third company was disbanded, Johnson's band was employed by other companes. It was for many years constant in attendance upon parades of the State Fencibles, Capt. James Page. This band was also supplied with stringed instruments, added in service for balls and dancing parties. Frank Johnson was a fine musician, and reputed in his time to be one of the best performers on the bugle and French horn in the United States. He was a man of talent also and the composer of many acceptable marches, lively quadrilles, and waltzes. After his death, A. J. R. Connor, a fine, tall, handsome-looking colored man, was the leader. A colored band, under the leadership of Hazzard from 1840 to 1850, was also in request generally for balls and parties. The Columbian Light Infantry, Capt. Charles S. Coxe, about 1820 established a band, the members of which were dressed in Turkish costumes with white turbans. About 1833 the Philadelphia Band, which used brass instruments altogether, was established principally among members of the Beck family. They became fashionable among the military, and took business in large degree from Frank Johnson's band. They were prominent on parades and festive occasions for many years. When the German Washington Guards, Capt. E. L. Kozeritz, was established, about 1837, it came out with a full band, composed of Germans, of twenty or thirty instruments. There was also introduced for the first time a drum corps of twelve or fifteen members, the style and mode of performance of which was entirely new in military displays. Some of the companies afterward established bands of their own. Bayley's Band, a fine organization, was employed by the State Fencibles. Breiter's Band performed in connection with the Gray companies. The company and battalion of German Washington Guards had a band of their own, and several other companies and regiments were supplied with bands between 1850 and 1860.

CHAPTER XXXIV.

CLUBS AND CLUB LIFE.

ALTHOUGH known as the City of Homes, Philadelphia may well be called the City of Clubs, as it probably contains more social organizations of that character than any other place in the United States, except New York. Below will be found sketches of all the prominent organizations of the Quaker City.

Social Clubs.—The oldest social organization in Philadelphia, and possibly in the world, is, as we have before stated, the Schuylkill Fishing Company, commonly known as the "State in Schuylkill," which was formed May 1, 1732. In that year a club, called the "Colony in Schuylkill," by way of jest, the members asserting that it was an independent colony of North America, was founded by Thomas Stretch, Enoch Flower, Charles Jones, Joseph Stiles, Isaac Snowden, John Howard, William Hopkins, and others. The first castle, or fish-house, was erected on the west bank of the Schuylkill, above where Girard Avenue bridge now stands. An association of Welshmen, known as the Society of Fort St. David's, was afterwards merged into the colony. On the 21st of July, 1825, Gen. Lafayette visited the castle and was duly elected a member of the State. On the 27th of April, 1844, the club was incorporated under the name of the Schuylkill Fishing Company. The present castle is at Rambo's Rock, near Gray's Ferry. The officers and citizens belonging to it are as follows: Robert Adams, ex-governor, elected Oct. 7, 1840; S. B. Thomas, ex-governor, elected March 28, 1845; A. E. Harvey, ex-counselor, elected Oct. 12, 1857; George Cuthbert, elected April 15, 1858; S. J. Christian, elected April 15, 1858; John Wagner, gov-

ernor, elected March 29, 1860; R. Rundle Smith, first counselor; M. E. Rogers, second counselor; Joseph T. Thomas, third counselor; Edwin L. Reakirt, secretary of state; John Hockley, Jr., treasurer; J. Somers Smith, sheriff; F. W. Fotterall, coroner; Charles S. Pancoast, A. Loudon Snowden, L. H. Warren, Dr. Thomas Wistar, James B. Young, Ellicott Fisher, W. Redwood Wright, Victor Guillou, Neilson Brown, E. W. Keene, H. Carleton Adams, L. Taylor Dickson. Honorary members, James C. Fisher, William Camac, Daniel Smith, Jr.

THE PHILADELPHIA CLUB, which occupies a massive brick building at the corner of Thirteenth and Walnut Streets, was organized in 1833, by Henry Bohlen, James Markoe, Joseph P. Norris, Henry Beckett, Joseph R. Ingersoll, Commodore James Biddle, George M. Dallas, John M. Scott, and William and Henry Chancellor. These names represented some of the oldest and most prominent families in the city. The club first had rooms in the Adelphi Building, on Fifth Street below Walnut, and afterward removed to Ninth Street above Spruce. The members then occupied a building on Walnut Street above Ninth, and in 1850 the present building was purchased. The club paid thirty thousand dollars for the building, and nearly that amount has since been spent in improving the property. The same year that the club moved into its new building it was incorporated under the name of the Philadelphia Association and Reading-Room. On the 25th of May, 1850, the name was changed to the Philadelphia Club.

Among the members are Frank S. Bond, James A. Bayard, Jr., Robert Adams, Jr., Joseph C. Audenreid, Edwin N. Benson, Thomas A. Biddle, Andrew G. Curtin, Simon Cameron, A. J. Cassatt, Edwin H. Fitler, John G. Johnson, Henry M. Phillips, George DeB. Keim, George W. Childs, James L. Claghorn, George D. Krumbhaar, Pierre Lorillard, Henry Lewis, H. Pratt McKean, Wayne MacVeagh, James W. Paul, W. H. Pancoast, J. B. Lippincott, Richard Vaux, Frank Thomson, J. Lowber Welsh, Langhorn Wister, Samuel Ward, Walter McMichael, H. W. Biddle, Atherton Blight, Beauveau Borie, Henry P. Borie, Richard M. Cadwalader, G. Dawson Coleman, Brinton Coxe, Francis J. Crilly, Rudolph Ellis, Alfred T. Goshorn, E. B. Grubb, G. C. Heberton, Alfred Horner, Jr., E. C. Iungerich, Robert P. Kane, Charles Kuhn, Hartman Kuhn, P. Lardner, Bloomfield McIlvain, Clayton Newbold, Louis C. Norris, Richard Peters, Henry Preaut, William Henry Rawle, George M. Robeson, Fairman Rogers, J. G. Rosengarten, Thomas A. Scott, James P. Scott, Edward Shippen, A. Loudon Snowden. Among the deceased members are Adolph E. Borie, Samuel B. Fales, Gen. George G. Meade, Dr. F. F. Maury, and Philip F. Wharton.

THE SOCIAL ART CLUB, which occupies a handsome house on Walnut Street above Nineetenth, facing Rittenhouse Square, was organized in 1875 by Henry C. Gibson, Edward S. Clark, S. Weir Mitchell, M.D., Charles Platt, and Stephen A. Caldwell, and chartered the same year. The objects of the club are the promotion of literary, artistic, and antiquarian tastes among the members, the maintenance of a library and reading-room, and the collection of works of art and antiquities. A large residence on Chestnut Street, above Fifteenth, was first occupied and handsomely fitted up. In 1878 the club purchased the building 1811 Walnut Street for fifty thousand dollars, and replaced the brick front with a marble facing. The club-house is filled with paintings, engravings, curiosities, and antiquities of every description. Among some of the most prominent guests of the club have been Cyrus Field, Sir George Ferguson Bowen, G.C.M.G., Governor of Victoria; Sekizawa Akekio, Japanese Commissioner to the Centennial Exposition; Sir Herbert Bruce Sanford, of England; Henry W. Longfellow, W. D. Howells, Theodore Thomas, John Fiske, Count Szecheniyi, of Hungary; Count Hoyos and Count Andrassy, of Austria, and numerous others. Among the most prominent members of the club are Edwin N. Benson, George H. Boker, Samuel Baugh, Henry N. Bartol, Pierce Archer, James L. Claghorn, George W. Childs, Craig Biddle, Frank S. Bond, Franklin B. Gowen, George DeB. Keim, William Brockie, John Cadwalader, James E. Caldwell, A. J. Drexel, Ferdinand J. Dreer, Clayton French, Frank Furness, Horace Howard Furness, E. Burd Grubb, Clement A. Griscom, Dr. R. S. Huidekoper, John G. Johnson, Hartman Kuhn, Henry C. Lea, Dr. R. J. Levis, J. B. Lippincott, W. E. Littleton, Edwin M. Lewis, Wayne MacVeagh, Frederick T. Mason, Col. Henry Metcalfe, Henry A. Muhlenberg, G. Heide Norris, George M. Newhall, S. Davis Page, Joseph Patterson, James W. Paul, Henry M. Phillips, William Henry Rawle, Fairman Rogers, Edward T. Steel, Frank Thomson, W. S. Vaux, R. J. C. Walker, Henry Wharton, Henry Winsor, William Struthers, and Howard Roberts.

THE RABBIT, which originally had its headquarters in a quaint farm-house on Rabbit Lane, near Fiftieth Street, was organized about 1867–68 by a number of gentlemen belonging to the Philadelphia Riding Club. Among the members at that time were A. J. Drexel, George C. Carson, Fairman Rogers, Charles R. Colwell, Henry B. Tatham, Joseph Lapsley Wilson, Samuel B. Thomas, Joseph Patterson, Dr. John Neill, Richard C. McMurtrie, Morton P. Henry, Evans Rogers, and J. D. Bleight. Henry B. Tatham was chairman of the committee, and might be considered the first president of the association. As it became more popular other members were added, until the roll assumed very respectable proportions. A number of members of the City Troop joined, and stimulated the taste for horseback-exercise. A track was staked out in a field and private exhibitions of speed were given, some of the races being of exceptional interest.

From 1867 until 1872 the house on Rabbit Lane was occupied by the party, and in the latter year they removed to a place on Hay Lane, on the west side of the Schuylkill River, opposite Point Breeze. After staying there a year another change was made to a picturesque old house on the ground belonging to Christ Church Hospital, beyond Belmont. In 1875 the club took possession of the Asheton mansion, on Ford road, outside the West Park. Three years ago they changed back again to the old farm-house on the Christ Church Hospital grounds, where they still remain. The house is an old two-story building of stone, having a high pitch-roof and any number of old-fashioned angles. On July 2, 1877, the club was incorporated under the name of "The Rabbit." Among the prominent members are George B. Roberts, J. B. Lippincott, Wayne MacVeagh, Frank Thomson, James A. Bayard, Jr., George H. Boker, William Harrison Eisenbrey, Edward J. Etting, William Read Fisher, Dr. R. S. Huidekoper, Charles K. Ide, W. W. Harrison, F. W. Fotterall, L. Taylor Dickson, H. Carlton Adams, John A. Brown, Jr., J. N. DuBarry, E. Burd Grubb, Samuel Wetherill, J. F. Tobias, Samuel Welsh, Jr., Campbell Tucker, Samuel G. Thompson, James P. Scott, George Philler, William E. Littleton, Clayton McMichael, Walter McMichael, Richard Peters, Moncure Robinson, Jr., Hartman Kuhn, William H. Gaw, J. Aubrey Jones, Henry Bower, William T. Lowber, J. Alfred Kay, William McMichael, and George Willing. Among the deceased members are Gen. George G. Meade, Dr. F. F. Maury, Owen Jones, and Lewis Waln Smith.

THE SKETCH CLUB, on Chestnut Street below Broad, was formed by a number of artists on Nov. 14, 1860. The original members were R. Wiley, George F. Bensell, Philip F. Wharton, H. C. Bispham, E. McIlhenny, J. Gibon, Edgar Wyand, and E. B. Bensell. Every Thursday evening the members meet for social recreation and sketching. Once a month a prize is awarded for the best illustration of a subject given. The prize awarded for the best monthly illustration is generally a handsome print. In awarding it, the treatment, drawing, and composition are all carefully considered. An annual prize is also awarded for the best illustration, consisting of an autotype of a specimen of the old masters. During its existence the club has been greatly instrumental in the advancement of art in the city. In 1874 a series of lectures were delivered before the club by Professor Harrison Allen on "Artistic Anatomy," which proved of great assistance to the members. At intervals life classes have been instituted, at which the members draw from living models. Entertainments have been given from time to time by the club to visiting artists of celebrity. In 1875 a reception was given to D. R. Knight, James Hamilton, F. O. C. Darley, and P. F. Rothermel, which was largely attended. Receptions have also been given to other clubs and to private individuals. Among the prominent members are F. F. De Crano, W. M. Lansdale, C. E. Dana, Howard Roberts, Earl Shinn, Frank H. Taylor, H. V. Poore, P. L. Senat, Herman Simon, C. H. Stephens, W. M. Dunk, Charles McIlhenny, Ernest H. Klemroth, Frank D. Briscoe, Charles V. Brown, Leon Delachaux, Stephen J. Ferris, Arthur B. Frost, Frederick James, James P. Kelly, D. R. Knight, Milne Ramsay, W. H. Lippincott, Frank Moss, J. McLure Hamilton, and Harry Thouron. Among the deceased members are George F. Bensell, Philip F. Wharton, and Howard M. Poland.

THE PENN CLUB was organized on March 18, 1875, by Wharton Barker, J. M. Power Wallace, John C. Sims, Jr., Morton McMichael, Jr., Capt. W. W. Nevin, Howard Roberts, Samuel Wagner, Jr., Charles Chauncey, Simon A. Stern, and Henry Reed. The organization was named the Penn Club, and its object was stated to be the association of authors, artists, and men of science, and amateurs of music, letters, and the fine arts. The club membership was limited to two hundred and fifty, and the management of the affairs was placed in the hands of a committee, who were authorized to elect a chairman, secretary, and treasurer. Wharton Barker was elected chairman (there being no president), Morton McMichael, Jr., treasurer, and John C. Sims, Jr., secretary. The club prospered greatly, and soon became widely known by its receptions of prominent men. By the 30th of April, 1875, it had a membership of one hundred and thirty, which was soon increased to the limit prescribed. Finding the rooms too small, the house at the southeast corner of Eighth and Locust Streets was rented and fitted up, and in July, 1875, the club moved into its new quarters. During its comparatively short career the Penn Club has entertained many distinguished guests, and its receptions, while thoroughly informal, have always been enjoyable. The custom is when a prominent stranger arrives in town with whom a member is acquainted to extend an official invitation to him, and the club is notified of the event. Those who attend the reception spend their time in conversing with one another, and a plain and inexpensive collation is served. The first reception given by the club was on March 25, 1875, and was tendered to Carl Schurz. On May 27th, Dion Boucicault was the guest, and in October, Professor Richard A. Proctor, the astronomer, was entertained. Since that time receptions have been tendered to the faculty of the University of Pennsylvania, the directors of the Academy of Fine Arts, Sothern and Jefferson the actors, W. W. Story the sculptor, Gen. Grant, just previous to his starting on his voyage around the world, the Historical Societies of Pennsylvania and New York, when Wayne MacVeagh delivered an interesting address, B. L. Farjeon the novelist, Bayard Taylor, James E. Murdoch, Governor Hoyt, Thomas Bayley Potter, M.P., Walt Whitman, and Dr. William Pepper, provost of the University of Pennsylvania. The following members have died

since the organization of the club: Thomas Balch, A. Lardner Brown, Henry Armitt Brown, Theodore Cuyler, Hon. Thomas Bradford Dwight, Asa I. Fish, LL.D., Professor William Newton Meeks, Samuel B. Wylie Mitchell, M.D., Hon. Morton McMichael, Hon. Joseph T. Pratt, B. Lincoln Ray, M.D., Lewis Sylvester, and Charles H. Addicks. Among the present members of the club are George H. Boker, Professor George F. Barker, Judge Craig Biddle, Anthony J. Drexel, Judge Hanna, Robert P. Dechert, George DeB. Keim, J. Vaughn Merrick, Walter E. Rex, George W. Childs, Fairman Rogers, A. J. Cassatt, H. Howard Furness, and Professor Charles J. Stillé.

THE CATHOLIC CLUB, which has a house on the east side of Broad Street, below Walnut, was originally founded, in 1870, under the name of the De Sales Institute. It was named in honor of St. Francis De Sales, and the object was to give aid to Catholic charities and support the faith. The club was chartered on the 7th of April, 1875, and two years later an amendment was added, by which the name was changed to the Catholic Club. In March, 1877, the building in Broad Street was leased, and after extensive improvements the club moved in. The club is accustomed to give annual art or musical receptions, as well as entertainments in honor of prominent persons. On Wednesday evening, June 13, 1877, one of the finest receptions ever given by the club was tendered to its venerable ex-president, Joseph R. Chandler. A sumptuous banquet was served in the dining-room of the club-house, at which President Robins occupied the head of the table, with Mr. Chandler at his right hand. Speeches were made by George D. Wolff, Pierce Archer, Jr., Charles Phillips, Mr. Chandler, President Robins, S. Edwin Megargee, and others, together with an original poem, written and read by John I. Rogers. In August of the same year a fine reception was also tendered to Archbishop Wood, upon his return from Europe, which was largely attended, and proved a very enjoyable occasion. Two years later a reception was given to Monsignor Chatard, formerly president of the American College at Rome. Numerous other receptions have been given from time to time by the club, which have always proved highly successful. From October to the following April, in every year, Sunday nights are used for the purpose of delivering lectures and interesting essays before the club. Daniel Dougherty has several times delivered lectures at the Academy of Music, and concerts have also been given, the proceeds of which have been devoted to various charitable institutions.

THE MERCANTILE CLUB, composed principally of members of the Jewish faith, was organized on Nov. 10, 1853. Among the original members were Mayer Arnold, Lazarus Mayer, H. Gunsenhauser, Michael Moyer, B. Greenewald, Moses A. Dropsie, and others. For ten years the club occupied the premises Nos. 410 and 412 Crown Street, and on the 17th of April, 1869, it was incorporated by the Legislature. The members applying for the charter were Hyman Gunsenhauser, David Teller, Benjamin F. Greenewald, Israel Weil, Gabriel Baum, Charles Stein, Henry Koshland, Levi Mayer, Arnold Vogel, Morris Rosenbach, Jacob Louer, Thomas S. Sterr, and E. G. A. Baker. In November, 1879, the club leased the large double brick house No. 864 North Seventh Street, owned by Edwin H. Fitler, and fitted it up at a cost of fifteen thousand dollars. The property has a frontage on Seventh Street, including a large garden of eighty-nine feet. The depth of the club building is one hundred and ten feet, connecting with a handsome new brownstone and pressed-brick hall fronting on Franklin Street, between Parrish and Poplar Streets. The club-house and hall are so arranged that they can be thrown into one at any time it is desired, and this is generally done at the entertainments given by the organization.

THE RIDING CLUB, which is located on Sixteenth Street below Walnut, was formed about thirty years ago by a number of prominent lawyers. Among the gentlemen who rode on horseback together at that time were the late St. George T. Campbell, Charles Peterson, Benjamin Gerhard, John D. Bleight, Judge Cadwalader, and others. After some little time the equestrians desired to procure a place to exercise their horses without going out on the road. It was necessary to have a large room not too far from the courts, as the lawyers might be sent for at any time. They therefore obtained permission to use a room on Sansom Street above Eighth, where they remained for several years. While located there Judge Hare, Samuel A. Rulon, Anthony J. Drexel, Dr. John Neill, Evans Rogers, and his son Fairman Rogers, R. C. McMurtrie, and George W. Biddle, were frequent attendants. Afterward they moved to their present location, No. 215 South Sixteenth Street, below Walnut. In 1868 the gentlemen who were in the habit of riding at this place procured articles of incorporation for an organization under the name of the Philadelphia Riding Club. Among the incorporators were John D. Bleight, Evans Rogers, Fairman Rogers, S. A. Rulon, A. J. Drexel, F. A. Drexel, S. H. Horstman, Joseph Patterson, Israel Morris, Benjamin Perkins, George W. Childs, J. T. Kille, and George W. Biddle.

THE CLOVER CLUB, which has its headquarters at the Hotel Bellevue, where its table in the shape of a four-leafed clover is only seen upon the occasion of its monthly dinners, was organized in January, 1882. It is an association of prominent men who like a good dinner, and who also like to see their friends enjoy one. Some of the most notable men in America have been entertained at its hospitable board. The following gentlemen comprise the membership:

Active Members.—John M. Ashmead, W. R. Balch, vice-president; Dr. Edward Bedloe, George W. Boyd, Col. F. A. Burr, William M. Bunn, James T. Bingham, J. L. Carncross, Joel Cook, C. R. Deacon, sec-

retary and treasurer; Col. Thomas Donaldson, Judge Thomas R. Elcock, M. M. Gillam, M. P. Handy, president; J. H. Heverin, T. M. Jackson, B. K. Jamison, W. H. Lex, president of Common Council; Col. William Ludlow, U.S.A., and chief engineer Philadelphia Water-Works; R. W. Merrill, W. B. Merrill, W. O. Hensel, A. K. McClure, Louis N. Megargee, Thomas Potter, Jr., George G. Pierie, Charles Emory Smith, Edward J. Swartz, J. R. Wood.

Non-Resident Members.—Capt. R. C. Clipperton, British Consul; Charles Burdett Hart, Wheeling, W. Va.; Paymaster M. C. MacDonald, U.S.N.

Honorary Members. — Daniel Dougherty, Hon. Henry M. Hoyt, Harrisburg, Pa.; Sol. Smith Russell.

THE JOURNALISTS' CLUB, which occupies a handsome five-story building on Walnut Street above Ninth, is composed entirely of editors and reporters, and numbers one hundred and fifty members. It was organized Nov. 20, 1882, and incorporated March 30, 1883. The object of the club is to promote fraternity among journalists, and with this view social entertainments are given fortnightly. The club-house includes a large restaurant, parlor, library, smoking-, billiard-, reading-, card-, and lodging-rooms for members. The officers are: President, M. P. Handy; Vice-President, George E. Mapes; Secretary, James Hoyt; Treasurer, John Norris; Managers, M. P. Handy, James Hoyt, W. C. Ruch, John Norris, L. N. Megargee, T. M. Jackson, T. J. Lindsay; House Committee, Albert H. Hoeckley, chairman, G. H. Shearer, J. B. Lane, G. R. Morse, and W. R. Lester. The club possesses a number of valuable paintings and engravings, as well as odd bric-à-brac and furniture.

THE LIBERAL CLUB, which occupies a handsome marble building on Broad Street, above Chestnut, was organized in 1876, by a number of members of the Union League and the Reform Club, the latter of which has since dissolved. The club was incorporated in 1878 by D. F. Houston, Stephen Flanagan, S. F. Donaldson, William Warnock, George W. Thompson, D. L. Flanagan, Charles I. Cragin, and E. F. Poulterer.

THE UNIVERSITY CLUB, to which only college graduates are eligible, occupies a handsome house on Walnut Street, above Thirteenth. The Right Rev. William Bacon Stevens is the president, and the organization is in a flourishing condition.

THE STYLUS CLUB is an organization restricted to editors, reporters, and contributors to or publishers of newspapers or magazines. It was organized in 1877, and its object is the promotion of social intercourse between its members. It is composed of the following gentlemen: James M. Ferguson, Stephen N. Winslow, Robert A. Welsh, Albert W. Frick, Edward J. Swartz, Alexander J. McCleary, Thomas J. Lindsay, James McConnell, William H. Smith, William B. Kinsey, Louis N. Megargee, Hermann Dieck, William F. McCully, George S. Ferguson, H. J. Murdoch, George G. Pierie, William Arthur, James R. Young, William Perrine, Robert S. Menamin, Franklin Dundore.

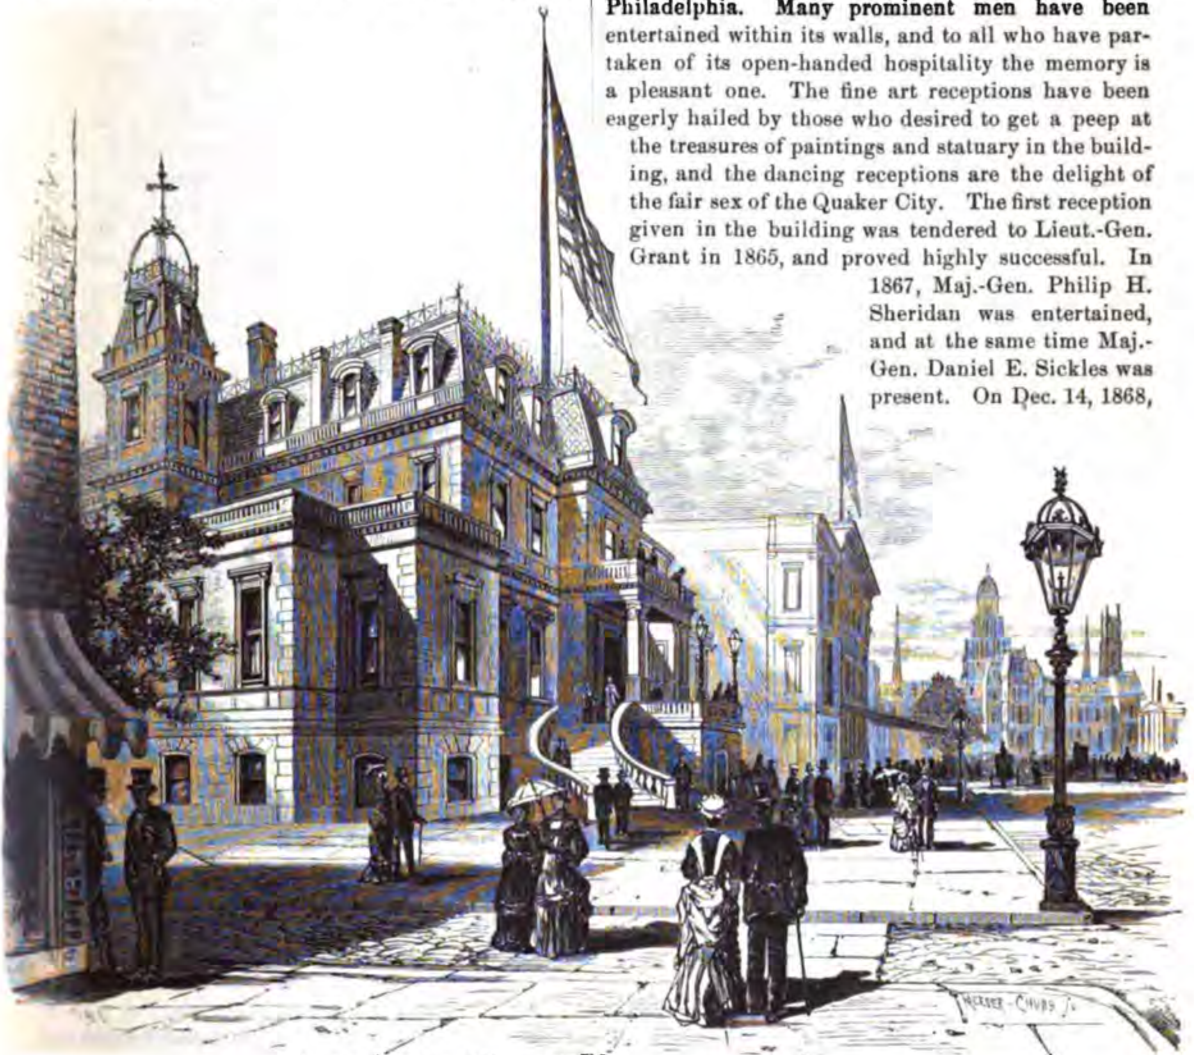
Political Clubs.—Besides the many social organizations in Philadelphia there are numerous political clubs. Prominent among these is the UNION LEAGUE, which is the leading club of the Quaker City. It is an outgrowth from the Union Club, which was organized Nov. 15, 1862, by Morton McMichael, chairman, J. I. C. Hare, Charles Gibbons, Benjamin Gerhard, and George H. Boker, secretary. Articles of association were drawn up, and the organization was named "The Union Club of Philadelphia." The articles provided, after reciting loyalty to the United States, that the club should meet every Saturday evening at the house of a member, who should provide a moderate entertainment not later than ten o'clock. Not more than three dishes of various kinds could be served, and the wines were limited to sherry and Madeira and one other. Meetings were afterward held at the residences of James W. Paul, John Ashhurst, Bloomfield H. Moore, and Dr. Wilson C. Swann. On Dec. 27, 1862, a meeting was held at the residence of Dr. John F. Meigs, at which the Union League of Philadelphia was organized from the members of the Union Club. The large house No. 1118 Chestnut Street was taken, and after being thoroughly furnished was thrown open to the members. In the mean time the Union Club was continued as a purely social organization until Nov. 4, 1865, when the weekly meetings were superseded by an annual dinner, which was to be held on December 27th in each year, the anniversary of the foundation of the Union League.

The League rapidly assumed a commanding position in the politics of the nation, and printed circulars were prepared and sent out to every city, town, and village in the country, giving plans for instituting similar Leagues to uphold the Union cause. A board of publication was appointed, and the sum of thirty-five thousand dollars was soon subscribed for the purpose of printing and issuing patriotic pamphlets. They were sent from Maine to California, and probably did much toward the success of the Republican party. A committee was also appointed for the purpose of securing employment for disabled Union soldiers and sailors, which accomplished much good. During this year (1863) a committee was appointed to enlist and send into the field as many regiments of soldiers as its means might warrant. In a few days eighty thousand dollars were collected and three regiments were armed, equipped, and sent forward. In August, 1864, the lease of the building No. 1118 Chestnut Street expired, and could not be renewed, as the late Matthias W. Baldwin desired to occupy the premises as a residence. A lot of ground had been previously purchased at the corner of Broad and Sansom Streets, upon which it was determined to erect a suitable building for the club.

During its erection the League moved temporarily into a building on the south side of Chestnut Street, between Twelfth and Thirteenth, opposite where Concert Hall was formerly. While located here the League opened a recruiting-office for colored soldiers in the premises next door, which created considerable excitement among the residents of the vicinity. At this time the League numbered nearly one thousand members, and when a meeting was held Concert Hall was hired for the occasion, as the premises were much too small for them. Up to the close of the war the League sent into the field nine regiments, two battalions, and a troop of cavalry, all armed and equipped at the expense of the club.

On May 11, 1865, the Union League took possession of their magnificent new building at Broad and Sansom Streets. It had been intended to inaugurate the moving with a grand reception, but on account of the assassination of President Lincoln it was decided to postpone the affair. The building, which is one of the finest club-houses in the world, was built by John Crump, and cost in the neighborhood of two hundred thousand dollars.

The Union League has always been noted for the beauty and elegance of its receptions, which have invariably been attended by the highest society in Philadelphia. Many prominent men have been entertained within its walls, and to all who have partaken of its open-handed hospitality the memory is a pleasant one. The fine art receptions have been eagerly hailed by those who desired to get a peep at the treasures of paintings and statuary in the building, and the dancing receptions are the delight of the fair sex of the Quaker City. The first reception given in the building was tendered to Lieut.-Gen. Grant in 1865, and proved highly successful. In 1867, Maj.-Gen. Philip H. Sheridan was entertained, and at the same time Maj.-Gen. Daniel E. Sickles was present. On Dec. 14, 1868, the Secretary of War, Edwin M. Stanton, was the guest of the League at an entertainment given in this house. On the 11th of May, 1870, the first reception was given to the families of the members and many invited guests. A committee of one hundred was appointed to look after the details, and everything passed off successfully. The club-house was magnificently decorated with flowers and plants, and an admirable orchestra furnished appropriate music. On the 22d of December, 1871, a grand reception was tendered to George H. Boker upon his appointment as minister to Turkey, which was largely



UNION LEAGUE CLUB-HOUSE.

attended, and on July 10, 1876, Mr. Boker, having returned from Russia, to which country he had been appointed minister, was entertained a second time. On October 26th in the same year, Hon. Rutherford B. Hayes, at that time Governor of Ohio, was the guest of the League. Two years later President Hayes and his wife were given a grand reception by the club, at which the decorations were notable for their elegance. Governor Hoyt was received April 15, 1879, and on December 23d, of the same year, Gen. Grant and his wife were entertained after their journey around the world. In addition to these more prominent receptions, there have been innumerable social entertainments. There are generally two receptions to the families of members and invited guests every winter.

THE AMERICUS CLUB is the leading Democratic organization of Philadelphia, and has a house on Broad Street above Chestnut. On the 30th of April, 1867, a meeting was held at the residence of Dr. Judah Isaacs, No. 513 Pine Street, having for its object the formation of a social club to be composed of Democrats. There were present at the time John Welsh, John Kelsh, John P. Delaney, Dr. J. Isaacs, William B. Hood, George Concannon, William W. Dougherty, Lewis C. Cassidy, David A. Nagle, James Stewart, John White, John O. Grady, and Andrew J. McGrath. Since that meeting John P. Delaney, William B. Hood, David A. Nagle, James Stewart, John White, and Andrew J. McGrath have died. John White acted as temporary president, William B. Hood as secretary, and Dr. Isaacs as treasurer. It was agreed that the membership should be limited to thirty, and that the meetings should be held in the third story of the building at the northeast corner of Fifth and Walnut Streets. A committee was appointed to rent and furnish the premises, and they were fitted up in comfortable style.

On the 11th of the following month a constitution and by-laws were reported by the committee appointed for that purpose. The name was adopted as the "Americus Club of Philadelphia," and the object was stated to be to have a room or rooms open at all times, furnished with books and newspapers of the day, for the discussion of all questions and the social enjoyment of the members. It was stipulated that the members of the club should be adherents of the Democratic party, and must be citizens of the United States. On the 15th of May, 1867, it was agreed to increase the membership to thirty-five, and a permanent organization was effected by electing the following officers: President, John Welsh; Vice-President, William Conway; Secretary, Andrew J. McGrath; Treasurer, Dr. J. Isaacs; Trustees, John P. Delaney, George Concannon, Matthew S. Farrell, John Kelsh, and James Stewart.

During the early part of the war, just after the Union League had been started and was progressing favorably, several of the members thought a club modeled after the same pattern, but conducted upon more economical principles, would be a great success. Accordingly they met and formed the National Union Club, having its headquarters on Chestnut Street, above Eleventh, in Girard row. At that time the Union League occupied the large double mansion on the south side of the same square. The object of the National Union Club was to sustain the government of the United States, to check disloyalty by every legitimate method, and at the same time to take an active part in national, State, and municipal politics. The club was a purely political organization, and among its original members were John E. Addicks, John L. Hill, William R. Leeds, Henry C. Howell, and Robert P. King. After the war had closed the members began to lose interest in it, and about 1872 the club was dissolved. As the years rolled on the members became desirous of forming another political club, and about 1874 the UNION REPUBLICAN CLUB of Philadelphia was formed. The object of the new club was to sustain and aid the Republican party, and also to take an active part in all political campaigns. Applicants for membership were restricted to citizens of the United States over twenty-one years of age, who were Republicans.

As soon as the club was organized it moved into the fine building northeast corner of Eleventh and Chestnut Streets, which it still occupies. At that time the president was John E. Addicks, who held that position until his death. M. Hall Stanton was vice-president, Henry C. Selby was secretary, and James N. Kerns treasurer. On Oct. 12, 1878, application was made for a charter by the following members, to whom it was granted: John E. Addicks, M. Hall Stanton, Henry C. Selby, James N. Kerns, and John McCullough. These members at one time held all the property of the club in their own name, but afterward transferred it to the organization.

THE COMMONWEALTH CLUB, a Democratic organization, and the UNITED REPUBLICAN CLUB occupy the southwest and northwest corners of Broad and Chestnut Streets respectively.

THE YOUNG REPUBLICANS' CLUB is at Twelfth and Chestnut Streets, and the PENNSYLVANIA CLUB, an independent political organization, on Walnut Street below Thirteenth.

THE SATURDAY CLUB, organized on Oct. 13, 1871, may be considered almost lineal in succession from the Wistar Parties and Wistar Club, established in the early part of the century. Its first president was Hon. Morton McMichael; George H. Boker, secretary. It succeeded the Union Club, which was founded in 1862, and continued during the civil war.

CHAPTER XXXV.

AUTHORS AND LITERATURE OF PHILADELPHIA.

The development of the literature of Philadelphia has been to the author a very entertaining study. The simplicity of its original, the means of its publication, the inspirations of its first ideas, contrasted with the excellent height to which it has attained, are things in the contemplation of which any person, whether he be a Philadelphian or not, who is fond of historical investigations, could not fail to become much interested. The school-master and the printer must begin this benign work, and it is amusing to consider the scale upon which these two plied their vocations in this early society. The name of Enoch Flower heads one list, that of William Bradford the other. The former would be unknown to fame but for a leaf in the journal of the Council in 1683, whereon appears a modest schedule of prices, which would seem to have put out of view of this wielder of the rod and ferule all prospect of great earthly riches. But children were not numerous, and their hands, when strong enough to wield an axe or hoe, or follow a plow and wagon horse, were thought to be more profitably employed in the forest or the field than in thumbing even the rudiments of any sort of lore. Mr. Enoch Flower, who is thought to have been a Wiltshire man, had this entry on the Council journal:

"Tenth Month 26th, 1683, Enoch Flower undertakes to teach school in the town of *Philadelphia*, on the following terms, *viz.*:

"To learn to read *English*, four shillings by the quarter; to write, six shillings by ditto; to read, write, and cast accounts, eight shillings by the quarter; boarding a scholar, that is to say, diet, lodging, washing, and schooling, ten pounds for one whole year."

This last sum, we observe, was half that of Dotheboys Hall, in Yorkshire, and we must allow it to be possible that the rector, like Mr. Squeers, was wont to make some of his practical lessons available in domestic economy. Six years after this date the first public school, called "Friends' Public School," was begun. In 1697 this school had become considerable enough to be incorporated in a charter by Lieutenant-Governor Markham. Some distinguished names appear in the petition for this purpose,—David Lloyd, Edward Shippen, Samuel Carpenter, Anthony Morris, James Fox, William Southbee, and John Jones. This action was confirmed by patents from William Penn in 1701, 1708, and 1711. This institution, the first of its kind, was entirely of Quaker origin, and was "forever thereafter to consist of fifteen discreet and religious persons of the people called Quakers, by the name of the Overseers of the Public School, found in Philadelphia, at the request, cost, and charges of the people called Quakers." In it the poor were to be taught without price. Already the side of the question of public against private schools, destined, it appears, never to be settled, was decided by these founders in favor of the former, as appears in the preamble of the amended charter of 1711: "*Whereas*, The prosperity and welfare of any people depend, in great measure, upon the good education of youth, and their early introduction in the principles of true religion and virtue, and qualifying them to serve their country and themselves, by breeding them in reading, writing, and learning of languages, and useful arts and sciences, suitable to their sex, age, and degree, which cannot be effected, in any manner, so well as by erecting *public schools*," etc. The words "sex, age, and degree," though so fitly spoken here, would be of little avail with founding of some later public institutions of the kind wherein the differences among all three of these conditions appear to be of little importance.

The first head-master was one destined to give trouble to the peaceful society that employed him, and finally, after involving them in many a dispute, abandon them, as so many others did afterward, and return to the English Church. George Keith, of Aberdeen, Scotland, lately of East Jersey, had a provision quite ample, compared with Enoch Flower, who worked in his own small independent way. He was to have fifty pounds a year, to be increased to one hundred and twenty in two years, a house to live in, and the school profits. But his restless spirit was tired out with one year's service. He was ambitious to become known as founder of a new sect, which he called Christian Quakers. But he deserted them in a very short while, and after officiating as missionary clergyman of the English Church in Boston and New York, went to England, where he died rector of Edbarton Church, Sussex. A man of considerable gifts and culture was Keith. He published two works, "New Theory of Longitude" and "Journal of Travels from New Hampshire to Caratuck." His continued reputation has depended upon that of William Bradford, who has become immortal in the defense of a great principle, which, however incredible it seems, required a very long time to obtain recognition and acceptance. We shall speak of them in connection presently. For we should not omit entirely the mention of Thomas Makin, who, having been chief of the ushers during Keith's administration of the Friends' public school, became the head-master on his retirement. This person, if not of great, was of versatile talents, at least he was versatile in occupations. He served as clerk of the Provincial Council, and then, after a fashion, he was a poet, even a poet in Latin hexameter verse. We know not how judicious or how munificent James Logan may have been in his encouragement of the muse, but the bard, whether in his *rôle* of prothonotary or pedagogue, inscribed to him two poems, "Encomium Pennsylvaniæ" and "In Laudes Pensilvaniæ, Poema, seu Descriptio Pensilvaniæ," "both which," says Proud, "were found among James Logan's papers, many years after his decease." They seem to have been written chiefly for amusement in his old age. As specimens of this last production in alternate hexameter and pentameter, we give the opening and the closing four lines:

"Hæc habet, et regio memorabile nomen, habebit
Auctior auctores tempus in omne sui;
Qui fuit illustre proavorum stemmate natus,
Sed virtute magis nobilis ipse suâ.

* * * * * * * * *

"Utilis est illi, si non opulenta supella;
Res sapiens omnes utilitate probat.
O! mihi si liceat sylvas habitare beatas,
Et modico victu, non sine pace, frui."

This was written in 1729. But two poems, so styled, had been written in English, one by Richard Frame in 1692, printed by Bradford, entitled "A Short Description of Pennsylvania; or, a Relation of What Things are Known, Enjoyed, and Like to be Discovered in said Province;" the other "A True Relation of the Flourishing State of Pennsylvania," by John Holme, about 1696. This is not known to have been published until 1847. The author, like Keith, owes what fame he has obtained by his connection with William Bradford, being one of the judges that sat on the case that has made the defendant so renowned.

William Bradford, though not an author, yet is distinguished as the first printer of the province, and the first to maintain, with heroic courage in the midst of persecution and suffering, the freedom of the press. He was a native of Leicester, and when a young man emigrated to Pennsylvania, and was the first to settle upon the spot where Philadelphia was destined to be built. This has been supposed to be at Kensington, not far from the elm-tree beneath which William Penn treated with the Indians. He had learned the printer's trade in London. He had come over in 1682, but it was not until 1686 that he printed his first book, an almanac. The calculations for this work had been made by one Daniel Leeds, whose appellation on the title-page was "Student of Agriculture." This poor printer doubtless did not even dream of the renown that was to befall him and his small press from one of its early endeavors to impart some notoriety to another. George Keith's fiery temper and bold words were to be handled elsewhere besides on the tongues of the peaceful Quakers. It is amusing to read Robert Proud's account of the conduct of Keith in his vilifying "divers persons in the magistracy, tending to subvert that absolutely necessary institution and order in civil society;" how "he called Thomas Lloyd, the Deputy Governor, who was accounted a person of a mild temper and deportment, good sense, and unblemished character, an impudent man and a pitiful Governor, asking him why he did not send him to jail! and telling him his back had long itched for a whipping! and that he would print and expose them," etc. "And, besides, being much enraged, he had published several virulent pieces on several of the principal magistrates in their judicial capacity, and thereby lessening the lawful authority of the magistracy in the view of the baser sort of people, who began thereupon to take greater liberties; wherefore the said printers, William Bradford and John McComb, who had published it, were by a warrant from five magistrates, viz.," etc. The historian evidently believed that the defendants suffered very lightly in comparison with the heinousness of their crime. William Penn was absent from the province during this trial. It had been by his invitation that Bradford had come to Pennsylvania, and he was much pained both by the prosecution and the notoriety imparted to it, and so wrote in several letters from England.

Keith had already been condemned in a meeting of the Quakers for his utterances against the old faith, and was forbidden to attend and speak in their religious meetings. Governor Lloyd and most of the Quaker magistrates were of this faction, which was in a decided majority. Bradford sided with Keith, and printed his pamphlets against what he styled "The Spiritual Court." John McComb's offense consisted in assisting, though in a very small way, in distributing them. It was evident that however tolerantly inclined toward those of other faiths were the Quaker leaders, they wished, and they were determined, if possible, to cut off or render harmless this turbulent faction among their own ranks, especially Keith and Bradford. The whole proceedings were entirely arbitrary. They seem ridiculous enough, and therefore less repulsive, because of the almost total want of the knowledge of judicial administration among those pious magistrates who were endeavoring to settle among themselves a family dispute, which, like all of its kind, was attended with peculiar acerbity. We give a few extracts from the report of this trial as we find it in the *Register of Pennsylvania* (1828):

"*Justice Cook.* 'What bold, impudent, and confident men are these, to stand thus confidently before the Court?'

"*Bradford.* 'We are here only to desire that which is the right of every free-born English subject, which is speedy justice, and it is strange that that should be accounted impudence, and we impudent fellows, therefore, when we have spoke nothing but words of truth and soberness in requesting that which is our right, and which we want, it being greatly to our prejudice that we are detained prisoners."

"*Justice Cook.* 'If thou hadst been in England, thou would have had thy back lashed before now.'

"*Bradford.* 'I do not know wherein I have broke any law so as to incur any such punishment.'

"*Justice Jennings.* 'Thou art very ignorant in the law. Does not thee know that every printer shall put his name to the books he prints, or his press is forfeited?'

"*Bradford.* 'I know that there was such a law, and I know when it expired.'

". . . The prisoners continued to press for a trial.

"*Justice Cook.* 'A trial thou shalt have, and that to your cost, it may be.'

"*Justice Jennings.* 'A trial thou shalt have, but for some reason known to us, the Court defers it to the next Sessions, and that is the answer we give, and no other you shall have.'"

In the interim between the sessions the accused were imprisoned, Bradford deprived of his printing utensils, and the license of McComb to trade revoked by the Governor. On reading the presentment at the second trial, Bradford, to the question of the clerk as to his guilt or innocence, responded,—

"*Bradford.* 'In the first place, I desire to know whether I am clear of the mittimus, which differs from the presentment.'"

This for a while seemed a poser for the court, as the mittimus and presentment plainly differed. They concluded, however, after conference with the prosecuting attorney, to try him on the presentment, telling him he was clear of the mittimus.

"*Bradford.* 'What law is the presentment founded on?'

"*Attorney for the Government.* 'It is grounded both on Common and Statute Law.'

"*Bradford.* 'Pray let me see that Statute and Common Law, else how shall I make my plea? Justice Cook told us last Court that one reason why ye deferred our trial then was, that we might have time to prepare ourselves to answer it, but ye never let me have a copy of my presentment, nor will ye now let me know what law ye prosecute me upon.'

"*Attorney.* 'It's not usual to insert in indictments against what statute the offense is, when it's against several statutes and laws made.'

"*Justice White* 'If thou wilt not plead guilty or not guilty, thou wilt lose thy opportunity of being tried by thy country.'"

The court then ordered the clerk to write down that William Bradford refused to plead, which he did; but as he was writing it down, Bradford desired they would not take advantage against him, for he refused not to plead, but only requested that which was greatly necessary in order to his making his own defense. Several in the court requesting on the prisoner's behalf that the court would not take advantage against him, they admitted him to plead, and he pleaded not guilty.

In impaneling the jury, the exceptions of Bradford to two of them were overruled *by the clerk* and the attorney, who, it seems, was David Lloyd.

"*Clerk.* 'These are no exceptions in law.'

"*Attorney.* 'Hast thou, at any time, heard them say that thou printed that paper? for that is only what they are to find.'

"*Bradford.* 'That is not only what they are to find. They are to find also whether this be a seditious paper or not, and whether it does tend to the weakening of the hands of the magistrates.'

"*Attorney.* 'No. That is matter of law, which the jury is not to meddle with, but find whether William Bradford printed it or not, and the bench is to judge whether it be a seditious paper or not, for the law has determined what is a breach of the peace, and the penalty, which the bench only is to give judgment on.'

"*Justice Jennings.* 'You are only to try whether William Bradford printed it or not."

"*Bradford.* 'This is wrong, for the jury are judges in law as well as the matter of fact.'

"The attorney again denied it, whereupon some of the jury desired to know what they were to try, for they did believe in their consciences they were obliged to try and find whether that paper was seditions, as well as whether Bradford printed it, and some of them asked to be discharged.

"A gentle noise and confusion among the people. Some on the bench showed their willingness to allow of Bradford's exception to two jurors. Justice Cook said, 'I will not allow of it. Is there four of us of a mind? . . .'"

During the time that the prisoners were on trial the grand jury sat in the room, frequently threatening them with presentment for the words they used in their defense. The only evidence that Bradford had printed the paper was, as appears by these words of the attorney for the government, "It is evident William Bradford printed the seditious paper, he being the printer in this place, and the frame on which it was printed was found in his house."

"*Bradford.* 'I desire the jury and all present to take notice, that there ought to be two evidences to prove the matter of fact, but not one evidence has been brought in this case.'

"*Justice Jennings.* 'The frame on which it was printed is evidence enough.'

"*Bradford.* 'But where is the frame? There has no frame been produced here, and if there had, it is no evidence unless you saw me print on it.'

"*Justice Jennings.* 'The jury shall have the frame with them. It cannot well be brought here, and, besides, the season is cold, and we are not to sit here to endanger our health. You are minded to put tricks on us.'

"*Bradford.* 'You of the jury, and all here present, I desire you to take notice, that there has not one evidence been brought to prove that I printed the sheet called *An Appeal;* and whereas they say the frame is evidence which the jury shall have, I say the jury ought not to hear, or have any evidence whatsoever, but in the presence of the judges and prisoners.'

"The jury had a room provided for them, and the sheriff caused the frame to be carried in to them, for an evidence that William Bradford printed the *Appeal.* The jury continued about forty-eight hours together, and could not agree. They then came into court to ask whether the law did require two evidences to find a man guilty? To answer this question the attorney read a passage out of a law-book, that they were to find by evidences, or on their own knowledge, or otherwise. 'Now,' says the attorney, 'this otherwise is the frame which you have, which is evidence sufficient.'

"*Bradford.* 'The frame which they have is no evidence, for I have not seen it, and how do I or the jury know that that which was carried into them was mine?'

"Bradford was interrupted, the jury sent forth again, and an officer commanded to keep them without meat, drink, fire, or tobacco. In the afternoon the jury came into court again, and told they were not like to agree, whereupon the court discharged them."

The defendant was remanded to prison, protesting then and at the next term of the court against the additional error of the court in discharging the jury before they had agreed upon a verdict. The case failed at last from the total lack of evidence, and doubtless from the court being in a degree overawed by the dauntless courage and the superior knowledge of their prisoner. It was said that when the "frame" of the printer was carried into the jury-room, they were extremely embarrassed by this "otherwise" item of evidence. Men who, if they could read at all, read forwards with only moderate facility and speed, found greatly enhanced difficulty in performing that operation backwards. In their attempts to place the frame in a position favorable for deciphering it, one of them, assisting this effort with his cane, thrust the whole of the types from their positions, and thus some of the "otherwise" evidence was destroyed.[1] We must suspect there was, in this awk-

[1] The "some reason known to us," as uttered by Justice Jennings at the first trial, why "the court defers it to the next sessions," is thus explained in Thomas' "History of Printing:"

"The day after the imprisonment of Bradford and his friends a 'Private Sessions,' as it was called, of the County Court was holden by six justices, all Quakers; to put a better complexion on their proceedings, requested the attendance of two magistrates who were not Quakers. This court assembled, it seems, for the purpose of convicting Keith, Budd, and their connexions of seditious conduct, and of condemning them without a hearing; but the two magistrates who were not Quakers, if we credit Keith and Bradford, reprobated the measure, and refused to have any concern in it, declaring that the whole transaction was a mere dispute among the Quakers respecting their religion, in which the government had no concern. They, however, advised that Keith and others accused should be sent for and allowed to defend themselves, and affirmed that if anything like sedition appeared in their practice,

ward thrust of the juror's cane, some "method" that was born either of a friendly compassion for the accused, or of a disgust for the alleged sufficiency of this species of evidence.

The defense made by Bradford shows very plainly that during those years he had spent in learning his trade in London he had become familiar with all the rights and defenses that he was entitled to under the law, which cannot be said of the court that tried him. They were, indeed, strange proceedings for a court of justice: the attorney, the clerk, the grand jury, and even outsiders taking part with the judges in the work of browbeating. It was, in truth, none other than a quarrel between the two factions of Quakers, which the dominant were determined, if possible, to subdue by whatever force they could employ short of the shedding of blood. We may see in the chapter on the Bench and Bar the materials out of which the former was made, and the impossibility of an accused obtaining competent counsel for his defense. Yet we cannot too much admire the courage and the coolness of William Bradford in combating until overpowered by such numerous powerful antagonists upon every position of principle and right, and, though after prolonged delays, imprisonments, and other sufferings, prevailing in a cause that has led to his being justly named the father of the freedom of the press in the country of his adoption. The disgust he felt for the treatment he had received, and his unfriendly relations with those in power in Philadelphia, induced him, in the following year, 1693, to accept offers to remove to New York, though he still retained an interest in the business he left behind. For thirty years Bradford was the government printer in New York, being in fact the only one of his trade in the province. In 1725 he printed there its first newspaper.

As for George Keith, no doubt much of his conduct had been extremely exasperating. Those Quakers, forbidden by their principles and their meeting to resent and punish the individual vituperations of one who it seems was voluble of insulting words and epithets, resorted to the only warfare allowed, and were not afraid of going too far in the employment of its powers and agencies. Unlearned men, though judges, unfamiliar with the laws as judicial forms, they regarded themselves at liberty to supply whatever all these lacked in order to apply some of the punishment that in their consciences they believed to be justly due

they would join heart and hand in their prosecution. To this the Quaker magistrates would not consent, and the others in consequence left the court. The court then, as is stated in a pamphlet (entitled 'New England Spirit of Persecution, transmitted to Pennsylvania, etc.'), 'proceeded in their work, and as they judged George Keith in their Spiritual Court without all hearing or trial, so, in like manner, they prosecuted him in their temporal court, without all hearing.' The pamphlet further states that 'one of the judges declared that the Court could judge of matter of fact without evidence, and, therefore, without more ado, proclaimed George Keith, by the Common Cryer, in the Market-place, to be a seditious person and an enemy to the king and queen's government.'"

to this disturber of their peace. Robert Proud shows a keen relish of the words he employed in telling of the subsequent career of this apostate from Quakerism.[1]

We thought that we should sketch with some detail these two men, the first names in those nurseries of Philadelphia literature, the school-room and the printing-office. Independent of such priority, they serve to illustrate conditions in that earliest society in ways most interesting to contemplate. It is easy to observe how simple were these conditions when we read the proceedings of that conglomerate assembly of judges, lawyers, clerk, grand and petit juries, and lobbyists called a court, and all clamoring against a poor printer, who, innocent of offense, consciously so, stood calmly before them all, pointing out their ignorance and injustice, and finally prevailing by the power of truth and justice.

The first essays in the matter of literary production we observe, from what has been said in the foregoing, were made on the subject of religious discussion. Our provincial literature, in its inception, was thus, to a degree, like that of the classical states in their infancy, which opened with hymns in honor of the gods. Counting themselves in Pennsylvania, as in New England, exiles for the sake of religion, their written thoughts might be expected to be upon that for the sake of which they had betaken themselves away from their native places. George Keith, rest-

[1] In volume i. (page 368) are given in a note the proceedings of the Yearly Meeting in Burlington in 1692, in "Their Testimony and Declaration against George Keith," and an appended "joining with our brethren in their Testimony against that spirit of railing, lying, slandering, and falsely accusing which hath risen and acted notoriously in George Keith and his adherents," etc.; also of the Yearly Meeting in London, in the Third month, 1694, in which it was unanimously declared "that the said George Keith was gone from the blessed unity of the peaceable spirit of our Lord Jesus Christ, and hath thereby separated himself from the holy fellowship of the Church of Christ; and that while he is in an unreconciled and uncharitable state he ought not to preach or pray in any of Friends' Meetings, nor be owned or received as one of us until," etc. The historian then proceeds thus: "He thenceforward became a public and bitter enemy, as far as in him lay, against the *Quakers* in general, preaching and writing against them with all imaginable virulency, in which he appeared afterward to be employed by their adversaries for that purpose; for, having joined with the Episcopal Clergy in *England*, and served there for some time as a Vicar, ordained by the Bishop of *London*, he afterward returned to *America*, where, as a *Clergyman* in orders, he officiated in his new function for about twelve months, and having there given the *Quakers* all the trouble in his power, he returned again to *England* by way of *Virginia*. In this visit, it is said, he was generally slighted, both by those who had been his adherents and others; and that his conduct was so glaringly inconsistent with his former pretensions, and his behavior toward the *Quakers* so manifestly arising from a malignant disposition of mind and disappointed malice, notwithstanding all the superior abilities which he possessed and made use of, he was universally despised by sober and thinking people of all societies."

Gratifying as it was to tell these things, there was probably a more serene enjoyment in that which follows:

"After his return to England he was fixed in a benefice in *Sussex*, and continued to write against his former Friends as a bitter enemy, but, as far as appears, with a sinking reputation. At last, on his death-bed, from a well-authenticated account, it is asserted he thus expressed himself: 'I wish I had died when I was a Quaker; for then I am sure it would have been well with my soul.'"

less, pugnacious, though perhaps sincere, or believing himself to be so, had already waged a fierce warfare against Cotton Mather and the New England Puritans. His first tract in this contest is said to have been the first book published in Pennsylvania. Such a spirit was not at home among the peaceful Quakers, and when they excluded him from their meeting the torrent of resentment he poured upon them, and the sight of the followers that he had subtracted from them, were more than they could endure, and they proceeded, with such results as we have seen. Their spiritual triumph was complete when the Yearly Meeting in London indorsed their "Testimony," and they doubtless felt a sense of relief when Keith went over bodily to the Church of England. Perhaps they enjoyed the sweet sense of full forgiveness when they heard how, upon his death-bed, he had sighed and wished that he had died while in their pious, peaceful fold.

Edward Penington, in 1695, wrote "The Discoverer Discovered," "Rabshakeh Rebuked, and his Railing Accusations Refuted," and a "Reply to Thomas Crisp," and in 1696 "Some Brief Observations upon George Keith's Earnest Expostulation," and a "Modest Detection of George Keith's (Miscalled) Vindication of his Earnest Expostulation." John Penington, M.D., of the same family (descendants of Isaac Penington, a noted English Quaker), who perished in his devoted services to the victims of the yellow fever, in 1793, was a contributor to the *Columbian Magazine*, published in 1790,—"Chemical and Economical Essays to Illustrate the Connection between Chemistry and the Arts," and "Inaugural Dissertation on the Phenomena, Causes, and Effects of Fermentation."

Germantown, it appears from the work of Gabriel Thomas, a Londoner, who visited Pennsylvania, sailing with the first ship that came there in 1681,[1] had the honor of manufacturing the first paper in the province, there being, according to him, as early as 1697, "all sorts of very good paper in the German town." By this time the press may be said to have been fairly settled. Its representative in the succession to William Bradford was one Reynier Jansen, who, in 1699, printed the first book that the province had produced upon subjects other than that relating to religion.

Jonathan Dickinson, an English Quaker, had been residing in the island of Jamaica. In 1796 he emigrated with his family to Philadelphia. During the voyage the ship in which he sailed was wrecked on the coast of Florida, and the passengers, falling among savages, suffered divers misfortunes until rescued by the Spanish Governor of St. Augustine. In the fullness of his gratitude the traveler, upon reaching Philadelphia, wrote and had published an account of these perils and sufferings. The title of the book reads thus: "God's protecting Providence man's surest help and defense in times of the greatest difficulty and most imminent danger; evidenced in the remarkable deliverance of divers persons from the devouring waves of the sea, among which they suffered shipwreck; and also from the more cruelly devouring jaws of the Cannibals of Florida. Faithfully related by one of the persons concerned herein, Jonathan Dickinson." The author was anxious that his book should receive the credit to which he believed it entitled; yet he was not without apprehension that readers outside of his community might suspect exaggeration of the hair-breadth escapes and other wonderful things therein related. So he says of himself,—"The writer is a man well known in this town, of good credit and repute, on whose fidelity and veracity those who have any knowledge of him will readily relie, without suspecting fallacy." This not very immodest self-laudation proved to have been well deserved, as the longer he continued to live the more he was honored, being made one of the Governor's Council, and chosen from among his colleagues master in chancery, and in time made chief justice of the province. His book has been said by some who have read it to be an unusually interesting and pathetic narrative. The preface, among other things, tells of one Robert Barrow, an English Quaker, who, having obeyed the spirit that required him to leave his home and native country for missionary labors, had been for a year or two in Philadelphia, and for as long a time in the West Indies, and lately a fellow-passenger with the author and a sharer in his sufferings. These had entirely broken down his constitution, and he survived the reaching of Philadelphia only four or five days. He was of the old sect of Quakers, without a drop of adulteration of the heresies of George Keith. They took him on a stretcher to "Samuel Carpenter's house," and one of his first questions was as to what had become of "George Keith's people." On hearing how they had been discomfited and utterly routed he rejoiced intensely at heart, and remained in this frame to the last. A copy of this work is now in the Philadelphia Library.

