In the cause of charity he was never appealed to in vain. He was connected with many of our charitable institutions, and in some of them took a more active part than might have been thought consistent with his various public and professional occupations.

Through life he fulfilled all public functions faithfully, sought none unworthily. By his inflexible integrity, not less by his eminent ability, he added lustre to Pennsylvania, and richly earned the honors which are now paid to his memory.

We have spoken several times before of the elevated tone of the bench and of the bar of Philadelphia. There never was a bar at which chicanery and pretension had less opportunities for successful practice. Already old was the canon that a lawyer, to be respected, if he had not great abilities and great learning, must at least be a gentleman. It is a canon that ever has been adhered to, and no bar in any State in the Union can count a larger number of men who adhered to it with constant, cheerful fidelity throughout life. All who remember Mr. Sergeant remember him with a regard that is made up both of profound respect and a feeling like affection. Great as he was, he never parted from the modesty and simplicity he had as a child. Not such an orator as Ingersoll or Lewis, he yet approximated the former in persuasiveness. He was not only thoroughly honest in conduct, but his very language before juries had the sound of honesty to a degree that was irresistibly persuasive. It was said of him once that without the consciousness of it he had the art of getting himself into the jury-box, and there take a part with his fellow-jurors in deciding upon his case. We know how unalterably upright he was when we are told that on the prospect of the failure of the Schuylkill Navigation Company, when it was

Digitized by Google

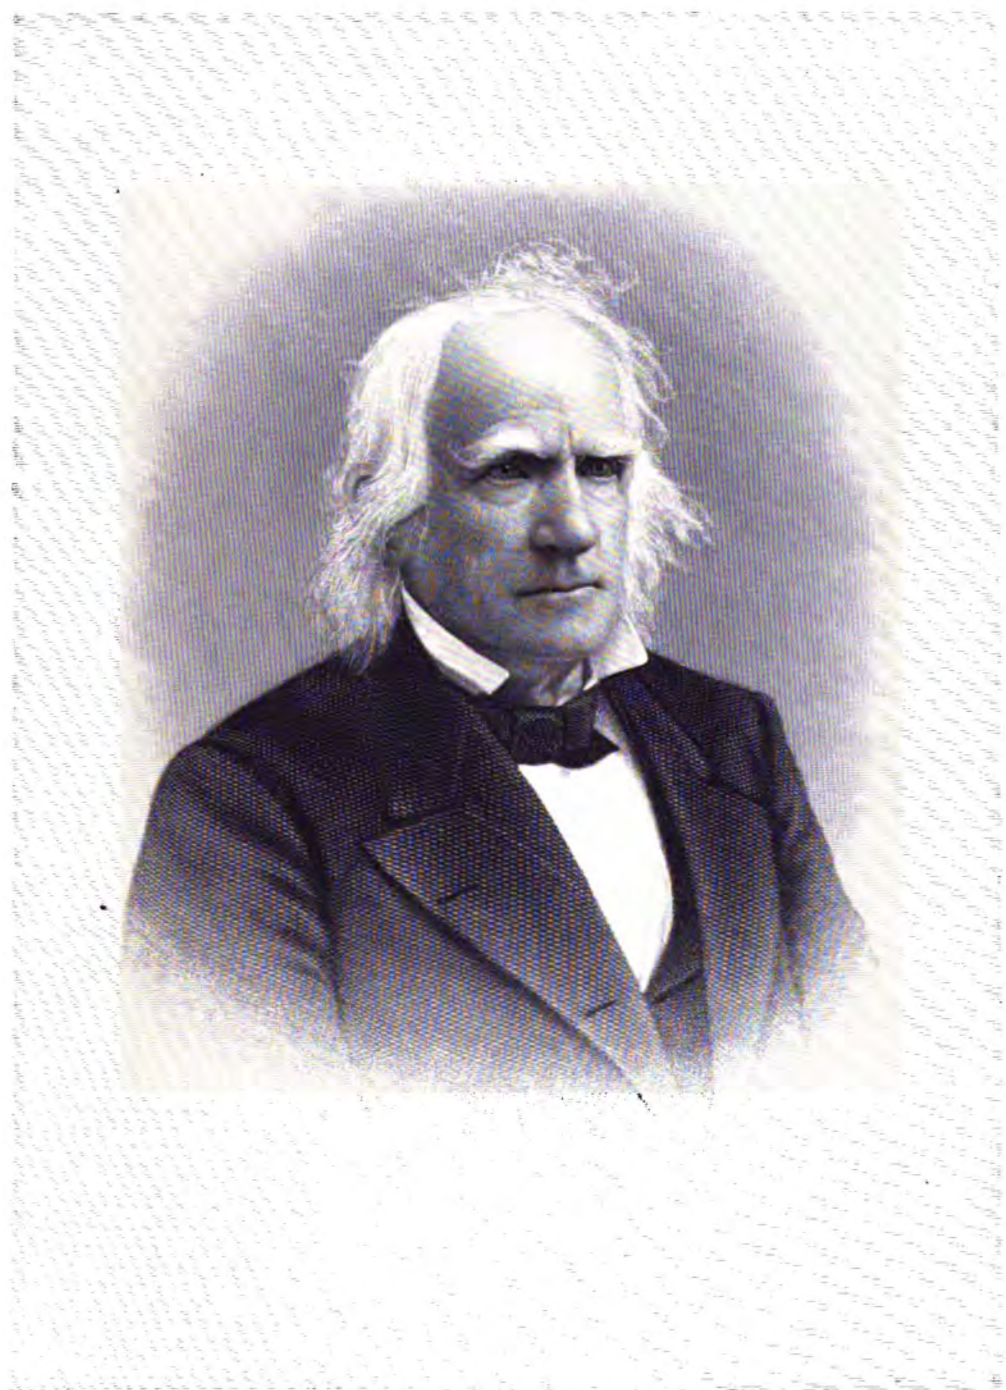
proposed to him to sell out his stock in time to prevent disaster, he answered, "No. I have launched my fortune in the same boat with others, many of whom have relied upon my opinion and my example as to the probable safety of the investment. There are many that can bear the loss less than I can, but whether or not, I will not shrink from the common peril, and save my money at the expense of others, as well as of my own character. If they lose, I will lose, and then no man can question the honesty and sincerity of my motive. Not a share of mine shall be sold." When such qualities belong to a man of great abilities and favorable opportunities, it is impossible to properly estimate his value to his generation. The eulogy of Mr. Sergeant by his great rival, is one of the very best of its kind in any language. The following brief extracts are so fine that we cannot fail to give them, wishing we had space for more: "Whatever he studied, he knew well, and when he left the office (or going thence to the bar) he was as accomplished a student as was ever admitted to the bar. I have seen his great powers in their bud,—you have seen them in their bloom. It was the flower more fully developed, but having from the strength of my first impression, no more freshness or beauty to me, at any hour, than when I saw it at its opening." "In addition to great quickness, grasp of thought, and power of comprehension, he derived through an excellent education the art of arranging his argument with perfect skill, according to the rules of the most finished and effective logic, and he was able to penetrate the want of it in anybody that was opposed to him." . . . "He marched to his conclusions by a path or paths that he was willing to let everybody trace and examine, after he had completed the passage,—and it was not safe for any man to do otherwise with him." . . . "He did not like to read for the purpose of thinking,—he thought for the purpose of reading, to corroborate or to rectify his thoughts. It was his striking way, and while sometimes it exposed him to inconvenience, at other times it gave him a sort of electric power that was altogether marvelous." He died in 1852.

William Sergeant, son of Hon. John Sergeant, was born in Philadelphia in 1829, and graduated at Princeton College in 1847. He studied law under Benjamin Gerhard, and was admitted to the bar in 1850. He held a prominent position at the bar, and was for a time a member of the Legislature. On the breaking out of the war he received a captaincy in the Twelfth United States Infantry, and was noticed for his gallantry in the Peninsular and the other campaigns in which he participated. He was afterward commissioned as colonel of the Two Hundred and Tenth Pennsylvania Volunteers. On the 31st of March, 1865, he was wounded by a ball in his thigh while resisting a desperate attack on the White Oak road near the Boynton Plank-road, in front of Petersburg, Va., from which he died on board of the hospital steamboat "Connecticut," while on his way home, April 11, 1865. Col. Sergeant was an amiable, accomplished, and warm-hearted gentleman, a writer of marked ability, and a gallant officer.

Benjamin Gerhard, by marriage connected with this family, was born at Philadelphia in 1812, and received a preliminary education at the school of Professor Espy. He graduated at Dickinson College in 1828, and studied law under Joseph R. Ingersoll, and was admitted to the bar in 1832. He married a daughter of John Sergeant, and was a trustee of the Gas Works for many years, member of City Council, trustee of the University of Pennsylvania; a member of the Protestant Episcopal Academy; a vestryman of St. James' Church; a member of the American Philosophical and Historical Societies, and of the Episcopal Corporation for Widows. During the early part of the late civil war he was appointed provost-marshal of the city to superintend the draft, and performed the duties without compensation. He was one of the founders and an officer of the Union League. He died June 18, 1864. He was an accomplished lawyer and a perfect master of the legal science, and edited "Starkie on Evidence," "Williams on Personal Property," and other text-books. In addition to his accomplishments as a lawyer, he possessed an extensive general education. The character of Mr. Gerhard was one of purity and candor; his anxiety about the affairs of the nation was intense, and he became a martyr to the cause to which the latter years of his life were given, and for which he gladly would have died.

One of John Sergeant's students is still practicing law at the bar of Philadelphia, and is one of its most distinguished citizens. Eli K. Price was born on the 20th of July, 1797, in Chester County, Pa., within a short distance from the spot where the battle of the Brandywine was fought. He is the third son of Philip and Rachel Price, the father being the fifth in the line of lineal descent from Philip Price, who came into Pennsylvania with the Welsh settlers, who, in 1682, took up Merion, Haverford, and Radnor townships, Chester Co., and subsequently overspread into Newtown, Goshen, and Uwchlan townships.

The early education of Eli K. Price was obtained at Friends' Western School, in the county in which he was born. The first inclination of Mr. Price, when nearing his majority, was in the line of commercial life, and he entered the shipping-house of Thomas P. Cope, in Philadelphia, with a view to definite embarkation upon mercantile pursuits. He had ever been an industrious student and a comprehensive reader, and it was not long before he concluded that a professional life was more in accord with his tastes. He accordingly entered the law-office of John Sergeant, where he applied himself with his wonted diligence to the mastering of legal problems. He was admitted to the Philadelphia bar on the 28th of



Eli K. Price,

aged 84 years.

Digitized by Google

May, 1822, and is now its senior member in actual practice.

Early in his professional career Mr. Price evinced great aptitude in the principles and practice of law. He speedily attained a very high position in his profession, and to-day he stands, with two or three other eminent jurists, at the head of the bar of this city. Pursuing the course usually followed by successful practitioners, his inclination and readings led him toward a specialty in civil practice,—the law of real estate. He has long held the proud position of being the leading authority upon the law relating to real property at the bar. The well-known act of Assembly of April 18, 1858, entitled "An Act relating to the sale and conveyance of real estate," popularly known by all lawyers as the "Price Act," is his handiwork, and in 1874 he published an admirable treatise upon the act in question, which contains much valuable historical and technical information. He has published other legal works, chief among which is the "Law of Limitation and Liens against Real Estate."

Not only has Mr. Price attained deserved distinction within the sphere of his profession, but he has also served with honor in a number of important public positions. He represented Philadelphia in the State Revenue Boards of 1845 and 1848, and was a member of the State Senate in 1854–56. To the latter office he was chosen over the regular candidates of the two political parties then existing. He had been especially selected as a candidate by many representative residents of the county of Philadelphia, with a view to having a diligent effort made looking toward the union of the several townships, boroughs, and districts of the county, to the corporate limits of the city of Philadelphia. It was chiefly through his energy that the charter of Feb. 2, 1854, known as the "Consolidation Act," was granted. The history of the movements looking to and following the consolidation was written and published by him, in 1873, in a volume of one hundred and thirty-seven pages. During his senatorial term of three years, many important statutes were passed, which had been drafted by him. Except his membership of the State Revenue Board and the State Senate, he has held no public office save that of a member of the Park Commission, upon which he has served since its organization, in 1867, to the present time.

Besides devoting his energies in the line of his profession, and in the incumbency of the offices mentioned, he has found time to give considerable attention to matters educational, scientific, and historical. He is at present a member of the board of trustees of the University of Pennsylvania, president of the board of managers of the University Hospital, vice-president of the American Philosophical Society, president of the Numismatic and Antiquarian Society, etc. In the successful operation of each of these institutions he takes a very active interest.

Throughout his varied and well-spent career, although apparently overburdened with the comprehensiveness of his pursuits and their laborious demands, he has found opportunity to prepare for publication a great variety of rich material upon many phases of political, social, and moral economy. In addition to the legal works already mentioned, and the "History of the Consolidation," he has prepared treatises upon the following subjects, which were read before the Philosophical Society, and subsequently published: "The Trial by Jury" (1863), "The Family as an Element of Government" (1864), "Some Phases of Modern Philosophy" (1872), "The Glacial Epochs" (1876), "Sylviculture" (1877), and "The Rockery at the University of Pennsylvania" (1881). All of these treatises display rare intellectual power, extensive research, and recondite literary intuition. Besides these public writings, he has prepared two other volumes, printed for private circulation, which evince equally as strong and commendable, though different phases of, head and heart power, namely, a memoir of his father and mother, Philip and Rachel Price, written with true filial reverence and delicacy, and a monograph containing a sketch of the life of a daughter, penned with affectionate yet dispassionate devotion. He is still much given to literary pursuits, although now [1884] eighty-seven years of age. The subjects which of late have engrossed his attention tend less toward the divers realms of practical ethics and abstract metaphysics than toward religious and spiritual themes.

In general terms it can be said of him that no Philadelphian to-day stands higher in the estimation of his fellow-citizens, whether as a courteous gentleman, a ripe scholar, or a sound lawyer. This opinion was but voiced by the late Chief Justice Sharswood, at the banquet given in the latter's honor, on Dec. 20, 1882, upon his retirement from the bench of the Supreme Court. In concluding an address replete with learning and reminiscence Judge Sharswood said, "I will ask your indulgence for a few moments longer, while I express the gratification I feel at being honored with the presence here of the venerable gentleman who sits by my side. Mr. Eli K. Price was the chairman of the committee by whom I was examined for admission to the bar more than fifty-one years ago. His examination was a thorough one, for then, as now, everything which it was his duty to do was done well. I have no doubt I made a great many mistakes, but he was kind and considerate enough not to correct them. We all know how laborious, useful, and honorable his long public and professional life has been, and he is still bearing fruit in old age as sound and ripe as ever."

Henry Baldwin, born in Connecticut, removed while young to Pennsylvania, and after studying under Alexander J. Dallas, was admitted to the bar in 1798. He practiced for several years successfully at Pittsburgh, and while there served in Congress.

On the death of Judge Washington, Baldwin was appointed his successor, and it was on his very first appearance at Trenton, when about to take his position upon the bench of the Circuit Court, that he used expressions that effectually put an end to the time-honored custom of receiving the judges by the marshal and his suite with their insignia, and being conducted to the court. When he came out of his lodgings he said, in pretended simplicity, "Why, what's the matter, boys? What are you doing with all these sticks?" The old bar, so long accustomed to the decorous usages set up by their forefathers, saw with sadness their sudden ludicrous overthrow, and at first it was feared that the mantle of his illustrious predecessor had not fallen upon him except as a mere occupant of the seat that had been vacated. From this judgment, however, he was able to rise by the exhibition of talents quite superior to what had been known of him in this eastern portion of the State, and an amiability and generosity quite unexpected from so rude a beginning. He was also found to be a man of great integrity, and though apparently sometimes too anxious to have and to know that he had the favorable opinions of others, yet never condescending to unworthy arts to obtain them. The "Forum" thus speaks of him: "A kinder and more conciliatory judge, and one who had stronger sympathies for the bar, or tenderer consideration for its youthful aspirants, rarely, if ever, graced any bench. . . . He was not, perhaps, calculated to shine in the circles of fashionable life, although his manners were exemplary; but he was calculated to shine in those higher spheres in which mere fashionable life never showed itself. . . . He had been brought up in a rough school, but there was still much unction in his manners. It could hardly be otherwise, from his naturally amiable feelings. That is a merit which education rarely gives, and still more rarely takes away." He died in 1844.

Edward King, quite unexpectedly to those who had seen him at the bar, where he had not devoted himself to close study, became eminent in spite of the want of very considerable preliminary preparation. Raised to the presidency of the Common Pleas in 1825, to the surprise of all, even the bar, he became one of the ablest and most notable judges that ever sat in that court. "He proved," says the "Forum," "take him for all in all, perhaps the best judge that ever occupied that bench since it was first created, so far as regarded its criminal jurisdiction, and at least equal to any in the civil department of his judicial duties. His charges to the jury exhibited great perspicuity and strength, and his written opinions during a period of more than twenty years were indicative of much research, discrimination, and power. If his firmness had been equal to his legal learning, certainly no judge of the Common Pleas in Pennsylvania would have been entitled to a loftier position than he richly merited. Indeed, it is doubtful whether there would have been his equal. As a criminal lawyer he had no judicial competitor."

John Cadwalader, judge of the United States District Court for the Eastern District of Pennsylvania, was born at No. 172 Chestnut Street, near Eighth, April 1, 1805, and resided there with his father, and at No. 266 Chestnut Street, until the latter, about 1815, bought the mansion of Maj. David Lenox at the southeast corner of Ninth and Arch Streets. He graduated at the University of Pennsylvania, in the department of arts, in 1821. He afterward studied law under Horace Binney, and was admitted to the bar Sept. 30, 1825. He at once took a high position as a lawyer, and was particularly distinguished for the thoroughness, accuracy, and variety of his learning, and his success as a counselor. He was in active and profitable practice for many years, and was justly considered one of the foremost among the leaders of the bar.

A strong Democrat from the time of General Jackson, Mr. Cadwalader took rank among the prominent men of that party, and sustained his faith consistently amid all the changes of opinion which gradually turned many of his early associates to the Whig party, and finally to the Republican party. He was elected a member of Congress on the Democratic ticket for the Fifth Congressional District, composed of a portion of Philadelphia and Montgomery Counties, in 1855, and served in the House of Representatives at Washington for a single term. Upon the death of Judge John K. Kane, Mr. Cadwalader was appointed to the vacancy in the United States District Court by President Buchanan, April 24, 1858. Under his administration the admiralty practice of the court, which increased immensely during the war of the Rebellion, and by the improvement in our foreign and domestic commerce, became more thoroughly than it ever had been before a science, settled in doctrine by the admirable character of his decisions and the profoundness of his learning.

Thomas Kittera came to Philadelphia with his father in 1801. He was admitted to the bar March 8, 1808, and died in the year 1834. As he was never married, he was the last male member of the family. Mr. Kittera's office and residence were on Walnut Street, between Fifth and Sixth (being No. 140 old style), and it was here that Judge Conrad (whose full name was Robert Taylor Conrad) acquired his legal education, and possibly his taste for poetry and literature; for Mr. Kittera was a man of fine ability, and his reputation for literary, as well as for legal knowledge, still lives among the older members of the bar.

Peter A. Browne, admitted March 7, 1803, was in active practice for many years, during which he was prominent in public affairs as captain of a company of volunteers, and as a member of the Franklin Institute, in the service of which he was very earnest. He projected the Arcade building, on Chestnut Street, and the Chinese pagoda, at

Fairmount. He gradually dropped away from law to science. He became interested in geology, and gave a great deal of attention to the subject of the texture and peculiarities of hair and wool. His last public appearance as a lawyer was upon the trial of James Wood for the murder of his daughter, in September, 1839, and of Singleton Mercer for the murder of Heberton Hutchinson, at Woodbury, N. J., in March, 1843. In those cases Mr. Browne brought forward, for the first time in the courts of Pennsylvania or New Jersey, the doctrine of "emotional insanity," a novelty to the law previous to that time. In both instances his clients were acquitted.

Thomas Burnside, who was an associate judge of the Supreme Court of Pennsylvania from 1845 to 1858, was admitted to the Philadelphia bar Feb. 4, 1804. He left the city afterward, and during many years as a lawyer and judge in the interior of Pennsylvania, had made himself known quite as much by the solidity of his judgment and his simple common sense as by his eccentricities. He was a good lawyer, but an oddity as a judge, succeeding in this regard to the reputation of Brackenridge. He died March 25, 1851, aged sixty-eight years.

John Swift, admitted March 16, 1811, became well known in connection with military affairs as captain of one of the companies of Washington Guards, colonel of regiment of militia, and candidate for brigadier-general against Col. Robert Patterson. He was also a prison inspector and mayor of the city. He held the latter office, altogether, eleven years, but not consecutively. He was mayor from 1832 to 1837, from 1839 to 1841, and from 1845 to 1849. At a late period of his life he was alderman of the Eighth Ward,—from 1855 to 1865. Mr. Swift—"Col. John Swift," as he was usually called—was prominent in political matters; originally as a Federalist, and afterward as a Clay Whig. He was a man of great courage and of earnest convictions, a most forcible political speaker, and the object of warm and devoted admiration and friendship by his political associates. He died June 9, 1873.

Nicholas Biddle was admitted to practice June 3, 1811. He was scarcely known as a lawyer, although he seems to have kept an office at No. 181 Chestnut Street. He devoted himself more especially to literature, art, and finance. He was a member of the State Legislature in 1810–11, State senator in 1814, director of the United States Bank in 1819, was president of that institution from 1823 to 1836, and was president of the United States Bank of Pennsylvania from 1836 to 1839. As a speaker Mr. Biddle was elegant and scholarly. His tastes were classic, and his diction was pure and pleasing. He died Feb. 27, 1844.

Benjamin R. Morgan, admitted to the bar in 1785, became one of the law judges of the District Court in 1821. He died Nov. 19, 1840, aged seventy-six years.

N Biddle

Joseph B. McKean, admitted Sept. 10, 1785, was the son of Governor Thomas McKean, and somewhat conspicuous in politics at various periods. He was appointed associate law judge of the District Court, together with Joseph Hemphill, in April, 1817. He became senior law judge in the next year, and continued to preside in that court until October, 1826, when he was succeeded by Judge Hallowell.

Gouverneur Morris, who was admitted to the Philadelphia bar in 1781, practiced law in Philadelphia for some years. A native of New York, born in 1752, he had been conspicuous in the political affairs of that province. He was a delegate (from New York) of the Provincial Congress of 1775. He was a member of the Continental Congress, sitting at Philadelphia, from 1777 to 1780. In the latter year he took

Digitized by Google

up his residence in this city, and was a member from Pennsylvania of the Convention that framed the Constitution of the United States. He was United States minister to France from 1792 to 1794, and United States senator from New York from 1800 to 1808.

James M. Porter, admitted April 24, 1813, practiced law in this city for a short time, after which he went to Easton, Northampton Co. He was a member of the Constitutional Convention in 1838, and was president judge of the Twelfth Judicial District, and afterward of the Twenty-second Judicial District. He died at Easton, Nov. 11, 1862.

William J. Duane, admitted June 13, 1815, came into the profession in his thirty-fifth year, having previously been a printer, a paper dealer, and an editor. He was the friend and counsel of Stephen Girard, was one of the executors under his will, and was subsequently a director of Girard College. In the line of his profession he was prosecuting attorney in the Quarter Sessions for two or three years. President Jackson appointed him Secretary of the Treasury in 1833, and removed him from that office on the 23d of September of the same year, because he refused to order the removal of the government deposits from the Bank of the United States, upon being commanded to do so. He died Sept. 27, 1865.

James Page, admitted March 16, 1816, was conspicuous for many years in public affairs, and was personally popular. He was a volunteer during the war of 1812, and afterward became captain of the State Fencibles, a company which survived for many years others which were established about the same time. He was also at one time colonel of a volunteer regiment. In politics he was a Democrat, and possessed considerable influence in his party. He was postmaster of Philadelphia from 1833 to 1841, county treasurer from 1842 to 1844, collector of customs from 1746 to 1849, and a member of Select Council for the Fifth Ward from 1866 to 1868. He died April 6, 1875, aged eighty years.

Since the death of Horace Binney, in 1875, James J. Barclay has been the senior member of the Philadelphia bar, and as such is held in the highest esteem. He was born in this city on Jan. 15, 1794; his father, John Barclay, was a merchant and at one time mayor of Philadelphia. He was quite young when he graduated at the University of Pennsylvania, after which he studied law with James Gibson, and was admitted to the bar in 1815. In the mean time, however, he had served during the war of 1812, and in Camp Dupont gained his military experience to a large extent. After the close of the war he devoted himself to his profession and to those philanthropic labors which have always distinguished him. He was not ambitious of public office, but did for a time serve as a member and afterward as president of the Board of School Control before the consolidation of the city. His writings, though not voluminous, have always been valuable, and one of his publications, "A Memorial of Abraham Hutton," contains, it is said, the best history of institutions for the deaf and dumb ever given to the public. He is a great lover of books and pamphlets, and his collection is one of the largest in the city. Since the date of the foundation of the House of Refuge, in 1826, he has been one of the founders and co-workers in that institution, and for forty-eight years its president. Not the House of Refuge alone, but other institutions have profited by his philanthropic labors, the public appreciation of which was so justly expressed on the anniversary of his ninetieth birthday, at a public reception given in his honor at the House of Refuge on Jan. 15, 1884. Upon that occasion, surrounded by those whom he had seen grow up about him, his past and present colleagues, intellectual men and fair women—by the best people in Philadelphia—he received the sincere congratulations of them all. It was a quaint, impressive, and dignified sight, this gathering of wealth, learning, enterprise, and beauty, all in turn speaking kind words, and calling up the history of the past to this old man, who bore with modesty and grace the almost reverential tokens of regard that it was considered a privilege to convey. A number of addresses were delivered during the evening, and the Hon. Eli K. Price, who is but three years Mr. Barclay's junior, and the next oldest member of the Philadelphia bar, paid the aged philanthropist a beautiful tribute. He said, Mr. Barclay "has lived all his life as God wills that man should live. He has been with him and cared for him, and, after a fuller measure of years and happiness, will gently and lovingly take him to Himself."

Charles Chauncey, Jr., was a leading member of the bar for half a century. He was a son of Charles Chauncey, LL.D., State's attorney in Connecticut in 1776, and judge of the Superior Court of that State from 1789 to 1793. Charles Chauncey, Jr., was born at New Haven, Conn., Aug. 17, 1777. He studied law there, came to Pennsylvania about 1798, and was admitted to the Philadelphia bar Jan. 7, 1799. He held no public office of importance, but as a counselor and lawyer held a place with Binney, the Sergeants, the Ingersolls, and the other lights of the bar. He died at Wilmington, on the 30th of August, 1839.

James Thompson, elected associate justice of the Supreme Court of Pennsylvania Oct. 13, 1857, was not a resident of Philadelphia until after he went upon the bench of the Supreme Court. He became chief justice in 1867, and held that dignified position until the end of his term, in 1872. He died in the Supreme Court room while arguing a case, Jan. 27, 1874, aged sixty-eight years. He was emphatically a great lawyer, with manners affable and pleasant, which made him popular. He was born in Middlesex, Butler Co., Pa., Oct. 1, 1806, learned the trade of a printer, became a journalist, studied law, and was admitted to the bar in 1829. Engaging in politics, he was a mem-

ber of the Legislature from Venango and Warren Counties in 1832–34, and in the latter year was Speaker of the House of Representatives. He was appointed judge of the Erie District Court in 1839, and served until 1845. In the latter year he was elected a member of Congress. He held that office until 1851, and was a member of the Legislature again in 1855.

St. George Tucker Campbell, a nephew of George M. Dallas, studied law with his uncle, and was admitted to the Philadelphia bar July 6, 1835. For twenty-five years he was in successful practice, which was incessant, and which finally brought about the usual effects of overwork. As an advocate, Mr. Campbell was remarkable for quickness of perception and energy in presenting his views. His speeches and arguments were usually short, but he had the facts so concentrated and classified that sophistry was swept away, and the clearest statements presented to courts and juries. In cross-examination Mr. Campbell was so sharp and aggressive that no untruthful witness could successfully resist the impetuosity of his attacks. He retired from active practice on account of impaired health several years before his death, which occurred March 20, 1874, when he was in the sixtieth year of his age.

HORACE BINNEY.

Among the lawyers admitted in 1800 were Horace Binney, March 31st, the Nestor of the American bar. He was a son of Dr. Barnabas Binney, and was born in Philadelphia, Jan. 4, 1780. He was a member of the Assembly of Pennsylvania for the session of 1806–7, and a member of Congress for the Second District as representative of the anti-Jackson party for a single term from 1833 to 1835. He was president of Common Council in 1810–11 and 1811–12, and a member of Select Council from 1816 to 1819. He gave but little time to public office, and was more interested in his practice, which in the course of years became very valuable. He died Aug. 12, 1875. One of his most celebrated cases was that of Vidal *vs.* The City of Philadelphia, before the Supreme Court of the United States, in which the meaning of Stephen Girard's will was the subject of the adjudication.

Elihu Chauncey, who was admitted to the bar on the 31st of April, 1800, occupied for many years a position of great respectability in the profession; but he never held public office.

Richard Peters, Jr., son of Judge Richard Peters, was admitted to the bar Dec. 2, 1800. He was never in extensive practice before the courts; but as a reporter of the decisions of the courts of the United States—Supreme, Circuit, and District—he was very industrious. His contributions to that branch of legal learning are comprised in thirty volumes, and he gave some attention to the editing of a few text-books. He was United States district attorney from 1813 to 1815. He died May 2, 1848.

William Morris Meredith, who was admitted Dec. 16, 1817, was in after-years, by the unanimous agreement of the profession, for a long time at the head of the bar. He was a man of extraordinary legal learning, of great quickness of apprehension, and of solid judgment. As a speaker he was straightforward and terse. He had remarkable ability in grasping facts and in establishing from them the real points at issue. With all this, he would have been a dull advocate if it had not been for a wonderful play of humor which he possessed, and which was available as well in illustration of an abstruse theory as in assisting him to bridge over the weak points of his case. He was the son of William Meredith, who had been city solicitor in 1808–9, 1811–13, and in 1815, and who in after-life was for many years president of the Schuylkill Bank. William M. Meredith made his way slowly, and was for some years in very moderate practice. He was a member of the Legislature 1824–28, a member of Select Council of Philadelphia 1833–49, was president of that body from 1834 to the end of the term, 1848–49, and was United States district attorney 1841–42. He was also Secretary of the Treasury of the United States 1849–50, member of the Constitutional Convention of Pennsylvania in 1837, attorney-general of Pennsylvania 1861–67, and was a member and president of the Constitutional Convention of Pennsylvania in 1873. He died Aug. 17, 1873, aged seventy-four years.

The first law-student of William M. Meredith was Richard Vaux, at present (1884) one of the most

Digitized by Google

distinguished lawyers and citizens of Philadelphia. Mr. Vaux was born in this city, on Arch Street, above Second, Dec. 19, 1816. His grandfather, born in England, went to San Domingo, and from thence came to Philadelphia. He married a Miss Roberts, granddaughter of the first "Hugh" Roberts. Roberts Vaux, the father of Richard, was born in this city, and was one of the authors of the present school system of Pennsylvania, and aided in drawing the first act of Assembly passed on the subject. He was instrumental in inducing Governor Wolf to present the matter in his annual message, and was afterward, for fourteen years, the first president of the Board of Controllers of Public Schools of Philadelphia. It was Roberts Vaux, also, who was the first to suggest that the object of imprisoning criminals should be their reformation rather than their punishment, and, with this end in view, to propose separate confinement and humanizing influences. After repeated rebuffs the State gave its approval, and the Eastern Penitentiary was remodeled on the plan of separate confinement. Roberts Vaux was also one of the founders of the Deaf and Dumb and of the Blind Institutions, of the Historical Society of Pennsylvania, and of kindred societies. Upon the subject of prison discipline Chevalier Wikoff, in his "Reminiscences of an Idler," pays a hearty tribute to Roberts Vaux, and writes further: "The novel attempt to improve the condition of malefactors made a sensation in Europe, and France sent over Messrs. De Tocqueville and De Beaumont, England Mr. Crawford, and Prussia Dr. Julius to examine and report on the two systems. All these eminent persons pronounced in favor of the cellular system of Roberts Vaux, which was forthwith introduced into their respective countries." Roberts Vaux, although not a lawyer, was a judge. He was appointed associate upon the bench of the Common Pleas, Oct. 30, 1835, and held that honorable commission until his death, Jan. 8, 1836. He was the last lay judge of that court.

Richard Vaux was educated almost exclusively by his father, Roberts, with the aid of private tutors, whom the latter selected and supervised. After he had finished his course of studies he began the study of law, becoming, as before stated, the first law-student of William M. Meredith. When but twenty years of age young Vaux was admitted to the bar, and very shortly afterward he received a note from John Forsythe, Secretary of State under President Van Buren, asking him when he was about to sail for Europe, as he understood that such a trip was contemplated. Pursuing the correspondence that ensued, Secretary Forsythe sent the young attorney a written request to take charge of a package, to be handed to him the night before the day of sailing, and to be delivered to the American legation in London. In due course of time the package was placed in the possession of Andrew Stevenson, of Virginia, United States minister to England, father of ex-Senator Stevenson, of Kentucky. Having done this, young Vaux was delivering some private letters to Mrs. Stevenson when the minister entered the room, and to his young friend's surprise, said, "Come down stairs, sir; I have made you secretary of legation *ad interim*. One of the dispatches that you brought to this office directs the present secretary to report to one of the Continental courts, and you must fill the vacancy." The young man protested, but in vain, for the honor was thrust upon him. He remained in the position until his successor, Benjamin Rush, was sent from the United States in the following year, when he went on the continent. After a long trip, in which he won attention and admiration everywhere by the brilliancy of his conversation and his charms of person, Richard Vaux returned to London, when Mr. Stevenson insisted on his remaining as the minister's private secretary, which position he continued to occupy until 1839. In October, 1839, he turned his back on the attractions of monarchical governments, and returned to Philadelphia, to find himself already nominated for the Legislature by the Democrats of the Ninth Ward of the "old" city. The Whig majority in the ward was very large, and the result was obvious, even at the time of his nomination.

WILLIAM M. MEREDITH.

In 1842 he was appointed by the Supreme Court inspector of the Eastern Penitentiary; and bringing to bear on the subject involved the love of prison reform he inherited from his father, has won for himself the reputation of being one of the leading penologists of the world. He has served as inspector for

Google

forty-four years, and during that time has prepared many volumes on the subject of penology, in all of which his theory of hereditary crime occupies a prominent place. Among the principal papers written by him on this subject are "Penal, an Element in Social Science;" "Crime-Cause;" Short Talks on Crime-Cause and Convict Punishment;" "The Convict, his Punishment, and How Best Applied;" "The Penalties and Prison-Life of American Convicts;" and "Short Sketch of the Eastern State Penitentiary." At the United States Congress of Delegates convened to consider Prison Subjects, held at St. Louis, Mr. Vaux was elected president, and in the following year a similar congress met at New York, over which he was also chosen to preside.

Owing to his ability in the discussion of penology and other phases of social science, he has been elected a member of the American Philosophical Society.

It was on the 4th of March, 1840, that he first attended a State convention, the Democratic delegates gathering in Harrisburg. There was a very bitter fight between the Van Buren and Johnson elements, and in the committee that was appointed on Mr. Vaux's motion to harmonize the convention, Simon Cameron, Hendrick B. Wright, Morrow B. Lowry, John W. Forney, Mr. Vanamridge, and Richard Vaux sat together. After this he began the practice of law, but in August, 1841, was appointed recorder of the city. He would not have accepted the office had not the Whig Councils, immediately after the appointment of this pronounced Democrat, removed from the recorder all salary and other emoluments, leaving but the bare office. This opposition determined his course, and for seven years he filled the position with an acceptability that gained for him a name as recorder that exists to this day. He published a legal volume entitled "Recorders' Decisions," that is now a legal treasure.

About this time in the old city the Whigs were still largely in the majority, but in 1842 the Democrats induced Richard Vaux to lead their forlorn hope. He was defeated by John M. Scott, but he cut down the regular Whig majority. In 1845 he was again renominated, Swift being the Whig candidate, and Peter A. Browne the nominee of the Native American party. Swift was elected, but Vaux polled a larger vote than Browne. Overtures were then made for Mr. Vaux to again become a candidate, with the understanding that he would receive the indorsement of the Native Americans.

"Never, while I live,'" he said, "will I put my name to any principle which attempts to interfere with the religious views of any citizens."

"Simply consent, sir," said the committee, "not to place any but native Americans on the police force."

He indignantly refused, but the Democrats nominated him in 1854 by the Crawford County system, and the Native Americans accomplished his defeat, Robert T. Conrad being made mayor. This aroused all the ire in Mr. Vaux's nature. Twice he had been defeated on outside issues that he had no connection with. The day following that of election he stood on the State-House steps, and with a shake of his head, and in roaring tones, announced himself as again a candidate. He was nominated, too, when convention day came around, and in 1856 he was made mayor, defeating Henry D. Moore.

The city was consolidated in 1854, and on Mayor Vaux devolved the formulation of many of the laws governing the newly-organized municipality. His police force was such a model one that his successor, a political opponent, retained its chief and many of its lieutenants. It was no infrequent thing for the bluff Democratic mayor to disguise himself and walk around the streets until two and three o'clock in the morning, to see that his officers were awake and conducting themselves properly. He was renominated for mayor by the Democrats, but owing to the Lecompton compromise matter being dragged into the canvass, he was defeated by Alexander Henry.

The mayoralty was the last public elective position which he occupied. After his retirement from this office he was made a director of Girard College, and became president of the board on the retirement of Morton McMichael, and served in that capacity until parties changed, and a successor from the majority party was chosen. The Democratic State Convention nominated him as an elector-at-large with Gen. Keim, of Reading, in the Presidential contest when Douglas, Breckinridge, and Lincoln were candidates. Again, in the McClellan canvass, he was also nominated by the Democratic party of the State as an elector-at-large with Mr. Johnson, of Cambria County. In 1875, the State Legislature having failed to make an apportionment of congressional districts, he was nominated by the State convention as a candidate for congressman-at-large, together with James H. Hopkins, of Pittsburgh, and Col. H. B. Wright, of Wilkesbarre.

Although Mr. Vaux has held no other public offices than those named, yet he has for years held, and still continues to hold, intimate relations with the leaders of his party, and several times of late has been officially identified with the party's management. In his political sympathies and beliefs Mr. Vaux is never equivocal. He is popularly known as the "Bourbon of Bourbons." This designation, the application of which excites no resentment, is thus defined by him: "The Bourbons—I mean the name as applied to American politics—are those who believe in State rights and the delegated limited powers of the Federal government, and who hold that the powers of sovereignty in the Federal government granted by the States is the first instance on record in any history where sovereignty has been so parted with by the sovereign."

For over forty years Mr. Vaux has been a Free-

mason. He was elected Grand Master of Masons of Pennsylvania, and served nearly three years. He is regarded as an authority in Masonic jurisprudence.

As a public speaker, at the bar, on the rostrum, or in the field of politics, he has made a high reputation. For a lifetime he has been addressing public assemblages, from New Hampshire to Kentucky, and in his own State has, probably, been more frequently invited to make political speeches than any other private citizen.

The personal characteristics of the man whom his friends sometimes—though in respect—speak of as "the Bourbon war-horse" are difficult to describe plainly without causing misunderstanding to arise in the minds of those not acquainted with them. He has the noble face, tawny locks, and flowing mane of the king of the forest. His hair, which is now bespotted with gray, hangs in a tangled mass over his brow and down his back. He has a full beard and moustache of silken gray, but the full dimensions of the former are concealed, and he gives the impression of wearing side-whiskers by having that portion of the beard which springs from the chin tied together and hidden beneath his clothing. Vigorous physical exercise leaves him in his sixty-eighth year with a robust health that many young men envy. Even at this time of life an ice-cold bath at five o'clock on a winter's morning is a necessary prelude to breakfast. Until recently he never entered a street-car. He never carried an umbrella for his own protection, and he has never worn an overcoat. A few years ago he did yield sufficiently to the force of life's tempest to permit him to wear a heavy cloak in very rainy weather, and now he pays tribute to the storm in the shape of a gossamer rubber coat. He is fast in his friendships, devoted to his principles, unswerving in his beliefs, emphatic in his opinions, impregnated with the Democracy. He has led an active political life of over forty years, and yet no one can point to an act of his and say that its motive was not as stainless as the Arctic snow.

In 1841, Mr. Vaux married Miss Waln, of this city, and has two sons and four daughters, some of whom are married.

Samuel Rush, admitted Feb. 15, 1817, represented the commonwealth as deputy attorney-general in various courts. He was recorder of the city, and presided in the Mayor's Court in 1838-41. He died in 1859, aged sixty-four years.

Thomas McKean Pettit was admitted April 13, 1818. He did some service as deputy prosecuting attorney. He was city solicitor in 1820, member of the Assembly in 1830, member of Select Council in 1831, assistant judge of the District Court in 1832, and was president judge of that court in 1835-45. He was also United States district attorney in 1845-49, and director of the United States Mint, April 4, 1853. He held the latter office less than two months. He died May 30, 1853, in the fifty-sixth year of his age.

Archibald Randall, admitted April 13, 1818, was for some years with John R. Vogdes, admitted 1820, a member of probably the first law-partnership established in the city. Randall & Vogdes were in business for some years. Archibald Randall was appointed law associate in the Court of Common Pleas, Jan. 23, 1834. In March, 1842, he received the appointment of judge of the District Court of the United States for the Eastern District in place of Thomas Bradford, who was appointed by President Tyler to succeed Judge Joseph Hopkinson, but was rejected by the Senate. Randall died May 30, 1846, aged forty-six years.

John M. Read, admitted Sept. 7, 1818, was the son of John Read, who was city solicitor 1810-11, 1818-20. John M. Read was a member of the Legislature for the city, elected on the Federal ticket, 1823-25; city solicitor, 1830-31; United States district attorney, 1837-41; attorney-general of Pennsylvania from June 23d to December, 1846; associate justice of the Supreme Court of Pennsylvania, 1858-72; and chief justice, 1872-73. He died Nov. 29, 1874, aged seventy-seven years.

John Purdon, Jr., the author of "Purdon's Digest," was admitted April 28, 1806. His compilations were very useful. He died Oct. 3, 1835.

Thomas F. Gordon, who was admitted Sept. 16, 1806, was clerk of the Orphans' Court from 1818 to 1821. He was the author of a history of Pennsylvania, a very useful book; also of histories of New Jersey, America, ancient Mexico, and a gazetteer of New Jersey, Pennsylvania, and New York. He died at Beverly, N. J., Jan. 11, 1860.

William Rawle, Jr., who was admitted May 21, 1810, was associated with Thomas Sergeant in the preparation of "Sergeant and Rawle's Reports."

Joel B. Sutherland, admitted March 30, 1819, plunged boldly into politics, and was almost continually in office until within a few years of his death. He was a physician before he studied law, and obtained his medical degree from the University of Pennsylvania. He was Lazaretto physician, 1816-17. As a politician Joel B. Sutherland was best known. He was a member of the Legislature, 1821-25; State senator for the county, 1825-27; member of Congress for the First District from 1827-37; and judge of the Common Pleas, 1833-34. In Congress he was chairman of the Committee of Commerce for some years. He was the author of a "Manual of Parliamentary Practice," for the government of Congress, which was founded upon that of Jefferson, and was for many years a great book of reference and authority in parliamentary usages. Dr. Sutherland was for a short time deputy prosecuting attorney for the county of Philadelphia. He died Nov. 15, 1861, aged seventy years.

Thomas S. Bell, admitted April 14, 1821, removed to Chester County shortly afterward. He was appointed president judge of the Common Pl--- -f

Richard Vaux

Digitized by Google

Chester County, May 16, 1839, and held that position until he was appointed justice of the Supreme Court, Nov. 18, 1846. He died June 6, 1861, aged sixty years.

Joseph McIlvaine, admitted Oct. 3, 1821, was recorder of the city of Philadelphia from Aug. 19, 1829, to 1835.

Henry D. Gilpin, admitted Nov. 14, 1822, was United States district attorney from 1832 to 1837. In the latter year he was appointed solicitor of the United States Treasury, when he removed to Washington. In 1840 he was appointed Attorney-General of the United States. He published a volume of "Reports," "Opinions of Attorney-Generals of the United States," supervised the publication of "The Madison Papers," wrote biographies, discourses, and addresses, and prepared, as well, contributions to light literature. He died Dec. 29, 1859.

John H. Campbell, admitted Feb. 1, 1823, was quietly engaged in practice for many years. He was elected a member of Congress for the Third District in 1845, and served one term.

Joseph M. Doran, admitted April 3, 1824, was judge of the Court of General Sessions which succeeded the Court of Criminal Sessions from March 20, 1840, until the time when the court was abolished by act of Assembly of Feb. 3, 1843. Doran was in moderate practice, and most successful in criminal cases. He was a man of rare humor, and his addresses to juries were enlivened not so much by sarcasm as by an unctuous ridicule of description or comparison which was always enjoyable.

John Bouvier, admitted April 10, 1824, is well known to the profession as the author of a "Law Dictionary," published in 1839; "The Institutes of American Law," 1851; and as the editor of an edition of "Bacon's Abridgment." The son of a French Quaker, and himself a native of France, he came to this country in 1802 with his father. He was employed in a book-store, and edited and published a newspaper at Uniontown, in Fayette County. He was first admitted to the bar of that county. He was recorder of the city of Philadelphia from Jan. 9, 1836, to March, 1838. When the Mayor's Court was abolished by the act of Assembly of March 19, 1838, Recorder Bouvier was made judge of the Court of Criminal Sessions, which was established in its place. He held that position until the tribunal was abolished by the act of Assembly of Feb. 25, 1840, which created the Court of General Sessions. He died Nov. 18, 1851.

John K. Kane, admitted April 8, 1817, was a member of the Legislature for the city of Philadelphia in 1824–25; city solicitor in 1829–30; and attorney-general of Pennsylvania in 1845, which he held for a year. In 1846 he was appointed judge of the United States District Court, to succeed Judge Archibald Randall, and discharged the duties of that office with learning and dignity until his death, which took place Feb. 21, 1858.

John Wurts, who was admitted Oct. 2, 1816, devoted some time to politics. He was a member of Congress from the First District in 1825–27.

In the history of Philadelphia there are several families fortunate in possession of several individuals who have risen to eminence. Like the Hamiltons, Sergeants, and Ingersolls, so were the Dallases. In George Mifflin was ably sustained the fame won by his father, Alexander James. Born at Philadelphia, July 10, 1792, he received his last academic training at Princeton, where he graduated in 1810, with the highest honor of his class. He read law in the office of his father, and while yet a young man began to take an interest in politics, attaching himself, as did his father, to the principles formulated by Thomas Jefferson. He was admitted to the bar before he was quite of age, as a special favor of the court, and at once set off as secretary to Mr. Gallatin, who, with Mr. Bayard, proceeded to join the United States minister at St. Petersburg. His subsequent career in the political history of the country is well known, and forms not a part of these sketches. In spite of the time devoted to politics, he made rapid rise in his profession. For at least he loved his profession more than politics, and the offices he held in the latter were devolved upon him more because of the great confidence the people of his State had in his abilities and integrity than for the sake of his own seeking. Charles J. Biddle, in his eulogy, pronounced Feb. 11, 1865, says of him, "He sought no office that would withdraw him from his profession. In the line of it he held several important positions. . . . He was deputy attorney-general for the city of Philadelphia, district attorney of the United States, solicitor of the Bank of the United States, commissioner of bankruptcy, attorney-general for the State of Pennsylvania, solictor of the county of Philadelphia. He declined the office of Attorney-General of the United States, which was offered to him by President Van Buren. In 1828 he was elected mayor of Philadelphia. But though the duties, less onerous than now, did not interfere much with his practice, he soon resigned the office."

So when he retired from the Vice-Presidency, in 1848, he went back with alacrity to his profession. His rank in the profession was among the very highest in every quality becoming a lawyer. A higher compliment in the matter of professional courtesy and kindness could not be paid than the following from Mr. Biddle's address: "A friend, who was probably as often as any one his junior in important cases, tells me he never was with any senior who took so full a share of the labor. He adds a remark so happy that I give it in his own words: 'Mr. Dallas seemed always to have in his mind an oath of professional office, to behave with all good fidelity as well to the court as to the client, to use no falsehood nor delay any person's cause for lucre or malice.'"

A very interesting work is that entitled "A Series of Letters from London written during the years 1856-60." The preface to these letters is so modest and tasteful that we insert it. "There were many incidents connected with the post of American minister in London, from 1856 to 1861, which may be usefully, and perhaps not disagreeably, recalled from the oblivion into which they must otherwise hasten. To do this, no departure from the reticence lastingly exacted by diplomatic function is necessary. A book in which the scenes and conversations of Paris, at the outbreak of the Revolution of 1848, are portrayed by a British diplomat, was doubtfully received, because this reserve was in a measure disregarded. The example should be followed with watchful self-restraint." The life of his father remained in manuscript for very many years, but has at last been printed, and it evinces that had the life of the author been devoted to literature, he must have become very eminent. A large number of Mr. Dallas' speeches are to be found in print. We make yet another quotation from the beautiful address of Mr. Biddle: "Living mainly by the practice of law in a commercial city, he did not hesitate, on two important subjects, to run counter to what were thought to be its interests. Through life he was the champion of the poorer many rather than the richer few. Yet no man was more refined and cultivated in his tastes, nor more adapted to the elegant enjoyments that may spring from the good use of wealth. He had none of the morbid sensibility that cloisters itself from contact with the world. He was one of those who seek tranquillity,—not in solitary retreats, but in their own hearts, made calm by culture, religion, and philosophy."

Another distinguished member of the modern bar was Theodore Cuyler, who was born at Poughkeepsie, N. Y., on Sept. 14, 1819. He was the eldest son, and third child, of the Rev. Dr. Cornelius C. and Eleanor (De Graff) Cuyler, and was a descendant of two of the oldest families of that State. The Rev. Dr. Cuyler was the pastor of the Reformed Dutch Church at Poughkeepsie, then the only church in the village; and here the son passed the first fourteen years of his life. However, in the spring of 1834, Dr. Cuyler having accepted the pastorate of the Second Presbyterian Church of Philadelphia, the family removed to the Quaker city; and here it was that Theodore Cuyler acquired the learning and culture which enabled him to make so indelible an impress upon the city's thought and progress; and here it was that his long life of effectual achievement, of untiring endeavor, and of well-merited honor, was lived out to its full consummation. In September, 1834, Mr. Cuyler was matriculated at the University of Pennsylvania as a member of the class of 1838. He was graduated in July of the latter year, third in his class. Not long after his graduation he was registered as a student of law in the office of Charles Chauncey, then one of the leaders of the Philadelphia bar. He was admitted to active practice on Oct. 7, 1841.

From the date of his admission to the bar his zeal in the profession of his choice knew no respite. While he underwent the testing experiences and vicissitudes which naturally come to the young advocate, no matter how tireless his ambition or how broad his fitness for his work, yet he persevered with indomitable energy, laying wide and steadfast the foundation of a remunerative practice and an honorable professional career. His first appearance in the Supreme Court of Pennsylvania was on April 19, 1849, when he successfully argued the case of Blight *vs.* Schenck (10 Barr, 285). In the following year, in December, he argued his first case in the Supreme Court of the United States, Gayler *vs.* Wilder (10 Howard, 477), on which Daniel Webster was upon the opposite side, Mr. Cuyler having been admitted to the bar of the United States Supreme Court on Dec. 30, 1845. During his long and varied professional career he was identified as leading counsel in scores of important cases, including many a *cause celebre*, and an attempt to catalogue them would result in a reproduction of much technical material from the State and Federal Law Reports for an extended period of years. While the compiling of such a catalogue would be neither practicable nor profitable, yet there were in his practice a number of cases of general and even of international importance which are worth noting. One of these was the noted Christiana treason case, tried in the Circuit Court of the United States in November, 1851, in which Castner Hanway, and thirty-seven other residents of Lancaster County, Pa., were tried on the charge of high treason. Their dereliction lay in the fact that they had declined to assist a United States deputy marshal in capturing two fugitive slaves who had escaped from Maryland. Another important case in which he was counsel was that of Henry Hertz, indicted and tried in the Circuit Court of the United States for enlisting soldiers in Philadelphia to serve in the British army in the Crimean war.

However, Mr. Cuyler's fame as a lawyer is derived chiefly from the great corporation cases in which he was counsel, many of the fundamental legal principles now prevailing, as applied to corporate rights and liabilities, having been established in the adjudication of the cases with which he was connected. On April 15, 1857, he was elected solicitor at Philadelphia of the Pennsylvania Railroad Company. In 1869, upon the reorganization of its legal department, he became the general counsel of that corporation, and he served it faithfully and zealously to the close of his life. As an advocate, he had but few equals at the bar. Whether he appeared to greater advantage at *Nisi Prius* or before the court in banc it is difficult to say. He was, perhaps, equally felicitous and forcible in his masterly examinations and cross-examina-

Digitized by Google

tions, and in his forensic appeals to an enraptured jury on the one hand, and in his brilliant exposition of abstruse legal principle before an attentive court on the other.

While devoting himself assiduously to his professional duties, through the long and honorable period of his practice, he yet found time to do the city and State good service. His first public office was that of director of public schools. He occupied this position for some years before 1856. On the 6th of May of that year he was chosen a member of Select Council from the Eighth Ward, and was successively re-elected in 1858 and 1860. His third term ceased on Dec. 31, 1862, when he voluntarily retired, having declined a further re-election. His associates during his six years of service numbered, among others, John Welsh, George M. Wharton, William Bradford, Archibald McIntyre, W. Heyward Drayton, John Price Wetherill, Daniel M. Fox, and other eminent citizens. On the 10th of May, 1860, while serving his last term, he was unanimously elected president of the chamber, and he continued to preside over its deliberations until he retired from the body.

He was also one of the original commissioners of Fairmount Park, serving with great zeal and acceptability until the close of his life. On Oct. 8, 1872, he was elected one of the delegates-at-large from Philadelphia to the Convention called to amend the Constitution of the State. He served with diligence and great distinction through the one hundred and seventeen days in which the Convention was in session. Even a cursory examination of the debates of the Convention will clearly exhibit the prominent position which he attained and maintained in that body, and the ability which he displayed in aiding in the formulation of many of the vital principles now embodied in the organic law of the State.

His time and energies were not, however, solely engrossed with his professional obligations, and with the discharge of those public duties incident to his incumbency of the official positions indicated; he was connected with other enterprises of wide scope, and in many societies and associations rendered, without remuneration, services professional and otherwise. He was the first president and one of the founders of the Social Art Club, for many years a director and the counselor of the Musical Fund Society, one of the trustees of the Pennsylvania Museum and School of Industrial Art, etc.

Burdened, as Mr. Cuyler was, by a multiplicity of onerous duties, and laboring, as he did, with untiring zeal in the line of his profession, and in such responsible and honorable positions as he chanced to be placed, it was but natural that his health should eventually give way, despite the fact that he possessed naturally a vigorous constitution. After several months of ill health, superinduced by a too active participation in two or three very important railroad suits, he died on the morning of April 5, 1876. The funeral services were held in the Second Presbyterian Church, on Saturday, April 8th, Dr. Beadle, the pastor, delivering a strong and profound discourse upon the life and character of the deceased. At a meeting of the bar, held on April 7th, presided over by Justice George Sharswood, resolutions eulogistic of Mr. Cuyler were adopted, and appropriate remarks were made by Messrs. Henry M. Phillips, George W. Biddle, William A. Porter, Daniel Dougherty, Stephen S. Remak, Chapman Biddle, and Judge Amos Briggs. On the 5th of April, upon the direction of President Judge Joseph Allison, a minute was entered upon the records of the Court of Quarter Sessions of the Peace, reciting the extraordinary professional abilities, and the distinguished career at the bar of Mr. Cuyler. Resolutions, or minutes, of a highly eulogistic character, were also adopted by the directors of the Pennsylvania Railroad Company, the Park Commission, the Social Art Club, the Pennsylvania Museum and School of Industrial Art, the trustees of the Second Presbyterian Church, and the Equitable Life Assurance Society.

Robert Cooper Grier was a native of Cumberland County, Pa., the son of Isaac Grier, a Presbyterian minister of the gospel. Isaac Grier was a near relation to Margaret Grier, who married Andrew B. Stephens, a native of the region near the mouth of the Juniata River, and father of Alexander H. and Linton Stephens, of Georgia, the former Vice-President of the Confederate States, and lately Governor of Georgia, and the latter at one time one of the judges of the Supreme Court of that State. Judge Grier graduated at Dickinson College in 1812, the same year in which his kinsman, Alexander Stephens, was born. He was then eighteen years old. After spending some time as head master of a college, he studied law under Charles Hall, Esq., a lawyer of Sunbury, and was admitted to the bar in 1817. His first judicial appointment was as judge of the District Court of Alleghany. In 1846, on the death of Judge Baldwin, he was made one of the judges of the Supreme Court of the United States.

Judge Grier was one of the most extensively and variously-informed men who have ever sat upon the bench. The habits of youth and younger manhood, that the straitened circumstances of his family made necessary, resulted in the production of such an accomplishment, which when exhibited with becoming sparingness and modesty are extremely interesting to contemplate. He removed, two years after his appointment, to Philadelphia. No man who had preceded Judge Grier upon the bench has left a better reputation for courtesy and kindness to bench and bar, and for probity and fairness in the rendition of the judgments of the court for extent and variety of learning, and for strength and comprehensiveness of mental grasp. During the exciting times of continued agitation of the various questions pertaining to slavery, the Fugitive Slave Law, the repeal of

the Missouri Compromise, the Kansas-Nebraska, and other Congressional proceedings regarding slavery in the Territories, and the opening of the civil war, he presided as a tower of strength in the courts of the United States. Baldwin, his predecessor, had been thought by some to be almost too prompt in enforcing the laws upon these subjects; but Judge Grier carried himself with the deliberateness and the equability, neither hasting nor resting, that he employed in every question, great or small, that involved no principles except those which related only to the ordinary transactions of mankind. Whatever were his opinions regarding the morality of the institution of slavery, or the misfortunes that its existence inflicted, he felt that he could not but hold himself to the law which he was sworn to follow, and leave where it belonged the province of repeal or amendment.

Mr. Brown in the "Forum," says, "Mr. Justice Grier is a man of more general and practical knowledge than Judge Washington. His classical attainments are higher and more cultivated. The grasp of his mind is stronger and more comprehensive; but for experience, and perspicuity, patience, dignity,—and above all, disinterestedness,—no judge that has ever preceded or followed Judge Washington ever equaled him."

The Supreme Court of Pennsylvania, since its organization in 1838, has had several very able judges. Ellis Lewis was a native of York County. Medicine was the profession that he first was inclined to adopt, but he gave it up when fully of age, was admitted to the bar in 1822, and the following year became deputy attorney-general for Lycoming and Tioga Counties. At Bradford, whither he removed from Williamsport, he rose into lucrative practice, and in compliment for the able service he had rendered in the Legislature, and his warm support of Andrew Jackson, he was appointed in 1833, by Governor Wolf, attorney-general of the State. This office he held for only a few months, resigning in order to take that of president of the Eighth Judicial District. In 1845 he became president judge of the Second Judicial District. In the year 1851, Judge Lewis was elected to the bench of the Supreme Court of Pennsylvania, and through the rotation prescribed by law (a singular law, we remark, by which the judge who held for the shortest term—three years—was so honored) he became, on the expiration of the term of Judge Black, chief justice, and so continued until the end of his term, in 1857. Judge Lewis has ever been regarded as a very able judge, notwithstanding the fact that he devoted so much of the time not occupied with official duties to politics and other studies. One of the most celebrated and important of his decisions, made while he was district judge, is that of Commonwealth *vs.* Armstrong, a decision that Chancellor Kent quoted in his "Commentaries on American Law." The question was as to the extent of a parent's exclusive right to give direction to the religious education of his child. The decision affirmed such right, and it was indorsed, with a complimentary notice of the presiding judge, by Judge Kent.

George W. Woodward was a native of Bethany, Tioga Co. After the completion of his education at Wilkesbarre he studied law in the office of Garrick Mallery, Esq., and was admitted to the bar in 1830. In 1841 he became judge of the Fourth Judicial District, and in 1852, upon the death of Judge Coulter, he was appointed to the bench of the Supreme Court by the Governor for the unexpired term of the deceased, and at the election by the people the same year was elected for the full term of fifteen years. The personal resemblance of Judge Woodward to Judge Gibson was often remarked. Upon their resemblance in other respects David Paul Brown runs the following interesting comparison between them: "Judge Gibson's attainments were more comprehensive and diversified, but less concentrated and available; his mental grasp was stronger, but it was not so steady. Judge Gibson struck a harder blow, but did not always plant it or follow it up so judiciously. Judge Gibson sometimes rose above expectation; Judge Woodward never falls below it. Judge Gibson's industry did not uniformly equal his talents; Judge Woodward's talents are, if possible, surpassed by his industry. Judge Gibson was, perhaps, the greater man, Judge Woodward the safer judge."

John C. Knox, born in 1817, appointed deputy attorney-general for Tioga County in 1840, became judge eight years afterward, having been appointed by Governor Shunk president judge of the Tenth Judicial District. The judiciary becoming, under the new Constitution, elective, he was elected in 1851 to the presidency of the Eighteenth Judicial District. In 1853 he was raised to the Supreme Court by Governor Bigler for the remainder of the term of Judge Gibson, who had died, and was elected by the people in the same year. His reputation as a judge was high. He died Aug. 28, 1880.