It is noteworthy that in that society books, almanacs, and pamphlets were anterior by several years to newspapers. This fact appears strange now when the newspaper is so quick to follow the march of population, and can flourish, or seem to flourish, when that population is sparse, and with little means besides what are necessary to pressing domestic wants to pay the printer. Yet the latter will "go West" along with other bold adventurers, for he counts on the knowledge that there will be enough to keep from starving the man who goes to give notoriety to them, individual and corporate. It was not until 1719 that the first newspaper was

[1] An Historical and Geographical Account of the Province and Country of Pennsilvania, and of West New Jersey, in America, etc., With a Map of both Countries. By Gabriel Thomas, who resided there about fifteen years. London, 1698.

printed in Philadelphia. But it is safe to say that this delay was due, more than any other cause, to the treatment received by the first printer, treatment that sent him an exile into another province. Yet the name of Bradford must be further connected with Philadelphia literature. At the time of his exile William had a son, then six years old, Andrew, who, when he grew up, returned to his native city, and conducted the business begun by his father. It is probable that the latter, after his removal to New York, had kept an interest in Philadelphia. From 1712 to 1723, Andrew was the only printer in the city. That was doubtless a proud day, that 22d day of December, 1719, when on a half-sheet of the quarto size appeared the *American Weekly Mercury*, printed by Andrew Bradford, in the Second Street, to be sold by himself and John Copson, on Market Street, at the price of ten shillings a year. It was indeed a slender beginning. The paper contained little that appertained to existing conditions in Philadelphia, beyond an occasional advertisement of a shopkeeper or a rare notice of a death. It was made up mostly of extracts from English journals, and these not always well selected. One of the early advertisements is of one Matthew Cowley, running thus: "These are to give notice that Matthew Cowley, a skinner by trade, is removed from Chestnut Street to dwell in Walnut Street, near the Bridge, where all persons may have their buck and doe skins drest, and He can also furnish you with bindings," etc.

Andrew Bradford did not seem to have inherited a very large part of the courage of his father. Possibly when he returned to his native place it had been understood between his father and himself that he should learn from the experience of the first trial to keep himself out of danger of giving such offense to the powers that were as to be subjected to similar experience on his own part. At all events his behavior was sufficiently subdued on an occasion in 1725 when he appeared before the Council. The following is an extract from the minutes of that body:

"At a Council at Philadelphia, Feb. 1, 1725, the board being informed that Andrew Bradford, the printer, attended, according to order, he was called in and examined concerning a late pamphlet entitled 'Some Remedies proposed for restoring the Sunk Credit of the Province of Pennsylvania.' Whereupon he declared that he knew nothing of the printing or the publishing the said pamphlet; and being reprimanded by the Governor[1] for publishing a certain paragraph in his newspaper, called the *Weekly American Mercury*, of the 2d of January last, he said it was inserted by his journeymen who composed the said paper without his knowledge, and that he was very sorry for it, and for which he humbly submitted himself, and asked pardon of the Governor and the board. Whereupon the Governor told him that he must not for the future presume to publish anything relating to or concerning the affairs of this government, or the government of any of his Majesty's colonies, without the permission of the Governor or secretary of this province for the time being. And then he was dismissed."

[1] Governor Keith.

We see from this that the press was yet far from being free, when its representative, upon the summons of Governor and Council, must appear before them and get his reprehension and admonition. This want of entire freedom was doubtless the cause of the poverty of publications even of a purely literary character. When a publisher had to scan closely what was offered, so as to avoid offending the powers that were, and be subjected to the loss as well of his "tools" (as these were styled in the case of William Bradford's type) as of his own personal liberty, native ambition must be slow in getting the encouragement needed for its development. Yet, besides the Latin verses of Makin, the school-master, there had been, before the establishment of the *Mercury*, a few essays, in a small and somewhat secret way, to pay honor to the muse of poetry. The very earliest production of this kind that is known is from an author who, whatever may have been his opinions of his poetical talents, had worldly wisdom enough to keep himself *incognito*, as did his publisher, though we must suspect the latter to have been none other than William Bradford. The poem appeared in 1693, the year after the great case of the latter was tried. It was entitled "A Paraphrastical Exposition on a Letter from a Gentleman in Philadelphia to his Friend in Boston, concerning a certain Person who compared Himself with Mordecai." One reason for suspecting Bradford as the printer is that the poem is an attack upon Samuel Jennings. This person ("Sam Jennings," the defendant styled him at the trial) was one of the justices who presided at that famous trial. We might suspect Keith to have been the author if the poem had been better, for Keith was a man of talent and culture. It doubtless came from one of the seceding sect of Christian Quakers, as the leader named his followers. Later, in 1707, another poet was made known to fame through the publication of the disputes between James Logan and the Assembly. He rejoiced in the name of William Rakestraw. All we know of this poet was gotten from the published proceedings of his trial as told in Logan's defense against the charges of the Assembly, and the only reference is to what are called his "several scurrillous libels and rhymes against the proprietor and his secretary." In what way the rhymster obeyed the order "to make satisfaction" we have not found.

Yet another poet lived (we could not say he flourished) before the birth of the *American Mercury*. This was David French. There was a Col. John French who bore a conspicuous part in the early times of the

lower counties, afterwards become the State of Delaware, and it has been supposed that he was the father of the poet, though there is no evidence of this fact, except that it was known that he came from the same region. He was evidently a person of classical education, and gifted with considerable poetic talent. Nothing has been ascertained positively of him, except the fact that he was acting at the time of his death, in 1742, as prothonotary of the court at New Castle, and was buried in the yard at Chester Church. For the preservation of his poetical effusions the world is indebted to Mr. Parke, one of the officers of the army in the war of the Revolution, who speaks of the author as "the learned and facetious David French, Esq., late of Delaware Counties." Mr. Parke himself was a gentleman somewhat facetious in his turn of mind, as will appear from reading what he said on their rescue by himself from destruction: "They had been consigned to oblivion, through the obliterating medium of rats and moths, under the sequestered canopy of an antiquated trunk." By whom the discovery was made Mr. Parke does not say. Probably he himself was the enterprising searcher and rescuer of the best of our very earliest poetical literature. These verses are poetical translations of some of the odes of Anacreon and two of Ovid's elegies. Some of them are decidedly fine, and evince unmistakably that their author was a man of high culture, who had studied poetry much and practiced its composition not a little.

But a poet must have a medium for the expression of his ideas. This came not until 1719, when the younger Bradford returned to his native place and set up the *American Mercury*. The new printer will learn from his father's experience not to meddle with matters appertaining to the government in this or any other of his Majesty's colonies.[1] Not long afterward another printing-press was started by one Samuel Keimer, who was one of the sect of fanatics called Camisards, or French Prophets, among the Cévennes Mountains of France, who were persecuted in the reign of Louis XIV. Keimer had written a book entitled "A Brand Plucked from the Burning," published in London in 1718. At this time he had diverged considerably from the religious faith practiced among the Cévennes. Franklin, who made his acquaintance when he reached Philadelphia, being then a lad of seventeen, says of him, "At this time he did not profess any particular religion, but something of all on occasion; was very ignorant of the world, and had, as I afterwards found, a good deal of the knave in his composition."

It is amusing to read the account that Franklin gives of his first acquaintance with these first printers Bradford and Keimer. Of the elder Bradford the philosopher certainly had not the high opinion which later writers have held concerning the man whom they style the "Father of the Freedom of the Press." The epithet "crafty old sophister" seems to us, however, not to have been wholly deserved, at least as appears from the account of the facts that led to its application. Franklin having applied to Andrew Bradford for work, William, now resident in New York, but happening to be in Philadelphia at that time, undertook to try to get for the lad employment with Keimer, as Andrew had no place for him. The two went together to Keimer's shop. Keimer, not knowing William Bradford, and supposing him to be a resident of the town, spoke boastingly of his prospects, as if he expected soon to get the greater part of the business in his line. The old gentleman, who was yet interested in the Philadelphia house, not telling who he was, "drew him on, by artful questions and starting little doubts, to explain all his views, what interest he relied on, and in what manner he intended to proceed. I," says Franklin, "who stood by and heard all, saw immediately that one of them was a crafty old sophister and the other a mere novice."

The printer, on Franklin's first engagement with him, was engaged in the pious duty of celebrating in verse the name and character of a deceased poet and friend. We regret that not more have been preserved of the poems of Aquila Rose, who died in 1723, at the age of twenty-eight. This was just before the coming of Franklin. He was clerk to the Assembly, and was employed in the printing-office of Andrew Bradford at the time of his death. He was spoken of as a young man of excellent character and promise, and his early death was universally regretted. Some years after his death, his son Joseph, who was an apprentice of Franklin, collected as many of his pieces as he could find and printed them in a pamphlet, along with those that had been written to his memory. The advertisement of the son appeals in a somewhat touching manner to those persons who may have borrowed without returning some of his father's works. He says, "The good reception the poetical manuscript writings of my deceased father, Aquila Rose, have met with in this province from men of wit and taste, with a desire of some of these to see them printed, induced me to collect what I could. But

[1] Benjamin Franklin, in his autobiography, makes a mistake, that is corrected by Sparks, regarding the rank, as to date, of the *American Mercury*, putting his brother's *New England Courant* "in the place belonging to another, second in the colonies." "This," says Sparks, "was written from recollection, and it is not surprising that, after the lapse of fifty years, the author's memory should have failed him in regard to a fact of small importance. The *New England Courant* was the fourth newspaper that appeared in America. The first number of the *Boston News Letter* was published April 24, 1704. This was the first newspaper published in America. The *Boston Gazette* commenced Dec. 21, 1719; the *American Weekly Mercury*, at Philadelphia, Dec. 22, 1719; the *New England Courant*, Aug. 21, 1721. Dr. Franklin's error of memory probably originated in the circumstance of his brother having been the printer of the *Boston Gazette* when it was first published. This was the second paper published in America." It appears from this that the *American Weekly Mercury* was the third, and only one day behind the second. Yet Philadelphia was far ahead of Boston in this matter, taking into consideration the date of the settlement of each. It was more than ninety years from the settlement of Boston to the establishment of the *Courant*, and only forty from the founding of Philadelphia to the *Mercury*. A longer time had elapsed in the case of New York.

many of his best pieces were lent out after his decease by my mother to persons who have forgot to return them, and perhaps the publishing these few will put them in mind of sending them to me." Rose was, as Franklin said, "a pretty poet," and had he lived would have attained some fame. The following are the last three stanzas from his piece styled

"TO HIS COMPANION AT SEA.

"Secure, should earth in ruins lie,
Should seas and skies in rage combine,
Unmov'd, all dangers we'll defy,
And feast our souls with generous wine.

"For should a fear each sense possess
Of chilly death and endless fate,
Our sorrow ne'er can make it less,
But wine alone can dissipate.

"Then fill the glass, nay, fill a bowl,
And fill it up with sparkling wine;
It shall the strongest grief control,
And make soft wit with pleasure join."

Keimer, when Franklin first met him, had on hand a job that was beset with difficulties of a kind more peculiar than we have ever heard of as befalling a poet. Anxious to do justice to the memory of his friend in verses that were to live, the difficulty was not in *making* the verses, but in introducing them decently to immortality through the medium of the press. His printing-stock consisted of "an old shattered press and one small worn-out font of English." The poet needed neither pen, nor ink, nor paper, nor time, nor reflection. He is the only poet that ever lived, perhaps, who composed his poetry in the types, as Franklin says, "directly out of his head." Hasting though he was to immortalize his friend, it was some days before his new employé's services could be availed, and his elegy could be printed. "Keimer made verses too, but very indifferently." This was the judgment of the employé, and we must admit that the period occupied in the composition was quite enough for a poem that contains the following as a specimen:

"Beloved he was by most, his very name
Doth with deep silence his great worth proclaim,
As if kind Heaven had secrets to disclose
By royal terms of Eagle and a Rose;
The arms most near akin to *England's* crown
Each royal emblem this sweet truth does own
As lively noble images affords,—
One's queen of flowers, the *other* king of birds."

The French prophet must continue to move in his eccentric course in obedience to a rather insane love of notoriety. One of his first movements after getting to Philadelphia was made in a temporary concern for the negroes. As this appears to have been the first attempt in the line of giving education to that race, we insert the advertisement of the project. It was put forth on Feb. 5, 1722:

"Take notice,—There is lately arrived in this city a person who freely offers his service, to teach his poor brethren, the *male negroes*, to read the Holy Scriptures, etc., in a very *uncommon*, *expeditious*, and *delightful manner*, without any manner of expense to their respective masters or mistresses. All serious persons, whether *Roman Catholics*, *Episcopalians*, *Presbyterians*, *Independents*, *Water-Baptists*, or people called *Quakers*, who are truly concerned for their salvation, may advise with the said person at his lodgings,—at the dwelling-house of *John Read*, carpenter, in *Hight Street*, at *Philadelphia*, every morning till eight of the clock, except on the SEVENTH DAY."

The philanthropist thought it worth while to signify that he was a poet also, and so he closed the advertisement as follows:

"The great JEHOVAH from above,
Whose *Christian Name* is LIGHT and LOVE,
In all his Works *will* take delight,
And wash poor HAGAR'S BLACK MOOR white.

"Let none condemn this undertaking,
In *silent thoughts* or *noisy speaking*;
They're fools whose bolt's soon shot upon
The mark they've looked but little on."

Quarrels of this kind were in Arcadia, and so they must be even at Parnassus. Philadelphia, it appeared, was yet not large enough to be able to afford two laureate wreaths at the same time, and another poet-printer, Jacob Taylor, contested arduously for the one the city had for bestowal. There was another spur to this rivalry besides the struggle for mere poetic fame. Jacob Taylor was also a school-master as well as printer and poet, and his verses must be employed to serve as well higher and spiritual purposes, that of assisting the business at which he made his bread. He attacked his rival both in prose (in the columns of the *Mercury*) and in verse. In the former medium, among other things, he says, "Thy constant care and labour is to be thought a finished philosopher and universal scholar, never forgetting to talk of the Greek and Hebrew, and other Oriental tongues, as if they were as natural to thee as hooting to an owl." This prose assault is followed, as was his rival's first advertisement, by verses in the same vein:

"A school for thee! a most commodious place
To nod and wink, and print with such a grace,—
Thy black disciples, now immured in folly,
Shall start our clerks, and read and speak like Tully;
The preference to the sable sort belongs;
The white man next must learn the sacred tongues.
Thus in just order are thy legions led
To realms of science,—Keimer at their head."

Franklin has much to say that is entertaining of his old employer; among other things, his plan for their joint founding of a new religious sect, in which Keimer was to preach the doctrines and Franklin to undertake the confutation of those who should assail it. Two of his most essential principles were the regarding of the seventh day as the Sabbath, and always wearing a beard, adopting literally the order in the Mosaic canon, "Thou shalt not mar the corners of thy beard." Franklin pretended to agree to his terms upon condition of the adoption of another essential, that of abstaining from animal food. After some remonstrance upon the score of health, the prophet agreed to this. The account of the ending of this pious project is given in Franklin's autobiography: "He was usually a great glutton, and I promised myself some diversion in half starving him. He agreed

to try the practice if I would keep him company. I did so, and he held it for three months. We had our victuals dressed and brought to us regularly by a woman in the neighborhood, who had from me a list of forty dishes to be prepared for us at different times, in all which there was neither fish, flesh, nor fowl, and the whim suited me the better at this time from the cheapness of it, not costing us above eighteen pence sterling a week. I have since kept several Lents most strictly, leaving the common diet for that, and that for the common, abruptly, without the least inconvenience, so that I think there is little in the advice of making these changes by easy gradations. I went on pleasantly, but poor Keimer suffered grievously, tired of the project, longed for the flesh-pots of Egypt, and ordered a roast pig. He invited me and two women friends to dine with him, but it being brought too soon upon the table, he could not resist the temptation, and ate the whole before we came."

Having learned that Franklin intended to start a newspaper, Keimer anticipated him, and set up one himself in 1728, under the name of *The Universal Instructor in all Arts and Sciences, and Pennsylvania Gazette.* Franklin, resenting the treatment he had received from him, berated his enterprise very effectively over the signature of "Busybody," in *The Mercury.* It fell through in less than a year, and Keimer emigrated to Barbadoes. The last of the productions of his genius that the world is acquainted with is an elegiac poem, of thirty or forty lines, from *The Barbadoes Gazette* of May, 1734. The following is the announcement and the first four lines:

"To those would be thought gentlemen, who have long taken this paper and never paid for it, and seem never to design to pay for it.

"The Sorrowful Lamentation of Samuel Keimer, printer of the *Barbadoes Gazette.*

"What a pity it is that some modern bravadoes,
Who dub themselves gentlemen here in Barbadoes,
Should time after time run in debt to their printer,
And care not to pay him in summer or winter."[1]

Jacob Taylor kept the ground after the departure of Keimer. In 1728 he published a descriptive poem, "Pennsylvania," and the "Story of Whackum." A nameless bard thus praised him in *The Mercury* in his old age:

"With years oppress'd and compass'd round with woes,
A muse with fire fraught yet Taylor shows;
His fancy's bold, harmonious are his lays,
And were he more correct, he'd reach the bays."

The main reputation that Taylor enjoyed during his life was as a maker of almanacs. These were the media for the transmission of literary fame. In this line he was accounted the best before Franklin.

Keimer's was not the only elegy upon the untimely death of Aquila Rose, so happily named. One Elias Bockett, of London, wrote one in what Keimer was free to admit was "a melting, florid strain." And yet there was another, by a bard whose modesty prevented his making known the name of the one who had wept in poetic words at the tomb of the friend whom he styled Myris. The "Elegy on the Sight of Myris' Tomb" is thus prefaced: "The following lines were left with the printer by an intimate friend of A. R., deceased, who, touching at Philadelphia on his way to Great Britain, had but time to hear a relation of his friend's death, view the place of his interment, and write, without revising even, the following lines." The poet, after invoking the upper and inferior gods, dryads, and nymphs of forest and sea, addresses the river Delaware in such strain as the following:

"With pleasure we behold, O Delaware!
Thy woody banks become the Muse's care;
Thy docile youth were with her beauty fired,
And folly, vice, and ignorance retired;
And had but Myris lived, we hoped to see
A new Arcadia to arise on thee."

The three who with Keimer were most prominent in the small literary circle of Philadelphia when Franklin returned from his visit to England were George Webb, Joseph Breintnal, and James Ralph. Webb had been an Oxford student, who, fired with ambition for the stage, ran away to London, where, having been reduced to great straits, he bound himself to service in America. Franklin found him, when about eighteen years old, with Keimer, who had bought the remainder of his term from his master, and finally made him his partner. It was he who had betrayed to Keimer Franklin's project of setting up a newspaper, and thus enabled the former to take the initiative. Webb was a person of considerable talent, but this was wasted by a life which exhibited no steadiness of purpose and little of moral principle. A poem is preserved, called "The Bachelor's Hall," which evinces poetical gift of respectable degree.

Joseph Breintnal is represented by Franklin as "a copyer of deeds for the scriveners, a good natured, friendly, middle-aged man; a great lover of poetry, reading all he could meet with, and writing some that was tolerable; very ingenious in many little knickknackeries, and of sensible conversation." Yet, except for Franklin's autobiography, we probably should not have heard either of him or Webb, as, like the petty boaster whom Themistocles in so few words silenced, they were great only because they dwelt in Seniphus. Not that there are not specimens of their effusions. A copy of *The Mercury* for 1731 contains a satirical poetic production by an author who, we regret, wrote anonymously. The production is entitled "The Wits and Poets of Pennsylvania." Breintnal had been a fervent admirer of Webb, and prologued his "Bachelor's Hall" with some very laudatory verses. The satirist above mentioned speaks of his poetry in this style, which, from what we have seen, we suspect to have been not far from just:

[1] In Duyckinck's "Cyclopædia of American Literature" it is said, "A collection of papers from this journal was, in 1741, printed in London, with the title 'Caribbeana,' in two quarto volumes, arranged in a stiff imitation of 'The Tatler.'"

"For choice of diction I should Breintnal choose,
For just conceptions and a ready muse;
Yet is that muse too labored and prolix,
And seldom on the wing knows where to fix.
So strictly regular is every rise,
His poems lose the beauty of surprise,
In this his flame is like a kitchen fire,
We see the billets last which mount it higher."

Breintnal was a contributor to *The Mercury*, and when Franklin ceased to assail Keimer's paper, he continued the warfare over the same signature, "Busy-Body." In the number of *The Mercury* for June 19, 1729, is a paper which, as included in a number of the "Busy-Body," has generally been supposed to have been contributed by him. It was written in a brief period of freedom from business engrossments, and therefore was content with a position not the highest in poetical endeavors. It is a description of Market Street. The poet, in his introduction, says of it, "A plain description of the High Street in this city; the whole town being too great a task for his leisure."[1]

James Ralph was a more considerable person than any of the others aforementioned, but, for a long time, was as careless and as improvident as Webb. Coarse and disgusting as are some of the accounts that Franklin gives of his intercourse with some of the earliest among those with whom he lived on terms of greatest intimacy during the first years of his residence in Philadelphia, they, as a whole, are exceedingly interesting. Ralph, one of these, the biographer characterizes as "ingenious, gentle in his manners, and extremely eloquent; I think I never knew a prettier talker." Both Johnson and another friend (Charles Osborne, described as sensible, upright enough, but "in literary matters too fond of criticising") tried to dissuade Ralph from addicting himself to poetry. "Ralph was inclined to pursue the study of poetry, not doubting but he might become eminent in it, and make his fortune by it, alleging that the best poets must, when they first begin to write, make as many faults as he did. Osborne dissuaded him, assured him he had no genius for poetry, and advised him to think of nothing beyond the business he was bred to." . . . "I approved the amusing one's self with poetry now and then, so far as to improve one's language, but no farther." In spite of these discouraging things, Ralph was determined to be a poet, the more so from the luck he had once in obtaining the too critical Osborne's unmeasured praise of one of his effusions by leading him, through Franklin's connivance, to believe that Franklin was the author. The religious convictions of Ralph were unsettled by Franklin, as the latter said afterward, to his cost. He forsook his wife and child, accompanied Franklin on his first voyage to England, and there, though Pope killed him off as a poet, he acquired considerable fame as a political writer. He had printed a poetical squib called "Sawney," in which he undertook to ridicule Pope, Swift, and Gay. His first poem printed in England was "Night." Pope, in "The Dunciad," gave this the two lines:

"Silence, ye wolves, while Ralph to Cynthia howls,
And makes Night hideous. Answer him, ye Owls."

One is startled by the cool sincerity with which Franklin tells of the continued intimacy with such a man, who at one time endeavors to be an actor, then a contributor to a paper published by one Roberts, on Paternoster Row, in imitation of the *Spectator*, then a hackney writer for the stationers and lawyers about the Temple, and finally obtaining temporary employment as a country school-master (at sixpence each pupil a week), and hiding the disgrace of so mean a condition under the assumed name of Benjamin Franklin. Never had poet had a less encouraging patron than Ralph in Franklin. An epic was tried in the shades of the school in Berkshire, and when extracts of it were sent to the Mæcenas in London, the latter, with his corrections and other discouraging pieces, sent one of Young's "Satires," just then published, whose verses upon the fate of authors in general he would fain have had him take

---

[1] The poem thus opens:

"At Delaware's broad stream, the view begin
Where jutting wharfs, food-freighted boats take in;
Then, with the advancing sun direct your eye
Wide opes the street with firm Brick Buildings high;
Step, gently rising, over the Pebbly way,
And in the Shops their tempting Wares display;
(Chief on the Right, screened from rude Winds & Blest
In Frost with Sunshine) Here, if ails molest,
Plain-surfaced Flags, and smooth-laid Bricks invite,
Your tender Feet to Travel with Delight
And Yew-Bow, distance, from the Key-built Strand
Our Court-house fronts Cæsarea's Pine-tree Land.
Thro' the arched Dome, and on each side, the Street
Divided runs, remote again to meet;
Here Eastward stand the Traps to Obloquy,
And Petty Crimes,—stocks, Post, and Pillory,
And (twice a week) beyond, right stalls are set
Loaded with Fruits and Fowls, and *Jersey's* Meat,
Westward, conjoin, the Shambles grace the Court."

Further on we are told locations of prominent buildings:

"South of the mart a meeting-house is reared
Where by the Friend (so called) is Christ revered;
With Stone and Brick the lasting walls are made,
High raised the Roof, and wide the Rafters spread.
Within a voice of this, the Presbyters
Of like materials have erected theirs;
Thence half a Furlong West, declining pace
And see the Rock-built Prison's dreadful Face.
'Twixt and beyond all those, near twice as far
As from a sling a stone might pass in air
The forging shops of sooty smiths are set
And Wheelwrights Frames,—with vacant Lots to let.
A neighborhood of smoke and piercing Dins,
From trades, from Prison Grates, and Public Inns.
But even among this Noise and Dirt are placed
Some Buildings fair, with peaceful Tenants graced.
Distant, more West, with unbuilt Grounds between,
The Furnace-House and Woods close up the scene.
On the other side (left in my verse disjoined
But all one Picture in the Poet's mind)
A comely Row of Tenements unite
And set their various goods and works to Light," etc.

for a warning.[1] He continued to woo the muses of Poetry and the Drama, in hope that they might induce Fortune to change her garments to his beholding. His plays, "The Fashionable Lady," "Fall of the Earl of Essex," "The Lawyer's Feast," and "The Astrologer," all broke down, in spite of the best presentation Drury Lane could give them. No better fate attended his poems, "Peuma," "Clarinda," "The Muse's Address." He bade farewell to literature with a work he named "The Case of Authors Stated, with Regard to Booksellers, the Stage, and the Public." Henceforward he devoted himself to political squibs, hired, cheaply enough, it was said, by Lord Melbourne, then prime minister, from whose service, according to Pope, he was easily bought. Had he remained in Philadelphia, and pursued a straightforward, upright course, it is probable that he would have risen to be the greatest literary man of that province during a considerable period. He was evidently a man of a high order of genius, at least for prose composition. Some time during his career he wrote a history of William of Orange, Queen Anne, and George I., which Hallam declared to be the most accurate and faithful history of those times. "My friend Ralph," said Franklin, "has kept me poor. He owed me about twenty-seven pounds, which I was now never likely to receive,—a great sum out of my small earnings." He must have retained to the last some of his old affection, for he tells us nearly twenty years afterward, evidently himself pleased with the news he had to impart, "He[2] gave me the first information that my old friend James Ralph was still alive, that he was esteemed one of the best political writers in England, had been employed in the dispute between Prince Frederick and the king, and had obtained a pension of three hundred a year. That his reputation was indeed small as a poet, Pope having damned his poetry in the 'Dunciad,' but his prose was thought as good as any man's."

He does not say so, but we suspect the philosopher of feeling some remorse for his part in unsettling the religious faith of the erratic man, and thus impelling him upon a career the chief part of which must prove unfortunate.

The nameless satirist of *The Mercury*, to whom we have before alluded, lauds very highly Henry Brooke, a young man,—who, however, was devoted rather to political than literary life. He was spoken of as a son of Sir Henry Brooke, and had come over with a commission of collector of customs at Lewistown in Sussex County. Although he continued to reside in the province until his death and acted a prominent part in politics, yet his spirit languished for want of the cultured society to which he had been accustomed. For several years he was Speaker of Assembly in the Lower Counties, and, on the establishment of Governor Keith's Court of Chancery, in 1720, was made by him a master in chancery. In a paper read at the council of the Historical Society of Pennsylvania, in 1829, by Joshua Francis Fisher, it is said, "The only specimen of Brooke's poetry which I have met with is entitled 'A Discourse on Jests.' It is addressed to Mr. Robert Grace, whom Franklin describes as a 'young man of fortune, generous, animated, and witty, fond of epigrams, but more fond of his friends.' It rallies him on the subject of his darling passion in a jest with much good sense and good humor. It may be pronounced a sprightly and pleasant treatise on false wit, and proves its author to have been not only an imitator of good models, but himself the possessor of a lively wit and a refined taste." . . . "He died in 1735 in the fifty-seventh year of his age, and the *General Magazine* of 1741 contains a poetic tribute to his memory, which describes him as an accomplished linguist and an adept in almost every science."

Another person, doubly unfortunate, being both a country school-master and a poetaster, was William Satterthwaite. Added to these misfortunes was his marriage, contracted, after one evening's courtship, with one of his pupils while he was teaching in England. The imprudence of this step, apparent both to husband and wife, induced them to emigrate to Pennsylvania, where the former drew what comfort he could with a poorly-paying vocation and an ill-tempered spouse, in composing verses named respectively "Mysterious Nothing," "An Elegy on the Death of Jeremiah Langhorne," "Providence," and "A Religious Allegory of Life and Futurity addressed to the Youth." The "Elegy of Langhorne" was written in grateful recollection of the kind services he had rendered the poet when pressed down by his various misfortunes. This generous patron was one of the leading public men of the province, being, after James Logan, chief justice. The poetry, though evincing a moderate degree of imagination, compares favorably with its contemporaries. It shows that his education had been far above the humble station he was occupying, and that his moral principles were good, even pious.

[1] The following lines seem as if they ought to have been adequate for their purpose:

> "The abandoned manners of our writing train
> May tempt mankind to think religion vain;
> But in their fate, their habit, and their mien,
> That gods there are is evidently seen.
> Heaven stands absolved by vengeance on their pen,
> And marks the murderers of fame from men:
> Through meagre jaws they draw their venal breath,
> As ghostly as their brothers in Macbeth.
> Their feet thro' faithless leather meets the dirt,
> And oftener changed their principles than shirt:
> The transient vestments of these frugal men
> Hasten to paper for our mirth again:
> Too soon (O merry, melancholy fate!)
> They beg in rhyme and warble thro' a grate.
> The man lampooned forgets it at the sight;
> The friend thro' pity gives, the foe thro' spite;
> And though full conscious of his injured purse,
> Lintot relents, nor Cecil could wish them worse."

[2] Governor Denny, who had just come over to the province with assuring messages from the proprietaries.

The muse here, as in greater and more advanced states of society, must pay her court to the great and the titled. There was not within it a laureate so named and entitled, besides perquisites, to pecuniary rewards and a butt of sack. But with the advent of a medium for their expression must come odes salutatory and panegyrics of divers sorts for those who held the reins of power. This sort of poetry was one of the first to follow in the train of *The American Weekly Mercury*, and divides its favors with that and its successor, *The Universal Instructor in all Arts and Sciences and Pennsylvania Gazette*. The first of the poets in this line in Philadelphia was one John Dommet, who for several years did that business alternately for both papers, winding up his career in 1729, not long before the publisher of the gazette with the name of lengthened sound was forced to retire and leave it in stronger hands. From all we can gather this poet received but little, if any, of the rewards he may have hoped and believed due to the verses in which he rendered immortal so many functionaries of high degree. Yet John Dommet, if he could not make himself rich by exalting yet higher the "blest" condition of the mighty upon earth, knew how to make himself "glorious" in the way such as he, Tam O'Shanter, and their likes love best; and this he was wont to do full often out of the pence his laudatory rhymes brought to him. He died at White Marsh. Some time afterward an elegy appeared in *The Mercury* in his honor. As a postscript to it the following summing up of his life was appended:

> "Wealthy whilst rum he had was John, yet poor
> 'Cause worth but little; rich, 'cause craves for no more;
> Him England birth, Heaven wit, this province gave
> Food, Indies drink, rhymes peace, White Marsh a grave."

In studying the early literature of Philadelphia thus far, crude and impoverished as it generally has appeared, yet a native of that city may well feel a sense of pride in the comparison it bears with that of any other of the American cities. By many years, comparatively, as we have seen, was Philadelphia anterior both to Boston and New York in the institution of a newspaper,—that first medium for the expression of the ideas of literary men. In such a society literature must be later than any other matter for the employment of active, persistent, serious endeavor. In such a society literature must in vain look for substantial encouragement from men who are intent upon organizing government, courts, commerce, and other institutions necessary for material security and prosperity. In our chapter on the Bench and Bar are noticed the materials out of which the judiciary was constructed, how rude and uncultured, yet how naturally prone to retention of the dignity and some of the oppressiveness that had obtained in English courts time out of mind; and how, yet, they retained the prejudices of those of their degree in the old country against the bar, who, though without their authority, were equally necessary for the adjudication of litigious causes on just and reasonable terms. These merchant judges, who alternated between the bench and their counting-rooms and warehouses, could see no value in work other than that which gave palpable evidences of results, that they could see and handle and pass from one to another in the habitudes of business transactions. The ideas of such men at such times, that a man who does not work with his hands is either no worker at all or produces work of incomparably less value than that of one who does, always operate discouragingly upon whatever is done in the office of the student. Such ideas never entirely subside, however advanced may be the state of society, and unreading men everywhere yet feel surprise, and some of them resentment, when they hear of the large pecuniary profits that occasionally accrue to a man of letters from an effort of his pen that has been uncommonly well received by the public. Yet it is during the formative period of a community's existence that these ideas obtain so generally as often to amount to actual prohibition to literary development. Few enough in such a period are those who value even rudimentary instruction enough to care to have it imparted to their children except in very small quantities, and for a price that only school-masters who are abjectly poor and utterly unfit for any other calling can be expected to accept, and then afterward avoid starvation. For education beyond rudimentary there was little concern beyond exceptional cases, or at least concern sufficient to withdraw from pursuits considered more important. Lawyers must arise, because, without its being so believed, they were as important to society as merchants and farmers and artisans, and indispensable to the maintenance of a pure judiciary, without which no society can subsist with freedom.

It is often amusing to contemplate the ideas of persons of ordinary or little culture, especially in new communities like Pennsylvania, regarding those who propose to devote themselves entirely or mainly to literature, especially light literature, most especially poetry. It is perhaps well for incipient poets that it is expensive to build and maintain madhouses, or many more of those unfortunates would have been sent therein. For down to these times, they are regarded by a great majority of mankind as promising to become lunatics if not vagabonds. William Bradford's printing-press Penn foresaw to be useful for the spread of such intelligence as needed diffusion for all practical business purposes among the colonists of his province, and no other. We have seen into what straits both Bradford and his son were driven when they undertook to travel outside of the small circle within which the government thought fit to limit them. In such a society the earliest literary men must be of about the quality, intellectually and morally, of those we have mentioned, poor pedagogues, or reckless rakes, living from hand to mouth, the latter generally defying public opinion, and sometimes

getting from an ignorant but vain and ambitious Governor or magistrate a few pence with which to buy a week's board and a jug of rum. Among such conditions it is most surprising that literature was not more tardy of development in Philadelphia, and that its early status was not much lower. The truth is that Philadelphians themselves have for the greatest part been used to rate the earliest literature of their city at far too low a value, and, what is more remarkable, to assign to Benjamin Franklin, a foreigner, the chief merit of its development, as if, like the traditionary Manco of Peru, he had brought to a barbarous or semi-civilized people the arts with which, but for his coming, they must have forever continued to be unacquainted. Much as is the praise due to that one of the most illustrious of all ages, this is not a part of it. Literature—that is, literature of the sort that lives longest in fame—arose in Philadelphia not by means of, but in spite of, his influence. "I approved the amusing oneself with poetry now and then, so as to improve one's language, but no further." This he said in advanced age, when the world was filled with his fame. Sufficiently "amusing" to others were his own essays of courtship to the muses. His jobbs[1] of poetry were to the extream[1] of common. It was not that writers were universally discouraged, otherwise they must have perished or gone entirely away. Among some of the older men, as Chief Justice Langhorne, and especially among the younger, who were enjoying advantages their fathers had not had, there was such encouragement as allowed to writers means sufficient with what they could pick up in other ways to obtain such living as they had. Of the writings of those whom we have mentioned, there was much that was quite above being common, showing that with fair auspices some of these authors might have taken a comparatively high rank. Some of the very best of the poetry of these times, however, was produced by anonymous writers. This fact is sufficient to show that the first settlers of Philadelphia set the smallest possible value upon this art when the men of wealth and culture and family connections disguised their authorship in the matter of such pieces as "A Journey from Patapsco to Annapolis," "Verses on the Art of Printing," "A Fable, the Dog and the Fox," and others of similar merit.

In one kind of writing especially some of these writers were of a rank that it would not be easy to find anywhere in this country now; that is, Latin poetry. We have already mentioned Thomas Makin, who succeeded George Keith as head-master of the Friends' Public School. After him came William Loury, who wrote Latin odes, and whose name would have been unknown except for the fact of his having written and signed his name to an elegy on the death of Andrew Hamilton, in 1741. The career of this great lawyer had been so distinguished that the author of some tributary Latin verses might be allowed to be named among the mourners at its close.[2] The poetry of this kind, inelegant as it is, falling short of the classic models it was intended to imitate, yet is incomparably superior to what might be supposed to have existed at that early day.

[1] He always spelled these words thus.

We have thus briefly sketched the history of the literature of Philadelphia to the period of the coming of Benjamin Franklin. We have seen that it was frequently crude, but containing occasional passages indicative of genius above ordinary, that in auspicious conditions could have accomplished far more abundant and successful results. It has been usual with most of those who have written of Franklin to regard him as the beginner of almost everything important that Philadelphia has produced since his advent there in 1723. To a man pre-eminently great mankind has ever been wont to ascribe more than his due of what was done both before and after the period of his endeavors. Yet there were heroes before Agamemnon, and bards before Homer, and Pericles could not have been Pericles except in Athens, wherein he lived in childhood. When Franklin came to Philadelphia he was a boy of seventeen, with little knowledge except of printing, to which he had been apprenticed in the shop of a brother, from whose brutal treatment he ran away. Within those previous forty years from the beginning of William Penn's proprietorship, Philadelphia had already grown to be a city destined soon to be known as the largest and most important in America. Its bench and bar were already on the eve of attaining the celebrity which in a few years was far to outrank all others, and its merchants were establishing a name for prudence, integrity, and success equal to the best. Its literary men were such as we have seen. He came to that town at a period most suited both to such a community and to himself. Having a genius whose quality was not dreamed of by his family or any others in his native place, he attained his freedom in boyhood, and went to a community that of all others in the country was the ripest for development of its various elements and resources. Here, unfettered by restraints of any sort except those imposed by the laws, no human being at his age ever indulged a larger freedom of action and opinion. It was a character unique, considering the variety of elements of which it was aggregated.

His autobiography is a curious and most interesting book. Parts of it read almost as if they were meant for a satire upon his youth, if not for the purpose of magnifying yet more the opinions of his greatness by contrasting his youth with his advanced manhood. He tells of the lowliness of his origin, his own little

[2] "De morte luctuosa celeberrimi Andreae Hamiltonis Armigeri, qui obiit IV. Augusti, MDCCXLI." Printed in the *Pennsylvania Gazette* Feb. 17, 1742.

dishonest pranks in boyhood, the meanness and cruelty of his elder brother, his own complicity with the latter in a trick to evade the execution of the laws, his boorish appearance and manners when he first walked up and down Market Street, his own disregard of the constraints of the Christian religion, and imparting that disregard to Ralph, Collins, and others of his companions, his courtship of Miss Read, and his subsequent neglect of her, his low debaucheries, and among all these his continual contemplation of his actions of every kind with one view, and one alone, that of ascertaining which of them would and which would not pay. The account of his marriage with Miss Read is the most remarkable of all the sayings of great men, at least in modern times, concerning a matter that among even the most uncultured has some delicacy that forbids it to be wholly uncovered. Husbands, of whatever degree of culture, for the most part forbear, except when in anger, to speak of their wives in such terms as may wound them, and disgust other persons to hear repeated. This, which may be termed an instinct of the conjugal relation, seems to have been wanting to Franklin. The coarse avowal of his controlling motive to marriage was painful enough. But what other husband would have written as follows? "I pitied poor Miss Read's unfortunate situation, who was generally dejected, seldom cheerful, and avoided company." Her situation was one to be pitied indeed. After his neglect of her while abroad, they had persuaded her to marry a potter, "one Rogers," whom she forsook on hearing that he had a wife in England. He had run away, and the rumor of his subsequent death was uncertain. But the old lover pitied "poor Miss Read," and, rather than do much worse, married her, and "none of the inconveniences[1] happened that we had apprehended. She proved a good and faithful helpmate; assisted me much by attending the shop. We strove together, and have ever mutually endeavored to make each other happy. Thus I corrected that great *erratum* as well as I could." The "*erratum*" of writing thus about the wife of his bosom was fully as gross as any that he has recorded, the more so as, notwithstanding their mutual affection, she must be presumed as having no more delicacy than himself, of whom he could thus write. This is the more surprising when we know that during forty years of married life they bore each other a faithful affection, and after all it is touching to read how in old age he writes about her to a young lady friend, using such expressions as "I hope she will live these hundred years, for we have grown old together, and if she has any faults I am so used to them that I don't perceive them," and "let us join in wishing the old lady a long life and a happy," etc., quoting from one of his own songs, written for the Junto:

"Some faults have we all, and so has my Joan,
But then the're exceedingly small;
And now I've grown used to them, so like my own,
I scarcely can see them at all,
My dear friends,
I scarcely can see them at all."

If ever there was a great man whose character, conversation, and opinions were unfavorable to the rapid development of literature in itself in a new society, it surely was Franklin. The literary talent that he found at Philadelphia, over which he had influence, he discouraged, unless it was to be exerted for the advancement of the practical standard which he had set up for his own pursuit. The literature of Philadelphia, therefore, we repeat, was not due to Franklin, but to its own inherent native strength, that developed in spite of his sentiments and his example. So much was due to be said in answer to those who have generally spoken as if they regarded everything important that has been accomplished by Philadelphia as having received its greatest impulsion from him.

Yet when we speak of the literature which Franklin, as we claim, discouraged rather than stimulated, we mean literature purely, specially as it is distinguished from science, political economy, and every other branch of intellectual expression except that which proceeds from the imagination or is expended in recording, with running comments thereon, the history of mankind. This is what we intend by literature purely, and this is the literature that by the consent of all mankind imparts the greatest amount of fame to those who have the genius to produce it. Further, this is the literature that owes nothing to Franklin, except as coming in along with the rest of his beneficiaries for its share of the blessings of those great institutions that he established. Franklin even when a young boy was a philosopher. At the age of ten years we find him discussing with his father, who held the rod over his back, the utility of a wharf which he, at the head of some comrades, had constructed on a salt marsh, with stones stolen from a pile belonging to a builder near by. "Several of us were corrected by our fathers; and, though I pleaded the usefulness of the work, mine convinced me that nothing was useful that was not honest." From that time forth utility was his standard. It is amusing to notice how he kept his eye upon that standard in his poetic essays when in the employment of his brother. "I now took a fancy to poetry, and made some little pieces; my brother, thinking it might turn to account, encouraged me, and put me on composing occasional ballads. One was called 'The Light-House Tragedy,' and contained an account of the drowning of Capt. Worthilake with his two daughters. The other was a sailor's song on the taking of *Teach* (or Blackbeard), the pirate. They were wretched stuff, in the Grub-Street ballad style, and when they were printed he sent me about the town[2] to sell them. The first sold

[1] Prominent among these, we learn from the following of Rogers: "He had left many debts which his successor might be called on to pay."

[2] Boston, where he then resided.

wonderfully, the event being recent, having made a great noise. This flattered my vanity, but my father discouraged me by ridiculing my performances, and telling me verse-makers were generally beggars. So I escaped being a poet, most probably a very bad one, but as prose writing has been of great use to me in the course of my life, and was a principal means of my advancement, I shall tell you how, in such a situation, I acquired what little ability I had in that way."

Thus the parental argument, though this time without the assistance of the rod, regarding the utility of actions prevailed, and he "escaped being a poet." With this standard before him, being yet in early boyhood, on a calculation of the comparative utility of attendance upon public worship on Sundays, and spending the time to be spent thereat in reading at the printing-office, he decided against the former, "which, indeed, I thought a duty, though I could not, as it seemed to me, afford time to practice it." So, when arrived at sixteen years, he found that by adopting a vegetable diet, and learning to prepare his own meals, he managed to save half the sum paid for his board. So, after faithful experience of the two methods of argument, the dogmatical and the persuasive, modestly diffident, he gave the palm to the latter and ever afterward adopted it. So the same method of calculation led him to take advantage of the stress to which his brother had been subjected by the offense that his paper, *The New England Courant*, had given the Massachusetts Assembly and break his indentures. It approximates the marvelous, his careful account of the matters that led to the adoption of his religious faith after his *quasi*-departure from that of the Deists. Referring to his having read Boyle's "Lectures," he writes, "It happened that they wrought an effect on me quite contrary to what was intended by them, for the arguments of the Deists, which were quoted to be refuted, appeared to me much stronger than the refutations; in short, I soon became a thorough Deist. My arguments perverted some others, particularly Collins and Ralph; but each of them having afterward wronged me greatly without the least compunction,[1] and recollecting Keith's conduct towards me (who was another freethinker[2]), and my own towards Vernon[3] and Miss Read, which, at times, gave me great trouble, I began to suspect that this doctrine, though it might be true, was not very useful. My London pamphlet, which had for its motto these lines of Dryden,—

"'Whatever is, is right; though purblind man
Sees but a part o' the chain, the nearest link,
His eyes not carrying to the equal beam
That poises all above,'—

and from the attributes of God, His infinite wisdom, goodness, and power, concluded that nothing could possibly be wrong in the world, and that vice and virtue were empty distinctions, no such things existing, appeared now not so clever a performance as I once thought it; and I doubted whether some error had not insinuated itself unperceived into my argument, so as to infect all that follows, as is common in metaphysical reasonings." From these reflections he deduced his conclusion, "I grew convinced that *truth*, *sincerity*, and *integrity* in dealings between man and man were of the utmost importance to the felicity of life." The account closed with allusion to vices not to be mentioned, although they "had something of *necessity* in them, from my youth, inexperience, and the knavery of others." The sum of all is, "I had, therefore, a tolerable character to begin the world with. I valued it properly, and determined to preserve it."

The establishment of the "Junto" by Franklin was the first organized effort to bring about co-operation among those who had talents for writing, and habits of reading and inquiry. This club began in 1727. The artful founder knew the value of secrecy, and this was made one of its elements, yet only to the degree of keeping its discussions from the public, allowing just enough to appear to stimulate interest among those who were admitted and lead outsiders to conjecture that it was of much importance. It existed until the war of the Revolution, and in it were discussed from time to time as great a variety of subjects as arose in any other ever instituted. Morals, politics, and natural philosophy, these were its themes, though any member might read a thesis on whatever subject he should please when discharging the obligation imposed by the rules upon every one to bring in something original once in every three months. The founder was fond to the last of this institution of his youth, which he styled a "school of philosophy, morality, and politics." Literature was not among its aims; but in such a club every one seriously devoted to its success must in time find his vocation, and thus the literary talent that was therein put itself forward in the individual efforts of its possessors. If Ralph had been there he doubtless would have been ridiculed, as before in the Sunday walks by the Schuylkill, for the compositions that did not pay except in the matter of "amusing one's self;" but his quarterly contributions must be tolerated according even to the letter of the rules. He doubtless would have discovered, sooner than in England, his genius as a political pamphleteer, as politics were to be a sharer in the general discussions. How his specially literary endeavors would have resulted we can imagine from the fate of Thomas Godfrey, whose claim to invention of the quadrant is now almost universally acknowledged, as long ago it ought to have been. Of this great man the founder of the Junto thus speaks: "Thomas Godfrey, a self-taught

[1] In borrowing from him and not returning.

[2] Governor Keith, while Franklin was with Keimer, had grossly deceived him with promises of assistance in the voyage to England, which had been undertaken at his suggestion.

[3] A person whose agent he had been in the collection of a debt which he withheld for a considerable period, at last correcting, "in some degree, that *erratum*," with payment of principal and interest.

mathematician, great in his way, and afterward inventor of what is now called Hadley's quadrant; but he knew little out of his way, and was not a pleasing companion; as, like most great mathematicians I have met with, he expected universal precision in everything said, or was forever denying or distinguishing upon trifles, to the disturbance of all conversation. He soon left us."

Some of the discussions upon morals in this young association, doubtless, would be entertaining if they could be reproduced. As it is, we read with curious interest how, in his old age, the philosopher set to work to break down the poor unpractical Keimer in his hard endeavors to maintain *The Universal Instructor in all Arts and Sciences and Pennsylvania Gazette*, by assisting with his own and Breintnal's "Busybody" contributions to *The Mercury* of Bradford, to exalt the latter beyond all hope of rivalry from the other, and how in due time he succeeded and got the paper into his own hands, to be known henceforward as *The Pennsylvania Gazette*.[1] Equally interesting is the account he gives of the value of appearances to a young tradesman bent upon obtaining and maintaining his credit:

"I began now" (after purchasing the *Gazette*) "gradually to pay off the debt I was under for the printing-house. In order to secure my credit and character as a tradesman, I took care not only to be in *reality* industrious and frugal, but to avoid all appearances to the contrary. I drest plainly; I was seen at no idle places of diversion; I never went out a fishing or shooting; a book, indeed, sometimes debauched me from my work, but that was seldom; snug, and gave no scandal; and to show that I was not above my business, I sometimes brought home the paper I purchased at the stores thro' the streets on a wheelbarrow. Thus being esteemed an industrious, thriving young man, and paying duly for what I bought, the merchants who imported stationery solicited my custom; others proposed supplying me with books, and I went on swimmingly. In the mean time Keimer's credit and business declining daily, he was at last forced to sell his printing-house to satisfy his creditors. He went to Barbadoes, and there lived some years in poor circumstances."

The Junto soon led to another institution, the first of its kind in America, which was destined to be the most prolific of all others in the diffusion of knowledge among all classes, the subscription library. This and other actions of Franklin in his special line of business is entitled to greater praise when we consider that at the time of his being established in Philadelphia "there was," as he says, "not a good bookseller's shop in any of the colonies to the southward of Boston. In New York and Philadelphia the printers were indeed stationers; they sold only papers, etc., almanacs, ballads, and a few common school-books. Those who loved reading were obliged to send for their books from England; the members of the Junto had each a few." When, therefore, they had left the tavern where the meetings were first held, and had hired a room, each member brought to it the books he possessed, and this arrangement, proving so beneficial, suggested to the founder the plan of enlarging the collection by subscriptions. The project, after great delays and hindrances, succeeded through the determined energy of Franklin, and became eminently successful. It soon was imitated in other cities and in other provinces, with results that are well known to all. This notable enterprise had its beginning in 1731. The Philadelphia Library, the oldest in the country, founded in 1731, incorporated in 1742, enlarged by the Loganian Library, and by annual purchases, is now one of the largest and most valuable in the United States.

We have spoken of the prominence of the almanac as a medium for the publication of matters of various sorts by which fame and money were hoped for from the notoriety thus given them. It was reserved for the publisher of the *Pennsylvania Gazette* to put forth the Almanac of Almanacs in the year 1732. The first of this work, destined to be continued for twenty-five years and be a source of handsome income, was unique in its announcement and its contents. "Just published, for 1733, an Almanac, containing the lunations, eclipses, planets, motions, and aspects, weather, sun and moon's rising and setting, high water, etc.; besides many pleasant and witty verses, jests, and sayings; Author's Motive of Writing; Prediction of the Death of his Friend, Mr. Titan Leeds; Moon no Cuckold; Bachelor's Folly; Parson's Wine, and Baker's Pudding; Short Visits; Kings and Bears; New Fashions; Game for Kisses; Katherine's Love; Different Sentiments; Signs of a Tempest; Death of a Fisherman; Conjugal Debate; Men and Melons; The Prodigal; Breakfast in Bed; Oyster Lawsuit, etc. By Richard Saunders, Philomat. Printed and sold by B. Franklin." Nothing in this line could now be compared with the Poor Richard that has become immortal. The great author, adhering to his maxim that wealth was the road to felicity, and even to virtue, reached forth his hand to get for himself and point out to the rest of mankind the means of similar success. It is simply wonderful, the story of its immense circulation, and the influence it exerted in the direction of its author's favorite thoughts. Finding it to have become so popular as to be read in every neighborhood, he says, "I considered it as a proper vehicle for conveying instruction among the common people who bought scarcely any other books. I therefore filled all the little spaces that occurred between the remarkable days in the calendar with proverbial sentences, chiefly such as inculcated industry and frugality as the means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want to act always honestly, as, to use here one of

[1] The following is a brief history of the paper till it fell into his hands:

"I wrote several pieces of entertainment for Bradford's paper, under the title of 'The Busybody,' which Breintnal continued some months. By this means the attention of the public was fixed on that paper, and Keimer's proposals, which we burlesqued and ridiculed, were disregarded. He began his paper, however, and after carrying it on three-quarters of a year with at most only ninety subscribers, he offered it to me for a trifle; and I, having been ready for some time to go on with it, took it in hand directly; and it proved in a few years extremely profitable to me."

those proverbs, "*It is hard for an empty sack to stand upright.*"

To our minds it would not be easy to find in the sayings of wise men one less fit to be believed and acted upon than this sentence. That virtue is to be secured by wealth was never, as we believe, the opinion of any other philosopher. Franklin, however, felt a pride in his presentation of proverbs, and to the almanac of 1757 he prefixed the greater part in a sort of discourse of an aged seer before crowds assembled in a public street. Nothing that had ever appeared in the form of a book was more popular, not only in this country but in England, and even in France, where two translations were made, and the editor in his old age was fond to believe that his work "had its share of influence in producing that growing plenty of money, which was observable for several years after its publication."

A man with the imperturbable confidence in his own powers that Franklin had, with such as he really possessed, could not fail to make a notable career. In the same year of his founding the library, he conceived what he styled "*a great and extensive project,*" namely, that of founding a new religious sect, to be called the Society of the Free and Easy. "Their narrow circumstances and the necessity of sticking close to my business" hindered then, and other engrossments afterward, but even when he was past threescore and ten he believed that the plan might have accomplished "great affairs among mankind." It was well for his contemporaries that his mind was diverted from this to other projects that were really useful. The levity with which he was wont to speak of matters generally held sacred by all classes of Christians must have been very painful to them.[1] His founding the Union Fire Company, the Philosophical Society, the city watch, the academy, the Pennsylvania Hospital, and the illustrious part he enacted in politics, science, and the useful arts are known to all. In the fields wherein he worked he might be compared with the greatest men of all times. In none of these departments did literature, as such, obtain his most devoted influence and attention. The praise due to him, abundant as it may be, comes not from the gentle Muses, who teach other doctrine than that wealth is the only road to virtue. Yet the Muses must have their share in the blessings of wealth, as well as of liberty and enhanced enlightenment, which the energies of Franklin were the most powerful of all in producing. As a wise man, in the sense of purely earthly wisdom, it is probable that the world never has produced a superior to Franklin; certainly none ever exerted so great an influence upon his generation. "He was," says Lord Jeffrey, "the most rational, perhaps, of all philosophers. No individual, perhaps, ever possessed a juster understanding, or was so seldom obstructed in the use of it by indolence, enthusiasm, or authority."

James Logan, who is further mentioned in the chapter on the Bench and Bar, with allusion to his literary attainments, was a man that, during any period of the history of the United States, would have been among the most prominent. Besides the works mentioned in the chapter referred to, he wrote and had published in Leyden, in 1747, "*Canonum pro inveniendis refractionam tum simplicium tum in lentibus duplicium focis demonstrationis geometricæ.*" His deportment toward the elder Godfrey was very different from what we are led to suspect was that of Franklin, from the manner in which this scientist is spoken of in the autobiography; for he generously exerted himself in establishing his claim for the invention of the quadrant, of which he had been deprived by Hadley. Logan was one of the best classical and oriental scholars that ever existed in this country. That was a most munificent gift he made of his library to the city, ever since known as the Loganian Library. The following extract, in which a list of the works is given, will surprise those who have read it for the first time, and have not otherwise been made acquainted with the collection. "In my library which I have left to the city of Philadelphia, for the advancement and facilitating of classical learning, are above one hundred volumes of authors, in folio, all in Greek, with mostly their versions; all the Roman classics without exception; all the Greek mathematicians, viz., Archimedes, Euclid, Ptolemy, both his Geography and Almagest, which I had in Greek (with Timon's Commentary, in folio, about seven hundred pages) from my learned friend Fabricius, who published fourteen volumes of his Bibliothèque Grecque, in quarto, in which, after he had finished his account of Ptolemy, on my inquiring from him, at Hamburg, how I should find it, having long sought for it in vain in England, he sent it to me out of his own library, telling me it was so scarce that neither price nor prayers could purchase it; besides there are many of the most valuable Latin authors, and a great number of modern and ancient mathematicians, with all three editions of Newton, Dr. Watts, Halley, etc."[2]

It is not generally known, at least outside of Pennsylvania, that that State gave birth to a man whom the celebrated Linnæus pronounced the greatest natural botanist in the world. This was John Bartram, a native of Delaware County, where he was born in

[1] An instance of this he gives when George Whitefield, who was an intimate friend, wrote to him expressing thanks for the offer of his hospitality, and concluded with saying, "That if I made that kind offer for Christ's sake, I should not miss of a reward. And I returned, '*Don't let me be mistaken: it was not for Christ's sake, but for your sake.*' One of our common acquaintance jocosely remarks, that knows it to be the custom of the saints, when they received any favor, to shift the burden of the obligation from off their own shoulders, and place it in heaven, I had contrived to fix it on earth."

[2] An interesting brief account of this celebrated collection may be found in vol. viii. of the ancient *Register of Pennsylvania*. Its location, when Logan had a building constructed to contain it, was at the northwest corner of Sixth and Walnut Streets.

the year 1701. His family were then residents of the village of Marple, whither they had emigrated in 1682 from Derbyshire. From childhood ever onward he was devoted to the study of plants, transmitting both his talents and tastes to his son William, and their joint labors during a period of nearly a hundred years were the most valuable contributions that this country has made to the science in whose behalf they were devoted. The father was a pious Quaker, admired and loved by his acquaintance. Following a fancy to have no other than his own hands in the construction of a new abode in his old age, he got out the timber and stone and built it without assistance. He engraved upon its front these lines:

"To God alone: the Almighty Lord:
The Holy One by me adored.
"JOHN BARTRAM, 1770."