One of the most eminent of the judges who have sat upon that bench was George Sharswood. And because of his so recent decease we might fitly make an extended notice of this great judge. But besides the delicacy involved in such work, his career, both as judge and author of works upon legal science, is too well known to require but a brief summary. After having enjoyed and profited by the best advantages of academic studies, graduating at Pennsylvania University, and reading in the office of Joseph R. Ingersoll, he began the practice in 1831. Since the organization of the Supreme Court of the State, whether since it was made dependent upon election by the people, or receiving appointments from executive action, it has not had an incumbent superior to Justice Sharswood. For several years he was in moderate practice as a lawyer, and was somewhat prominent in politics as a member of the Whig party.

Geo. Sharswood

Digitized by Google

He was a member of City Councils for some years, a member of the Pennsylvania Legislature, House of Representatives, 1837–38, a member of Select Council from 1838 to 1841, and a member of the House of Representatives, 1841–43. His opinions being known to be in favor of free trade, his party gradually drifted away from him, until he found himself numbered with the Democrats. On the 2d of April, 1845, he was appointed associate judge of the District Court of the city and county by Governor Francis R. Shunk. On the 1st of February, 1848, he was commissioned president judge of that court, in place of Hon. Joel Jones, resigned. He was elected president judge of the same court in 1850, and was re-elected in 1860. He remained at the head of that tribunal until 1867, when he was elected, as a Democratic candidate, associate justice of the Supreme Court of Pennsylvania, and took his seat in 1868. By rotation as the oldest judge in commission, he became chief justice Dec. 4, 1878, and held the office until the first Monday of January, 1883, when he retired. He was the recipient of a banquet given in his honor by the Philadelphia bar shortly afterward. He died May 28, 1883, aged seventy-two years. Judge Sharswood was an industrious legal author while yet at the bar. He edited "Blackstone's Commentaries," "Byles on Bills," "Starkie on Evidence;" at a later period, "Russell on Crimes," "Leigh's Nisi Prius," "Roscoe on Criminal Evidence," and "Smith on Contracts." He was the author of original works: "Professional Ethics," 1854; "Popular Lectures on Commercial Law," 1856; and "Lectures Introductory to the Study of the Law," 1870. Some of these were the results of his eighteen years' work as professor of law—between 1850 and 1868—in the University of Pennsylvania.

David Paul Brown

The District Court for the city and county of Philadelphia (organized in 1811) has had a succession of able judges. Among these George McDowell Stroud was conspicuous, not only for the vigor, but the rapidity of his decisions and actions. The enormous quantity of business that devolved upon that court, however, required a judge that was swift in its dispatch, even if, as was sometimes complained of Judge Stroud, he may have been at times too impatient, and so made rulings that operated inconveniently to counsel and parties litigant. Impatience in a judge is far better than indolence. Impatience, in most cases, may be rendered harmless by a reversal of a decision, either by the judge who made it, after subsequent calm reflection, or by a higher tribunal, whereas indolence brings those sickening delays that are often as hurtful to justice as the denying or selling it would be. Judge Stroud was appointed in 1835, for ten years. He retired at the end of his term, but was reappointed in 1848, and in 1851 was elected under the amended Constitution, and re-elected in 1861. He continued to the end of his term, in 1871, making a nearly continuous service of thirty-six years. He died in 1875.

Among others of the judges of the Court of Common Pleas may be mentioned the names of John Hallowell, J. Richter Jones, Anson Virgil Parsons, James Campbell, Oswald Thompson, William D. Kelley, Joseph Allison.

We close the account of those members of the bench and bar who are deceased with a reference to David Paul Brown, to whose work, the "Forum," we have so often referred, which has been of inestimable service in the work we have had on hand. He also has, too, recently deceased, and is too well remembered to allow of any other than a brief sketch. His literary productions are noticed in another chapter. He was born in Philadelphia, Sept. 28, 1795, was educated partly by his mother and private teachers, and in Massachusetts by a clergyman in the classics. On the completion of his education he decided that his future profession should be the practice of medicine. For that purpose he entered the office of Dr. Benjamin Rush, and remained until the death of the latter, when he abandoned the medical profession, and turned his attention to the law. He entered the office of William Rawle, the elder, and after a due course of study was admitted to the bar on the 4th of September, 1816. He was a brilliant and effective speaker, and soon attracted attention. In criminal cases he was at one time considered an advocate of great power, especially with a jury, and he had for

Digitized by Google

some years the leading criminal practice of the city, with occupation in the civil courts of importance and value. At one time he appeared in almost every important criminal case, and his practice was lucrative. But, while he was earning money with ease and great rapidity, he was deficient in economy and frugality, and seemed to spend faster than he made. The profitable period of the life of a lawyer will not extend over his whole life, if his term at the bar should be as extensive as was that of Mr. Brown. Of late years he went out from the public sight, and, with but a moderate practice, amused himself by literary pursuits. His poems occasionally found their way into the newspapers. Some of them were originally published in the *Sunday Dispatch*. In earlier life he wrote and published "Sertorius," a tragedy, in which the elder Booth took the principal part; "The Prophet of St. Paul's," a drama, which was also performed in one of the Philadelphia theatres; "Love and Honor," a farce, which, we believe, was never played. His book entitled "The Forum; or Forty Years' Full Practice at the Philadelphia Bar," was published in two volumes octavo, and, although it contains much that is interesting, is also remarkable for its utter absence of allusions to many matters connected with law and lawyers in Philadelphia, in the period named, which were of great interest. Mr. Brown's great strength professionally was in the skill and power which he possessed in the examination of witnesses, his easy and flowing oratory, his classic style, and, particularly, a readiness of retort and repartee, which frequently did more than his most impassioned eloquence.

One of the most distinguished of the living contemporaries of David Paul Brown is Hon. Benjamin Harris Brewster, at present the Attorney-General of the United States. He was born in Salem County, N. J., Oct. 13, 1816, and is a son of Francis E. and Maria Hampton Brewster. His grandfathers (Brewster and Hampton) were both surgeons in the Revolutionary army. His father was an eminent lawyer, who ranked high at the bar of this city, and other members of the family have distinguished themselves in various relations of life. Mr. Brewster is, of course, college-bred, and, like all young Jersey gentlemen of his day, an alumnus of Princeton, being a member of the class of 1834. He now wears the degrees of A.B., A.M., and LL.D. The effect of his Princeton training is reflected in much that Mr. Brewster says and writes. He is orthodox in everything, and orthodoxy in everything commands his respect and admiration. Simultaneous with leaving college Mr. Brewster began the study of the law. His preceptor was the now venerable Eli K. Price, the Nestor of the Philadelphia bar. He was admitted to the practice of his profession in 1838, and won prominence at once. There were giants in those days,—Binney and Sergeant and Meredith and the other great men who have shed an ineffaceable lustre upon the Philadelphia bar being still active; but even in this great company the abilities of the young advocate were easily discernible. He soon achieved greatness, and for thirty years has been the preferred counselor of Philadelphians. A list of the great cases in which he has been engaged would fill a column in a newspaper. No living Philadelphia lawyer has so extended a reputation, and no one has been oftener summoned abroad to argue important causes.

Mr. Brewster's reputation as a legal practitioner is of a twofold character. He not only possesses a mind stored with ripe knowledge and jurisprudential acumen, but, unlike many eminent jurists, his power as an eloquent advocate before a jury is great. The only two public offices of great importance which Mr. Brewster has held have been strictly within the line of his profession. In 1867 he was appointed by Governor Geary attorney-general of the commonwealth of Pennsylvania. His term of service continued until 1869, when he resigned. In 1881, upon the resignation of Hon. Wayne MacVeagh, Mr. Brewster was appointed by President Arthur to the office of Attorney-General of the United States. This office he still holds, having during his two years' incumbency of the high position reflected great credit upon the country, the national administration, and the bar.

Besides the two great offices mentioned, Mr. Brewster has seldom been in the service of the public. He has rarely been an office-holder, and never an office-seeker. His first taste of public life was in 1846, when, at the age of thirty years, he was appointed a commissioner by President Polk to adjudicate the claims of the Cherokee Indians against the United States.

Besides his labors at the bar, and his public services in the State and nation, Mr. Brewster has devoted very considerable attention to literary pursuits; and as a finished linguist, a delightful conversationalist, an attractive orator, and a polished writer he is equaled by few. His numerous public addresses upon a variety of occasions have been replete with rich erudition, and his contributions to current literature have been characterized by great learning and rhetorical skill. In the words of a biographer, "He has been a close student of *belles-lettres*, is a versatile and brilliant essayist, a correct, original, and profound thinker, a graceful, eloquent, and forcible speaker;" and, as another biographer has said,—

"To listen to him is at once to be enchanted and to be instructed. Every ancient and modern author is at his tongue's end, and the only trouble one experiences is when he throws at the more unlettered of us some quotation from Æschylus or Horace or Virgil. The study of the history of the Middle Ages—of that long, black period, when the only lamp that illumined the world was held in the hands of 'Holy Mother Church'—seems to have especially fascinated him, and his lecture or monograph upon Gregory VII.

Yours very truly
Wm D Kelley

is, in my opinion, the greatest tribute ever paid to the greatest man of his time, who lived between the decay of Pagan Rome and the rise of Christian civilization, —a greater man than Charlemagne."

In his personal and domestic life Mr. Brewster is none the less eminent. Like the great Duc de Guise, who, with his brother, the Cardinal Lorraine, founded the mighty Catholic League in France, and was the power behind the throne during the reign of three monarchs, and who had hopes of royalty himself, he bears the marks of recognition on his face. Of little more than medium height, and now slightly inclined to corpulency, he dresses with faultless taste, but after the style of a generation ago. In dress, as in manners and morals, he is inclined to be old-fashioned. His manners are courtly, he recalls the *ancien noblesse*, and he would be distinguished in any assemblage. His popularity among his friends and acquaintances is proverbial.

Before his appointment to the cabinet, and prior to his removal to Washington, Mr. Brewster was noted for his domesticity. His home was characterized by solid comfort, substantial wealth, and uncontaminated virile taste in everything. His inner office, the *sanctum sanctorum*, as it were, which was in the same building, was a delightful spot. There was no other law-office in Philadelphia to compare with it in its comforts, furnishings, and attractiveness.

In 1857, Mr. Brewster was married to Elizabeth Von Myrbacke de Reinfeldts, a Prussian lady, who died in 1868. In the summer of 1870 he was again married, his second wife being a daughter of Robert J. Walker.

Hon. William Darrah Kelley, jurist and statesman, senior member of the National House of Representatives, and so often termed the "Father of the House," was born in Philadelphia April 12, 1814, and was the grandson of Maj. John Kelley, an officer of the Revolutionary army. His success in life is altogether the fruit of his own efforts, as his father died when he was a mere child. His first employment was as a reader in a Philadelphia printing-office, which he left to spend seven years as an apprentice in a jewelry-house. Thoroughly learning his trade, he accepted a situation in Boston from 1835 to 1839. His leisure hours were given to study, and when he left the latter city to return to Philadelphia, he had acquired a reputation as a writer and speaker. Here he studied law, and exhibited so decided a tendency for political affairs that in several campaigns he took the stump for the Democratic party. In 1841 he was admitted to the bar; in 1845–46 he was attorney-general of Pennsylvania, and from 1846 to 1856 judge of the Court of Common Pleas of Philadelphia. In 1854 he abandoned the Democratic party, and signalized his entrance into the Republican party by an address in which he opposed the admission of slavery into Kansas or any other of the Territories. In 1860 he was elected by the Republicans to the House of Representatives of the Thirty-seventh Congress, and has been re-elected ten times in succession; so that he is now in his twenty-third year of uninterrupted service. He has filled memberships of all the important committees of the House, and was chairman of the Committee on the Centennial Celebration. There is no more ardent and efficient advocate and defender of the system of protection of American industry, and his speeches and documents upon the question are a library of reference and information. Since the retirement of Mr. Blaine from the House of Representatives, he has been chosen to the chairmanship of the Ways and Means Committee in each Congress of which the Republicans have had control. In addition to his many political speeches, a number of addresses on general topics have been published from his pen. In the summer of 1883 he went to Europe for medical treatment, and returned in a much improved condition.

Furman Sheppard, another distinguished member of the bar of to-day, was born at Bridgeton, Cumberland Co., N. J., in 1824. He graduated with distinction at Princeton in 1845. After leaving college he devoted himself to teaching the classics and mathematics in schools and private families for some time, and then commenced the study of law with Judge Garrick Mallery. He was admitted to the bar Sept. 7, 1848, and remained for several years associated with Judge Mallery in the active management and conduct of the business of his office. His range of subsequent practice has included many cases of importance and responsibility in the Federal as well as the State courts, and the professional ability therein displayed is conceded by the bar, and has not been without frequent mention and recognition by the bench. He was nominated the Democratic candidate for the office of district attorney for the city of Philadelphia in 1868, and in October of that year was elected to the office for the term of three years. The entire city ticket was claimed to have been elected by the Democrats, but this being disputed, a contest was entered upon by the Republicans, and the matter went before the courts. A decision was rendered affirming the election of D. M. Fox as mayor, but annulling that of the district attorney, the receiver of taxes, and some others. Mr. Sheppard obtained a rehearing of his case, in which it was shown that the court, in deciding against him, had committed an arithmetical error, and he was thereupon restored to the office as its rightful possessor. In the mean time, for about six months, it had been occupied by Charles Gibbons, the opposing candidate. An appeal from this latter decision was made, and the case carried before the Supreme Court, where, on review, the judgment of the inferior court was affirmed, and Mr. Sheppard thereupon resumed the duties of the district attorneyship, his administration being marked throughout by energy and a high sense of responsibility. In 1871 he was renominated,

but by means of a local and special election law which had been enacted in the mean time, he was defeated by a small majority. In 1874 he was unanimously nominated again by the Democratic County Convention, and was indorsed by the Citizens' Municipal Reform Association. After a campaign almost unexampled in its activity and earnestness, and which aroused more than a merely local interest, he was elected by a vote nearly six thousand above the average of that received by the Democratic State ticket, while the vote of his opponent was reduced over eight thousand below that of the Republican State ticket. The term to which Mr. Sheppard was thus elected expired on the 1st of January, 1878.

Upon receiving his third nomination for the district attorneyship, in July, 1874, Mr. Sheppard addressed a letter to the committee which notified him of the action of the convention, which well illustrated his position relative to that office. The following is an extract:

"My occupation brings me in contact with persons of all shades of political opinion and of all classes of society, and I am constrained to say that the feeling which pervades the general body of citizens, as respects our municipal misgovernment, is one of mortification, distrust, and apprehension, to such an extent, indeed, that public spirit and local pride seem to languish in our city, good men shrink or are driven into retirement, and thus the management of public business is the more easily usurped or retained by knavery, mediocrity, and disrepute."

Mr. Sheppard paid especial attention to the dispatch of criminal business arising during the centennial summer, and by procuring the establishment of a Magistrate's Court on the centennial grounds for the immediate hearing of criminal charges, and by other arrangements, he succeeded, in most cases, in having offenders indicted, tried, and sentenced within a few hours after the commission of the offense. This rapid proceeding was popularly designated as "Sheppard's Railroad," and it, in connection with the vigilant co-operation of Mayor Stokley, entirely broke up the preparations of the criminal class for plundering our centennial visitors.

Having accomplished what he believed to be his duty in connection with that most important branch of the public service which was under his charge, he announced his determination, in 1877, to decline a renomination, and to resume his private practice. This announcement was received by the public with a very reluctant acquiescence, and a reconsideration of it, although strongly urged, was finally declined.

Shortly before the meeting of the Democratic State Convention of 1877 a very general impression prevailed that the nomination for the then existing vacancy in the Supreme Court would probably be conceded to Philadelphia, and Mr. Sheppard consented to the use of his name as an aspirant for the position. On the first ballot Mr. Sheppard received 64 votes, to 73 for John Trunkey, of Venango, and 116 scattered among seven other candidates. On the second ballot Mr. Sheppard led with 103 votes, Trunkey having 100 only, with 48 scattering. During the progress of the third ballot, which appeared to stand 125 for Trunkey to 124 for Sheppard, the excitement ran very high. The chairman finally decided that the third ballot must be taken over, and the roll was again called. All the candidates were dropped but Trunkey and Sheppard, and the vote between them ran singularly even. They were not ten votes apart at any time; they were exactly even at 85, again at 90, again at 97, again at 100, again at 107, again at 113, again at 117, again at 120, again at 122, and the roll closed with Trunkey 123 and Sheppard 123, with five not voting. Two more votes were cast, and it stood 124 to 124. Then the chairman voted for Trunkey, and as the two other delegates were absent, Sheppard was defeated by one vote. Mr. Sheppard's defeat was brought about by a defection in the Philadelphia delegation. At the Democratic Convention of 1878, Mr. Sheppard was again a candidate for Supreme Court judge, and again his chances for the nomination were sacrificed by antagonism in the Philadelphia delegation, one-half of which voted for Judge Henry P. Ross, of Montgomery, who was nominated on the first ballot. Judge Ross received 162 votes, to 71 for Sheppard and 10 for Edward S. Golden, of Armstrong.

For several years after 1878, Mr. Sheppard devoted his energies entirely to the practice of his profession. However, on the 24th of January, 1884, having been unanimously nominated by the Democratic Convention as a candidate for the office of city solicitor, and indorsed by the Citizens' Committee of One Hundred, he again entered the political arena. His written acceptance of this nomination, addressed to the committee which acquainted him with the action of the convention, was as follows:

"Gentlemen,—In reply to the communication which you have just handed me, informing me of my nomination as city solicitor, I may say at once that I accept it. Indeed, it has been tendered so unanimously and spontaneously, that to do otherwise would be almost an act of rudeness.

"Should it be the pleasure of the citizens of Philadelphia to ratify your action, I shall earnestly endeavor to discharge the duties of the position with whatever of ability I may possess, and with a full sense of the double obligation, professional and official, resting on me."

Notwithstanding the claims of a busy professional life, Mr. Sheppard's liberal taste has led him to devote spare time to the study of languages and literature. In the "Vocabulary of the Philosophical Sciences," published by the late Rev. Charles P. Krauth, vice-provost of the University of Pennsylvania, the author expresses his acknowledgment for friendly and useful suggestions, among other named persons, "to Hon. Furman Sheppard, who, known to the world as one of our most distinguished jurists, is also one of our ripest philosophical scholars and thinkers." By appointment of the judges of the Supreme Court, Mr. Sheppard was for several years, and, by appointment of Governor Pattison, is at present an inspector of the Eastern Penitentiary, and his interest in matters of science and literature has led to his election as a

Furman Sheppard

Digitized by Google

trustee of the Jefferson Medical College at Philadelphia, and to membership in the American Philosophical Society. In the year 1855, for the purpose of introducing the systematic study of the principles of the Constitution of the United States as a branch of instruction in schools, he prepared a work, entitled "The Constitutional Text-Book," together with an abridgment of the same, entitled "First Book of the Constitution." Each of these works was extensively circulated and largely used as a text-book in schools and colleges.

In making this summary of the most notable persons and things connected with the bench and bar of Philadelphia, we have been compelled to pass over many others of much, though secondary, interest. Our object has been to sketch outlines that, besides being sufficient for the general purposes for which this branch of the work has been compiled, will enable readers easily to find where they may study more extensively upon individuals, persons, or events.

The history of the bench and bar of Philadelphia is one of especial interest. It is, indeed, wonderful to contemplate the development from those rude beginnings of William Penn, down to and after the time when had resulted the production of judicial excellence, quite superior to what was established anywhere else in the country. Whoever studies this history will have enhanced admiration for the character of William Penn. His antecedents, both in personal culture and in the social relations of his family, were favorable for the great enterprise he had undertaken. Having embraced the faith of a sect despised in his native country, he had done so from sincere convictions of the insufficiency of the Established Church, as its career was being run after the Restoration, to encourage the religious growth of minds seriously concerned about the truth. But these convictions did not bring with them prejudices against individuals, and the history of the world does not exhibit a founder of a new commonwealth who was more circumspect and sagacious in the employment of those who were to assist in his great work. Capacity, integrity, sincerity, vigor of purpose were the qualities he was in search of, and when he found them, whether in Quakers or Episcopalians, he employed them. Some of these belonged to his own relatives. The latter he must naturally prefer, in a condition where his personal interests were largest and most important; but in such selections his sagacity was apparent as in those made outside of his religious faith. In regard to that, he was a man ever disposed to give the freedom and the respect that he desired for himself. The hostility to professional judges and lawyers was not to be greatly wondered at when it is considered how oppressive, how unscrupulous the English bar had become in the times of the two last of the Stuart kings. The men, English born, who were in Pennsylvania in 1683, for the most part, were those who or whose families had suffered from these and other oppressions, and they were determined to organize, if possible, a judiciary that would be without many of the evil elements of the one they had left behind. As for lawyers,—they hoped to be able to get along altogether without them. They were a class who, in their opinions, were mere dishonest hinderers and delayers of justice, practicing in all the various stages between audacity and servility. Disputes, in the hope of these law-givers, might be settled with sufficient ease and promptness by the courts on their presentation by the disputants themselves, or their personal friends, or yet more easily and soon by the arbitrament of their neighbors. We have seen what this first judiciary organization was, its ancient, simple origin, and what praise it has received from the most gifted of the profession in later times who have studied well its history.

There is no part of the annals of this whole country more deserving of study and reflection than those of the judiciary of Pennsylvania. To its early actions are to be traced an almost incredible amount of whatever, since their time, has been best in all the institutions of the country,—political, civil, mercantile, social, and domestic. Taking the word *aristocracy* in its just literal sense, government of the best, it has certainly obtained from the influences begun under William Penn's government earlier and more extensively than those originating in any other State in the Union. With trifling exceptions, the men selected to preside in these courts were such as, except in the matter of professional training, were wonderfully well fitted for their positions. They were not only with honorable connections in the old society of Great Britain and Ireland, but they had not lost enough of the memories of society there to lead them to feel that they could dispense with many of the forms and other attributes of government in all its forms. To themselves they assumed the costume, and endeavored to practice the decorum, of the courts of the mother-country. Even the appointment of sheriffs and other subordinate officers was made with a carefulness that has long ago ceased to be employed. Out of three persons nominated by popular will for the offices of sheriff and coroner, one was selected by the government.

In a society so young, consisting of so small a number of inhabitants, litigation could not be very extensive or involving many subtle important questions. Most of it was petty, both in civil and criminal adjudication, yet occasionally questions intricate, involving important principles and considerable pecuniary interests, demanded both strong understandings and painstaking research and reflection on the part of those who were to decide upon them. Yet the bench by gradual usage became more and more competent for its functions, and we find that under the Asshetons, who were relations of the proprietor, and had come over on his invitation, and were trained lawyers of careful and accurate habits, judicial forms

very shortly after the beginning of the eighteenth century, even the forms in courts, were put upon a basis of entire respectability.

The rise of the bar, as we have seen, was difficult, and only after experience of their inevitable necessity. It is somewhat amusing to read the pitiful petition of Francis Daniel Pastorius, in 1708–9, to the Governor and Council of Pennsylvania, complaining of one John Henry Sprogel, "through the contrivance or plotting of Daniel Falkner in the last adjourned court held for the county of Philadelphia, the 18th of January, by means of a *Fictio Juris* (as they term it), wherewith your petitioner is unacquainted, hath got a writ of ejectment, that the said Sprogel hath further feed or retained the four known lawyers of this province, in order to deprive your petitioner of all advice in law, which sufficiently argues his case to be none of the best." The petitioner "notwithstanding he was the first of all Germans who came into this country since it was a province, yet being poor, and unable to fetch lawyers from New York," begs, in his helpless condition, "for whatever relief the Governor and Council in justice and equity shall think expedient."

It must have seemed to Governor, Council, and judges a pitiful case indeed, when it required the four known lawyers of the province to handle a *fictio juris*, to the ejectment of one German, who was too poor to fetch lawyers from New York.

With the overthrow of this prejudice there began a system of training for the bar that resulted in the production of a large number of men, whose likes, in comparison of numbers, were not to be found elsewhere, and who imparted not only to the judiciary and the bar, but to commercial and social life a tone that, in the number of those who maintained it in its highest pitch, was as pure as could be maintained anywhere on the earth. The early judges were mainly merchants. They had with them the traditions of ancestry that for the greatest part were of the best of English society, both among the gentry and the peerage. The sittings upon the bench, preserving the decorous usages which they remembered to have seen and respected in their native countries, the habitual application of their minds alternately to mercantile transactions and the adjudication of disputes among their fellow-citizens, made them, both as judges and as merchants, rise with ease to the standard which we have described.

It has been a pleasing task to contemplate the reciprocal influences these two avocations exerted. The number of eminent lawyers was small for a considerable period after the subduing of the prejudices against them; but when the sons of the old councilors had grown up and received the careful training we have mentioned, completed, in many cases, at the Inns of Court in London, then it was that the bar of Philadelphia took its rapid rise to the very top of excellence, and maintained it for fully fifty years. To the intermarriages among the early descendants of these councilors, society, especially in Pennsylvania and Maryland, is indebted for a vast number of those who yet contribute most to its respectability and its general well-being. In the bar, so constituted, there was much of that family aristocracy which, exhibited as it then was, assisted far more than it injured in the advance of social existence. The coming on of the Revolution and the declaration and attainment of independence effected great changes in all conditions in the community. Hostile as were the leading families to the oppressive laws of the mother-country, yet many of the fathers, and some of the younger members among them, contemplated with pain a separation that seemed to threaten the destruction not only of their own established prosperity but that of the country. Many of them, when their magistracies were abolished and their professional practice suspended, withdrew in sadness from public life and waited the end of revolution and war. Others among them, scions of fathers who thus retired, went heartily for independence, and were conspicuous in service from its inception to its final attainment. To the great honor of those who had borne no part, but neither had contributed in any respect, except in the known state of their sentiments to the British cause, such was the universal confidence in their integrity that many of them were restored, after independence was achieved, to their offices in the courts organized under the new government.

And now, in accordance with the natural results of revolutions, a new set of men came on, men outside of the old families, men who had learned from the history of late events what may be accomplished by courageous, persistent endeavors, in spite of the want of high family connections and long training under experienced guides,—self-made men, ambitious of honor and power and wealth,—and we have seen to what rank they rose in time on those fair fields. In the contemplation of these new men it is pleasing to notice the benign influences imparted by what had been so long the rule in a profession that had been in the hands of gentlemen well bred in all the discipline of personal and professional honor. The new men could see no hope of satisfactory rivalry with those who were by inheritance, as it were, the leaders of the profession, except by imitation of their long, persistent studies before and after admission, their unsullied integrity, and the becoming dignity of their deportment. They also, many of them, intermarried among the older families, and helped to perpetuate blood so productive of good citizenship in all pursuits. It may have been a mistake to bestow the appointment of the judiciary upon popular election. Doubtless it was, but, so far as Pennsylvania is concerned, her experience has been such that she need not, up to the present time, regret it.

The bar of Philadelphia to-day, as reflected in its

living and active members, both those upon the shady side of the hill and those younger men who are gallantly climbing toward the summit, is not unworthy in any respect of the distinguished ancestry whose faint outline has been painted in the preceding pages. It has not lost any of its old-time brilliancy. It is still distinguished for its eloquence, its integrity, and for its solid learning, as of yore. But these qualities are not so conspicuous now as their singularity made them in the period from 1760 to 1860, when, for a century, the lawyers of Philadelphia were almost without peers in their profession upon this continent.

The profession holds out to-day the same high rewards to honorable industry, cultivated talents, probity, and integrity, and our contemporaries toil with an inherited zeal and compete with an ardor transmitted through unbroken generations for the same sort of distinction as that which compensated Hamilton, Allen, Tilghman, and Sergeant. Those who lightly pretend to believe the bar has degenerated are not familiar with its past, or have neglected to measure the stature of its present. They may not have forgotten Price, Gowen, Cassidy, Edward Coppee Mitchell, John G. Johnson, George W. Biddle, Daniel Dougherty, Henry M. Phillips, MacVeagh, Edwin Shippen, and Brewster, perhaps, but they do not sufficiently take into account men who are their equals in energy and learning, although they may be not as well known.

In making comparisons between the lawyers of the past and present, it must not be forgotten that much more is demanded of advocates nowadays than was the case a hundred or even fifty years ago. The rules and forms of practice have been greatly simplified, statutes codified, reports made more complete and comprehensive, and the profession wears much more the aspect of a science than formerly. But, at the same time, the sphere of the advocate has both widened and deepened enormously. Precedents and rulings have multiplied on all sides, and the *juris consult* must nowadays be ready at a moment's warning to thread the intricate labyrinths of a dozen branches of science which had no existence in the times of Hamilton, Shippen, and Hopkinson. Then expert testimony was almost unknown; now it is called in the majority of important issues. Patent law, railroad law, telegraph law, all open new and most arduous fields to the profession, and compel it to specialize itself more and more every day. Business law is assuming a thousand new shapes, each more complicated than the other; nor can the vast body of decisions, rapidly as it accumulates, keep pace with the ever-swelling volume of new issues daily coming up for adjudication. A lawyer who would embrace the whole scope of his profession nowadays must travel very far beyond Coke and Blackstone, Chitty and Greenleaf, Kent and the code. He must be an accountant, a civil engineer, an architect, a mechanician, a chemist, a physician; he must know the vocabulary and technology of all the arts and professions; he must be a theologian and a metaphysician, with the experience of a custom-house appraiser and the skill in affairs of an editor. And, after all, with all these stores in his possession, so great is the competition that he may scarcely be able to hew out a living in his profession.

Bar Associations.—The bar of Philadelphia was among the earliest, as well as among the most diligent and judicious, in the matter of associations for the purpose of keeping up a common professional library and the professional education of young men. As early as 1802 was formed "The Law Library Company of the City of Philadelphia," whose first officers were Joseph B. McKean, Edward Tilghman, William Lewis, William Rawle, and J. Bradford Wallace. In the year 1826 this company was united with another known as "The Associated Members of the Bar," the new company being styled "The Law Association of Philadelphia." It has continued with great prosperity to the present time, and now includes the majority of the members of the bar in good personal and professional standing. It owns a law library second to none in the country, as is more fully noticed in another part of this work.

In 1810 there was a law society in existence, of which Peter A. Browne was president. This appears from a communication sent to the Law Association in that year.

In 1811 another law society was formed, composed probably of students and young members of the bar. They called upon P. S. Du Ponceau to act as their president. This association was in existence about two years.

In 1820 "The Society for the Promotion of Legal Knowledge and Forensic Eloquence" was founded, and was composed of judges of the Federal and State courts, and lawyers and students who had attained the age of twenty-one years. Its principal object was "to connect with the mode of instruction at that time exclusively pursued a more scientific and academical system, whereby not only a greater degree of jurisprudential knowledge might be acquired, but the students might be exercised in the art of public speaking, so as to unite the talent of the orator with the science of the jurist." On the 12th of January, 1821, the society was incorporated. William Tilghman was chosen president; William Rawle, vice-president; John K. Kane, secretary; and Benjamin Tilghman, treasurer. The trustees were Charles Chauncey, Thomas Kittera, John M. Scott, Bloomfield McIlvaine, and John Keating, Jr.