In 1751 he published his work, "Observations on the Inhabitants, Climate, Soil, Divers Productions, Animals, etc., made in his Travels from Pennsylvania to Onondaga, Oswego, and the Lake Ontario." In 1766 appeared "An Account of East Florida, by William Stork, with a Journal kept by John Bartram, of Philadelphia, upon a Journey from St. Augustine, Fla., up the River St. John's." Besides, he contributed numerous papers to the Philosophical Transactions from 1740 to 1763. He was the first in this country to found a botanic garden. His researches and publications made him known to the most distinguished scientists and friends of science in Great Britain and Europe, among them Peter Collinson and Sir Hans Sloane. His son William, at the instance of the distinguished Quaker physician, Dr. John Fothergill, of London, spent five years in the study of the natural productions of the Southern States. The results of these investigations were published by Dr. Fothergill.[1]

In the Bench and Bar chapter will be found a quotation from a letter of Francis Daniel Pastorius, who was undergoing trouble from the operation of a *fictio juris*, which the "four known lawyers of the province" were employing against him. Notwithstanding his scholarly attainments, he could not comprehend all the meaning and possibilities of this phrase, so long celebrated in the annals of judicial proceedings, and was too poor to send and bring lawyers from New York to compete with the learned quartet of Philadelphia. How his petition to the Governor and Council resulted we do not know. He lived, however, to own and transmit to his descendants a good property in Germantown, where he had gardens and vineyards, and left his name as a gifted Latin and French scholar, and a by no means contemptible rhymster in English. He had emigrated to Pennsylvania in the same ship with William Penn and Thomas Lloyd, then past forty years old. He was a native of Limburg, Germany. About the year 1700 he had published in that country his book, "A Description of Germany." A warm friendship existed between him and Thomas Lloyd. In honor of the latter's daughters,—Rachel Preston, Hannah Hill, and Mary Norris,—he wrote several complimentary short poems, which fifty years ago were, and now may be, in the possession of some of their descendants. We believe they were never printed.

Another German, John Kelpius, styled "the Hermit," became somewhat notable in the early settlement of Germantown. He was a native of Siebenbürgen, or Transylvania, and thought to be of noble family. With others of similar fanatical sentiments, he emigrated to Pennsylvania. The principal element of the faith of him and his sect was devotion, for the sake of religion, to a single and solitary life. The name adopted by the sect was in striking contrast with their principles,—"The Society of the Woman of the Desert." They settled first at Germantown, then in the place known as "the Ridge." Kelpius was the leader, being a man of much culture. After his death the sect rapidly declined, its few members deserting the woman in the wilderness, preferring the society of those who dwelt in less cheerless and comfortless neighborhoods. Kelpius wrote a collection of hymns. John F. Watson, in "Notes of the Early History of Germantown" (*Register of Pennsylvania*, 1828), gives an interesting account of the hermit, in which he praises his writings in Latin, Greek, Hebrew, and English. His "Hymn-Books" were translated into English by Christopher Witt. Watson thus speaks of the location of the hermitage: "Kelpius' hut or house stood on the hill where the Widow Phœbe Riter now (1828) lives. Her log house has now stood more than forty years on the cellar foundation which was his. It is on a steep, descending, grassy hill, well exposed to the sun for warmth in winter, and has a spring of the hermit's making halfway down the hill, shaded by a very stout cedar-tree. After Kelpius' hut went down the hares used to burrow in his cellar. He called the place the 'Burrow of Rocks, or Rocksburrow' (now Roxborough)."

From the "Memoirs of the Historical Society of Pennsylvania" we learn, through Mr. Joshua Francis Fisher (1829), that early in the century the French language was taught in Philadelphia, a fact which he then thought should "excite astonishment when the period and the condition of our province are considered, and must elevate our opinion of the learning and refinement of our ancestors." He mentioned, especially, one John Solomon, who published in the *Pennsylvania Gazette*, Aug. 2, 1736, a sonnet, and in that of August 12th, same year, an elegy on the death of Governor Gordon.

Among those who wrote verses in Latin we have

[1] Travels through North and South Carolina, Georgia, East and West Florida, the Cherokee Country, the Extensive Territories of the Muscogees, or Creek Confederacy, and the Country of the Choctaws; containing an Account of the Soil and Natural Productions of those Regions, together with Observations on the Manners of the Indians. Embellished with copper-plates. 8vo. Map and sixteen plates. Philadelphia, 1791.

not yet mentioned the most noted, because he came on somewhat later than Makin and Loury. This was John Beveridge, a Scotchman, at one time teacher of a grammar-school in Edinburgh under the lead of Ruddiman, celebrated as one of the founders of the earliest literary society in Scotland, whose "Rudiments of the Latin Tongue" was long used as a text-book in schools. Leaving his native country, he came first to New England, and afterward to Philadelphia, where he was employed in the academy. The life of a school-master who does not like his vocation, and is therefore not suited for it, is not to be envied. Especially is this the case if he be a man of ardent temper, scholarly, and not knowing how to rule his little government. Somehow it has always been that there is less sympathy for a school-master's sorrows than for those of any other class of men. The scufflings with rude and dull boys, the tricks and their practical jokes upon a man sensitive to the ridicule they create and make publicly known, are generally considered necessary attendants to that relation, like the shell of the tortoise or the dromedary's hump, and the pain inflicted is considered small in comparison with the pettiness of the things that are its occasion. Yet there is some sadness in contemplating a man highly gifted as was John Beveridge spending a long life amidst such worryings which, if petty, were continual, and because of their pettiness the more exhausting of manhood. The school-master, for the want of a better means of earning a living, continued, for years and years, to alternate between flogging his subjects and being tricked and bull-baited by them, employing some of the leisure that was not given to reflection upon the lowness of his lot, in writing verses in the tongue he understood nearly as his vernacular,—his "*Epistolæ et alia quædam Miscellanea.*" These consisted of lyrics addressed to various friends he had known in Scotland and New England, of what he styled *Carmina Gratulariæ*, in honor of several of the Governors of the province, and of a few pastorals. Some of the lyrics in this collection are very fine; but the gratulatory pieces are ridiculously extravagant, and seem as if they were meant to compensate for the smallness of their subjects by the magnitude of the praise bestowed upon them. In the one to John Penn the poet broadly hints that he might receive as reward for his encomiums upon him and his family a reasonable number of acres of good land from the many thousands he possessed. But the proprietor either did not understand the hint or thus appreciate praise, and the poet, though living to old age, died with the birch in his hand. We scarcely need speculate upon what opinions our only philosopher indulged concerning this aged, learned, always poor school-master. As he neither had wealth nor knew how to get it, he must, by the standard of Richard Saunders, have been neither happy nor virtuous, but a mere "empty sack," incapable, from want, to fill and lift himself up, and therefore properly left to be worn out.

Contemporary with Beveridge was another school-master, misnamed Dove, bolder, more fiery, and combative, who in English rhymes lampooned whom he pleased. He was an Englishman, and in his native country had gotten some notoriety by figuring in a work called "Life and Adventures of the Chevalier Taylor," referred to in Boswell's "Life of Dr. Johnson." He was first employed in Philadelphia as English teacher in the academy, but, upon some dispute with the trustees, left, and took charge of the academy of Germantown. Another similar disagreement there led to his setting up an independent school, which soon came to nothing. Graydon tells some amusing anecdotes of this school-master, having been a pupil of his when the school was in Videll's Alley, that opened into Second a little below Chestnut Street.[1] He was of the jocular sort of pedagogues, and reserved the most of his ire for his own and his party's enemies. His rhymes were greatly applauded, but, being personal or political, lost their interest in a short time. The most noted of them was "Washing the Black-a-Moore White," written upon William Moore, of Moore Hall, on the occasion of his arrest by the Assembly.

The misfortunes as well as the genius of the inventor of the quadrant were inherited by his son, Thomas Godfrey. His father, who was a glazier, died when he was a child, pressed down by poverty, which would have been turned at least to competent means if his claim had not been disputed and for a time usurped by Hadley.[2] He was able to obtain at school only a tolerable English education, which he supplemented by private studies while working at his father's trade. Unfit for mechanical employment, he tried soldiering, seafaring, trade, speculation in North Carolina, in which last-mentioned region he contracted malaria

[1] "It was his practice in school to substitute disgrace for corporeal punishment. His birch was rarely used in the canonical method, but was generally stuck into the back part of the collar of the unfortunate culprit, who, with this badge of disgrace towering from his nape like a broom at the mast-head of a vessel for sale, was compelled to take his stand upon the top of the form, for such a period of time as his offense was thought to deserve. He had another contrivance for boys who were late in their morning attendance. This was to dispatch a committee of five or six scholars for them, with a bell and lighted lantern, and in this "odd equipage" in broad daylight, the bell all the while tingling, were they escorted through the streets to school. As Dove affected a strict regard to justice in his dispensations of punishment, and always professed a willingness to have an equal measure of it meted out to himself in case of his transgressing, the boys took him at his word, and one morning, when he had overstayed his time, either through laziness, inattention, or design, he found himself waited on in the usual form. He immediately admitted the justice of the procedure, and putting himself behind the lantern and the bell, marched with great solemnity to school, to the no small gratification of the boys and entertainment of the spectators."

[2] Barlow pays a handsome tribute to the elder Godfrey in his "Columbiad," while noticing American men of science:

> "To guide the sailor in his wandering way,
> See Godfrey's glass reverse the beams of day.
> His lifted quadrant to the eye displays
> From adverse skies the counteracting rays;
> And marks, as devious sails bewildered roll,
> Each nice gradation from the steadfast pole."

from exposure, and died at twenty-six. That this young man possessed genius of high order plainly appears from several of his productions, written from time to time in his ever-restless career. Dr. Smith, the distinguished head of the Philadelphia Academy, wrote a review of them for the volume that was published after his death, in 1765, and bestowed the praise that was well deserved. When only twenty-one years of age he wrote "The Prince of Parthia," a tragedy, which he in vain attempted to have produced upon the stage in his native town. This was the first dramatic work ever written in America. It is a play of very considerable merit, notwithstanding the marks of hasty composition and an imagination whose too great exuberance, due to extreme youth, would have been subdued to a becoming tone if he had lived longer. "The Court of Fancy" was modeled on "The House of Fame," of Chaucer. Besides these were several other minor poems, on current topics, some pastorals, and a version, in modern style, of Chaucer's "Assembly of Fowls." The following song is a fair specimen of his powers in the idyl, a species of poetry in which it is so rare to find anything more than passable:

"Young Thyrsis, with sighs, often tells me his tale,
And artfully strives o'er my heart to prevail;
He sings me love-songs as we trace through the grove,
And on each fair poplar hangs sonnets of love.
Though I often smile on him to soften his pain
(For wit I would have to embellish my train),
I still put him off, for I have him so fast,
I know he with joy will accept me at last.

"Among the gay tribe that still flatter my pride
There's *Cloddy* is handsome and wealthy beside;
With such a gay partner more joys I can prove
Than to live in a cottage with Thyrsis on love.
Though the shepherd is gentle, yet blame me who can,
Since wealth and not manners 'tis now makes the man.
But should I fail here, and my hopes be all past,
Fond Thyrsis, I know, will accept me at last.

"Thus Delia enliven'd the grove with her strain,
When Thyrsis, the shepherd, came over the plain;
Bright Chloris he led, whom he'd just made his bride,
Joy shone in their eyes as they walk'd side by side;
She scorn'd each low cunning, nor wish'd to deceive,
But all her delight was sweet pleasure to give.
In wedlock she chose to tie the swain fast,
For shepherds will change if put off to the last."

Godfrey became quite a favorite among those who hoped for a higher standard of literature in Philadelphia, and, considering his youth and his restless disposition, the work he did is very remarkable.

His fellow-townsman and friend, Nathaniel Evans, wrote an interesting sketch of his life, that was prefixed to his poems. He, too, was an author and a classical scholar. At the time of the completion of his education the academy became a college, and he was one of the first to take the degree of Master of Arts. He entered, on graduating, upon work in the Society for Propagating the Gospel in Foreign Parts, and went abroad for the purpose of qualifying for ordination. When this was accomplished he returned and was stationed in Gloucester County, N. J., where he died in 1767. A warm friendship sprang up, on the voyage home, between him and Miss Elizabeth Graeme, who has been generally regarded as the most gifted and accomplished woman of Philadelphia during provincial times and for some time after the Revolution. Several poems were addressed to this lady by the young religionist, who, imitating Petrarch, gave to her the name of Laura. One of these, called "Ode written at Graeme Park," shows that he was sometimes a guest at that country-seat, once so famous. After his death, Dr. Smith, with the assistance of his fair friend, published his poems. The volume contains poetical correspondence between him and Laura, several poems on contemporary subjects, an ode to the memory of Gen. Wolfe, one on the Peace, an imitation of Horace, addressed to Thomas Godfrey.[1] His friend Miss Graeme was well known in literary as well as social circles. This accomplished lady was as unfortunate as she was gifted. She was the daughter of Councilor Graeme, mentioned more fully in the chapter on the Bench and Bar. Her mother was a daughter, by her first marriage, of the wife of Sir William Keith, Governor, who made his son-in-law a master in chancery, and afterward second to Chief Justice Langhorne, judge of the Supreme Court of the province.

A matrimonial engagement, contracted when she was seventeen years old with a young man who was going abroad for the purpose of studying law, was broken off from some cause, but the event was said to have been a sore disappointment to her. The suffering she felt has been assigned as the cause of her study of literature and occasionally printing her writings. She translated Fénelon's "Télémaque" into English verse. Besides she wrote a paraphrase of the book of Psalms.

[1] The following Ad Gulielmum Landerum, P. P., in Latin, after the Sapphic metre, shows the degree of care with which the classics were then taught in the college:

"Caseus pinguis, pyra, mala, nectar
Te manent mecum, Gulielme, sextam
Occidens quam Sol properabit horam
Axe fugaci.

"Diligit pullos nitidumque nidum
Uxor, at tecum gradiatur audax;
Filio quisquam nec erit venusto
Gratior umbra.

"Risus et musæ comitentur almæ,
Innocens et te jocus et lepores:
Linque sed curas, et amara vitæ
Linque severæ.

"Hanc moram rugis sapiens futuris
Ponito; quamvis viridem senectam
Cautus arceto, remorare vitæ
Gaudia blandæ.

"Vive nunc: ætas fugit impotentis
Fluminis ritu, volucrisve venti;
Vis stitit nulla, et revocavit horas
Nulla volantes.

"Umbra seu pulvis fumus, aut inanis
Fama, et nostrum remanebit olim.
Nil nisi virtus, monumenta sacra
Ingeniique."

She went abroad for the purpose of recruiting her health, which had become much impaired after her disappointment. On her return, her mother having died, she took the management of her father's house at Graeme Park, and it became the most noted place in Pennsylvania for the meetings of the most gifted persons in the country. When she was thirty-six years old she was married to Henry Hugh Ferguson, a Scotchman, near relative of Dr. Adam Ferguson. After only four years of married life, her husband, being in England for a season in 1776, returned with a commission in the British army, and was attainted of treason to the United States government. Devoted as she was to her native country, yet, like many others of those best born and best situated, she regarded independence with alarm. Although a woman, she was too prominent in society for her conduct and opinions not to be important and necessary to be known to the authorities. Rev. Dr. Duché, the distinguished rector of Christ and St. Peter's Episcopal Churches, in a panic of intolerable alarm, wrote a letter to Gen. Washington, urging him to abandon the rebel cause and submit himself to the British government, a letter which Washington, notwithstanding the consequences to befall the writer, felt himself bound to make known to the Congress. An offer had also been sent to Joseph Reed that if a reconciliation could be effected he should receive ten thousand pounds and any office he might desire in the colonies, an offer that received that noted answer that the king of Great Britain had nothing within his gift that would tempt him. The letter to Washington and the offer to Reed were transmitted through Mrs. Ferguson. Her sex, her high character, and her condition as the wife of a man in open hostility, who must to a great degree influence her opinions, were all forbearingly regarded by the government. She was refused her request in 1778 to go to New York in order to bid farewell to her husband, and they never met again. Graeme Park was seized as his property, but her petition for a lifetime occupancy was granted, and she retained it until her death, in 1801. She lived in comparative poverty, yet was well known for many benefactions out of her limited income for those of her neighbors who were poorer than herself.

The pious Petrarch of Gloucester would doubtless have made the Laura of Graeme Park his wife when, after her disappointment, she could have afforded again to take more hopeful views of life. So we must understand such words as these, with which one of his rhyming letters ends, after comparing her to Stella in answer to her likening him to Swift:

> "O Laura! when I think of this,
> And call you friend, 'tis greater bliss
> Than all the '*fat church-warden's schemes*,'
> Which rarely '*prompt my golden dreams*;'
> Yet if the happiness, fair maid,
> That soothes me in the silent shade
> Should, in your eye, appear too great,
> Come, take it all, and share my fate."

The answer shows that the time for yielding to such diversion to her griefs had not yet come. After suggesting some advice to him, she concludes thus:

> "Haste not to bend at Hymen's shrine;
> Let friendship, gen'rous friendship, be
> The bond to fetter you and me,—
> *Vestal, platonic*, what you will,
> So virtue reigns with freedom still.
> But if in matrimonial noose
> You must be bound, and have a spouse
> The faithful rib that heav'n shall send
> I'll fondly greet, and call her friend."

Mrs. Ferguson's prose was quite superior to her poetry. Her journals of travels, and many of her letters, are very excellent in their kind. She was long remembered with an interest that was bestowed equally upon no other woman in the whole country. Misfortune had served not only to make her compassionate to the sufferings of others to a degree that was romantic, but led to eccentricities that were easily atoned for by her other shining characteristics. Joshua Francis Fisher writes of her in 1831, "Mrs. Ferguson is said to have been a lady of fine talents, of refined delicacy, exquisite sensibility, and romantic generosity. Several of her friends are still living who remember with delight her noble disposition, her agreeable conversation, and her amusing eccentricities."

It has appeared that the earliest literature in Pennsylvania was for the greatest part in the line of poetry. So far from being strange, this is in harmony with the earliest literature of all people. Poetry is older than prose,—as a written language, of course. The first things thought worthy to commit to writing among all peoples when first arising into enlightenment are the songs, religious or otherwise, that have been aforetime in the mouths of the people. It is so to a degree with such a colony as that founded by Penn. In his suite, besides those who came for the sake of adventure, were devout, simple-minded men, who, regarding themselves as exiles, were more apt, if they should conceive a notion to literature of any sort, to follow the suggestions of the imagination than of the understanding. The young child can be taught precepts sooner if imparted in rhyme than in plain prose. It will learn the precept not so much for its own value as for the pleasure of the rhyme. It is the same with young nations. The first literature must necessarily be poetic. We have seen something of what that of Philadelphia was,—that, without claims to be considered great, some of it, when we consider all the circumstances of its creation, was of such a kind that Philadelphians may well be gratified that so much of it was preserved. The coming of Benjamin Franklin, who of all philosophers was probably the most unpoetic, had rather a discouraging influence upon that kind of literature, by pointing the minds of the people entirely to the practical and to the material. So meagre was his imagination that it did

not even indulge itself, except to a very limited extent, in dreams of any sort, not even of the future life. His teachings, his example, led ever to the practical and the material. Endeavors, according to his teachings and example, when not exerted for the practical and the material, were vain, even reprehensible. Even virtue, whatever his opinion of that might be, was attainable only through the previous attainment of wealth. The value of Franklin to mankind, therefore, is to be estimated by the stimulus he gave to a young community with inexhaustible, undeveloped resources to make themselves rich and happy. The institutions which he helped to establish were on a scale so great as to be benign in other directions besides those in which he traveled. They served to educate the youth to defend the oppressed, to care for the helpless. The freedom, the culture, the material prosperity that followed his endeavors did their work on the community and on individuals also. He was the first, it is true, to begin a literary magazine, the *General Magazine*,—historical chronicle for all the British plantations in America,—but it was far more political and news-telling than literary, and was continued only for about a year, because it was not an undertaking for which the character of his mind was suited.

We have seen that much of the prose writing heretofore was of a religious kind. A greater variety of opinions was never found in a new community than in Philadelphia at its founding. Noticeable in this connection are the agitations that were then beginning upon the subject of African slavery. Whatever merit belongs to the initiation of this subject, since become so vast and eventful, is due to George Keith, already mentioned, who wrote an essay upon it. But as he was wont to find fault with his brethren the Quakers for other habits and opinions, his remonstrances upon this subject doubtless had as little influence as the others. If the Quakers should be endangered in their claim to priority in this matter by being reminded that the first apostle for the freedom of the African deserted their meeting and went back to the Church of England, they may feel reassured by the fact that not very long after Keith another of their sect was even more pronounced and more steadfast in his preaching. This was Ralph Sandiford, a native of Liverpool, once a sailor-boy, and who after settlement in Philadelphia became a preacher. In 1729 he had printed, at Benjamin Franklin's press, a book entitled "The Mystery of Iniquity; or, A Brief Examination of the Practice of the Times." The public sentiment upon the subject was by no means in accord with the preacher, and the chief magistrate threatened him with condign punishment if he should circulate it. Regardless of threats, he persisted in circulating it gratuitously. There is no record, we believe, that he was ever punished. What hostility there was to negro slavery was mostly confined to the poorer sort of white persons, on the ground mainly of their competition with them in servile employments,—an argument that was the most powerful and most reasonable ever adduced against the institution. Complaints were not unfrequently made by such white men, and discriminations in their favor demanded, which to some extent were complied with. Sandiford, who was generally regarded as a fanatic, died at Lower Dublin, in Philadelphia County, in 1733.

Quite beyond him went Benjamin Lay, for whom Franklin in 1736 printed a book. He was a native of

Benjamin Lay

Essex, in England, and, like Sandiford, had been a sailor. He was advanced in years when he came to Philadelphia. He rode two hobbies,—hostility to negro slavery and to animal food. On these two subjects he put forth pamphlets, circulating them gratis, but his fiercest assaults were made upon meat. In his zeal he set out to fast in the manner and to the extent of the Saviour, and actually got himself into imminent danger of perishing, when some friends interposed just in time to rescue him.

The most able and respectable among this class was Anthony Benezet, a native of St. Quentin, France, but who had left that country when a very young child, and, after spending the time until his eighteenth year in England, had come to Philadelphia, where he was soon afterward engaged as a teacher in the public schools. He became seriously interested in the slave trade, gave much of his time to its study, and published several works thereon. The first of these was "A Caution to Great Britain and Her Colonies relative to Enslaved Negroes in the British Dominions." This was in 1767. In 1772 appeared "Some Historical Account of Guinea, with an Inquiry into the Rise and Progress of the Slave Trade, its Nature and Lamentable Effects;" and in 1780, "A Short Account of the

Digitized by Google

Religious Society of Friends." He was a devout Quaker and a thoughtful, sincere philanthropist. His works had a wonderful influence upon public opinion everywhere. They were read extensively in England, and were the first to give direction to the movement against the slave trade initiated by Wilberforce, Clarkson, and others.

Franklin gives a curious account of a Rev. Mr. Hemphill, a Presbyterian divine, some of whose preachings led to a war of pamphlets shortly after the starting of the *Pennsylvania Gazette*. Franklin himself entered into the dispute, partly out of amusement, it is probable, to encourage what afforded frequent jobs for his press, and to defend a man whom his brethren had driven from their communion for the sake of his views upon religious topics. The reverend gentleman had borne himself ably enough in the pulpit, being a man of decided eloquence, until it was discovered that many of his sermons were not of his own composition. Franklin would not abandon him even then, having the audacity to say that he preferred to have a preacher preach a borrowed sermon, if it was good, than his own, if it were not. But this argument did not satisfy the public, even that part who had sympathized with Mr. Hemphill. When the theft was discovered beyond a doubt he had to leave the field.

The most eminent native-born Philadelphian of the period we are now considering was David Rittenhouse. His birthplace has very commonly been assigned to Germantown, but he was born, according to Allibone, at Paper-Mill Run, Roxborough township, near Germantown. His father was a farmer, whose ambition for his son was not higher than that he should pursue the same vocation. But even in boyhood, while at work upon the farm, his talents for mathematics and astronomy commenced to develop with a rapidity almost without precedent, and at the age of seventeen, without assistance from any quarter, he had constructed a clock. Long before this, however, his talents for mathematical studies had been evinced, and on the farm near Norriton, Philadelphia Co., whither his father had removed, the fences, stones, his plow-handles, and all other objects on which he could mark with a pencil or chalk had upon them mathematical calculations that he had made. At the age of seven years he had constructed a complete water-mill in miniature. During his minority he had also made himself fully acquainted with the "Principia" of Sir Isaac Newton, and, without the slightest knowledge that the science of fluxions had been demonstrated, discovered it himself. The farmer's boy believed himself to have been its first discoverer until he afterward ascertained that that honor had been the subject of most acrimonious, prolonged dispute between Newton and Leibnitz, a dispute which was at last settled among the scientific men of the world by assigning the honor to both, as each was clearly proved to have made the discovery in ignorance of the other's investigations and results. For the honor of the achievement itself, therefore, Rittenhouse deserves praise equally with these illustrious men. Allowed by his parents to discontinue working on the farm, he built a shop on the roadside, near by, and commenced business as a clock and mathematical instrument maker. The marriage of his sister with William Barton, an Irish gentleman of good education, was very favorable to his ambition. Through Barton's encouragement and assistance he was enabled to continue his studies with ease, but these he prosecuted so continuously, day and night, that unfortunately his health became seriously and permanently impaired.

In 1768, Rittenhouse completed his first orrery, an instrument which was seen by Thomas Jefferson. He declared that the young man who had constructed it was one who, "as an artist, had exhibited as great proofs of mechanic genius as the world has ever produced." He made the next year his celebrated "Report on Observations of the Transit of Venus," which attracted the attention of the whole scientific world. The orrery first constructed by him was purchased by the College of New Jersey. He went straightway to the construction of another, which he afterwards employed in his astronomical calculations. This is now in possession of the University of Pennsylvania. In 1770 he removed to Philadelphia, and was elected a member of the Philosophical Society, to whose Transactions he became a frequent contributor during the remainder of his life. In 1773, as appears in the records of the society, he was chairman of a committee appointed to examine the first steam-engine constructed in this country, that had been made by Christopher Colles for the use of a distillery. The engine, after being worked for a few moments, broke, it was said, from the too little expense that had been employed in its construction; but the report of the committee was favorable to the principle on which it had been undertaken. Rittenhouse was employed by the government of Pennsylvania on several occasions as one of the commissioners for settling the boundaries between that and the adjoining States, and finally, after the death of Franklin, he became president of the Philosophical Society.

This celebrated institution had been founded, in 1769, by the union of the American Philosophical Society with the American Society for Promoting and Propagating Useful Knowledge. The first of these societies was originated by Franklin in 1743.[1] Its first president was Thomas Hopkinson. It is unfortunate that its details are not known, the minutes kept by it having been lost. It continued to exist for about ten years, when it ceased.

The second of the societies was the old Junto, estab-

[1] His circular, issued on May 14, 1743, was entitled "A Proposal for Promoting Useful Knowledge among the British Plantations in America."

lished by Franklin in 1727, reconstructed under a new name and with somewhat enlarged intentions, the members of the Junto having decided upon the admission of corresponding members. A new name was adopted: "The American Society for Promoting and Propagating Useful Knowledge, held at Philadelphia." The plans of the society were gradually enlarged, and the name slightly altered.

In 1767 the American Philosophical Society, now reduced to a very few members, resolved on resuscitation. They had the influence of the Governor, John Penn, and made James Hamilton their president, after getting about fifty other members. The first paper among its Transactions was from David Rittenhouse, and was upon the subject of the orrery that he had constructed. A new vigor was thus imparted, and it was resolved to construct an observatory at Philadelphia and one at Norriton, the residence of Rittenhouse. Being without sufficient means for the accomplishment of all their purposes, they applied to the Legislature for assistance, and, the Governor being their chief patron, they obtained a grant of one hundred pounds for the purchase of a telescope. Finally, in 1769, the two societies were united. Each, on the new organization, was desirous of retaining its president, Franklin of the one, and Hamilton of the other. A very active contest was had between the two parties, which was ended by the defeat of Hamilton. Under the combined influence of the leading members, the society rose with great rapidity. Observatories were raised in Philadelphia (State-House Square) and at Norriton. One of the first matters considered by the new society was instruction to the committee on American improvements to inquire as to the most suitable route for a canal between Chesapeake and Delaware Bays. The committee, after investigation, reported in favor of the upper route. They were, however, appalled by speculations upon the probable cost, and abstained from making any estimate, reporting that it was beyond "the ability of the country."

It is obvious, from the laws first passed by the society, that none were desired as members who could not contribute to its progress. All its members were to be assigned to one or more of its six committees,—1, geography, mathematics, natural philosophy, and astronomy; 2, medicine and anatomy; 3, natural history and chemistry; 4, trade and commerce; 5, mechanics and architecture; 6, husbandry and American improvements. The officers were a patron (the Governor of the State being *ex officio* that officer), a president, three vice-presidents, a treasurer, four secretaries, three curators, and twelve counselors. It was a fortunate city that had two such men living contemporary with each other as Benjamin Franklin and David Rittenhouse at the period of the inception of its undertakings in behalf of philosophy, science, and political economy. Rittenhouse seemed to desire to take his favorite studies with him into the future world. He requested, upon his death-bed, that his body might be buried under the pavement of his observatory in the garden attached to his residence. The request was of course complied with. In 1813 his life was published, written by William Barton, his nephew.[1]

Rittenhouse came to the presidency of the society between the two men who were probably the greatest intellects that the country has produced. Succeeding Benjamin Franklin, he was himself succeeded by Thomas Jefferson, who, after occupying the office for three years, retired, when the office was bestowed upon Caspar Wistar. Wistar was of a family of German Quakers, who were settled first as glass-manufacturers in New Jersey, afterward in Philadelphia. Educated abroad, chiefly for the purposes of a medical education, he became professor of chemistry and anatomy in the university, to which he imparted a distinguished reputation, in the department of its medical school especially. Besides his many contributions to the Society's Transactions, he published "A System of Anatomy," which ranks among the very highest authorities upon that branch of science that have been produced in this country or Europe. The next two presidents, Robert Patterson and William Tilghman, ably sustained the dignity of that office. The former, an Irishman by birth, was professor of mathematics in the university and became its provost. Several papers of the Transactions were from his pen. Tilghman is noticed at length in the chapter on the Bench and Bar, wherein his reputation was fully on a level with that of any man that has ever sat upon the bench in the State. His successor is mentioned also in the same chapter; but he must be sketched more at length in this sphere, wherein his services were yet more conspicuous and comparatively important.

Peter S. Du Ponceau was the most variously gifted man perhaps that has ever lived in Philadelphia. He was a native of the island of Ré, on the western coast of France. While but a child he acquired a knowledge of the English and Italian by the intercourse he had with English and Italian officers who were stationed on that island, where his father was acting in some military command. Being intended for a military engineer, he had given up this pursuit on account of some imperfection of his eyesight. At thirteen he was sent to a college kept by the Benedictines, and at the death of his father, while he himself was in his fifteenth year, he at first yielded to the desire of his mother and friends of the family that he should study for the priesthood. But after a few months he gave up theology, left Bressuire, where he was at his preparatory studies, and went to Paris,

[1] "Memoirs of the Life of David Rittenhouse, LL.D., F.R.S., late President of the American Philosophical Society, etc., interspersed with various notices of many distinguished men, with an Appendix containing sundry philosophical and other papers, most of which have not hitherto been published." By William Barton. Philadelphia, 1813.

where he supported himself by making available his knowledge of English in translating books and merchants' papers in that language, and in giving lessons. It was not long before he made the acquaintance of Court de Gébelin, author of "Le Monde Primitif," and became his secretary. Happening to meet at the house of Beaumarchais with Baron Steuben, he was persuaded by him to accompany him to America as his secretary and aide-de-camp. They sailed from Marseilles, and arrived at Portsmouth, N. H., December, 1777. Having accompanied Gen. Steuben, who obtained for him a brevet commission of captain, he was obliged, after three years' service, to retire, on account of ill health, from the army. Becoming a citizen of America, he, then only twenty-one years of age, succeeded Robert R. Livingston in the department of foreign affairs. About two years afterward he retired from this position, and, having studied law, was admitted to the bar in 1785, being then twenty-five years old. Such was the

PETER S. DU PONCEAU.

rapidity of his rise, that on the acquisition of Louisiana from Napoleon Bonaparte, Mr. Jefferson offered him the position of chief justice in the United States Court for that State. In the midst of his practice, which was large and lucrative, he found time to translate several foreign works upon the law, and wrote several original dissertations upon it as practiced in the United States, most noted of which is that entitled "A Dissertation on the Nature and Extent of the Jurisdiction of the Courts of the United States." Another admirable paper is his "Discourse on Legal Education," prefixed to a work of Thomas Sergeant's, entitled "A Brief Sketch of the National Judiciary Powers exercised in the United States prior to the Adoption of the Present Federal Constitution." More elaborate is his "Brief View of the Constitution of the United States, addressed to the Law Academy of Philadelphia."

But the best claim that this eminent man has upon his survivors for gratitude and praise depends upon the distinguished services he rendered through his connection with the Philosophical Society to linguistic and other literature. We have seen that in the objects for the study and propagation of which the society was expending its energies, neither history nor other literature was included. Through the influence of Mr. Du Ponceau was established a committee on history, moral science, and general literature. His first paper, in pursuance of the inquiries set on foot by this committee, was on the "Structure of the Indian Languages." The fame obtained by this on its publication among the Transactions resulted in his getting the degree of LL.D. and being elected a member of the Academy of Inscriptions of the French Institute. The Comte de Volney, while engaged in his investigations concerning ancient chronology, offered a linguistic prize, which was won by Mr. Du Ponceau with his "Indian Languages of North America." The last important work he contributed to literature was "A Dissertation on the Chinese Language." This is a most valuable work, and has exerted a strong influence in changing the opinion for a long time previously prevailing that this language, with that of Japan, is ideographic, representing *ideas*, instead of lexigraphic, representing *sounds*, as in the European tongues.

There were several other minor pamphlets and dissertations put forth by him upon various subjects in which his versatile mind was interested, and he was prominently distinguished in the latter part of the last and the first part of the present century. In his latter years his well-known absence of mind, the infirmities of his vision, the brightness of his intellect, continued to so late a period of old age, imparted a tenderness to the consideration in which he was universally held. His death, at eighty-four years, called forth expressions of public feeling mingled with regret, and of admiration for his varied talents.

The "Transactions of the Philosophical Society" during the period first succeeding its institution contain contributions from several persons who evinced much ability in their several pursuits. Rev. Gotthilf Henry Ernst Muhlenberg, a native of New Providence, Montgomery Co., in 1753, after completing his education at Halle, was ordained to the ministry of the Lutheran Church, and became assistant to his father in Philadelphia. On the occupation of that city by the British in the Revolutionary war, he retired to the country, where his time, during the interval of clerical service, was devoted to the study of botany. In 1780 he accepted a call to the Lutheran Church of Lancaster, where he spent the rest of his life, which continued until 1815.

Dr. Muhlenberg devoted much of his leisure time to the natural sciences, particularly to botany. A member of the Philosophical Society, he sent in several papers, which have always ranked high in the Transactions. The reputation obtained by their publication procured for him invitations to membership

in kindred institutions in Germany, Sweden, and Denmark. Willdenow, in his "Species Plantarum," makes frequent allusion to him. His principal publications are "Catalogus Plantarum," "Descriptio uberior Graminum," and "Flora Lancastriensis." Besides his other accomplishments, he was a gifted

REV. GOTTHILF HENRY ERNST MUHLENBERG.

scholar both in ancient and oriental literature. Various papers contributed by him were never published, but, together with his herbarium, are now in possession of the society.

In this connection should be mentioned the name of Ambroise Palirot de Beauvais, who, though a citizen of France, spent some years in Philadelphia, whither he had fled from the island of St. Domingo on the overthrow of the government there by the negroes, and was hindered from returning to his native country on hearing the news that he had been proscribed by its government as an emigrant. This adventurous man had traveled in Guinea, and gone to St. Domingo, in pursuit of investigations on natural sciences. While in America he still pursued his favorite studies among the Alleghany Mountains. Having obtained permission to return to France he did so, and became one of the most distinguished members of the Institute. It was De Beauvais who arranged the collection of Peale's Museum in Philadelphia. Charles Wilson Peale was the author of an essay on "Wooden Bridges," with plates, "Introduction to a Course of Lectures on Natural History," "The Preservation of Health," "Essay to promote Domestic Happiness," and "Economy in Fuel." Doughty's "Natural History" contains a biographical notice of him by his son, Rembrandt Peale.

Thomas Nuttall, another distinguished foreigner, belongs in part to Philadelphia, where he spent much of his time. He was a native of Yorkshire, England, and spent his boyhood to majority in serving an apprenticeship to printing. Then he came to the United States. Here he devoted much of his time to expeditions in several parts of the country, even into the great territories of the West, in the study of botany. He traversed the Mississippi Valley, Florida, the region around the Northern Lakes, crossed the country to the Pacific, and thence sailed to the Sandwich Islands, in further pursuit of his favorite studies. He made Philadelphia his home until elected to take charge of the botanical garden attached to Harvard University. In 1828 the condition of his return to his native country having been attached to a bequest made in his favor, he went back. His principal works were "The Genera of North American Plants, and a Catalogue of the Species to 1817," "A Journal of Travels into the Arkansas Territory during the Year 1819," "Manual of the Ornithology of the United States and Canada," and some volumes supplementary to Michaux's "North American Sylva." A biographical sketch of Mr. Nuttall was made by Elias Durand, who claims for him that he made more explorations and discoveries in botanical investigations in North America than any other, and that, with the possible exception of Professor Gray, of Harvard University, no other has given descriptions of a greater variety of plants.

The name of Benjamin Smith Barton belongs both to science and to the profession of medicine. He was son of the Rev. William Barton, of Lancaster, to whom, as we have seen, David Rittenhouse was indebted for the encouragement and development of his extraordinary powers. He was educated for the medical profession at Edinburgh, London, and Göttingen. He was first made Professor of Natural History and Botany in the University of Pennsylvania, and afterward succeeded Dr. Griffiths as Professor of Materia Medica, and Dr. Rush as Professor of the Theory and Practice of Medicine. The first work on botany published in America was by him, and he was the editor for several years of a medical journal. His other published works were "New Views of the Indian Tribes," "Materia Medica," and "The Pyrola Umbellata," the last of which appeared in the "Medico-Chirurgical Transactions" of London.

Another eminent member of the Philosophical Society was James Woodhouse, a native of Philadelphia, and a graduate of the college there. He attended Gen. St. Clair's expedition, in 1791, as surgeon-general, and afterward served for the rest of his life as Professor of Chemistry in the University of Pennsylvania. Among his publications outside of his profession was "Experiments and Observations on the Vegetation of Plants."

Google

The most able co-operator whom Franklin had was Joseph Galloway, before referred to, who alone of that party was able to compete with John Dickinson, the eloquent leader of the opposition. In the most heated contest for the Assembly he and Franklin were defeated, but through their outside influence the recall of the petition for the relapse of the government to the crown was hindered, and at the election in 1765, Galloway was again elected, and became Speaker for nine consecutive years. In the subsequent disputes with the crown Galloway sided with the latter, and in December, 1776, went from his home in Bucks County, whither he had retired after the passage of the resolution for independence, to Gen. Howe, and served under him in his march through New Jersey, and after the evacuation of Philadelphia went to England, where he remained for the rest of his life. In his exile he became a devoted student of the book of Revelation, concerning which he imagined that he already saw the fulfillment of many of its prophecies. His publications consist of pamphlets and speeches and works relating to the American war and the subject of his later studies. The list is thus given in Allibone: (1) "Speech in Answer to John Dickinson," London and Philadelphia;[1] (2) "Candid Examination," New York, 1775, London, 1780; (3) "Letters to a Nobleman," 1779; (4) "Reply to Sir William Howe," 1780; (5) "Cool Thoughts," 1780; (6) "Historical and Political Reflections," 1780; (7) "Letter to Lord Howe," 1780; (8) "Comment upon the Revelation;" (9) "Prophetic and Anticipated History of Rome." . . . "A new edition of his 'Candid Examination' was printed by a committee of the House of Commons, that made its appearance in Philadelphia in 1855. It was reprinted by the Council of the Seventy-Six Society, and edited by Thomas Balch, Esq., a lawyer of Philadelphia."

The most distinguished writer of political pamphlets was John Dickinson, a notice of whom will be found in the chapter on the Bench and Bar. The career of this extraordinary man is one of the most interesting in the history of this country in the times of the Revolution. Unlike Galloway, he was opposed to Franklin's policy regarding the relegation of the government of Pennsylvania from the Penns to the crown of Great Britain, and his able efforts for some time hindered the consummation of that project. But the country never possessed a citizen more patriotic than John Dickinson, and perhaps none who better understood at the last the principle on which the government he had opposed was founded. A native American, he felt that whatever were the fortunes of his country, he must take them as his own. When the measure was at length carried over his opposition, he treated it as an accomplished fact behind which it was neither possible nor patriotic to go, and in the subsequent consideration of the exactions of the British government, he did more than any other man in the country to arouse among the people the resentment that led to independence. The most famous papers written during all this period were what were known as "Letters from a Farmer in Pennsylvania to the Inhabitants of the British Colonies." Their influence has ever been regarded as superior to all others in imparting to the people an intelligent view of their rights and duties, and it is probable that no political pamphlets ever effected such important results. They were thrown broadcast over the country, reprinted in England, and translated into French. On their publication in England, Dr. Franklin, who had been his rival, wrote the preface.[2] With the prudence of a wise, contented old man, he spoke of the several exactions that had been inflicted upon the colonies, and urged a firm, peaceful, continued opposition until they were removed. This he did not doubt would be the case in time, and he never contemplated that matters would ever be driven to the extremity that ensued. When that extremity came, as before, he was arrayed on the side of conservatism, and, as long as he could do so with any hope of success, opposed the scheme of independence. A higher compliment could scarcely have been paid to him than to have been chosen to write a greater number than any other man in the Continental Congress of the various addresses to the British government on the subject of grievances. Through his influence partly, and on account of the general peaceful character of the Quaker population, the sentiment of armed hostility and eventual independence was later in being aroused in Philadelphia than in other parts of the colonies. It was through his influence that what was known as the second petition to the king passed in Congress, which was carried over by Richard Penn. Congress voted it out of regard to him, who was universally esteemed for his talents, patriotism, and integrity. This petition obtained the name of "The Olive Branch." Its illustrious advocate entertained in regard to it hopes that were not felt by a large majority of the body, who, but for his sake, would have precipitated independence much sooner than it came.

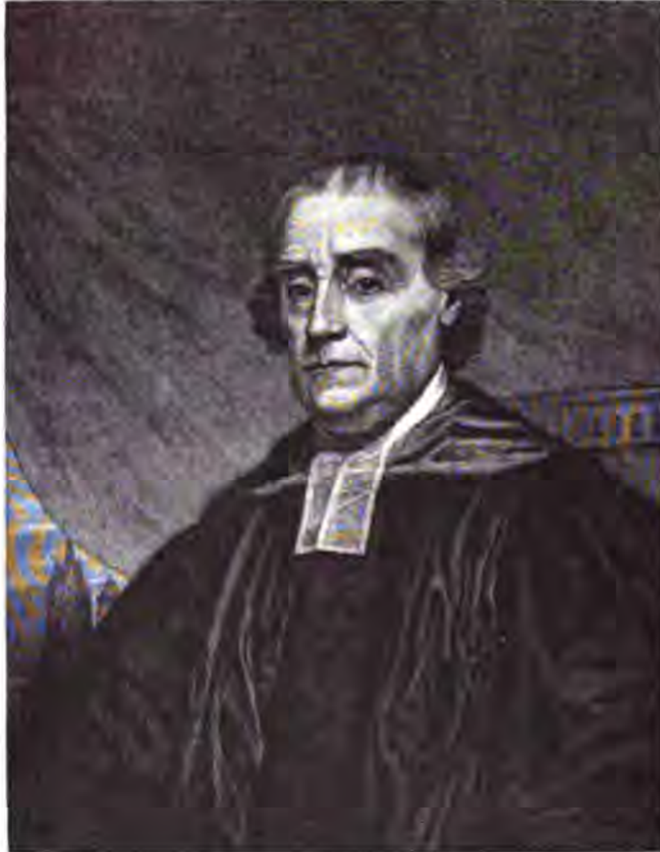
The part he bore at the last was most strikingly admirable. Of the delegates that were elected in December, 1775 (of which Dickinson was one, having been unanimously re-elected), all were against

[1] His rival, John Dickinson, declared that he never made this speech, and that it was written and published after the appearance of his own.

[2] The judgment evinced in these letters is most admirable. The introduction to the first is in these words: "My dear countrymen, I am a farmer, settled, after a variety of fortunes, near the banks of the river Delaware, in the Province of Pennsylvania. I received a liberal education, and have been engaged in the busy scenes of life, but am now convinced that a man may be as happy without bustle as with it. My farm is small; my servants are few and good; I have a little money at interest; I wish no more; my employment in my own affairs is easy, and with a continued grateful mind, undisturbed by worldly hopes or fears, relating to myself, I am completing the number of days allotted to me by Divine goodness."

separation except Franklin. Through the influence of the latter, the instructions to the delegation to vote against separation were withdrawn. Yet Dickinson persisted, and some of his speeches, made in the debates, are among the very finest orations that ever were pronounced. There was much that was pathetic in his words, when he dwelt upon the casting off of the parental authority that through so many generations had been, in the main, so benignant. But at last, when he saw that the sentiment in the other direction was irrepressible and continually growing stronger, more determined, and more acrimonious, when the resolution reported by the committee of the whole came up for final action, and Pennsylvania would have been the only one not to join in the measure, he, with Robert Morris, his colleague, withdrew in sadness from the hall, and the majority of the remaining members of the delegation having been converted to the measure, it was unanimously carried. He at once yielded to the temporary necessity of retiring from political life, and went to the field as a private soldier of the Delaware militia, and, when he came forth again, bore a leading part in Congress. As a delegate from Delaware, he served in the Convention of 1787, which met for the formation of the Federal Constitution. No man better understood the principles upon which that Constitution was founded. He was fully in accord with McKean in having fixed the recognition of the equality of the smaller States, and as long as he lived regarded the new government not as that of one compact people, but as a federation of sovereignties represented in the higher body, and a union of the peoples of those sovereignties in the lower.

Mr. Dickinson also wrote a series of papers over an assumed name, "Fabius," first for the purpose of attaching the people, in 1788, to the new Constitution, and afterward in behalf of the French people in their revolution of 1797. For some time the petition to the king was thought to have been written by Richard Henry Lee, Chief Justice Marshall having erroneously so stated in his "Life of Washington." But it was the production of John Dickinson. To him, more than to any other man in his generation, was due the opinion of the Earl of Chatham which prompted the celebrated eulogium he uttered on the American Congress. We have seen that the second petition to the king was his composition also.



WILLIAM SMITH, D.D.

Among others who were engaged in the political controversies of those times was Dr. William Smith, whose most distinguished endeavors, however, were made in other fields. He was a native of Aberdeen, Scotland, and after emigrating to America, and teaching for a season in the family of Governor Martin, of Long Island, studied for the ministry of the Church of England. He was made provost of the College of Philadelphia in 1754. This eminent divine and teacher joined heartily in the cause of his adopted country, but sided with John Dickinson in advocating the cause of the proprietors, and became afterward among the most eminent of the pamphleteers, especially in those contests that were waged, after the war of the Revolution was ended, between the officers of the college and those who affected to believe that the former intended to defeat the object of its charter and convert it into one entirely in the interest of the Church of England.

There are many interesting things told in Franklin's autobiography about the rise, the ups and downs of this institution, first as an academy, then a college, and lastly a university. Under Dr. Smith's presidency the college grew rapidly in name and importance, students coming from other provinces and even from the West Indies. The medical college was at-

Digitized by Google

tached in 1765, the first professorship (that of the Theory and Practice of Physic) being filled by Dr. Morgan.

The college became a university in 1779, and, after a period of acrimonious disputes, Dr. Smith meanwhile having been removed, was restored to the provostship in 1789, and in 1791, upon his retirement in advanced age, the two institutions were blended, and became the University of Pennsylvania. Besides his political pamphlets, he was the author of several sermons and orations that were published. One of his earliest publications was "A Philosophical Meditation and Religious Address to the Supreme Being," which was intended as a text-book in philosophy. This was published in London in 1784. His "Brief State of Pennsylvania," published in London, was reprinted in New York. In 1803, Bishop White published, with his own preface, a collection with the title, "The Works of William Smith, D.D., late Provost of the College and Academy of Philadelphia." He was as well known in Great Britain as in America, and several of the English Reviews, notably the *London Monthly* and the *London Critical*, published laudatory criticisms upon his productions. In spite of his defense of the proprietary claims, he was an ardent patriot; his war sermons, in 1775, being regarded as contributing greatly to the feeling that culminated so happily. His essays, contributed to *The American Magazine* with the title of "The Hermit," aided his professional labors in raising in the community the standard of literary taste.

As for magazine-writing, it is a little curious that it should have been so far behind other similar interests. Franklin, as we have seen, was a man who, devoting his energies and counsels to the cultivation of fruits, had little leisure or concern for the flowers. He started the *General Magazine and Historical Chronicle* in 1741, but it printed little that was purely literary; besides, it died within a year. This, such as it was, has the honor of being the first literary journal published in the town. In the same year Andrew Bradford started *The American Magazine*, that lived a couple of months. Sixteen years afterward it was revived by the same publisher, and had a yet shorter existence. The *Penny Post* had an irregular brief existence. It appeared in 1769 from the press of Benjamin Mecom, and in the same year appeared another *American Magazine*, by Lewis Nicola. It also died in a few months. In 1771 a publication was issued under a name which, however high sounding, could not perpetuate it beyond a few numbers,—*The Royal Spiritual Magazine, or Christian Ground Treasury;* and in 1775, *The Pennsylvania Magazine, or American Monthly Museum*, was published by Robert Aitken. The career of Dr. Smith was highly favorable to the production of a taste for literature that in time would originate and support literary journals.

Several men of considerable distinction were associated with Dr. Smith. Among them was the Rev. Ebenezer Kinnersley, who was teacher of oratory and English literature. He became most distinguished, however, for his studies and discoveries in electricity as associate with Franklin. In the Transactions of the Philosophical Society are papers from him, entitled "Experiments in Electricity." There were also Rev. Francis Allison, master of the Latin school, then vice-provost of the college, and Rev. John Ewing, who, in the charter of the University, in 1779, was made its first provost. He was a Marylander, born at East Nottingham, and was very highly cultivated not only as a divine (Presbyterian) but as a scientist, at one time being vice-president of the Philosophical Society. Besides, he was familiar with the classics and metaphysics. It was one of his delights to teach how the advance of science, instead of diminishing, enhances in reasonable minds the authority and value of the Sacred Scriptures. Among his contributions to the "Philosophical Transactions" were an "Account of the Transit of Venus," and a paper on Godfrey's quadrant. Others prominent in the office of provost were Dr. John McDowell, formerly principal of St. John's College, Maryland, Dr. John Andrews, Dr. Frederick Beasley, Bishop De Lancey (descendant of Chief Justice De Lancey), Dr. John Ludlow, Dr. Henry Vethake.

Francis Hopkinson is fully noticed in the chapter on the Bench and Bar, as he was more connected with legal and political studies than with literature. He was one of the most variously accomplished men of his time, well versed in mathematics, in chemistry, and other sciences, a wit, and considerable of a poet. Among his poems, besides "The Battle of the Kegs," were "The New Roof," "A Morning Hymn," "An Evening Hymn," "Description of a Church," "Science," "A Camp Ballad." His keen wit generally led him to take in his printed pieces the direction of satire. Of these the most noted are "The Typographical Mode of Conducting a Quarrel," "Thoughts on the Diseases of the Mind," "White-Washing," and "Modern Learning." Among his poetical pieces were "The Pretty Story," "The Prophecy," and "The Political Catechism." An excellent edition was published by Dobson in 1792, three volumes, octavo, entitled "The Miscellaneous Essays and Occasional Writings of Francis Hopkinson." Thomas I. Wharton (*Register of Pennsylvania*, September, 1830) says of him, "A poet, a wit, a chemist, a mathematician, and a judge of the Admiralty, his character was composed of a happy union of qualities and endowments commonly supposed to be discordant; and with the humor of Swift and Rabelais, he was always found on the side of virtue and social order. His publications were chiefly of a fugitive nature, and originally appeared in the magazines and newspapers."

The absence of suitable media for the public expression of literary endeavors kept down, doubtless, many of both sexes who, if they had lived sixty or

seventy-five years later, would have become widely known. In the midst of that splendid development that the legal profession had undergone, and that which grew upon political discussions, there had grown much literary taste and culture that maintained silence from the force of circumstances. Of the impression made upon foreigners by the notice of these we can form some idea from an account written by the Rev. Andrew Burnaby, vicar of Greenwich, in England, who, upon his return from a visit made to this country, published, in 1760, an account of his travels. Alluding to Philadelphia, he thus wrote: "Arts and sciences are yet in their infancy. There are some few who have discovered a taste for music and painting; and philosophy seems not only to have made a considerable progress already, but to be daily gaining ground. The Library Society is an excellent institution for propagating a taste for literature, and the college well calculated to form and cultivate it. This last institution is formed upon an admirable plan, and is by far the best school for learning throughout America. It has been chiefly raised by contributions, and its present fund is about ten thousand pounds Pennsylvania money. An account of it may be seen in Dr. Smith's (the president's) discourses. The Quakers also have an academy for instructing their youth in classical learning and practical mathematics; there are three teachers and about seventy boys in it. Besides these there are several schools in the province for the Dutch and other foreign children, and a considerable one is being erected at Germantown."

We have already alluded to Mrs. Ferguson. There were other ladies whose influence was benignant to literature in those early times, and who themselves were well known to possess talents of a high order, that only needed a more advanced state of publishing facilities to become widely known. One of these ladies was Susanna Wright, English-born, who came over with her parents when a girl. After some years spent at Philadelphia, the family removed to the banks of the Susquehanna, where they dwelt in close proximity to the Indians. The accomplishments of Miss Wright led her to make intimate acquaintance with many of the leading spirits of the province.

At that period, among other things that hindered development of literary talents to a high degree among women, besides the absence of magazines or other literary journals, was a diffidence that now fortunately no longer exists, founded upon the idea that writing and publishing of books might not be entirely consistent with the preservation of a becoming degree of feminine modesty. Though Miss Wright was familiar with several European languages and some of the sciences, and though her letters to various persons were greatly admired, yet we believe none of these were printed. The specimens of her poetry that have been seen are described as exhibiting much warmth and delicacy of feeling, and evince the gift of a devout spirit of religious faith.

Another was Hannah Griffiths, who had in her veins the blood of the Plantagenets. She was great-granddaughter, through Isaac Norris, of Thomas Lloyd, of Dolobran, who, as related in the chapter on the Bench and Bar, was a lineal descendant, through the Fair Maid of Kent, of King Edward III. Like Susannah Wright, she never married, though being of excellent social position and moving actively in that society which had become already about the most cultivated and *élite* in the whole country. She is represented as being a woman "of excellent abilities, and distinguished for the ease and accuracy with which she expressed herself both in conversation and with her pen." Her writings "were mainly devotional, or else in an elegiac strain on the death of her friends." "She was remarkable for the readiness of her wit and repartee, and for the ease and fluency of her conversation. In her a generous and lofty spirit was finely tempered by a Christian humility. She wrote a great deal, but was averse to her pieces appearing in print, which they sometimes did, though without her knowledge." Joshua Francis Fisher (*Register of Pennsylvania*, 1831)[1] says, "Several of Hannah Griffiths' pieces are evidence of talents of a superior order. They all breathe a spirit of piety and purity that commands our love, and some of them rise to a high elevation of devotional sublimity. Her versification is easy and elegant, and her poetry generally reflects with added lustre the charming traits of her exalted and polished mind." Both these ladies lived to a great age. Miss Griffiths became totally blind at last, but supported this affliction with much fortitude.

A person who was very prominent in his day in all circles was the Rev. Jacob Duché, rector of the united churches of Philadelphia, Christ and St. Peter's. He was a gentleman of excellent talents, education, and social position, and was particularly distinguished for being one of the most oratorical of the divines of the country. With his special abilities in this line, he was spoken of as a person variable and flippant in conduct and opinions, which infirmity led him into serious difficulties. He affected the *nom de plume* of "Tamoc Caspipina," formed from the initial letters of his lengthened title of rector of the two churches. His violent conduct in urging the people to resistance in the Stamp Act contests, and his alarm when he saw his advice accepted and likely to produce such dangerous results, greatly injured his standing. The list of his publications comprises the following: "Sermons," 1775; "Caspipina's Letters," Philadelphia, 1774, Bath, England, 1777; "Letter to General Washington on the Declaration of Independence," Bath, 1777; "Discourses on Various Subjects," London, 1779. The sermons of Dr. Duché were highly esteemed in England. The *London Monthly Review* praised them well. They, it said,

[1] Early Poets and Poetry of Pennsylvania.

"have great warmth and spirit, and, at times, are in the strain of our old divines."

The good effects of the University were seen in reasonable time. Stephen Watts was an ardent admirer of Beveridge, the Latin poet, and contributed to his "Epistolæ Familiaris et Alia Quædam Miscellanea." When quite young he published an "Essay on the Advantages of a Perpetual Union between Great Britain and the Colonies," which was received with much *éclat*. It was not long, however, before he left these fields, which were not remunerative. Having studied law, he removed to Louisiana, where he married the Governor's daughter and acquired a fortune. Another was Thomas Coombe, who, like Mr. Duché, was for resistance until the Declaration of Independence, and for submission afterward. Having been sent off to Virginia on account of his Tory sentiments, after remaining a while, he left for England, and never returned. He had taken orders in the Church of England, and was assistant minister at Christ Church; he translated some of Beveridge's Latin poems. In 1775 he published, in London, a poem entitled "The Peasant of Auburn; or, The Emigrant," which was afterward republished in Philadelphia by Enoch Story. It is dedicated to Goldsmith, and was apparently designed as a continuation of the poem of "The Deserted Village." Coombe takes his emigrant to the banks of the Ohio, where Indian atrocities seem to show that it would have been much better if the emigrant had not deserted Auburn, or had at least chosen some more favorable place of exile. The poem was said to have been written for the purpose of discouraging emigration to this country. At the same time was printed "The Unfortunate Lovers," and some other pieces that are quite inferior to his first production.

Philip Freneau, though not a native nor continuous resident of Philadelphia, yet had several of his works published before removal from New York thither. While a resident of New York he made the beginning of those patriotic poetical pieces that gave him reputation second to no other in that line of composition. In 1776 he made a voyage to the West Indies, where he wrote two of his poems,—"The House of Night," and "The Beauties of Santa Cruz." In 1781 he wrote (having first printed in the *Freeman's Journal*) "The Philosopher of the Forest." In 1782 he wrote, at Philadelphia, "A Short Discourse on Esquires, with a Short Narrative of His Honor, the President of the Debtors' Club." "A Journey from Philadelphia to New York by way of Burlington, *via* South Amboy," in verse, is easy and amusing. Bailey published in 1786 "The Poems of Philip Freneau, written chiefly during the late war." In 1788 was published "The Miscellaneous Works of Mr. Philip Freneau, containing his Essays and Additional Poems." In the *National Gazette*, while Freneau edited it, were satirical poems against Washington, John Adams, Knox, and others, which were ascribed to his pen.