There was in 1818 an association in existence which was called "The Law Society," before which in that year Thomas M. Pettit, the president, delivered some opinions upon questions argued, and John K. Kane, also president at a subsequent period, delivered opinions. This society was invited to become a "Law Academy" by the "Society for the Promotion of

Legal Knowledge," etc. The members of the Law Society agreed to this, and their society was formally annexed to the new association as "The Law Academy." The members of the academy were treated as an associate branch, and were accorded the privilege of electing their own officers, who were different from the officers of the principal association. They chose Peter S. Du Ponceau to be the provost, and James Gibson, vice-provost. *Poulson's Advertiser* in February, 1821, published the following item of news:

"The Law Academy, a recent institution, was opened in due form in the hall of the Supreme Court, in the presence of lawyers, judges, members of the Supreme Court, etc. The provost delivered an address showing the necessity of a national school of jurisprudence, and the advantage which this city possesses over all other American cities, after which there was a discussion of the question whether the inhabitants of Pennsylvania have a right to tow upon the banks of the river Delaware without permission of the owner of the lands over which they pass,—Roger Dillion Drake in the affirmative, Charles B. Penrose in the negative; to be followed at the next meeting by Thomas S. Smith in the affirmative, and Samuel H. Perkins in the negative."

Mr. Du Ponceau saw in this opportunity the means of erecting a law-school. The organization was expected to be of a dual character,—composed of members of the bar and judges as one class, and of students as another class. The old Law Society was merged into this institution. The Law Academy commenced its exercises in the early part of 1821, with thirty regular and eighteen honorary members. The academy discussed weekly some legal question before the provost or vice-provost, who at the next meeting delivered his opinion,—not in the form of a judicial decision, but of a law lecture on the particular subject to which the question referred. Mr. Du Ponceau was ardent in his anticipation that the Law Academy might become, in time, a school of law of sufficient importance to be annexed to, and become a part of, the University of Pennsylvania.

In March, 1822, the Society for the Promotion of Legal Knowledge and Forensic Eloquence appointed Joseph Barnes, judge of the District Court, lecturer for the Law Academy upon "Common Law." In November of the same year he delivered lectures on "Municipal Law." The existence of the Society for the Promotion of Legal Knowledge, etc., was brought to a close in a curious manner. It was probably in existence for a year or two. It came to an end in a strictly *legal* manner. The absence of the janitor on a night when there ought to have been an election for officers, prevented the accomplishment of that great duty. Then arose a controversy whether the society had not ceased to exist because its functions had not been continued at the right time and place according to the constitution. This was debated with great learning, and finally the differences of opinion engendered so much personal disagreement that indifference followed, and the society died of inaction.

The Law Academy, which was a branch of the Society for Promoting Legal Knowledge, was not so strictly technical as the society which had adopted it. The members refused to consider that it *was* dissolved, and they struggled on, determined to take care of themselves. They were successful. There were regular elections, an increase of members, and sufficient enthusiasm to keep the Law Academy in motion.

In 1833, Mr. Du Ponceau, speaking of the unfortunate end of the Society for the Promotion of Legal Knowledge, etc., said, in his address to the Law Academy,—

"What the academy has done since is known to us all. I think I may safely say that no association of young students has distinguished itself as this academy has done. It was a happy idea of your faculty to include among your scholastic exercises the writing of dissertations upon legal subjects."

Several were produced of considerable merit, which the academy deemed worthy of publication.

The Law Academy, in fact, claims to have been originated in 1783. In 1838, when it was incorporated, the academy ordered that the inscription upon the seal of the corporation should contain the words: "Founded, 1783; incorporated, 1838. *Per aspera ad astra.*"

We subjoin a list of reports of Pennsylvania Courts, abridged from John Hill Martin's "Bench and Bar," in which it will be seen that this State is abundantly rich, and we are confident in saying that in the courts of no State in the Union do any reports rank higher than those of Pennsylvania:

MS. Notes and Reports of cases between the years 1760 and 1783.
Hopkinson's Reports of forty-nine cases in Admiralty, printed in 1792.
Pennsylvania State Trials, 1794.
MS. Notes of J. Bradford Wallace, 1801 to 1816.
Wallace's Reports, 1802.
Peters' Admiralty Decisions, 2 vols., 1807.
Opinion of Judge Cooper on Foreign Admiralty Cases, 1810.
Fisher's British License Cases, 1 vol., 1813.

The Weekly Reporter, 1881.

Persons appointed to administer the Laws in the County of Philadelphia and the Province of Pennsylvania from the Earliest Period to the Present Time:[1]

THE SUPREME COURT OF THE PROVINCE OF PENNSYLVANIA.

This high tribunal was established under the royal charter to William Penn, bearing date March 4, 1681, and by order of the Provincial Council of yᵉ 1st of yᵉ 2nd mo., 1684, and reorganized from time to time by different Acts of the Assembly of the Province.

The following sketch, which is as complete as the records at Harrisburg and elsewhere can make it, shows the organization and *personnel* of the court at different periods between 1684 and 1776.

It will be observed that William Penn, as early as the 18th of 8th mo., 1685, in his letter to William Markham, "Dept. Govern'r of Pennsylvania," says, "I have sent my Cosin William Crispen, . . . and it is my will and pleasure that he be as Chief Justice," etc., and although Andrew Robeson, in 1693, is the first of the "prior judges" (1 Proud, 295; 1 C. R., 86) that I find called chief justice, I have indicated each "prior judge" before his time as chief justice.

4th 6 mo., 1684.—1 C. R., 47, 66–8, and 1st Proud, 286; "Rawle's Equity," 9. Under the act of 1684, chapter 158, Laws, five justices were commissioned for two years,—Dr. Nicholas More, C. J., William Welch, William Wood, Robert Turner, and John Eckley. William Clarke was appointed in place of William Welch, who died before 10th 7th mo., 1684. He was styled "Justice in General," 1 C. R., 109–10, and appears to have, by virtue of his commission, presided over the county courts, and, perhaps, succeeded William Welch, who was called the president of the counties of Philadelphia and New Castle, in 1 C. R., 67. My references to the "Colonial Records" are to the first edition, printed in 1838. The second edition was issued in 1851–52.

1685.—Appointed 14th 7 mo., 1685; 1 C. R., 102 and 105–8,—James Harrison, C. J., James Claypoole, and Arthur Cooke. These judges, however, declined to serve; 1 Proud, 300, and the Council heard the appeals.

1686.—Appointed 31st 1 mo., 1686; 1 C. R., 120, 130, and 141,—Arthur Cooke, C. J., William Clarke, and John Cann.

1686.—Commissioned 20th 7 mo., 1686. Recommissioned 2nd 2 mo., 1687; 1 C. R., 142, 143, and 152,—Arthur Cooke, C. J., John Simcock, and James Harrison.

1690.—Appointed 2nd 2 mo., 1690; 1 C. R., 283 (1st edition), and 1 C. R., 324 (2d edition)—Arthur Cooke, C. J., William Clarke, and Joseph Growden.

1690.—Under the act of 1690, chapter 197, five judges were appointed and commissioned on the 5th 7 mo., 1690; 1 C. R., 303,—Arthur Cooke, C. J., John Simcock, Joseph Growden, Peter Alrichs, and Thomas Wynne; but on account of the "unwillingness of yᵉ Judges to doe their Dutys in Severall counties," this commission was afterward revoked, and the court was reorganized 21st 9 mo., 1690; 1 C. R., 304,—John Simcock, C. J, William Clarke, Arthur Cooke, Griffith Jones, and Edward Blake, of New Castle. William Clarke, C. J., for the Lower Counties, with the other four as his associates.

1693.—The following judges were commissioned May 29, 1693, and in the same year a new law was passed, by which the court was to consist of one chief justice and four associates, and a new commission issued to the same justices Sept. 23, 1693. The fifth justice seems never to have been named; 1 C. R., 352, 383, and 415,—Andrew Robeson, C. J., William Salway, John Cann, and Edward Blake. Anthony Morris was appointed Aug. 10, 1794, in the place of John Cann, deceased.

1698.—On the 3rd of the 8th mo., 1698, the following justices held a session of the Province Court at Chester; Martin's "History of Chester," 73,—Joseph Growden and Cornelius Empson.

1699.—On the 18th 2 mo., 1699, a Provincial (Supreme) Court was held at Chester by Edward Shippen, Cornelius Empson, and William Biles. It is, perhaps, on account of this record in the minutes of the courts of Chester County that I find Edward Shippen sometimes spoken of as one of our chief justices, but he never obtained that dignity that I can ascertain.

1701.—From Mr. Staughton George's notes and the Records of Commissions at Harrisburg. Commission dated 20th 6 mo., 1701. The commission directs the justices to hold a court twice a year at Philadelphia, on the 24th of the 7th mo. and on the 10th of the 2d mo. Two of them to go the circuit of the counties, of whom Guest or Clarke must always be one. In the "Logan Papers," 1 vol. 57, it is stated under date of the 26th of 7 mo., 1701, "Judge Guest is made our Chief Judge, upon which Judge Growden would not act as his inferior. Caleb Pusey is in, and what is the wonder of us all, Thomas Masters has, without taking his degree of a Justice, leaped at once to be one of the five Judges,"—John Guest, C. J., William Clarke, Joseph Growden (declined), Edward Shippen, Robert French (declined?), Caleb Pusey, and Thomas Masters.

1702.—"Logan Papers," 1 vol. 193–5, &c.,—John Guest, C. J., William Clarke, Edward Shippen, Thomas Masters, and Samuel Finney, associates.

1703.—2 C. R., 86; "Logan Papers," 1 vol. 193–5,—William Clarke, C. J., Edward Shippen, Thomas Masters, and Samuel Finney. William Clarke was acting chief justice in place of Guest, who declined. Capt. Finney also declined.

1704.—Commissioned April 10, 1704; see Record of Commissions,—William Clarke, C. J., John Guest, Jasper Yeates, Samuel Finney, and William Trent, associates. Judge Clarke died about February, 1705.

1705.—Martin's "History of Chester," p. 74,—John Guest, C. J., Joseph Growden, Jasper Yeates, Samuel Finney, and William Trent. Chief Justice Guest died 8th 7 mo., 1707.

1706.—2 C. R., 248, appointed April 17, 1706,—Roger Mompesson, C. J., Joseph Growden, Jasper Yeates, Samuel Finney, and William Trent, associates.

By order of the Queen's Council of Feb. 7, 1705–6, the several laws establishing the courts of this province having been repealed, and the Assembly not agreeing on a bill, John Evans, the Lieutenant-Governor, by an ordinance and proclamation of Feb. 22, 1706–7, established and restored the usual courts, etc. See "Manuscript Laws of the Province of Pennsylvania," Book A 4, pp. 3–7. The Supreme Court was to have only three justices; and the Supreme Court of the province became separated from that of the Lower Counties on the Delaware. A Supreme Court for the trial of negroes was created, Book A 4, p. 78, and a commission issued, A 4, pp. 66 and 181. The Supreme Court for the Lower Counties

[1] The complete and satisfactory lists of persons appointed to administer the laws in the county of Philadelphia and the province of Pennsylvania are extracted, with the author's permission, from John Hill Martin's "Bench and Bar of Philadelphia," published by Rees Welsh & Co., Philadelphia, 1883. No person in the city is more thoroughly acquainted with the history of the bench and bar of Philadelphia, or more competent to discuss this important subject in an effective and comprehensive manner, than Mr. Martin, and with rare generosity he has given the writer permission to extract from his able work all that he desires to make this chapter complete.

was established with three justices, A 4, p. 184. I am indebted for much valuable information respecting the Provincial Courts to Mr. Staughton George, of Harrisburg, Pa. Mr. George is one of the editors of the work issued by the State in 1879, known as "The Duke of Yorke's Laws," etc. It brings the provincial acts down to 1700; but we have no printed acts of the Assembly between 1700 and 1714, since when the annual session laws have been printed, and several complete copies are known to exist. See my "Bibliographical Sketch of the Laws of Pennsylvania," *Legal Intelligencer*, Oct. 6, 1882.

1707.—Names of justices commissioned,—Joseph Growden, C. J., Nov. 20, 1707; Jasper Yeates, Dec. 2, 1707; Samuel Finney, April 8, 1708.

1711.—Under the act of Feb. 28, 1710–11. Four justices were commissioned March 16, 1711,—Joseph Growden, C. J., Samuel Finney, Richard Hill, and Jonathan Dickinson.

1715.—Under the Act of May 28, 1715, Book A 2, p. 109, commissions were issued on June 10, 1715, to Joseph Growden, C. J., William Trent, Jonathan Dickinson, and George Roche. Robert Assheton was appointed associate, June 12, 1716, in the place of Capt. George Roche, who was absent from the country; 2 C. R., 613.

1717.—Commissioned Feb. 15, 1717. From record of commissions,—David Lloyd, C. J., Jasper Yeates, Richard Hill, and William Trent, associates.

Commissioned Sept. 23, 1717. Record of commissions. A change of Governors accounts for two commissions being issued the same year,—David Lloyd, C. J., Jasper Yeates, Richard Hill, and Jonathan Dickinson.

1718.—Commissioned Feb. 15, 1718; 3 C. R., 22, 29, 35, 67, 83, 104–5,—David Lloyd, C. J., Jasper Yeates, Richard Hill, and William Trent. The same justices were recommissioned March 26, 1720, and served until the passage of the act of May 22, 1722, which reduced the number of justices to three. Justice Yeates died in 1721; 3 C. R., 140.

1722.—Commissioned June 2, 1722; see also 3 C. R., 156, 186, and 197. Three justices, act of May 22, 1722,—David Lloyd, C. J., Richard Hill, and Robert Assheton.

1724.—"Votes of Assembly," 2 vol., 401 and 493,—Daavid Lloyd, C. J., Richard Hill, William Trent, and Robert Assheton. Assheton was appointed in place of William Trent, who died Dec. 25, 1724, he being at his decease the chief justice of New Jersey.

1726.—Commissioned Sept. 20, 1726. A new act was passed Aug. 27, 1727. Book A 2, p. 352, and the same justices were recommissioned Sept. 23, 1727. See also 3 C. R., 272 and 273,—David Lloyd, C. J., Richard Hill, and Jeremiah Langhorne, in the place of Robert Assheton, who declined. He being recorder of the city of Philadelphia, *ex officio* justice of the peace and the courts, clerk of the peace, and prothonotary of the Court of Common Pleas of the same city and county, objections were made to his sitting in the Supreme Court as one of the justices. David Lloyd died 6th 2 mo., 1731, aged seventy-eight years, and was buried in Friends' graveyard at Chester. (See Martin's "History of Chester," p. 82.) Richard Hill was a merchant sea-captain. He died Sept. 9, 1739, so says 1 Proud's "History of Pennsylvania," i. p. 473, in a note.

1731.—Commissioned April 9, 1731, Record Commissions and 3 C. R., 426, 439, and 640,—Isaac Norris, C. J., Jeremiah Langhorne, and Dr. Thomas Graeme. James Logan, C. J., was commissioned Aug. 20, 1731, in the place of Isaac Norris, who declined the office, and died June 3, 1735.

1733.—Commissioned April 9, 1733. Recommissioned Dec. 28, 1733,—James Logan, C. J., Jeremiah Langhorne, and Thomas Graeme, associates.

1739.—Commissioned Aug. 13, 1739; 4 C. R., 348,—Jeremiah Langhorne, C. J., Thomas Graeme, and Thomas Griffitts. Chief Justice Langhorne died in 1743, and Mr. Justice Griffitts resigned the same year.

1743.—Commissioned April 5, 1743; 4 C. R., 640,—John Kinsey, C. J., Thomas Graeme, and William Till. Kinsey, C. J., died in 1750. Dr. Thomas Graeme died Sept. 14, 1772, aged about eighty-four years.

1750.—Commissioned Sept. 20, 1750,—William Allen, C. J., Lawrence Growden, and Caleb Cowpland. Mr. Justice Cowpland died at Chester, Pa., on the 12th of the 10 mo., 1757, in the sixty-seventh year of his age, and was buried in Friends' graveyard at that place. For a sketch of the old judge and his family, see Martin's "History of Chester," p. 272–3.

1758.—Commissioned April 8, 1758,—William Allen, C. J., Lawrence Growden, and William Coleman. By an act passed Sept. 29, 1759 (see "Big Peter Miller," p. 115), the justices were to hold office for life or during good behavior, and the above judges were recommissioned April 8, 1760, and again on March 20, 1761. Lawrence Growden was recommissioned in 1761, but not sworn into office; at least his oath is not on file with the others in the records at Harrisburg. He died in 1770, aged seventy-six.

1764.—Commissioned March 21, 1764,—William Allen, C. J., William Coleman, and Alexander Stedman. Alexander Stedman, the president judge of the Court of Common Pleas for the city and county of Philadelphia, was commissioned in place of Coleman on March 21, 1764, and not before that date, as I find that he presided in the Orphans' Court on March 10, 1764. On the 20th of May, 1767, an act was passed increasing the number of judges of the Supreme Court to four, viz., a chief justice and three associates.

1767.—Commissioned Sept. 14, 1767, under the act of May 20, 1767, the bench to consist of four judges, to be justices of the Supreme Court, and justices of the Oyer and Terminer and General Gaol Delivery; 9 C. R., 393,—William Allen, C. J., William Coleman, John Lawrence, and Thomas Willing. In 1768, Mr. Justice Coleman retired from the bench, but the vacancy occasioned by his resignation was not filled until 1774.

1774.—The following gentlemen were commissioned, April 29, 1774 (10 C. R., 173), justices of the Supreme Court of the province, and the same day a new commission was issued, assigning and appointing the same four gentlemen "justices of the Court of Oyer and Terminer and General Gaol Delivery for this province."—Benjamin Chew, C. J., John Lawrence, Thomas Willing, and John Morton, of Chester County.

THE JUSTICES OF THE SUPREME COURT OF THE PROVINCE OF PENNSYLVANIA FROM 1684 TO 1776.[1]

Chief Justices.

Name	Date
Dr. Nicholas Moore, commissioned	4 6mo., 1684
James Harrison,[2] commissioned	14 7mo., 1685
Arthur Cooke, commissioned	31 1mo., 1686
John Simcock,[3] commissioned	21 9mo., 1690
Andrew Robeson, commissioned	May 29, 1693
John Guest, commissioned	20, 6mo., 1701
William Clarke,[4] commissioned	—— —, 1703
John Guest, commissioned	—— —, 1705
Roger Mompesson, commissioned	April 17, 1706
Joseph Growden, commissioned	Nov. 20, 1707
David Lloyd, commissioned	Feb. 15, 1717
Isaac Norris,[5] commissioned	April 3, 1731
James Logan, commissioned	Aug. 20, 1731
Jeremiah Langhorne, commissioned	Aug. 13, 1739
John Kinsey, commissioned	April 5, 1743
William Allen, commissioned	Sept. 20, 1750
Benjamin Chew, commissioned	April 9, 1774

Associate Justices.

Name	Date
William Welch, commissioned	4 6 mo., 1684
William Wood, commissioned	4 6 mo., 1684
Robert Turner, commissioned	4 6 mo., 1684
John Eckley, commissioned	4 6 mo., 1684
William Clarke, commissioned	10 7 mo., 1684
James Claypoole, commissioned	14 7 mo., 1685
Arthur Cooke, commissioned	14 7 mo., 1685
John Cann, commissioned	31 1 mo., 1686
John Simcock, commissioned	20 7 mo., 1686
James Harrison, commissioned	20 7 mo., 1686
Joseph Growden, commissioned	2 2 mo., 1690
Peter Alrichs, commissioned	7 5 mo., 1690
Thomas Wynne, commissioned	7 5 mo, 1690
Griffith Jones, commissioned	21 9 mo., 1690
Edward Blake, commissioned	21 9 mo., 1690
William Salway, commissioned	May 29, 1693
Anthony Morris,[6] commissioned	Aug. 10, 1694
Cornelius Empson,[6] commissioned	about 1698
Edward Shippen,[6] commissioned	about 1699
William Biles,[6] commissioned	about 1699
Robert French,[7] commissioned	20 6 mo., 1701
Caleb Pusey, commissioned	20 6 mo., 1701
Thomas Masters, commissioned	20 6 mo., 1701
Samuel Finney, commissioned	Sept. —, 1702
John Guest, commissioned	April 10, 1704
Jasper Yeates, commissioned	April 10, 1704
William Trent, commissioned	April 10, 1704
Richard Hill, commissioned	March 16, 1711
Jonathan Dickinson, commissioned	March 16, 1711
George Roche, commissioned	June 10, 1715
Robert Assheton, commissioned	June 12, 1716
Jeremiah Langhorne, commissioned	Sept. 20, 1726

[1] This list is made from the Record of Commissions at Harrisburg and other authentic sources, and is believed to be absolutely correct in everything except some few dates of the issuing of commissions.

[2] James Harrison declined, and died the 6th of the 8th mo., 1687, aged fifty-nine.

[3] Simcock died 27th 1st mo., 1703.

[4] Guest declined to serve for some reason, and Clarke was chief justice for two years.

[5] Declined Aug. 20, 1731, and Logan commissioned.

[6] See Martin's "History of Chester," pp. 73 and 74.

[7] Mr. Shaw was recommended for the office, but Mr. French continued.

Dr. Thomas Graeme, commissioned	April 9, 1731
Thomas Griffitts, commissioned	Aug. 13, 1739
William Till, commissioned	April 5, 1743
Lawrence Growdeu, commissioned	Sept. 20, 1750
Caleb Cowpland, commissioned	Sept. 20, 1750
William Coleman,[1] commissioned	April 8, 1758
Alexander Stedman, commissioned	March 21, 1764
John Lawrence, commissioned	Sept. 14, 1767
Thomas Willing, commissioned	Sept. 14, 1767
John Morton,[2] commissioned	April 29, 1774

JUSTICES OF THE SUPREME COURT OF THE COMMONWEALTH OF PENNSYLVANIA.

Chief Justices.

Joseph Reed, declined	March 20, 1777
Thomas McKean,[3] commissioned	July 28, 1777
Edward Shippen, commissioned	Dec. 18, 1799
William Tilghman, commissioned	Feb. 28, 1806
John Bannister Gibson, commissioned	May 18, 1827
Jeremiah S. Black, elected	Dec. 1, 1851
Ellis Lewis,[4] by rotation	Dec. 4, 1854
Walter H. Lowrie,[5] by rotation	Dec. 7, 1857
George W. Woodward, by rotation	Dec. 7, 1863
James Thompson,[6] by rotation	Dec. 2, 1867
John Meredith Read, by rotation	Dec. 2, 1872
Daniel Agnew, by rotation	Dec. 1, 1873
George Sharswood, by rotation	Dec. 4, 1878
Ulysses Mercur, by rotation	Dec. 1, 1883

Puisne Justices.

William Augustus Atlee,[7] commissioned	Aug. 16, 1777
John Evans,[8] commissioned	Aug. 16, 1777
George Bryan,[9] commissioned	April 3, 1780
Jacob Rush, commissioned	Feb. 26, 1784
Edward Shippen, commissioned	Jan. 29, 1791
Jasper Yeates, commissioned	March 21, 1791
William Bradford, commissioned	Aug. 20, 1791
Thomas Smith,[10] commissioned	Jan. 31, 1794
Hugh Henry Brackenridge, commissioned	Dec. 18, 1799
John Bannister Gibson, commissioned	June 27, 1816
Thomas Duncan, commissioned	March 14, 1817
Molton Cropper Rogers, commissioned	April 15, 1821
Charles Huston, commissioned	April 17, 1826
Horace Binney, declined commission	May 18, 1827
John Tod,[11] commissioned	May 25, 1827
Frederick Smith, commissioned	Jan. 31, 1828
John Ross, commissioned	April 16, 1830
John Kennedy, commissioned	Nov. 29, 1830
Thomas Sergeant,[12] commissioned	Feb. 3, 1834
Thomas Burnside, commissioned	Jan. 2, 1845
Richard Coulter, commissioned	Sept. 16, 1846
Thomas S. Bell, commissioned	Dec. 18, 1846
George Chambers, commissioned	April 16, 1851
Jeremiah S. Black, elected	Oct. 14, 1851
Ellis Lewis, elected	Oct. 14, 1851
John Bannister Gibson, elected	Oct. 14, 1851
Walter H Lowrie, elected	Oct. 14, 1851
Richard Coulter, elected	Oct. 14, 1851
George W. Woodward,[13] appointed	May 8, 1852
John C. Knox, appointed	May 23, 1853
Jeremiah S. Black, elected	Oct. 10, 1854
James Armstrong, appointed	April 6, 1857
James Thompson, elected	Oct. 13, 1857
William Strong, elected	Oct. 13, 1857
William A. Porter, appointed	Jan. 20, 1858
Gaylord Church, appointed	Oct. 22, 1858
John M. Read, elected	Oct. 12, 1858
Daniel Agnew, elected	Oct. 13, 1863
George Sharswood, elected	Oct. 8, 1867
Henry W. Williams,[14] appointed	Oct. 26, 1868
Ulysses Mercur, elected	Oct. 8, 1872
Isaac Grantham Gordon, elected	Oct. 14, 1873
Edward M. Paxson,[15] elected	Nov. 2, 1874
Warren J. Woodward,[15] elected	Nov. 2, 1874
James P. Sterrett,[16] appointed	Feb. 26, 1877
John Trunkey, elected	Nov. 7, 1877
Henry Green,[17] appointed	Sept. 29, 1879
Silas M. Clark, elected	Nov. 7, 1882

Standing Masters in Chancery.

Commissioned by the Supreme Court.

John William Wallace	Dec. 20, 1844
John King Findlay[18]	Jan. 11, 1853
Joel Jones	—— ——
Garrick Mallery	July 25, 1861

Prothonotaries of the Supreme Court of Pennsylvania.

Patrick Robinson,[19] in office	11 5 mo., 1685
David Lloyd,[20] appointed	2 8 mo., 1686
Robert Assheton,[21] appointed	Oct. 25, 1701
Joshua Lawrence, "in office for divers years past"	before 1730–31
James Read, in office	June 6, 1748
Edward Shippen, Jr.,[22] in office	Nov. 1, 1762
Edward Burd, appointed	Sept. 1, 1778
Joseph Reed, appointed	Jan. 2, 1800
Joseph Barnes, appointed	May 13, 1809
John Conard, appointed	May 5, 1817
Col. Isaac Franks[23]	Feb. 18, 1819
William Richardson Atlee, appointed	March 9, 1822
Joshua Raybold, appointed	Feb. 7, 1824
William Duane,[24] appointed	April 23, 1829
Stephen Payran, Jr., appointed	Nov. 26, 1835
Henry Witmer, appointed	March 24, 1836
Joseph Smith, appointed	Feb. 2, 1837
Francis W. Hindman[25]	Jan. 1, 1839
Joseph Simon Cohen, appointed	Dec. 16, 1840
Robert Tyler,[26] appointed	Jan. 11, 1853

[1] Mr. Justice Coleman died Jan. 11, 1769, aged sixty-four years.

[2] See "Life of George Read," p. 14, 1754, "John Ross, then attorney-general."

[3] Chief Justice McKean was recommissioned July 29, 1784, and again on July 29, 1791. He was admitted a member of the Middle Temple bar, in England, on May 9, 1758, and was admitted to the bar of the Supreme Court of Pennsylvania on April 17, 1758, which must have been just before he sailed for England.

[4] Died March 19, 1871, aged seventy-two years.

[5] Died Nov. 14, 1876, aged sixty-nine years.

[6] Died Jan. 27, 1874, aged sixty-eight years.

[7] William Augustus Atlee died Sept. 9, 1793.

[8] Judge Evans died Dec. —, 1783.

[9] Recommissioned April 3, 1787; died Jan. 27, 1791, aged sixty years.

[10] For obituary of Judge Smith, see the *Portfolio* for 1809, 2 vol., p. 79, and inscription on his tombstone in Christ Church graveyard, Philadelphia.

[11] Died Feb. 23, 1830, aged fifty-one years.

[12] Resigned Oct. 1, 1846.

[13] Judge Woodward was appointed in place of Richard Coulter, who died April 20, 1852. Elected Oct. 12, 1852, for fifteen years.

[14] Judge Williams was elected in October, 1869, for fifteen years.

[15] In drawing lots, Judge Paxson drew the seniority.

[16] Judge Sterrett was appointed in the place of Williams, deceased, and was afterward elected Nov. 5, 1878. Judge Williams died Feb. 19, 1877.

[17] Judge Green was appointed by the Governor to fill the vacancy created by the death of Judge Warren J. Woodward, on Sept. 5, 1879, aged sixty years, and on Nov. 2, 1880, was elected to serve for fifteen years.

[18] The court commissioned Judge Findlay as "Standing Auditor and Master in Chancery," and on July 25, 1861, Garrick Mallery was appointed "Master and Examiner in Equity," in the place of Joel Jones, deceased. I could not find the date of the latter's appointment on the minutes.

[19] The Historical Society of Pennsylvania have the MS. minutes of the County Court of Philadelphia, in Patrick Robinson's handwriting. I identify them as of that court by the case of Rambo, 1 C. R., 106. For Pat Robinson's troubles, etc., see 1 C. R., 86, 87, 89, 90, 94, 95, 101, 108, 144, and 145.

[20] David Lloyd was commissioned on the 2d of the 8th month, 1686 (see 1 C. R., 145), in place of Pat Robinson, dismissed.

[21] Robert Assheton was appointed, Oct. 25, 1701, town clerk, clerk of the peace and clerk of the court, or courts, by William Penn. See "City Charter," 2 Proud, Appendix, Part 1, p. 45. On Sept. 15, 1726, he said he had been clerk and prothonotary of Philadelphia for about twenty-six years. He died June 5, 1727. It is very probable that the above appointment by Penn carried with it the clerkship of the Supreme Court of the province. At all events he was certainly in office as clerk of the Supreme Court June 6, 1709. 2 C. R., 474.

[22] Edward Shippen, Jr., was in office, and signs himself as prothonotary, Sept. 24, 1765. See 4 "Pa. Archives," 243. He was in office before Nov. 1, 1762. 9 C. R., 5.

[23] Died March 3, 1822, aged sixty-three.

[24] By the Act of April 14, 1834, for the purpose of holding the Supreme Court, the commonwealth was divided into four districts, denominated the Eastern, Western, Northern, and Middle Districts, and a prothonotary or clerk appointed in each district. I have no records of any other district than the Eastern. By the minutes of the Middle District, Wallace De Witt was the prothonotary in office May 2, 1864. Robert Snodgrass, appointed May 1, 1871, and William Pearson, Jan. 11, 1882.

[25] Died Nov. 12, 1840, aged thirty-four.