For some time he had the superintendence of *The United States Magazine*, published by Francis Bailey. He afterward removed to New York and started *The Time-Piece and Literary Companion*, which, though evincing excellent ability, soon fell through. A restless spirit, he was wandering alone, even to a great age, from place to place. In one of such excursions near the town of Freehold in New Jersey, when eighty years of age, he perished in a snow-storm. It is reported that Lord Jeffrey said of him, "The time will come when his poetry, like that of Hudibras, will command a commentator like Gray."

One of the most promising of the young poets of Philadelphia, whose early death (at twenty-two years of age) seemed to have prevented a very brilliant career, was John Wilcocks. He was a young man of fortune, the son of a gentleman from the West Indies, who died shortly after his advent to Philadelphia. He wrote, mainly for his own entertainment, fables, satires, epigrams, etc., and in spite of the haste and carelessness apparent in their composition some of them evince talent that, if sedulously cultivated, would have produced results of much value. These pieces were published along with those of his intimate friend, John Parke, who wrote what he styled "The Lyric Works of Horace, translated into English Verse, to which are added a Number of Original Poems, by a Native of America.

"'Qui cupit optatam cursu contingere metam,
Multa tulit fecitque puer.'

"Philadelphia: Printed by Eleazer Oswald, at the Coffee-House, 1786."

These were written in compliment to several leading personages of the day, as Dr. Smith, Governor McKean, Benjamin Franklin, and others. It was a pity that such uncommonly good classical attainments should have been put to uses so unsuited.

George Mason, Jr., a writer little known, seems to have occupied his muse in graceful subjects. An epithalamium was composed in allusion to the marriage of Rachel Pemberton to Dr. James Parke, Dec. 5, 1773.

Several compositions of this period have been preserved, whose authors are unknown. Among them is one called "The Maid's Husband," found in Hazard's "Register," written about 1766, as is supposed by a lady. It possesses considerable merit.

To the poetry written by authors in the period thus far whose names are unknown may be added the following: "Serious Reflections on the Times," a poem by a minister of the gospel, published by James Chattin, 1758; "America in Tears," a pastoral eulogy on the death of George II., published by Stewart, 1761; "A Panegyric," by Strephon, published by Dunlap, 1762; "An Ode on the Glorious Successes of his Majesty's Arms and the Present Greatness of the English Nation," William Dunlap, printer, 1762; "Pennsylvania," a poem, by a student of the College

of Philadelphia, printed (1766) by Benjamin Franklin and David Hall. This poem was considered, at the time it was published, as a superior production. The theme was principally Braddock's defeat, and the efforts of the bard were intended to arouse the sons of Pennsylvania to meet the foe. "The Manners of the Times," a satire by Philadelphiensis, was printed by Dunlap in the year 1762. It is a light and an agreeable poem. Some of the hits are apparently intended to be personal.

In dramatic works, to "The Prince of Parthia," by Godfrey, there was added, in the year 1768, a piece called "The Disappointment," by Andrew Barton, which was announced for representation as an "opera" at the South Street Theatre, but which was never acted, in consequence of its personal allusions. Watson's "Annals of Philadelphia" attributes this work to Col. Thomas Forrest. Concerning the "Siege of Quebec," which was performed at the South Street Theatre in 1770, the authorship is unknown. It was written in America, but whether by an American or by a British officer, is left to conjecture.

Robert Proud

The historian of this period was Robert Proud, an English Quaker, born at Yorkshire, England, May 10, 1728. Arriving in Philadelphia in January, 1759, he taught Greek and Latin in a Quaker academy until the Revolution. Firm in his attachment to the crown, he believed that the Revolution would cause the decline of virtue and prosperity in America. He wrote his "History of Pennsylvania from 1681 till the year 1742." This work is one which evinces a great amount of study and research, and notwithstanding the frequent confusion and too great circumstantiality of details, has ever been regarded as a very important contribution to the history of the times. It was published in 1797–98, and the publication was said to have been attended with pecuniary loss to the author. Chancellor Kent says of the work, "This work is of great research, and abounds with valuable matter, but it is the most confused and tedious composition that ever tormented human patience."

The number of works published in Philadelphia before the war of the Revolution is about six hundred.

Nicholas Baker Waters, M.D., a native of Maryland, son-in-law to David Rittenhouse, published "A System of Surgery," 1790.

Samuel Brown Wylie, D.D., a native of Moylarg, County Antrim, Ireland, was pastor of the First Reformed Presbyterian Church in Philadelphia, Professor of Ancient Languages in the University of Pennsylvania, and Vice-Provost. He published (1) "The Faithful Witness of Magistracy and Ministry upon a Scriptural Basis," 1804; (2) "Covenanting," 1803; (3) "First Annual Address before the Historical Society;" (4) "Greek Grammar;" (5) "Life of Alexander McLeod, D.D." His rank among scholars and divines was very high.

James Peller Malcolm, who was a native of Philadelphia, removed to London, where he became author: (1) "An Ancient History and Modern Description of London," 1802; (2) "Excursions into the Counties of Kent and Gloucester," 1806; (3) "Anecdotes of the Manners and Customs of London during the Eighteenth Century," 1808; (4) ditto "From the Roman Invasion to the Year 1700," 1811; (5) "Miscellaneous Anecdotes," 1811; and (6) "Lives of Topographers and Antiquaries."

Dr. Franklin, in his autobiography, speaks of Charles Brockden, the conveyancer who drew the papers for the establishment of the first library. The coming of this man to Philadelphia was owing to a singular accident. While a boy in the employ of a man in London, during the reign of Charles II., he happened one day to overhear a conversation between his employer and other persons, who were plotting something treasonable against the government. The plotters, on discovering that they had been overheard, debated whether they should murder the lad or ship him off. The latter alternative was finally determined upon, and he was sent to Philadelphia. Others of the family came on when the exile had grown prosperous, and one of his nephews was destined to become our first novelist.

John Edward Harwood, comedian, came to Phila-

Digitized by Google

delphia in 1798. He was a dashing man upon the stage. While in the city, in 1800, he married a daughter of Hartman Bache,—an alliance which was not well received by the members of the family. Harwood wrote poetry. A collection of his fugitive pieces was published in 1809. Some of these are didactic, some sentimental. The following verses, from an "Ode to Indolence," will give an idea of Harwood's style:

"Goddess of Ease! whose all lethargic sway
In drowsy fetters binds the senseless soul,
Whose magic power e'en mighty seas obey,
And, touched by thee, in smoother billows roll;
At thine approach, in summer's scorching heat,
The cattle grazing on the fragrant plain
To some kind shade direct their weary feet,
T' enjoy sweet sleep beneath thy placid fane.

"Oh! take me, goddess, to thy circling arms,
And pour sweet visions o'er my languid head;
O'er every thought infuse thy magic charms,
And round my pillow all thy poppies spread.
What time the wearying sun, no longer bright,
Now paints the western sky with streaks of red;
What time the moon extends her glimmering light,
And dark'ning shades advise the tranquil bed;

"What time the shepherd's herds to quiet folds,
And, weary, haste to pen their tardy sheep;
What time 'the air a solemn stillness holds,'
And weary Nature welcomes balmy sleep.
Oh! waft me, goddess, to that peaceful shore
Where drowsy Silence lulls the quiet mind,
Where Strife's discordant voice is heard no more,
And sadd'ning thoughts a potent opiate find."

Joseph Stansbury, dealer in china and crockery-ware, in Second Street, was one of the best writers upon the Tory side. He was witty and sarcastic. In gasconade and lampoon he could scarcely have been surpassed by any author on his side at the time of the Revolution. Several of his pieces have been noted and quoted heretofore. Winthrop Sargent printed many of his poems in "Loyal Verses," published in 1860. Stansbury was a native of England, who came to Philadelphia some years before the Revolution, and was committed to prison in 1776 for singing "God Save the King!" at the City Tavern. He nevertheless remained in the city after his release, and was honored, upon the British occupation, with the appointment, by Lord Howe, of commissioner for selecting the city watch. He was elected a director of the Philadelphia Library Company in 1777. He was under arrest in 1780, and his personal property under seizure and threat of forfeiture. He was finally released upon condition that he would, at New York, use his influence to obtain the release of two American prisoners. He remained in New York while the British army had possession, when he removed to Nova Scotia. In 1785 he came back to Philadelphia, intending to re-establish himself in business; but, being warned to quit the city, and threatened with violence, he retired to New York, where he became secretary of an insurance company, and died in 1809.

Henry Archer, an Englishman, who came to Philadelphia in October, 1778, was educated at a military school in England, and, being enthusiastic in the cause of liberty, he sought to aid the patriot cause, and tendered his services as a volunteer. He was the author of "The Volunteer Boys," of which the following is a copy:

"Hence with the lover who sighs o'er his wine,
Chloes and Phyllises toasting!
Hence with the slave who will whimper and whine,
Of ardor and constancy boasting!
Hence with Love's joys,
Follies and noise—
The toast that I give is The Volunteer Boys.

"Nobles and beauties, and such common toasts,
Those who admire may drink, sir!
Fill up the glass to the volunteer hosts,
Who never from danger will shrink, sir!
Let Mirth appear,
Every heart cheer—
The toast that I give is the brave Volunteer!

"Here's to the Squire who goes to parade!
Here's to the Citizen soldier!
Here's to the Merchant who fights for his trade,
Whom danger, increasing, makes bolder!
Let Mirth appear,
Union is here—
The toast that I give is the brave Volunteer!"

Dramatic literature received much more attention after the Revolution than had previously been paid to it. At the South Street Theatre William Dunlap's comedy of "The Father; or, American Shandyism," was produced Jan. 26, 1791. From the pen of the same author was also produced, in 1798, a translation of Kotzebue's play of "The Stranger," and in the next year "Lovers' Vows." In 1800 "False Shame" and "The Wild-Goose Chase" were produced. Dunlap was principally conspicuous in translations from the German.

Various opinions have been expressed as to the ability of Joseph Dennie, the original editor of the *Portfolio*. Allibone says of him,—

"He enjoyed great reputation as a writer during his life and for some years after his decease. Patriarchs of the lean and slippered pantaloon, who perhaps composed a part of the mob of 'gentlemen who wrote with ease' about the beginning of this century, still extol the melodious cadence and liquid flow of the essays of the American Addison. We ourselves are so old-fashioned as to consider Dennie a charming writer."

But Griswold, in the "Prose Writers of America," who was a stern and an exact critic, was of a different opinion. He says,—

"The 'Lay Preacher' of Dennie and his articles in the *Portfolio* seem to me feeble and affected, though occasionally marked by considerable excellence. It was natural to overrate him, as in his time we had very few writers with whom he could be compared. For several years after the death of Brockden Brown, I believe, he was the only man in the country who made literature a profession. . . . He was a great favorite in society, and his brilliant social qualities gave him a factitious reputation as a man of letters. There is nothing in his writings deserving of reputation."

After the death of Dennie, the editorship of the *Portfolio* passed under the direction of Nicholas Biddle, who had been an occasional writer before that time. Mr. Biddle was at the time twenty-five years of age, and was son of Charles Biddle, formerly Vice-

President of Pennsylvania. He had the happiness of having received a good education, which he finished at Princeton, in 1801. He then studied law in Philadelphia for three years, and in 1804, receiving the appointment of secretary to Gen. Armstrong, minister to France, he went to that country, and resided in Europe until 1807. He was not all the time with Mr. Armstrong. He traveled in England, and while there became secretary to Mr. Monroe, then minister to England. He returned to America in 1807, and began the practice of the law, indulging in such literary amusement as brought him in connection with the *Portfolio*. Mr. Biddle wrote the concluding portion of the narrative of the American explorations of Lewis and Clarke, after the sudden death of Lewis, taking up the unfinished work by that traveler. Biddle wrote pleasantly and critically on the fine arts, was a pleasing versifier, and shone most excellently in humorous trifles, which were tasteful and amusing.

Harrison Hall assumed the publication of the *Portfolio* Jan. 1, 1816, while John E. Hall was the editor. The former kept a book-store at No. 136 Chestnut Street, while the latter had his office as a lawyer at the corner of Seventh and Sansom Streets.

John E. Hall was one of the writers for the *Portfolio* during Dennie's time. His mother, Mrs. Sarah Hall, was a daughter of the Rev. John Ewing, provost of the university, and was herself a writer for the *Portfolio*. John E. Hall was born in September, 1783. He was educated at Princeton, studied law under Joseph Hopkinson, and was admitted to the bar. He went to Maryland, practiced law in Baltimore, and during that time was elected professor of rhetoric and belles-lettres in the University of Maryland. While in that city he edited Wirt's "Letters of a British Spy," was the author of the life of Dr. John Shaw, prefixed to his poems, and wrote the "Memoirs of Anacreon," published in the *Portfolio*,—a work to which he was incited, it is said, by the approval of the poet Thomas Moore. The papers were a series of descriptions of Grecian manners and customs, purporting to have been written by Critias of Athens. Mr. Hall established in Baltimore, in 1808, the *American Law Journal*, which was subsequently transferred to Philadelphia, and published until 1817. He commenced the publication of the *Journal of Jurisprudence*, a quarterly, in 1820.

James Hall, a brother of Harrison and John E. Hall, contributed to the *Portfolio* "Letters from the West," which were written in the character of a young man traveling for amusement.

Dr. Thomas Mifflin Hall, who belonged to the same family, was also a contributor to the *Portfolio* in the shape of poetry and scientific articles.

On the 1st of January, 1824, Job Palmer published the first number of the *American Monthly Magazine*, which was edited by Dr. James McHenry. Dr. McHenry was a native of Ireland, and probably came to Philadelphia about 1820. Although he received the diploma of a physician, he was not engaged in the practice of medicine, but devoted himself to literature, and for some years was the keeper of a retail dry-goods store. His first literary work was "The Pleasures of Friendship," a poem, which was published in the early part of 1822. In June, 1824, he brought out his novel of "Halloran." He also wrote "The Wilderness," a novel; "The Spectre of the Forest," a novel; and "The Insurgent Chief," a novel. "The Pleasures of Friendship" went to a second edition in 1835. In 1839, Dr. McHenry published "The Antediluvians; or, The World Destroyed," a poem. He was a contributor to the *American Quarterly Review*, a publication which was commenced in 1837.

William Cliffton, Jr., was born in Philadelphia in 1772. He was the son of William Cliffton, blacksmith, a resident of Southwark, who was a member of the Society of Friends. William the younger was of delicate constitution; and although intended, perhaps, for his father's calling, he was unable to follow it. He found consolation in literature. His father was treasurer of the commissioners of Southwark. Some political reason, perhaps, led the son to the publication of a satirical poem called "The Group," which was pointed at some of the prominent members of the board. The commissioners highly resented this publication; and being unable at the time to discover the name of the author, directed the prosecution of Stephens, the publisher, for libel. This poem was published in 1793. Cliffton afterward published "A Rhapsody on the Times," in Hudibrastic measure. He commenced a poem called "The Chimeriad," which was unfinished. He wrote "An Epistle to Gifford," the author of "The Baviad" and "The Maviad," which was considered elegant. His poems were collected and published by J. W. Fenno and G. & R. Waite, at New York, in 1800. Cliffton died on Dec. 17, 1799, at the early age of twenty-seven. As a specimen of the style of Cliffton, the opening of the "Epistle to Gifford" may be quoted:

> "In these cold shades, beneath these shifting skies,
> Where Fancy sickens and where Genius dies—
> Where few and feeble are the Muse's strains,
> And no fine frenzy riots in the veins—
> There still are found a few to whom belong
> The fire of Virtue and the soul of Song,
> Whose kindling ardor still can wake the strings
> When Learning triumphs and when Gifford sings.
> To thee, the lowliest bard his tribute pays—
> His little wild-flower to thy wreath conveys;
> Pleased if permitted round thy name to bloom—
> To boast one effort rescued from the tomb!
>
> "While this delirious age enchanted seems
> With hectic fancy, desultory dreams—
> While wearing fast away is every trace
> Of Grecian vigor and of Roman grace—
> With fond delight we yet our bard behold,
> As Horace polished and as Persius bold;
> Reclaim the art, assert the muse divine,
> And drive obtrusive Dullness from the shrine!

Since that great day which saw the tablet rise
A thinking block, and whisper to the eyes,
No time has been that touched the muse so near,
No age when learning had so much to fear
As now, when *love-lorn ladies light verse frame*,
And every rebus-weaver talks of fame!"

Charles Brockden Brown was born in Philadelphia, Jan. 17, 1771, and was a nephew of Charles Brockden, who for over sixty years was recorder of deeds and master of the rolls at Philadelphia. Brown was educated at the school of Robert Proud, the first historian of Pennsylvania, and studied law in the office of James Wilson. His first literary efforts were a series of essays under the title of "The Rhapsodist," published in the *Columbian Magazine*. In 1797, he published "The Dialogue of Alcuin," in which the topic of marriage was discussed. In 1798 he commenced a series of papers in Waters' magazine,[1] entitled "The Man at Home." In the second volume of that magazine he commenced the novel of "Arthur Mervyn," which was founded upon incidents of the yellow fever of 1793. Before that time he had published, in New York, "Wieland; or, The Transformation." "Ormond; or, The Secret Witness," was published in 1799. "Edgar Huntley; or, The Memoirs of a Sleep-Walker," was published in 1801. Brown was the publisher of the *American Magazine*, commenced in 1799, which lasted about a year. Several novels followed, with other literary work. His style was clear and nervous, "with little ornament, free from affectation, and indicated a singular sincerity and depth of feeling." He exceeded in narrative which was eloquent and exciting. He died in 1810. His novels were nearly all reprinted in England, and were well received. He never realized much from his talent. Writing to his brother, James Brown, in 1800, he said,—

"Book-making, as you will observe, is the dullest of all trades, and the most any American can look for in his native country is to be reimbursed in his unavoidable expenses. . . . The salability of my works will much depend upon their popularity in England—whither Caritat has carried a considerable number of 'Wieland,' 'Ormond,' and 'Mervyn.'"

C. B. Brown

Dr. Benjamin Rush, chiefly known as a medical writer and lecturer, wrote, in addition to scientific essays, upon political and literary subjects. In 1798 a volume was published from his pen entitled "Essays, —Literary, Moral, and Philosophical." They were principally papers which had appeared in the *Museum* and *Columbian Magazine*. He wrote "An Account of the Life of Christopher Ludwick, the Baker-General of the United States Army during the Revolutionary War." This was published in Poulson's *Advertiser* in 1801. It was republished some years ago by the Philadelphia Society for the Establishment and Support of Charity Schools. His "Life of Anthony Benezet" is a pleasant specimen of writing. Dr. Allibone enumerates twenty-six topics upon which Rush wrote more or less copiously. He was a busy man, and, whether in his profession or in the field of literature, gave himself but little rest.

Rev. John Blair Linn, who in time became an assistant of Dr. John Ewing in the pastorship of the First Presbyterian Church, had previously been intended for the profession of the law, and had studied for that purpose. He had some literary taste. He was the author of "Bourrille Castle; or, The Gallic Orphan," a play, acted in New York, and published in 1797. He was the author of two volumes of miscellany and verse, which were published anonymously. He wrote a poem on "The Death of Washington," in 1800; "The Powers of Genius," a poem, in the same year; and a poem in blank verse, called "Valerian," which was published in 1805, after his death, with a biography by his brother-in-law, Charles Brockden Brown.

A very large number of authors appeared between 1780 and 1820. The *Portfolio*, *Literary Magazine*, *Repository*, *Analectic Magazine*, and other periodicals invited cordially the literary talent of the city to exhibit itself in their pages. Thomas Brannigan was an industrious writer on subjects chiefly religious. Some of his publications were the following: "An Essay on the Oppression of the Exiled Sons of Africa," and "A Letter to Napoleon Bonaparte;" "Serious Remonstrances on the Slave Trade, with a Plan of Colonizing Free Negroes," 1805; "The

[1] *The Weekly Magazine*, by James Waters. It ran about a year.

Digitized by Google

Penitential Tyrant, or Slave-Trader Reformed," a pathetic poem, 1807; "Avenia, a Tragical Poem on the Oppression of the Human Species and the Infringement of the Rights of Men, with Notes Explanatory and Miscellaneous" (written in imitation of Homer's Iliad), 1805; "Political and Theological Disquisitions on the Signs of the Times," 1807; "The Curse of Christendom, or Bigotry and Bitterness Exposed," 1808; "The Excellency of the Female Character Vindicated," 1808; "The Beauties of Philanthropy, or the Moral Likeness of God delineated in Miniature," 1808; "The Excellency of Virtue Contrasted with the Deformity of Vice," 1808; "The Pleasures of Death Contrasted;" "A Concise View of the Various Religious Denominations of the United States, with Notes;" "Miseries of Human Life," 1809; "A Beam of Light in a Dark, Degenerate, and Deluded Age," 1814; "The Charm of Benevolence, or Patriotic Mentor," 1814; "The Celestial Comforter, or a Collection of Scripture Promises," 1814; "Right of God written for the Benefit of Man, or the Impartiality of Jehovah Vindicated," 1815; "The Pleasures of Contemplation, or a Justification of the Ways of God to Man." Probably Brannigan was a native of Ireland. His name appears in the directory for 1810, the business given being that of an accountant; residence No. 167 Coates Street. In 1811 he is at the same number as a publisher. In 1816, after his name, is added, "author of 'Avenia,' No. 363 North Third Street." In 1824 he had become a collector. Of his writings it may be said that, though they do not show marks of genius, they are respectable. As a poem, "Avenia" will take rank with most productions of the kind. The diction is pure, and the sentiments are highly moral.

In 1803 was published in London "Meditations written during the Prevalence of the Yellow Fever in Philadelphia, which proved Fatal to Upward of Four Thousand of its Inhabitants. By Joshua Cresson, of Philadelphia, of the People called Quakers, and one of the Latest Victims of the Disease.

> "Good when He gives, supremely good,
> Not less when He denies;
> Even crosses from His sovereign hand
> Are blessings in disguise."

Mr. Cresson commenced these "Meditations" on the 16th of September, 1798, and continued them until the 11th of October. He was attacked with the disease on the 15th of that month, and died on the 21st. The manuscript was, after his death, sent to London, and, attracting great attention among the Quakers, was printed.

Dr. Thomas Ruston, who was probably an American by birth, as he graduated in Princeton, N. J., as Bachelor of Arts, was a resident of Philadelphia as early as 1791, at which time he lived at No. 321 High Street, and practiced medicine. He had studied that science at the University of Edinburgh, where he received his degree as M.D. About the year 1794 he built a very large and elegant mansion for that time, on the lot at the northwest corner of Eighth and Chestnut Streets, which occupied the western part of the ground, reserving considerable space along Chestnut Street and along Eighth to Grape Street for the purposes of a garden. He resided there until about 1797 or 1798, when, in consequence of being involved by the cost of the building, he was sold out by the sheriff. In 1804 he published a book entitled "A Collection of Facts, etc., on the Yellow Fever, in a Serial of Letters addressed to the Inhabitants of the United States, by Thomas Ruston, M.D., of the University of Edinburgh and of the Royal Incorporated Medical Society; A.B. of the College of Nassau Hall of Princeton, in the State of New Jersey; Member of the American Philosophical Society of Philadelphia, and Honorary Member of the Royal Society of Friends of their Country at Valencia, in Spain. *Omni tulit punctum qui miscuit utile dulce.*" This volume was dedicated to Mrs. E. Powel, of Powelton. The most remarkable thing connected with it was that, after having exhausted his matter of an argumentative and statistical nature in the letters, Dr. Ruston winds up his work with a long poem which is entitled "A Tolerably Picturesque Poetical Description of the Horrors of the Year 1798," a composition peculiar, at all events, if not highly poetical.

Gen. Jonathan Williams, who was superintendent of West Point Academy, member of Congress from Philadelphia, and resident at one time at Mount Pleasant (now in the Park), published, in 1799, "A Memoir of the Thermometer in Navigation;" "Elements of Fortification," 1801; "Kosciusko's Manœuvres for Horse Artillery," 1808.

Joseph Sansom, in 1805, published, in two volumes, "Letters from Europe during a Tour through Switzerland and Italy in the Years 1801 and 1802." In 1817 he published "Sketches of Lower Canada," which were considered of sufficient importance and interest to be published in Sir Robert Phillips' collection of travels. Sansom was a merchant, and was in business with his brother Samuel. He was a member of the Society of Friends.

Harriet Fenno, a daughter of John Ward Fenno, editor of the *United States Gazette*, wrote poetry with taste and feeling, her contributions appearing in the *Portfolio* under the signature of "Violetta." Among her best productions was an address to Mr. Malbone on his painting a miniature likeness of a friend.

Dr. Nathaniel Chapman, more distinguished as a physician, yet devoted some of his time to literature. He was a native of Fairfax County, Va., and was born May 28, 1780. It is said that he imitated some of the early efforts of Pope, and paraphrased the "Odes of Horace" when he was not more than eight years old. He became a contributor to the *Portfolio*, under the signature of "Falkland," while yet a boy. In 1807-8 he published a work entitled "Select

Speeches," forensic and parliamentary, in five volumes. It was a compilation embracing the most celebrated oratorical efforts of famous men. The work of Dr. Chapman consisted not so much in the arrangement of the speeches as in the illustrative remarks and criticisms upon them. These speeches were followed by a collection made by Stephen Cullen Carpenter, published in two volumes in 1815, entitled "Select American Speeches." Dr. Chapman's great activity as a medical writer, together with his numerous professional cares, did not allow him to devote much time to lighter literature.

Tench Coxe devoted his attention principally to subjects of political economy. He was a son of William Coxe, of Philadelphia, and Mary, his wife, who was daughter of Tench Francis, attorney-general of Pennsylvania before the Revolution. Tench Coxe was born in Philadelphia, May 22, 1755, and died July 17, 1824. He was educated at the University of Pennsylvania, was brought up to business, and became partner in the mercantile firm of Coxe, Furman & Coxe. He held various public offices. He was a member of the Continental Congress, assistant secretary of the treasury, commissioner of revenue, and purveyor of the public supplies of the United States. He wrote frequently in pamphlets on public questions. He was author of an "Address on Manufactures," "An Inquiry into the Commercial System of the United States," in 1787; "A Brief Examination on Lord Sheffield's Observations on the Commerce of the United States, with two Supplementary Notes on American Manufactures," in 1792; "A View of the United States of America," in 1794; "Thoughts on Naval Power and the Encouragement of Commerce and Manufactures," in 1806; "A Statement of the Arts and Manufactures of the United States for the year 1810;" "Memoir on the Cultivation, Trade, and Manufacture of Cotton," in 1807; "A Memoir on the Navigation Act," in 1809; and papers on other subjects of public importance.

Charles J. Ingersoll will be found fully noticed in the chapter on the Bench and Bar. He was a man of great versatility of talent, and, in the midst of professional studies and pursuits, devoted a considerable portion of his time to letters. While studying for the bar he wrote the tragedy of "Edwy and Elgiva," which was played at the Chestnut Street Theatre on the 2d of April, 1801. He also published, in 1800, in the *Portfolio*, "Chiomara," a poem. In 1808 he published a pamphlet entitled "The Rights and Wrongs, Power and Policy, of the United States of America," which was in defense of the commercial policy of Mr. Jefferson. In 1809 he published an anonymous work entitled "Inchiquin, the Jesuit's Letters; being a fragment of a private correspondence, accidentally discovered in Europe, containing a favorable view of the manners, literature, and state of society in the United States, and a refutation of many of the aspersions cast upon this country by former residents and tourists. By some unknown foreigner." "Inchiquin" represents a variety of description, criticism, narrative, and reflection, rendered agreeable by a vein of ridicule and humor. Literature and politics were particularly attended to. This work was reviewed in the *London Quarterly*, and a reply to that article was made by James K. Paulding. Ingersoll contributed to various newspapers, among them the *Democratic Press* and the *National Intelligencer*, of Washington, in relation to the controversy with England out of which originated the war of 1812. Several of his speeches on the war, while a member of Congress, were published. In 1823 he delivered an address before the American Philosophical Society on "The Influence of America on the Mind." It was republished in England. His latest work was "A Historical Sketch of the Second War between the United States of America and Great Britain," in four volumes. It was published between 1845 and 1852. He died in 1862.

His brother, Joseph Reed Ingersoll, a distinguished lawyer, also mentioned in the chapter referred to, though less prominent in literature than his distinguished brother, yet contributed occasionally to it. He translated the treatise of Roccus, "De Navibus et Nauta." His speech before the Phi Beta Kappa Society of Bowdoin College, on "The Advantages of Science and Literature," and other similar discourses, were highly praised on their production. Another

Digitized by Google

brother, Edward Ingersoll, wrote for the *Portfolio* a series of poems entitled "Horace in Philadelphia," and contributed articles on political subjects to Walsh's *Gazette*.

Condy Raguet, who was born in Philadelphia Jan. 28, 1784, graduated at the University of Pennsylvania and studied law, but gave up that pursuit, and, entering a counting-house, was sent at the age of twenty years to San Domingo as supercargo of a vessel. In 1805 he published "A Short Account of San Domingo, and a Circumstantial Account of the Massacre there." He corresponded with the *Portfolio*, and a letter of his, written in 1810, will be found in volume vi. of that periodical. He wrote "an account of the operations of the volunteers on the Delaware" after the return of the Advance Brigade in 1814. In these operations he was captain of a company of volunteers, and was promoted colonel before the troops returned. Mr. Raguet's thoughts were directed in the latter portion of his life to subjects of finance and political economy. He was the author of "An Inquiry into the Causes of the Present State of the Circulating Medium of the United States," published in 1815.

Zebulon Montgomery Pike, a native of New Jersey, who was employed in the government survey of Louisiana Territory in 1805, published in Philadelphia, in 1810, an "Account of Expeditions to the Sources of the Mississippi and through the western parts of Louisiana, from 1805 to 1807, and a tour through the interior parts of New Spain when conducted through those Provinces by order of the Captain General, in the year 1807." This was printed in 1810. On the breaking out of the war with England, Pike received a colonel's command. He was next year made brigadier-general, and was mortally wounded during the attack on York, Upper Canada, on the 28th of April, 1813.

Alexander Wilson, the ornithologist, performed his literary work in the United States almost entirely in Philadelphia. He undertook, in 1804, a pedestrian tour to the Falls of Niagara, in company with two friends, one result of which was the poem, "The Foresters," published in the *Portfolio*, which describes a journey in October through Pennsylvania and across the Alleghanies.

In 1806, William Bradford engaged Wilson to superintend the publication of "Rees' Encyclopedia." The salary was liberal, and enabled him to give up the drudgery of teaching, and to urge upon Bradford the publication of the "Ornithology."

Wilson wrote "The Solitary Tutor," published in the *Literary Magazine* of Charles Brockden Brown; an oration on "The Power and Value of National Liberty," 1801; a song called "Jefferson and Liberty," and several pieces printed in the *Analectic Magazine*, published by Moses Thomas. In 1810 he wrote "The Pilgrim, a Poem on a Voyage down the Ohio River." The "Ornithology" has attracted the praise of scholars and men of science in all parts of the world, while Wilson's energy has been frequently commended. Lord Brougham said of him that he had "penetrated through the vast territories of the United States with an enthusiasm never excelled." Cuvier declared that his "History of the Birds of the United States" equaled in elegance the most beautiful European works. *Blackwood's Magazine*, speaking of his style, said, "By the mere force of native genius and of delight in nature he became, without knowing it, a great and good writer." The "Encyclopedia Britannica," eighth edition, said, "With regard to the literary merit of his 'American Ornithology,' passages occur in the prefaces and descriptions which, for elegance of language, graceful ease, and graphic power, can scarcely be surpassed."

George Ord, the naturalist, who was born in Philadelphia in 1781, was a warm friend of Wilson, and after the latter died, added a supplement to his ornithological works. He also contributed a biography of Alexander Wilson, which is the source from which almost everything that is known of that child of genius is derived. Ord took a warm interest in the life of his friend, and his biography is considered an elegant and interesting memoir. Mr. Ord also wrote memoirs of Charles Alexander Le Sueur and of Thomas Say. He became president of the Academy of Natural Sciences, and held that dignified post until his death in 1866.

A curious composition published in 1801 by R. H. Hall was "The Powers of Chemistry in Relation to Things Visible and Invisible; or, a Walk through the Laboratory of the Skies through the Indulgence of the Goddess of Science. Dedicated to the Faculty of Pennsylvania. By Isaac Abrahams." "Many shall run to and fro, and knowledge shall increase." In the copy in the Philadelphia Library, which belonged formerly to James Cox, the artist, it is written that the composition was by —— Austin. It was dedicated to Professor Wood, of the Chemical Society.

Thomas Dobson, bookseller and publisher, was the author of "Letters on the Existence and Character of the Deity, and on the Moral State of Man;" "Thoughts on the Scriptural Account of Faith in Jesus and Life through His Name," 1807; "Thoughts on Mankind," 1811.

Roberts Vaux was an active citizen, and wrote frequently upon subjects of public interest and philanthropy. He was born at Philadelphia on the 21st of January, 1786, and died in 1836. Between 1809 and 1825 he published the following: "Eulogium on Benjamin Ridgway Smith," 1809; "Memoirs of the Lives of Benjamin Lay and Ralph Sandiford," 1815; "Memoirs of the Life of Anthony Benezet;" "Address before the Philadelphia Society for the Promotion of Agriculture," 1825.

Jacob Rush was a brother of Dr. Benjamin Rush. He was born in 1746, and graduated at Princeton College in 1765. He was president judge of the Court of Common Pleas at Philadelphia from 1806 until 1820.

Although he was much engaged by his legal and judicial duties, he found time to indulge in authorship on other subjects. He was the author of "Charges on Moral and Religious Subjects," published in 1803; "The Character of Christ," 1806; "Christian Baptism," 1819.

Rebecca Rush, daughter of Judge Rush, wrote "Kelsey," a novel, by a lady of Pennsylvania. This book was published by Bradford & Inskeep in 1812. They gave Miss Rush one hundred dollars for the manuscript.

Mordecai M. Noah, born in Philadelphia, July 19, 1785, was apprenticed to a mechanical business, which, not liking, he abandoned and engaged in the study of the law, but in which he did not long persevere. He removed to Charleston, where he engaged in politics, but came back to Philadelphia before the year 1810, and established himself as a merchant at No. 41 North Fourth Street. He remained in Philadelphia until 1813, and during that time obtained the title of "major," which he held the remainder of his life. He received it in an election for militia officers, which, as he afterward told with glee, was attended only by himself and two other persons. In 1813 he went to Morocco as United States consul, and was taken prisoner by a British frigate. After his return to the United States he published a volume of travels in England, France, Spain, and the Barbary States. In New York he edited the *National Advocate* until 1826, when he established the *New York Enquirer* (subsequently the *New York Courier and Enquirer*). Noah was also connected with the following New York newspapers: *Evening Star*, 1834; *Union*, 1842; and the *Sunday Times and Messenger*. In a letter written to William Dunlap, in 1832, Noah relates some of his adventures in Philadelphia, particularly in relation to theatrical affairs. He was a member of a Thespian company which performed in the old South Street Theatre, together with George Helmbold, afterward editor of the *Tickler*. He was a regular attendant at the Chestnut Street Theatre, and wrote a melodrama called "The Fortress of Sorrento," which was never acted; and "Paul and Alexis; or, the Orphans of the Rhine," performed at Charleston, and afterward called "The Wandering Boys." He wrote for an actress "She Would be a Soldier; or, the Battle of Chippewa." His subsequent plays were "Marion; or, the Hero of Lake George;" "The Grecian Captive," and "The Siege of Tripoli."

Robert Walsh, a native of the city of Baltimore, was born in 1784, and was educated at the Catholic College at Baltimore and the Jesuit College at Georgetown, D.C. He went to Europe, and remained abroad until about 1809, having studied law in the meanwhile with Robert Goodloe Harper. He came to Philadelphia toward the beginning of the year 1810, and was admitted to the bar on the 7th of April of that year. He intended to devote himself to the practice of the law; but deafness, which was increasing upon him, obliged him to withdraw from that pursuit, and he returned to literature. He commenced to write for the *Portfolio*. In December, 1809, he published "A Letter on the Genius and Disposition of the French Government. Including a View of the Taxation of the French Empire. By an American recently returned from Europe." This pamphlet was published in Philadelphia, in Baltimore, and in London. In the latter city the "Letter" reached a twelfth edition. In 1811, Mr. Walsh commenced the editorship of the "American Review of History and Politics." In 1813 he published "Correspondence Respecting Russia," between himself and Robert Goodloe Harper, and "An Essay on the Future State of Europe." In 1817 he was editor of the *American Register*. In 1819 was published his most important work, "An Appeal from the Judgments of Great Britain respecting the United States of America. Part I. Containing a Historical Outline of their Merits and Wrongs, and Strictures on the Calumnies of British Writers." This book went through two editions in America, and was twice reprinted in London, being the object of extensive criticism. The Legislature of Pennsylvania passed a vote of thanks to Mr. Walsh, and resolved that copies should be purchased for its members. In 1821, Mr. Walsh became editor of the *National Gazette*, which he continued to conduct until 1837. In the mean time he did other literary work. He was editor of the *Museum of Foreign Literature and Science*, which was established in 1822. He contributed to Delaplaine's *Repository* some of the biographical notices, among which was one on Benjamin Franklin.

William Duane withdrew from the *Aurora* newspaper in 1822, went to South America, and traveled through the new republics in that portion of the world. He embodied an account of his observations in "A Visit to Colombia," 1822–23, which was published in 1826. Mr. Duane found some leisure amid the distractions of partisan politics to employ his pen upon useful topics. He wrote a pamphlet in 1803, entitled "The Mississippi Question," and in 1811 "An Epitome of the Arts and Sciences." Having from an early period been connected with the military organizations of the city, he paid some attention to tactics,—his interest in which was increased by important appointments, one of which was lieutenant-colonel of rifles, conferred by Jefferson in 1808, and the other adjutant-general, with the rank of colonel, in 1813. His military works were: "A Military Dictionary," 1810; "Handbook for Riflemen," 1813; "Handbook for Infantry," 1813; "American Military Library," 1819. Mr. Duane was appointed prothonotary of the Supreme Court, April 23, 1829, and held that office up to the time of his death, Nov. 24, 1835.

William J. Duane, a son of the above, was born at Clonmel, Ireland, on the 9th of May, 1780, and as-

sisted his father, who was a reporter of Parliamentary debates for the *General Advertiser* at London, and was brought by the latter to America. He had some knowledge of the printing trade, and was employed in his seventeenth year in the office of the *True American*, then published by Samuel F. Bradford. He afterward became a clerk in the office of the *Aurora*, when his father joined that establishment. He married Deborah Bache, the sixth child and third daughter of Richard and Sarah Bache, and granddaughter of Benjamin Franklin, on the last day of the year 1805. His mother-in-law, Margaret Hartman, was the widow of Benjamin Franklin Bache, and was married a second time to William Duane, father of William J. Duane.

Benjamin F. Bache, a grandson of Franklin, was brother to the wife of William J. Duane. The latter became a paper merchant, but subsequently studied law, and was admitted to the bar in June, 1815, his studies having been conducted in the office of Joseph Hopkinson. Mr. Duane wrote "The Law of Nations Investigated in a Popular Manner, Addressed to the Farmers of the United States," 1809; "Letters to the People of Pennsylvania on Internal Improvements," 1811; "Observations on the Importance of Improving the Navigation of the River Schuylkill, for the Purpose of Connecting it with the Susquehanna," 1818.

Samuel Ewing was a son of Rev. Dr. John Ewing, for many years pastor of the First Presbyterian Church, and provost of the University of Pennsylvania. He studied at the University, and was intended for the business of a merchant, being placed in the counting-house of John Swanwick. When that gentleman failed Mr. Ewing took one voyage as a supercargo. He subsequently studied law in the office of William Lewis, and was admitted to the bar in 1800. An acquaintance with Joseph Dennie induced him to become one of the correspondents of the *Portfolio*. He wrote various papers under the signature of "Jacques." Among his productions were "Reflections in Solitude," in blank verse. In 1809 he projected a monthly miscellany entitled *Select Reviews and Spirit of the Foreign Magazines*, which was kept up for three years. Subsequently the demands of his profession withdrew Mr. Ewing from the pursuits of literature, and he enjoyed a good practice. He died on the 8th of February, 1825, aged forty-nine years.

A pleasing example of the humor and gayety of Ewing is to be found in the "Mammoth Feast," written in 1802, in reference to the collation which Rembrandt Peale and twelve other gentlemen partook of within the breast of the skeleton of the mammoth, which he was about to take to Europe for exhibition.

Rev. Dr. James Patriot Wilson, of the First Presbyterian Church, published, in 1810, "Lectures on some of the Parables and Historical Passages in the New Testament," "Easy Introduction to Hebrew" (1812), "Essay on Grammar" (1817). He edited "Sermons of Rev. John Ewing, with a Life," published at Easton, in 1812, and "Ridgley's Body of Divinity, with Notes" (1816).

In 1810 was published "Moral and Political Truth; or, Reflections Suggested by Reading History and Biography. A Poem. By Jacob Franklin Heston." This he dedicated to Thomas Jefferson.

John Davis, an Englishman, came to America about 1799, and traveled chiefly on foot. He published "Travels of Four and a Half Years in the United States," at London, in 1803, and an abridgment was published in 1817. Davis settled down in Philadelphia as keeper of a juvenile book-store in 1804.

Rev. Dr. William White, bishop of the Protestant Episcopal Church, published "Lectures on the Catechism" (1813), "Comparative View of the Controversy between the Calvinists and Arminians," two volumes (1817), "Memoirs of the Protestant Episcopal Church in the United States of America" (1820), with a continuation issued in New York in 1835,—a valuable contribution to church history.

Dr. James Abercrombie published in 1812 "The Mourner Comforted: A Selection of Extracts Consolatory on the Death of Friends. From Writings of the most noted Divines and Others; with Prayers suited to the various instances of Mortality." He proposed, before the breaking out of the war with Great Britain, to publish a complete edition of the works of Dr. Samuel Johnson by subscription. The project, which was suspended by the events of the war, was revived in 1815.

Jesse Kersey, a preacher of the Society of Friends, published in 1814 "A Treatise on the Fundamental Doctrines of the Christian Religion; in which are Illustrated the Profession, Ministry, and Faith of the Society of Friends."

John Watson published in 1810 "Observations on the Customary Use of Spirituous Liquors. Particularly Addressed to the Inhabitants of Pennsylvania."

In 1808, William Christie published "A Dissertation on the Unity of God and the Membership of Christ."

John Parrish published in 1806 "Remarks on the Slavery of the Black People, to the Citizens of the United States."

In 1810, Thomas S. Manning, printer, at No. 148 South Fourth Street, printed a serial publication entitled "The Savage. By Piomingo, Head Man and Warrior of the Muscogulgee Nation." These papers, which were mostly didactic, were written by John Robinson, a native of the Holston River settlements in Washington County, Va., where he was born about the year 1795.

Clement C. Biddle was a son of Col. Clement Biddle, and was born in Philadelphia on October 24, 1784. He received his education at the University

of Pennsylvania, then under the superintendence of Rev. James Davidson. His literary work was confined to the editing of a treatise on political economy by John Baptiste Say, which had been translated into English. Mr. Biddle added a translation of the introductory essay and notes. He also wrote in the newspapers on political subjects and on political economy.

Alexander Graydon, a native of Bristol, Bucks Co., where he was born April 10, 1752, was a nephew of Dr. John de Normandie. He came to Philadelphia when young, was educated principally at the Quaker school, and studied law, but he was not admitted to the bar. He volunteered in the American army at the outbreak of the Revolution, and served until the capture of Fort Washington, on Long Island, where he was taken prisoner, being captain of a company. Graydon is the author of one of the most delightful books connected with our early history. It was called "Memoirs of a Life Chiefly Passed in Pennsylvania within the Last Sixty Years; with Casual Remarks upon the General Occurrences, Character, and Spirit of that Eventful Period. Harrisburg. Published 1811." Graydon's descriptions of life in Philadelphia before the Revolution, and of the noted persons of whom he had knowledge, are lively and agreeable. He was a frequent contributor, after the year 1800, to the *Portfolio*, in a series of papers entitled "Notes of a Desultory Reader," which are criticisms upon the works of favorite authors. He was a highly cultivated man, and wrote easily and delightfully. One of his contributions to the *Portfolio* is a translation of the Latin epigram,—

> "Avulsa e ramo, frons o miseranda, viventi,
> Marcida quo vadis?—Quo vadam, nescio—Quercum
> Maternum columenque meum stravere procellæ.
> Inde mihi illudit Zephyrus, Boreasve; vagamque
> Montibus ad valles, sylvis me volvit ad agros:
> Nec contra nitor. Quo tendunt omnia tendo;
> Quo fertur pariter folium lauri rosæque."

The translation runs thus:

> "Torn from thy maturing branch, poor fallen leaf,
> What hapless lot awaits thy withering form?
> Alas! I know not, but I mourn in chief,
> Thy parent oak laid prostrate by the storm.
>
> "Hence doomed the sport of every vagrant breeze,
> I'm hurried up the mount, then down again;
> One while I mildew under shading trees,
> Now, whirled afield, I bleach upon the plain.
>
> "In short, I go where all things earthly tend,
> And unresisting meet my wasting foes,
> For oaks and bramble have one common end,
> The foliage of the laurel and the rose."

These verses, we think, evinced uncommon talent.

Peter Markoe published a volume of miscellaneous poems in 1787; "The Times," a poem, in 1788; "The Patriot Chief," a tragedy; and "Reconciliation," an opera. He was a son of John Markoe, a native of the Danish West Indies, who was first captain of the Philadelphia Troop of Light-Horse. Peter Markoe was supposed to have been the author of "The Algerine Spy." He died in 1792.

Joseph Hutton published, in 1812, "Leisure Hours; or, Poetic Effusions." He was the author of several plays,—"Cuffy and Duffy," "The School for Prodigals," "Modern Honor," "The Wounded Hussar," "The Orphan of Prague," "Fashionable Follies." He was for some time an actor, but for the greater part of his life was more quietly engaged in the performance of the duties of a school-master. He kept his school in Lombard Street, near Third, in 1816.

Thomas Clark, in 1813–14, published "Sketches of the Naval History of the United States from the Commencement of the Revolution up to the Present Time." This work was the foundation on which J. Fenimore Cooper wrote his "Naval History." Clark was a native of Pennsylvania. In 1813 he was appointed a lieutenant of artillery in the regular army, and attained the rank of captain of topographical engineers. He left the army when the war of 1812 closed.

A treatise entitled "The Philanthropist; or, Institutions of Benevolence," by Dr. Thomas D. Mitchell, was published by Isaac Pierce in 1813. He suggested a plan for the establishment of free schools, advocated improvements in the management of the almshouse and hospitals, provisions for disabled soldiers, and the establishment of a national asylum for soldiers, sailors, and their orphan children, and, in view of the diseases of infants and the mortality of children from summer sicknesses, proposed that means should be taken to insure to young children the benefit of fresh air in summer-time. He thought that the City Hospital, in Coates Street, might be used for that purpose. This essay probably led to the foundation of "The Society for Securing the Benefits of Fresh Air to Children in Summer."

John Sanderson, who was born in Carlisle in 1783, studied the classics with a clergyman living some six or seven miles from his home, and in 1806 came to Philadelphia to study law. His means were straitened, and, not being able to support himself while following his studies, he was compelled by necessity to give up his intention, and he became a teacher in Clermont Seminary, which was established near Frankford, the principal of which was John T. Carré. Afterward Sanderson married a daughter of Mr. Carré's, and became a partner in the management of the school. He was a contributor to the *Portfolio*. In 1820 was published at Philadelphia "The Lives of the Signers of the Declaration of Independence," which was the first attempt to combine their biographies. The first and second volumes of this book were written by John Sanderson. The remaining seven volumes are attributed to Robert Waln, Jr., Henry D. Gilpin, and others. Mr. Sanderson published in 1826 "Remarks on the Plan of a College to Exclude the Latin and Greek Languages." His views were adverse to the establishment of such an institution. After the death of Stephen Girard he advocated, in accordance with those opinions, the

introduction of the languages in the course of studies at Girard College. These arguments were enforced through the medium of the press in a series of letters signed "Roberjot." He went to Paris in 1835, and remained there one year. His impressions were given to the world in "Sketches of Paris, in Familiar Letters to his Friends, by an American Gentleman," two volumes, 1838; "The American in Paris," two volumes, 1838. These are light, agreeable, and abounding in wit and humor. Theodore Hook suggested the publication of this book in England. Jules Janin translated it into French, and it was published in 1843. He commenced a work to be entitled "The American in Paris," portions of which were published in the *Knickerbocker Magazine*. He was made professor of Greek and Latin in the Philadelphia High School on his return from Europe in 1836, and died in 1844.

Elias Boudinot, who had been member of Congress and director of the mint, republished, in 1801, "The Age of Revelation, or the Age of Reason shown to be an Age of Infidelity," which had been originally published in 1790; "The Second Advent of the Messiah," 1815; and "A Star in the West, or an humble attempt to discover the long-lost Ten Tribes of Israel preparatory to their return to their beloved city, Jerusalem." The last-named was published at Trenton, in 1816, and the object was to show that the Indians were descendants of the ten tribes.

Alexander James Dallas devoted his pen principally to the science of the law, statutory and adjudicated. Among his miscellaneous productions were: "Features of Jay's Treaty," 1795; "Speeches on the Trial of Blount and the Impeachment of the Judge;" "Exposition of the Character and Causes of the Late War," 1815. Mr. Dallas, at his death, in 1817, left unpublished some unfinished sketches of a history of Pennsylvania.

Dr. Robert Hare, who was born in Philadelphia, Jan. 17, 1781, devoted the best part of his life to science, and wrote frequently. He published, in 1810, a pamphlet entitled "A Brief Review of the Policy and Resources of the United States."

Dr. James Mease edited and revised the fourteen volumes of a compilation entitled "The Wonders of Nature and Art," by Rev. Thomas Smith, 1806. He published "A Geographical Account of the United States," 1807; "Picture of Philadelphia," 1810; "Description of Some of the Medals struck in North America," 1821.

John Mellish was a native of Scotland, and came to Philadelphia in 1809, dying December 30, 1822, aged fifty-two years. He was author of "Travels in the United States in 1806-'7-'9-'10-'11," which was published in two volumes in 1812. He wrote several pamphlets connected with his business of engraver of maps. Among these were: "A Description of the Roads," etc., 1814; "Travellers' Directory," 1815; maps of Pennsylvania and the United States, and "A Geographical Description of the United States," 1816; "Universal School Geography and Atlas," 1818; "Necessity of Protecting Manufactures," 1818; and "Information to Emigrants," 1819.

Dr. Charles Caldwell, whose career is closely connected with the history of the medical profession in Philadelphia, indulged somewhat in literature apart from that pertaining to medicine and surgery. His contributions to the *Portfolio*, during the editorship of Dennie, obtained from him the editorship of that magazine, which he held until he went to Kentucky, in 1818. He was an industrious writer, and in his "Autobiography" he gives a list of nearly two hundred essays, treatises, criticisms, biographies, etc., of which he was the author, a large number of which are upon medical subjects. Many of his literary efforts were published in the *Portfolio*, and embrace biographies, reviews, etc. Probably one of his earliest efforts was "An Elegiac Poem on the Death of Washington," written in 1800. "An Essay on the Variety, Complexion, and Figure of the Human Species" occupied ninety pages of that periodical. He was the author of "Lives of Distinguished Americans," published in 1816, and of "A Life of Gen. Greene," four hundred and fifty-two pages, published in 1819. He left Philadelphia in the previous year, becoming connected with the medical department of the University of Transylvania, and died at Louisville, on the 9th of July, 1853.

James Nelson Barker was son of Gen. John Barker, who was mayor of the city of Philadelphia in 1808-9 and 1812-13, and sheriff of the county from 1803 to 1807. He was the author of "Tears and Smiles," a comedy produced at the Philadelphia Theatre in March, 1807; "The Travelers," an operatic play, in the same month; "The Indian Princess; or, La Belle Sauvage," played April 6, 1808; "The Embargo; or, What News?" March 16, 1808; "Attila," a tragedy; "How to Try a Lover," 1817; "Marmion; or, the Battle of Flodden Field," dramatized from Sir Walter Scott's poem, Jan. 1, 1813; "The Armorer's Escape," March 21, 1817; "Superstition," a tragedy, the scene of which is laid in New England, and the principal character of which is Goff, the regicide, March 17, 1824. He wrote some fugitive pieces of poetry, was a frequent contributor to journals on political subjects, and delivered an address on "The Early Settlements on the Delaware" before the Historical Society of Pennsylvania, which contained some valuable information.

Richard Biddle, brother of Nicholas Biddle, was born in Philadelphia on the 25th of March, 1796, and spent the early part of his life in Philadelphia. He was a volunteer in 1813 in the troops that were sent to Delaware. He studied law, and was admitted to the bar March 25, 1817. He was in practice as a lawyer in the city until about 1820, when he removed to Pittsburgh. His principal literary work was "A Life of Sebastian Cabot," which has been considered

by writers to be a most elaborate and successful biography, introducing from obscure and forgotten sources new and important information on the history of maritime discovery in America. He also wrote a review of Capt. Basil Hall's "Travels in North America," in 1827–28. He was elected to Congress in 1837, served a single term, and died at Pittsburgh, July 6, 1847.

Mathew Carey, being devoted to the business of bookselling in 1800, became, as years advanced, in consequence of ease and the acquisition of wealth, a prolific writer. His subjects were solid. He gave no time to the elegancies of literature or fiction. He was born in Dublin, Ireland, Jan. 28, 1760, and came to Philadelphia in November, 1784. By the aid of Lafayette, who sent him four hundred dollars, he established the *Pennsylvania Herald*, Jan. 25, 1785. In a duel with Col. Eleazer Oswald, Jan. 21, 1786, he received a wound which confined him to his house for sixteen months. He was subsequently connected with the *Columbian Magazine* and the *American Museum*. He took an active part in charitable enterprises, and every fortnight dispensed food and other necessaries of life to hundreds of poor widows. In 1793 he founded the Hibernian Society. In 1796–98 he had a controversy with William Cobbett, which he closed with "The Porcupiniad, a Hudibrastic Poem." In 1830, under the title of "Miscellaneous Essays," he republished selections from his writings. There are fifty-eight papers, essays, and longer compositions, and two hundred pieces collected under the heading of "Light Reading." "The History of the Yellow Fever of 1793" takes up a portion of the volume, and among the other pieces are "Essays on the Benevolent Charities of Philadelphia," fifty-one pages; "Review of the Policies of the Founders of the Colonies of Massachusetts, New Jersey, Rhode Island, Pennsylvania, Maryland, Virginia, and West Virginia, as regards Liberty of Conscience," twenty-eight pages, and numerous papers of more interest when written than when republished. In 1810 he published "Letters and Reflections on the United States Bank." In 1814 he published "The Olive Branch; or, Faults on both Sides, Federal and Democratic. An Appeal to the good sense of the political parties of the day to lay aside their differences during the pendency of the existing war with Great Britain." It passed through ten editions, circulating ten thousand copies. In 1818 he published "Vindicia Hibernicæ," which was a refutation of charges made against the Catholics of Ireland of butchering Protestants in the insurrection of 1640. In 1820 he published "The New Olive Branch," which was in favor of protection to American industry. In 1822 he published "Essays on Political Economy," which were also in favor of protection. He also advocated the system of internal improvements to which Pennsylvania is so much indebted. He died in Philadelphia Sept. 16, 1839.

MATHEW CAREY.

Mason L. Weems, an Episcopal clergyman, and a native of Virginia, who had some time officiated at Pohick Church, near Mount Vernon, became in later life a book agent or canvasser for Mathew Carey, and most frequently was solicitor for the sale of his own productions. As a writer he was very prolific. When not traveling, he was chiefly a resident of Philadelphia. His themes were biographical, patriotic, or moral and religious. He was author of a "Life of George Washington," published in 1800, which contains the anecdote of little George, the cherry-tree, and the hatchet. He wrote lives of Gen. Francis Marion, Benjamin Franklin, and William Penn. These publications had an immense circulation. More than forty editions of the "Life of Washington" were disposed of, and the book is one which still meets with a sale. The same may be said of his other biographies. He also wrote "The Philanthropist," "The Old Bachelor," "The Drunkard's Looking-Glass," and was the author of "An Oration on True Patriotism," and of many other tracts and essays.

"Sketches in Verse" were printed for C. & A. Conrad & Co., Philadelphia, by Smith & Maxwell, in 1810. In the introduction to these pieces it was said that the most of the sketches appeared in the *Portfolio*, and were signed "R. H. R." In this volume is the ode "To a Market Street Gutter," which was a parody on the "Ode to the Raritan." The ode "To a Market Street Gutter" was a provocation which led to retaliation in the production of "The Pursuits of Philadelphia Literature," in which John Davis took a part. Dr. Robert H. Rose, of Silver

Digitized by Google

Lake, Susquehanna Co., was the author of "Sketches in Verse."

In 1811 was published "The Maniac, and Other Poems," by John Lawson, who seems to have been a citizen of Philadelphia. The directories of that year and of the year following give the name of "John Lawson, sea-captain, No. 119 Callowhill Street," but whether that person was the author of those poems cannot now be determined. Lawson's poems are introduced by a poetic address, signed T. L. McKinney, dated May 5, 1811, and another by Joseph Hutton, both of which are highly complimentary. Beside "The Maniac," which is in three parts, the volume contains "The Hour-Glass," and ten other miscellaneous pieces.

Moses Thomas, in 1814, published "An Apology for the Life of James Fennell," written by himself, with the self-accusing motto:

> "Look into those they call unfortunate,
> And, closer view'd, you will find they are unwise."

Fennell was also the author of the plays entitled "The Wheel of Truth," "Lindor and Clare," "Picture of Paris," and "The Face of Nature." He was for several years a resident of Philadelphia, and died in the city in June, 1861. He was born in London, took to the stage in 1787, was successful as a tragedian, and was considered a fine actor. He was eccentric, and about the time he published his "Apology" he had determined to leave the stage and establish salt-works near New London, Conn., which proved a failure. His autobiography was the first of a theatrical character published in this country.

Mary Brook published "Reasons for Silent Waiting" in 1816.

Rev. Ezra Stiles Ely, in 1815, published "The Journal of the Stated Preacher to the Hospital and Almshouse of the City of New York for 1811–15." This book was unfavorably criticised on account of the character of the revelations which it contained. These were stories of vice and wretchedness which, it was said, had a tendency to make the virtuous reader "familiar with sins of which hitherto he had no idea," and the influence was therefore declared to be bad.

Francis Shallus, who was an engraver and proprietor of a circulating library, published, in 1817, "Chronological Tables for Every Day in the Year, compiled from the most Authentic Documents," etc. This digest, beside foreign and domestic references, contains dates of events in Philadelphia which were not to be obtained in any other way.

In 1817, Jesse Torrey published "A Portraiture of Domestic Slavery in the United States, including Facts on Kidnapping."

Dr. Adam Seybert was born in Philadelphia in 1773. He was educated for the medical profession, and pursued his studies at London, Edinburgh, Paris, and Göttingen. He took part in politics, and was a member of Congress from Philadelphia, 1811–15 and 1817–19. His writings were principally on medical subjects. He published, in 1818, "Statistical Annals of the United States of America from 1789 to 1818," which was extensively reviewed, and extracts from it were published in French. He wrote some papers on "Land and Sea Air, and the Atmosphere of Marshes," which were published among the "Transactions of the Philosophical Society." He died in Paris, May 2, 1825, aged fifty-two years.

"The Mariner," a poem in two cantos, by Archibald Johnston, was published by Edward Earle, 1818. It was dedicated to Commodore Richard Dale.

John Agg, in 1819, published "The Ocean Harp," and some smaller pieces, with a monody on the death of Dr. John S. Dorsey.

Robert S. Coffin, a printer, who assumed the signature of "The Boston Bard," worked at his trade in the principal Atlantic cities, and was for some time a contributor to Philadelphia newspapers and magazines. He was a native of Maine, and was at one period of his life a sailor. He died at Rowley, Mass., in May, 1827. His pieces were collected in a volume entitled "Miscellaneous Poems," published in 1818, and in another entitled "The Oriental Harp." The author dedicated his "Miscellaneous Poems" to the officers and members of the New England Society of Philadelphia. The volume contained over one hundred pieces, and took up one hundred and fifty-six pages, 16mo.

Richard Ferguson published in 1818 "Causes, Results, and Remedies of Revenge and Unmercifulness;" "Abaddon's Steam-Engine, Calumny, Delineated,—being an attempt to stop its deleterious effects on Society, the Church, and the State," etc.

William Grimshaw in 1819 published "A History of England, from the Invasion by Julius Cæsar to the Peace of Ghent." It was a condensed account, for the use of schools. Also "A History of the United States, from the First Settlement to the Peace of Ghent." He was also the author of histories of France, Greece, Rome, South America, and Mexico. He wrote "A Life of Napoleon," an "Etymological Dictionary," a "Lexicon for Gentlemen," and a "Lexicon for Ladies," and prepared a treatise on politeness, called "The American Chesterfield." He was a native of Greencastle, Ireland, and emigrated to America in 1815. In the Directory for 1824 he is set down as "author," living at No. 263 New Market Street. He died in 1852.

Ezekiel Sandford published in 1819 "A History of the United States before the Revolution, with Some Account of the Aborigines."

William B. Tappan, who was born in Beverly, Mass., in 1794, came to Philadelphia about 1817, and engaged in business as a clock- and watch-maker at No. 49 South Third Street, afterward at No. 8 South Third Street. About 1820 he gave up that business, and opened a school at No. 118 Chestnut Street. He

was afterward associated with S. M. L. Staples in the management of a school at No. 2 Sansom Street. Subsequently he became the agent or manager of the American Sunday-School Union. Mr. Tappan delighted in poetry, and wrote copiously. He published at Philadelphia "New England and Other Poems," in 1819; "Songs of Judah," 1820; "Lyrics," 1822.

Dr. John K. Mitchell was born at Sheppardstown, Va., in 1798. He published in 1821 a poem entitled "St. Helena. By a Yankee." He graduated at the University of Pennsylvania in 1819, and married a daughter of Alexander Henry in 1821.

Matthias James O'Conway translated "The Knights-Templar," from the French of M. Raynouard, to which he added notes and prefixed a history of the origin and character of that order.

"The Maniac's Confession,—a Fragment of a Tale," by J. W. Simmons, author of "The Exile's Return," was published by Moses Thomas (J. Maxwell, printer) in 1821. "The Exile's Return," the author explains in the preface of "The Maniac's Confession," was written some time before the author was twenty years old; "The Maniac's Confession," at the commencement of his twentieth year; and "Observations upon American Literature and upon Poetry in the Drama," before he had become of age. In the same preface he goes into a vindication of himself from a charge that he had taken his incidents from Maturin's "Bertram."

Robert Waln, Jr., who was born in Philadelphia in 1797, was a man of leisure and of literary tastes. His inclinations ran strongly toward satire. He was the author of the following: "The Hermit in America on a Visit to Philadelphia;" "Sisyphi Opus, or Touches at the Times;" "The Hermit in Philadelphia." Mr. Waln also wrote "Life of Marquis de Lafayette," 1824; and "Account of the Asylum for the Insane near Frankford," which was published after his death. He published in quarto numbers "A History of China," and assisted in the preparation of some of the biographies for Sanderson's "Signers of the Declaration." He died in 1824. All of these works were in prose, except "Sisyphi Opus" and "American Bards." The latter was an imitation of the "Pursuits of Literature," "English Bards and Scotch Reviewers," and other works of a satirical character.

William Rawle, the elder, devoted his attention more particularly to legal subjects. He was the author of an address before the Philadelphia Society for Promoting Agriculture, published in 1819; two addresses to members of the Philadelphia bar, 1824, and a View of the Constitution of the United States of America, 1825. David Paul Brown says that Mr. Rawle wrote several works on the subject of religion, which were never published. Among them were "Angelic Influences," "Original Sin, and the Virtue of Baptism," and "An Essay to show the Proof of the Truth of Christianity to be derived from the Parables of our Saviour alone."

Charles West Thomson, who was born in Philadelphia in 1798, studied law, and was admitted to the bar. He afterward turned his attention to teaching, and had his school in Carpenter's Court in 1825. He subsequently obtained a position in the United States custom-house, and finally became a minister of the Protestant Episcopal Church. He commenced to write poetry at an early age. He published "The Limner," prose sketches, in 1822; "The Phantom Barge, and other Poems," in the same year; "Eleanor, and other Poems," 1826; "The Sylph," etc., 1828; "Love of Home," etc. He became a contributor to periodicals, and wrote for annuals and magazines.

Dr. John D. Godman, a native of Annapolis, Md., born Dec. 24, 1794, was bound as an apprentice to a printer at Baltimore; was a sailor in 1814, and participated with the defenders of Fort McHenry when it was bombarded by the British. After he left the navy he studied medicine, and obtained the degree of M.D. in February, 1818. He practiced at New Holland, on the Susquehanna, in Anne Arundel County, Md., and at Philadelphia. He became professor of Anatomy, in 1821, in the Medical College of Ohio, at Cincinnati; resigned a few months afterward; edited, in the mean while, the *Western Quarterly Reporter*, and came back to Philadelphia in the latter part of 1822. In 1823 he commenced his principal work, "American Natural History," which was completed in 1828. He was a contributor to the *American Quarterly Review*.

Rev. William A. Muhlenberg, at one time rector of Christ Church, published, in 1823, "Church Poetry; being portions of the Psalms and Verses and Hymns suited to the Fasts and Festivals of the Church." Dr. Muhlenberg was author of the well-known hymn, "I would not live alway."

Rev. Benjamin Allen, rector of St. Paul's Protestant Episcopal Church from 1821 to 1828, was moved by literary and patriotic ambition to publish, in 1811, a volume entitled "Miscellaneous Poems on Moral and Religious Subjects," by Osander, printed in New York; "United We Stand, Divided We Fall," by Juba, New York, 1812; "Columbia's Naval Triumphs," New York, 1813; "Urania, or the True Use of Poesy," by B. Allen, Jr., Philadelphia, 1814; "The Phœnix, or the Battle of Valparaiso," by B. Allen, Jr., New York, 1814; "The Death of Abdallah," an Eastern tale, founded on the story of Abdallah and Sabat in Buchanan's "Christian Researches," New York, 1814; "The Palace of the Comet," a poem. He edited the *Layman's Magazine*, at Martinsburg, Va., in 1815. In Philadelphia, in 1822, he published a volume of sermons, entitled "Jesus Christ and Him Crucified," the subjects being "The Trinity," "The Divinity of Christ," and "The Atonement;" "Living Manners, or the True Secret of Happiness," Philadelphia, 1822; an abridgement of Burnet's "History of the Reformation," Philadelphia, 1823; "History of the Church of Christ," Philadelphia, 1823; "A Narrative of the

Labors, Sufferings, and Final Triumphs of the Rev. William Eldred, late a Missionary of the Society for the Advancement of Christianity in Pennsylvania," 1828; "General Stevens, or the Fancy Ball," being the third part of "Living Manners," 1828; "The Church in the Fires of Persecution, or a History of the Sufferings of the Church from the Days of our Saviour," 1828. In 1828 he commenced the publication of *The Christian Warrior*, a magazine published weekly, which had but a short life.

In 1822 was published "The Troubadour," "The Club, a Satire, and other Poems," by John C. McCall. He was a lawyer, and he wrote with taste and facility of expression. The following is an extract from Canto I. of "The Troubadour:"

"The mists lay dreaming on the mountain's breast,
The lazy winds were sinking into rest,
And, softly breathing as they died away,
Sighed o'er the splendors of departing Day!
In awful grandeur, 'mid a blaze of light
That threw its countless hues of colors bright
O'er clouds and hills, o'er dells and babbling streams,
The sun of Even shed his crimson beams!
The hollow murmurs of the rushing rill,
The mellow horn that sounded 'cross the hill,
The nightly anthem of the feathered host,
All golden sounds, and sober Evening's boast,
Mixed their sweet discords with seraphic skill,
And held the wanderer list'ning at their will!
The lowing herds crept slowly 'long the vale,
And distant echoes bore the hunter's hail;
The curling smoke above the foliage flew,
Fantastic wreathing as the zephyrs blew."

Thomas Green Fessenden, a wandering child of genius, who published at London "The Terrible Tractoration," a satirical poem which attracted much attention, was at Philadelphia in 1808-9, where he published "Pills—Poetical, Political, and Philosophical; Prescribed for the Purpose of Purging the Public of Piddling Philosophers, of Puny Poetasters, of Paltry Politicians and Petty Partisans. By Peter Pepper-Box, Poet and Physician. Philadelphia: Printed for the Author, 1809."

"No common medicines are fit
For patient by a mad dog bit;
And poison must, as Galen held,
By counter-poison be expelled."
—*Paracelsus.*

The subjects of the satire were the embargo, gunboats, Governor Snyder, John Binns, Parson Hey, Dr. Leib, Commodore Truxton, and other themes. In 1808, Fessenden published "The Register of Arts, or a Compendium of the most Useful Discoveries and Inventions." He afterward finished his life as a lawyer, political editor, and writer upon agricultural subjects.

"Facts and Arguments respecting the Great Utility of an Extensive Plan of Inland Navigation in America, with a Map. By a Friend of National Industry." Printed by William Duane, No. 106 Market Street, 1805. This was issued anonymously, but in the Philadelphia Library catalogue it is ascribed to Turner Camac.

William Blodget in the same year published "The Utility of an Extensive Plan of Inland Navigation in America."

"An Apology for Silent Waiting upon God in Religious Assemblies." By Thomas Colley. Printed by Joseph Cruikshank, 1804. This was antagonized by the publication, in 1809, of "A Spiritual Discourse on Noise. Being a Plain Vindication of Sonorous Adoration." By Charles Giles. Printed by Abel Dickinson for the publisher (1809). The latter was evidently the production of a Methodist, and a defense "of a class of professing Christians who, in their transported moments being filled with heavenly joys, have clasped their hands, shouted aloud, and praised God in a vocal manner."

Messrs. L. A. Tarascon, Jr., and James Berthoud & Co. published, in 1806, "An Address to the Citizens of Philadelphia on the Great Advantages which Arise from the Trade of the Western Country to the State of Pennsylvania at large, and the City of Philadelphia in particular."

Charles Paleske wrote, in 1808, "Observations on the Application for a Law to Incorporate the Union Canal Company."

"An Account of the Languages, History, Manners, and Customs, etc., of the Indian Nations who once Inhabited Pennsylvania," by the Rev. John Heckewelder, was published in 1819.

Robert W. Ewing paid considerable attention to dramatic affairs, and frequently appeared in the newspapers during the year 1825-26 as a critic of dramatic performances under the signature of "Jacques." He wrote several plays, among which were "Le Solitaire," "Sponge Again," "The Frontier Maid," "The Highland Seer," "The Election," "Imperial Victim," "Lafayette," "Quentin Durward," "Exit in a Hurry," and "The Bride of Death."

"Juvenile Essays, a Collection of Poems," by Henry Pepper, was published without date. It probably made its appearance about the year 1815.

Dr. Joseph Priestley's last work was issued in 1803, and was entitled "Socrates and Jesus Christ Compared." This essay led to the publication of a reply by the Rev. J. Blair Linn, of the Presbyterian Church, and a rejoinder by Dr. Priestley. The latter died at Northumberland, Feb. 6, 1804.

"The Power of the Church Distinguished from the Power of Anti-Christ, the Man of Sin," by Emor Kimber, was published in 1823.

"Remarks on the Internal Evidence of the Truth of Revealed Religion," by F. Erskine, 1821.

"Salvation by Christ, to which is added Remarks upon the Salvation of Christ," by Job Scott, 1824. The same writer published in 1804 "War Inconsistent with the Doctrines of Jesus Christ."

In 1821 was published "The Vermin Destroyer; being a complete and necessary family book, etc., etc. By Dr. James Johnston." The title was very long, and was minutely descriptive of the contents. At the

same time Dr. Johnston published "A History of the Haunted Caverns of Magdalena, an Indian Queen of South America," etc., etc.

Benjamin Johnson in 1805 published "A Compendious History of the World, from the Earliest Times to the Coronation of Bonaparte," the latter part of which was announced to have been written by a citizen of Philadelphia. The same writer prepared "An Account of the Life and Writings of the great Apologist for Quakerism, Robert Barclay." He edited "An Easy Grammar of Geography for the Use of Schools, by the Rev. J. Goldsmith," superintended the preparation of "The Poems of Addison," and embodied in one volume the poetry of Dr. S. Johnson and William Collins.

Among the works of fiction published anonymously, and probably to be ascribed to inhabitants of Philadelphia, were "Kelroy, by a Lady of Pennsylvania," 1812; "Bakhtier Nameh; or, The Royal Foundling; a Persian Story, exhibiting a Portraiture of Society in the East. Translated into the English by a citizen of Philadelphia," 1813; "Margaretta; or, The Intricacies of the Heart, by a Lady of Philadelphia," 1821.

The following plays and pieces performed in Philadelphia, presented anonymously, were most probably written by citizens or residents: "The Way to Keep Him; or, Virtue, Love, and Friendship," a comedy played at the South Street Theatre in 1801; "The Federal Oath," South Street Theatre, July 5, 1802; "The Enterprise; or, Wreath for American Tars," a drama, Chestnut Street Theatre, 1803; "The Tripolitan Prize; or, Veteran Tars," Chestnut Street Theatre, 1804; "Blackbeard," a pantomime, brought out at the same house, 1804; "Count Benyowsky," a tragi-comedy, 1804; "American Tars in Tripoli," 1804; "The Impatient Lover," a comedy, translated by a citizen of Philadelphia, performed at the Olympic Theatre, 1812; "American Naval Pillar," Olympic Theatre, 1812; "Philadelphia Volunteers; or, Who's Afraid?" by a citizen of Philadelphia, acted at the Olympic Theatre, Oct. 5, 1812; "The Constitution; or, American Tars Triumphant," and "Returned from a Cruise," Chestnut Street Theatre, 1812; "The Constitution; or, More Laurels," Chestnut Street Theatre, 1813; "The Naval Frolic, a Tribute to American Tars," by a gentleman of Philadelphia, performed at the South Street Theatre, Jan. 1, 1812; "Heroes of the Lakes," played at the Chestnut Street Theatre, 1813; "The Author's Night," a farce, by a citizen of Philadelphia, Walnut Street Theatre, 1821.

William Francis, an actor of the Chestnut Street Theatre, brought out in 1803 a pantomime entitled "Harlequin in Prison; or, the Genii of The Rocks."

Mrs. Melmoth, who was acting at the Chestnut Street Theatre, in 1807 produced at that house "The Generous Farmers, or Chedmella Faul Routh," written by herself.

John Bray, an actor at the Chestnut Street Theatre, wrote some plays which were performed, namely, "Who Pays the Piper?" a comedy, 1809, and "The Toothache," a comedietta, 1814.

John Hodgkinson, comedian, who was at one time a manager of the South Street Theatre, in 1811 wrote "The Man of Fortitude," a melodrama.

Andrew Allen, an actor, was the author of "The Taking of Yorktown," a pantomime, brought out at the Olympic Theatre in 1812; "Proctor's Defeat by General Harrison," a play, 1813.

In 1823 there was performed at the Chestnut Street Theatre a farce called "The Phrenologist," which was translated from the German of Kotzebue by Francis J. Troubat, who afterward was a member of the bar.

Charles Breck wrote, in 1806, a comedy entitled "The Fox Chase," which was performed at the Chestnut Street Theatre in April of that year.

In the interests of science and education, and the branches of learning taught in schools and colleges, there was considerable activity among various writers.

Nicholas Gouin Dufief, a Frenchman, came to Philadelphia about the year 1800, and established himself at No. 68 South Fourth Street, as professor of French literature and bookseller. He published "Logic of Facts" in 1806, "A New Universal Pronouncing Dictionary of the French and English Languages," in three volumes, in 1810, and set forth his principles of teaching in a treatise entitled "Nature Displayed in Her Mode of Teaching Language to Man; or, A New and Infallible Method of Acquiring a Language in the Shortest Time Possible. Deduced from an Analysis of the Human Mind." This work was in two volumes, and has reached, up to the present time, more than twenty-one editions. Mr. Dufief's method received the approbation of the highest scholars of the period.

"Nature Explained. By D'Orlic: 1806." This was a controversial publication in regard to the merits of Dufief's plan of teaching French, and in opposition to that plan.

Peter A. Chazotte published, in 1817, "An Essay on the Best Method of Teaching Foreign Languages, as Applied with Extraordinary Success to the French Language." In 1819 he brought out "Metaphysics" and "Philology of Languages."

A rather curious treatise—being a Frenchman's directions to his countrymen how to speak English—was published by Moses Thomas in 1818. It was entitled "Traité complet de la Prononciation de la Langue Anglaise, by Charles Carle, interpreter for the State of Pennsylvania, and professor of English and French in Philadelphia."

An "Abridgment of a French and English Grammar," by A. Texier de la Pommeraye, appeared in 1822, and a reader—"Lecteur Français Amusant et Instructif"—in 1826.

"Hispano-Anglo Grammar, containing the Definitions, Structure, Government, and Combination of the Various Classes of Words in the Spanish Lan-

guage; also a Vocabulary and Index, by M. J. O'Conway," was brought out in 1810.

Dufief's "Nature Displayed," adapted to the Spanish by Don Manuel de Torrez and L. Hargous, was published in 1817.

Hugh Williamson, M.D., LL.D., statesman and man of letters, was born at West Nottingham, Pa., Dec. 5, 1835, graduated at the University of Pennsylvania, and died at New York May 22, 1819. He studied divinity, preached occasionally during two years, and in 1760-63 was professor of Mathematics in the University of Pennsylvania. He studied medicine in Edinburgh and Utrecht, where he took his degree, and on his return practiced successfully in Philadelphia. On Jan. 7, 1769, he was appointed one of a committee to the Philosophical Society to observe the transit of Venus, his account of which is in vol. i. of the Transactions of that society, which also contains a paper by him on the transit of Mercury, Nov. 9, 1769. After visiting the West Indies in 1772, he went to England to procure aid for an academy at Newark, N. J., and upon his return home entered into business at Charleston, S. C., and afterward practiced medicine at Edenton, N. C., where he acquired great distinction. He subsequently removed to New York, and was a frequent contributor to the Transactions of the learned societies of Europe and America. He published a series of essays upon paper currency in 1786; some fugitive pieces on languages and politics in the *American Museum;* "Observations on the Climate of America," 1811; "History of North Carolina," two volumes, 8vo, 1812; "Observations on Navigable Canals;" and an essay on comets. In 1810 he delivered a discourse on the "Benefits of Civil History" before the New York Historical Society.

HUGH WILLIAMSON.

Frederick David Schaeffer, a native of Frankfort-on-the-Main, emigrated and settled at Germantown, afterward at Frederick, Md., where he died in 1836. He was the author of (1) "Antwort auf eine Vertheidigung der Methodisten," and (2) "Eine Herzliche Anrede." His son, Frederick Christian, D.D., who died in 1832, was author of (1) "The Blessed Reformation," (2) "Parables and Parabolic Sayings," and (3) "Sermon on Laying the Corner-Stone of St. Matthew's Church, New York." Another son, Charles Frederick, D.D., published (1) "Kurtz's Manual of Sacred History," (2) "Luther's Smaller Catechism, with Additions," (3) Antritts-Rede, gehalten am 16 April, 1856, zu Gettysburg;" (4) "Discourse in the Memorial Volume of the Lutheran Evangelical Church of the Holy Trinity." A grandson, Charles William, was author of (1) "Discourse on the Fiftieth Anniversary of the Lutheran Evangelical Church," (2) "Valedictory Discourse at Harrisburg," (3) "Dr. W. J. Mann's Exposition of Luther's Smaller Catechism," (4) "Early History of the Lutheran Church in America," (5) Bogatzky's "Golden Treasury," (6) "Family Prayer-Book," (7) "Discourse Delivered at the Opening of the Twentieth Convention of the General Synod of the Evangelical Lutheran Church."

Charles Adams Smith published (1) "Parables from the German of Krummacher," (2) "Catechumen's Guide," (3) "Commentary on Mark and John," (4) "Illustrations of Faith," (5) "Men of the Olden Time," also several single sermons.

John Blair Smith was author of the "Enlargement of Christ's Kingdom."

Samuel Stillman, D.D., at one time a Baptist clergyman of Philadelphia, was author of several sermons and discourses.

James A. Bayard, the distinguished American statesman, who was a native of Philadelphia, had published (1798) a speech on "The Foreign Intercourse Bill," and one on "The Repeal of the Judiciary Act in 1802."

Rev. Morgan Edwards, Baptist, a native Welshman, published several sermons and discourses, and a work called "Materials toward a History of the Baptists of Pennsylvania and New Jersey."

In 1754, William Bradford printed for Samuel

Digitized by Google

Blair, a native of Ireland, his works, consisting of sermons, treatises, and a "Narrative of a Revival of Religion in Pennsylvania." His son, of the same name, published in 1761 an "Oration on the Death of George II."

Mrs. Sarah Hall was the author of "Conversations on the Bible." She contributed to the *Portfolio*, of which her son, John E. Hall, was editor.

Thomas Truxton (1794) published "Remarks, Instructions, and Examples relating to Latitude and Longitude," also the "Variation of the Compass."

James Wilson, one of the associate judges of the Supreme Court of the United States, was the author of several works. Besides "An Address to Citizens of Philadelphia," published in 1784, he wrote, with Thomas MacKean, "Commentaries on the Constitution of the United States."

His son, Bird Wilson, D.D., LL.D., published, in 1803, the works of his father, containing law lectures, speeches, orations, and legal disquisitions. Bird Wilson, after having served upon the bench, took orders in the Episcopal Church, and published,—(1) "An Abridgment of the Law by Matthew Bacon," 1811; (2) "Memoirs of the Right Rev. William White, Bishop of the Protestant Episcopal Church in the State of Pennsylvania."

James Sharswood, grandfather of the eminent judge, was a leading politician, and the author of several articles, published in the *Aurora*, against the United States National Bank.

Benjamin Say, M.D., published in 1792 "Spasmodic Affection of the Eyes," "Medical Memoirs and Short Compilation of the Extraordinary Life and Writings of Thomas Say." The latter was his father, a member of the Society of Friends, who had published a work called "The Vision of Thomas Say."

Thomas Say, son of Benjamin, was one of the most eminent naturalists that this country has produced. In company with McClure, Ord, and Peale, he traversed Georgia and East Florida in 1818, and the following year went in the first expedition of Capt. Long, and with the second in 1823. His published contributions to science are numerous: (1) "Astronomical and Meteorological Records and Vocabularies of Indian Languages;" (2) "American Entomology;" (3) "American Conchology." Many papers were contributed by him to scientific journals. His collected writings and notices of him were published: (1) "The Complete Writings of Thomas Say on the Entomology of the United States. Edited by John Le Conte, M.D., with a Memoir of the Author by George Ord;" (2) "The Complete Writings of Thomas Say on the Entomology of the United States, with a Copious Index to the Original Work. Edited by William D. Binney." A biographical sketch of the author was delivered by Benjamin H. Coates, M.D., before the Academy of Natural Sciences.

James H. Rogers, M.D., while Professor of Chemistry in the Philadelphia Medical Institute, was a frequent contributor to medical journals.

Henry Darwin Rogers, LL.D., Professor of Chemistry and Natural Philosophy in Dickinson College, at one time State geologist of Pennsylvania, was a native of Philadelphia. His researches and publications obtained for him membership in the Royal Society, of which he was elected a fellow in 1858. These publications comprise, (1) "Five Annual Reports of the Geological Survey of Pennsylvania;" (2) "Report on the Geological Survey of New Jersey," 1836; (3) "Final Report" on the same in 1840; (4) "Address Assoc. Amer. Geol. and Nat.;" (5) "Atlas of the United States;" (6) "The Geology of Pennsylvania: A Government Survey; with a General View of the Geology of the United States, Essays on the Coal Formation and its Fossils, and a Description of the Coal-Fields of North America and Great Britain; with Seven Large Maps and Numerous Illustrations on Copper and Wood." The *Edinburgh Review* thus speaks of this most elaborate work: "The magnificent 'Survey of the Geology of Pennsylvania,' which is one of the most valuable recent contributions to geological science, and is published in a form equally creditable to the liberality of that commonwealth, the energy of its author, and the typographical skill of its printer, enables us to quote some interesting details as to the latest discoveries on the subject of fossil footprints in the United States."

Stephen Simpson was author (1832) of a "Biography of Stephen Girard" and other lesser works. He was proprietor and principal editor of *The Portico* and the *Columbian Magazine*, and a frequent contributor to *The Aurora* and "The Philadelphia Book."

Several descendants of Benjamin Franklin, through his daughter, Mrs. Bache, have become distinguished for authorship among other things. Franklin Bache, M.D., great-grandson of the philosopher, was author of (1) "A System of Chemistry, for the Use of Students of Medicine," 1819; (2) "A Supplement to the American Edition of Henry's Chemistry"; (3) "Letter to Roberts Vaux on the Separate Confinement of Prisoners;" (4) another letter on the same subject, published in the *Journal of Law*; (5) "The Dispensatory of the United States," in conjunction with Dr. George B. Wood; (6) "Introductory Lectures on Chemistry." He also, with Dr. Robert Hare, was editor of "Ure's Dictionary of Chemistry," of "A System of Pyrotechny," by James Cutbush, of "Turner's Chemistry," of "Dr. Hare's Chemical Compendium," and, with others of the medical profession, of *The North American Medical and Surgical Journal*. "Morand's Memoir on Acupuncturation" was translated from the French by him, and he was also a frequent contributor to the Columbian Chemical Society, *American Medical Record*, and various scientific journals.

Mrs. Anna Bache wrote "Clara's Amusements," "The Fireside Screen, or Domestic Sketches," "Little Clara," "The Sibyl's Cave," and "Scenes at Home."

R. Bache, 1810, wrote "Manual of a Justice of the Peace," and, 1818, "The Case of Alien Enemies Considered and Decided."

William Bache was author, 1794, of "Inaugural Dissertation on Carbonic Acid."

The most distinguished author of that name was Alexander Dallas Bache, a great-grandson of Franklin, graduated at the head of his class at West Point in 1825, occupied successively the lieutenancy of engineers of fortifications, professorship of mathematics in the University of Pennsylvania, that of natural philosophy and chemistry, and the presidency of Girard College. He published a volume written upon the various systems of public instruction in Europe, whither he went for the purpose of studying them. Professor Bache superintended the publication of the "Reports of the United States Coast Survey." He was a member of the principal scientific societies of the world, having received the medal of the Royal Geographical Society for 1858. His other most important works are mainly contributions to the American Association for the Advancement of Science, the Franklin Institute of Pennsylvania, the "Transactions of the American Philosophical Society," the "Annual Reports to the Treasury Department on Weights and Measures," the *American Journal of Science*, and the British Association for the Advancement of Science.

Albert Barnes, an eminent Presbyterian divine (First Presbyterian Church in Philadelphia), who for many years persisted in refusing the degree of D.D., which was several times tendered him, is well known throughout the English-speaking world for his Commentaries on the New Testament, on the Book of Job, and on the Prophecies of Isaiah and Daniel. He was also author of "An Inquiry into the Scriptural View of Slavery," "A Manual of Prayers," "The Way of Salvation," "Practical Sermons designed for Vacant Congregations," "The Church and Slavery," "Prayers Adapted to Family Worship," "Miscellaneous Essays and Reviews," and the "Atonement in its Relations to Law and Moral Government." The works of no commentator on the New Testament were ever so popular as those of Mr. Barnes. In the period of the first twenty-five years of their publication the sales are said to have been not far from half a million.

Samuel Bayard published (1810) "A Digest of American Cases on the Law of Evidence, intended as Commentaries on Peake's Compendium to the Law of Evidence;" also, 1834, "An Abstract of the Laws of the United States which relate to the Duties and Authority of the Judges of the Inferior State Courts, and the Justices of the Peace throughout the Union."

Gregory Townsend Bedell, D.D., rector of St. Andrew's Episcopal Church, spent much of his time in studying and writing upon religious subjects. His publications are (1) "Ezekiel's Vision;" (2) "Is It Well?" (3) "It Is Well;" (4) "Onward, or Christian Progression;" (5) "Pay Thy Vows;" (6) "Renunciation;" (7) "Way Marks;" (8) "Sermons, with Biographical Sketch of the Author by Stephen H. Tyng, D.D.," 2 vols. 8vo.

Henry Bond, M.D., a native of Watertown, Mass., wrote "Watertown Family Memorials, with Illustrations, Maps, and Notes;" besides contributions to medical journals.

Francesca Anna Canfield is spoken of in terms of great praise in Griswold's "Female Poets of America," for her various contributions to the periodicals of the time, about 1820.

Henry C. Carey, son of Mathew Carey, carried on the publishing business after the death of his father. He wrote an essay on "The Rate of Wages," afterward enlarged upon in his work on "The Principles of Political Economy," published in 1837, a work that has been translated into several languages of Europe. The following year he published "The Credit System in France, Great Britain, and the United States," a work which was pronounced by the *Journal des Économistes* the best work on the "Credit System" that had ever been published. In 1848 he published "The Past, the Present, and the Future." This work was also much admired abroad. He also wrote many articles for *The Plow, the Loom, and the Anvil*, some of which were collected in a volume entitled "The Harmony of Interests,—Agricultural, Manufacturing, and Commercial," and others in a smaller work, "The Prospects." Of these *Blackwood's Magazine* said, "Mr. Carey, the well-known statistical writer of America, has supplied us with ample materials for conducting such an inquiry, and we can safely recommend this remarkable work to all who wish to investigate the causes of the progress or decline of industrial communities." In 1853 appeared his "Slavery and the Slave Trade." He published other works, as "Answers to the Questions,—What Constitutes Currency? What are the Causes of its Unsteadiness? and What is the Remedy?" "Letters on Copyright, and Principles of Social Science."

John Beale Bordley was author of "Forsyth's Treatise on Fruit-Trees," "Sketches on Rotation of Crops," 1792; "Essays and Notes on Husbandry," 1799, and "View of the Courses of Crops in England and Maryland," 1804.

George P. Morris was born in Philadelphia. When he was not more than twenty-one years of age he began his career of letters with the establishment of *The New York Mirror* and the *Ladies' Gazette*. These were followed by *The New Mirror* and *The Home Journal*. That career was one of the happiest. In 1825, when he was only three-and-twenty, he produced his drama "Brier Cliff," which had a most successful run upon the stage, paying the author several thousand dollars. His opera of "The Maid of Saxony" was also successful. In 1836 appeared "The Little Frenchman and his Water-Lots;" in 1838, "The Deserted Bride, and other Poems;" in 1844, "Songs and Ballads." His rank is highest as a lyrical poet, in which *rôle* he has

had as yet no superiors in this country. All who read poetry at all are familiar with "The Carrier Dove," "Long Time Ago," "Think of Me, My own Beloved," "Woodman, Spare that Tree," "The Pastor's Daughter," "A Legend of the Mohawk," "I Love the Night," and many others of their like. We give a part of the criticism of his long-time friend and partner, N. P. Willis: "Morris is the best-known poet of the country,—by acclamation, not by criticism. He is just what poets would be if they sang, like birds, without criticism; and it is a peculiarity of his fame that it seems as regardless of criticism as a bird in the air. Nothing can stop a song of his. It is very easy to say that they are easy to do. They have a momentum, somehow, that it is difficult for others to give, and that speeds them to the far goal of popularity."

Thomas Bond, M.D., delivered the first clinical lectures in the Pennsylvania Hospital, and wrote much for the *London Medical Observer and Inquirer*. He wrote also "An Account of an Immense Worm bred in the Liver," and "On the Use of Peruvian Bark in Scrofulous Cases."

James C. Booth was author of the "Encyclopædia of Chemistry, Practical and Theoretical, Embracing its Application to the Arts, Metallurgy, Geology, Medicine, and Pharmacy." In conjunction with Campbell Morfit, he wrote, for the Smithsonian Institute, on "Recent Improvements in the Chemical Arts."

John Bouvier, associate judge of the Court of Criminal Sessions, an emigrant from France, published, in 1839, his "Law Dictionary, adapted to the Constitution and Laws of the United States of America and the Several States of the American Union, with References to the Civil and Other Systems of Foreign Law." This work, immediately on its production, was received cordially by the public, and has ever been regarded by the profession as the best book of the kind for the use of the American bar. Judge Baldwin, of the Supreme Court, said of it, "It is not only the best which has been published, but in itself a valuable acquisition to the bar and bench, by which both will profit." In 1841, Judge Bouvier began the writing of a new edition of Bacon's "Abridgment of the Law," and, with comparatively little assistance, finished the task in four years. In 1851 he published the "Institutes of American Law," which received equal praise with that bestowed upon his other works.

His daughter, Hannah M. Bouvier, published, in 1857, "Familiar Astronomy; or, An Introduction to the Study of the Heavens. Illustrated by Celestial Maps," to which was added a "Treatise on the Globes" and a "Comprehensive Astronomical Dictionary," a work that drew words of very high praise from the most eminent scientists of Europe. Trübner said she might justly be styled the Mary Somerville of the United States.

Judge Robert T. Conrad was known for his literary productions. His dramatic pieces are "Conrad of Naples," and "Aylmere; or, The Bondman of Kent." The latter was published in 1852, along with other poems, such as "Sonnets on the Lord's Prayer;" "Lines on a Blind Boy Soliciting Charity by Playing on his Flute." We give one of the sonnets:

> "Give us this day our Daily bread! thou art
> Lord of the harvest. Thou hast taught the song
> Sung by the rill, the grassy vale along;
> And 'tis thy smile when Summer's zephyrs start,
> That makes the wavy wheat a sea of gold!
> Give me to share thy boon! No miser hoard
> I crave; no splendor, no Apician board,
> Freedom and faith and food,—and all is told:
> I ask no more. But spare my brethren! they
> Now beg in vain to toil; and cannot save
> Their wan-eyed loved ones, sinking to the grave.
> Give them their daily bread! How many pray,
> Alas, in vain, for food! Be Famine fed;
> And give us, Lord, this day our daily bread."

Robley Dunglison, M.D., LL.D., a native Englishman, for many years Professor of the Institutes of Medicine and Medical Jurisprudence in Jefferson Medical College, was the author of a very large number of works, among which were "Commentaries on the Diseases of the Stomach and Bowels of Children," 1824; "Human Physiology;" "A New Dictionary of Medical Science and Literature," 1833; "The Practice of Medicine; or, A Treatise on Special Pathology and Therapeutics;" on "The Blind and Institutions for the Blind." Probably no physician of the country has contributed more largely to the literature of the profession. His works rank among the very highest of their kind, and have had comparatively enormous sales.

Frederick Charles Brightly, an emigrant from England, published (1839) "Treatise on the Law of Costs," "Nisi Prius Reports," "Equitable Jurisdiction of the Courts of Pennsylvania," and edited "Purdon's Digest of the Laws of Pennsylvania," and "Binn's Justice." He published also an "Analytical Digest of the Laws of the United States, from the Adoption of the Constitution to the End of the Thirty-fourth Congress," a work that has been greatly commended.

John Romeyn Brodhead, born in Philadelphia, was an attaché to the United States Legation at the Hague, and in 1846 was Secretary of Legation at London under Mr. Bancroft. He was author of (1) "Address before the Historical Society of New York," 1844; (2) "Report as Historical Agent of New York;" (3) "History of the State of New York;" (4) "Address before the Clinton Hall Association."

William Potts Dewees, M.D., Professor of Midwifery in the University of Pennsylvania, was the author of "Inaugural Essays," "Medical Essays," and "System of Midwifery, founded on the French System of Obstetrics, especially that of Baudelocque." The twelfth edition of this admirable work was published in 1854. In 1825 he published "A Treatise on

the Physical and Medical Treatment of Children," and the following year one on the "Diseases of Women;" in 1830, "Practice of Medicine."

Herman Haupt published in 1840 "Hints on Bridge-Building," and afterward "General Theory of Bridge-Construction."

Isaac Hays, M.D., was editor of Wilson's "American Ornithology," of Hoblyn's "Dictionary of Medical Terms," Lawrence's "Treatise on Diseases of the Eye," Arnott's "Elements of Physics," and *The American Journal of the Medical Sciences* from its commencement, in 1827; also the *Philadelphia Journal of Medicine and Physic*, to both of which he contributed a variety of articles.

Joseph Hartshorne, M.D., was first American editor of Boyer's "Lectures on Diseases of the Bones," arranged by Richerand, and translated by Dr. Farrall, London. Besides this work, he contributed much to the *Eclectic Repository* and the *Medical Recorder*, of Philadelphia.

Edward Hartshorne, M.D., and Henry Hartshorne, M.D., sons of the preceding, added to the literature of the profession. The former published (1) "Medical Jurisprudence," by Alfred S. Taylor, with notes and references to American decisions; also the "Ophthalmic Medicine and Surgery" of T. Wharton Jones. He was the author of many articles in *The American Journal of the Medical Sciences, The Philadelphia Medical Examiner*, and the *Philadelphia Journal of Prison Discipline and Philanthropy*. The latter published "Water *vs.* Hydropathy," "Thesis on Water in its True Relation to Medicine," contributions to the above last-named journals, and a prize essay on "Arterial Circulation."

Catharine H. W. Esling, formerly Miss Waterman, was a very popular authoress about 1840, contributing often to the periodicals. Her published volume is one entitled "The Broken Bracelet, and Other Poems." Mrs. Hale, in "Woman's Record," speaks of Mrs. Esling as excelling "in portraying feeling, and in expressing the warm and tender emotions of one to whom *home* has ever been the lodestar of the soul."

J. F. B. Flagg, M.D., a native of Boston, removed to Philadelphia, where he was author of "Ether and Chloroform, their Employment in Surgery, Dentistry, Midwifery, Therapeutics, etc.," 1851, a work that has been much praised.

W. W. Gerhard, M.D., was for a time lecturer on clinical medicine in the University of Pennsylvania. He published (1) "Clinical Guide," 1842; (2) "Lectures on the Diagnosis, Pathology, and Treatment of the Diseases of the Chest." Of this last work the *American Journal of the Medical Sciences* says, it is "the best refutation of the charges which are constantly made against physical exploration in medicine by those who appear to imagine that science can never advance beyond the point at which they ceased to learn."

Paul B. Goddard, M.D., was a frequent contributor to medical science. His works are (1) "On the Arteries," with plates; (2) "On the Nerves;" (3) "The Anatomy, Physiology, and Pathology of the Human Teeth;" (4 and 5) edition of Erasmus Wilson's "System of Human Anatomy, General and Special;" and the same author's "The Dissector; or, Practical and Surgical Anatomy;" (6) Moreau's "Practical Treatise on Midwifery;" (7) Ricord's "Illustrations of Syphilitic Disease." He edited the iconographic portion of "Rayer on the Skin," and edited "Ashwell on the Diseases of Females."

Thomas Charlton Henry, D.D., for many years pastor of the Second Presbyterian Church of Charleston, a native of Philadelphia, wrote three works that have been often very highly commended: (1) "An Inquiry into the Consistency of Popular Amusements with a Profession of Christianity," Charleston, 1825; (2) "Moral Etchings from the Religious World," 1828; (3) "Letters to an Anxious Inquirer, designed to relieve the Difficulties of a Friend under Serious Impressions." This last work was published in London (1829), with a memoir of the author by Rev. Thomas Lewis, and a preface by John Pye Smith. "These letters," said the *London Evangelical Magazine*, "are the production of a master-mind, deeply read in the Scriptures, in the knowledge of the human heart, and in the phenomena of Christian experience."

John Henry Hobart, D.D., bishop of New York, Professor of Theology and Eloquence in the General Protestant Episcopal Seminary of New York, was born in Philadelphia, and was at one time rector of a Protestant Episcopal Church in the upper part of the county. He published "Companion for the Altar," 1804; "Companion for the Festivals and Fasts," 1804; "Apology for Apostolic Order," 1807; Charge to the Clergy," 1815; "State of Departed Spirits;" "Thanksgiving Sermon;" "Address to the Episcopal Missionary Society," 1817; "Communicant's Manual;" "A Discourse comparing the United States with England;" "The Clergyman's Companion;" "The Christian's Manual of Faith and Devotion." His posthumous works, with a memoir by Rev. William Berrien, were published in 1833. Bishop Hobart was an earnest advocate of Episcopal ordination.

Thomas C. James, M.D., professor of Midwifery in the University of Pennsylvania, was fond of light literature, and contributed to the *Portfolio* translations in verse of the Idylls of Gessner.

L. J. Jardine, M.D., published, in 1795, "Letter from Pennsylvania to a Friend in England."

William David Lewis, after a year's residence in Russia, published a translation of the "Bokchesarian Fountain," by Alexander Pooshkeen, and other poems from the Russian. This was the first translation from Russian literature that was ever made in this country.

John Morgan, M.D., with Dr. William Shippen,

founder of the first medical school in Philadelphia, in which he was professor of the theory and practice of medicine, published in 1768 "Tentamen Medicum de Puris Confectione," and is said to have been the first in the medical profession who proposed the theory of the formation of pus by the secretory action of the vessels of the affected part. He was author also of "A Discourse on the Institution of Medical Schools in Philadelphia," and of "Four Dissertations on the Reciprocal Advantages of a Perpetual Union between Great Britain and her American Colonies." These received the prize awarded by John Sargeant, of London. He wrote also "A Recommendation of Inoculation, according to Baron Dimsdale's Method," 1776; also "Vindication of his Public Character in the Station of Director-General of the Military Hospitals," 1777. He was also one of the founders of the Philosophical Society, and contributed frequently to its Transactions.

Samuel George Morton, M.D., after completing his education at the University of Edinburgh, rose rapidly in his profession, and was professor of anatomy in the Pennsylvania Medical College from 1839 to 1843. He became prominently connected with the Academy of Sciences, of which he was for some time president, and to whose Transactions he contributed many valuable papers. In 1827 he published "Analysis of Tabular Spar from Bucks County;" in 1834, "Synopsis of the Organic Remains of the Cretaceous Group of the United States;" and in the same year, "Illustrations of Pulmonary Consumption; its Anatomical Character, Causes, Symptoms, and Treatment." In 1839 appeared "Crania Americana; or, A Comparative View of the Skulls of Various Aboriginal Nations of North and South America," to which was prefixed an essay on the "Varieties of the Human Species; illustrated with Plates and Maps." This work made a profound impression upon the scientific world. Humboldt, Prescott, Silliman, and others lauded it highly. The *Westminster Review* said, "It is the first application, upon anything like a commensurate scale, of the study of cranial peculiarities to the illustration of a great division of the human family." He wrote also a treatise styled "An Inquiry into the Distinctions and Characteristics of the Aboriginal Race of America;" also "Crania Egyptiaca; or, Observations on Egyptian Ethnography, derived from Anatomy, History, and the Monuments;" also "An Illustrated System of Human Anatomy, Special, General, and Microscopic;" also "A Catalogue of Skulls of Men and the Inferior Animals in his Collection." This collection, now in possession of the Academy of Natural Sciences, is said to be the most extensive in the world. Some of Dr. Morton's views were startling to the scientific world, especially his belief in a plurality of races, and that man will yet be found in the fossil state as low down as the eocene period.

Philip H. Nicklin was a bookseller in Baltimore first and Philadelphia afterward, dealing in law-books mainly. He was author, in 1834, of "Report Concerning the Universities of Oxford and Cambridge;" (2) "Letters Descriptive of the Virginia Springs," by Peregrine Prolix, 1836; (3) "A Pleasant Peregrination," etc.; (4) "Remarks on Literary Property;" (5) "Papers on Free Trade." He also contributed to Silliman's and other journals.

James Patterson, pastor of the First Presbyterian Church of the Northern Liberties, published, about 1820, a missionary sermon and several religious works.

Henry Stewart Patterson, M.D., besides the biography of Dr. Morton, which has been much praised, published (1) "Oration before the Pennsylvania Literary Institute;" (2) "Lectures Introductory to a Course of Materia Medica;" (3) "Notice of the Life and Professional Services of William R. Grant, M.D.," 1852.

Dr. William Patterson, a native of Londonderry, published, 1793, (1) "Remarks on Some of the Opinions of Dr. Rush respecting Yellow Fever;" (2) "Observations on the Climate of Ireland," 1804.

Charles Picot, a native of Paris, for several years a teacher in Philadelphia, wrote (1) "First Lessons in French;" (2) "French Assistant;" (3) "Entertaining French Narratives;" (4) "French Historical Narratives;" (5) "Historical, Scientific, Literary, and other Narratives;" (6) "Beauties of the French Drama;" (7) "Fleures de Parnasse;" (8) "Spanish Speller." Besides these, with Judah Dobson, he published an "Abridgment of Fleming and Tibbins' French and English Dictionary," in 1844.

John Hare Powel was once secretary of the United States Legation, under William Pinckney, at London. One of the founders of the Pennsylvania Agricultural Society, of which he published memoirs; also "Hints for American Farmers," and contributions to the *American Farmer*, and other journals.

John Redman, M.D., about 1810, published—(1) "Abortion;" (2) "Defense of Inoculation."

John Read, son of George Read, one of the signers of the Declaration of Independence and member of the Convention that framed the Constitution of the United States, and successor to Nicholas Biddle in the United States Senate, published, in 1798, "Arguments on British Debts."

His son, John Meredith Read, United States district attorney, and attorney-general and associate, and chief justice of the Supreme Court of Pennsylvania, devoted some of his time to authorship. Among his productions are "Outlines of a Plan for the Administration of the Girard Trust," 1833; "Address to the Democratic Members of the Legislature of Pennsylvania," 1854; "Speech at Philadelphia on the Power of Congress over the Territories," and a large number of justly celebrated addresses. Also "Views Sustained by Facts and Authorities on the Suspension of the Writ of Habeas Corpus;" "Lecture before the Law Department of the University of Pennsylvania," and many other similar works. Mr. Read was regarded one of the

ablest debaters of his time. His speech in the celebrated trial of the United States *vs.* Hanway, for treason, was never reported. If it had been, it has been said that the law of treason would have been forever settled in this country.

Joseph Reed, son of Gen. Joseph Reed of Revolutionary fame, published in 1822 "Laws of Pennsylvania," a continuation of the series by Charles Smith.

Henry Reed, who passed one-half of his life in the literary duties of the Pennsylvania University as Professor of Literature and Moral Philosophy, was one of the most accomplished scholars in English literature that this country has produced. He was born in Philadelphia on the 11th of July, 1808, being a grandson of Joseph Reed, the President of Pennsylvania. He was christened by the name of Henry Hope, after Henry Hope, of Amsterdam, who was cousin-german of his mother's grandmother, though the middle name was afterward dropped. He received his early education in the classical school of James Ross, a highly-esteemed teacher of his day in Philadelphia. Passing to the University of Pennsylvania in September, 1822, he attained his degree of Bachelor of Arts in 1825, taking first honors. He then pursued the study of the law in the office of his uncle-in-law, Hon. John Sergeant, and was admitted to the bar in 1829. In September, 1831, he relinquished the practice of his profession, and was elected Assistant Professor of English Literature in the University of Pennsylvania. In November of the same year he was chosen Assistant Professor of Moral Philosophy. In 1835 he was elected Professor of Rhetoric and English Literature.

Previous to this time, however, in 1834, he married Elizabeth White Bronson, a granddaughter of Bishop William White. Mrs. Reed had six children,—three who died in infancy, and Mary Bronson Reed, Henry Reed (a member of the bar of this city), and Anne Bronson Reed (who married W. B. Robins, who is also a member of the Philadelphia bar).

In May, 1854, Henry Reed obtained a leave of absence from his university duties, and accompanied by his sister-in-law, Miss Bronson, left America for a summer visit to Europe, a trip he had long contemplated. He visited the Continent, and from thence went to England, where he was at home among such friends as the Wordsworths, Southeys, Coleridges, Arnolds, Lord Mahon, Mr. Baring, Mr. Aubrey De Vere, Mr. Babbage, Henry Taylor, and Mr. Thackeray, names, one and all, associated with the highest literary or political distinction. The last words he ever wrote were in a letter of the 20th of September, 1854, to his venerable friend, Mrs. Wordsworth, thanking her and his English friends generally for all she and they had done for him. On the same day, Mr. Reed and his sister-in-law embarked at Liverpool for New York, in the steamship "Arctic." Seven days afterward, at noon, on the 27th, when almost in sight of his native land, a fatal collision occurred, and before sundown every human being (about three hundred persons) left upon the ship had sunk under the waves of the ocean.

The news of Mr. Reed's death was received with deep and intense feeling in the city of his birth, his education, and his active life. Philadelphia mourned sincerely for her son, and no tribute to his memory, no graceful expression or act of sympathy to his family, was withheld.

A diligent scholar, and of a thoroughbred cultivation in the best schools of English literature and criticism, of unwearied habits of industry, he would probably, as life advanced, have further served his country by new offerings of the fruits of his mental discipline and studies. His chief compositions were several courses of lectures which he delivered to the public at the University of Pennsylvania, and of which a collection has been published since his death by his brother, William B. Reed, with the titles "Lectures on English Literature, from Chaucer to Tennyson;" "Lectures on English History and Tragic Poetry as Illustrated by Shakespeare," and "Lectures on the British Poets." These works have been eminently successful, having passed through several editions both in this country and in England. The tastes, mental habits, and associations of the writer are fully exhibited in these productions, which cover many topics of moral and social philosophy, besides the criticism of particular authors. Of the "Lectures on the British Poets" the *London Athenæum* said, "No one can glance through the 'Lectures,' which are oratorical in style, without acknowledging the noble ardor which inspires them, or without sympathizing in the American's appeal—almost as fervent as a prayer—in behalf of the republic he loved, and to the service of which he devoted his generous and honorable life."

As a scholar and thinker, Mr. Reed belonged to a school of English writers who received their first impulse from the genius of Wordsworth and Coleridge. It is characterized by its sound conservatism, reverential spirit, and patient philosophical investigation. He was early brought into communication with Wordsworth, whom he assisted by the supervision and arrangement of an American edition of his poems. The preface to this work, and an elaborate article in the *New York Review* of January, 1839, which appeared from his pen, show his devotion to this master of modern poetry. After the death of the poet he superintended the publication of the American edition of the memoirs by Dr. Christopher Wordsworth.

With the Coleridge family he maintained a similar correspondence and intimate relation. As an evidence of this, Lord Chief Justice Coleridge, while on his late visit to this country, in the speech he made on Oct. 16, 1883, at the banquet given in his honor by the trustees of the University of Pennsylvania, at that institution, said, "He was a friend of Henry Reed, too soon, too sadly lost," and added, "He was a

Digitized by Google

scholar, philosopher, and perfect gentleman. He was known in England as well as here. Of him it might be said, 'His life too short for friendship, not for fame.'"

A memoir which Mr. Reed prepared of Sara Coleridge for the *Literary World*, Aug. 20, 1852, though brief, was so carefully and characteristically executed, that it appeared not long after, reprinted entire, among the obituaries of the *Gentleman's Magazine*.

Professor Reed edited several books in connection with his courses of instruction. In 1845 he prepared an edition of Alexander Reed's "Dictionary of the English Language," and in 1847 edited, "with an introduction and illustrative authorities," G. F. Graham's "English Synonymes," the series of poetical citations added by him being confined to Shakespeare, Milton, and Wordsworth. He also edited American reprints of Thomas Arnold's "Lectures on Modern History" and Lord Mahon's "History of England from the Peace of Utrecht to the Peace of Paris." In 1851 he edited the poetical works of Thomas Gray, for which he prepared a new memoir, written with his accustomed judgment and precision. An "Oration on True Education" was delivered by him before the Zelosophic Society of the University of Pennsylvania in 1848. He also delivered a "Lecture upon the American Union" before the Smithsonian Institute, and several addresses were made at various times before other bodies. To this enumeration is to be added a life of his grandfather, Joseph Reed, published in Sparks' "Series of American Biography."

William C. Preston was a native of Philadelphia, though his life was spent mostly in South Carolina. He was elected president of South Carolina College in 1845, and served that State both in the House of Representatives and the Senate of the United States. Although an eminent orator and scholar, he committed to the press little of his written work. His "Eulogy on Hugh S. Legare" is a most finished production.

Alonzo Potter, D.D., LL.D., a native of New York, elected bishop of the Protestant Episcopal Church of Pennsylvania in 1845, had a very high reputation for ability and varied accomplishments. He was author of (1) "A Treatise on Logarithms," 1822; (2) "A Treatise on Descriptive Geometry;" (3) "Political Economy, its Objects, Uses, and Principles," 1840; (4) "The Principles of Science Applied to the Domestic and Mechanic Arts, and to Manufacture and Agriculture;" (5) "The School and the School-master, with G. B. Emerson;" (6) "Hand-Book for Readers and Students;" (7) "Plan of Temperance Organizations;" (8) "A Lecture on Drinking Usages." In 1858 a volume was published with selections from his sermons and other addresses. Besides these Bishop Potter composed nearly a dozen of the volumes in the Harper's Family Library Series.

Thomas McKean Pettit, one of the judges of the District Court of Philadelphia, was author of (1) "Annual Discourse before the Historical Society of Pennsylvania in 1828;" (2) "Annual Discourse before the Philomathian Society of the University of Pennsylvania," 1836; (3) "Memoirs of Roberts Vaux."

Leon Hyneman, editor of *The Masonic Mirror*, published, 1858, "The Origin of Freemasonry."

Charles Hodge, D.D., professor of Biblical Literature in the Theological Seminary of Princeton, was a Philadelphian. He was editor of the *Biblical Repertory* and *Princeton Review*. His publications are (1) "Comment on the Epistle to the Romans," 1835; (2) "Questions to the Epistle to the Romans;" (3) "Constitutional History of the Presbyterian Church in the United States," 1840; (4) "The Way of Life," 1842; (5) "What is Presbyterianism? An Address delivered before the Presbyterian Historical Society," 1855; (6) "A Commentary on the Epistle to the Ephesians," 1856; (7) "Commentary on the First Epistle to the Corinthians," 1857.

Daniel McCalla, D.D., minister of the Congregational Church at Wappetaw, S. C., was a native of Philadelphia. His "Sermons and Essays," with an account of his life, were published in 1810, by Hollingshead.

J. C. Oehlschlager, for many years a teacher of the German language, published a "Pronouncing German Reader," and the introductory matter to the American edition of Grieb's German and English Dictionary.

Benjamin Morgan Palmer, D.D., a native of Philadelphia, for many years pastor of the Presbyterian Church at Beaufort, S. C., published several of his sermons, and in 1835, "The Family Companion."

Joseph Parrish, M.D., published "Practical Observations on Strangulated Hernia and some of the Diseases of the Urinary Organs," 1836; and an edition of William Lawrence's "Treatise on Hernia," with an appendix. He was one of the editors of the *North American Medical and Surgical Journal*, and contributed much to its columns. A memoir of him was published by Dr. George B. Wood. His son, of the same name and profession, principal of the Institution for Feeble-Minded Children at Germantown, contributed many able papers on Idiocy and other subjects to the *New Jersey Medical Reporter*.

Two other sons, Isaac and Edward Parrish, published several works. The former, a physician, wrote a biographical memoir of John C. Otto, 1832. He was a frequent contributor to the Transactions of the College of Physicians, Pennsylvania State Medical Association, and other learned societies. A memoir of him, by Dr. Samuel Jackson, was published in 1853. His brother, professor of Materia Medica in the Philadelphia College of Pharmacy, was author of (1) "An Introduction to Practical Pharmacy," 1856; (2) "The Phantom Bouquet," a popular treatise on the art of skeletonizing leaves and seed-vessels; (3) "An Essay on Education in the Society of Friends, with an Account of the Proceedings of Laying the Corner-Stone of Swarthmore College."

Eli K. Price, a distinguished member of the bar, published (1) "A Memoir of Philip and Rachel Price," 1853; (2) "Of the Limitation of Actions and of Liens against Real Estate in Pennsylvania," 1857; (3) "A Discourse on the Family as an Element of Government, with Centennial Writings of the Descendants of Philip and Rachel Price," 1864; "History of the Consolidation of the City of Philadelphia," 1873.

Margaret Smith, daughter of Col. John Bayard, of Revolutionary service, was author of (1) "A Winter in Washington; or, The Seymour Family," 1827; (2) "What is Gentility?" 1830; and many other stories and sketches appearing in *The Southern Literary Messenger and Lady's Book*. Mr. Hale's *Woman's Record* notices Mrs. Smith.

Richard Penn Smith, publisher of *The Aurora*, grandson of Dr. Smith, first provost of the University of Pennsylvania, wrote "The Forsaken," 1831; "A Guide to Philadelphia," 1832; "The Actress of Padua and Other Tales," 1836; a "Life of David Crockett." He was, however, more distinguished for his dramatic works,—"Caius Marius," made famous by Edwin Forrest, "Quite Correct," "Eighth of January," "A Wife at a Venture," "The Sentinels," "William Penn," "The Triumph at Plattsburgh," "The Water-Witch," "Is She a Brigand?" "My Uncle's Wedding," "The Daughter," "The Venetian." "The Disowned" and "The Deformed" were acted with much *éclat* in the London theatres. Selections from his works by his son, Horace W. Smith, with a biographical sketch by Morton McMichael, were published in 1856.

Henry Stuber, M.D., was a frequent contributor to various periodicals. He is best known for his "Continuation of the Autobiography of Dr. Franklin," in which he gives account of the philosopher's researches in electricity.

Joel B. Sutherland, M.D., judge of the Court of Common Pleas of Philadelphia, wrote (1) "Manual of Legislative Practice and Order of Business in Legislative Bodies," 1830; (2) "A Congressional Manual; or, Outline of the Order of Business in the House of Representatives of the United States."

Henry S. Tanner, a native of New York, resided for some years in Philadelphia. He published (1) "New American Atlas," 1817; (2) "Map of North America," 1822; (3) "The World on a Globular Projection," 1825; (4) "Map of the United States of Mexico," 1825; (5) "Map of Philadelphia," 1826, besides many other maps. He was the author also of "Recent Surveys," "View of the Valley of the Mississippi," "American Traveller," "Central Traveller," "New Picture of Philadelphia," "Description of the Canals and Railroads of the United States." His maps and other works were highly praised. He was a member of the Geographical Society of Paris, and a corresponding member of the Royal Geographical Society of London.

Gerard Troost, a native of Holland, the first president of the Academy of Natural Sciences in Philadelphia, became professor of Chemistry, Mineralogy, and Geology in the University of Nashville. He translated Humboldt's "Aspects of Nature," and wrote extensively for several learned societies. In 1826 he published "Geological Survey of the Environs of Philadelphia" and "Geological Surveys of Tennessee."