[26] Robert Tyler was a son of John Tyler, of Virginia, one of the Presidents of the United States. He married a daughter of the distinguished

James Ross Snowden, appointed	May	6, 1861

Frederick Carroll Brewster	Oct.	26, 1869
Samuel E. Dimmick	Jan.	22, 1873
George Lear	Dec.	6, 1875
Henry W. Palmer	Feb.	25, 1879

actor, Mr. Cooper, and abandoned his position to take part with his native State when she attempted to secede from the Union, in 1861.

[1] Moore declined at first, but afterward accepted. He was appointed in the first place attorney-general for the king; 1 C. R., 519, and afterward by Penn. 1 "Logan Papers," 60.

[2] In Futhey & Cope's "History of Chester County," and 9 "Pa. Archives," 631 (2d series), the following are given as attorneys-general of the province to 1717: "Oct. 25, 1683, John White; Jan. 16, 1685, Samuel Hersent (commission revoked); Nov. 17, 1685, John White (special), April 24, 1686, David Lloyd; May 19, 1868, John Moore; 1700, William Assheton; 1701, Par Parmyter; April 5, 1705, George Lowther; June 24, 1708, Thomas Clarke; 1710, Robert Quarry; March 5, 1717, Henry Wilson." William Assheton, 1700, died September, 1723, aged thirty-three years. He was judge of the Vice Admiralty then. He was born about 1680, and it must have been his father, Robert Assheton, who was, if at all, only for a brief period, attorney-general in 1700. I am afraid that the error as to William Assheton has its origin in my "History of Chester," 472, and I can recall no authority for its insertion there. "In the year 1700, James Logan speaks of David Lloyd as the then attorney-general," 1 "Watson's Annals," 521. John Moore was attorney-general Dec. 19, 1700; 2 C. R., 11.

[3] Par Parmyter was Penn's cousin, and appointed before this date, but does not seem to have remained long in the province, as Moore was again in office in 1703. See "Logan Papers," 1 vol. 38, 66, 113, 196, and 314. See "State Papers," 4 vol., "Memoirs of the Historical Society," p. 333.

[4] In 9 "Pennsylvania Archives" (2d series), p. 631, Henry Wilson is given as commissioned attorney-general on March 5, 1717, to succeed Thomas Clarke. Previously this attorney-general's name had been furnished me as Thomas Wilson, and as being from the Records of Commissions at Harrisburg. Not being able to discover that any lawyer of either name lived in the province at the period indicated, I asked the secretary of internal affairs to examine the Records of Commissions. He replied by his deputy, April 5, 1881, "We have made a very thorough search, not only through the records of this department, but also through those of the secretary of state, and are unable to find that 'Henry Wilson' or 'Thomas Wilson' were attorneys-general at any period." In the "Catalogue of the Alumni of the University of Pennsylvania," Thomas Kittera, a graduate of 1805, is noticed as attorney-general of Pennsylvania. If he ever held the office the Record of Commissions at Harrisburg would have shown it.

JUSTICES OF THE PEACE OF THE COUNTY COURTS OF PHILADELPHIA COUNTY, FROM 1684 TO 1790.

In this record, in spelling the names of justices, I have followed their signatures in possession of the Historical Society of Pennsylvania. It will be observed that the members of the Provincial Council are not on the Record of Commissions, although they were *ex officio* justices of the peace and of the courts. See 1 C. R., 497 (2d edition), Sept. 28, 1696.

1682–83, January 2.—From the original precept to the sheriff. Nicholas More, president, Thomas ffairman and Laurence Cock.

1684.—William Welsh, General Commission of the Peace, appointed 29th 3d mo., 1684. He died, and (1 C. R., 66) William Clark was appointed general justice, 19th 6th mo., 1684, and the following justices: William Clayton, Robert Turner, and Francis Daniel Pastorius.

1685.—Appointed 6th 9th mo.; 1 C. R., 112 and 127, and commissioned Justices of the Peace, and of the Courts of the County of Philadelphia,—James Claypoole, William Frampton, Humphrey Murray, William Salway, John Bevan, Lacey Cock, William Wardner, Sr., Dr. John Goodsonn, Robert Turner, and John Moon.

1686.—Appointed; 1 C. R., 134 and 143,—Christopher Taylor, 17th 3d mo., 1686; Barnabas Wilcocks and William Southebe, 20th 7th mo., 1686. William Clarke, "Justice for yᵉ Province and Territories, 2nd 8th mo., 1686;" 1 C. R., 145.

1687.—Appointed 18th 3d mo.; 1 C. R., 162,—John Eckley, Thomas Ellis, John Goodsonn, William Southebe, Barnabas Wilcocks, Joshua Cart, and John Shelton.

1688.—Commissioned 12th day of 11th month (see Commission in Archives of the American Philosophical Society, at Philadelphia),—William Markham, Robert Turner, John Eckley, John Goodsonn, Samuel Carpenter, Griffith Jones, Samuel Richardson, William Salway, Lasse Cock, Griffith Owen, Francis Rawle, and John Holme.

1689–90.—Appointed 2d 11th mo.; 1 C. R., 278,—Thomas Lloyd, John Eckley, Robert Turner, William Salway, Barnabas Wilcocks, Francis Rawle, Lawrence Cock, and John Holme.

1690.—Commissioned 4th 9th mo., 1690—"Justices of the Quorum, Common Pleas." Record of Commissions, Harrisburg,—William Markham, Thomas Ellis, Dr. John Goodsonn, and Samuel Jenings.

1690.—Appointed 6th 7th mo.; 1 C. R., 303,—Arthur Cooke, added to the Commission.

1692.—6th Hazard's "Register," 281,—Arthur Cooke, Samuel Richardson, Anthony Morris, and Robert Ewer.

1693, May 5th.—William Salway, Esq'., "did solemnlie promise to execute the Office of Justice of the Peace throughout the whole province and Countrey;" 1 C. R., 331. Appointed May 6, 1693,—Anthony Morris, Jacob Hall, Francis Rawle, Francis Danl. Pastorius, Andrew Bankson, Griffith Owen, a former Justice, did decline. May 10th,—Humphrey Waterman. July 18th,—Joshua Carpenter.

1697.—Mentioned Feb. 12, 1697–98; 1 C. R., 498,—Edward Shippen, Anthony Morris, Charles Sober, John Farmer, James ffox, and Samuel Richardson.

1700.—Mentioned 19th 10 br. in 2 C. R., 4,—Edward Shippen, Samuel Richardson, Nathan Stanbury, and John Jones.

1701.—Commissioned 2d 7th mo., 1701. See Record of Commissions,—John Guest, Samuel Finney, Edward Farmer, Rowland Ellis, Robert French, Andrew Bankson, Samuel Richardson, Nathan Stanbury, and John Jones.

1703, 7th 7th mo.—1 "Logan Papers," 236. Mentioned as the only Judges sworn,—John Guest, Samuel Finney, Edward Farmer, and Andrew Bankson.

1704.—Appointed 4th 7 mo.; 2 C. R., 163,—John Guest, Samuel Finney,

[5] Died May 16, 1862. [6] Died Aug. 28, 1880.
[7] Died Feb. 14, 1882, aged seventy-three.

George Roche, Samuel Richardson, Nathan Stanbury, John Jones, Joseph Pidgeon, Edward Farmer, Rowland Ellis, and Andrew Bankson, Jr.

1706.—Commissioned 11th mo., as Justices of the Court of Common Pleas. See Record of Commissions. Day of the month not recorded,—Joseph Growden, William Biles, Samuel Dark, Joseph Kirkbride, Willoughby Warder, Jeremiah Langhorne, and Thomas Stevenson.

1707.—Commissioned March 3d, Justices of the Common Pleas, Quarter Sessions, and Equity. See Record of Commissions,—Joseph Growden, Samuel Finney, Nathan Stanbury, John Jones, George Roche, Edward Farmer, Joseph Pidgeon, Rowland Ellis, and Peter Bankson.

1715.—Commissioned June 4th. See Record of Commissions and 2 C. R., 626,—Richard Hill, Benjamin Vining, Isaac Norris, James Logan, Nathan Stanbury, Edward Farmer, Rowland Ellis, Josiah Rolfe, John Swift, Samuel Carpenter, Joseph Fisher, and Robert Jones. The mayor and recorder were added to the commission always; 2 C. R., 626. Richard Hill was mayor and Robert Assheton recorder in 1715, but the latter is not mentioned in the Record of Commissions.

1715.—Commissioned September 1st. See Record of Commissions. No reason is given for two commissions this year,—Richard Hill, Isaac Norris, James Logan, Nathan Stanbury, Edward Farmer, Rowland Ellis, Benjamin Vining, Josiah Rolfe, Richard Anthony, John Swift, and Robert Jones.

1717.—Commissioned September 2d. Record of Commissions, 3 C. R., 17,—Richard Hill, Isaac Norris, James Logan, Anthony Palmer, Nathan Stanbury, Edward Farmer, Rowland Ellis, Benjamin Vining, Josiah Rolfe, John Swift, Robert Jones, Clement Plumsted, and Morris Morris.

1718.—Commissioned August 19th, and recommissioned Nov. 29, 1718; 3 C. R., 40, and Record of Commissions,—Richard Hill, Isaac Norris, James Logan, Jonathan Dickinson, Robert Assheton, Anthony Palmer, Nathan Stanbury, Edward Farmer, Rowland Ellis, Benjamin Vining, Josiah Rolfe, Clement Plumsted, John Swift, Robert Jones (Merion), Robert Jones (North Wales), Andrew Hamilton, Samuel Perez, Samuel Carpenter, Richard Moore, and Charles Read.

1719.—Commissioned December 5th; from Record of Commissions,—Richard Hill, James Logan, Isaac Norris, Jonathan Dickinson, William Fishbourne, Robert Assheton, Anthony Palmer, Nathan Stanbury, Edward Farmer, Rowland Ellis, Benjamin Vining, Clement Plumsted, John Swift, Robert Jones (Merion), Robert Jones (North Wales), Samuel Perez, Samuel Carpenter, Richard Moore, and Charles Read.

1712.—Commissioned June 4th; from Record of Commissions,—Richard Hill, James Logan, Isaac Norris, Jonathan Dickinson, William Fishbourne, Robert Assheton, Anthony Palmer, Rowland Ellis, Benjamin Vining, Clement Plumsted, John Swift, Robert Jones (North Wales), Samuel Carpenter, Charles Read, Francis Rawle, and Robert Fletcher.

1723.—Commissioned February 18th. Records of Commissions,—Richard Hill, James Logan, Isaac Norris, Robert Assheton, Anthony Palmer, William Fishbourne, Josiah Rolfe, Edward Farmer, Benjamin Vining, Clement Plumsted, John Swift, Robert Jones (North Wales), Samuel Carpenter, Charles Read, Rees Thomas, Francis Rawle, Robert Fletcher, Richard Alborough, Thomas Lawrence, Evan Owen, John Cadwalader, and Edward Roberts.

1725.—Commissioned May 12th. Record of Commissions,—Richard Hill, Isaac Norris, Robert Assheton, Anthony Palmer, William Fishbourne, Edward Farmer, Clement Plumsted, John Swift, Robert Jones (North Wales), Samuel Carpenter, Charles Read, Rees Thomas, Francis Rawle, Robert Fletcher, Robert Fisher, Thomas Lawrence, Evan Owen, John Cadwalader, and Edward Roberts.

1726.—Commissioned September 1st; 3 C. R., 271, 298, and Orphans' Court Docket, No. 1,—Isaac Norris, James Logan, Anthony Palmer, Samuel Preston, William Fishbourne, Edward Farmer, Clement Plumsted, John Swift, Charles Read, Robert Fletcher, Thomas Lawrence, Evan Owen, Edward Roberts, Thomas Fenton, Richard Harrison, Joseph Ashton, Derick Jansen (Germantown), and Owen Evan (North Wales), and on Sept. 15, 1726 (3 C. R., 273),—Robert Assheton; but not to sit on the bench, as he was clerk of the peace and prothonotary of the Court of Common Pleas.

1727.—Commissioned September 2d,—Isaac Norris, James Logan, Anthony Palmer, William Fishbourne, Edward Farmer, John Swift, Clement Plumsted, Charles Read, Thomas Lawrence, Edward Roberts, Thomas Fenton, Richard Harrison, Joseph Ashton, Derick Jansen, and Owen Evan.

1732-33.—Appointed March 5th; 3 C. R., 528,—Isaac Norris, Clement Plumsted, Thomas Lawrence, Samuel Hasell, Edward Farmer, Charles Read, Edward Roberts, Richard Harrison, Derick Jansen, Owen Evan, William Allen, George Boone, Thomas Griffitts, George Fitzwater, Richard Martin, Lassey Bore, John Pawlin, Mordecai Lincoln, and the mayor and recorder of the city of Philadelphia for the time being.

1733.—Commissioned December 3d,—Isaac Norris, Clement Plumsted, Thomas Lawrence, Samuel Hasell, Thomas Griffitts, Charles Read, Edward Farmer, Edward Roberts, Richard Harrison, Derick Jansen, Owen Evan, William Allen, George Boone, George Fitzwater, Richard Martin, John Pawlin, Mordecai Lincoln, Evan Thomas, Henry Pastorius, and the mayor and recorder of the city.

1738.—Appointed November 22d; 4 C. R., 312,—Clement Plumsted, Thomas Lawrence, Samuel Hasell, Ralph Assheton, Thomas Griffitts, Edward Farmer, Edward Roberts, Richard Harrison, Derick Jansen, William Allen, George Boone, George Fitzwater, James Hamilton, Thomas Fletcher, William Till, Cadwalader Foulke, Abram Taylor, Jonathan Robeson, Owen Evan (Limerick), Edward Reece (Manhatawney), David Humphreys (Merion), and the mayor and recorder of Philadelphia for the time being.

1741.—Appointed April 4th; 4 C. R., 482. Commissioned April 10, 1741. Record of Commissions,—Clement Plumsted, Thomas Lawrence, Samuel Hasell, Ralph Assheton, the mayor and recorder of Philadelphia, Edward Roberts, Richard Harrison, William Allen, George Boone, George Fitzwater, James Hamilton, William Till, Abraham Taylor, Jonathan Robinson, Owen Evan (Limerick), Isaac Leech, Benjamin Shoemaker, Joseph Paschall, Joshua Maddox, Robert Strettell, and Derrick Keyser. In the appointments appears the name of Griffith Llewellyn, but his name is not in the commission.

1745.—Commissioned May 27th; 4 C. R., 762,—Thomas Lawrence, Samuel Hasell, Ralph Assheton, Abram Taylor, Robert Strettell, the mayor and recorder, William Allen, Richard Harrison, George Boone, George Fitzwater, Jonathan Robinson (Robeson in the Commission), Owen Evan (Limerick), Benjamin Shoemaker, Joshua Maddox, Septimus Robinson, Griffith Llewellyn, Derrick Keyser, Edward Shippen, Joseph Turner, Charles Willing, Thomas Venables, Nicholas Ashton, Thomas Fletcher, Samuel Marsh (Whitemarsh), Thomas Yorke, James Delaplaine, Francis Parvin, John Potts and Anthony Lee, Esquires.

1749.—Appointed June 30th; 5 C. R., 388,—Thomas Lawrence, Samuel Hasell, Abram Taylor, Robert Strettell, Benjamin Shoemaker, Joseph Turner, Thomas Hopkinson, William Logan, the mayor and recorder of the city, William Allen, Jonathan Robinson, Owen Evan, Joshua Maddox, Septimus Robinson, Edward Shippen, Charles Willing, Thomas Venables, Nicholas Ashton, Thomas Fletcher, Samuel Morris (White Marsh), Thomas Yorke, Francis Parvin, John Potts, Anthony Lee, William Coleman, Benjamin Franklin, Rowland Evans, and John Smith (son-in-law of James Logan).

1750.—Deed-Book H, No. 13, page 256,—Samuel Mifflin.

1751.—Commissioned March 25th. Record of Commissions,—Jonah Seely and Conrad Weiser.

1752.—Appointed by Council May 25, 1752; 5 C. R., 572, and commissioned by the Governor May 30, 1752,—Thomas Lawrence, Robert Strettell, Benjamin Shoemaker, Joseph Turner, William Logan, Owen Evan, Joshua Maddox, Septimus Robinson, Edward Shippen, Charles Willing, Nicholas Ashton, Thomas Fletcher, John Potts, William Coleman, Benjamin Franklin, John Smith, Rowland Evans, William Plumsted, Thomas White, John Mifflin, Henry Antes, Henry Pawling. Samuel Ashmead, John Jones, Abraham Dawes, and, August 1st, Charles Brockden.

1757.—Appointed November 27th; 7 C. R., 769,—William Coleman (promoted to associate justice of the Supreme Court April 8, 1758), Joshua Maddox, Septimus Robinson, John Potts, Rowland Evans, William Plumsted, Henry Pawling. Samuel Ashmead, John Jones, William Peters, Atwood Shute, Alexander Stedman, Samuel Mifflin, Jacob Duché, Isaac Jones, Evan Thomas, John Roberts, Archibald McLean, Enoch Davis, William Dewees, John Coplin, George Evans, and Isaac Ashton.

1759.—Commissioned October 20th,—James Humphreys and John Hughes. These are the only names on the Record of Commissions at this date. James Humphreys was a notary public, and was made a justice of the peace to accommodate him in that office, which he held for a long series of years; see 10 C. R., 46. On Feb. 8, 1761, five writs of *supersedeas* were issued to Thomas Yorke, Rowland Evans, John Potts, Samuel Wharton, and John Hughes, late judges of the Common Pleas, forbidding them exercising the powers granted them by Governor Denny; 8 C. R., 575. They were commissioned only as judges of the Common Pleas on Oct. 20, 1759; no doubt they held the Quarter Sessions. In the Record of Commissions Samuel Wharton heads the list, and would, therefore, appear to be the prior judge, but I have followed the "Colonial Records," as above, and as will appear in the list of the justices and judges of the Common Pleas. See also the Orphans' Court Dockets, wherein it is sho[illegible]s Yorke and his associates held that court from Dec. 8, [illegible]perseded.

1761.—Commissioned February 28th; 8 C. R., 575,—Alexander Stedman (advanced to associate justice of the Supreme Court March 20, 1761), William Plumsted, Septimus Robinson, John Potts, Jr., Rowland Evans, Henry Pawling, Samuel Ashmead, John Jones (Germantown), William Peters, Samuel Mifflin, Jacob Duché, Isaac Jones, William Coxe, Thomas Willing, Daniel Benezet, Edward Pennington, Samuel Shoemaker, William Parr, Joshua Howell, Evan Thomas, John Roberts (Miller), Archibald McLean, Enoch Davis, William Dewees, John Coplin, George Evans, Isaac Ashton, Henry Harrison, James Coultas, John Trump, John Bull, and William Mayberry, and, on March 4th, James Humphreys. In 8 C. R., 575, will be found the list of gentlemen recommended for justices to the Governor on Feb. 28, 1761, which it will be perceived, differs from the foregoing in this, Jacob Hall is omitted and William Parr substituted.

1764.—Commissioned November 19th,—William Plumsted, Septimus Robinson, Samuel Ashmead, William Peters, Samuel Mifflin, Jacob Duché, Isaac Jones, William Coxe, Thomas Willing, Daniel Benezet, Samuel Shoemaker, William Parr, Evan Thomas, Archibald McLean, William Dewees, Henry Harrison, James Coultas, Jacob Hall, John Bull. Thomas Lawrence, Jr., John Lawrence, George Bryan, William Humphreys, Frederick Antes, Peter Evans, James Biddle, Alexander Edwards, and James Humphreys.

1765.—Commissioned January 17th,—Enoch Davis.

1767.—John Allen, commissioned March 20th; and Charles Jolly, Sept. 14, 1767.

1768.—Charles Batho, commissioned June 13th.

1770.—Commissioned June 4th,—Isaac Jones, Samuel Ashmead, Samuel Mifflin, Jacob Duché, Samuel Shoemaker, William Parr, Evan Thomas, Archibald McLean, William Dewees, Jacob Hall, Thomas Lawrence. John Bull, George Bryan, Frederick Antes, James Biddle, Alexander Edwards, John Allen, Charles Jolly, James Young, Charles Batho, John Gibson, Peter Chevalier, Peter Knight, and John Potts; and, on June 21st, James Humphreys, the notary public.

1771.—John Moore, commissioned August 1st, and on August 20th, Matthew Clarkson, the notary public.

1772.—Commissioned January 1st; 10 C. R., 46,—Peter Miller, the notary public, to aid him in his office, etc.

1772.—Commissioned April 27th,—Isaac Jones, Samuel Ashmead, Samuel Mifflin, Jacob Duché, Samuel Shoemaker, William Parr, Archibald McLean, John Bull, George Bryan, Frederick Antes, James Biddle, Alexander Edwards, John Allen, James Young, John Gibson, John Potts, John Moore, Thomas Rutter, James Diemer, Samuel Potts, George Clymer, Lindsay Coats, Charles Bensel, and Samuel Irwin, and the following notaries public, to assist them in their office, viz.: James Humphreys, Matthew Clarkson, Peter Miller, and John Ord; and on May 4th, Samuel Powel and Henry Hill; 10 C. R., 47.

1773.—Justices of the Quarter Sessions and Common Pleas. From "Aitkin's Register," 1773, p. 30,—Isaac Jones, president; Samuel Ashmead, Samuel Mifflin, Jacob Duché, Samuel Shoemaker, William Parr, Archibald McClean, John Bull, George Bryan, Frederick Antes, James Biddle, Alexander Edwards, John Allen, James Young, John Gibson, John Potts, John Moore, Thomas Rutter, James Diemer, Samuel Potts, George Clymer, Samuel Irwin, Lindsay Coates, James Humphreys, Matthew Clarkson, Peter Miller, John Ord, Samuel Powell, and Henry Hill.

1774.—Justices of the Common Pleas and Quarter Sessions. From "Aitkin's Remembrancer,"—Samuel Ashmead, president; and the above justices, excepting Isaac Jones, and with Alexander Wilcocks, commissioned March 4th; 10 C. R., 155.

1776.—By ordinance of the Convention of September 3d. See "Minutes of the Convention," page 73,—Benjamin Franklin, John Dickinson, George Bryan, James Young, James Biddle, John Morris, Jr., Joseph Parker, John Bayard, Sharpe Delaney, John Cadwalader, Joseph Cowperthwaite, Christopher Marshall (the elder), Francis Gurney, Robert Knox, Matthew Clarkson, William Coats, William Ball, Philip Boehm, Francis Casper Hassenclever, Thomas Cuthbert (the elder), Moses Bartram, Jacob Shreiner, Joseph Moulder, Jonathan Paschall, Benjamin Paschall, Benjamin Harbeson, Jacob Bright, Henry Hill, Samuel Ashmead, Frederick Antes, Samuel Irwin, Alexander Edwards, Seth Quee, Samuel Potts, Rowland Evans, Charles Bensel, and Peter Evans.

1777.—Commissioned March 28th; 11 C. R., 104,—James Young, John Ord, Joseph Redman, Sr., Isaac Howell, George Henry, Plunket Fleeson, Benjamin Paschall, and Philip Boehm.

1777.—Commissioned June 6th; 11 C. R., 215,—Samuel Ashmead, George Bryan, James Young, John Moore, John Ord, Jonathan Paschall, Joseph Redman, Sr., Peter Evans, George Henry, Plunket Fleeson, Isaac Howell, Benjamin Paschall, Seth Quee, Andrew Knox, John Knowles, David Todd, Philip Boehm, Zebulon Potts, and John Richards, and, on July 25th, William McMullin.

1778.—July 6th, Jonathan Bayard Smith; October 21st, David Kennedy; November 10th, Henry Naglee, Joseph Cowperthwaite; December 16th, John Miller and Michael Croll.

1779.—Commissioned January 5th,—William Ball, William Adcock, Samuel Morris, Jr., and, May 7th, William Rush.

1780.—Commissioned June 7th,—John Howell; 12 C. R., 379.

1783.—Commissioned July 12th,—William Dean; 13 C. R., 625.

1784.—14 C. R., 54, etc.—Frederick Augustus Muhlenberg, Samuel Wharton, Isaac Howell, John Knowles, William Masters, Manuel Eyre, John Richards, Henry Scheetz, Plunket Fleeson, John Gill, and Jonathan Penrose.

1785.—John Nice, James Loughead, Joseph Wharton, and Edward Shippen; 14 C. R., 316, 344, 381.

1786.—14 C. R., 629, 660, 669, 672; 15 C. R., 17, 26,—Dr. Enoch Edwards, William Craig, William Pollard, Matthew Holgate, John Gill, Lewis Weiss, and William Rush.

1787.—15 C. R., 160, 192, 272,—February 9th, Alexander Tod; April 7th, Matthew Irwin; and, September 12th, Robert McKnight.

1788.—January 10th, William Nichols; March 31st, Joseph Ferree; April 3d, Jacob Weaver; May 9th, Joseph Wharton and William Masters to be justices of the Common Pleas; 15 C. R., 452; August 26th, William Coats; August 29th, William Craig; September 22d, Clement Biddle; and November 25th, James Biddle.

I give below a list of the justices who held the County Courts of Philadelphia until Sept. 1, 1791, and, to avoid useless repetition of names, give only the name of each justice once, and the date of the year when first commissioned, although many were reappointed several times, and some served through a long series of years. For the term of service, see the Record of Commissions heretofore given. It appears that four justices were a quorum. See 2 C. R., p. 4. In the old Dockets of the Orphans' Court I noticed that there were always four justices present at every sitting of the court, never any less, seldom any more:

PRESIDING JUSTICES OF THE COUNTY COURT OF QUARTER SESSIONS.

Name	Date
Nicholas More, in office	Jan. 2, 1682–83
William Welch, commissioned	29 3 mo., 1684
William Clarke, commissioned	19 6 mo., 1684
James Claypoole, commissioned	6 9 mo., 1685
Christopher Taylor,[1] commissioned	17 3 mo., 1686
William Clarke, commissioned	2 8 mo., 1686
John Eckley, commissioned	17 6 mo., 1687
William Markham, commissioned	10 11 mo., 1688
Thomas Lloyd,[2] commissioned	2 11 mo., 1689
William Markham, commissioned	4 9 mo., 1690
William Salway, commissioned	May 5, 1691
Anthony Morris,[3] commissioned	May 29, 1693
Edward Shippen, commissioned	Feb. 12, 1697–98
John Guest, commissioned	2 7 mo., 1701
Joseph Growden, commissioned	— 11 mo., 1706
Richard Hill, commissioned	June 4, 1715
James Logan,[4] commissioned	Sept. 2, 1723
Isaac Norris,[5] commissioned	Sept. 21, 1726
Clement Plumsted, commissioned	June 11, 1734
Thomas Lawrence,[6] commissioned	May 27, 1745
Robert Strettell, commissioned	April 26, 1754
William Coleman, commissioned	Nov. 27, 1757

[1] Died before Sept. 21, 1686.

[2] Died 10th 7 mo., 1694, aged forty-five.

[3] Salway was promoted to the Supreme Court on May 29, 1693, and Morris on Aug. 10, 1694, but the latter seems to have retained his position in the lower courts, as will be seen hereafter; he died 23d 8 mo., 1721, aged sixty-seven.

[4] "James Logan and his associates, justices of the Court of General Quarter Sessions of the Peace and Common Pleas for the city and county of Philadelphia," Sept. 2, 1723. See printed pamphlet, entitled "A Charge to the Grand Jury," etc., printed 1723, by Andrew Bradford, with the address to the grand jury.

[5] See Orphans' Court Docket, No. 2. Isaac Norris last sat on the bench on April 22d, and on June 11, 1734, Clement Plumsted heads the list of justices.

[6] Thomas Lawrence died April 25, 1754. On April 8, 1758, Coleman was promoted to the Supreme Court, and Alexander Stedman took his place then, for we find him presiding in the Orphans' Court on Dec. 9, 1758, and called "President of the Court of Common Pleas," June 2, 1759; 8 C. R., 339. On March 21, 1764, Judge Stedman was advanced to the Supreme Court in place of Mr. Justice Coleman, who declined to be recommissioned, and William Plumsted, next in the commission of Feb 28, 1761, to Stedman, no doubt took his place as president.

Alexander Stedman,[1] commissioned	April 8, 1758
William Plumsted, commissioned	March 21, 1764
Septimus Robinson,[2] commissioned	Aug. 14, 1765
Samuel Ashmead, commissioned	Jan. 16, 1767
Isaac Jones, commissioned	June 4, 1770
Samuel Mifflin,[3] commissioned	Dec. 6, 1773
James Young, commissioned	March 28, 1777
Samuel Ashmead, commissioned	June 6, 1777
John Ord, commissioned	March 1, 1779
John Moore, commissioned	Sept. 6, 1779
John Ord, commissioned	Sept. 4, 1780
Plunket Fleeson, commissioned	Nov. 18, 1780
Edward Shippen, commissioned	Oct. 4, 1785
Dr. Enoch Edwards, commissioned	Aug. 15, 1789

JUSTICES OF THE COURT OF COMMON PLEAS, QUARTER SESSIONS OF THE PEACE, AND ORPHANS' COURT FOR THE CITY AND COUNTY OF PHILADELPHIA FROM 1684 TO 1789.

Nicholas More, commissioned	Jan. 2, 1682-83
Thomas Fairman, commissioned	Jan. 2, 1682-83
Laurence Cock, commissioned	Jan. 2, 1682-83
William Welch, commissioned	29 3 mo., 1684
William Clarke, commissioned	19 6 mo., 1684
William Clayton, commissioned	19 6 mo., 1684
Robert Turner, commissioned	19 6 mo., 1684
Francis Daniel Pastorius, commissioned	19 6 mo., 1684
James Claypoole, commissioned	6 9 mo., 1685
William Frampton, commissioned	6 9 mo., 1685
Humphrey Murrey, commissioned	6 9 mo., 1685
William Salway, commissioned	6 9 mo., 1685
John Bevan, commissioned	6 9 mo., 1685
William Warden, Sr., commissioned	6 9 mo., 1685
John Moon, commissioned	6 9 mo., 1685
Dr. John Goodsonn, commissioned	6 9 mo., 1685
Christopher Taylor, commissioned	17 3 mo., 1686
Barnabas Wilcocks, commissioned	20 7 mo., 1686
William Southebe, commissioned	20 7 mo., 1686
John Eckley, commissioned	18 3 mo., 1687
Thomas Ellis, commissioned	18 3 mo., 1687
Joshua Cart, commissioned	18 3 mo., 1687
John Shelton, commissioned	18 3 mo., 1687
William Markham, commissioned	12 11th, 1688
Samuel Carpenter, commissioned	12 11th, 1688
Griffith Jones, commissioned	12 11th, 1688
Samuel Richardson, commissioned	12 11th, 1688
Griffith Owen, commissioned	12 11th, 1688
Francis Rawle, commissioned	12 11th, 1688
John Holme, commissioned	12 11th, 1688
Thomas Lloyd, commissioned	2 11, 1689-90
Arthur Cooke, commissioned	6 7 mo., 1690
Samuel Jenings, commissioned	4 9 mo., 1690
Anthony Morris, commissioned	— —, 1692

Jacob Hall, commissioned	May 6, 1693
Andrew Bankson, commissioned	May 6, 1693
Humphrey Waterman, commissioned	May 10, 1693
Joshua Carpenter, commissioned	July 18, 1693
Edward Shippen, commissioned	Feb. 12, 1697-98
Charles Sober, commissioned	Feb. 12, 1697-98
John Farmer, commissioned	Feb. 12, 1697-98
James Fox, commissioned	Feb. 12, 1697-98
Nathan Stanbury, commissioned	19 10 br 1700
John Jones, commissioned	19 10 br 1700
John Guest, commissioned	2 7 mo., 1701
Samuel Finney, commissioned	2 7 mo., 1701
Edward Farmer, commissioned	2 7 mo., 1701
Richard Ellis, commissioned	2 7 mo., 1701
Robert French, commissioned	2 7 mo., 1701
George Roche, commissioned	4 7 mo., 1704
Joseph Pidgeon, commissioned	4 7 mo., 1704
Andrew Bankson, Jr., commissioned	4 7 mo., 1704
Joseph Growden, commissioned	— 11, 1706
William Biles, commissioned	— 11, 1706
Samuel Dark, commissioned	— 11, 1706
Joseph Kirkbride, commissioned	— 11, 1706
Willoughby Warder, commissioned	— 11, 1706
Jeremiah Langhorne, commissioned	— 11, 1706
Thomas Stevenson, commissioned	— 11, 1706
Peter Bankson, commissioned	March 3, 1707
Richard Hill, commissioned	June 4, 1715
Benjamin Vining, commissioned	June 4, 1715
Isaac Norris, commissioned	June 4, 1715
James Logan, commissioned	June 4, 1715
Josiah Rolfe, commissioned	June 4, 1715
John Swift, commissioned	June 4, 1715
Joseph Fisher, commissioned	June 4, 1715
Robert Jones, commissioned	June 4, 1715
Robert Assheton, commissioned	June 4, 1715
Richard Anthony, commissioned	Sept. 1, 1715
Anthony Palmer, commissioned	Sept. 2, 1717
Clement Plumsted, commissioned	Sept. 2, 1717
Morris Morris, commissioned	Sept. 2, 1717
Jonathan Dickinson, commissioned	Aug. 19, 1718
Robert Jones (Merion), commissioned	Aug. 19, 1718
Robert Jones (North Wales), commissioned	Aug. 19, 1718
Andrew Hamilton, commissioned	Aug. 19, 1718
Samuel Perez, commissioned	Aug. 19, 1718
Richard Moore, commissioned	Aug. 19, 1718
Charles Read, commissioned	Aug. 19, 1718
William Fishbourne, commissioned	Dec. 5, 1719
Robert Fletcher, commissioned	June 4, 1722
Rees Thomas, commissioned	Feb. 18, 1723
Richard Alborough, commissioned	Feb. 18, 1723
Thomas Lawrence, commissioned	Feb. 18, 1723
Evan Owen, commissioned	Feb. 18, 1723
John Cadwalader, commissioned	Feb. 18, 1723
Edward Roberts,[4] commissioned	Feb. 18, 1723
Robert Fisher, commissioned	May 12, 1725
Samuel Preston,[5] commissioned	Sept. 1, 1726
Thomas Fenton, commissioned	Sept. 1, 1726
Richard Harrison, commissioned	Sept. 1, 1726
Joseph Ashton, commissioned	Sept. 1, 1726
Derick Jansen, commissioned	Sept. 1, 1726
Owen Evan (North Wales), commissioned	Sept. 1, 1726
Samuel Hasell, commissioned	March 5, 1732-33
William Allen, commissioned	March 5, 1732-33
George Boone, commissioned	March 5, 1732-33
Thomas Griffitts, commissioned	March 5, 1732-33
George Fitzwater, commissioned	March 5, 1732-33
Richard Martin, commissioned	March 5, 1732-33
Lassey Bore, commissioned	March 5, 1732-33
John Pawlin, commissioned	March 5, 1732-33
Mordecai Lincoln, commissioned	March 5, 1732-33
Evan Thomas, commissioned	Dec. 3, 1733
Henry Pastorius, commissioned	Dec. 3, 1733
Ralph Assheton, commissioned	Nov. 22, 1738
James Hamilton, commissioned	Nov. 22, 1738
Thomas Fletcher, commissioned	Nov. 22, 1738
William Till, commissioned	Nov. 22, 1738
Cadwalader Foulke, commissioned	Nov. 22, 1738
Abram Taylor, commissioned	Nov. 22, 1738
Jonathan Robeson, commissioned	Nov. 22, 1738
Owen Evan (Limerick), commissioned	Nov. 22, 1738
David Humphreys, commissioned	Nov. 22, 1738
Edw'd Reece (Manatawny), commissioned	Nov. 22, 1738
Isaac Leech, commissioned	April 4, 1741
Benjamin Shoemaker, commissioned	April 4, 1741
Joseph Paschall, commissioned	April 4, 1741
Joshua Maddox, commissioned	April 4, 1741
Robert Strettell, commissioned	April 4, 1741
Derrick Keyser, commissioned	April 4, 1741
Griffith Llewellyn, commissioned	May 27, 1745
Septimus Robinson, commissioned	May 27, 1745
Edward Shippen, commissioned	May 27, 1745
Joseph Turner, commissioned	May 27, 1745
Charles Willing, commissioned	May 27, 1745
Thomas Venables, commissioned	May 27, 1745
Nicholas Ashton, commissioned	May 27, 1745
Samuel Morris (White Marsh) commissioned	May 27, 1745
Thomas Yorke, commissioned	May 27, 1745
James Delaplaine, commissioned	May 27, 1745
Francis Parvin, commissioned	May 27, 1745
John Potts, commissioned	May 27, 1745
Anthony Lee, commissioned	May 27, 1745
Thomas Hopkinson, commissioned	June 30, 1749
William Logan, commissioned	June 30, 1749
William Coleman, commissioned	June 30, 1749
Benjamin Franklin, commissioned	June 30, 1749
Roland Evans, commissioned	June 30, 1749

[1] By the act of Sept. 29, 1759, the justices of the Quarter Sessions were not to be judges of the Common Pleas or of the Orphans' Court; therefore Thomas Yorke and his associates never sat in the Quarter Sessions; for this reason his name is omitted in this list.

[2] Septimus Robinson died Jan. 7, 1767.

[3] Westcott, in his "History of Philadelphia," *Sunday Dispatch* of May 2, 1875, states, *inter alia*, that "Samuel Ashmead died in 1798. . . . He was president of the justices of the Common Pleas and Quarter Sessions in 1774." See Aitkin's "Register," which gives him as president of the Common Pleas and Quarter Sessions at that date. This is an error as to the Quarter Sessions, for an old docket, just discovered (1879), of that court, for 1773 to 1779, gives as president, or first justice, Isaac Jones, Sept. 6, 1773; Samuel Mifflin, Dec. 6, 1773; and places Mifflin's name on a separate line by itself until June 4, 1776, after which there are no entries in the docket until the following, viz.: "At a General Quarter Sessions of the peace, held at Philadelphia for the county of Philadelphia, on the 1st day of September, Anno Domini, 1777 (being the first session of the peace held for the county aforesaid since the United Colonies of North America were by their Representatives in Congress assembled declared free and independent States, which was done at Philadelphia, on the 4th day of July, 1776, when the former Constitution and Government of the Province of Pennsylvania were abolished, and soon afterward a new (to wit, the present) Constitution, laws, and police for the good government of the Commonwealth of Pennsylvania were formed and established)." And we find in said docket, "James Young, Esquire, president," Sept. 1, 1777; John Ord, Esquire, president, March 1, 1779; John Moore, Esquire, president, Sept. 6, 1779; John Ord, Esquire, president, Sept. 4, 1780.

[4] Died 25th 11 mo., 1768, aged eighty-two.

[5] Died 10th 7 mo., 179?, aged seventy-nine.

William Markham,[5] commissioned... 4 9 mo., 1690
William Salway, commissioned... May 5, 1693
Anthony Morris,[6] commissioned... May 29, 1693

[1] Son-in-law of James Logan.

[2] Died Feb. 1, 1776, aged seventy-two.

[3] The Peningtons of Philadelphia spell their names thus, and are descendants of Isaac Penington, who died in 1769, and who, with his wife, is buried alongside of William Penn and his wife, in Jordan graveyard, Chalfont, Bucks, England. He said there was no need of a double *n* to spell Penington.

[4] Died Aug. 31, 1785.

[5] On the 4th of 9th mo., 1690, William Markham, Thomas Ellis, John Goodson, and Samuel Jenings were commissioned "Justices of the Quorum" for the Court of Common Pleas of Philadelphia, three to be a quorum.

[6] I have seen a writ signed by him on May 20, 1698, in the office of his descendant, P. Pemberton Morris, of the Philadelphia bar. Anthony Morris was probably the presiding justice of the Common Pleas from May 29, 1693, until Edward Shippen appears at the head of the commission; 1 C. R., 498, but as the writ signed by Morris bears date more than three months afterward, it may be that Shippen presided only in the Quarter Sessions. The writ signed by Anthony Morris, before referred to, is in the plain language of Friends, and is as follows:

"PHILADELPHIA, *ss.* [SEAL.] { THESE are by the King's authority in the Proprietor's name to require thee to ATTACH Francis Jones, Merch't, by all his goods and chattels in thy Bailwick, so that hee may be and appear at the next Court to be held at Philadelphia the Seventh day of the Fourth Month next, as well to answer the complaint of James Stanfield, Merch't, as well to stand to and abide the Judgment of the said Court, and make returns hereof to said Court. Given under my hand and Seal the 20th Day of the 3rd Month, 1698.

"ANTHO. MORRIS.

"To the Sheriff of the County of Philadelphia, or his Lawful Deputy."

ASSOCIATE JUDGES OF THE COMMON PLEAS.

Name	Date
Thomas Yorke, commissioned	Oct. 20, 1759
Rowland Evans, commissioned	Oct. 20, 1759
John Potts, commissioned	Oct. 20, 1759
Samuel Wharton, commissioned	Oct. 20, 1759
John Hughes, commissioned	Oct. 20, 1759

1 Isaac Norris died June 3, 1735, and Clement Plumsted became the presiding justice. See Record of Commissions, 1733.

2 Thomas Lawrence died April 22, 1754, and was succeeded by Robert Strettell, who stood next in the commission to Lawrence on his decease. See Orphans' Court Dockets from June 5, 1754, to June 20, 1757, from which he appears to have been the presiding justice.

3 Stedman was in office at this date (see Orphans' Court Docket), and is spoken of as president of the Court of Common Pleas (8 C. R., 339) on June 2, 1759.

4 On Feb. 28, 1761, five writs of *supersedeas* were issued to Thomas Yorke, Rowland Evans, John Potts, Samuel Wharton, and John Hughes, late judges of the Common Pleas, forbidding them exercising the powers granted them by Governor Denny; 8 C. R., 575. They were commissioned Oct. 20, 1759, and in the Record of Commissions Samuel Wharton's name heads the list as first judge, but I have followed the Colonial Records, as Samuel Wharton not having been in commission before as a justice, is not likely to have been first judge, although he was a prominent man in his day, a writer of some eminence, and devoted to the proprietary's interest. The Orphans' Court Docket on Dec. 8, 1759, shows that Thomas Yorke was the senior judge.

5 Robinson died Jan. 8, 1767.

6 Ashmead succeeded Jones at this date in the Common Pleas. See Record of Commissions at Harrisburg, wherein he and the other justices are referred to as "Samuel Ashmead and associates of the Common Pleas." In Aitken's "Register" of 1774, Samuel Ashmead is given as the "president" of the justices of the Common Pleas and Quarter Sessions. Isaac Jones appears to have died or resigned after Sept. 6, 1773, and if there is an error in the indorsement or note to the Record of Commissions even, Ashmead became president of the Board of Justices of the Common Pleas at Jones' retirement, as the "Register" shows. We have seen heretofore, that on Dec. 6, 1773, Samuel Mifflin became "president of the justices of the Quarter Sessions," as appears by the Docket of that Court, wherein it will also be seen that Ashmead sits next to him in rank among the justices. In the *Independent Gazetteer* of March 29, 1794, will be found a biographical notice of the death of Samuel Ashmead, who died March 19, 1794, "aged above eighty-four years, long respectable as a magistrate, and lately a representative in the Legislature for Philadelphia County." He "died in the Northern Liberties, and was interred on the 21st in the Baptist burial-place."

7 It is doubtful whether Benjamin Franklin ever presided in any of the courts. The appointment of justices by the Convention of July 15, 1776, was an usurpation of power. See "Minutes of the Convention," p. 73.

8 Died April, 1802, aged 50 years.

9 Edward King died May 8, 1873, in his eightieth year. He was a powerful, heavy-built man, of a robust constitution. He was the great judge of the Common Pleas. I have been told that much dissatisfaction was openly expressed by many members of the bar at his elevation to the bench, but that the great abilities he soon displayed astonished his friends and confounded his enemies.

10 Oswald Thompson died Jan. 23, 1866, from overwork. He was an accomplished scholar, an able and a conscientious judge, and a kind-hearted, courteous gentleman.

11 Joseph Allison was appointed by the Governor to fill the vacancy caused by the death of Judge Thompson, and was sworn into office Feb. 5, 1866. On Oct. 11, 1866, he was elected president judge.

12 From signature in Archives of the Historical Society.

13 Died 7th mo., 1629, aged eighty.

14 9 C. R., 237.

15 Commissioned as Samuel Ashmead and associates of the Common Pleas. Humphreys, Ord, Miller, and Clarkson were notaries public, and were commissioned justices of the peace and of the court, to assist them in their business; 10 C. R. 46.

16 Died Nov. 30, 1791, aged seventy-four.

17 Died Aug. 5, 1788, aged fifty-three.

Dr. Enoch Edwards, commissioned	Aug.	17, 1791
Jonathan Bayard Smith, commissioned	Sept.	23, 1791
William Robinson, Jr., commissioned	Sept.	23, 1791
Isaac Howell, commissioned	July	6, 1793
Thomas L. Moore, commissioned	July	6, 1793
Joseph Redman, commissioned	Nov.	11, 1793
Reynolds Keen, commissioned	May	8, 1794

John Richter Jones, commissioned	March	12, 1836
James Campbell, commissioned	April	2, 1842
Anson V. Parsons,[7] commissioned	Feb.	8, 1843
William D. Kelley, commissioned	March	13, 1847
Joseph Allison,[8] commissioned	Nov.	7, 1851
Robert T. Conrad, commissioned	Nov.	30, 1856
James R. Ludlow,[9] commissioned	Nov.	24, 1857
William S. Peirce,[10] commissioned	Feb.	3, 1866
Frederick Carroll Brewster, commissioned	Nov.	15, 1866
Edward M. Paxson,[11] commissioned	Oct.	26, 1869
Thomas K. Finletter, commissioned	Oct.	11, 1870

The dates to March 3, 1819, were taken from the Orphans' Court Dockets, and are the dates the judges first sat in that court. The old minutes of the Common Pleas contain no information. The remaining dates are those of commissions, election or transfer.

THE COURTS OF COMMON PLEAS UNDER THE CONSTITUTION OF 1873.

By the Constitution of 1873, it was provided that on and after the first Monday of January, 1875, the then existing Court of Common Pleas and District Court should be abolished, and all their powers and jurisdiction should be vested in four new courts of equal and co-ordinate jurisdiction, to be composed of three judges each, and to be called the Courts of Common Pleas No. 1, No. 2, No. 3, and No. 4, respectively. By the schedule to the Constitution the judges of the District Court and the old Common Pleas, then in commission, were transferred to the new courts, and provision made for the election of two additional new judges to complete the requisite number.

COURT OF COMMON PLEAS, No. 1.

PROTHONOTARIES OF THE COURT OF COMMON PLEAS, PHILADELPHIA.

John Southern, 1 C. R., 145	date unknown.	
Patrick Robinson, in office	3 mo.	16, 1685
David Lloyd, commissioned	2 8 mo.,	1686
James Claypoole,[28] commissioned	12	28, 1688–89
John Claypoole,[29] in office	July	6, 1697
Robert Assheton,[30] appointed	Oct.	25, 1701
Andrew Hamilton, commissioned	June	5, 1727
James Hamilton, commissioned	Dec.	28, 1733
Thomas Hopkinson, commissioned	Nov.	24, 1748
James Read, commissioned	May	1, 1752
James Hamilton,[31] commissioned	—	—, 1754

[1] Died May 18, 1815.

[2] Lieut.-Col. Edward W. Heston, an officer of the Revolutionary army, died Feb. 14, 1824, aged seventy-eight years.

[3] Died June 7, 1828.

[4] Died Jan. 29, 1835, aged eighty-six.

[5] Died 1858, aged sixty-seven.

[6] Died Jan. 8, 1836. He was the last of the "lay" judges of the Common Pleas in Philadelphia.

[7] Died Sept. 23, 1882, aged eighty-three.

[8] Election and sworn in Dec. 5, 1851. By an amendment to the Constitution in 1850 the judges were made elective.

[9] Judge Ludlow was re-elected for ten years on Oct. 12, 1867.

[10] Elected for ten years Oct. 11, 1866.

[11] Appointed, then elected Oct. 11, 1870, for ten years.

[12] Re-elected for ten years, Nov. 7, 1876.

[13] Transferred from the old Common Pleas. Re-elected for ten years, Nov. 7, 1876.

[14] Transferred by the schedule to the Constitution from the old Common Pleas. He never, however, sat in the new court, as he was in the mean time elected to the Supreme Court, where he took his seat Jan. 4, 1875.

[15] Appointed to fill the place of Paxson, elected to the Supreme Court. Elected for ten years, Nov. 2, 1875.

[16] Transferred from the District Court, of which he was then president. Re-elected for ten years, Nov. 5, 1878.

[17] Transferred from the District Court. Re-elected for ten years, Nov. 8, 1881.

[18] Died March 26, 1877.

[19] Appointed in place of Pratt (deceased). Elected for ten years, Nov. 10, 1877.

[20] Transferred from the old Common Pleas, of which he was then the senior associate. Re-elected for ten years, Nov. 10, 1877.

[21] Transferred from the District Court. Died June 30, 1876.

[22] Transferred from old Common Pleas. Re-elected for ten years, Nov. 2, 1880.

[23] Appointed in place of Lynd, deceased. Elected for ten years, Nov. 7, 1876.

[24] Transferred from the District Court, of which he was then the senior associate. Re-elected for ten years, Nov. 5, 1878.

[25] Transferred from the District Court.

[26] Judges Pratt and Elcock were elected "judges" without designation of any court, and in accordance with Section 18 of the Schedule to the Constitution, drew lots for their assignments to the vacant positions in Courts No. 2 and No. 4. Though elected in November 1874, their terms did not commence until Jan. 5, 1875.

[27] Elected in place of Judge Briggs, whose term expired in December, 1882.

[28] The offices usually annexed to that of prothonotary were clerk of the Orphans' Court and Court of Quarter Sessions, and justice of the Court of Common Pleas, 14 C. R., 377. And this rule existed until the Revolution. James Claypoole died before the 30th of the 5th mo., 1690.

[29] For John Claypoole, see 1 "Pa. Arc.," 125. Thomas Lloyd (1 C. R., 214) claimed that the offices of keeper of the seal, master of rolls, clarke of the peace, and clerk of the justices of the county, were his by patent and on the 1st of 1 mo., 1689, appointed David Lloyd his deputy, which course, the Council held, was a high usurpation of the Governor's authority.

[30] Robert Assheton said, Sept. 15, 1726, that he had been for about twenty-six years clerk and prothonotary of Philadelphia. He died June 5, 1727, having been appointed town clerk and clerk of the peace and clerk of the court, or courts, by the "City Charter" of Oct. 25, 1701.

[31] Andrew Hamilton died in 1741. James Hamilton was still in office Jan. 30, 1775. In the year 1760, Samuel Wharton was his deputy. In 1770–71, James Biddle was his deputy. See 4 "Pa. Archives," 600.

ASSOCIATE JUSTICES OF THE CITY COURT.

The Aldermen of the City.[13]

1701.—Joshua Carpenter, Anthony Morris, Griffith Jones, Joseph Wilcox, Nathan Stanbury, Charles Read, Thomas Masters, and William Carter.

1704.—Edward Shippen, John Jones, and Thomas Story.

1705, Oct. 2.—Samuel Richardson.

1708, Oct. 5.—George Roche, Richard Hill, Samuel Preston, and Isaac Norris.

1711, Oct. 2.—Jonathan Dickinson.

1713, Oct. 6.—Joseph Growden and Pentecost Teague.

1715, Oct. 14.—William Hudson, Abraham Bickley, and Joseph Redman.

1717, Oct. 1.—James Logan.

1718, Oct. 7.—Thomas Griffith[14] and William Fishbourne.

1720, March 4.—William Trent.

1720, Oct. 4.—Clement Plumsted and Israel Pemberton.

1722, Oct. 2.—Benjamin Vining, Charles Read, Jr., and Thomas Griffitts.[14]

1724, Oct. 6.—Thomas Lawrence and Evan Owen.

1727, Oct. 3.—Edward Roberts.

1729, Oct. 7.—Samuel Hasell, George Claypoole, John Jones,[15] and George Fitzwater.

1730, Oct. 6.—William Allen and Isaac Norris, Jr.

1733, Oct. 2.—Anthony Morris, Jr.

1741, Oct. 6.—Joseph Turner, William Till, James Hamilton, and Benjamin Shoemaker.

1743, Oct. 4.—William Atwood, Abram Taylor, Samuel Powel, Jr., and Edward Shippen.

1747, Oct. 6.—Joshua Maddox, Charles Willing, and William Plumsted.

1748, Oct. 4.—Robert Strettell and Septimus Robinson.

1751, Oct. 1.—Benjamin Franklin and John Mifflin.

1755, Oct. 7.—John Stamper, Atwood Shute, and John Lawrence, Jr., who died January, 1775.

1756, Oct. 5.—Alexander Stedman and Samuel Mifflin.

1757, Oct. 4.—John Wilcocks, Jacob Duché, and William Coxe.

1759, Oct. 2.—Thomas Willing and Daniel Benezet.

1761, Oct. 6.—Henry Harrison and Samuel Rhoads.

1764, Oct. 2.—Isaac Jones and John Lawrence.

1766, Oct. 7.—Amos Strettell and Samuel Shoemaker.

1767, Oct. 6.—John Gibson.

1770, Oct. 2.—James Allen, Joshua Howell, and William Fisher.

1774, Oct. 4.—Samuel Powel and George Clymer.

1777, June 11.—11 C. R., 220. To be judges of the City Court,—James Young, John Ord, Plunket Fleeson, Isaac Howell, and Philip Boehm, who resigned Sept. 30, 1778.

1779, Jan. 15.—11 C. R., 667,—Benjamin Paschall, and on October 27th, John Miller. 12 C. R., 150.

1782, Jan. 31.—13 C. R., 181,—William Rush. Appointed in place of John Ord, deceased.

---

[1] Jonathan Bayard Smith, died June 16, 1812, aged seventy years; born Feb. 21, 1742. He was a son of Samuel Smith, of Portsmouth, N. H., and removed to Philadelphia before the Revolutionary war. Samuel Smith, his father, had three sons,—Thomas, Jonathan, and William. Thomas married a sister of the late Judge Richard Peters. Jonathan married Susannah, daughter of Col. Peter Bayard, of Maryland. After his marriage he introduced the name of Bayard as one of his Christian names. William was the father of the late Samuel F. Smith, president of the Philadelphia Bank. So says Richard H. Bayard, May 7, 1858.

[2] The certificate of admission of my grandfather, Dr. William Martin, of Chester, Pa., to the Philadelphia bar, bears date March 24, 1794, and is signed by Charles Biddle, prothonotary of the Court of Common Pleas. He was a sea captain, and died April 4, 1821, aged seventy-six years. He was appointed prothonotary of the Common Pleas in 1791, and reappointed in 1800.

[3] Richard Palmer died May 20, 1850, aged over seventy years, ex-alderman of Southwark.

[4] By the 1st section of the Act of July 2, 1839, P. L., 559, etc., the prothonotaries of the District Court and Court of Common Pleas, the clerks of the Oyer and Terminer, Quarter Sessions, and Orphans' Court, the Recorder of Deeds and the Register of Wills, were elected at the general election, on the second Tuesday of October, 1839, for the term of three years from the 1st of December in the same year, and made elective thereafter at the next election after the occurrence of any vacancy; such vacancy to be filled in the mean time by appointment of the Governor.

[5] Olwine died May 6, 1850, aged fifty-two years.

[6] Donagan contested Fletcher's election successfully.

[7] Died Aug. 3, 1881, aged forty-three.

[8] By the Constitution of 1873, the prothonotary is appointed by the judges of the court; salary, $10,000 per annum. The only clerks of the Common Pleas that I can now recall are Christian Frederick Erichson, in 1858, and for several years afterward. Thomas O. Webb, chief clerk of the Common Pleas, under his father, in 1856, and until his death, in 1868. George T. Deiss, who succeeded him in that position, and was continued until the reorganization of the courts in 1875, when he was made court clerk of the Common Pleas, No. 1, which position he still fills. The present court clerk of court No. 2, is Thomas B. Reeves; of No. 3, James Penn MacCain; and of No. 4, Charles H. White. The affable manners of these gentlemen render them great favorites with the bar.

[9] Assheton was elected in the place of Edward Shippen, who declined.

[10] Andrew Hamilton, the Recorder, died in August, 1741, and must not be confounded with Andrew Hamilton, appointed clerk of this court and town clerk, Feb. 24, 1745. See "Minutes of the Common Council," 452–56. Andrew (Jr.) and James Hamilton were sons of the recorder, who was formerly attorney-general of the Province. Andrew, Jr., died 1747.

[11] See "Minutes of Common Council," p. 795. Andrew Allen was declared a traitor about 1778, and his estates sold April 12, 1779. See 11 C. R., 745.

[12] By act of March 21, 1777, the Supreme Executive Council were authorized to appoint *five* judges to hold the City Court, and for other purposes. Fleeson was appointed by the Supreme Executive Council, to hold the office during pleasure. 13 C. R., 181. He died in 1791.

[13] Reappointments are not noticed in the list. See 2 Proud, Appendix, part 1, page 47, and the "Minutes of Common Council" therefor. There is no way of determining the length of service of these judges of the City Court, but the great majority held the office till their death, or until the court was abolished, in 1789.

[14] Different persons. See "Minutes of Common Council" during the years 1722–26, when both were present at the sitting of Council at different times. Alderman Thomas Griffith's name appears on the "Minutes of Council" April 27, 1727, while Thomas Griffitts was elected mayor in 1729–37. See also Orphans' Court Docket, No. 1, March 4, 1729–30.

[15] Elected to Council in 1712, as John Jones Boller, but it should be John Jones (Bolter).

CLERKS OF THE CITY COURT.

Name	Month	Date
Robert Assheton, by the charter	Oct.	25, 1701
Ralph Assheton,[1] by the Council	Aug.	10, 1716
Andrew Hamilton, Jr., by the Council	Feb.	21, 1745
William Coleman, by the Council	Sept.	18, 1747
Edward Shippen, Jr., by the Council	May	27, 1758
John Haley, by the Council	June	11, 1777
William Nichols, 14 C. R., 667	March	24, 1786

The act of March 11, 1789, abolished this court.

THE COURT OF EQUITY.

Formed by proclamation Aug. 10, 1720; abolished by resolution of 27th 11th mo., 1735–36.

The history of the Court of Chancery in Pennsylvania is rather curious. The Assembly has nearly always been violently opposed to the formation of a court with exclusive equity powers. In the earliest days of the Province, after it came under the jurisdiction of Penn, he and his Council exercised chancery powers in cases brought before them. Thus our earliest courts began to exercise a blended jurisdiction in equity as well as law, and to all intents and purposes exercised the authority of Chancery Courts. The subject became an important one very early, because the Governors under the proprietaries claimed the powers of chancellors, and the entire period of our colonial history is marked by frequent disputes on questions of prerogative between the Governors and the Assembly.

Sir William Keith, who was Governor from 1717 to 1726, obtained from the Assembly an act establishing a *Court of Equity*, the Governors being the chancellors. This was our first and only "Court of Chancery" in Pennsylvania. It existed fifteen years, and was abolished in 1736. As our courts possess equity powers, there is now no need for a court with exclusive equity jurisdiction. Mr. William Henry Rawle's lecture on "Equity in Pennsylvania," published with a copy of the Register's Docket, fully elucidates the subject, and gives a history of Keith's Court of Chancery.

CHANCELLORS.

Name	Month	Date
Sir William Keith, Bart.	Aug.	25, 1720
Patrick Gordon, Esq.[2]	Feb.	2, 1726

REGISTERS.

Name	Month	Date
Charles Brockden, appointed	Aug.	25, 1720
Robert Charles,[3] resigned	Sept.	1, 1739

MASTERS.

1720.—James Logan, Jonathan Dickinson, Samuel Preston, Richard Hill, Anthony Palmer, and William Trent.

1721.—Thomas Masters, Robert Assheton, William Assheton, and John French.

1724.—Andrew Hamilton and Henry Brooke.

1725.—William Fishbourne, Dr. Thomas Graeme, Evan Owen, Ralph Assheton, Thomas Lawrence, and Samuel Hasell.

1730.—Clement Plumsted and Isaac Norris.

SOLICITORS.

1720.—John Kinsey, James Parnell, Ralph Assheton, James Alexander, Joseph Growdon, Jr., James Graeme, and Peter Evans.

EXAMINERS.

1725.—Charles Osbourne and Dr. Patrick Baird.

THE HIGH COURT OF ERRORS AND APPEALS.

Established by act of Feb. 28, 1780; *abolished by act of Feb.* 24, 1806.

This court was established by act of Feb. 28, 1780, to hear appeals from the Supreme Court, the Register's Court, and the Court of Admiralty. The judges were to be the president of the Supreme Executive Council, the judges of the Supreme Court, and three persons of known integrity and ability to be commissioned for seven years, any five or more to form a quorum.

By the act of April 13, 1791, section 17, the judges of the Supreme Court, the president judges of the several Courts of Common Pleas of the five judicial districts, and three other persons of known legal abilities were constituted a High Court of Errors and Appeals, to hear appeals from the Supreme Court and the Register's Court,—"Read's Digest," 70, article 23, section 17. In this Digest will be found many acts relating to the courts, from the act of May 22, 1722, to 1800.

By an act of Sept. 30, 1791, a president judge was to be appointed by the Governor of the commonwealth.

William Tilghman, appointed	July	31, 1805
Edward Burd, *Register*.		

ORPHANS' COURT FOR THE CITY AND COUNTY OF PHILADELPHIA,

IN THE PROVINCE OF PENNSYLVANIA.