William Bradford, Attorney-General of the United States, a native of Philadelphia, wrote, at the request of Governor Mifflin, "An Enquiry how far the Punishment of Death is Necessary in Pennsylvania." In early life Mr. Bradford wrote for the periodicals sundry poetical pieces.

John Bradford Wallace published (1) "Reports of Cases of the Third Circuit United States Court," in 1801; (2) "Remarks upon the Law of Bailment," 1840; and edited, in 1802, "Abbot on Shipping." His widow printed (for private circulation) a sketch of his life in 1848. His son, John William Wallace, master in chancery of Pennsylvania, reporter of United States Supreme Court, published (1) "The Reporters Chronologically Arrayed, with Occasional Remarks upon their Respective Merits;" (2) "Cases in the Circuit Court of the United States;" (3) "The Want of Uniformity in the Commercial Law between the Different States of the Union," 1851; (4) "Pennsylvania as a Borrower;" (5) "Reports of Cases in Supreme Court of the United States." He was editor of "British Crown Cases Reserved," also Smith's "Leading Cases." Mr. Wallace was for some years president of the Historical Society of Pennsylvania, and wrote and delivered several valuable historical addresses. He also produced admirable works upon biography and history, among them, "Sketch of the Life of Bradford," the first printer of Pennsylvania; "An Old Philadelphian, Col. William Bradford, the Patriot Printer of 1776." This was privately printed a short time before Mr. Wallace's death, which took place Jan. 10, 1884.

Jasper Yeates, a member of the Philadelphia bar and associate justice of the Supreme Court of Pennsylvania, published reports of that court in 1818, which have been severely criticised for the want of care with which they were made.

Alexander Wilcocks, M.D., wrote (1) "Essay on the Tides: Theory of the Two Forces," 1844; (2) "Reflections upon the Nature of the Temporary Star of the Year 1572: An Application of the Nebular Hypothesis;" (3) "Thoughts on the Influence of Ether in the Solar System: Its Relations to the Zodiacal Light, Comets, the Seasons, and Periodical Shooting Stars."

Several of the family of Wharton have been prominently connected with the literary growth of Philadelphia. Thomas I. Wharton, a member of the bar, and for some time reporter of the Supreme Court of Pennsylvania, was author of (1) "Digest of Cases in the Circuit Court of the United States, Third District, and in the Courts of Philadelphia and Pennsylvania,"

1822; (2) "Digested Index to the Reported Decisions of the Several Courts of Law in the Western and Southern States," 1824; (3) "Discourse before the Society for the Commemoration of the Landing of William Penn," 1826; (4) "Discourse before the Alumni of the University of Pennsylvania," 1836; (5) "Reports of Cases in the Supreme Court of Pennsylvania, Eastern District," 1835; (6) "Memoir of William Rawle, LL.D.;" (7) "Letter on the Right and Power of Philadelphia to Subscribe to the Pennsylvania Railroad Company's Stock;" (8) "Address at the Opening of the New Hall of the Athenæum, Philadelphia," 1846. He also published biographical sketches of many distinguished Philadelphians, which have been of much service to us in the preparation of this work. His son, Francis Wharton, D.D., LL.D., who began as a lawyer and afterward became a minister of the Protestant Episcopal Church (rector of St. Paul's, Brookline, Mass.), published (1) "Treatise on the Criminal Code of the United States," 1846, which was very highly commended by several leading lawyers in this country; (2) "The State Trials of the United States during the Administrations of Washington and Adams, with References Historical and Professional, and Preliminary Notes on the Politics of the Times," 1849; (3) "Treatise on the Law of Homicide in the United States," 1855; (4) in conjunction with others, "Treatise on Medical Jurisprudence." This work also has been highly praised. (5) "A Willing Reunion not Impossible: A Thanksgiving Sermon," 1863; (6) "The Silence of Scripture," 1867. Dr. Wharton was also a frequent contributor to various periodicals. His brother, Henry Wharton, a lawyer, was author of "A Practical and Elementary Treatise on the Law of Vicinage," and was one of the editors of *The American Law Register*.

George M. Wharton published (1) "Remarks on Horace Binney's Treatise on Habeas Corpus;" (2) "Answer to Mr. Binney's Reply;" (3) an article on "Literary Property" in *The North American Review*, and one on "Oratory" in "The Philadelphia Book."

Jacob Servoss Rose, M.D., was author of (1) "Consumption Curable;" (2) "Reformed Practice of Medicine," 1845.

William Edward Schenck, D.D., corresponding secretary and editor of the Presbyterian Board of Publication, published (1) "Historical Account of the First Presbyterian Church of Princeton," 1850; (2) "Farewell Discourse," 1852; (3) "Discourse on Church Extension in Cities;" (4) "God Our Guide," 1863; (5) "Aunt Fanny's Home;" (6) "Children in Heaven;" (7) "Presbyterian Social Psalmist;" (8) "With Others Children's Praise."

Chief Justice George Sharswood, who is noticed in the chapter on the Bench and Bar, contributed much to the literature of his profession that has received the very highest encomiums,—(1) "Professional Ethics, a Compend of Lectures on the Aims and Duties of the Profession of Law," 1854; (2) "Popular Lectures on Common Law," 1856. He edited Blackstone's "Commentaries," "Byles on Bills of Exchange," "Coote on Mortgages," Leigh's "Nisi Prius," "Roscoe on Criminal Evidence," "Russel on Crimes," "Smith on Contracts," "Starkei on Evidence," Stephens' "Nisi Prius," "Laws of the United States," "English Common Law Reports." These editions rank among the very best that have ever appeared.

Francis Gurney Smith, M.D., professor of Institutes of Medicines in Philadelphia College, published (1) "Domestic Medicine, Surgery, and Materia Medica," 1852; (2) "Experiments Upon Digestion;" (3) "An Analytical Compendium;" (4) "Translation of Barth and Roger's Manual of Auscultation and Percussion;" (5) editor of Carpenter's "Principles of Human Physiology and the Microscope," of Rirke's & Paget's "Physiology," and, with others, of Drake's "Systematic Treatise."

Joseph Few Smith, D.D., first a Lutheran, then Presbyterian divine, professor of Sacred Rhetoric and Pastoral Theology in Auburn Theological Seminary, was author of (1) "Address before the Evangelical Lutheran Church," 1845; (2) "American Lutheran Mission," 1845; (3) "Hints to Church Members," 1845; (4) "Pulpit Eloquence;" (5) "Silent Influence of the Bible," 1851; (6) "The Office of the Ruling Elder," 1858; (7) "Prayer Meeting," 1860; (8) "The Fiftieth Anniversary of the Second Presbyterian Church of Newark, N. J.;" and (9) "The Prayer of the Afflicted," 1864. He was also a frequent writer for religious periodicals.

Persifor Fraser Smith was author of (1) "Pennsylvania State Reports," 1865; (2) "Forms of Procedure in the Several Courts of Pennsylvania."

William Moore Smith, son of Rev. Dr. Smith, the provost of the University, was a member of the bar, and wrote and published a volume of poems, which was republished in London.

Thomas L. Smith, a native of Philadelphia, afterwards judge of the Supreme Court of Indiana, published reports of that court, 1848; (2) "Elements of the Laws; or, Outlines of the System of Civil and Criminal Laws in force in the United States," 1858.

Robert Smith was for some time editor of *The Friend*, a literary and religious journal, devoted to the doctrines of the Quakers. This was about 1840–50.

Casper Souder, Jr., an editor and proprietor of *The Evening Bulletin*, and a frequent contributor to other journals of Philadelphia and New York, had a great deal of local historic knowledge, and wrote with care and excellence upon antiquarian topics. Among such contributions was "A History of Chestnut Street," published in the *Dispatch*, and a "History of Carpenters' Hall," prepared for the Carpenters' Company.

Alfred Charles Stillé, M.D., who had studied much abroad, and was prominently connected for many years with the Philadelphia Association for Medical

Instruction, St. Joseph's Hospital, Pennsylvania Medical College, and University of Pennsylvania, was author and editor of many valuable works. With John Forsyth, he translated "Pathological Hæmatology, from the French of G. Andral," 1839; (2) author of "Medical Instruction in the United States," 1845; (3) Elements of General Pathology," 1848; (4) "Report on Medical Literature," 1850; (5) "The Unity of Medicine," 1856; (6) "Humboldt's Life and Character," 1859; (7) "Therapeutics and Materia Medica; a Systematic Treatise on the Actions and Uses of Medicinal Agents, including their Description and History," 1860. This last work was pronounced by the *Archives Générales* of Paris to be worthy of being classed among the best and most powerful treatises on therapeutics. (8) "War as an Instrument of Civilization;" (9) "Epidemic Meningitis; or, Cerebro-Spinal Meningitis," besides many other essays on medical and surgical subjects.

Two others of this name prominently appear in literature. One, Charles Janeway Stillé, LL.D, professor and provost of the University of Pennsylvania, wrote (1) "How a Free People Conduct a Long War," 1862; (2) "Northern Interest and Southern Independence: A Plea for United Action," 1863; (3) "Historical Development of American Civilization: An Address before the Alumni Association of Yale College," 1863; (4) "Memorial of the Great Central Fair for the United States Sanitary Commission," 1864; (5) "History of the United States Sanitary Commission: being the General Report of its Work during the War of the Rebellion," 1866; (6) "Inaugural Address as Provost of Pennsylvania University;" (7) "Memoir of Rev. William Smith, D.D., First Provost;" (8) "Studies in Mediæval History."

John T. S. Sullivan, a son of the distinguished William Sullivan, LL.D., of Boston, resided for some time in Philadelphia, where he practiced law. He was the author of a biographical sketch of his father, translated several stories from the German, and wrote a considerable number of lyrical pieces, many of which became well known and popular.

Benjamin Cook Taylor, D.D., a minister of the Reformed Dutch Church, wrote (1) "The School of the Prophets," 1839; (2) "Annals of the Classis and Township of Bergen in New Jersey," 1857; (3) "Sermon on the Two Hundredth Anniversary of the Reformed Protestant Dutch Church of Bergen." He was also an occasional contributor to the *Christian Intelligencer*.

Stephen Higginson Tyng, D.D., a native of Newburyport, Mass., rector consecutively of St. George's Church, Georgetown, D. C.; Queen Anne's Parish, Prince George's County, Md.; St. Paul's, and the Epiphany, Philadelphia; and of St. George's Church, New York, was a voluminous author. He wrote, among other things, "Lectures on the Law and the Gospel," "Memoir of Rev. G. T. Bedell," "Recollections of England," "A Lamb from the Flock," "Christian Titles," "Fellowship with Christ," "The Rich Kinsman," "The Captive Orphan," "Forty Years' Experience in Sunday-Schools," "Guide to Confirmation," "Prayer-Book Illustrated by Scripture," "The Feast Enjoyed," "The Spencers," etc., besides a large number of sermons and addresses, memoirs, etc. He was a contributor to "The Man of Business," and consecutively editor of *The Episcopal Recorder*, *The Protestant Churchman*, and *The Theological Repertory*.

Job R. Tyson, LL.D., was author of (1) "Essay on the Penal Laws of Pennsylvania," 1827; (2) "Address before the Apprentices' Library Company of Philadelphia," 1830; (3) "Annual Discourse before the Historical Society of Philadelphia;" (4) "Memoir of T. C. James, M.D.," 1836; (5) "Lottery System of the United States;" (6) "Discourse on the Integrity of the Legal Character."

Benjamin Wallace, D.D., edited the *Presbyterian Quarterly* for ten years, and published some sermons. He was a contributor to the "Bibliotheca Sacra."

Henry E. Wallace was publisher of "Pennsylvania Reports," containing decisions appearing in the *Legal Intelligencer*, of which he was editor, and co-editor of the *Pennsylvania Law Journal*, 1842.

Horace Binney Wallace, son of John Bradford Wallace, was one of the most gifted men that Philadelphia has produced. He had studied both law and medicine, but never engaged in the practice of either. He traveled very extensively abroad and carefully studied foreign laws and institutions, and had begun a series of works upon those subjects, when his life was cut off at Paris, in 1852, when only thirty-five years of age. Among his projects was a series of volumes on civil and commercial law. He wrote anonymously, at the age of twenty-one, "Stanley; or, The Recollections of a Man of the World," which was well received. He was also a constant contributor to several literary periodicals. Since his death selections have been made from these contributions, and published in two volumes with the titles of,—one, "Literary Criticisms and Other Papers," 1856; the other, "Art and Scenery in Europe, with Other Papers." These works have been most favorably criticised by the highest literary judgment. Of the "Art and Scenery" the *London Athenæum* said, "The style is elegant, fanciful, and easy, indicating an amateur's fondness for technicalities, but disfigured by no affectation." Daniel Webster thus spoke of him: "The development of great characters has always been one of my most favorite studies; and I doubt whether history displays at thirty years of age a loftier nature or one more usefully or profoundly cultivated." The celebrated Auguste Comte did not hesitate to rank Mr. Wallace as the "equal of the American statesmen."

William Wetherill, M.D., was the author (1835) of "Chemical and Medical Researches on Kreosote." Another of this family, Samuel Wetherill, a member of the bar, together with Benjamin Gerhard, edited

Joshua Williams' "Principles of the Law of Personal Property, for the Use of Students in Conveyancing."

Charles M. Wetherill, Ph.D., M.D., who had been educated in France and Germany, was author of (1) "Manufacture of Vinegar, its Theory and Practice, with Especial Reference to the Quick Process," 1860; also "Chemical Analysis." He contributed largely to scientific journals at home and in Germany and France.

Samuel Wetherill, ancestor of the above, a preacher of the Society of Free Quakers, published "An Apology for the Religious Society called Free Quakers," and several other smaller religious papers.

John A. Warder published "Hedge Manual: a Treatise on Hedges, Evergreens," etc., and "American Pomology." He also translated from the French Trousseau and Belloc on Laryngeal Phthisis, 1839. He was editor of the *Botanical Magazine and Horticultural Review.*

William D. Gallagher was born in Philadelphia, though he removed to the West when a lad of seventeen years. He was intimately associated with several literary journals,—as *The Backwoodsman, The Cincinnati Mirror, The Western Literary Journal and Monthly Review, The Western Magazine and Literary Journal.* In 1835, Mr. Gallagher published a volume of poetry with the title "Erato," and in 1836 another, and still another in 1837. His reputation as a poet began with the publication, anonymously, of "The Wreck of the Hornet." The second volume opened with a poem on Napoleon, called "The Conqueror." In the third was a narrative poem "Cadwallon." In 1841 he edited a volume which he styled "Selections from the Poetical Literature of the West." The following verses, from his "August," may be taken as a specimen:

"Faster along the plain
Moves now the shade, and on the meadow's edge:
The kine are forth again,
The bird flits in the hedge;
Now in the molten west sinks the hot sun.
Welcome, mild eve! the sultry day is done.

"Pleasantly comest thou,
Dew of the evening, to the crisped-up grass,
And the curled corn-blades bow
As the light breezes pass,
That their parched lips may feel thee and expand,
Thou sweet reviver of the fevered land.

"So, to the thirsting soul,
Cometh the dew of the Almighty's love;
And the scathed heart, made whole,
Turneth in joy above
To where the spirit freely may expand,
And rove, untrammeled, in that better land."

John S. Hart, a native of Massachusetts, published, in 1849, an essay on "Spenser and the Faerie Queene," and in 1851, "Female Prose Writers of America;" in 1844, "A Class-Book of Poetry" and "A Class-Book of Prose;" in 1845, "An Exposition of the Constitution of the United States for the Use of Schools," and an "English Grammar;" in 1853, "Greek and Roman Mythology," and other works. He was editor of the *Common School Journal, Sartain's Magazine, The Iris,* and White's "Universal History."

Ebenezer Hazard, one time postmaster-general of the United States, published, in 1792, in two quarto volumes, "Historical Collections, consisting of State Papers and other authentic Documents, intended as Materials for a History of the United States of America." These collections and those of his son have always been regarded as of inestimable value. His son, Samuel Hazard, was editor of the "Register of Pennsylvania, 1828 to 1836," "United States Commercial and Statistical Register, 1839 to 1842," "Annals of Pennsylvania, from the Discovery of Delaware (1609) to the Year 1682," "Pennsylvania Colonial Records," and "Pennsylvania Archives from 1682 to 1790." As a historical scholar, patient, industrious, and judicious, he has had no equal among authors in that field of literature. Willis P. Hazard in 1879 published the "Annals of Philadelphia and Pennsylvania in the Olden Time" as a supplementary volume to "Watson's Annals."

Henry D. Gilpin, attorney-general of the United States, published "Reports of the District Court of the United States for the Eastern District of Pennsylvania," authorities (chiefly under Judge Hopkinson) that rank among the highest in the profession, also "Opinions of the Attorney-General of the United States from the Beginning of the Government to the Year 1841." He was appointed by Congress supervisor of the publication of the "Madison Papers," 1840. Mr. Gilpin was a constant contributor to literary journals, among them *The American Quarterly, The Democratic* and *North American Reviews.* He wrote a large number of biographical sketches of the signers of the Declaration of Independence, and of several of the public men with whom he was contemporary.

Richard de Charmes, a minister of the Swedenborgian Church, was the author of "The New Churchman Extra." He also published several sermons and lectures in defense of his religious faith.

One of the busiest literary men that Philadelphia has produced is Timothy Shay Arthur. He was born in Orange County, N. Y., but came to this city in 1841, and engaged in journalism. For many years he was the editor and proprietor of *Arthur's Home Magazine.* Among his voluminous writings are "Arthur's Juvenile Library," "Cottage Library," "Golden Grains from Life's Harvest-Field," "Lights and Shadows of Real Life," "Leaves from the Book of Human Life," "The Loftons and the Pinkertons," "Ten Nights in a Bar-Room," "Tales for Rich and Poor," "Advice to Young Men," "Six Nights with the Washingtonians," "Maiden, Wife, and Mother," "Tales of Married Life," "True Riches," "The Hand but not the Heart," "Tired of Housekeeping," "Stories of Domestic Life," and

"The Good Time Coming." Together with W. H. Carpenter, he published also a series of histories of several States of the Union.

Abel Stevens, D.D., LL.D., the distinguished Methodist divine, has written a large number of works, among them "Memorials of the Introduction of Methodism into New England," 1848; "Memorials of the Progress of Methodism in New England;" "Church Polity;" "Pastors' Stories;" "Sketches and Incidents;" "Tales from the Parsonage;" "The Great Reform;" "The Preaching Required by the Times;" "The History of Methodism in its Different Denominational Forms;" "History of the Methodist Episcopal Church in the United States of America;" "The Life and Times of Nathan Bangs;" "The Centenary of American Methodism;" "The Women of Methodism: Its Three Foundresses, Susanna Wesley, the Countess of Huntingdon, and Barbara Heck, with Sketches of their Female Associates and Successors in the Early History of the Denomination." He was also editor of several Methodist journals, and contributor to many more.

Martin Russell Thayer, a native of Petersburg, Va., removed to Philadelphia in 1840, entered upon the practice of the law, and became in 1867 associate judge of the District Court. He published, besides several other pamphlets, "A Reply [in 1862] to Charles J. Ingersoll's Letter to a Friend in a Slave State," and in the same year "The Duties of Citizenship."

Joseph Parrish Thompson, D.D., LL.D., pastor of the Broadway Tabernacle, New York, a native of Philadelphia, published (1844) "Memoir of Timothy Dwight;" the next year, "Memoir of David Hale;" in 1848, "Young Men Admonished;" in 1851, "Hints to Employers;" in 1852, "Stray Meditations;" in 1854, "The Inalienable Possession;" and the same year, "Photographic Views of Egypt, Past and Present;" in 1855, "The Good Man's Memorial;" in 1857, "The Early Witnesses;" the same year, "Last Sabbath in Broadway Tabernacle: A Historical Discourse;" in 1858, "Teachings of the New Testament on Slavery," and "Memoirs of David Stoddard, Missionary to the Nestorians;" in 1859, "The College as a Religious Institution;" in 1860, "Love and Penalty;" in 1863, "The Sergeant's Memorial;" besides many other works, and numerous contributions to religious and literary journals.

Robert P. Thomas, M.D., professor of Materia Medica in the Philadelphia College of Pharmacy, was a frequent contributor to the *American Journal of the Medical Sciences*, the *Medical and Surgical Reporter*, and the *American Journal of Pharmacy*. He edited R. B. Griffith's "Universal Formulary," and Dr. Benjamin Ellis' "Medical Formulary," and a translation from the French, Cazeaux's "Midwifery."

Joseph M. Wilson became well known as the originator, in 1858, of the "Presbyterian Historical Almanac and Annual Remembrancer of the Church," regarded as one of the best works of its kind ever published.

George D. Potts, D.D., pastor, at the time of his death (1864), of the University Place Presbyterian Church in New York, was a native of Philadelphia. Besides many contributions to various religious journals, he published various sermons, lectures, and addresses, between 1826 and 1854.

Philip Syng Physick, M.D., one of the most eminent in the medical profession of any country, after a three years' course of study abroad, settled in Philadelphia, his native place, and contributed a large number of papers to the journals of his time, such as the *New York Medical Repository*, Dr. Coxe's *Medical Museum*, *Eclectic Repository*, *Philadelphia Journal of Medical and Physical Sciences*. A biographical sketch of him was made by his son-in-law, Dr. J. Randolph, surgeon of the Pennsylvania Hospital, and professor of Clinical Surgery in the University of Pennsylvania. Dr. Randolph also published several professional papers. A biographical memoir of him was written by G. W. Norris, M.D., 1848.

W. H. Odenheimer, D.D., rector of St. Peter's Church, and Protestant Episcopal Bishop of New Jersey, published "The Origin and Compilation of the Prayer-Book," 1841; same year, "The Devout Churchman' Companion;" "The True Catholic no Romanist," 1842; "Thoughts on Immersion," 1843; "The Young Churchman Catechised," 1844; "F. Ringelburgius on Study," "Bishop White's Opinions," 1846; "Essay on Canon Law," 1847; "The Clergyman's Assistant in Reading the Liturgy," 1848; "The Private Prayer-Book," 1851; "Jerusalem and its Vicinity."

William B. Rogers, a native of Philadelphia, at one time professor in the University of Virginia, originated the plan of the Institute of Technology, and delivered a course of lectures, that have been much praised, before the Lowell Institute. He published "Report of the Reconnoissance of the State of Virginia," 1836; "Report of the Geological Survey of Virginia," 1836–41.

Horace Wemyss Smith, son of Richard Penn Smith, published "Nuts for the Future Historian to Crack, containing the Cadwalader Pamphlet, Valley Forge Letters," etc., 1856; "The Miscellaneous Works of the Late Richard Penn Smith," 1856; "The Yorktown Orderly Book," 1865; poems in *Godey's* and *Graham's Magazines*; "Patriotic Songs of America," and "The Life and Services of William Smith, D.D."

Lloyd P. Smith, who was great-grandson of James Logan, succeeded his father, John Jay Smith, as librarian of the Loganian Library. He published "Report to the Contributors of the Pennsylvania Relief Association for East Tennessee of a Commission sent by the Executive Committee to Visit that Region," 1864; "Remarks on the Existing Materials for forming a Just Estimate of the Character of Napoleon I.," 1865; "Remarks on the Apology for

Usurpation contained in Napoleon's Life of Cæsar," and was for a considerable time editor of *Lippincott's Magazine*. John Jay Smith, his father, was busy in literature for some years. A notice of him will be found in the chapter on Libraries.

William Strickland, architect, published "Triangulation of the Entrance into Delaware Bay;" "Reports on Canals, Railways," 1826; and, together with E. H. Gill and R. H. Campbell, "Public Works of the United States," 1841.

Mrs. Townsend Stith, in 1831, published "Thoughts on Female Education."

William Suddards, D.D., a native of England, rector of Grace Church, published a number of sermons, and for many years edited *The Episcopal Recorder*, and "The British Pulpit."

Furman Sheppard, an able member of the Philadelphia bar, was the author of "The Constitutional Text-Book," 1855; "The First Book of the Constitution," 1861; and "A General Treatise on the Law of Easements." A more extended notice of him will be found in the chapter on the Bench and Bar.

Samuel Sloan, architect, published "The Model Architect," 1852; "Constructive Architecture," 1859; "City and Suburban Architecture," 1859; "Homestead Architecture," 1869; "American Houses," 1868; and published *Sloan's Architectural Review and Builder's Journal*.

Clifford Stanley Sims wrote "Stemmata Rosellana," 1859; "The Origin and Signification of Scottish Surnames," 1862; and "History of the Society of the Cincinnati of New Jersey."

William Henry Milburn, the celebrated blind Methodist evangelist, was born in Philadelphia. He published "The Rifle, Axe, and Saddle-Bags," with an introduction by Rev. John McClintock.

Benjamin Moran, private secretary to James Buchanan when United States minister in London, published "The Footman and Highway; or, Wanderings of an American in Great Britain." Mr. Moran was for some years United States minister to Portugal.

Rev. Henry D. Moore published "The Good Child's Library," forty-eight volumes; "Poems for my Friends;" and the annuals "The Winter Bloom" and "The Talisman." He was editor of *The Christian Souvenir*.

Edward Joy Morris, member of Congress and *chargé d'affaires* to Naples, and United States minister to Turkey, published "Notes of a Tour through Turkey, Greece, Egypt, Arabia Petræa," etc., 1842; "The Turkish Empire;" "Life and Love in Norway," translated from the German of Theodore Mügge; also "Erich Randal;" and "Corsica, Picturesque, Historical, and Social," from the German of Gregorinus.

Edward Duffield Neill, Presbyterian minister at St. Paul, Minn., a native of Philadelphia, published "Annals of the Minnesota Historical Society," and "History of Minnesota, from the Earliest French Explorations to 1858." He contributed to the *Presbyterian Quarterly Review*.

John Neill, M.D., surgeon to the Pennsylvania Hospital, was author of "Outlines of the Arteries, Nerves, Veins, and Lymphatics," and, with Francis Gurney Smith, "An Analytic Compendium of the Various Branches of Medical Science;" also edited an American issue (1852) of William Pirrie's "Principles and Practice of Surgery."

John H. Packard, M.D., demonstrator of Anatomy in the University of Pennsylvania, translated from the French Malgaigne's "Treatise on Fractures," and was author of "Manual of Minor Surgery," 1863; "Lectures on Inflammation," and "Rules for the Course to be followed by the Bystanders in case of Railroad Injury, when Surgical Assistance cannot be at once obtained," 1864.

Joseph Pancoast, M.D., one of the most eminent physicians in the world, professor of Anatomy in Jefferson Medical College, besides many contributions to various scientific journals, was the author of "A Treatise on Operative Surgery; comprising a Description of the Various Processes of the Art, including all the New Operations; exhibiting the State of Surgical Science in its Present Advanced Condition; with a large number of Plates," 1844, and of sundry Essays and Introductory Lectures to his Class. He was also editor of several works published in foreign countries, as Lobstein's "Treatise on the Human Sympathetic Nerve," Manec's "Great Sympathetic Nerve and Cerebro-Spinal System in Man," Wistar's "System of Anatomy."

Edward M. Paxson, once editor of the *Newtown Journal*, and founder of the Bucks County Agricultural Society, afterward associate justice of the Supreme Court of Pennsylvania, printed verses, composed by himself, upon his parents.

Joseph Rupert Paxton was author of "Jewelry and the Precious Stones (by Hipponax Roset)," 1856; and "Reveries of a Bachelor." Mr. Paxton has translated a number of French plays, and dramatized many of Dickens' stories. He was for two years, 1854–56, editor of the *Bizarre*.

William A. Porter, one of the judges of the Supreme Court of Pennsylvania, published (1) "An Address at Lafayette College," 1842; "Essay on the Law pertaining to the Sheriff's Office," 1845; "Address before the Law Academy of Philadelphia," 1849; and an "Essay on the Life, Character, and Writings of John B. Gibson, late Chief Justice of the State of Pennsylvania," 1855. He contributed also to *The American Law Magazine* and *Law Journal*.

A. Snowden Piggott, M.D., is author of "Chemistry and Metallurgy as applied to Dental Surgery," and the "Chemistry and Metallurgy of Copper."

Caspar Wistar Pennock, M.D., was author, with W. W. Gerhard, of "Observations of the Cholera of Paris," 1832.

William Stevens Perry, Protestant Episcopal Bishop of Iowa, is author of "An Historical Sketch of the Church Missionary Association of the Eastern District of Massachusetts," 1859; with Francis L. Hawks, "Journal of the General Conventions of the Protestant Episcopal Church, 1785 to 1853;" the "Journals of the Diocese of the Conventions of New Hampshire;" an "Historical Fragment (Bishops Seabury and Provost);" "The Connection of the Church of England with Early American Discovery and Colonization;" "The Proposed Book of Common Prayer of the American Episcopal Church;" edited, with introduction, "The Documentary Annals of the Colonial Church;" "Questions on the Life and Labors of the Great Apostle; for Sunday and Parish Clubs and Bible-Classes."

Henry Peterson, editor of *Neal's Gazette* and *Saturday Evening Post*, wrote "The Twin Brothers; or, Lessons in Charity," 1843. He has also published novels, and several poems, all which have been much praised.

Robert E. Peterson, M.D., was the author of "The Roman Catholic not the only True Religion, not an Infallible Church."

Addinell Hewson, M.D., surgeon to Wills Hospital, edited a "Treatise on Diseases and Injuries of the Eye," by Mackenzie, 1854. His father, Thomas T. Hewson, M.D., was translator of the "Treatise on Syphilis," by Swediaur.

Mrs. Mary Hughes, a native of England, emigrated to Philadelphia. She was the author of "Aunt Mary's Library for Boys and Girls," 10 vols., "Ornaments Discovered," "Stories for Children," "Emma Mortimer," and "Buds and Blossoms."

E. Kent Kane, who was son of Judge Kane, United States district judge of Pennsylvania, wrote one of the most entertaining works that has ever been produced upon the subject of travels, whether by land or sea. This was his account, entitled "The United States Grinnell Expedition in Search of Sir John Franklin," written after sixteen months' cruise on that most perilous and philanthropic undertaking. In 1856 he published "Arctic Explorations: The Second Grinnell Expedition during the Years 1853–55;" in 1856, "Far North: Explorations in the Arctic Regions." The author received sixty-five thousand dollars on the first year's sales of "Arctic Explorations." Among the many hundreds of expressions of praise to Mr. Kane, we give the following from Bancroft: "His constant self-possession during his long trials, his quickness of judgment, his unshrinking courage in danger, his fertility in resources in the hours of greatest difficulty, give him a very high place in the very first rank of ocean navigators as a leader, and commander, and man, and no one of them all has told the story of those adventures so charmingly as he has done."

John Jones, M.D., a native of New York, wrote "Plain Remarks upon Wounds and Fractures." After his death, Dr. Mease published an account of his life, with his surgical works.

J. P. Jones published, in 1834, "Eulogy on A. Laussat;" and in 1850, "Pennsylvania State Reports."

Walter R. Johnson published "Natural Philosophy on the Basis of Moffat," 1835; the same year, "Chemistry;" "Notes on the Use of Anthracite Coal in the Manufacture of Iron," 1841; an edition of Knapp's "Chemical Technology," 1848; an edition of Weisbach's "Mechanics," 1849; and in 1850, "The Coal-Trade of British America." Mr. Johnson was a frequent contributor to the *Journal of the Franklin Institute*.

Joseph H. Jones, D.D., a Presbyterian divine, published (1) "Revivals of Religion," 1839; "Influences of Physical Causes on Religious Experience," in 1846; "Life of Ashbel Green," 1849; and in 1850, "A Sermon on the Death of the Rev. C. C. Cuyler." He also published several other sermons and essays.

Thomas Evans, in 1828, published "Exposition of the Faith of the Society of Friends."

Francis Glass, in 1835, published a life of Washington, in Latin.

Richard Harlan, M.D., was author, in 1825, of "Fauna Americana," and in 1835, of "Medical and Physical Researches."

J. Harlan, in 1841, wrote "Memoirs of India and Afghanistan."

Thomas F. Gordon was author, in 1827, of "Digest of the Laws of the United States;" "History of Pennsylvania from its Discovery," 1829; "A History of New Jersey," 1831; "History of America," 1831; "History of Ancient Mexico," and "Gazetteer of New Jersey," 1834, and "Gazetteer of New York," 1836. Gordon wrote with judgment. His historical works are valuable.

Charles G. Leland, one of the most gifted among our literary men, was born in this city Aug. 15, 1824, and after his graduation at Princeton studied abroad for some years. Some time after his return he began a series of papers for the *Knickerbocker Magazine*, which were afterward published in book-form, under the title of "The Sketch-Book." He has also published "The Poetry and Mystery of Dreams," 1855; "Meister Karl's Sketch-Book," 1856, a collection of miscellanies and sketches of foreign travel; "Pictures of Travel," 1856; a translation of Heine's "Reisebilder;" also Heine's "Book of Song;" and "Hans Breitmann's Ballads," 1868–71. He began his literary career while in college, for the *Knickerbocker Magazine*, and was an editor on *Sartain's Magazine*, Griswold's *International*, *Graham's Magazine*, the Philadelphia *Bulletin*, and other periodicals. Besides his contributions to these journals and to Appleton's "Cyclopædia," as well as editorship of *Vanity Fair*, *The Continental Magazine*, and the *Philadelphia Press*, he has written "Sunshine in Thought," 1863; "Legends of the Birds," 1864; "The Union Railway, Eastern Division; or, Three Thousand Miles in a

Railway Car," 1867; and in 1872 he published a book of poems entitled "The Music Lesson of Confucius and other Poems." In the same year he published "Gaudeamus," and a year later "The English Gypsies and their Language," and the "Egyptian Sketch-Book," besides other works and contributions. His brother, Henry Perry Leland, a graceful magazine writer, was born in this city Oct. 28, 1828, and died here Sept. 22, 1868. In 1856 he published a volume of sketches entitled "The Gray Bay Mare," and in 1863 "Americans in Rome." He was wounded in the civil war by a piece of shell while serving as lieutenant in the One Hundred and Eighteenth Pennsylvania Regiment, from the effects of which he never recovered.

George H. Boker published in 1847 "The Lesson of Life, and other Poems." The next year appeared "Calaynos," a tragedy, which was remarkably successful both at American and British theatres. Successively came "Anne Boleyn," "The Betrothal," "Leonor de Guzman," and "Francesca da Rimini." His "Plays and Poems," in two volumes, were published in 1856. The following is said by Professor Tuckerman in "Characteristics of Literature:" "The glow of his images is chastened by a noble simplicity, keeping them within the line of human sympathy and natural expression. He has followed the masters of dramatic writing with rare judgment. He also excels many gifted poets of his class in a quality essential to an acted play,—spirit. To the tragic ability he unites aptitude for the easy, colloquial, and jocose dialogue, such as must intervene in the genuine Shakespearean drama, to give relief and additional effect to high emotion."

Thomas Scattergood. Of this gentleman the Memoirs were published in London in 1845.

William Sharswood, Ph.D. of the University of Jena, published in Vienna "Studia Physica." In 1862 he published in Philadelphia "Elenore; a Drama, in Five Acts." The same year were published his "Miscellaneous Writings."

George Washington Smith published (1) "Facts and Arguments in Favor of Adopting Railroads in Preference to Canals;" in 1829, "Defense of the Pennsylvania System of Solitary Confinement of Prisoners."

Eliza L. Sproat was author of "The Keepsake," 1847; "The Snow-Flake," 1849; and in the same year was a contributor to "Leaflets of Memory." She was a frequent contributor to *Sartain's Magazine.*

Thomas Stewardson, M.D., at one time physician of the Pennsylvania Hospital, wrote "Researches on Emphysema of the Lungs," 1830; and "Observations on Remittent Fever." He wrote also many other articles, that were published in the *American Journal of the Medical Sciences.*

James Milnor, D.D., at one time lawyer and member of Congress, became an Episcopal divine and rector of St. George's Church, New York. He published occasional sermons and addresses. After his death a memoir of him was published by Rev. John J. Stone, D.D., rector of Christ Church, Brooklyn, 1855.

Richard R. Montgomery translated Ségur's "History of Charles VIII., King of France," in 1842.

Robert Parkinson was author of "The Complete Confectioner, Pastry-Cook, and Baker, with Additions and Alterations," 1844.

Robert M. Patterson, M.D., son of Robert, LL.D., before mentioned, professor of Mathematics and Natural Philosophy, and president of the American Philosophical Society, published "Early History of the American Philosophical Society," 1843; an address before the Franklin Institute in the same year, and afterward several other addresses.

W. Alexander, in 1847, published poetical works, including "Christian Dramas and Minor Poems," with a Dissertation on Poetry, and a Sketch of his Life.

David Bates, in 1848, published a collection of poems in a volume styled "The Æolian."

John Binns was author of "A Digest of the Laws and Judicial Decisions of Pennsylvania touching the Authority of Justices of the Peace" (1840), which was revised and republished under the title "Magistrate's Manual." In 1855 he put forth his "Autobiography." Mr. Binns was editor of the *Democratic Press,* and as a political writer he was among the foremost of his time.

W. H. Crump, an Englishman by birth, was a very popular writer of periodical literature, and for many years one of the editors of the *Philadelphia Inquirer.* In 1841 he published "The World in a Pocket-Book; or, Universal Popular Statistics."

Robert Egglesfield Griffith, M.D., published "Medical Botany," 1847. "The Universal Formulary" was published in 1856, after his death. He was also editor of several works by eminent foreign medical men.

Henry B. Hirst published in 1845 "The Coming of the Mammoth, The Funeral of Time, and other Poems;" in 1848, "Endymion, a Tale of Greece," in four cantos; in 1849, "The Penance of Roland, a Romance of the Peine Forte et Dure; and other Poems." The poems of Mr. Hirst exhibited very often a fancy of a very high degree. The following verses are from "The Robin." After singing of the legend of this bird covering the babes with leaves, he ends thus:

"So they rear
Their fledglings undisturbed. Often has hovered,
While I have stood anear

"A robin's nest, o'er me that simple story,
Gently and dove-like, and I passed away
Proudly, and feeling it as much a glory
As 'twas in Cæsar's day

"To win a triumph, to have left that nest
Untouched; and many and many a school-boy time,
When my sure gun was to my shoulder prest,
The thought of that old rhyme

"Came o'er me, and I let the robin go.
At last the young are out, and to the woods
All have departed. Summer's sultry glow
Finds them beside the flood.

"Then Autumn comes, and, fearful of its rage,
They flit again. So runs the robin's life:
Spring, Summer, Autumn, Winter, sees its page
Unstained with care or strife."

Eliza Leslie was one of the most popular female writers that has risen in any part of this country. Her published writings were "Seventy-five Receipts for Pastry, Cakes, and Sweetmeats," 1827. Then followed "The Mirror," "Young Americans," "Stories for Emma," "Stories for Adelaide," "Stories for Helen," "Atlantic Tales," "Birth-Day Stories," "The Wonderful Traveller," "Domestic Cookery-Book," "Althea Vernon; or, The Embroidered Handkerchief," "Henrietta Harrison," "Kitty's Relations," "Leonilla Lynmore," "Ladies' Receipt Book," "The Maid of Canal Street," "The Bloxhams," "Indian Meal Book," "Amelia," "The Dennings and their Beaux," "Alina Derlay," "French Cookery," "Stories for Young People," "Stories for Summer Days and Winter Nights," "Russel and Sydney, and Charles Loring," "Behavior Book," etc. Besides these, she edited *The Gift* and *The Violet*, and was a frequent contributor to other periodicals. The works of no other female American author have ever sold so well as those of Miss Leslie.

Alfred Taylor, Presbyterian divine, pastor at Bristol, is author of "Union Prayer Meeting Hymn-Book," 1858; "Prayer-Meeting Tune-Book," 1859; "Sunday-School Photographs," 1864; "The Extra Hymn-Book," 1864; "Hints about the Sunday-School Work," 1869. He was the editor of *Sunday-School Work*.

Joseph Thomas, M.D., with others, published "Baldwin's Pronouncing Gazetteer," 1845; "Travels in Egypt and Palestine," 1854; "A Revised Gazetteer," 1854; and, with others, "A Geographical Dictionary of the World." In 1865 he published a "Comprehensive Medical Dictionary," and in 1869, "Lippincott's Dictionary of Biography and Mythology."

Charles B. Trego wrote "A Geography of Pennsylvania," 1843; and arranged the Franklin papers for the American Philosophical Society.

George W. Tryon, Jr., in 1861 published "List of American Writers on Recent Conchology, with the Titles of their Memoirs and Dates of Publication;" the same year, "The Mollusca of Harper's Ferry," and "Synopsis of the Recent Species of Gastrochænidæ, a Family of Acephalous Mollusca;" in 1862, "A Sketch of the History of Conchology in the United States," and a "Monograph of the Order Pholodacea, and other Papers;" in 1865, "Synonymy of the Species of Strepomatidæ."

James Tyson, M.D., in 1870 published "The Cell Doctrine; its History and Present State, with a Bibliography of the Subject."

Henry C. Watson, a native of Baltimore, wrote "Camp-Fires of the Revolution; or, The War of Independence," 1851; "Nights in a Block-House; or, Sketches of Border Life," 1852; "Old Bell of Independence," 1852; "Yankee Tea-Party; or, Boston in 1773," 1853; "Lives of the Presidents of the United States, with a History of the United States;" "Heroic Women of Philadelphia," 1853; "Ladies' Glee Book," 1854; "Masonic Musical Manual," 1855; "Universal Naval History;" "Camp-Fires of Napoleon," 1856; "Romance of History as exhibited in the Lives of Celebrated Women." He wrote other works, upon hunting, etc.

R. M. Whitney, editor of *The Evening Journal*, published a "Memorial to Congress on the Bank of the United States" in 1832.

John R. Whitney, in 1869, published "The Last Passover: an Account of the Closing Incidents in the Life upon Earth of our Lord Jesus Christ; a Verbal Harmony of the Four Gospel Narratives."

Henry Wikoff was author of "Napoleon Louis Bonaparte, First President of France: Biographical and Personal Sketches, including a Visit to the Prince at the Castle of Ham," 1849; "My Courtship and its Consequences," 1855; "The Adventures of a Rising Diplomatist," 1856; "A New Yorker in the Foreign Office, and his Adventures in Paris." There is an interesting report of his trial, along with others, for a conspiracy to effect a forced marriage with Miss Gamble in "My Courtship."

Joseph Janvier Woodward, M.D., surgeon United States army, published, in 1862, "The Hospital Steward's Manual;" "Outline of the Chief Camp Diseases of the United States Armies, as observed during the Present War," 1864.

Horatio C. Wood, M.D., professor of Botany in the University of Pennsylvania, published, in 1865, "Monograph of the North American Myriapoda," and several other scientific books, and has been a contributor to very many scientific journals.

Thomas A. Budd, a leading lawyer, published in "The National Portrait Gallery" the "Life of John Dickinson," and was the author of several printed addresses.

J. W. Comfort, M.D., in 1853, published "Practice of Medicine on Thomsonian Principles, adapted as well to the use of Families as to the Practitioner."

D. Francis Condie, M.D., published an abridged edition of Thomas' "Practice of Medicine" in 1818; in 1824, "A Course of Examinations for the Use of Medical Students;" in 1831, "The Catechism of Health;" in 1832, "A Treatise on Epidemic Cholera;" in 1850, "A Practical Treatise on the Diseases of Children."

Benjamin Ellis, M.D., was author of "The Medical Formulary;" corrected and extended by S. G. Morton, M.D., 1849.

Gouverneur Emerson, M.D., edited, in 1853, "Johnson's Farmer's and Planter's Encyclopædia of Rural Affairs." He wrote much upon medical statistics.

He also published "Effects of Depressing Influences in Changing the Proportions of the Sexes at Birth."

Edwin T. Freedley published, in 1852, "Money: how to Get, Save, Spend, Give, Lend, and Bequeath it," a work that created a decided sensation at home and abroad. The *London Economist* said of it, "Mr. Freedley's is a capital book, and, considered as a representative of the daily dealings of the Americans, it raises them very much in our estimation. The work ought to be read by all traders, old and young." In 1856 he published "Leading Pursuits and Leading Men;" and in 1858, "Philadelphia and its Manufactures."

J. Reese Fry edited Conrad's "Life of Zachary Taylor."

William E. Horner, M.D., professor of Anatomy in the University of Pennsylvania, in 1851, published "Special Anatomy and Histology;" in 1856, "United States Dissector; or, Lessons on Practical Anatomy," and "An Anatomical Atlas."

Edward D. Ingraham, a member of the bar of Philadelphia, was author of "A View of the Insolvent Laws of Philadelphia," 1827; editor of "Gow on Partnership," 1844; of Vattel's "Law of Nations," 1852; of "English Ecclesiastical Reports from 1809 to 1835," also of an interesting treatise on the events connected with the capture of the city of Washington, D.C., by the British army in the war of 1812.

Horatio Gates Jones, in 1858, published "Genealogical Account of Wigard and Gerhard Levering."

Mrs. Sarah Jane Lippincott, *née* Clarke, made some reputation over the signature of "Grace Greenwood." Her work began with letters to the *New York Mirror*. She subsequently wrote a large number of works, most of which were received with great favor. Some of them are "Greenwood Leaves," in 1849, with a new series; Poetical Works, 1850; "Haps and Mishaps of a Tour in Europe," 1852; "Recollections of my Childhood, and other Stories;" "Merrie England," 1855; "A Forest Tragedy, and other Tales," 1856; and, in 1857, "A New Book for Children."

J. Cheston Morris, M.D., was translator (1856) of the German Lehmann's "Manual of Chemistry."

P. Pemberton Morris, in 1849, published "A Practical Treatise on the Law of Replevin in the United States, with Appendix of Forms and Digest of Statutes."

Robert Morris, for many years an editor of the *Philadelphia Inquirer*, wrote extensively and with marked ability on various subjects, in politics, morals, and social life. He wrote some poetry, as, in 1836, "The Broken-Hearted." In 1836 he was contributor to "The Philadelphia Book." Some of his moral and social sketches and stories were published under the title "Courtship and Marriage."

Richard Newton, D.D., rector of St. Paul's Episcopal Church, has published two volumes that were well received, "Prayers of the Church" and "Rills from the Fountain of Life."

Frederick Overman was author (1850) of "The Manufacturer of Iron;" in 1851, "The Manufacture of Steel," and "The Moulder's and Founder's Pocket Guide," and "Practical Mineralogy, Assaying, and Mining;" in 1852, "Mechanics for the Millwright, Machinist, Civil Engineer, Architect, and Student," and a "Treatise on Metallurgy."

William V. Pettit published (1852) his "Addresses delivered in Congress."

Henry Philips, Jr., published in 1862, "Historical Sketches of Paper Money issued in Pennsylvania;" in 1863, "Catalogue of the New Jersey Bills of Credit;" in 1867, "Historical Sketches of Paper Money," and "Some Observations on the Early Currency of Maryland," also "Medicine and Astrology," and "The Pleasures of Numismatic Science."

Edward Pollock was a frequent contributor to *Graham's Magazine*. Among others of his poems is "The Chandos Picture."

John Meredith Read, a great-grandson of the signer George Read, and son of Chief Justice John M. Read, has been prominently connected for many years with many learned societies, and contributed largely to their various subjects of inquiry. He was author, in 1860, of "The Relation of the Soil Plants and Animals;" in 1866, of "A Historical Inquiry concerning Henry Hudson." He has contributed largely to various periodicals, and among his contributions have been poems.

Isaac Reed, Jr., in 1860, published a collection of juvenile poems called "Head and Heart Fruits."

Joseph J. Reed, in 1862, published "Outlines of Universal History, in Three Parts,—Ancient, Mediæval, and Modern."

.Mary J. Reed, under the name of Marie Roseau, was a contributor to several literary journals.

David Meredith Reese, M.D., LL.D., once superintendent of public schools in New York City and County, was a native of Philadelphia. He was author of "Observations on the Epidemic Yellow Fever," 1819; "Strictures on Health," 1828; "Epidemic Cholera," 1833; "Humbugs of New York," 1833; "Review of First Annual Report of the American Anti-Slavery Society," 1834; Quakerism *versus* Calvinism," 1834; "Phrenology known by its Fruits," 1838; and "Medical Lexicon of Modern Terminology," 1855. He was, besides, editor of the works of several foreign writers.

John J. Reese published "American Medical Formulary" in 1850, and in 1858, "Analysis of Physiology." "A Treatise upon Toxicology" is his most important work, published about 1872.

John Riddell, architect, in 1867, published "Architectural Designs for Model Country Residences."

Abraham Ritter was author of "History of the Moravian Church in Philadelphia," 1857; and in 1860, of "Philadelphia and her Merchants" as constituted fifty to seventy years ago.

Benjamin Rush, grandson of the distinguished phy-

sician of that name, wrote, in 1862, "Letters on the Rebellion to a Citizen of Washington from a Citizen of Philadelphia."

Winthrop Sargent published, in 1855, "The History of an Expedition against Fort Du Quesne in 1775;" in 1857, "The Loyalist Poetry of the Revolution;" in 1858, "A Journal of the General Meeting of the Cincinnati in 1784;" in 1861, "The Life and Career of Major John André," and other works concerning that officer.

Richard Rush, son of Dr. Benjamin Rush, born at Philadelphia Aug. 29, 1780, a statesman and diplomatist, held high positions: Attorney-General of Pennsylvania, 1811; Attorney-General of the United States, 1814 to 1817; Secretary of State and minister to England. He wrote largely upon political and public affairs. He was author of an edition of "Laws of the United States," 1815; "Memoranda of a Residence at the Court of St. James," 1833; a second volume, "Incidents, Official and Personal, from 1819 to 1825;" "Washington in Domestic Life," 1857; "Occasional Productions," 1860.

Dr. James Rush, son of Dr. Benjamin Rush, and founder of the Ridgway Branch of the Philadelphia Library, was author of "The Philosophy of the Human Voice," which high scientific authorities declare to be the most philosophical work upon the voice and methods of speech ever written. Also "Hamlet, a Dramatic Prelude," 1834; "Analysis of the Human Intellect," 1865; "Rhymes of Contrast on Wisdom and Folly," 1869.

John Sartain published the *Foreign Semi-monthly*, and afterward *Sartain's Union Magazine;* he was also connected for some time with *Graham's Magazine*. He published, in 1852, "Poetical and Prose Illustrations of Celebrated American Painters."

Alexander Shiraz, an Episcopalian minister, in 1865, wrote "Life and Letters of Rev. James May, D.D."

Henry H. Smith, M.D., professor of Surgery in the University of Pennsylvania, published several works, among them "A Treatise on Minor Surgery," 1843;" "An Anatomical Atlas," 1844; "A System of Operative Surgery," 1852; "The Treatment of Ununited Fractures by Means of Artificial Limbs," 1855; "A Professional Visit to London and Paris," 1855; "Syllabus of Lectures on the Principles and Practice of Surgery," 1855; "The Medical, Literary, and Social Influence of the Alumni of Pennsylvania University," etc.

Marshall B. Smith, a divine of the Dutch Reformed Church, one of the editors of *The Protestant Churchman*, published, in 1861, "A Sermon on the Nation's Danger," and "The Nation's Duty."

Frederick Ratchford Starr, a native of Nova Scotia, published, in 1866, "Didley Dumps; or, John Ellard the Newsboy," and "What Can I Do? A Question for Professing Christians;" and the following year, "May I Not? or, Two Ways of Looking Through a Telescope."

Rev. Edward Wurts, in 1869, published "The Thief on the Cross; or, the Way of Salvation by Grace proved and illustrated from its Leading Example."

Rev. Daniel B. Woods, in 1861, published "Sixteen Months at the Gold Diggings," of which the *London Athenæum* said that a better book on California had not come within its notice.

Annis Lee Wister (*née* Furness), in 1864, translated from the German of George Blum and Louis Wahl "Seaside and Fireside Fairies;" in 1868, "The Old Mam'selle's Secret," and "Gold Elsie," from the German of E. Marlitt; in 1869, "The Countess Gisela," from the same; in 1870, "Only a Girl; or, A Physician for the Soul," from Wilhelmine von Hillern; in 1871, "Enchanting and Enchanted," and many others in subsequent years.

William Welsh, in 1861, published "Lay Co-operation in St. Mark's Church;" in 1863, "Letters on the Home Missionary Work of the Protestant Episcopal Church;" in 1868, "The Bishop Potter Memorial House;" in 1869, with others, "Toopi and his Friends; or, Indians' Wrongs and Rights."

Joseph Warrington, M.D., in 1837, published "Oration on the Improvements in Medicine," and "Treatise on the Uterus," from the French of F. Du Parcque; in 1852, "Nurse's Guide;" and in the same year "Obstetric Catechism."

Townsend Ward was author (1858) of "The Insurrection of the Year 1794 in the Western Counties of Philadelphia." He has written many historical treatises and papers, notable among which are his "Walks in Germantown and the Neighborhood," in the *Pennsylvania Magazine of History*.

James Barr Walker, D.D., in 1855, published "The Philosophy of the Plan of Salvation," which has been very extensively read, and has been translated into several foreign languages. The same year appeared "God Revealed in Nature and in Christ, including a Refutation of the Development Theory contained in the Vestiges of the Natural History of Creation;" in 1857, "Philosophy of Scepticism and Ultraism;" in 1862, "The Philosophy of the Divine Operations in the Redemption of Man." He edited *The Ohio Observer*, *The Watchman of the Valley*, and *The Watchman of the Prairies*. He has also published some poetical pieces.

Victor Value, a French teacher, published "Ollendorff's New System of Learning French; with Value's System of French Pronunciation;" in 1856 and 1858, "French Prosody."

Samuel Hulbeart Turner, D.D., professor in the General Theological Seminary of New York, was a native of Philadelphia. He was a voluminous writer, and his works have been highly esteemed. In 1824 he published "Notes on the Epistle to the Romans;" in 1841, "Companion to the Book of Genesis;" in 1848, "Parallel References Illustrative of the New Testament;" in 1851, "Essay on our Lord's Discourse at Capernaum;" in 1852, "Thoughts on

the Origin, Character, and Interpretation of Scripture Prophecy;" and "St. Paul's Epistle to the Hebrews, in Greek and English;" in 1853, "St. Paul's Epistle to the Romans;" in 1856, "To the Ephesians;" in 1858, "Teachings of the Master;" in 1869, "Spiritual Things compared with Spiritual;" in 1861, "The Gospels compared with the Ammonian Sections and the Tables of Eusebius;" besides many others. His "Autobiography" appeared in 1862, the year after his death.

John C. Trautwine, civil engineer, was author of (1) "New Method of Calculating the Cubic Contents of Excavations and Embankments by the Aid of Diagrams," 1851; (2) "Field Practice of Laying Out Circular Curves for Railroads," 1851; and (3) in 1854, "Rough Notes of an Exploration for an Inter-Oceanic Canal Route by way of the Rivers Atrato and San Juan, New Granada." He was also a contributor to the *Journal of the Franklin Institute*.

John Warner published a work on Railroad Excavation and Embankment, with Diagrams.

John K. Townsend was author of "A Narrative of a Journey across the Rocky Mountains to the Columbia River, and a Visit to the Sandwich Islands," etc., 1837, and (1839) "Ornithology of the United States."

Mary Townsend published "Life in the Insect World."

Miss Hannah Townsend, in 1852, published "History of England in Rhyme."

John W. Torrey published, in 1857, "Interest Tables;" and John J. Breban published a work on the same subject. All these were preceded by "Rowlett's Interest Tables." Rowlett was for some years a clerk in the Bank of North America.

William P. Tatham (1869) published "On the Restoration of the Standard of Value, and the Proper Limit to the Use of Bank Credit as Money."

A. De Kalb Tarr, in 1859, published "The American Reader of Prose and Poetry."

George M. Dallas, son of Alexander J. Dallas, was United States senator; ambassador to Russia from 1837 to October, 1839; Vice-President of the United States from 1845 to 1849; minister to England, 1856 to 1861. He wrote and published pamphlets and speeches. Allibone gives a list of thirty of these. His "Letters from London in 1856–60" were edited and published by his daughter Julia.

Samuel D. Gross, M.D., physician and surgeon, translated Holland's "General Anatomy," Hatin's "Manual of Obstetrics," Hildebrand on "Typhus Fever," and Tavernier's "Operative Surgery." He has been a prolific writer on medical subjects: "Diseases and Injuries of the Bones and Joints," 1830; "Elements of Pathological Anatomy," 1839; "Wounds of the Intestines," 1843; "Diseases, Injuries, and Malformations of the Urinary Organs," 1851; "Foreign Bodies in the Air-Passages," 1854; "Report on the Causes which Retard the Progress of American Medical Literature," 1856; "System of Surgery: Pathological, Diagnostic, Therapeutic, and Operative," 1859; "American Medical Biography," 1861. About 1876 he wrote a comprehensive review and history of the progress of medicine and surgery during the previous century, and prepared an interesting discourse upon the origin and early history of Jefferson College.

Alexander D. Bache, LL.D., A.A.S., born July 19, 1806, was made regent of the Smithsonian Institute in August, 1846, having previously held many distinguished positions. In 1833 he edited Brewster's "Optics," with notes. He published "Observations" at the observatory of Girard College in 1840–45; "Report of Experiments to Navigate the Chesapeake and Delaware Canal by Steam," in 1834, and contributed many valuable papers to scientific journals of the day. He died at Newport, R. I., Feb. 17, 1867.

Samuel Austin Allibone, LL.D., the eminent bibliographer, who gave sixteen years of his life to the preparation of a monumental dictionary of the writers in English literature, was born in Philadelphia in 1816. The main labor of his career was preceded by the printing of two minor books,—"A Review by a Layman of New Themes for the Protestant Clergy," 1853; and "New Themes Condemned," 1854. "At the age of thirty-four," says Mr. Duyckinck, "while engaged in mercantile life, he projected, and three years later (Aug. 1, 1853) he began, the compilation of 'A Critical Dictionary of English Literature and British and American Authors, Living and Deceased, from the Earliest Accounts to the Latter Half of the Nineteenth Century.'

"The first volume, exceeding one thousand royal octavo pages, was published in December, 1858. Its notices extended from A to J, inclusive, but the volume was subsequently made to include those under K and L also. The second volume, reaching from M to S, inclusive, appeared in the spring of 1870, and the third, T to Z, in the year following. His only assistant was his wife, who copied the manuscript, covering about twenty thousand foolscap pages, from his notes." The entire work contains three thousand one hundred and forty double-column pages, and mentions the writings of about forty-seven thousand writers. While busied with his dictionary, Dr. Allibone prepared some valuable indexes, one of three hundred and ninety-six columns to "Orations and Speeches of Edward Everett," 1850–59; another of seventy-six columns to the "Life and Letters of Washington Irving," 1861–64; and also "An Alphabetical Index to the New Testament," prepared in spare moments on Sundays. He has been secretary of the American Sunday-School Union and editor of its publications, giving his mornings to its service, since 1867. Among his works are "Union Bible Companion," a compendium of scriptural knowledge, 1871; "The New Explanatory Question-Book on the Harmony of the Gospels," and one on the Acts, 1869; "Poetical Quotations from Chaucer to Tennyson," 1873; and a companion volume of "Prose

Quotations." This distinguished author has been for some years librarian of the Lenox Library, in New York.

Dr. Isaac Cathrall, born in 1764, studied medicine under Dr. Redman, and in London, Edinburgh, and Paris. He returned home in 1793 during the prevalence of yellow fever, and suffered severely with the disease. In 1797-99 he remained at his post, and even dissected those who died of the fever. He published "Remarks on the Yellow Fever," 1794; "Buchan's Domestic Medicine, with Notes," 1797; "Memoir on the Analysis of the Black Vomit," 1800, in vol. v. of the "Transactions of the American Philosophical Society;" and a pamphlet on the yellow fever in conjunction with Dr. Currie, in 1802. He was a surgeon of the city almshouse from 1810 to 1816. He died Feb. 22, 1819.

Zachariah Poulson was born in Philadelphia Sept. 5, 1761. His father was also named Zachariah, and was born at Copenhagen, Denmark, from whence he emigrated to America and settled in Germantown in 1749. Zachariah, the elder, learned the printers' trade with Christopher Sauer (the second). The younger Poulson, following in the footsteps of his father, learned the art of printing with Joseph Cruikshank, on Market Street. He was editor, publisher, and proprietor of the first daily paper published in the United States, which was called *Poulson's American Daily Advertiser*, and was continued for nearly forty years, when it ceased to exist in 1849. He was elected for many years printer for the Senate of Pennsylvania. In 1789 he printed the "Minutes of the Convention which was appointed to Amend and Revise the Constitution of the State." Among the most important of the works printed by him are Proud's "History of Pennsylvania," in 1797-98; "Poulson's Town and Country Almanac," 1789 to 1801; "The American Tutor's Assistant;" the works of William Gerard de Braam: "Journals of the General Conventions from the Abolition Societies of the United States," intermittently from 1794 to 1801. Besides his business as a printer and publisher he was prominently associated with many public benefactions. He was one of the founders and at his death the president of the Philadelphia Society for Alleviating the Miseries of Public Prisons, at one time a manager of the Pennsylvania Hospital, for fifty-nine years connected with the Library Company of Philadelphia,—twenty-one years as librarian, six as treasurer, and served thirty-two years as a director. The portrait accompanying this sketch is from a painting by Sully, which is now the property of the library. He was an enterprising and public-spirited man, and a citizen who was an honor to the place of his birth. His death occurred at Philadelphia, July 31, 1844, and he was buried in the family cemetery at Germantown.

Z. Poulson

Dr. Henry Bond was the author of many valuable papers on professional subjects, and contributed largely to medical and other journals. He was a member of numerous historical and other societies, and of religious and charitable associations, and was several years president of the Board of Health. Besides his high reputation as a physician, he obtained that also of being a successful and thorough genealogist. He was born at Watertown, Mass., March 21, 1790, and graduated at Dartmouth College in 1813. He studied medicine, settled first in Concord, N. H., and in November, 1819, in this city, where he resided till his death, May 4, 1859.

Lucy Hamilton Hooper, a Philadelphia lady of culture, published "Poems: with translations from the German of Geibel and others," and, in conjunction with Charles G. Leland, edited *Our Daily Fair*, the daily chronicle of the great Central Sanitary Fair held in this city in 1864. For two years she was assistant editor of *Lippincott's Magazine*, and was a constant contributor to the *Galaxy* and other leading periodicals. A second and complete volume of her poems was published in 1871. She has been for some years a popular correspondent at Paris with journals published in Philadelphia.

Frank R. Stockton, a contributor to leading magazines, was born in 1834. He has been connected editorially with the *Philadelphia Post* and *Hearth and*

Digitized by Google

Home and *Scribner's Monthly*. He wrote "Ting-a-Ling," "The House that John Built," "Roundabout Rambles," etc. He contributed to the *Southern Literary Messenger*, *Punchinello*, and other journals.

Henry Simpson died in 1868, aged seventy-seven years. He was a member of the Legislature of Pennsylvania, appraiser of the port of Philadelphia, and author of "The Lives of Eminent deceased Philadelphians," 8vo, 1859.

Thompson Westcott, editor of the *Philadelphia Sunday Dispatch* since its beginning, in 1848, was born in 1820. He was admitted to the bar in 1841, and is the author of a "Life of John Fitch," 1857; "Taxpayers' Guide," 1864; "Names of Persons, etc., with a History of the Test-Laws of Pennsylvania," 8vo, 1865; "Chronicles of the Great Rebellion," originally compiled for the "Old Franklin Almanac;" "The Official Guide Book of Philadelphia," 1876; "Centennial Souvenir," 1876; author of "The Historic Mansions and Buildings of Philadelphia," 1877; "History of Philadelphia," published in the *Sunday Dispatch*, and numerous contributions to the periodical literature of the country.

William Bradford Reed, LL.D., grandson of Gen. Joseph Reed, was born in this city June 30, 1806; graduated at the University of Pennsylvania in 1822. He was attorney-general of Pennsylvania in 1838, envoy extraordinary and minister to China 1857–58, and negotiated the treaty ratified Jan. 26, 1860. Author of "Life and Correspondence of Joseph Reed," 2 vols. 8vo, 1847; "Life of Esther Reed," 8vo, 1853; "Vindication of Joseph Reed," in reply to Bancroft's "History," in several pamphlets. He edited the posthumous works of his brother Henry, and published a large number of historical addresses and political pamphlets. He contributed to the *American Quarterly* and *North American Review*, and at the time of his death was one of the editors of the *New York World*.

Rev. Charles Philip Krauth, in 1825, assisted in preparing a "Hymn-Book, Liturgy, and Prayers for the use of the Churches of the Lutheran District Synod;" in 1831 he was placed on the editing committee of fifteen; from 1827 to 1834 he was pastor of St. Matthew's Lutheran Church in this city, and was regarded as one of the finest pulpit orators in the city. From 1834 to 1847 he was president of Pennsylvania College. He published some addresses, and furnished many articles for the *Lutheran Intelligencer* and the *Evangelical Review*.

His son, Rev. Charles Porterfield Krauth, was pastor of St. Mark's Lutheran Church from 1859 to 1868; professor of Theology in the Lutheran Seminary, 1864–68; and subsequently professor of Moral and Intellectual Philosophy in the University of Pennsylvania. He published "The Pastoral Office," 1845; "The Transfiguration," 1850; "Popular Amusements," 1851; "The Bible a Perfect Book," 1851; "The Old Church on the Hill," 1854; "The Lutheran Church and the Lord's Day," 1857; "Translation of Tholuck's Commentary on the Gospel of St. John;" and wrote many other important treatises and criticisms. In 1861 he became editor of the *Lutheran and Missionary*. He has contributed to numerous reviews and periodicals.

Robert Shelton Mackenzie, M.D., D.C.L., LL.D., was literary and foreign editor of *The Press*. Among his publications are "Lays of Palestine," "Titian," "Partnership 'en Commandite,'" "Mornings at Matlock," a collection of fugitive magazine pieces; Sheil's "Sketches of the Irish Bar," "Noctes Ambrosianæ," "Bits of Blarney," "Dr. Maginn's Writings" and others, "Tressilian and his Friends," "Memoirs of Robert Houdin," "Life of Charles Dickens," "Life of Sir Walter Scott," etc. He received the honorary degree of Doctor of Laws from the University of Glasgow, and subsequently was admitted Doctor of Civil Law at Oxford. Mrs. Adelheid Shelton Mackenzie, his wife, has written several attractive romances, among them "Married against Reason," and "Aureola; or, The Black Sheep."

Thomas Mackellar, poet, was born in New York, Aug. 12, 1812, and in 1833 removed to Philadelphia, where, on the death of Mr. Johnson in 1860, he became senior partner of the great type-foundry of Lawrence Johnson & Co. He early wrote for the *Journal* of the Sunday-School Union, and published "Droppings from the Heart," 1844; "Tam's Fortnight's Rambles," 1847; and "Lines for the Gentle and Loving," 1853; also "The American Printer."

Joseph Clay Neal, humorist, was born at Greenland, N. H., Feb. 3, 1807, and died July 18, 1847. He removed to Philadelphia about 1820, and became editor of the *Pennsylvanian*, and after a tour in Europe and Africa for his health, in 1841–42, assumed, in 1844, the editorship of the *Saturday Gazette*, which he continued till his death. His first humorous compositions were "The City Worthies," a series of sketches which appeared in the *Pennsylvanian*. In 1837 he published the "Charcoal Sketches," reprinted in London under the auspices of Charles Dickens; in 1844, "Peter Ploddy, and other Oddities," and subsequently a new series of "Charcoal Sketches."

Oswald Seidensticker, professor of German Language and Literature in the University of Pennsylvania, has written and published several valuable literary works, and delivered a number of interesting historical addresses. He has also contributed a number of articles to the periodical literature of this country and Germany upon the German element in America.

Charles Henry Hart was born Feb. 4, 1847. He studied law in the office of Samuel H. Perkins, was admitted to the bar in 1868, and received the degree of Bachelor of Laws from the University of Pennsylvania in the following year. He published "Bibliographia Lincolniana: an Account of the Publications occasioned by the Death of Abraham Lincoln,

Sixteenth President of the United States, with Notes and an Introduction." The introduction was subsequently reprinted as a "Biographical Sketch of Mr. Lincoln." In May, 1870, he delivered a "Discourse on the Life and Services of Gulian Crommelin Verplanck, LL.D.," and subsequently published a "Memoir of George Ticknor, the Historian of Spanish Literature," and "A Treatise on the Doctrine of Equitable Conversion." He also contributed to the *New England Historical and Genealogical Register* a "Memoir of William Hickling Prescott," and has contributed many articles to the press of the country.

George Lippard, novelist, was born near Yellow Springs, Pa., April 10, 1822, and died in 1854. In 1841 he became a contributor to the *Spirit of the Times*. His first novel was "The Lady Annabel," followed by "The Quaker City," "Herbert Tracy," "Washington and his Generals," "Paul Ardenheim," "Memoirs of a Preacher," "Adonai," "Jesus and the Poor," "Adrian the Neophyte," "The Empire City," "Nazarene," "Blanche of Brandywine," "Legends of Mexico," "Washington and his Men," "The Rose of Wissahickon," "Bel of Prairie Eden," and "New York, its Upper Ten and Lower Million," etc. His life and selected writings were published, with an essay on his writing and genius, by C. C. Burr, in 1847.

William M. Gouge, editor of the *Philadelphia Gazette*, was born Nov. 10, 1796, and died at Trenton, N. J., July 14, 1863. He published "A Fiscal History of Texas," 1852; "History of the American Banking System," 1835; "Expediency of Dispensing with Bank Agency and with Bank Paper," 1837. He edited several journals, and for thirty years contributed articles on banking to various journals.

William Grimshaw, author of school histories and grammar, emigrated to America in 1815 from Ireland, and lived many years in Philadelphia. He published "Life of Napoleon," "Etymological Dictionary," "Gentlemen's and Ladies' Lexicons," "Merchant's Law Book," "Form Book," "American Chesterfield," etc. He died in this city in 1852.

James Gilborne Lyons, LL.D., died at Haverford, Jan. 2, 1868, where he had for many years a select boys' school of a high character. He was an accomplished scholar, and published "Christian Songs, Translations, and other Poems," 1861.

Samuel W. Pennypacker, a prominent member of the bar, was the author of many valuable historical contributions. His chief writings are "History of Phœnixville," "History and Biographical Sketches," and various addresses upon public occasions. He edited several volumes of law reports, and contributed many articles to the magazines and newspapers of the country. His historical researches in reference to the history of Germantown and of the Germans in Pennsylvania show great knowledge and patient industry.

Herman Hooker, a bookseller, was the author of "The Portion of the Soul; or, Thoughts on its Attributes and Tendencies as Indications of its Destiny," "Popular Infidelity," "The Philosophy of Unbelief in Morals and Religion," etc., "The Uses of Adversity and the Provisions of Consolation," "The Christian Life a Fight of Faith," and several others. He died July 25, 1865.

Noah Webster, the philologist and publicist, in 1787 was principal of the Episcopal academy, and when the Constitution of the United States was formed by the convention of that year, gave it his assistance in a pamphlet, an "Examination of the Leading Principles of the Federal Constitution." While on a visit to Philadelphia in 1782 he was encouraged by Mr. Madison and Professor Samuel S. Smith to enter upon the preparation of the school-books by which he subsequently became so well known. His public spirit and impulses were shown in his successful efforts to remove the remains of Godfrey, the inventor of the quadrant, from a neglected spot on an old farm near Germantown to Laurel Hill, where an appropriate monument was erected. He also suggested the erection of a monument to Gen. Francis Nash, of North Carolina, at Germantown, where the gallant soldier fell on the battle-ground of 1777.

William Henry Fry, composer and journalist, was born in August, 1815, and died at Santa Cruz, West Indies, Dec. 21, 1864. His father, William Fry, was proprietor of the *National Gazette*. The musical talent of W. H. Fry was very early manifested, and in 1835 he received from the Philharmonic Society an honorary medal for four overtures performed by them. He became connected with the *National Gazette* in 1839, was editor of the *Ledger* in 1844, and afterward wrote for the *Sun*. His opera "Leonora" was produced at the Chestnut Street Theatre in June, 1845, and an Italian version at the Academy of Music, New York, in the spring of 1858. From 1846 to 1852 he was in Europe, chiefly residing in Paris, and corresponding with the *New York Tribune* (with which he was subsequently connected), the *Philadelphia Ledger*, and other newspapers. In 1852 he delivered in New York a series of ten lectures on the history of music, illustrating them by two new symphonies, "The Breaking Heart" and a "Day in the Country." These, with two others, "Santa Claus" and "Childe Harold," were also soon after played by Jullien's orchestra in various parts of the United States. He also wrote the music to an ode for the opening of the great Industrial Exhibition at New York in 1853, and a *Stabat Mater*, composed in 1855. He was also a political orator, and a popular lecturer on miscellaneous subjects. He published "Artificial Fish-Breeding" in 1854.

His brother, Joseph Reese Fry, translated and adapted the opera of "Norma" from the Italian for the Wood English Opera Troupe, wrote the libretto of his brother's opera "Leonora," and also of the opera of "Notre Dame." An accomplished scholar and lin-

guist, he was well versed in the history of the literature of music, and wrote with ease and taste. He was largely instrumental in raising the Union League Brigade during the civil war, and was the author of "Life of Zachary Taylor," 1848.

John Fanning Watson was born June 13, 1779, in Burlington County, N. J. His parents were of English origin; his grandfather, Thomas Watson, came to America in 1667, settling at Salem, where the father of John F., William Watson, was born.

After enjoying but limited advantages for an education, Mr. Watson came to this city and entered the commercial house of James Vanuxem, an eminent merchant. Here he remained until nineteen years of age, when, through his becoming a member of the Macpherson Blues, he offended the firm, and was compelled to withdraw. He next became a clerk in the War Department at the city of Washington until 1804, when he resigned his position to form a business connection with Gen. James O'Hara at New Orleans. After a residence of two years at New Orleans he returned to the city of Philadelphia, where he made his first essay as a bookseller and publisher, establishing a business house on Chestnut Street.

JOHN FANNING WATSON.

In 1814, Mr. Watson was elected cashier of the Bank of Germantown, which position he held till 1847, when he was chosen treasurer and secretary of the Philadelphia, Germantown and Norristown Railroad Company. In 1859, being at that time eighty years of age, he retired from all active business. In 1820 he began to collect antiquarian material, the first being history and legends of Germantown, though none of them were printed until about 1828, when some extracts from his manuscript books were printed in the *Register of Pennsylvania*. In 1830 the first edition of his "Annals of Philadelphia" was issued, the same "being a Collection of Memoirs, Anecdotes, and Incidents of the City and its Inhabitants from the Days of the Pilgrim Founders; also, Olden Time Researches and Reminiscences of New York City in 1828." It was in one volume of eight hundred pages, and illustrated by lithographs. In 1842 the work was republished in two volumes, revised and enlarged, and again, in 1856, he made a final revision, adding an appendix to the second volume. The editions subsequent to the first did not contain the matter relative to New York.

In 1832 he published a duodecimo volume, "Historic Tales of Olden Time, concerning the Early Settlement and Advancement of New York City and State." This was followed the next year by a similar volume, "Historic Tales of Olden Time, concerning the Early Settlement and Progress of Philadelphia and Pennsylvania." In 1846 his "Annals and Occurrences of New York City and State in the Olden Times" was published. Besides these works he edited "A Dictionary of Poetical Quotations, consisting of Elegant Extracts on every Subject, compiled from Various Authors, and arranged under Appropriate Heads." Mr. Watson's first publisher and most active co-laborer was Samuel Hazard, and to them is due the awakening of that spirit of antiquarianism and historical research from which sprung the Historical Society. Mr. Watson was an ardent collector of all objects of historic interest, many of which are now deposited in the Philadelphia Library and with the Historical Society. While his published writings are mostly local history, he also wrote articles on a variety of subjects, particularly upon theology. Mr. Watson died on Dec. 23, 1860, being eighty-two years of age, and leaving behind him a monument to his mental powers in his "Annals."

Rev. William M. Engles edited the *Presbyterian* from 1834 till his death, Nov. 27, 1867. He published "Records of the Presbyterian Church," "Bible Dictionary," "Book of Poetry," "Sailor's Companion," "Sick-Room Devotions," "Soldier's Pocket-Book."

Thomas Evans, in 1828, published "An Exposition of the Faith of the Religious Society of Friends," etc., and from 1837 to 1854 edited, in conjunction with his brother William, "The Friends' Library," a collection of the standard religious writings of the society, in fourteen volumes. He died May 25, 1868.

Thomas Fisher, poet and scientific writer, was born Jan. 21, 1801, and died Feb. 12, 1856. He published a "Dial of the Seasons," 1835; "Mathematics Simplified and made Attractive," 1853; and in 1850, "Song of the Sea-Shells, and other Poems." Red-

Digitized by Google

wood Fisher published several volumes on "Political Economy." Myles Fisher published an "Answer to Paine's Age of Reason."

George R. Crooks, D.D., lexicographer, was born Feb. 3, 1822, and in association with Professor McClintock, of Dickinson College, prepared Latin and Greek text-books. He published an edition of Butler's "Analogy."

Thomas Earle, a writer on law, died July 14, 1849. He removed to Philadelphia in 1817, and engaged in mercantile pursuits for a few years, then studied law, and commenced practice. He edited successively the *Columbian Observer*, *Standard*, *Pennsylvanian*, and *Mechanics' Free Press and Reform Advocate.* He published an "Essay on Penal Law," an "Essay on the Rights of States to Alter and Annul their Charters," "A Treatise on Railroads and Internal Communications," 1830, and a "Life of Benjamin Lundy." At his death he had nearly completed a history of the French Revolution and a translation of Sismondi's "Italian Republics."

Willis Gaylord Clark, a miscellaneous writer, died June 12, 1841. He gave early indications of literary talent; established a weekly journal in 1830, which was soon abandoned. He became co-editor with Dr. Brantley of the *Columbian Star*, a religious and literary weekly, and was subsequently, until his death, editor and proprietor of the *Philadelphia Gazette.* In September, 1833, he recited his longest poem, "The Spirit of Life," before the Franklin Society. In 1844 a volume of his literary remains, including "Ollapodiana," poems, and magazine articles, was published. He was a frequent contributor to the annuals and magazines, particularly the *Knickerbocker.*

Dr. Jacob Green, physicist, was born July 26, 1790, and died Feb. 1, 1841. He graduated at the University of Pennsylvania, and in his boyhood made a large collection of plants. He published soon after leaving the university, in connection with a young friend, a treatise on electricity, which gave him a reputation. He also studied law, and was licensed to practice, but in 1818 accepted a professorship in New Jersey College of Chemistry, Philosophy, and Natural History. He was professor of Chemistry in the Jefferson Medical College from 1822 to the close of his life. He published "Chemical Diagrams;" "Chemical Philosophy," 1829; "Treatise on Electro-Magnetism;" "Astronomical Recreations;" "A Syllabus of a Course on Chemistry;" two works on "Trilobites," with wax illustrations; a work on the "Botany of the United States, with a list of the Botanical Productions of New York;" "Notes of a Traveller," giving an account of a visit to Europe in 1828, three volumes, 1831; "Diseases of the Skin," 8vo, 1841; and contributions to *Silliman's Journal.*

Robert Patterson, LL.D., born in the north of Ireland, May 30, 1743, came to America in 1768, and became principal of the academy at Wilmington, Del., in 1774. He was a brigade major in the Revolutionary war, professor of Mathematics in the University of Pennsylvania in 1779-1814, and some time vice-provost. In 1805 he was made director of the United States Mint, and from 1819 till his death, July 22, 1824, was president of the American Philosophical Society, to whose Transactions he was a frequent contributor. He published "The Newtonian System," 1808; "Treatise on Arithmetic," 1819; and edited Ferguson's "Mechanics," 1806; his "Astronomy," 1809; John Webster's "Natural Philosophy," 1808; Ewing's "Natural Philosophy, with Biographical Sketch," 1809. A record of the families of Robert Patterson the elder was privately printed in 1847.

John Foster Kirk, editor of *Lippincott's Magazine*, was born at Fredericton, New Brunswick, in 1824, and came to the United States in 1842. He was secretary to William H. Prescott during the last ten years of the historian's life. He lived in Boston until 1870, when he removed to Philadelphia. He has written some fine literary and historical articles for the *North American Review*, *Atlantic Monthly*, and *Lippincott's Magazine.* His chief work is the "History of Charles the Bold, Duke of Burgundy." He has also prepared a revised edition of Mr. Prescott's works, and an American edition of Palgrave's "Golden Treasury of the best English Songs and Lyrics."

John Cassin, a prominent ornithologist, was born near Chester, Pa., Sept. 6, 1813, but removed to this city in 1834, and, excepting a few years of mercantile pursuit, devoted himself to ornithology. He contributed to scientific journals, and published "Birds of California and Texas," a "Synopsis of the Birds of North America," "Ornithology of the United States Exploring Expedition," "Ornithology of the Japan Exploring Expedition," "Ornithology of Gilliss' Astronomical Expedition to Chili," and the chapters on the rapacious and wading birds in "The Ornithology of the Pacific Railroad Explorations and Surveys." He died Jan. 10, 1869. He was of a distinguished Quaker family, Commodore John Cassin being his great-uncle.

Francis J. Grund was long a resident of Philadelphia, and a frequent contributor to the public prints. He made his first impression as a Washington correspondent of the *Public Ledger.* He established *The Age*, and was the author of "The Americans in their Moral, Social, and Political Relations," 1837; "Aristocracy in America," 1839; "Algebraic Problems;" elements of "Chemistry," and of "Natural Philosophy;" and "Plane and Solid Geometry."

John Church Hamilton, son of Gen. Alexander Hamilton, was born in Philadelphia in 1792. He was the author of "Memoirs of Alexander Hamilton," 2 vols. 8vo, 1831; "Works of Alexander Hamilton," 7 vols. 8vo, 1851; "History of the Republic," 2 vols. 8vo, 1858.

Henry Charles Lea, son of Isaac Lea, and grand-

son of Mathew Carey, was born Sept. 19, 1825, and represented the publishing house of Mathew Carey & Sons, established at the close of the last century. He is the author of "Superstition and Force," etc., 1866; "Studies in Church History," etc., 1869; "History of Clerical Celibacy," etc. His father, Isaac Lea, LL.D., the naturalist, was born at Wilmington, Del., March 4, 1792, and joined the publishing firm of Mathew Carey, his father-in-law, in 1821, retiring in 1851. In 1815 he became a member of the Academy of Natural Sciences, and shortly after published his first paper in the *Journal* of this academy, describing the minerals in the neighborhood of Philadelphia. In 1827 he began a series of memoirs on new forms of fresh-water and land shells, which were continued for many years. In 1833 he published "Contributions to Geology," and in 1858 was elected president of the Academy of Natural Sciences. In 1851 he published a "Description of a New Genus of the Family Melaniana," "Fossil Footmarks in the Red Sandstones of Pottsville," and "Synopsis of the Family of Naiades." He also contributed many valuable articles to the journals of the country. The firms succeeding Mathew Carey have been Mathew Carey & Sons, Carey, Lea & Carey, Carey & Lea, Carey, Lea & Blanchard, Lea & Blanchard, Blanchard & Lea, and Henry C. Lea.

Thomas Dunn English, born June 29, 1819, received the degree of M.D. from the University of Pennsylvania in 1839, and, having subsequently studied law, was in 1842 admitted to the bar. He wrote a novel, entitled "Walter Woolfe," and edited and contributed to a variety of journals and magazines. About 1842 he wrote for the *New York Mirror* the song "Ben Bolt." In 1848 he edited a humorous periodical, entitled the *John Donkey*, and, in connection with G. G. Foster, a work on the French Revolution of that date. He wrote a series of national ballads for *Harper's Magazine*, and is the author of numerous dramas, one of which, "The Mormons," has been printed. In 1855 he published a collection of his miscellaneous poems.

Dr. Benjamin Howard Rand was born in 1827, and graduated at Jefferson College in 1848. In 1853 he was professor of Chemistry in Philadelphia Medical College, and lecturer on Chemistry in the Franklin Institute. In 1864 he was professor of Chemistry in Jefferson Medical College. He was the author of "Medical Chemistry for Students," 1855; "Elements of Medical Chemistry," 1866. He edited Metcalfe's "Caloric," 2 vols., 1859, and contributed to medical periodicals.

Robert Montgomery Bird, born at New Castle, Del., in 1803, was educated in Philadelphia for the medical profession, but early turned his attention to literature. He contributed to the *Monthly Magazine*, and wrote three tragedies, "The Gladiator," "Oralooss," and "The Broker of Bogota." His novels were "Calavar," 1834; "The Infidel," 1835; "The Hawks of Hawk Hollow;" "Nick of the Woods," 1837; "Peter Pilgrim," 1838; and "Robin Day," 1839. In the same year he retired to his native town, but for a few years before his death, Jan. 22, 1854, he edited the *Philadelphia North American*, of which he was a part proprietor.

George W. Carpenter, of Germantown, ranked high as a geologist, and was a member of many European scientific societies. He was the author of "Essays on Materia Medica" and "Medical Chest Dispensatory," and was a contributor to the *Journal of the Medical Sciences*.

Joseph R. Chandler, a native of Kingston, Mass., educated to the law, member of Congress from Philadelphia from 1849 to 1855 and from 1858 to 1861, and afterward United States minister to Naples, was a conspicuous literary character for many years. When he first came to the city he was a teacher, and in 1821 published "A Grammar of the English Language."

Jos R Chandler

He was a frequent contributor to the *United States Gazette*, and for some years was editor and proprietor of that journal and an editor of the *North American*, in which it was merged. He was a prolific writer, sometimes of fiction, short tales, and sketches, and of many essays upon public and moral subjects, with addresses and speeches.

Charles J. Peterson, a native of Philadelphia, for many years proprietor of *Peterson's Magazine*, was editor at one time of the *Evening Bulletin* and an editorial contributor for the *Public Ledger*. His published works are "The Military Heroes of the Revolution, with a Narrative of the War of Independence," 1842; "The Military Heroes of the War of 1812 and of the War with Mexico," 1848; "Grace Dudley; or, Arnold at Saratoga," 1849; "Cruising in the Last War," 1849; "Naval History of the United States," 1850; "The Valley Farm;" "Kate Aylesford;" "History of the Refugees," 1855; "Mabel; or, Dark-

Digitized by Google

ness and Dawn," 1857; "The Old Stone Mansion," 1859; also a continuation from 1840 to 1856 of Charles von Rotteck's "History of the World," 1856, and numerous tales and critical articles in magazines and newspapers.

John Frost, a native of Kennebunk, Me., and graduate of Harvard, came to Philadelphia in 1828, and was appointed professor of Belles-Lettres in the Central High School in 1838. He was very industrious, and the author of a large number of books for the use of schools and young people, with historical and biographical compilations.

Thomas Buchanan Read, the artist-poet, who spent a large portion of his life in Philadelphia, was born in Chester Co., Pa., March 12, 1822. He removed to the city in 1846, but died in New York, May 11, 1872. His latest poems were "The House by the Sea," 1855; "Sylvia; or, The Last Shepherd, an Eclogue, and other Poems, including Lyrics and Airs from Alpland," 1857; "The Wagoner of the Alleghanies, a Poem of the Days of Seventy-Six," 1862; "A Summer Story, Sheridan's Ride, and other Poems, chiefly of the War," 1865; and "Good Samaritans, a Poem," 1867, besides some minor contributions to magazines. Complete editions of his poetical works in two volumes were issued in 1860 and 1862, in three volumes in 1865 and 1867, and in one volume in 1882.

Joel Cook, one of the editors of the *Public Ledger* in 1884, published his first book, the "Siege of Richmond," a narrative of the military operations of Maj.-Gen. George B. McClellan during the year 1862. He wrote and published a delightful account of his travels in Europe, and also of journeys in the neighborhood of Philadelphia. About 1882 a splendid illustrative work upon the "History and Legends connected with Mansions and Seats of Historic Interest in England" was published, and is considered a valuable and interesting book, showing much research and knowledge.

Dr. Joseph Leidy, the celebrated naturalist and physiologist, was born in Philadelphia, Sept. 9, 1823, and received his degree at the University of Pennsylvania. In 1853 he was elected to the chair of Anatomy in that institution, which was held for many years. Some of his valuable contributions to the science of comparative anatomy and vertebrate palæontology are in the "Proceedings of the Academy of Natural Sciences," the "Transactions of the Philosophical Society," and the "Smithsonian Contributions." He published an "Elementary Treatise on Anatomy," and many scientific papers.

Charles Heber Clark, once an editor and proprietor of the *Evening Bulletin*, wrote many humorous sketches, which were embodied in "Out of the Hurly-Burly," 1874, and "Elbow Room," at a later period.

John Hill Martin, a member of the bar, published, in 1873, a "History of Bethlehem, Pa.;" a "History of Chester and its Vicinity," 1877; "The Bench and Bar of Philadelphia," 1883, the latter a very comprehensive work.

Rev. William H. Furness, a leading Unitarian minister, published, in 1836, "Remarks on the Four Gospels," which he expanded into a large work in 1838, entitled "Jesus and His Biographers." He is also the author of "A Life of Christ;" "Domestic Worship;" "Julius, and other Tales, from the German," 1856; "Thoughts on the Life and Character of Jesus of Nazareth," 1864; "The Veil Partly Lifted and Jesus Becoming Visible," 1864; "Unconscious Truth of the Four Gospels," 1868; "Jesus," 1870, etc. He translated Schiller's "Song of the Bell," and other German poems, with great beauty and fidelity. A portion of these have been collected in a small volume with the title "Gems of German Verse." He is also the author of several hymns included in the collection in use by his denomination. As a preacher, Dr. Furness has great power, and his sermons, of which a volume appeared

Google

in 1855, are remarkable for the union of speculation and feeling. Dr. Horace Howard Furness, his son, has edited a "New Variorum Edition of Shakespeare," embracing the various readings of the principal editors. The first volume, "Romeo and Juliet," was published in 1871, and "Macbeth," "Hamlet," and "King Lear" have since appeared. He is also a valuable contributor to various journals. His wife is a lady of fine literary talent. Among her works are a "Concordance to Shakespeare's Poems."

We have thus made an imperfect sketch of a few of the prominent writers that Philadelphia has produced. The list is far longer than we had anticipated when we set upon our task. Proud as this great city may be of that distinguished line who have ornamented its bench and bar, it may boast more heartily still of its writers. In every department of inquiry, theology, morals, politics, political economy, science, art, mechanics, agriculture, trade, commerce, navigation, law, social life, history, poetry, and the novel, Philadelphia is not to be surpassed by any city of its age and size anywhere or in any time for the number and value of the works its citizens have composed.

In making this sketch we have noticed the earlier authors more at length than those that are more recent. We considered such a course the better because of the comparative lack of familiarity of most persons with the earlier literature of Philadelphia, except that part of it which has become specially distinguished in history, while that of recent times is generally well known. In our list of over five hundred names there are many who are known to the whole world, and many others who, had they lived in countries more fond than ours of the literary productions of their citizens, would have attained to far greater fame. The task of recording these names in this book has been very pleasing, and we have our own part of the gratification that all Philadelphians must feel in the contemplation of an array of authors so numerous and so honorable. Philadelphia has been a kind and generous nurse to talent of every description, and no city of its age and growth can show a greater number of those who have made becoming returns to her fostering care.[1]

CHAPTER XXXVI.

LIBRARIES AND HISTORICAL AND SCIENTIFIC SOCIETIES.

As we have before stated in preceding chapters of this work, the first printing-press established in the middle colonies was brought to Philadelphia in 1685, three years after the arrival of William Penn. Philadelphia had also the honor of publishing in 1784 the first daily newspaper issued in the United States. It also led the way in publishing the first works of many literary varieties. But colonial Philadelphia did not simply excel as a maker of periodicals and books, but as a preserver thereof as well. In this city the first distinctive American library was established, and as the result of the beginning of this praiseworthy institution and of other kindred literary enterprises, the culture and intellectual growth of literature in Philadelphia soon became marked. Franklin, apropos of the foundation of the literary company, says, "The institution soon manifested its ability, was imitated in other towns and in other provinces. . . . Reading became fashionable, and our people having no amusement to divert their attention from study, became better acquainted with books, and in a few years were observed by strangers to be better instructed and more intelligent than people of the same rank in other countries."

The Rev. Jacob Duché, in 1774, wrote, "There is less distinction among the citizens of Philadelphia than among those of any other city in the world. . . . Literary accomplishments here meet with deserved applause. But such is the taste for books that almost every man is a reader."

But it was not alone in the domain of literature that Philadelphia led the way in its early history. In that kindred sphere, the realm of scientific and philosophical research, its enterprise and culture also led all the colonies. The American Philosophical Society, founded in 1743, was the forerunner of the numerous American associations now engaged in promoting the several abstract and applied sciences.

The Library Company of Philadelphia.—The Library Company of Philadelphia, established in 1731, owns the oldest library in America. It has long been known as the "father of American libraries," although Benjamin Franklin early denominated it the "*mother* of all the North American subscription libraries." Thackeray, in writing to Mr. William B. Reed, spoke of the institution as "that good old library." It had the following interesting origin: In the fall of 1728 the first literary association in the province was formed by Benjamin Franklin, Joseph Breintnall, "a copyer of deeds for scriveners," Thomas Godfrey, mathematician; Nicholas Scull, afterward surveyor-general of the province; William Parsons, who was a shoemaker by trade, but was afterward surveyor-general of the province; William Maugrige, a joiner; Hugh Meredith, a pressman, and Franklin's first partner; Stephen Potts, printer and bookbinder; George Webb, a compositor, but an Oxford scholar; Robert Grace, a gentleman of fortune; and William Coleman, a merchant's clerk, afterward a merchant and one of the provincial judges. This was the famous "Junto" club which originally met at a tavern, but afterward at the house of Robert Grace.

[1] In the chapters on the "Bench and Bar," "Medical Profession," "Art and Artists," "Religious Denominations," "Press," and others in this work, will be found sketches of many prominent authors and literary men, and mention of their works.

From this Junto originated the Philadelphia Library. Franklin thus tells the story of its origin in his "Chronicle of Events" in his life, under date of 1730:

"About this time (1730) our club meeting, not at a tavern, but in a little room of Mr. Grace's, set apart for that purpose, a proposition was made by me that, since our books were often referred to in our disquisitions upon the queries, it might be convenient to us to have them altogether where we met, that upon occasion they might be consulted; and by thus clubbing our books in a common library we should, while we liked to keep them together, have each of us the advantage of using the books of all the other members, which would be nearly as beneficial as if each owned the whole. It was liked, and agreed to, and we filled one end of the room with such books as we could best spare. The number was not so great as we expected, and though they had been of great use, yet some inconveniences occurring for want of due care of them, the collection, after about a year, was separated, and each took his books home again.

"And now I set on foot my first project of a public nature, that of a subscription library. I drew up the proposals, got them put into form by our great scrivener, Brockden, and by the help of my friends in the Junto, procured fifty subscribers of forty shillings each to begin with, and ten shillings a year, for fifty years, the term our company was to continue. We afterward obtained a charter, the company being increased to one hundred. This was the mother of all the North American subscription libraries, now so numerous."

The instrument of association was dated July 1, 1731, and the directors and treasurer therein appointed held their first meeting on the 8th of November following, at the house of Nicholas Scull, and made choice of William Coleman as their treasurer, and of Joseph Breintnall as their secretary, whose first entry is in the following words:[1]

"The minutes of me, Joseph Breintnall, secretary to the directors of the Library Company of Philadelphia, with such of the minutes of the same directors as they order me to make, begun on the 8th day of November, 1731. By virtue of the deed or instrument of the said company, dated the first day of July last. The said instrument being completed by fifty subscriptions, I subscribed my name to the following summons or notice which Benjamin Franklin sent by a messenger, viz.:

"'To Benjamin Franklin, Thomas Hopkinson, William Parsons, Philip Syng, Jun., Thomas Godfrey, Anthony Nicholas, Thomas Cadwalader, John Jones, Jun., Robert Grace, and Isaac Penington.

"'GENTLEMEN,—The subscription to the library being completed, you, the directors appointed in the instrument, are desired to meet this evening, at five o'clock, at the house of Nicholas Scull, to take bond of the treasurer for the faithful performance of his trust, and to consider of and appoint a proper time for the payment of the money subscribed, and other matters relating to the said library.

"JOS. BREINTNALL,
"*Secretary.*

"PHILADELPHIA, 8th November, 1731."

Upon the organization of the Library Company of Philadelphia, the price of a share was fixed at forty shillings. Ten persons paid their subscriptions at the first meeting. By March, 1732, more than twenty-five subscribers had paid in their money, and it was resolved to send to England for some books immediately. James Logan, having heard of the plan, proffered his assistance in suggesting to the members of the society such books as it would be judicious for them to select. He being esteemed a gentleman of universal learning, and "the best judge of books in these parts," the generous offer was accepted. Under the advice of Mr. Logan, forty-five pounds sterling was remitted to London, and the books ordered were obtained by Thomas Hopkinson, who was then on a visit to England. Peter Collinson, of London, who purchased the books, sent over on his own account, as a present to the library, a copy of Sir Isaac New-

ARMS USED BY HON. JAMES LOGAN.

ton's "Philosophy" and Peter Miller's "Gardener's Dictionary."

In October, 1732, the first importation of books was received and taken "to Robert Grace's chamber, at his house in Jones' Alley." The proprietor of the house Franklin characterizes as "a young gentleman of some fortune, generous, lively, and witty, a lover of punning and of his friends." Robert Grace's house, which was pulled down in 1850, stood on the site of No. 131 Market Street and Nos. 120 and 122 Church Street, formerly Jones' Alley. Mr. Poulson, in 1806 (*Minutes*, vol. iv. p. 209), says, "Jones' Alley is now called Pewter Platter Alley, and the building in which the library was kept was afterward occupied by David Hall as a printing-office. It was back of the house in which Mr. Horner has his iron-mongery store." This house in Jones' Alley was rented by Louis Timottiée (spelled also Timothee), the first librarian, from Robert Grace. It was the librarian's duty to attend at the library on Wednesdays, from two or three o'clock in the afternoon, and on Saturdays from ten to four. He occupied Grace's house, and received a small salary. By the rules, he was allowed to permit "any civil gentleman to peruse the books of the library in the library-room, but not to lend to or suffer to be taken out of the library by any person who is not a subscribing member, any of the said books, Mr. James Logan only excepted."

On the first occasion of the transfer of a share, December, 1732, the secretary records that "the directors have made inquiry concerning the said Evans,

[1] The author is greatly indebted to Lloyd P. Smith, the distinguished librarian of the Library Company of Philadelphia, for the facts contained in the sketch of this library.

Digitized by Google

who was a stranger to most of them, and having heard that he is honest and industrious, and regardful of books, they agree to take him into partnership."

At a meeting held Dec. 10, 1733, Benjamin Franklin mentioned Mr. Timothee's having been serviceable to him, and that he was willing to officiate for him as librarian until his current year should be expired.

On Aug. 11, 1735, a verbal order was granted to the treasurer to buy gold at twenty per cent. to remit to Peter Collinson, because a good bill for eight pounds could not be had.

At the meeting of Oct. 15, 1735, the directors declined to admit a less number of new members than five at a time.

On May 8, 1737, the directors, librarian, treasurer, and secretary, with a few others, dined together "at Mr. Mullan's, and enjoyed a facetious, agreeable conversation."

On May 1, 1738, the directors returned thanks to the Hon. Thomas Penn for a valuable and well-situated lot of ground "he has been pleased to bestow upon the company to build a library upon."

The minutes of the meeting of Aug. 16, 1738, contain this memorandum: "Jos. Breintnall, secretary, writes to Peter Collinson that Dr. Thos. Bond is the bearer of this, who (*if he be asked*) will give a surprising account of a new discovered phenomenon of a dog's breeding snakes in his liver after having been bit by snakes, and recovered."

On Oct. 16, 1738, it is recorded Walter Sydserp, of Antigua, gave the library £34 6*s*. 5*d*. sterling, writing that "if hereby others are prevailed on to lend a hand to promote so great a good, and so uncommon a virtue, your infant colony will, in a few ages, be ranked the first in the Kalendar of the American settlements."

On Nov. 12, 1739, at a meeting at the house of the widow of John Roberts, it was determined to remove the books from the residence of William Parsons, the librarian, where they had been kept for some time, to the State-House, the use of which had lately been granted the company by the Assembly, upon a petition of the directors drawn by Benjamin Franklin. It was not, however, until April 7, 1740, that the books were removed. They were placed in the upper room of the westernmost office of the State-House.

On the 9th of June, 1740, Franklin was ordered to print a complete catalogue, and on the 11th of August a committee of directors was ordered to prepare such a catalogue. The work of preparing and printing this catalogue was prosecuted at once, and on Aug. 10, 1741, it was agreed that each member of the Provincial Assembly have a catalogue given him, and that one be sent to John Penn, Esq., and one to Peter Collinson.

May 3, 1742, the charter granted by the proprietary was accepted by the members signing a paper to that effect.

On May 10, 1742, "the directors then went to the Widow Roberts' to sup, where they remembered their benefactors."

At the meeting of April 28, 1743, it was ordered that, "As Mr. John Bartram was a deserving man, he should have free access to the library, and be permitted to read and borrow the books."

The minutes of the meeting of Nov. 12, 1744, contain this memorandum: "Proposed that Mr. Franklin speak to his companions, who were, before the grant of our patent, nominated trustees to receive a conveyance from the proprietor, in behalf of the company, for a lot he gave them to build a library-house upon, on the south side of Chestnut Street, and that they obtain a deed for it without delay." [1]

On Nov. 11, 1745, the directors met at Joseph Breintnall's, all previous meetings having been at the Widow Roberts'.

On April 14, 1746, the directors met at the Widow Breintnall's, and presented her with fifteen pounds in consideration of her husband's services.

On May 12, 1746, it was ordered that the charter be printed by Benjamin Franklin.

At the meeting of July 14, 1746, John Lober and Lynford Lardner were appointed to prepare a catalogue of all the books added to the library since the last catalogue was printed, and deliver the same to Benjamin Franklin, who was directed to print it.

On Jan. 12, 1747, John Lober was instructed to confer with Secretary Peters to know whether leave might be obtained to fence in an additional piece of the proprietor's ground with the library lot during the pleasure of the proprietor, and on Feb. 9, 1747, Mr. Lober reported that he had spoken with the secretary, who gave a ticket to the surveyor-general to inspect the contiguous ground and return it by metes and bounds, that a proper entry might be made of the application, and a memorandum drawn to be signed by the Governor as commissioner of reports.

On July 13, 1747, Franklin presented to the board a letter from the proprietor Thomas Penn, Esq., with an electrical apparatus, in replying to which the committee say, "Some of our members who employ themselves in such researches may, by its assistance, show that this fresh mark of your favor has been judiciously as well as generously bestowed upon your most obliged," etc.

On Sept. 10, 1750, it was ordered that the books in the library "be new numbered, beginning No. 1 in the folios and likewise in quartos, octavos, and 12mos. Mr. Greenway [the librarian] undertook to do it, and is to be paid for doing it and for making a new catalogue."

On May 11, 1752, it was ordered that application be made to the secretary for a patent for the company's lot.

---

[1] This lot was on the south side of Chestnut Street, about half way between Eighth and Ninth.

At the meeting of Jan. 8, 1753, it was resolved "that R. Peters and B. Franklin wait upon John Penn, Esq., with the compliments of the directors, and request him to do them the honor of accepting the privilege, now unanimously voted, of the free use of the library during his residence in this country."

Franklin acted as secretary from 1746 to 1757, but many of his minutes are lost. In 1757 he went to England, and Mr. Allison, at the request of the company, consented to keep the minutes of the directors for the current year.

It was ordered, at the meeting of Jan. 14, 1760, that bound catalogues of the books belonging to the library be presented to the following gentlemen, viz., six copies to the honorable the proprietaries, Thomas Penn and Richard Penn, one to Mr. Gray, of Colchester, one to P. Collinson, and twelve to Mr. Franklin, to be distributed among gentlemen of his acquaintance.

On October 3, 1760, it was ordered, "That the secretary wait on Mr. Brockden and receive from him the patent for the lot given by the proprietaries to the library."

This memorandum is found on the minutes of the meeting of Feb. 20, 1761: "B. Franklin writes from London, to the treasurer, '. . . My best respects to the directors, my old friends, whom I long once more to see.'"

April 12, 1762, the secretary received from Mr. Brockden the proprietor's patent for a lot of ground, recorded in Patent Book, vol. xix. p. 545.

The following minute was adopted at the meeting of May 10, 1762: "Whereas, the fine of one shilling is found insufficient to engage the attendance of the directors at their monthly meetings, it was put to the vote and carried in the affirmative, that the fine for absences shall for the future be two shillings, for the benefit of the house where said directors shall keep their meetings."

On Nov. 8, 1762, the directors unanimously agreed that Dr. B. Franklin (who had just returned from England) be elected a director in the room of Samuel Shoemaker, who declined serving.

On June 13, 1763, the directors agreed to meet at the Indian Queen.

The board agreed, on Nov. 14, 1763, that it would be highly proper for them to address the Hon. John Penn, Esq., upon his appointment to this government and safe arrival here. Dr. Franklin, Thomas Cadwalader, and Samuel Rhoads were appointed a committee to prepare such an address, which was presented on the 21st of November, by the directors in person, receiving the thanks of Mr. Penn.

On March 12, 1764, it was unanimously resolved that there should be a new and complete catalogue of the books, curiosities, laws, rules, etc., belonging to the library, printed for the use of the company, the former catalogue being rendered incomplete by the great additions to the library, and by the loss of numbers of other books from the library since the printing of the said catalogue some years previously.

It was represented to the directors that several members of the company were much displeased at certain new regulations in the library, adopted Dec. 12, 1763, by which every person except the librarian was excluded from entering the library and taking down the books there, but was to apply to the librarian for any book he might choose to peruse. Because of these complaints it was resolved that the librarian should prepare a bond which should be tendered to every member who should desire the privilege of entering the library and examining the books there at the hours of attendance on Saturday, by which he should bind himself to be answerable for his proportional part of the loss that might arise from any books being lost or stolen out of the library.

The minute of the meeting of Nov. 2, 1764, contains this unique memorandum: "Mr. Bymes complaining that he had provided supper for the last meeting and nobody came but the secretary, it was agreed that for the future every absentee should pay a fine of one shilling, which should go to the house as a recompense for providing a supper for a larger company than should happen to attend, and that the secretary should pay Mr. Bymes 7*s.* 6*d.* for his last disappointment out of the money in his hands collected by former fines."

Dr. Franklin having gone to England, Joseph Sims was chosen a director in his place. On March 11, 1765, the secretary having reported that the new edition of the catalogue of books, etc., belonging to the library was completed, it was ordered that a copy of the same, neatly bound, should be presented to each of the following gentlemen, viz.: "To the honorable the proprietors of the province, to Mr. Peter Collinson, to Mr. Jackson, the agent of the province, to Mr. Gray, of Colchester, to Dr. Nothergill, to Mr. Lagrant, to Mr. Mildred, to Mr. Roberts, to Mr. John Struttle, and six copies to Dr. Benjamin Franklin, in London, to be distributed as he shall think proper; to the Governor, the Speaker of the honorable House of Assembly, and to Col. Bouquet, in this city."

On Nov. 11, 1765, it was "*Resolved*, That Mr. James Bymes be desired to provide suppers for six members on the second Monday in every month, and that every absentee be for the future charged with 2*s.* 6*d.* in discharge of the reckoning."

At a meeting of the library company, Feb. 20, 1768, the price of a share was lowered from twenty-one pounds to ten pounds Pennsylvania currency (twenty-six dollars and sixty-seven cents).

On April 24, 1769, the secretary reported that a committee from the Union Library Company, into which the Amicable and Association Libraries had previously merged, had delivered to him a deed of conveyance of all their estate to this company, duly

executed, and had received from him certificates for the admission of their members.[1]

May 2, 1769, Ludowic Sprogle and John De Maurregnault were appointed to take charge of the library, the former to take charge of the books at the State-House, and the latter those at the house on Third Street, between Walnut and Spruce, used by the Union Library.

May 16, 1769, a committee appointed to prepare a petition to the House of Representatives for leave to build a library-house on the State-House Square laid the same before the board, at a meeting held May 16, 1769.

It was ordered, Sept. 25, 1769, that the library should be open on Tuesdays, Thursdays, and Saturdays from 5 to 9 P.M. in summer, and from 4 to 8 P.M. in winter.

The following letter from Dr. Franklin was laid before the board at the meeting held Nov. 29, 1769:

"LONDON, July 7th, 1769.

"GENTLEMEN,—I received your favour of the 3d of May, and shall send you the books you write for ℞ Capt. Falconer. Seeing some time since that other libraries were about to be united with yours, I did for that reason forbear buying any Books but 'Robinson's History,' till I should have further orders, lest I should purchase Duplicates. I think we should have, in some of our public Libraries, all the Transactions of every Philosophical Society in Europe, viz., The Memoirs of the Academy of Sciences at Paris; those of Petersburg; of Haerlem, in Holland; of Bononia [Bologna], in Italy, &c., with the Continuations as they come out yearly, and also the French Encyclopædia. They would be extremely useful to us on many accounts, and are rather too heavy for private collections. But as they are in different Languages, and the Majority of our Members are only acquainted with English, I have not ventured to buy them without orders, and in general I wish to have express Directions, and that as little as possible may be left to my judgment in laying out the Company's Money.

"With great Esteem, I am,
"Gentlemen,
"Your most obedient,
"Humble servant,
"B. FRANKLIN.

"MESSRS. THOMSON & MIFFLIN."

Oct. 20, 1770, Josiah Henry reported that he had let out the old Union Library, on Third Street, to Robert Bell.[2]

At a general meeting of the company held Oct. 5, 1771, it was resolved that, the books being crowded together, it was expedient to built a new library-room, and the directors were empowered to apply to the Assembly for part of the State-House Square. From the minutes of the meeting of April 4, 1772, it appears that the Assembly had declined granting the company liberty of erecting a library on State-House Square. On the 29th of June, 1772, the company having been offered a room by the Carpenters' Company, on the second floor of their hall, at twenty pounds per annum, the directors agreed to take it at that rate; and on Oct. 26, 1772, it was agreed to lease the whole of the second floor at thirty-six pounds per annum.

[1] The building of the Union Library Company was at the southeast corner of Third and Pear Streets.

[2] Bell was a bookseller and publisher, and held "the book auction" there at stated times.

On Dec. 28, 1772, the directors "agree to allow the Librarian five pounds per annum, in consideration of which he is to provide an assistant at his own cost!"

It was agreed on May 10, 1773, that the library should be opened every day from two o'clock until seven P.M., as soon as the books were removed from the State-House to the new rooms. The minutes of the meeting held Oct. 25, 1773, contain this mournful record: "The library being entered by some thief last night (as supposed), he carried off all the coins and tokens, together with some change which was left in the drawer."

On Dec. 28, 1773, the committee sent a list of books to be bought in London by Dr. Franklin, and added: "Since our last the library has been removed to a new building called the Carpenters' Hall, in the centre of the Square in which Friends' school stands. The books (inclosed within wire lattices) are kept in one large room, and in another handsome apartment the apparatus is deposited and the directors meet."

On Aug. 31, 1774, it was ordered, "That the librarian furnish the gentlemen who are to meet in Congress in this city with the use of such books as they may have occasion for during their sitting, taking a receipt from them;" and the same privileges were continued to the Continental Congress while in Philadelphia.

Jan. 10, 1775, the following letter, addressed to Dr. Franklin, was read: "Sir,—we are directed to acknowledge the receipt of your favor of the 9th April and 25th July, with the books sent for the use of the company, which fresh instance of your constant kind concern for us is very obliging. . . . The directors are preparing an order for books, but from the present unhappy situation of public affairs it must be postponed. Wishing for days more propitious to the growth of science in America," etc. On the same date John Wesley presented four books to the company. On May 7, 1776, the board directed the following advertisement to be inserted in the *Pennsylvania Gazette*, *Journal*, *Packet*, *Ledger*, and *Evening Post:* "The members of the Library Company of Philadelphia are requested to attend at the library-room on Thursday, the 30th day of May, inst., at two o'clock in the afternoon, in order to consider the propriety of empowering the directors to remove the books and effects of the company, and determine on the place where they shall be deposited in case any future event should render that measure necessary, and that printed notices of the meeting be left at the house of each member on the morning of that day."

At a general meeting held May 30, 1776, in answer to the above call, the number of members present not being competent to the passing of a law, adjourned to June 6th, when the same thing occurred. At the regular meeting, July 9, 1776, only two directors were present. These were momentous times. At a meeting held March 11, 1777, Messrs. Allison, Jones, and

Hewes were appointed a committee to wait on Gen. Gates, commanding officer in this city, in order to procure, if possible, an order for the removal of the sick soldiers from the library; and the secretary was ordered to insert the following advertisement in the *Gazette*, *Packet*, and *Post*:

"The members of the Library Company of Philadelphia are hereby notified that books may be procured from the said library by application at the house of the librarian, on the south side of Market Street, four doors below Fourth Street, between the hours of five and seven in the afternoon, and leaving a signed note for such books as they may respectively want. The lower part of the library being at present used as an infirmary for the sick soldiery, renders it inconvenient for the librarian to attend at the library-room as usual."

An extract from the will of the Hon. William Logan, Esq., was laid before the board at the meeting held Aug. 12, 1777, by which it appeared he had bequeathed to the Library Company a very considerable collection of ancient authors, which had been accordingly delivered to the librarian.

On Nov. 12, 1778, the directors, taking into consideration the high prices of fire-wood, candles, etc., agreed that the library be opened during the winter season only upon Wednesdays and Saturdays from two o'clock to 8 P.M.

March 9, 1779, a number of members, anxious for the safety of the library, having mentioned their apprehensions of its danger from the combustibles kept in the hall below, the board, on the 9th of March, 1779, appointed William Hewes to apply to the gentlemen who had the management of those affairs to procure its removal, if possible, in the event of there being any real danger.

On Nov. 9, 1779, an order was drawn on the treasurer for six pounds specie and six pounds Continental money for the secretary's salary for two years. Munificent compensation!

April 11, 1780, a committee consisting of Messrs. Hewes and Stansbury was appointed to apply to the proper persons or powers for a safe passport for sundry books intended for the company, and then lying at New York. The committee for a passport reported, April 27, 1780, that they had received from Timothy Matlack, secretary, an extract from the minutes of the Supreme Executive Council, as follows: "On consideration that there is now in force a law of the State against importing any goods, wares, or merchandise the growth or manufacture of Great Britain, and, considering the character of the persons employed in New York in obtaining the said books, Agreed, that this council cannot give any advice or assistance in a business so circumstanced."

On May 4, 1781, the directors agreed that thirty shillings State money be received in lieu of a bushel of wheat, by which the annual payments were last year directed to be made, if paid immediately.

May 14, 1783, a bill of exchange for two hundred pounds sterling was remitted to Joseph Woods and William Dillwyn for the purchase of books. The letter addressed to them says, "We have not received any new books since 1774, except those contained in the list herewith [twenty volumes]; we, therefore, shall confide entirely to your judgment to procure for us such modern publications as will be proper for a public library, and though we would wish to mix the utile with the dulce, we should not think it expedient to add to our present stock anything in the novel way."

March 12, 1784, a joint committee of the American Philosophical Society and the Library Company petitioned the General Assembly to this effect:

"That a design hath been conceived and is already in a promising state of forwardness, to unite to the City Library that learned and executive collection of books known by the name of the 'Loganian Library;' but in such manner that, although it be kept in the same building, it shall ever remain distinct from the library with which it may be united, and retain its name in honor of the liberal citizen who collected and intended it for public use.

"That the Philosophical Society also find it absolutely necessary . . . that they should be accommodated with a suitable building . . .

"That your petitioners have turned their attention to the east and west lines of the State-House Square. . . . and, therefore, humbly pray your honorable House to grant . . . to the Philosophical Society a lot of ground eighty feet in front upon Sixth Street, and forty feet deep upon said square, midway between Walnut and Chestnut Streets, and to the said Library Company a like space of ground upon Fifth Street and directly opposite."

On Feb. 3, 1785, a petition was presented to the Assembly reciting that the former application for lots on the State-House Square had been ineffectual, and adding that "the directors and Philosophical Society proposed renewing their application, and a petition for that purpose was produced by the said Philosophical Society, but in which they had transferred the prayer of the petition, jointly presented to the last House; and placed the library on the west instead of the east side of the square, and, as they declined uniting with the library company on the plan which had been agreed to, your petitioners thought it a duty they owed to their constituents, to refuse signing the said petition. . . . Before the Revolution the library was opened six times a week, and, though it is at present opened but three times a week on account of our funds being diverted to the importation of books published during the war, we hope the stock will very soon afford a daily attendance.

"That the Library Company consists of upwards of four hundred members, and that there are also many other persons who constantly take out books. That being attended by so numerous a body of old and young, they hope your honorable House, in taking up the prayer of the Philosophical Society, will be pleased to consider that the members who attend at the society's hall are few in numbers compared with those

who frequent the library, and their stated meetings are only once a fortnight.

"Your petitioners therefore hope that you will be pleased to grant to the Library Company of Philadelphia a lot on the east side of the State-House Square."

On Feb. 2, 1786, a committee appointed to wait on Dr. Franklin reported that they had had a conference with the doctor, who appeared to interest himself much in the prosperity of the library, and wished some steps could be taken to procure a convenient lot to build on, and intimated that he had a valuable number of books which he intended for the library whenever there should be a safe place to deposit them in.

On July 5, 1787, it was "resolved that the librarian furnish the gentlemen composing the convention now sitting with such books as they may desire during their continuance in Philadelphia, taking a receipt for the same."

Feb. 5, 1789, a letter was presented to the company from Dr. Franklin, president of the Philosophical Society, inclosing an extract from the minutes of the said society, by which it appears that a committee were appointed to treat with the directors of the library company with respect to renting to the directors, for the use of the company, part of the building belonging to the society, on the State-House Square, which minute was taken into consideration, and it was resolved that Josiah Hewes and John Kaighn do wait on the president and thank him for his continued friendly attention to the interests of the library company, and that they request the president to inform the committee of the Philosophical Society that the directors are of opinion the present situation of the library would be very desirable were it not for the danger of fire, arising from a joint tenancy in the same building, which has induced them to enter into treaty for a lot on Chestnut Street and Fifth Street, on which they conceive, by proper exertions, they will be able to erect a safe, convenient, and detached building, without any diminution of the present income of the company, and that they desire the president to inform the society the directors entertain a proper sense of the overtures from the society, but that the dangers at present apprehended from fire would not be obviated by a removal of the books unto the society's hall.