By the act of March 27, 1713, establishing the Orphans' Court, the presiding justices of this court were those of the Quarter Sessions, as the same justices were to hold both courts. Previous to this the court was held by the justices of the County Courts, Orphans' Courts having been constituted by the act of 1683 to "sitt twice every year." But as the dockets of the Orphans' Court are complete from April 9, 1719, to this date, I have thought it proper to give the presiding justices from the records, so far only as they show them. There is nothing, however, in the minutes to indicate who was the presiding justice. That knowledge I have derived from the long service of certain justices at the head of the list of justices present at the sittings of the court, and from the

[1] Robert Assheton's son. Appointment "to take effect November 30th next, when he comes of age." See "Minutes of Common Council."

[2] See 3 C. R., 266. He died at Philadelphia, Aug. 5, 1736.

[3] See "Rawle's Equity," 52. In 9 "Pa. Arc.," 631 (2d series), "George Thomas" is mentioned as one of the chancellors. The only act he performed that I know of in regard to the court was as Governor, on Sept. 1, 1739, in accepting the resignation of Robert Charles as the "Registrar," and directing him to "deliver up all the books, papers, and writings in his custody to Thomas Lawrie, the secretary, to be by him kept till further orders." Upon the question of the power of the Assembly to abolish the court, see the "Shippen Papers," 1–6.

[4] Thomas McKean was the chief justice of the Supreme Court; Atlee, Evans, Bryan, and Rush (who was appointed in place of Evans, deceased), associate justices. Hopkinson was the judge of the Admiralty. James Smith, of York, resigned May 10, 1781. Samuel Miles resigned April 4, 1784, and Edward Shippen appointed in his stead. Henry Wynkoop, president judge of Bucks County, resigned June 27, 1789.

[5] President of the Supreme Executive Council.

[6] William Bradford was commissioned an associate justice of the Supreme Court, Aug. 20, 1791, in the place of Bryan. Atlee was commissioned president judge of the Second District, Aug. 17, 1791, to take effect on September 1st. (See the act of April 13, 1791.) James Biddle became president judge of the First District Sept. 1, 1791; Jacob Rush, president judge of the Third; James Riddle, of the Fourth; Alexander Addison, of the Fifth; and John Joseph Henry, of the Second, in November, 1793, in place of Atlee, who died on September 9th of that year. Thomas Smith was appointed an associate justice in the place of Bradford, promoted to Attorney-General of the United States. Hugh Henry Brackenridge was appointed an associate justice *vice* Shippen, made chief justice in the place of McKean, elected Governor Dec. 18, 1799. John D. Coxe, president judge of the First District in the place of Biddle, and William Tilghman, president judge of the First District in the place of Coxe. No "persons of known legal abilities" were appointed to fill two out of three additional positions mentioned in the act.

record of commissions, etc. Previous to Isaac Norris, in 1727, the records do not indicate a president; no particular justice heads the list; Robert Assheton generally presided. Docket No. 1 opens "the 9th April, 1719," with the following justices present: Jonathan Dickinson, Robert Assheton, and Clement Plumsted. After Sept. 23, 1727, the justices whose names I give below presided nearly all the time of their term of service, and it will be perceived that in most cases they were the prior or oldest justices in the commission.

Jacob Duché, who is given on March 19, 1764, was not president of the board of justices by seniority, but presided until December 8th. He was one of the most attentive justices of the court, and presided very often at the sittings during his long term of service. He was a merchant, and the father of the Rev. Mr. Duché, of Revolutionary fame.

Isaac Jones presided almost continuously from June 27, 1768, until Sept. 6, 1773. He never sat after that date, although I have a citation issued by the Orphans' Court on Sept. 14, 1773: "Witness Isaac Jones, Esquire. . . . By the court. James Humphreys, clerk," showing, I think, that Jones was the president or presiding justice at that time. The seal of the court to the papers is the arms of William Penn, surrounded by the words, "Orphans' Court, City & County Phila."

Samuel Mifflin presided after Sept. 13, 1773. He was, we know, the president of the Quarter Sessions from Dec. 6, 1773, to 1776. Sometimes, however, Samuel Ashmead sat in the Orphans' Court with him, and presided, and at other times Mifflin presided, with Ashmead as an associate. Ashmead was the older justice by commission, and when Plumsted died, in 1765, Ashmead succeeded him in the Orphans' Court, although Septimus Robinson was next to Plumsted, but Robinson never sat in this court after March 21, 1757. He died previous to Jan. 16, 1767. (See Will-Book O, 156.) His will is dated Jan. 4, 1767. From Aug. 14, 1765, to Sept. 6, 1766, Mr. Duché generally presided; after that Ashmead presided nearly always till June 13, 1768. I discovered a singular error in the Wills index. William Plumsted is entered there as having died in 1769, but in Will-Book O, p. 335, his will is proved as of Aug. 20, 1765.

I noticed that whenever the mayor of the city was present he always presided, his name heading the list of justices. On all other occasions the order of seniority of justices was rigidly observed, erasures being even made in the minutes to correct errors in this respect, and I expect that in the few instances where the justices were not entered in proper order, it is an error on the part of the clerk.

The records show conclusively that out of each commission a certain number of justices were assigned to each County Court. To make this evident I give a carefully-prepared list of all the justices who have sat in the Orphans' Court from 1719 to 1791, extracted from the dockets, and, therefore, absolutely correct. The date of the first sitting only given.

PRESIDING JUSTICES.

Name	Date
Isaac Norris, in office	Sept. 23, 1727
Clement Plumsted,[1] in office	June 11, 1734
Thomas Lawrence,[2] in office	June 3, 1745
Robert Strettell, in office	June 15, 1754

Jacob Weaver, in office	March 21, 1789

On Sept. 23, 1791, James Biddle, Jonathan Bayard Smith, Enoch Edwards, and William Robinson, Jr., Esqs., judges, held the Orphans' Court. This is the first time the term judges is used in the dockets of this court (see Docket No. 16), although Thomas Yorke and his associates were commissioned as judges of the Common Pleas and Orphans' Court. They are called justices in the minutes of the Orphans' Court. The judges of the Common Pleas held the Orphans' Court from 1791 to 1875.

THE ORPHANS' COURT

As Established by the Constitution of 1873.

The delays and expense attending the settlement of estates of decedents led the framers of the new Constitution of Dec. 16, 1873, to authorize the formation of Orphans' Courts as separate tribunals. (See Article v., Section 22.) In Philadelphia the Orphans' Court was established by the act of May 19, 1874, and organized Jan. 4, 1875. The Orphans' Court always had separate organization as to clerks and records, but until 1874 never had an independent judiciary. The Orphans' Court bench now consists of three judges, learned in the law. At first the judges were of equal rank, and presided in turns, but the act of May 24, 1878, created the office of president judge.

THE REGISTERS OF WILLS OF PHILADELPHIA.

The provincial registers were the registers-general of Pennsylvania for the Probate of Wills and Granting Letters of Administration, established by the twenty-second section of the laws agreed on in England. 1 C. R., 32. The act of March 14, 1777, abolished the office of register-general and named the Register of Wills in each county to succeed the deputies of the register-general. 1 Dallas' "Laws of Pennsylvania," 731. The dates of appointment are taken from the will-books, and are the dates when the names are first mentioned therein. Book A, in register's office, is in the handwriting of Patrick Robinson. He was deputy register and secretary to the Governor.

The Registers-General.

Name	Day	Month	Year
Christopher Taylor,[13] in office	10	br. —	1682
Robert Turner, commissioners in the place of Taylor, deceased	5	5 mo.	1686
William Frampton, commissioners in the place of Taylor, deceased	5	5 mo.	1686
William Southbee, commissioners in the place of Taylor, deceased	5	5 mo.	1686
James Claypoole, Sr., commissioned	19	9 mo.	1686
Jacob Simcock,[14] deputy	—	——	——
Thomas Ellis, appointed	9	8 mo.	1687
David Lloyd, deputy, appointed	12	8 mo.	1687
William Markham, appointed	14	8 mo.	1688
Patrick Robinson, deputy	—	——	——
Capt. John Blackwell,[15] appointed	8	11 br.	1678-89
Robert Turner,[16] in office	16	12br.	1690-91
Samuel Jennings, in office	5	10 mo.	1692
Francis Rawle, Jr., deputy	—	——	——
William Markham, appointed	20	7 mo.	1693
John Moore,[17] in office	7	3 mo.	1700

[1] Died Nov. 30, 1791, aged seventy-four.

[2] Lewis William Weiss was his full name.

[3] Judge O'Brien died Jan. 24, 1878, aged sixty.

[4] In place of Judge Dwight, who resigned on account of his ill-health.

[5] Charles Read was probably appointed after the passage of the act of March 27, 1713. He died in office before Jan. 20, 1736-37.

[6] *Vice* Hamilton, deceased. For Andrew Hamilton's appointment, see clerks of the City Court. I give Hamilton and Lawrence as clerks of the Orphans' Court on the authority of Thompson Westcott. Hamilton died in office in September, 1747.

[7] Nichols, clerk of the Mayor's Court and Orphans' Court. Directory of 1798; 12 C. R., 667, clerk of the Orphans' Court and City Court.

[8] In the official lists in the Directory of 1830 and 1831, Joseph Andrews is given as the clerk of the Orphans' Court, which is an error; it should be Robert. In the court offices the active man is always the chief deputy; the actual prothonotary, clerk, register, etc., are seldom known or seen by the bar. In the Orphans' Court office, for a long series of years, from 1858 to 1868, Richard M. Batturs, a genial gentleman of Philadelphia, was chief clerk. Since his retirement, Alfred J. Fortin has been the efficient deputy. He entered the office first in 1857.

[9] Col. Christy was elected under act of July 2, 1839, for three years from December 1st, in same year (L. P., 559), and commissioned Nov. 14, 1839. He died Aug. 31, 1881, aged seventy-two.

[10] Brooks died before being commissioned, Nov. 7, 1848. (See 9 Barr, 513; Commonwealth *vs.* Hanley.)

[11] Broom was commissioned Dec. 14, 1848. Commission set aside by the Supreme Court on Jan. 22, 1849, on the ground that there was no vacancy. Oliver Brooks, who was elected Oct. 10, 1848, having died before a commission had been issued to him, it was held that Hanley, the old clerk, held over. Hanley died March 18, 1849, and Broom was appointed and commissioned March 26, 1849, and elected in October, 1849, for three years.

[12] Clark was at the time register of wills, and became *ex officio* clerk of the Orphans' Court under the provisions of the Constitution of 1873.

[13] The first will, recorded 10th mo., 1682, was Thomas Wreames. He died before 5th mo. 5th, 1686; 1 C. R., 137.

[14] See Smith's "History of Delaware County," 502.

[15] He appointed himself register-general, thus creating a precedent which was afterward followed by other Governors.

[16] Francis Rawle, Jr., his son-in-law, was his deputy.

[17] In Smull's "Legislative Hand-Book," 1878, it is set forth that John Moore was commissioned Jan. 1, 1693. By "Will-Book B" it does not so appear, but he was in office May 7, 1700. Col. William Markham was commissioned by Penn, March 29, 1703, by an order directed to Lieutenant-Governor Andrew Hamilton, 2 C. R., 96; also Book A, 25th 7 mo., 1703, and complained to the Council (2 C. R., 122, 123, and 124) that Moore refused to surrender the office to him, saying that it was "his property

The registers of wills are now by the Constitution of 1873 the clerks of the Orphans' Court. (Art. 5, sec. 22.)

THE MAYOR'S COURT OF THE CITY OF PHILADELPHIA.

This court was created by act of Assembly of March 11, 1789, incorporating the city of Philadelphia, and abolished by the act of March 19, 1838.

By this act the mayor, recorder, and aldermen, or any four of them, whereof the mayor or recorder was always to be one, were constituted a court, to be called "the Mayor's Court of the City of Philadelphia," to hear and determine all charges of larcenies, forgeries, perjuries, assaults and batteries, riots, rows, unlawful assemblies, and all other offenses usually cognizable in any Court of Quarter Sessions. This court met quarterly on the first Monday of March, June, September, and December in each year, and held frequent sessions.

The act of 1789 also established the "Aldermen's Court," to consist of three aldermen, two to be a quorum. Those to hold the court to be designated at least four times a year by the mayor or recorder to try all matters usually cognizable by justices of the peace, where the debt or demand amounted to forty shillings and did not exceed ten pounds. The justices of the court were paid by fees. This court was abolished by act of Assembly of March 20, 1810. I copy from the *Independent Gazetteer* of April 18, 1789, the following in reference thereto: "At a meeting of the mayor, recorder, and aldermen, held the 15th inst., the mayor and recorder nominated and appointed Francis Hopkinson, Joseph Swift, and Hilary Baker, Esqs., to constitute and hold 'the Aldermen's Court.'"

The mayor and aldermen had power personally to hear and determine cases of debt under forty shillings.

PRESIDING JUSTICES.

THE MAYORS.

1789. Samuel Powel.
1790. Samuel Miles.
1791. John Barclay.

1802.—Samuel Carswell, in place of Howell.
1803.—Abraham Shoemaker.[8]
1806, May 26.—Michael Keppele, in place of Hillegas.
1809.—Andrew Geyer.
1809, Aug. 9.—John Geyer, in place of Tod.
1813, April 30.—George Bartram, in place of Smith.
1813, Nov. 25.—Timothy Matlack, in place of Stocker.

and freehold, and conceived it to be a point of law," and demanded a trial thereof, which was granted. Markham and Moore acted jointly while contesting the matter. Markham died 12th mo. 4th, 1704, and Lieutenant-Governor Evans appointed himself the register-general, thus settling the matter, and taking possession of one of the most lucrative offices in the province, and made his cousin, Peter Evans, his deputy, 2 "Logan Papers," 8.

[1] John Moore signs as deputy register from Dec. 3, 1724, to April 2, 1728.

[2] Reappointed by Council (16 C. R., 443), Sept. 4, 1790.

[3] By act of July 2, 1839, the registers of wills became elective. Charles Thomson Jones was deputy for Corfield, J. B. Sewell for Pray, and Piersol and Col. Robert F. Christy for Painter. John Weaver died in office Jan. 16, 1846.

[4] Appointed for the unexpired term of Col. Leech, who died in office.

[5] Appointed in place of Brearly, who died Aug. 23, 1878, aged thirty-seven years.

[6] Mayor's Court, after the second Tuesday in October, 1796, was composed of fifteen aldermen as associates, appointed by the Governor under the act of April 14, 1796.

[7] The father of Hilary and John Baker was a German schoolmaster, of Germantown, named Hilarius Becker. Baker and Barker are different names, and must not be confounded in these lists.

[8] Died May 25, 1818, aged sixty-five.

1815, July 24.—Samuel Badger, in place of John Barker.
1816.—Joseph Hertzog.
1817, April 2.—James Nelson Barkér.
1818, March 4.—Peter Christian, in place of Matlack.
1818, April 8.—Abraham Shoemaker, Jr., in place of his father, resigned.
1820, May 11.—John Connelly, in place of Jacob Baker.
1822, April 3.—Joseph Watson, in place of Keppele.
1822, April 3.—William Duane, in place of Carswell.
1822, Dec. 2.—John Binns, in place of Hertzog.
1823, Jan. 7.—William Milnor, in place of Connelly.
1823, Dec. 15.—David P. Muhlenberg, in place of Douglass.
1829.—Jacob Sperry,[1] Joseph Burden, Richard Willing, Jr.[2]
1832.—Robert Wharton, Jonathan K. Hassinger, Thomas McKean.
1835.—Samuel Heintzelman, John R. Vodges, in place of Sperry and Willing.
1835.—David S. Hassinger.

William White, commissioned	March	26, 1836

THE DISTRICT COURT FOR THE CITY AND COUNTY OF PHILADELPHIA.

Organized by act of Assembly of March 30, 1811; *abolished by the Constitution of* 1873.

In the early part of the present century Philadelphia was the largest city in the Union, and its commerce, manufactures, and general business had kept pace with its population. It began to be seriously felt that the judicial system was inadequate, and accordingly, by an act approved March 30, 1811, it was enacted: "Whereas, the Court of Common Pleas of the City and County of Philadelphia, from the various objects of its jurisdiction and the great increase and accumulation of business, is incompetent to the speedy and effectual administration of justice to the citizens of that district, for remedy whereof, be it enacted," etc., that there shall be established a Court of Record by the name and style of the District Court for the city and county of Philadelphia, to consist of a president and two assistant judges, any two of whom, in case of the absence or inability of the other, shall have power to try, hear, and determine all civil pleas and actions where the sum in controversy should exceed one hundred dollars.

The court thus established soon became full of important business, and acquired a solid and enduring reputation as a great law court for the trial of civil issues. It was the first and, for many years, the only court of original jurisdiction in the commonwealth whose judges were all learned in the law. Down to about the beginning of this century there was no positive requirement that even the presidents of the Common Pleas should be learned in the law, though the practice had been uniform since the Revolution to appoint only lawyers. But the associates remained laymen in the Common Pleas of Philadelphia until 1833, when one of them was required to be learned in the law, and "one to be appointed under the existing laws of the commonwealth" (act of Feb. 8, 1833; P. L., 23), and the other associate remained a layman until 1836, after which all the judges of that court were required to be learned in the law (act of March 11, 1836; P. L., 76). So late as 1831 the salaries of the associate judges of the Common Pleas of Philadelphia were only four hundred dollars each, while the salaries of the judges of the District Court and the president of the Common Pleas were two thousand dollars each.

The bench of the District Court was occupied by a succession of learned and able lawyers, and when the court adjourned *sine die*, Jan. 4, 1875, it was with the universal regret of the bar. A more dignified, learned, and impartial tribunal has seldom, if ever, existed in this or any other community.

James Tyndale Mitchell, commissioned	Dec.	4, 1871
Amos Briggs, commissioned	March	25, 1872

Joseph Hemphill was a native of Chester, now Delaware County, admitted to the Chester County bar, August, 1793. Member of Congress, 1801 to 1803, from Chester County, and from 1819 to 1831. He died May 29, 1842, aged seventy-two years. Associate Judge Sommer's name is sometimes rendered Somers. Simmons and Sommer were not lawyers. Judge Sommer died in February, 1857, aged sixty-nine years, and Anthony Simmons, late judge and colonel of the Ninety-sixth Regiment, died Jan. 6, 1830, aged fifty-seven years. Edward King had the position of associate judge offered to him in 1825; he hesitated about accepting it, and then Judge Hallowell took it, thus making room in the Common Pleas for King as the president judge. The "Forum," 2 vol., 175. On April 1, 1835, King was tendered the place of presiding judge of the District Court, but declined. George M. Stroud was associate for thirty-four years, and declined the position of presiding judge in 1868, when Sharswood was elected judge of the Supreme Court, and died in 1875, full of years and honors. Thomas McKean Pettit was appointed in the place of Hallowell, who resigned, and was recommissioned March 30, 1835, for ten years. Joel Jones was recommissioned March 31, 1845, for ten years. Judge Hare was commissioned president judge Dec. 1, 1867, and elected Nov. 6, 1868. Thomas Greenbank had certificate of election and took his seat, but it was successfully contested by M. Russell Thayer. Judge Briggs was appointed March 25, 1872, and elected Oct. 8, 1872, for ten years. In accordance with the amended Constitution of 1873, the District Court was consolidated with the Court of Common Pleas, and the act of May 14, 1874, abolished all courts not mentioned in the Constitution. P. L., 1874, pp. 139, 140.

An interesting sketch of the District Court will be found in "An Address delivered at the final adjournment of the Court, Jan. 4, 1875," by the Hon. James T. Mitchell, one of the judges of the court, in which he says, "By the Constitution of Pennsylvania, adopted in 1873, a new organization of the judicial tribunals of the State was directed, under which the Nisi Prius, District, and Common Pleas Courts of Philadelphia City and County ceased to exist on the first Monday in January, 1875. The judges of the Supreme Court, heretofore in turn holding the Court of Nisi Prius, were relieved from original jurisdiction, and the judges of the District and Common Pleas Courts were transferred to the new Courts of Common Pleas, created by the Constitution."

PROTHONOTARIES OF THE DISTRICT COURT.

Name	Month	Date
John Porter, also of the Common Pleas	April	25, 1811
Timothy Matlack, of District Court only	March	14, 1817
Michael Leib, commissioned	Nov.	15, 1822
Randal Hutchinson, commissioned	Feb.	27, 1824
John Lisle, commissioned	Feb.	22, 1830
Franklin Comly, commissioned	March	24, 1836
William White, commissioned	Jan.	7, 1839
William V. Pettit,[3] commissioned	Feb.	9, 1839
Edward C. Dale, elected	Dec.	1, 1842
David C. Skerritt, elected	Dec.	1, 1845
Augustin R. Peale, elected	Dec.	1, 1848
Thomas Fletcher, elected	Dec.	1, 1851
James W. Fletcher, elected	Dec.	1, 1854
John P. McFadden, elected	Dec.	1, 1857

[1] Died Jan. 2, 1830, aged sixty.

[2] Died April 15, 1833.

[3] Appointed, and then elected on the second Tuesday in October, to serve three years from the 1st day of December. (See act of July 2, 1839, § 3.)

Philip S. White, elected..........Dec. 1, 1860
George Kelly, elected..........Dec. 1, 1863
James McManes, elected..........Dec. 1, 1866

COMMISSIONERS OF INSOLVENTS.

Act of March 13, 1812, *to expire April* 1, 1815.

Three commissioners to be appointed by the Governor. This law was repealed, except as to pending cases, Dec. 21, 1812. April 29, 1814, the insolvent law was declared unconstitutional.

Charles Jared Ingersoll, commissioned..........March —, 1812
William Newbold, commissioned..........March —, 1812
John Conrad, commissioned..........March —, 1812
George Bartram,[2] commissioned..........July 14, 1812

THE COURT OF CRIMINAL SESSIONS FOR THE CITY AND COUNTY OF PHILADELPHIA.

This court was organized in accordance with the act of March 19, 1838, and commenced its sessions on the first Monday in April, 1838, with a president judge and two associates learned in the law, all *ex officio* justices of the peace, and to have all the powers and exclusive jurisdiction exercised by the Mayor's Court and the Recorder's Court of the Northern Liberties, Kensington, and Spring Garden.' The clerk of the Quarter Sessions of the Peace to be clerk of the court. "All the necessary records of the Mayor's Court, Recorder's Court, and of the Court of Quarter Sessions of the County of Philadelphia shall be delivered to the clerk of the Sessions Court."—"Laws of Penna.," 1838, section 18, p. 125. Abolished by act of 27th February, 1840.

PRESIDENT JUDGE.

James Todd,[3] appointed..........March 28, 1838

ASSOCIATE JUDGES.

John Bouvier,[4] appointed..........March 28, 1838
Robert T. Conrad,[5] appointed..........March 28, 1838

THE COURT OF GENERAL SESSIONS FOR THE CITY AND COUNTY OF PHILADELPHIA.

Established by Act of Feb. 27, 1840. *Abolished by Act of Feb.* 3, 1843.

The Court of General Sessions was to consist of three judges, learned in the law, and to have exclusive jurisdiction and cognizance of all matters of which the Court of Criminal Sessions then had jurisdiction, and with power to try all cases of murder, etc.; and such duties as were incident to the clerk of the Oyer and Terminer were to be performed by the clerk of that court, and such as appertained to the clerk of the Criminal Sessions were to continue to be performed by the clerk of that court. When the court was abolished the Court of Quarter Sessions was reinstated with all its former powers and original jurisdiction.

PRESIDENT JUDGES.

George W. Barton,[6] appointed..........March 20, 1840
Anson V. Parsons,[7] appointed..........Jan. —, 1843

William E. Littleton, elected..........Nov. 2, 1880

Joseph P. Galton, chief court clerk of the Quarter Sessions, died on Jan. 22, 1879, aged thirty-nine years. He entered the office of the clerk of the Quarter Sessions in 1857, when quite young, as an assistant to J. Orlando Tobias, the then chief court clerk, and succeeded him in that position in 1860. His death was announced in Judge Mitchell's court by District Attorney Hagert, on the afternoon of the day of his death. He said, "It becomes my painful duty to announce to your Honor the decease of Joseph P. Galton, who was connected with this court for a period of twenty-one years, and who was for more than eighteen years its court clerk. In the course of this long experience, Mr. Galton had acquired a thorough knowledge of the business and practice of the court, and was frequently consulted by the judges in matters arising in the progress of its daily business. Indeed, so thoroughly informed was he upon such matters, that although comparatively young in years, he filled the full measure of the old law-writer's description of the aged and faithful clerk, who was described as the 'right hand of the court.' Ever faithful and attentive to his duties, courteous and obliging to all

[1] Mr. Selby served until the court was abolished, and then became, by the Constitution of 1873, prothonotary of the Common Pleas. The bar seldom came in contact with the prothonotaries. Their duties were performed by deputies. The seniors of the bar have a vivid recollection of Matthias Coates, who was chief clerk previous to 1840 for many years. He was a character in his way, and made all the lawyers "stand from under" when he was in a bad humor. He was much liked, however. John L. Woolf was deputy for Mr. Dale, and afterward principal deputy for Sheriff Lelar. Edwin T. Chase succeeded Woolf as chief clerk, and held that office for a long time. The bar will recall with pleasure Frederick A. Trego; James G. Gibson, search clerk for many years, and afterward prothonotary of the Common Pleas; David A. Allison, who succeeded him as search clerk, and continued in that position for a long period; and Benjamin M. Shain, who was for a long series of years a clerk; Henry T. Coleman, a former appearance clerk from 1845 to 1848; Horace L. Peterson, in the same position; and Pierre Chapouty, chief clerk; and also Robert E. Hackett, for many years one of the clerks, who died Jan. 8, 1882, aged seventy-two years, all pleasant and obliging gentlemen.

[2] Appointed in the place of Conrad, who resigned.

[3] Of Fayette County; attorney-general when appointed.

[4] Recorder of Philadelphia.

[5] Recorder of the Northern Liberties.

[6] Judge Barton resigned Dec. 31, 1842.

[7] On Feb. 3, 1843, the bill abolishing the General Sessions having been finally passed, the Governor revoked the appointment of Anson V. Parsons as president judge, and nominated him as an additional judge of the Common Pleas, and the Senate confirmed him February 8th. He never presided.

[8] 1 C. R., 208, 214; died 1690.

[9] In office; 1 Pa. Archives, 125.

[10] See 9 Pa. Archives, 2d series, 699.

[11] John Lawrence was appointed in the place of Andrew Hamilton, deceased, 5 C. R., 106 (1747), 110, and held office until his death, January, 1775. Although it is stated in 9 Pa. Archives, 2d series, 699, that James Read was appointed clerk of the peace June 4, 1752, it is probably an error. See Prothonotaries of Common Pleas.

[12] See 4 Pa. Archives, 601, and Aitken's "Register" for 1773, p. 30, etc.

[13] The Directory of 1794 says Charles Biddle was prothonotary of the county. The Directories of 1798 and 1799, under the head of the Common Pleas and Quarter Sessions, give Charles Biddle "Prothonotary of said Court."

[14] James Enen, Jr., under the Constitution of 1838, was elected on Oct. 8, 1839, to serve three years from December 1st. See act July 2, 1839.

[15] See the opinion of the city solicitor of Oct. 21, 1879.

[16] *Vice* Truman, deceased.

with whom he was brought into contact, his loss will be sensibly felt by the court and the bar. I deem it due to the memory of this efficient and faithful officer to bear this public testimony to his worth and ability, and as a mark of esteem in which he was held by the judges, I move, your Honor, that a minute of his death be entered on the records of the court."

Judge Mitchell, in a few feeling remarks eulogistic of the deceased, said that he acquiesced in what Mr. Hagert had said, and ordered a minute of the proceedings to be entered on the records.

The death of Mr. Galton was also announced in the old court-room by Assistant District Attorney Reed, and Judge Yerkes, after making an appropriate reply, ordered that the court be adjourned in respect to the memory of the deceased. These were exceptional honors to one occupying so subordinate a position; but the moral is evident,—

"Honor and fame from no condition rise;
Act well your part, there all the honor lies."

INTERPRETER FOR THE COURT OF QUARTER SESSIONS.

Appointed by the judges, term five years.

Joseph Sanson,[1] appointed........................Feb. 8, 1869

PROSECUTING ATTORNEYS FOR PHILADELPHIA.

This list is very unsatisfactory, but it is the best I could compile from the reports and the memory of the older members of the bar, and is, therefore, necessarily incomplete in many particulars. Attorney-General Lear wrote me in 1878 that there were no lists of the deputies on file in the attorney-general's office. The prosecuting attorneys were:

DISTRICT ATTORNEYS OF PHILADELPHIA.

Previous to 1850 the prosecuting law-officer for the commonwealth in the different counties of the State was appointed by the attorney-general, and called the deputy attorney-general. By the act of May 3, 1850, P. L., 654, the qualified voters of every county in the State were authorized to elect one person learned in the law as district attorney, for three years from the first Monday in November next after his election. By Article 14 of the new Constitution district attorneys are declared to be county officers, and their terms begin on the first Monday in January next after their election, to represent the commonwealth in all criminal and other prosecutions. Since that time the following gentlemen have acted as district attorneys for the judicial district known as the city and county of Philadelphia.

Name	From		To
Horn R. Kneass, in office from	1850	to	1851
His election contested successfully by			
William B. Reed, in office from	1851	to	1856
Lewis C. Cassidy,[4] elected	Nov.		3, 1856
His election successfully contested by			
William B. Mann, in office from	1856	to	1868
Joseph P. Loughead, in office from	1856	to	1859
Dennis W. O'Brien,[5] dep. dist. att'y.	June		21, 1861
Furman Sheppard,[6] elected	Nov.		2, 1868
Charles Gibbons, by the court	Oct.		25, 1869
Furman Sheppard, by the court	May		3, 1870
William B. Mann, in office from	1871	to	1875
Furman Sheppard, in office from	1875	to	1878
Henry S. Hagert,[7] in office from	1878	to	1881
George S. Graham,[8] elected	Nov.		2, 1880

[1] In the edition of "Purdon's Digest," by Brightly, 1853, it is said, in a note to an act providing for the appointment of an interpreter in Allegheny County, that the several sworn interpreters of foreign languages in the city and county of Philadelphia shall be entitled to receive the same fees as the Allegheny County interpreter for attendance on courts. This act was passed April 14, 1838. In a note the compiler says that the only act authorizing the appointment of an interpreter in Philadelphia was the general health law of Jan. 29, 1818, which gave him fees for his visits to vessels. On the 27th of March, 1865, a law was passed authorizing the appointment of an interpreter in Philadelphia by the Governor, and one for the court by the judges of the Common Pleas.—See Com. ex rel. Girard *vs.* Sanson, 67 Pennsylvania State Reports, 322.

[2] All the attorneys-general had their deputies here, but some represented the commonwealth themselves, particularly those residents of the city. Joseph B McKean, 1800 to 1808; Richard Rush, 1811; Jared Ingersoll, 1811 to 1816; Ellis Lewis, 1831; George M. Dallas, 1838; William B. Reed, 1838; Ovid F. Johnson, 1839 to 1845; Benjamin F. Champneys, 1846; and James Cooper, in 1848, appeared before the courts here in person as the representatives of the commonwealth.