April 30, 1789, the committee on accounts reported the capital stock of the company as follows:

	£	s.	d.
Bonds and mortgages	400	0	0
Ground-rents	567	13	4
House in Third Street, late the Union Library	500	0	0
Lot on Fifth Street	250	0	0
Lot on Chestnut Street	200	0	0
	1917	13	4
Deduct for ground-rents	216	13	4
	1701	0	0
Arrearages of interest, etc	284	10	0
Cash in hands of treasurer	345	17	10
Cash in hands of librarian	14	7	4½
	2345	15	2½

The library was also reported to comprise about seven thousand seven hundred volumes, and sundry apparatus not valued.

At a meeting of the members of the library company, held June 1, 1789, Bishop White was nominated by the directors, and took the chair. The directors were authorized to erect a two-story building, estimated to cost £1999 8*s*., as soon as one hundred new shares were sold.

On July 30, 1789, the building committee reported a conversation with Dr. Logan, to the effect that a lot of twenty-seven feet ten inches by two hundred and twenty-five feet deep could be procured, at the rate of one hundred dollars per annum. This is the first case on the minutes in which money is reckoned in dollars instead of in Pennsylvania currency of $2.66⅔ to the pound. They also reported that the two corner lots had been sold by the sheriff, and had fallen into the hands of Mary Norris, who was ready to make a title to the company. It was agreed to take the lot from Dr. Logan, and the committee was instructed to procure the deeds for this and the lots of Mary Norris, and to proceed to have the cellar dug out as speedily as possible.

On examination of the plans the board determined in favor of an elevation presented by Dr. Thornton.

Sept. 3, 1789, the building committee reported,—

"That the *first stone* of the edifice was laid on the thirty-first of August last; that upon the suggestion of Doctor Benjamin Franklin a large stone was prepared and laid at the South-west corner of the building with the following Inscription composed by the Doctor, except so far as relates to himself, which the committee have taken the liberty of adding to it:—

"'Be it remembered,
In honor of the Philadelphia Youth,
Then chiefly Artificers
That in MDCCXXXI,
They cheerfully,
at the Instance of Benjamin Franklin,
one of their Number,
Instituted the Philadelphia Library;
which, tho' small at first,
Is become highly valuable & extensively useful,
And which the Walls of this Edifice
Are now destined to contain and preserve;
The first Stone of whose Foundation,
was here placed,
The thirty-first day of August, Anno Domini MDCCLXXXIX,

Benjamin Gibbs,	Thomas Parke,	then being Directors.
Josiah Hewes,	Joseph Paschall,	
John Kaighn,	Benjamin Poultney,	
Mordecai Lewis,	Richard Wells,	
Thomas Morris,	Richard Wistar,	

Samuel Coats, Treasurer—
William Rawle, Secretary—
Zachariah Poulson, Junr. Librarian.'

"The following medals were deposited in the Stone:—a Pewter Coin 2 Inches diameter, a Figure erect with a Helmet—Right hand a Spear—left hand a Knot, or Cord, from whence suspends 4 shields, being the Arms of 4 Crowns, viz. 1st England—on the right, 2d three fleur de Lis (France) below on the right 3d a Lion rampant with a Sword in the right Paw, grasping a Bundle of arrows in the other—Fourth—A Shield with a Lion rampant at two opposite Corners of the Shield, the other two are confused. At the bottom is a detached Shield, as if lying on the ground, unconnected with the other four—The Figure appears to be a large head covering the whole Field.—Around the inner Edge is *Communi consensu* —1789 stamped on this side by Rue.

"On the other side is a handsome figure in Robes, sprinkled with fleur de Lis. Sitting in an armed chair, resting on a raised Step, sprinkled also with Fleur de Lis—The left hand pointing to a Pillar, with a Cap of 'Liberty' on it—A female Figure in light Robes is hanging up a shield on the Pillar having 13 Stripes—Round the inner Edge the Motto *Libertas Americana*, 1783–1789 Stamped.—

"A Copper Inch Coin, a Star radiating with thirteen small Stars between the points of the Rays—The Motto *Nova Constellatio*. On the other Side a circular Wreath with the Letters U. S.—The Motto *Libertas et Justitia* 1785–1789 Stamped.—

"A Copper large Inch Coin, a Shield with thirteen stripes.—The Motto *e pluribus unum*.—On the reverse, a Plough with a Nags head over it—The Motto *Nova Cæsaria*, 1787–1789 Stamped.

"A George the Third half-penny 1773. Stamped 1789.

"Inch Copper Coin—On one side a Spread Eagle with Massachusetts on the inner Date 1788—on the reverse an Indian with a Bow in his Right, and an Arrow in his left hand. Motto, *Commonwealth*—stamped 1789—

"Inch Copper Coin—a Cæsar's hand on one side with *Vermont: Auctoritas* on the inner Circle—On the reverse a Figure like Britannia date 1785. Motto *Inde: et Liber:* Stamped 1789—

"1¾ Inch a Medal—Roman head of Genl. Washington—round the inner Edge G. Washington General of the Continental Army in America—On the reverse a Trophy—Cannon, Mortar, Trumpet & Rays shooting out all round *Washin: reunit* par un rare assemblage les talens du Guerrier, les Vertus du Sage."—

SEAL OF THE LIBRARY COMPANY OF PHILADELPHIA.

Information was given at the same time by John Kaighn to the effect that William Bingham, having heard of the intention of the directors to erect a statue of white marble of Dr. Franklin as the founder of the library in the niche in the front of the building, was willing to furnish it at his own expense. John Kaighn, Mordecai Lewis, Joseph Paschall, and Dr. Parke were appointed a committee to wait upon and confer with him upon the subject.

On Oct. 1, 1789, the committee on the statue reported "that they have understood Dr. Franklin would approve of a gown for his dress and a Roman head."

A letter was read from William Bingham to the directors of the Library Company, at a meeting held April 5, 1792,[1] informing them of the arrival of a statue of Dr. Franklin, and requesting their acceptance thereof, and testifying his friendship to the institution; whereupon the secretary was directed to return an answer thereto, informing him of their acceptance of his valuable present and expressive of their thanks for the same.

This statue was cut of Carrara marble, by Francisco Lazzarini. It was placed in the niche in front of the building in the early part of April, 1792, and an ode in honor of its erection was published in Bache's paper, April 17th of that year. The features of the head were taken from a bust of Franklin procured from the Pennsylvania Hospital.

William Bingham, who donated the statue, inherited a large estate through a long line of distinguished ancestors, who resided in Pennsylvania. His great-grandfather, James, died in 1714, leaving a large estate. His grandfather, James, married a daughter of William Budd, of Burlington, N. J., and also inherited large landed property. His father, William, besides the Bingham and Budd property that came into his possession, added considerably to it by a marriage, in 1745, with Mary, daughter of Alderman and Mayor John Stamper. William Bingham, who married Ann Willing, the daughter of Thomas Willing, one of the early celebrated families of Philadelphia, was born in this city April 8, 1752. He graduated at the College of Philadelphia in 1768, and received a diplomatic appointment under the British government at St. Pierre Myzene, in the West Indies, where he was consul in 1771. He remained there during the Revolution as the agent of the Continental Congress, and performed patriotic service in furnishing money and supplies to the struggling colonies.

After his return from the West Indies, Mr. Bingham married, on Oct. 26, 1780, at Christ Church, the beautiful and accomplished Ann Willing, then only sixteen years old. This young girl, as will be seen in other portions of this work, was the favorite of very eminent men on account of the social position of her family and her own graces and accomplishments.

In 1784, William Bingham and his beautiful wife visited Europe, where they remained two years, and attracted general attention, having been presented to Louis XVI. In 1786, Mr. Bingham was elected a member of the Congress of the Confederation, and served until 1789. He was captain of a troop of dragoons in the latter year, and with his company

[1] Mr. Bingham's letter was as follows:

"PHILADELPHIA, April 4, 1792.

"GENTLEMEN,—The Respect I bore to the Memory of that deceased Patriot, Philosopher, and Statesman, Dr. Franklin, induced me to engage to carry your Intentions, of erecting a Marble Statue to perpetuate in the Minds of his Fellow-citizens the recollection of his public and private Virtues, into full Effect.

"The Statue is, at length, arrived, and I have the honor of inclosing to you the Bill of Lading. If I may credit the communications of my Correspondents, it is fashioned out of a beautiful block of Marble and is executed in a very masterly Stile, and is in every respect, worthy of the distinguished Personage whom it is intended to represent. As such I request your acceptance of it, and to believe me a Sincere Friend to your Institution.

"Gentlemen,
"Your obedient humble Servant,
"WM. BINGHAM.

"THE DIRECTORS OF THE LIBRARY COMPANY OF PHILADELPHIA."

escorted Mrs. Washington from Chester to the city when on her way to New York to join her husband, who had been elected the first President of the United States. In 1790 he was elected a member of the General Assembly of Pennsylvania, and although it was his first year in that body, he was, owing to his ability and character, chosen Speaker of the House. He was a member of the Assembly for the sessions of 1790 and of 1791, and in 1795 elected United States senator from Pennsylvania, and held the office until 1801. In July, 1780, William Bingham subscribed five thousand pounds to "the Bank of Pennsylvania for the purpose of supplying the army of the United States with provisions for two months."

Mrs. Bingham died in Bermuda, May 11, 1801, at the age of thirty-seven years. Mr. Bingham went to Europe shortly afterward, and died at Bath, in 1804, leaving three children, Ann Louisa, Maria Matilda, and William Bingham.

Samuel Jennings having written from London to his father that he would like to paint a picture for the library, the directors suggested, at a meeting held May 6, 1790, "the figure of Liberty displaying the arts and placing on the top of a pedestal a pile of books lettered with Agriculture, Commerce, Philosophy, and a catalogue of the Philadelphia Library, a broken chain under her feet, and in the distant background a group of negroes sitting on the earth, or in some attitude expressive of ease and joy." The picture is now in the Ridgway Branch.

On June 3, 1790, Richard Wells produced the following bequest from Dr. Benjamin Franklin: eighteen volumes quarto of a French work entitled "Descriptions des Arts et Métièrs," for which Mr. Wells was requested to inform the executors "that they entertain a very just sense of the compliment made to the library by the doctor."

July 1, 1790, the board having been desirous of disposing of the lot on Chestnut Street given by the late proprietaries of Pennsylvania, intimation, by the desire of the board, was made to their descendants, John Penn and John Penn, Jr., by one of the directors, which produced a letter to their agent, Anthony Butler, of which the following is a copy, and the original is permitted to be kept for such purposes as may hereafter become necessary:

"London, April 7, 1790.

"Sir,—Understanding that the Library Company of Philadelphia intend to fix upon a different place for the Building of a Library, as a more convenient Situation than the lot near ninth street, we beg to intimate to you our compliance with their requisition, made through Doctor Parke, for power to sell that Lot. You may therefore consider any mode which you together agree on the expediency of for confirming their Title as having the Sanction of our joint Consent. We are, Sir, with regard,

"Your obedient huml Servts.

"John Penn

"John Penn, Junr.

"Anthony Butler, Esquire."

The committee appointed to remove the books and property of the Library Company reported, Oct. 7, 1790, that they had performed that service.

On Dec. 30, 1790, the books in the new apartments being ready for delivery, the directors took into consideration the propriety of opening the library every day, and in consequence agreed with Zachariah Poulson, Jr., to perform that service at the rate of one hundred pounds per annum, to commence on the 1st of January next, and directed an advertisement to be published agreeably thereto, acquainting the members that the library will be opened in future every day, Sundays excepted, from one o'clock P.M. until sunset.

The library was opened for the first time for the delivery of books the 1st of January, agreeably to the order of the board on December 30th.

At a meeting held Jan. 18, 1791, the directors of the Library Company of Philadelphia, desirous of showing a respectful mark of attention to the President and Congress of the United States, resolved "that the President and members of the Senate and of the House of Representatives of the United States shall have the free use of the books in the library in as full and ample manner as if they were members of the company."

On Feb. 3, 1791, the secretary reported that, agreeably to the wishes of the board at the special meeting of the 18th ult., he communicated the resolution then agreed upon to the President and to the Senate and House of Representatives of the United States; that he received the following letter in consequence thereof:

"Thursday, Jan. 20, 1791.

"Sir,—In obedience to the command of the President of the United States, I have the honor to communicate to you, to be presented to the directors of the Library Company of Philadelphia, his best thanks for the very polite manner in which they have offered him the use of the books in the library, and he begs they will be assured that this mark of attention has made a proper impression on him.

"I have the honor to be, very respectfully, sir,

"Your most obedient servant,

"Tobias Lear,

"*Secretary to the President of the United States.*

"William Rawle, Esq.,

"*Secretary to the Directors of the Library Company of Philadelphia.*"

Early in 1792 the heirs of James Logan made a proposition to transfer to the Library Company the Loganian Library, with certain properties, arrearages, and rents for the support of the institution, and a committee was appointed Feb. 18, 1792, to confer with them. A week later, on February 25th, the committee reported the following terms as advisable to be agreed to, and proposed to the heirs of James Logan, respecting the same:

"That application should be made to the Legislature for a Law to unite the Loganian Library to the Library belonging to the Library Company of Philadelphia, so as to retain, as much as may be, the principles originally intended by James Logan; that the books shall be received into one of the apartments of the Philadelphia Library, or a commodious Room prepared contiguous thereto, on reasonable terms; the said books, and others hereafter to be acquired by the Loganian Library, to be and remain distinct and apart from the books of the Library of Philadelphia; that the Directors of the said Library of Philadelphia, from time to time chosen, together with James Logan, the surviving Son of James Logan, the Donor, and two Associates whom he may choose, shall form a Board of Trustees for

the conducting and managing the affairs of the said Loganian Library, and that his successor and successors, in the order and manner prescribed by the Deeds of Trust, shall, in all future time, form one of the said Trustees, with power to nominate two Associate Trustees, or in case of death or resignation to supply, from time to time, the place or places of such Associate Trustee so dying or resigning."

The transfer was made valid by act of Assembly passed March 31, 1792. The preamble to the act recited that William Logan, one of the trustees and first librarian, was dead; that the avocations of the other trustees, with the condition of public affairs, had suspended the operations of the library, although the books were found to be in good order, and were increased in number by a bequest by William Logan of nearly one hundred volumes, the whole number of books being about three thousand five hundred volumes. James Logan, the remaining trustee, it was declared, had entered into an arrangement with the Library Company of Philadelphia to render the said institution beneficial to the public, consistent with the designs of the founder. In this transfer were included the Loganian Library building and lot at the northwest corner of Sixth and Walnut Streets, two rent-charges (issuing out of ground in Bucks County), books, and other properties.

The character of the works in the Loganian Library, which passed into the hands of the Library Company of Philadelphia, can be best understood from the words of the founder himself, that cultured scholar, of whom *Blackwood's Magazine* for January, 1825, says, "We look upon him as altogether an extraordinary man." His library, which became as a public institution the Loganian Library, comprised, as he tells us, "over one hundred volumes of authors all in Greek, with mostly their versions; all the Roman classics without exception; all the Greek mathematicians. . . . Besides there are many of the most valuable Latin authors, and a great number of modern mathematicians."

The directors of the Library Company of Philadelphia having been appointed, by the act of Assembly of March 31, 1792, trustees of "the Loganian Library," in conjunction with James Logan, a son of the testator, and two associates by him to be appointed, the board agreed, on May 10, 1792, to permit the meetings to be held in the directors' room until further order should be taken therein.

On June 12, 1792, Benjamin Franklin Bache presented to the company the machine which Dr. Franklin first used to make experiments in electricity. This interesting machine is now in the south gallery at the Ridgway Branch.

On June 25, 1792, Richard Wells and Thomas Parke were appointed a committee to make a purchase of, or take on ground-rent, five feet of ground extending eastward from the eastern line of the library lot and north and south the whole length of the library, for the purpose of erecting thereon a suitable building for the present reception and accommodation of the books belonging to the Loganian Library. On July 16th the committee produced two deeds from Samuel M. Fox, the one for the additional lot they were directed to purchase, and the other granting a privilege of turning water from the eastern side of such building as may be erected thereon until prevented by the erection of an adjoining building or buildings. They also report the plan of an additional building to be erected on the east side of the present library, which plan was approved by the board, who authorized them to carry it into execution.

On Aug. 20, 1792, Richard Wells, Thomas Parke, William Rawle, and John Kaighn, the building committee, reported that the trustees of the Loganian Library had agreed to lend the Library Company of Philadelphia the sum of seven hundred pounds to defray the expense of a building for the accommodation of the Loganian Library.

At a meeting held Nov. 25, 1793, the secretary reported that, agreeably to public notice given for that purpose, a general meeting of the members had taken place on the 30th of August last, and the propositions recommended to the directors on the 1st of August had been taken into consideration and a law passed raising the price of shares to forty dollars.

At a meeting of the members of the company held March 16, 1795, a by-law was passed entitled "An Act to repeal so much of any law or laws of the company as authorizes the directors to dispose of the real estate belonging to the company."

On Nov. 2, 1797, the secretary was directed to present to the President of the United States a handsome bound catalogue of the books belonging to the Philadelphia Library, and to offer him the use of them during his official residence in this city.

The contagious fever which prevented a meeting of the directors on the 6th of September, 1798, continuing in the city, and the city being abandoned by many of the citizens on account thereof, the directors had no meeting until the 7th of November, 1799.

On Nov. 3, 1803, Mr. Norris, as executor of John Bleakely, deceased, informed the board that he was ready to pay the legacy of one thousand pounds bequeathed to this institution by Mr. Bleakley.

The corresponding committee reported, Aug. 9, 1804, that they had received a letter from Joseph Woods and Robert Barclay, dated June 2, 1804, with a catalogue of the books bequeathed to the Library Company by the late Dr. Preston. On Aug. 25, 1804, the secretary was directed to write a letter of thanks to Mrs. West for the picture of Dr. Preston.

Rev. Dr. Samuel Preston was an intimate friend of Benjamin West, whose house, when in London, he frequently made his home. Having no descendants, it was occasionally a topic of discussion at the dinner-table what would be the best disposition of his valuable books. West pressed upon his notice the library at Philadelphia, and finally obtained his promise to will his collection to the institution, which promise he faithfully kept. There are in the collection many

rare books of plates of the most costly description. On hearing of his promise, Mrs. West requested the doctor to sit to her husband for his portrait, which was forwarded soon after the books; bearing on the canvas, "A present from Mrs. West to the Library Company of Philadelphia."

The committee to prepare and forward a petition to Congress praying a remission of the duties on Dr. Preston's legacy, reported, Nov. 1, 1804, that they had prepared and forwarded such a petition, that the same had been presented to the two Houses of Congress, and that a committee of the House of Representatives had reported against granting the prayer of said petition, and their report had been adopted by both Houses.

At a meeting held March 6, 1806, Zachariah Poulson, Jr., in resigning the office of librarian, which he had held more than twenty-one years, presented the following comparative statements:

STATE OF THE LIBRARY AND OF THE FUNDS WHICH SUPPORT IT.

In February, 1785, the library contained:		In February, 1806, the library contained:	
Works.	Volumes.	Works.	Volumes.
339 (Folios)	586	945 (Folios)	1,495
412 (Quartos)	709	1397 (Quartos)	2,154
1282 (Octavos)	2660	3717 (Octavos)	7,201
731 (Duodecimos)	1532	1850 (Duodecimos)	3,368
2464	5487	7909	14,218

THE ANNUAL REVENUE OF THE COMPANY.

In February, 1785.

At this time there were 380 members, whose annual payments averaged nearly $1.60, and yielded a total of		$607.33
The annual amount of the hire of books and fines collected by the librarian, about		80.00
The interest of five bonds of £100 each		80.00
The rent of the old Union Library, formerly occupied by Robert Bell, bookseller	£50	
Deduct therefrom the ground-rent of	13	
Which leaves a balance of	£37	98.67
Two ground-rents of £3 each on lots in Pear Street		16.00
A ground-rent of £10 on the old Almshouse lot in Union Street.		26.67
A ground-rent of £15 on a lot in Spruce Street		40.00
A vacant lot of ground on the south side of Chestnut Street, above Eighth Street		....
A lot of ground on the east side of Fifth Street, below Spruce Street		....
		$948.67

In February, 1806.

There are now 676 members, whose annual payments will average about $2.30, and yield a total of	$1554.80
The annual amount of the hire of books and fines collected by the librarian, about	200.00
The legacy of £1000 left to the institution by *John Bleakley*, Esquire, deceased, late a director of the library, which has been invested in stock, and yields, per annum	200.00
The dividend on two shares of the stock of the Bank of the United States, bequeathed to the company by the late Rev. *Samuel Preston*, of Chevening, in the county of Kent, England, say	72.00
The rent paid by the trustees of the Loganian Library, being the legal interest of the money expended by the Library Company of Philadelphia in erecting the additional building which contains the Loganian Library	213.33
The surplus of the rent of the cellars after paying the balance of ground-rent (amounting to $40) on the lot on which the library stands	180.00
	$2370.13

Increase of the annual revenue of the company, $1421.46.

George Campbell was elected librarian April 10, 1806. On the 5th of August, 1824, it was resolved that the use of the library be offered to Gen. Lafayette during his residence in this city, and that he be presented with a copy of the catalogue; and on Oct. 7, 1824, Dr. Parke reported that, together with Mr. Lewis (instead of Mr. Rawle who was prevented from attending), he had offered the use of the library to Gen. Lafayette during his residence in the city, and presented him with a copy of the catalogue and a copy of the resolution of the board, on receiving which he expressed great satisfaction.

Sept. 4, 1828. The committee on the bequest of William Mackenzie reported that they had, agreeably to the will of Mr. Mackenzie, selected from the library of that gentleman five hundred volumes from his English books printed since the beginning of the eighteenth century for this institution and for the Loganian Library, all the books of Mr. Mackenzie printed before the beginning of the eighteenth century, and eight hundred volumes from his French and Latin books printed since the beginning of the eighteenth century, and that all the books thus selected had been received and were then in the library building.

The books left by William Mackenzie to the Loganian Library include many *incunabula* or early printed books, some of them of great rarity and value; two of them—Caxton's "Golden Legend," and a vellum "Pliny," by the first printer at Venice—were put on exhibition under glass at the Ridgway Branch. William Mackenzie, Esq., was born in Philadelphia July 23, 1758, received his education at the college and academy of Philadelphia, and then entered the counting-house of the late John Ross, Esq. Being easy in his circumstances, and fond of reading and retirement, he indulged himself in literary pursuits, and gradually accumulated the collection of rare and valuable books which he bequeathed to the Philadelphia and Loganian Libraries. The Rev. Dr. James Abercrombie, who was one of his few intimate friends, in speaking of him, says he believes "he never had an enemy; at least, from the purity of his principles and correctness of his conduct, I am sure he never deserved one."

The committee further reported that they deemed it expedient to purchase the whole of that part of Mr. Mackenzie's library which had not been bequeathed. The board approved of the views of the committee, and authorized them to make the purchase.

The portrait of the late William Mackenzie was presented by the Rev. Dr. Abercrombie, to whom the secretary was instructed to return the thanks of the board for his present.

On April 30, 1829, George Campbell resigned his post of librarian, which he had held for twenty-three years, and was succeeded by John Jay Smith.

John Jay Smith, of Ivy Lodge, Germantown, president of the board of trustees of Laurel Hill Cemetery, librarian of the Philadelphia Library, and one of the hereditary trustees of the Loganian Library, was by birth a Jerseyman, his Quaker ancestors having settled in Burlington County in 1678. In the

"Conceptions of West Jersey" (1676) the signature of Richard Smith (of Bramham, in Yorkshire) appears as one of the proprietaries of the province, along with that of William Penn and numerous others. The descendants of Richard Smith continued to reside, as they still do, near Burlington, one of them having been the author of the well-known "History of New Jersey" (1675), and another a member of the Continental Congress.

John Jay Smith was born June 27, 1798, at Green Hill, Burlington Co., N. J., whence he removed at an early age to Philadelphia, and entered into business as a druggist. His fondness for literature soon led him to the use of the pen, and he was editor, successively, of Walsh's *National Gazette*, Waldie's *Select Circulating Library*, Smith's *Weekly Volume*, Downing's *Horticulturist*, and several other periodicals. In 1829 he was appointed librarian of the Philadelphia Library, a post which he held until 1851, when he was succeeded by his son, the present librarian. In the time of the former the library was open only in the afternoon, and Mr. Smith's mornings were devoted for more than forty years to the planting and superintendence of the celebrated cemeteries, Laurel Hill and West Laurel Hill, of both of which he was the founder. It was in these labors that he acquired that extensive knowledge of trees and landscape-gardening which he afterward employed in editing Michaux's "North American Sylva" and McMahon's "American Gardener's Calendar." "His knowledge of trees and plants," says the *Gardener's Monthly*, "of garden art and rural taste, was singularly acute, and many of the most beautiful grounds, not only about Philadelphia, but in many distant parts of the country, were made more lovely by the suggestions freely thrown out by his fertile mind. The ground around his beautiful residence in Germantown was a remarkable piece of successful landscape gardening." The Germantown Horticultural Society, which "grew out of his active brain and generous energy," was not the only association founded by one who seemed to realize that the highest motive is the public good. In early life he was secretary of the company which started the famous line of daily Conestoga wagons from Philadelphia to Pittsburgh, and also one of the earliest members of the Academy of Natural Sciences. He called the meeting which resulted in forming the Girard Life Insurance Company, and was one of the originators as well as the treasurer of the Athenian Institute, an association of men of letters for the delivery of annual courses of lectures in Philadelphia. His first visit to Europe was naturally a great relief from his confining duties at the library, and resulted in the publication, in two volumes, of "A Summer's Jaunt Across the Water" (Philadelphia, 1846). His literary activity, no less than his turn for family history, are further shown by the production of his "American, Historical, and Literary Curiosities" (Philadelphia, 1847); his "Letter to Horace Binney, Esq., respecting John Smith, the founder of the Philadelphia Contributionship" (Philadelphia, 1852); "The Hill Family" (privately printed, Philadelphia, 1854); "A Brief Memoir of one of New Jersey's Respected Sons" (Philadelphia, 1860); and "The Penn Family" (Philadelphia, 1870). The same taste made him gather autographs, and his important collection of papers relating to the history of Pennsylvania and New Jersey are now happily preserved in the manuscript department of the Philadelphia Library. He was a steady miscellaneous reader. His wide range of information and brilliant conversational powers will long be remembered by Philadelphians, few of whom were aware that he passed at least forty years of his life in physical pain and suffering. Although, on one occasion, his life was only saved by a surgical operation of a heroic sort, yet his later years were passed in comparative ease, and his mental activity continued unimpaired down to the close of his long and useful life. He died Sept. 25, 1881. *Requiescat a laboribus suis: opera enim ejus sequuntur illum.*

Jan. 7, 1831, on motion of Benjamin R. Morgan, the following statement was directed to be published, attested by the secretary, viz.:

"The directors of the Library Company of Philadelphia are happy in announcing to their fellow-citizens, that although some valuable books have been destroyed, and others injured by the fire on the 6th inst., in the apartment of the Loganian Library, the loss sustained by the public in their valuable institutions under their care, proves much less than was at first apprehended.

"The destruction of an original portrait of James Logan, the distinguished donor of the library bearing his name, and a bust of the venerable founder of Pennsylvania, is, however, a subject of great regret to them.

"To the prompt and energetic exertions of the fire and hose companies, particularly the Pennsylvania and Fame, whose location enabled them to bring their powerful apparatus into almost immediate action, the preservation of the library is chiefly attributable.

"The fire originated in the breastwork of the chimney, from a grate recently fixed in the Loganian Library, with a view to the greater security afforded by a coal fire.

"The presence of the directors at one of their stated meetings in an upper room of the Philadelphia Library, fortunately prevented any delay in the introduction of water, and enables them to exonerate their librarian, and those employed by him, from any imputation of negligence.

"WILLIAM RAWLE, JR., *Secretary*."

A committee to whom was referred a communication from James Coxe, relative to the purchase of his library, reported at a meeting held April 15, 1832, that they had purchased the same from Mr. Coxe for an annuity of four hundred dollars to be paid to him during his natural life. The books amounted to about six thousand volumes, more or less.

At a general meeting, held April 28, 1832, the yearly payment was raised to four dollars.

Sept. 6, 1832, it was resolved that the library should hereafter be kept open every day (Sundays excepted) from the 1st day of October to the 1st day of April from one o'clock P.M. until sunset, and from the 1st day of April to the 1st day of October from two o'clock P.M. until sunset.

Jno. Jay Smith

On Nov. 2, 1837, it was "*Resolved*, That the free use of the books in the library be tendered to the members of the convention to alter the constitution of this State, which is to meet in this city on the 23d November, in as full and ample manner as if they were members of the company."

The following resolution was adopted Dec. 7, 1848: "*Resolved*, That on and after the 1st day of January next, the library shall be opened daily (except on the usual Holy days) from ten o'clock A.M. until sunset, and that the librarian shall be authorized to employ an assistant, to be nominated by him and approved by the board, for whom the librarian shall be responsible in all cases, and that thereafter the sum of five hundred dollars per annum be added to the salary of the librarian from the 1st of January next."

INTERIOR OF PHILADELPHIA LIBRARY.

The librarian nominated his son, Lloyd P. Smith, as his assistant, who was approved by the board. This was at the meeting of Dec. 7, 1848.

On the 6th of February, 1851, John Jay Smith resigned his post as librarian, and his son, Lloyd P. Smith, was appointed in his place. Volume iii. of the Catalogue was published in 1856, an index being added by the new librarian. It was compiled—as were vols. i. and ii., published in 1835—by George Campbell, Esq., who died June 11, 1855, after serving the library faithfully as librarian, and as secretary for forty-three years.

In 1857 the directors set on foot the establishing of a fund to erect a fire-proof building, to which seven of them subscribed five hundred dollars each. For several years subscriptions were neither numerous nor very large, and no immediate steps were taken looking toward the institution of building operations. In 1864, however, the building fund received a very unexpected, as well as a very liberal contribution. Joseph Fisher bequeathed five thousand dollars in cash and one-half of his residuary estate, the total of which bequest amounted to $54,488.12. Joseph Fisher was by birth a German, who made and sold mathematical and optical instruments. His store on Chestnut Street, above Second, still remembered by many Philadelphians, was the place where, by economy and strict attention to business, he accumulated a competency, on which he retired. The latter part of his life was mainly devoted to reading and study, and he mixed but little with the world. When he called upon the late William E. Whitman, secretary of the Library Company, to draw up his will, after leaving certain legacies to relatives—he was himself a bachelor—he directed Mr. Whitman to make the Pennsylvania Hospital his residuary legatee. The latter remarked that the library wanted money for a fire-proof building. "Well," said the old gentleman, who was a member of the company, "suppose we divide it." And so it was, the hospital and the library each got over fifty thousand dollars, and to both institutions the amount was of great importance. "A word spoken in season how good is it!" Mr. Fisher's portrait, by Drexel, hangs in the Locust Street building, more than half of whose cost was defrayed by his opportune bequest. The building fund of the Library

Company was allowed to remain untouched for a number of years, meanwhile drawing interest, and receiving fresh accessions. In 1868 the fund was estimated at eighty thousand dollars.

In 1869 the Library Company received a most extraordinary contribution. Dr. James Rush left his estate, amounting to about one million dollars, to the company. Within a year or two thereafter the executor of Dr. Rush's will began making preparations with a view to erecting a structure on the square of ground bounded by Christian, Carpenter, Broad, and Thirteenth Streets for library purposes, in accordance with the testator's will. In 1871, however, the Directors of the Library Company filed a bill in equity to restrain the executor from proceeding with the work. The principal reason for this litigation was that the site at Broad and Christian Streets was distant from the residences of a large number of the members of the company, and therefore in an unsuitable place. The litigation thus inaugurated covered a period of two years. In 1873, however, the bill in equity was dismissed by the Supreme Court of Pennsylvania, and building operations were vigorously prosecuted. In 1878 the Library Company having accepted, by a majority vote, the bequest of Dr. Rush, his executor, Henry J. Williams, conveyed to the company the new building, to which was given the name of the Ridgway Branch, in memory of Dr. Rush's wife, together with the residuary estate of the generous testator. May 6, 1878, the Library Company took possession of the Ridgway Branch, and the Loganian Library and a portion of the Philadelphia Library were removed thereto. The building erected, a massive, imposing granite structure, is of the Doric order, and with its grounds covers, as indicated above, an entire square or block. It is calculated to contain four hundred thousand volumes, or three times as many as the library at present has. The exterior walls are of granite, with a frontage of two hundred and twenty feet and a depth of one hundred and five feet, and three porticoes, one in the centre and one at each end.

Dr. James Rush, who made the magnificent donation to the Philadelphia Library, was the son of Dr. Benjamin Rush, the distinguished physician of this city. He was born March 1, 1786, and graduated at the New Jersey College in 1805. He achieved a high reputation as a physician, but later in life secluded himself among his books. He was the author of "The Philosophy of the Human Voice," which, it is said, "contains more minute and satisfactory analysis of the subject than is to be found in any work." He also wrote "Hamlet, a Dramatic Prelude," 1834; "Analysis of the Human Intellect," two volumes, 8vo, 1865; "Rhymes of Contrast on Wisdom and Folly," 8vo, 1869. He left about one million dollars to the Philadelphia Library Company to establish the Ridgway Branch of the Philadelphia Library, provided the shareholders would accept the gift subject to the restrictions named in his will. In case the bequest was refused Dr. Rush directed that the institution should be opened as a free library, under the

DR. JAMES RUSH. MRS. JAMES RUSH.

name of the Ridgway Library. The name "Ridgway" was adopted by Dr. Rush from Phœbe Ann, the maiden name of his wife, a daughter of Jacob Ridgway, from whom he inherited the most of his wealth.

Jacob Ridgway, the son of John and Phœbe Ridgway, of Little Egg Harbor, N. J., was born on the 18th of April, 1768, and was the youngest of five children. His parents were consistent members of the Society of Friends, his father being an elder in the meeting. His father died when he was six years old, and upon the death of his mother came to Philadelphia to live with his eldest sister, whose husband he had chosen as his guardian. His property was more than sufficient for his maintenance and education, and afforded capital sufficient for commencing business. He began his mercantile career in the wholesale dry-goods house of Thomas Shaw, and succeeded him in it as partner with his son, Thomas Shaw. In a few years he withdrew from the concern, and went into partnership with his brother-in-law, James Smith, in a grocery on Water Street. He continued here for some time, and then sold out to Joseph Pryor, and began the shipping business. Smith & Ridgway continued as shipping merchants with great prosperity until the difficulties commenced between France and England. Their ships were seized, and it became necessary for one of the firm to reside abroad to protect their property. Mr. Ridgway then removed with his family to London, where he conducted the business of the firm, and also that of a number of other merchants. He spent much time in traveling, but finally settled a Antwerp as consul for the United States. He there became a partner in the firm of Mestoris & Ridgway, still continuing in the firm of Smith & Ridgway, of this city. During this time he constantly sent large sums of money to be invested in real estate in Philadelphia. On his return, after several years' absence, he retired from business, finding sufficient employment in the care of his property. He died in the seventy-sixth year of his age, in May, 1843, leaving a large estate.

JACOB RIDGWAY.

The Library Company, not being content with the prospect of a new library building through the munificence of Dr. Rush, and having already in hand a very gratifying building fund, determined, in 1870, to inaugurate some active measures looking toward the erection of a suitable structure. In that year was purchased a lot of ground at the northwest corner of Locust and Juniper Streets, east of Broad. Further effort remained in abeyance, however, pending controversies relating to the acceptance of Dr. Rush's bequest, until 1879, when the corner-stone of the new building was laid on the Locust Street lot of ground. In February of the following year (1880) the library, or so much of it as had not been removed in 1878 to the Ridgway Branch, was transferred to the building at Locust and Juniper Streets. This new structure, which is chiefly built of brick, is a pleasing one to the eye. Although bearing no very strong resemblance, so far as the superficial observer can detect, to the old building at Fifth and Library Streets, yet the new edifice is in the interior substantially an architectural copy of the former.

The old library building, which was originally open only a short time in the afternoon, was in 1869 ordered to be open from 9 A.M. to 5 P.M. On removing to the new building at Locust and Juniper Streets, in 1880, however, the period was extended from 8.30 A.M. to 6 P.M. Moreover, in November, 1882, the library was ordered to be open on Sunday afternoons, but for readers only.

The collection of *incunabula* and of various rare manuscripts belonging to the Library Company of Philadelphia is hardly excelled in America. The company owns some fine specimens of illuminated manuscripts, exemplars of Caxton, Fust, and Schaeffer, the inventors, or at least sharers, in the invention of printing; of Pynson, Wynkyn de Worde, Sweynheym, and Pannartz; a work of Jenson, believed to be unique; of Koberger, and other works irreplaceable if lost.

The oldest printed book with a date found at the library is one by the eminent scholastic Eusebius, namely, "Præparatio Evangelica," printed in 1470. As is well known, the book is a very rare one. Another rare book is one written by Nicholai Delyra, "A Commentary on the Psalms," also printed in 1470, on vellum. Another fine old book is a copy of the Bible, printed in 1471, by Sweynheym and Pannartz, the first printers at Rome. Another old volume is a

Digitized by Google

work on "Natural History," by Pliny, printed in 1476 by Jenson, the second printer in Venice. A handsomely illuminated work by that prolific writer, Duns Scotus, printed at Venice in 1477, is also found here. "The Golden Legend," printed by Caxton in 1486, is the oldest volume in the collection printed in England. The book is a rare one, as is also a copy of "The Imitation of Christ," by Thomas à Kempis, printed the same year (1486) at Venice. "Gothic Hours," printed on vellum, by Verard, an early French printer, in 1487, is a handsome volume. There are also two interesting works which were printed in 1491, namely, an early copy of Dante's Poems, in Italian, printed at Venice, and a religious volume, "The Book of the Treasure Holder," in German, printed in Nüremberg by Antony Koberger, the first printer at that place. Another volume of considerable rarity found here is "A Book of Prayers," published in 1496 by Verard, the French printer. In addition to the volumes enumerated, the library contains many more old books printed before 1500. Besides its *incunabula*, the library contains many volumes of much rarity. Among such may be mentioned an "Elliott Indian Bible," printed at Cambridge, Mass., in 1663. Two other objects of value are the first volume of the earliest newspaper in Pennsylvania, Bradford's *American Mercury*, for 1719, and the first volume of Benjamin Franklin's newspaper, *The Pennsylvania Gazette*, for 1728.

BOOK-PLATE OF DR. BENJAMIN RUSH.

Among the library's valuable collections are the unique drawings and paintings of old houses and buildings in Philadelphia which formerly belonged to John F. Watson, the annalist, and to Charles A. Poulson, son of Zachariah, the librarian, who was a diligent collector of matters pertaining to local history.

List of catalogues, pamphlets, broadsides, magazine articles, etc., relating to or illustrating the history of the Library Company of Philadelphia:

"Autobiography of Benjamin Franklin," v.p., v.d. This volume, as is well known, contains Dr. Franklin's own graphic account of the origin of the library.

The original articles of association. Philadelphia, 1731. Printed in 1869.

"A Catalogue of Books belonging to the Library Company of Philadelphia." Philadelphia (Franklin), 1741. The only copy known to exist of this catalogue is now under glass at the Ridgway Branch. It is a small duodecimo of 56 pp. The last page gives *a short account of the library*, concluding that "Tho' 'tis compos'd of so many persons of different Sects, Parties, and Ways of Thinking, yet no differences relating to the affairs of the Library have arisen amongst us." This volume was preceded, as appears by the following minutes, by several other catalogues, all of which were probably broadsides. None of them seem to have come down to the present time.

"The Charter of the Library Company of Philadelphia." Philadelphia (Franklin), 1746. This tract (12mo), contains, in addition to the charter, a list of books added since 1741, the rules of the company, and an advertisement that "such as incline to be admitted are desired to leave their names with the librarian, who attends every Saturday from 4 to 8."

"A Catalogue of Books belonging to the Union Library Company of Philadelphia, to which is prefixed the articles of the company, with the names of the present members, and rules observed by the clerk in letting out books, etc." Philadelphia: printed by James Chattin, 1754. (Small 12mo, pp. 53.)

"Catalogus Bibliothecæ Loganianæ: being a choice collection of books, as well in the Oriental, Greek, and Latin as in the English, Italian, Spanish, French, and other languages, given by the late James Logan, Esq., of Philadelphia, for the use of the Publick. Numbered as they now stand in the Library built by him in Sixth Street, over against the State-House Square." Philadelphia: printed by Peter Miller, 1760.

"The Charter, Laws, and Catalogue of Books of the Library Company of Philadelphia." Printed by Franklin & Hall. Philadelphia, 1764.

"Catalogue of Books belonging to the Association Library." Philadelphia, 1765.

"The Charter, Laws, and Catalogue of Books of the Library Company of Philadelphia; with a short account of the Library prefixed." Philadelphia, 1770.

"Statements concerning a Hall for the Library Company" (broadside). Philadelphia, 1771.

"A Catalogue of the Books belonging to the Library Company of Philadelphia; to which is prefixed a short account of the Institution, with the charter, laws, and regulations." Philadelphia (Poulson), 1789.

"Catalogue of the Loganian Library." Philadelphia (Poulson), 1795.

"Catalogue." Philadelphia, 1807.

"Catalogue of the Loganian Library." 2 vols. Philadelphia (J. Dobson), 1828. In vol. ii. are described the books bequeathed to the Loganian Library by William Mackenzie, to which is prefixed a sketch of his life.

"Why and Because: being the reasons produced in 1832 for and against keeping the Philadelphia Library open in the morning. Collected from the public prints, and arranged in the order in which they appeared, by John Jay Smith." Philadelphia, 1832.

"Papers (signed 'Franklin') in regard to opening the Library in the morning." Philadelphia, 1832.

"Remarks on opening the Library all day." Philadelphia, 1832.

"Catalogue." 2 vols. Philadelphia, 1835. These volumes contain a short account of the library, the charter and its supplements, the by-laws, the rules, the state of the library, a table showing the number of shares issued, forfeited, and remaining, a list of the members, and the names of the successive librarians.

"Library Company of Philadelphia, in trust for the use of the Loganian Library, *versus* Samuel D. Ingham. Writ of error, etc." Philadelphia, 1836. Relates to the Bucks County lands.

"Catalogue of the Books belonging to the Loganian Library; to which is prefixed a short account of the Institution, with the law for annexing the said Library to that belonging to the Library Company of Philadelphia." Philadelphia, 1837. This catalogue, like that of 1835, was prepared by George Campbell, formerly librarian.

"Notes for a History of the Library Company of Philadelphia." By John Jay Smith, librarian. Philadelphia, 1837. 8 pp., 8vo. Reprinted from Waldie's *Portfolio*.

Digitized by Google

"Appeal [drawn up by Henry J. Williams, Esq.] for a fund to erect a fire-proof building for the Library Company, with a list of subscribers; together with a final statement by the treasurer of receipts and expenditures." Philadelphia, 1855–60. This volume, although in manuscript, can be consulted at the Locust Street building.

"Catalogue." Vol. iii. Philadelphia, 1856. Contains a preface pointing out some of the rarities in the library, a state of the library, a list of the directors, treasurers, secretaries, librarians, and London agents of the board, and a list of portraits in oil belonging to the company.

"Bulletins of the Library Company." Philadelphia, 1856–84. These semi-annual bulletins give the titles of the more important books added to the library since the publication of the third volume of the catalogue, together with various bibliographical and other matter, for the use of the members.

"Library Company of Philadelphia *vs.* Andrew J. Beaumont *et al.* Brief of argument for plaintiffs, answer of defendants, and decree of the Court of Nisi Prius." Philadelphia, 1861. These paper-books relate to the re-valuation of the Loganian lands in Bucks County.

"Will of Joseph Fisher, deceased." Philadelphia, 1864.

"Report of William L. Dennis, examiner, concerning the will of Joseph Fisher, deceased." Philadelphia, 1866.

"First Supplement to the Catalogue of Books belonging to the Loganian Library; to which is prefixed the Deed of Trust constituting the Foundation of the Library," etc. Philadelphia, 1867.

Atlantic Monthly. Vol. xxi. Boston, 1867. Contains an article on the old Philadelphia Library by Gen. J. Meredith Read, Jr.

"Circulars to stockholders, resolutions, and powers of attorney. Printed on the occasion of a vote of the members being taken upon the question of the acceptance of the Rush legacy." Philadelphia, 1869.

Legal pamphlets—twenty-three in number—growing out of the bills in equity filed after the decease of Dr. James Rush, and relating to his devise to the Library Company. Philadelphia, 1871 to 1880.

Plan showing the residences of members of the Library Company. Philadelphia, 1872.

"Memorial of Thomas Potts, Jr. By Mrs. Thomas Potts James." Privately printed. Cambridge, 1874. In this volume, pp. 375–391, occurs a life of Robert Grace, and a description of the house where, as Mrs. James thinks, the library was first kept.

"Public Libraries in the United States. A Special Report of the Bureau of Education." Washington, 1876. Contains (pp. 952–977) an account by Lloyd P. Smith of the public libraries of Philadelphia, including a history of the Library Company.

"Old Landmarks in Philadelphia." [Containing an account of the library.] New York, 1876. In *Scribner's Monthly*, vol. xii. p. 145.

"The Philadelphia Library." By Thompson Westcott, Jr.

"Historic Mansions of Philadelphia." Philadelphia, 1877.

"The Old Philadelphia Library." By Louise Stockton. Philadelphia, 1882. In *Our Continent*, vol. ii. No. 15.

"The Philadelphia Library." By Bunford Samuel, assistant at the Ridgway Branch. New York, 1882. In *The Century*.

The librarians have been Lewis Timothee, in 1732; Benjamin Franklin, William Parsons, Francis Hopkinson, 1764–65; Zachariah Poulson, 1785–1806; George Campbell, 1806–29; John Jay Smith, 1829–51. He was succeeded by his son, Lloyd P. Smith, the present librarian, a gentleman having a great fund of literary, scientific, and classical information, and a thorough knowledge of books and the management of public libraries.

The Library of Friends.—The Library of Friends of Philadelphia, now in possession of that branch of Quakers popularly known as "Orthodox," owes its origin to a bequest made by a worthy Friend, Thomas Chalkley, as appears by the following extract from his will, bearing date the 19th of Second Month, 1741, as follows:

"Having spent most of my days and strength in the work and service of the gospel of our Lord Jesus Christ, and having been joined as a member of the Monthly Meeting of Friends of Philadelphia for above these forty years, to them, as a token of my love, I give my small library of books."

A transcript from the will was presented to the Monthly Meeting of Friends of Philadelphia, held the 30th of Second Month, 1742, and Robert Jordan, a member and an eminent minister of that meeting, offering his services as librarian, the books, being three in number, were delivered into his possession, with a catalogue of their titles. Not long after this, however, Robert Jordan died, and it was found necessary to select a new librarian. Anthony Benezet was requested by the Monthly Meeting to take charge of the library, which he did, and it was accordingly removed to his house. Here it remained until the erection of the meeting-house adjoining the school-house at the southeast corner of Fourth and Chestnut Streets, to which latter place the collection was removed.

In 1804 the new meeting-house at the southeast corner of Fourth and Mulberry (now Arch) Streets was erected, and the old property, two squares below, was abandoned to commercial purposes. Not long after this date the library was transferred to the new meeting-house of the Friends. In 1844, however, the collection of books had attained such a size as warranted the erection of a separate building. Accordingly, a modest structure was built on the eastern end of the lot belonging to the Monthly Meeting of Friends, fronting on Arch Street, now numbered 304. This building comprises the present quarters of the library in the second story, the first story being occupied by Friends' book-store.

The small collection left by Thomas Chalkley was gradually increased by purchases and donations of benevolent individuals, among whom may be noted Dr. John Fothergill, Peter Collinson, David Barclay, of London, grandson of the Apologist, and James Bright. Little attention, however, seems to have been given to the library, and books having been loaned without a systematic record of the persons who borrowed them, many volumes were irrecoverably lost.

In 1765 the attention of the Monthly Meeting seems to have been awakened to the importance of preserving a collection of the writings of early Friends and other suitable books for the perusal of its members, and a committee was appointed to devise some method of rendering the library more useful, to collect the books which had been loaned out, to purchase others, and report the names of suitable persons to have charge of them. This committee recovered some of the missing volumes, repaired those which were mutilated, and made a new catalogue of the whole. John Todd, then a teacher under "the overseers of the public school founded by charter in the town and county of Philadelphia," was engaged as the librarian.

The first attempt at anything like a system for conducting the library appears to have been made at this period. The following rules, among others, adopted at this time are of interest as showing the scrupulous

care and precision with which it was sought to conduct the affairs of the library, namely,—

"The librarian to give attendance on Seventh Day of every week, in the afternoon, from four to six o'clock, in order to lend out and receive the books, and shall keep a book, columnwise, in which shall be noted the title of the book, the name of the borrower, the time for which the book is lent, the sum for which the note was given, the day when the book shall be returned, and the forfeitures arising from all defaults.

"Each borrower shall give a promissory note to the librarian for the sum set in the written catalogue against the book he borrows, conditioned for returning the same book within the time mentioned in the said catalogue, at the expiration of which time, if the borrower inclines to keep the book longer, he must renew his note."

The improvement which took place in the library at the time alluded to, although considerable, still left it in a very imperfect state. The number of books was small, and those chiefly related to the history and doctrines of the Society of Friends. A very material gain, however, was made by John Pemberton's bequest to the library of a large number of books. His will, dated 1st of Fourth Month, 1794, contained the following clause:

"I give and bequeath unto my aforesaid friends, John Field and William Wilson, and the survivors of them, after the decease of my wife, one-half of my library of books, in trust, for the use and benefit and perusal of Friends of the three Monthly Meetings in this city; and to be placed in the library for that purpose; wishing the beloved youth were more willing to read and to become acquainted with the trials, sufferings, and religious experience of our worthy ancients."

In 1817 the library was placed in the hands of a committee, consisting of one Friend from each Monthly Meeting in the city.

The library has continued to grow steadily, but has never attained to very extensive proportions. It contained in 1884 eight thousand five hundred volumes. The library is free to any Friend, living in or near this city, who will sign an agreement to replace or pay for volumes that may be lost or injured. Thereafter any member of his or her family can take them out without charge, subject to the rules of the library. The books comprise works of history, biography, science, and most other subjects usually found in well-selected libraries, works of fiction being excluded. The collection of biographies and other writings of early Friends is probably unequaled in any other collection of books in this country.

The Philosophical Society.—In 1743, Benjamin Franklin, who did so much to excite and promote the love of literature, science, and human progress in the mind of conservative Philadelphia, was the originator of the American Philosophical Society. Being impressed with the importance of establishing a national institution for the cultivation of science, he, on the 14th of May, 1743 (old style), corresponding in the Gregorian calendar to the 25th, issued and distributed a proposal for this purpose in the form of a printed circular. This circular is entitled "A Proposal for Promoting Useful Knowledge among the British Plantations in America."

After speaking of the great extent of the colonial possessions, this paper says,—

"The first drudgery of settling new colonies, which confines the attention of people to mere necessaries, is now pretty well over; and there are many in every province in circumstances that set them at ease, and afford leisure to cultivate the finer arts and improve the common stock of knowledge. To such of these who are men of speculation many hints must from time to time arise, many observations occur, which, if well examined, pursued, and improved, might produce discoveries to the advantage of some or all of the British plantations, or to the benefit of mankind in general. But as, from the extent of the country, such persons are widely separated, and seldom can see and converse or be acquainted with each other, so that many useful particulars remain uncommunicated, die with the discoverers, and are lost to mankind, it is, to remedy this inconvenience for the future, proposed,—

"That one society be formed of *virtuosi*, or ingenious men, residing in the several colonies, to be called *The American Philosophical Society*, who are to maintain constant correspondence.

"That Philadelphia, being the city nearest to the centre of the continent colonies, communicating with all of them northward and southward by post, and with all the islands by sea, and having the advantages of a good growing library, be the centre of the society.

"That at Philadelphia there be always at least seven members, viz., a physician, a botanist, a mathematician, a chemist, a mechanician, a geographer, and a general natural philosopher, besides a president, treasurer, and secretary.

"That these members meet once a month, or oftener, at their own expense, to communicate to each other their observations and experiments; to receive, read, and consider such letters, communications, or queries as shall be sent from distant members; to direct the dispersing of the copies of such communications as are valuable to other distant members, in order to procure their sentiments thereupon."

Then follows in detail an enumeration of the subjects which it was proposed that the society should consider and investigate, including researches in botany, medicine, mineralogy and mining, mathematics, chemistry, mechanics, arts, trades, manufacturers, geography, topography, agriculture, etc.

There seems to be some doubt as to the precise date of the actual organization of the society. That it was formed and in active working order in the year in question (1743) is altogether probable, for as early as April 5, 1744, Dr. Franklin, in a letter to Cadwallader Colden, states "that the society, so far as relates to Philadelphia, was actually formed, and has had several meetings to mutual satisfaction."

In this letter the following list is presented of the original members: Dr. Thomas Bond, as physician; John Bartram, as botanist; Thomas Godfrey, as mathematician; Samuel Rhoads, as mechanician; William Parsons, as geographer; Dr. Thomas Bond, as general natural philosopher; Thomas Hopkinson, president; William Coleman, treasurer; and Benjamin Franklin, secretary. But a glance is sufficient to attract one's attention to the eminence of the names embraced in this list.

The minutes of the early proceedings of the Philosophical Society are not preserved, and one is left in the dark, not only as to the nature and scope of its labors, but also as to the period that it remained in activity. It is only from indirect evidence that it is to be inferred that it did not continue its meetings for more than ten years, when it went into a state of suspended animation, from which it was destined to revive at a future day, and to flourish with greater vigor than had characterized the earlier days of its existence.

The temporary collapse of the society was probably due to the fact that, at the time of its foundation, in 1743, the colonies were not prepared to appreciate and sustain so comprehensive a scientific organization. In fact, it seems to be generally conceded that Franklin was somewhat radically in advance of his age, in attempting to establish such an institution, particularly upon so elaborate a scale. The society did not remain in abeyance very long, however, for less than twenty years had elapsed before the surviving members of the old society, reduced to six in number, thought (to use the expression of one of them) that " they saw their way clear for its revival," and measures were accordingly taken looking toward this end. The date at which they reassembled for the first time is not known definitely; but it appears from the minutes that in November, 1767, the society elected four new members, and in January of the following year forty-four additional names were placed upon the roll.

From June 19, 1768, minutes of the proceedings were regularly recorded, and are preserved in the archives of the society. These records show that the revived institution began its new career with great advantages. John Penn, the Governor of the province, consented to become the society's patron. The use of the Council chamber of the State-House was granted for its meetings, and the rooms and apparatus of the College of Philadelphia were put at its commands " whenever the members should choose to meet there or have any experiments performed before them."

The following officers were elected by the society, Feb. 9, 1768, to wit: President, Hon. James Hamilton; Vice-Presidents, Drs. William Shippen and Thomas Bond; Treasurer, Philip Syng; Secretaries, Rev. William Smith, D.D., and John Ewing and Dr. Charles Moore.

On the 22d of March, 1768, the first scientific communication was made to the Philosophical Society, and it now stands as the first paper in the series of Transactions. It is entitled, " A Description of a New Orrery, planned and now nearly finished by David Rittenhouse, A.M." Throughout the year many communications were made, which are to be found in the printed Transactions. But by far the most important proceedings of the society were those which had relation to the transit of Venus over the sun's disc that was to occur on the 3d of June, 1769. At a meeting held June 21, 1768, the society took active measures preparatory to this great event by appointing a committee to make the necessary arrangements, and to observe the transit at Norriton; and another committee to erect an observatory at Philadelphia and make preparation for ascertaining the latitude and for observing the transit. The observations at Philadelphia and Norriton, and also at Cape Henlopen, were all successful, and the account of them and of the results to which they led is given in full detail in the first volume of the Transactions of the Society.

It was in the early portion of the year 1769 that the two organizations, the American Philosophical Society and the American Society, held at Philadelphia, for Promoting Useful Knowledge, were merged into a single association. The latter society was an outgrowth of the Junto, which was itself the progeny of the original Junto Club. At a meeting of the club held Dec. 13, 1766, rules had been adopted for the admission of non-residents as corresponding members, so that the bounds of the society could be extended to the utmost limits of the provinces, and even into Europe. By such a step as this the association lost its character of a club, and accordingly, at the same meeting, it abandoned the name of Junto, which had been used by itself and the parent institution for nearly forty years, and adopted the more ambitious title of "The American Society for Promoting and Propagating Useful Knowledge, held at Philadelphia." On the 23d of September, 1768, a new code of laws was adopted by the society, which was now called, by a slight change of the former name, " The American Society, held at Philadelphia, for Promoting Useful Knowledge." On the 4th of the fóllowing November, at an election of officers, Benjamin Franklin was chosen president.

To the latter society belongs the honor of making the first overtures looking toward a consolidation with the Philosophical Society.

On the 26th of January, 1768, the question was discussed " whether, since the two societies had the same views, it would not be desirable that they should be united, if this could be done on an equal footing, and on terms equally honorable to both;" and it was " voted unanimously that such a union would be desirable, and would conduce to the public good, if it could be effected on these terms, but on no other." Considerable diplomacy was required to consummate the union which was virtually effected. For a time it looked as though all negotiations would prove futile. Finally, however, on the 15th of November of the same year (1768), the Philosophical Society appointed a committee, consisting of their two vice-presidents, two secretaries, and two members, " to concert measures and prepare the way for a union." Shortly afterward the American Society also appointed a committee of conference, comprising the vice-president, two secretaries, two curators, and a member, with instructions to insure perfect equality between the contracting parties. The negotiations were conducted with a degree of diplomatic formality which shows the importance attached to the measure on both sides. Finally, on the 20th of December, both societies being in session, the terms on which a union should take place were mutually agreed upon. A perusal of them shows how cautiously they were framed, with a view to the perfect equality in the claims of the two parties to the treaty. The terms of

consolidation provided, *inter alia*, that the united society should bear the following name, composed of the former two, viz., "The American Philosophical Society, held at Philadelphia, for Promoting Useful Knowledge," and that the first joint meeting should be held at the college on Monday, Jan. 2, 1769. The ratification of this treaty was the last great act of the two rival societies, and at the close of the year 1768, a few days afterward, their existence as separate bodies came to an end.

On the last-mentioned day, Jan. 2, 1769, the united society held its first meeting and its first election. Dr. Benjamin Franklin was chosen president, while Dr. Thomas Cadwalader, Dr. Thomas Bond, and Joseph Galloway were elected vice-presidents. From the day of the union active measures were inaugurated and prosecuted in the various channels of scientific energy. But momentous events were soon to happen, whereby men's thoughts were turned toward more engrossing and more vital concerns than philosophical research. Political liberty, national and individual, came to be popular subjects of discussion, and, finally, war's alarms were almost the only sounds which fell upon the ear. From the month of March, 1774, to the same month, 1779, very few meetings were held; there not being a single session for over three years prior to the date last named. But on the 5th day of March, 1779, the society reassembled, never again to be dispersed or to be interrupted in its scientific pursuits.