[3] Messrs. Lewis, Phillips, and Hirst are mentioned in the reports as appearing for the commonwealth, but I believe they were not prosecuting attorneys or deputies in the strict sense, but only assisted the attorneys-general in special cases. At the times stated, Messrs. Barton and Brooke were deputies for Ovid F. Johnson, the attorney-general.

[4] The act of April 27, 1857, which was passed with the intention of compromising the contest between Mr. Mann and Mr. Cassidy, provided that there should be two district attorneys, the judges of the Quarter Sessions to appoint the additional district attorney, but the presiding judge of the Court and his associates refused to recognize the act as a compromise, and the contest went on, and was decided in favor of Mr. Mann. The court then appointed Mr. Loughead the additional district attorney.

[5] District Attorney Mann was in service for over four months (in 1861) as colonel of the Thirty-first Pennsylvania Volunteers, during which time Mr. O'Brien was his deputy. He was the assistant of Mr. Reed during the latter's term. Mr. Mann's son, Charles Naylor, was his assistant after his admission to the bar, in 1862. The late Judge Thomas Bradford Dwight and William H. Ruddiman were also Mr. Mann's assistants.

[6] Mr. Sheppard had certificate of election, and was sworn in. Mr. Gibbons contested his election, and the court declared him elected, Oct. 25, 1869; afterward the court discovered they had made an error in counting the votes, so on May 3, 1870, reversed their former decision and declared Mr. Sheppard duly elected. His assistants during the time he held office were Henry S. Hagert, Robert P. Dechert, and William Wilson Ker.

[7] Mr. Hagert's assistants were John R. Reed, Dallas Sanders, and William Wilson Ker, lately an assistant to the Attorney-General of the United States.

[8] District Attorney George S. Graham made the following appoint-

SALARIES OF COUNTY OFFICERS OF PHILADELPHIA COUNTY.

Act of March 31, 1876.

Office	Salary
District Attorney	$15,000
First Assistant	6,000
Second Assistant	5,000

Treasurer	10,000
Commissioners (each)	5,000
Controller	10,000

CITY SOLICITORS.

By ordinance of Feb. 27, 1801,[1] an attorney and solicitor for the corporation was authorized to be appointed by the mayor, salary $500. I am indebted to the late estimable Chief Justice John Meredith Read for this list of the city solicitors, and for encouraging me to compile these lists for preservation and future reference.

Name	Year
Jared Ingersoll,[2] appointed	1798
Joseph Hopkinson, appointed	1801
Mahlon Dickerson, appointed	1801
William Meredith, appointed	1808
William McIlhenny, Jr., appointed	1809
Joseph Reed, appointed	1810
William Meredith, appointed	1811
Randall Hutchinson, appointed	1813
E. Spencer Sergeant, appointed	1814
John Read,[3] appointed	1818
Thomas McKean Pettit, appointed	1820
Robert Wharton Sykes, appointed	1823
John K. Kane, appointed	1829
John Meredith Read, appointed	1830
John K. Kane, appointed	1831
Edward Olmsted,[4] appointed	1833
Isaac Hazelhurst, elected	1854
William A. Porter,[5] elected	1856
William L. Hirst, by Councils	1857
Henry T. King,[6] elected	1858
Charles E. Lex, elected	1860
Frederick Carroll Brewster,[7] elected	1862
James Lynd, by Councils	1866
Thomas J. Barger,[8] elected	1868
Thomas J. Worrell,[9] in office	1869
Charles H. T. Collis, elected	1871
William Nelson West,[10] elected	1877
Charles F. Warwick, elected	1884

SOLICITORS OF THE DISTRICTS.

FOR PHILADELPHIA COUNTY.

Previous to Consolidation, 1854.

Edward C. Quin, elected	—— —, 1854

FOR SPRING GARDEN.

District established by Act of March 23, 1813. *Solicitors elected by Ordinance of June* 18, 1832.

Name	Date
Peter A. Browne, appointed	Jan. —, 1820
James Page, appointed	Jan. —, 1824
Samuel Chew, appointed	—— —, 1826
Robert Bethell, elected	—— —, 1832

ments: First Assistant, Francis Amedée Bregy; Second Assistant, Charles Franklin Warwick; Third Assistant, John Lippincott Kinsey; Clerk, James Murray Rush Jermon. Mr. Bregy was assistant under Col. Mann. Charles F. Warwick having been elected city solicitor in 1884, J. L. Kinsey was appointed second assistant, and John A. Siner third assistant.

[1] Ordinance repealed Dec. 28, 1815. Ordinance of April 10, 1817, authorized the mayor to appoint a solicitor, whose services were to be paid for according to their value. And this was the rule until the passage of the ordinance of Aug. 29, 1839, which authorized Councils, yearly, in January, to elect a solicitor.

[2] Judge James T. Mitchell, formerly assistant under Mr. Lex, has a letter signed by Jared Ingersoll, dated in 1798, as city solicitor.

[3] John Read, city solicitor in 1818, was the father of the late Chief Justice Read, city solicitor in 1830.

[4] Mr. Olmsted held the office for twenty-one years.

[5] George L. Ashmead was first assistant city solicitor for Mr. Porter.

[6] The first assistant under Mr. King, and also under Mr. Lex, was David W. Sellers. The other assistants under Lex were the present Judges Finletter and Mitchell, and Simon Gratz.

[7] Mr. Brewster was elected in 1862 for three years, re-elected in 1865, resigned in 1866, having been elected as associate judge of the Common Pleas.

[8] Mr. Barger's election was successfully contested by Mr. Worrell, who was declared city solicitor in 1869.

[9] Henry R. Edmunds was assistant city solicitor from Feb. 25, 1870, to Feb. 14, 1871. William P. Messick, A. Atwood Grace, William H. Yerkes, William N. Ashman, Lorin Burritt, Joshua Spering, Joseph K. Fletcher, and John H. Seltzer, for the guardians of the poor, were also assistants under Mr. Worrell.

[10] Assistants to Mr. West were Charles E. Morgan, Jr., John K. McCarthy, and Francis Alexander Osbourn solicitor for the guardians of the poor, and Abraham M. Beitler, Charles Barnsley McMichael, Robert W. Finletter, William H. Addicks, Robert T. Corson, John Scott, Jr., M. Verner Simpson, Thomas Corwin Cheston, and Thomas D. Finletter.

[11] Attorneys for forfeited recognizances.

[12] The reason why it is impossible to obtain a list of the solicitors of Southwark is because no such list was ever made out by any person. The minute-books of the corporation of Southwark, as well as of all other districts, were ordered to be placed in charge of City Councils after consolidation. This direction was but partially enforced. Many of the books were carried off by individuals. I saw some years ago a minute-book of the corporation of Southwark in the possession of a gentleman of this city, who claimed it to be his private property. It is said that for some years after consolidation a large number of books belonging to the district corporations, with other papers, were stored over the mayor's office at Fifth and Chestnut Streets, but I have not been able to verify this statement.

[13] Appointed *pro tem.*, *vice* Kneass, resigned.

[14] Collector of outstanding debts, 1847–48.

Eli K. Price, elected	——	—, 1833
John Miles, in office	——	—, 1835
Charles Naylor, elected	Dec.	—, 1835
Eli K. Price, elected	Dec.	—, 1837
Henry M. Phillips, elected	Dec.	8, 1841
Joseph Allison, elected	Dec.	4, 1848–51
Robert Bethell, elected	Dec.	—, 1851
Leonard Myers, elected	——	—, 1854

FOR KENSINGTON.

Incorporated by Act of March 6, 1820. *Office created by Ordinance of Nov.* 7, 1843.

John M. Read, appointed	Sept.	—, 1842–46
Elihu DeKalb Tarr,[1] appointed	——	—, 1846–50
John G. Michener, appointed	——	—, 1850
Harlan Ingram, appointed	——	—, 1852
John G. Michener, appointed	——	—, 1854

FOR PENN TOWNSHIP.

Created by Act of March 21, 1827. *Incorporated by Act of Feb.* 26, 1844.

George M. Wharton, appointed	——	—, 1844
J. Murray Rush, appointed	1845	to 1846
Horn R. Kneass, appointed	1848	to 1850
David Webster, appointed	Oct.	22, 1850
Henry T. Grout, appointed	——	—, 1851
David Webster, appointed	——	—, 1854

FOR WEST PHILADELPHIA.

Created a borough Feb. 17, 1844. Title changed to district April 3, 1851.

Henry M. Phillips, appointed	May	3, 1842
George Emlen, appointed	April	—, 1849
George L. Ashmead,[2] appointed	before	1850
William W. Wallace, appointed	June	—, 1850
Henry M. Phillips, appointed	1851	to 1854

FOR RICHMOND.

Incorporated Feb. 27, 1847.

William E. Lehman, appointed	April	—, 1847
Edward C. Graeff	Oct.	—, 1849
Thomas W. Higgins, appointed	1853	and 1854

FOR MANAYUNK BOROUGH.

Charles D. Freeman, appointed	April	—, 1847

FOR THE BOARD OF HEALTH.

Samuel Ewing, in office	1812	to 1818
Charles Naylor, in office	1835	to 1838
Benjamin Gerhard, in office	1838	to 1841
J. Altamont Phillips, in office	1841	to 1854

FOR THE GUARDIANS OF THE POOR.

James Milnor, in office	——	—, 1809
Richard Rush, in office	——	—, 1810
Samuel Ewing, in office	——	—, 1815
James A. Mahany, in office	——	—, ——
Joel B. Sutherland, in office	before	1822
John M. Scott, in office	1822	to 1835
James Hanna, in office	1835	to 1850
Charles Gilpin, resigned	Feb.	—, 1850
Henry S. Hagert, in office	Oct.	16, 1850–54

Since the Act of Consolidation the city solicitor or his assistants represent all the departments of the city.

THE RECORDER'S COURT OF THE NORTHERN LIBERTIES, KENSINGTON, AND SPRING GARDEN.

Established by Act of June 16, 1836.

This court was abolished by act of March 19, 1838, creating the Court of Criminal Sessions. It was irreverently called "The Flaxseed Court."

PRESIDENT.

Robert T. Conrad, commissioned	July	16, 1836

ASSOCIATES.

The Aldermen of the Districts.

I have had no opportunity of examining the records of the districts; in fact, I believe they have all been destroyed, hence these imperfect lists. There were no City Directories printed in 1836 or 1838, and that of 1837 contains no lists of the aldermen, except those of the city proper. Being unable to find out the names of the gentlemen who sat as associates, application was made to the author of the history of Philadelphia for any information he had on the subject. He replied as follows:

"By an act passed in 1832 seven aldermen were to be appointed for the District of the Northern Liberties. John T. Goodman, Nathan Harper, John Laws, John R. Walker, Frederick Wolbert, Peter Hay, and John Conrad were appointed in 1833. Some one of these must have died, resigned, or declined, because Mordecai Y. Bryant was appointed April 17, 1833, in the place of somebody; John M. Cannon was appointed April 15, 1834; and Michael Andress, April 16, 1836. The three latter were probably in commission at the time the Recorder's Court was created, but we do not know which four of the seven first above named were in service at that time. The Spring Garden aldermen, by act of 1832, were four in number. There were appointed in 1833: Morton McMichael, Charles Souder, John L. Woolf, and Freeman Scott. June 20, 1836, Martin W. Alexander was appointed. We presume that he was the successor of Charles Souder, who died June 2, 1836. By act of 1832 four aldermen were to be appointed for the District of Kensington, and in 1834 the number was increased to five. In 1833 the four aldermen were Hugh Clark, Isaac Boileau, Robert Hodgson, and David Snyder. William B. Mott was appointed Dec. 7, 1835. On Dec. 9, 1836, Samuel Weyant replaced one of the foregoing, but we do not know who." Frederick Wolbert, an alderman of the Northern Liberties, died June 19, 1836.

JUDGES OF THE VICE-ADMIRALTY SITTING IN PHILADELPHIA.

William Penn and Council	March	9, 1683
Thomas Lloyd and Council	11 8 mo.,	1684
Benjamin Fletcher, vice-admiral	Oct.	20, 1692
William Markham,[3] sole judge	May	17, 1693
Col. Robert Quarry	——	—, 1697
Robert Snead, deputy, 1 C. R., 531	Aug.	8, 1699
John Moore, deputy, 1 C. R., 550	April	13, 1700
Roger Mompesson,[4] "Logan Papers"	9 5 mo.,	1703
Robert Quarry, P. and West Jersey	9	br, 1703
John Moore, deputy for Seymour	5 mo.	20, 1704
William Assheton,[5] in office	——	—, 1718
Josiah Rolfe, sole judge	June	25, 1724
Joseph Browne, sole judge	Oct.	6, 1724
Isaac Miranda, deputy judge	July	19, 1727
Charles Read, sole judge	April	—, 1735
Andrew Hamilton, sole judge	Aug.	18, 1737
Thomas Hopkinson,[6] sole judge	——	—, 1741
Dr. Patrick Baird, deputy	Dec.	14, 1749
Edward Shippen, Jr.,[7] judge	Nov.	22, 1752
Jared Ingersoll, commissary	Oct.	17, 1768
James Biddie, deputy	Oct.	17, 1768

JUDGES OF THE ADMIRALTY UNDER THE COMMONWEALTH OF PENNSYLVANIA.

George Ross,[8] commissioned	April	6, 1776
Francis Hopkinson, commissioned	July	16, 1779

[1] See his "Digest of the Ordinances."

[2] See copy of "Ordinances," edited by him in 1851.

[3] William Markham was appointed by Benjamin Fletcher, the vice-admiral, etc., "his Deputy or Surrogate in the sd office of Vice Admiralty, as far as it extended over sd province of pennsylvania & Countrey of New Castle."—1 C. R., 311 and 314.

[4] Mompesson had arrived here at this date; 1 "Logan Papers," 200. His commission as judge of the Vice-Admiralty included Massachusetts Bay, New Hampshire, Connecticut, Rhode Island, New York, the Jerseys, and Pennsylvania; "Street's New York Council of Revision," 75; but Col. Quarry in some way got a commission as judge of the Admiralty for Pennsylvania and West Jersey.—1 "Logan Papers," 281, November, 1703. In 1 C. R., 575, Quarry is spoken of as judge of the Court of Admiralty of Pennsylvania and West Jersey on May 14, 1700, and Moore as advocate.

[5] The inscription on the book-plate previously referred to is as follows: "William Assheton, of Gray's Inn, Esquire, Judge of the Court of Admiralty in Pennsylvania, 1718." See, also, 3 C. R., 182, May 18, 1722, where he is stated to be "Judge of His Majesties Court of Vice Admiralty for this Province."

[6] See 2 *Pennsylvania Magazine*, 314.

[7] In the history of the First City Troop it is stated James Mease was "Admiralty surveyor of the port of Philadelphia, 1796–1825."

[8] The Continental Congress recommended the several Legislatures of the United Colonies to create Courts of Admiralty.—"Journal of Congress," i. vol., 260. An appeal being allowed to Congress in all cases, or to such person or persons as they should appoint for the trial of appeals. On Sept. 9, 1776, a committee, consisting of Richard Stockton, Samuel Huntington, Robert Treat Paine, James Wilson, and Thomas Stone were appointed to hear an appeal in the case of the schooner "Thistle." This committee appears never to have met but once, namely, on Sept. 16,

JUDGES OF THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA.

Under act of Congress, Sept. 24, 1789, organizing United States District and Admiralty Courts.

Francis Hopkinson, commissioned	Sept. 30, 1789

JUDGES OF THE UNITED STATES CIRCUIT COURT, EASTERN DISTRICT OF PENNSYLVANIA.

THIRD JUDICIAL CIRCUIT.

See Act of Congress, Sept. 24, 1879, and Brightly's "Digest of United States Statutes."

James Wilson, assigned	April 12, 1790
John Blair, assigned	April 11, 1792
William Cushing,[14] assigned	Oct. 11, 1792
William Paterson, assigned	March 11, 1793
James Iredell,[14] assigned	April 11, 1793
Samuel Chase,[14] assigned	April 11, 1798
Bushrod Washington,[15] commissioned	Dec. 20, 1798
Jared Ingersoll,[16] chief judge	Feb. 18, 1801
Richard Bassett, commissioned	Feb. 20, 1801
William Griffith, appointed	Feb. 18, 1801
William Tilghman, chief judge	March 3, 1801
Henry Baldwin, assigned	Jan. 6, 1830
Robert Cooper Grier, assigned	Aug. 4, 1846
William McKennan, commissioned	Jan. 4, 1870

1776, in the State-House, to the appeal from the decision of Judge Ross. —See "Admiralty Docket," "Record in Prize," 1776, in which the committee are denominated commissioners.

[1] There is a volume of reports of his decisions included in his works.

[2] Appointed by the President, but not confirmed by the Senate.

[3] In the place of Horace Binney, who declined Jan. 31, 1842.

[4] Died Jan. 26, 1879, in the seventy-fourth year of his age.

[5] James Logan says of Lloyd, in a letter to Penn, 2d Eighth mo., 1702 (1 "Logan Papers," 139), "He is now made J. Moore's Deputy Judge of the Admiralty, Advocate at the said Court, and is now at New Castle upon a trial in it, notwithstanding his opposition to it before thy arrival occasioned so much trouble." This means that John Moore, who was the deputy judge, as we well know, made David Lloyd the advocate for the crown in his court.

[6] Died May 29, 1781, aged twenty-nine years.

[7] Died Jan. 14, 1776, aged sixty-three.

[8] Appointed United States marshal of the Pennsylvania District Sept. 30, 1789. This official is now styled the United States marshal for the Eastern District of Pennsylvania.

[9] Died Sept. 10, 1826, aged eighty-seven.

[10] Died Aug. 27, 1837.

[11] Died May 4, 1869.

[12] Died Nov. 7, 1871.

[13] Mr. Valentine was assistant district attorney from May, 1864, to the day of his appointment. Henry Hazlehurst and Hood Gilpin were appointed assistants by Mr. Valentine in 1875, Henry P. Brown in 1876, and James S. Nickerson in 1882.

[14] These judges held the Circuit Court at the date specified, Cushing at York, Pa., Iredell and Chase at Philadelphia. As they were justices of other circuits, they were probably detailed for the occasion by the Supreme Court. Until the appointment of Judge McKennan, the only judges of the Circuit Courts were the associate justices of the United States Supreme Court, with the exception of the "Midnight Judges." The act of April 16, 1869, gives each circuit a judge. The bench of the Circuit Court consists of an associate justice of the Supreme Court, the circuit judge, and the judge of the United States District Court for the district in which the court is held. Any two of said judges sitting together constitute a full bench.

[15] Judge Washington died Nov. 26, 1829, aged seventy. Judge Grier died Sept. 26, 1870.

[16] Jared Ingersoll was appointed chief judge Feb. 18, 1801, but declined, and Mr. Tilghman was appointed, nominated, and confirmed by the Senate on March 3, 1801. These judges were facetiously called "The Midnight Judges."

CHAPTER XL.

MEDICAL PROFESSION.

First Practitioners—Epidemics—Eminent Physicians and Surgeons—Medical and Dental Colleges and Societies—Hospitals and Dispensaries.

If the city of Philadelphia was at an early period in possession of the ablest bar in the United States, the same may be said in regard to its physicians. It is a fact, not generally known, that this city takes precedence over all other cities in the United States in medical education. Here the first systematic and regular course of lectures in medical instruction in this country was given, which resulted in the foundation of the present University of Pennsylvania. It is not strange, therefore, that a city which first began medical instruction in this country, being so favorably located, should have gained pre-eminence over all rivals in this particular field, and secured to her medical schools a world-wide fame.

As heretofore stated, the first settlers on the banks of the Delaware were the Swedes. We are not informed from what diseases they suffered during the period of their supremacy, and how they were mitigated by the hands of those skilled in the knowledge of the causes of human maladies, and the means of their relief. Noah Webster, in his history of epidemics and pestilential diseases, alludes to the fearful severity of the winter of 1641, and the great sickness that prevailed among the Swedes in the following summer. In 1647 the same colony was similarly visited by an epidemic that prevailed throughout all the colonies. From the remarks of this writer we must conclude that there were few, if any, whose skill was sufficient for the exigencies of that visitation. He says, "such as were bled or used cooling drinks died; such as used cordials or more strengthening things, recovered for the most part." Eight years afterward another fearful epidemic came on. Yet further on, the same historian tells of another whose advent had been presaged by signs and wonders in the heavens. "In the year 1668 appeared a comet with a stupendous coma: this was attended by an excessively hot summer, and malignant diseases in America."

The foregoing is about the extent of our knowledge of diseases and their treatment in this country prior to the arrival of William Penn. This absence of information may be regarded as evidence that these colonists, barring accidents from epidemics, were in the main a vigorous and healthy community. With the coming of a ruler like William Penn all the exigencies of a society destined to rapid development must be foreseen, and to some degree provided for. We have seen how he brought along Bradford and his printing-press, destined to become so notable in the history of the young commonwealth. All professions had their representatives among those related to him by blood or religious faith. Among those who joined their fortunes with him in this movement (perilous for those times) were Thomas Wynne and Griffith Owen, whom, for want of earlier historic accounts, we must regard as the pioneers of the medical profession in Pennsylvania. Both were Quakers, and, according to tradition, had been well educated in medicine, and been engaged in practice in the mother-country. Wynne was said to have followed his profession in the city of London. The proprietor, it seems, had other uses for his learned friend than the cure of the bodily infirmities of his people; or such infirmities were not sufficiently numerous and serious to engross all his time. We find that he was returned to the first Assembly that was elected for the province, and became its first Speaker.

It is much to be regretted that these men did not leave some memorial of the career they led in the beginning of the scientific treatment of what few maladies befell the early colonists. What poetry is to prose, in new societies, surgery is to medicine. It goes before. They were mainly accidents by flood and field, great and small, from dangerous wounds to toothaches, that claimed the attention of these men of science, except, indeed, when an epidemic came along, and prostrated the multitudes with fevers and influenzas or other pestilences. Cases were not sufficiently numerous to keep even these two constantly employed. Dr. Wynne continued to take an active part in politics, while his brother of the lancet and the scalpel is said to have traveled much among the neighboring provinces. This habit grew upon him with years, until later he gave his practice over entirely to his son, and took his chief delight in going the rounds of meetings with the Quaker ministers, several of whom kept journals, in which Dr. Owen is frequently alluded to in terms of fond regard.[2]

---

[1] Mr. Justice Bradley is one of the associate justices of the Supreme Court of the United States, assigned to the Third Circuit, as the circuit justice, which he must visit at least once in every two years.

[2] Dr. Owen, we suspect, was as much a preacher as physician. This combination of the two professions, theology and medicine, is not uncommon, especially in newly-organized communities. The cure of souls among such as claim to have this as a gift from heaven, nearly always carries along as a handmaid the cure of bodies, and many a penny has been turned in this line of practice that was at least as honest as those gathered from the other. Among the inducements of simple folk to emigrate to other climes, those founded upon religion are frequently among the most potent. Dr. Thatcher speaks with feeling upon this motive that impelled so many Quakers to leave their native country. "They

Allusions are found here and there in old annals to the "Barbadoes distemper," so named, doubtless, from having been imported from that island. This was in 1697, beginning in August and lasting until near the last of October, when it suddenly subsided. It had been an intensely hot summer, during which several persons had died from sun-stroke. Vomiting and the discharge of blood were the most marked symptoms. Dr. Wynne had died some time before this epidemic. His practice devolved upon his son-in-law, Dr. Edward Jones. A son of Dr. Owen about this time became of age, and these two young physicians supported the burden of encountering this distemper. It is evident from the foregoing that the settlement must have been a remarkably healthy one for several years, in spite of its rapid growth and the necessarily abundant felling of timber. Deaths that occurred, except from epidemic causes peculiar to no locality, were very infrequent. Allusions are frequently made to this fact by English travelers who, upon their return to England, published accounts of the country.

At the settlement of Philadelphia there were living those with whom the search for the philosopher's stone and the elixir of life was yet dear, sometimes avowedly so. One of these, whose descendants yet live in the State, some of them deriving profit yet from one of his nostrums, was very prominent in his day. There were many who fully credited his claim to have the secret of producing gold, and the doubting were confidently answered by those who had seen with their own eyes the precious metal in his hands. Among many of the uneducated in Pennsylvania to this day is often used the medicine "golden drops," of which the traditions of cures, some approximating the miraculous, are many and multifold.

were restive and unhappy under the restrictions and even persecutions which emanated from the bigotry of the Church of England." The Puritan clergy of England were, for more than twenty years prior to the emigration of the first settlers, subjected to the sharpest persecution. Hence, as a precautionary measure in case of ejectment, a considerable number of clergymen of that period were educated to the medical profession, and not a few were eminent professionals before they crossed the Atlantic. When these professional men came to form connections in the colonies, it was found that the small congregations were unable to afford them a comfortable support; hence the convenience of their resorting to secular avocations."

The clergy, at least in this country, have not been noted for backwardness in asserting their claims of recognition for whatever they may have regarded themselves as specially competent. From the pulpit they declaimed upon the sin of inoculation when it was first introduced. They wrote and published freely upon other subjects connected with the sanitary and moral principles involved in medical practice. Some interesting things are told of this mingling of the two professions. A descendant of one of these theological physicians used to exhibit, not very long ago, what evinced some absence of mind in his ancestor. The latter was on one occasion on a Sunday morning in the pulpit engaged in the dispensation of the solemn services of the hour, when he received a communication, stating that a negro girl needed his speedy medical attention. Unfortunately, he had no paper at hand on which to write his prescription. Whereupon he took the hymn-book and wrote on a fly-leaf this: "Let the wench be blooded, and wait until I come." The case being urgent, we suppose the reverend doctor hastened through his present duties in order to repair to those which, if not more important, needed more speedy attention.

Dr. Griffith Owen died about 1717. His son and Dr. Jones, a son-in-law of Dr. Wynne, as far as can now be known, were the only two physicians of any claim to respectability until the coming of Dr. Kearsley and Dr. Graeme. The latter of those, we may suppose, was at least as fond of other pursuits as of his profession. At all events, he was often absent from the arena of professional labors, whiling away his time in establishing and continually adding adornments to his estate in Montgomery County, destined to become long notable under the name of "Graeme Park."

The Graemes claim descent from William de Graham, who went to Scotland on invitation of David I., in 1128, and whose descendant in the tenth generation was one of the Scotch commissioners to treat with England in 1406 and 1411, from whom came in undoubted succession the Graemes of Montrose. Dr.

DR. THOMAS GRAEME.

Thomas Graeme was born in 1688, at Balgowan, the hereditary estate in Perthshire. He came to Pennsylvania in 1717, along with and under the auspices of Col. William Keith, who had been appointed Deputy Governor of the Province. He was by profession a physician, and is supposed to have received his education at the University of Leyden. His practice was small in a society where, as we have seen, men who had been regularly educated in medicine as well as law were regarded with less favor than those who consulted other dictates than those to be found in books. To compensate this insufficient progress of his *protégé*, Governor Keith put him at the head of the naval office, much to the disgust of Logan, whose friend Assheton had been removed for this purpose, and went so far as to intimate that Keith, without considering the question of the merits of Assheton or Graeme, had appointed the latter from gratitude to his family for the security which he had enjoyed while hiding at Balgowan after the battle of Sheriff Muir. He was married to Miss Diggs, who was stepdaughter to the Governor, and this relation also enhanced his influence at the seat of power in the province.

The Court of Chancery was established through

the influence of Governor Keith in 1720. In 1725 Dr. Graeme was raised to the Council and became a master in chancery. Hostile as the Assembly became to the Governor, the latter's subordinates came in for their share of odium and distrust. They complained of the exorbitant fees charged by the master, and even went so far as to accuse him of partiality. Notwithstanding these discouraging things, he was appointed in 1731 justice of the Supreme Court. The St. Andrew's Society, intended originally for the assistance of Scotchmen, was founded in 1749, and Dr. Graeme became its first president. He died in 1772.

The name of Dr. John Kearsley was long remembered. He was a native of England, and came to this country about 1711. As a member of the Colonial Assembly his speeches for the rights of Americans were so forcible that he was often carried home on the shoulders of the people. He contributed a large sum of money for the building of Christ Church. Associated with his name is the establishment of the first institution founded for the relief of the indigent,—the Hospital for Poor Widows, which was attached to Christ Church. Under his instructions were two young men who were destined to become eminent in the profession, but the latter in another community,—John Redman and John Bard. He has been represented as of morose disposition, an infirmity which, strangely enough, is often found, as in his case, blended with high public spirit and hearty benevolence. He died about 1732. His practice, like that of Drs. Wynne and Owen, descended to another member of his family, a son of his brother. But this person, if he did not take too active a part in politics, certainly espoused the unfortunate side. An avowed adherent to the foreign cause, first proprietary and then royal, his conduct rendered him obnoxious to the Whigs to that degree that he was subjected to so gross indignities as to induce permanent insanity.

For a while dividing the practice with Dr. Kearsley, and then surviving him about twenty-five years, was Dr. Lloyd Zachary. He had come when a young infant with his father from England to the city of Boston. A brother of the elder Zachary was a resident of Philadelphia. To this brother the child was consigned by his father on his death-bed, and Philadelphia became his home for the rest of his life. Dr. Zachary was one of the most gifted men that ever lived in Philadelphia. After receiving his academic education he was placed under Dr. Kearsley for professional training. With him he remained until he had acquired all that his preceptor could singly impart. Then he went abroad and spent three years in further study. He began the practice of medicine about 1723. He was eminently successful, and acquired much money, of which he liberally contributed to charitable purposes. He rendered incalculable services to the hospital which was founded in his time, and of which he was made first physician. In the community there probably was not one who was more respected and beloved. His active career was unhappily shortened by an attack of paralysis when in the meridian of his success. Yet his devotion to the hospital was never subdued, and when he died, his will was found to contain a liberal bequest in money and books to that institution.

Two of the Bonds—Thomas and Phineas—brothers, natives of the State of Maryland, became quite distinguished. Thomas, the elder, removed to Philadelphia about the year 1734. Franklin had then been a resident about ten years, and was already fairly entered upon the great career he was to enact. Dr. Bond soon became intimate with the latter, and they, along with Bartram, Godfrey, and others, gave to public endeavors their most determined and successful direction. With Dr. Zachary, he was teacher of the medical students of the city, and was the first to deliver clinical lectures at the hospital, of which he was one of the most active of the founders. The younger brother, Phineas, after receiving his academic education, took professional courses in London, Paris, Leyden, and Edinburgh, after which he returned and settled in Philadelphia, where he soon rose to distinction, and, besides being connected with his brother and Dr. Zachary in the hospital, was one of the founders of the College of Philadelphia. The elder Bond was an occasional contributor to foreign journals, notably the *London Medical Observations and Inquiries*. One of his papers was an account of an immense worm bred in the liver, and another on the use of Peruvian bark in scrofulous cases.

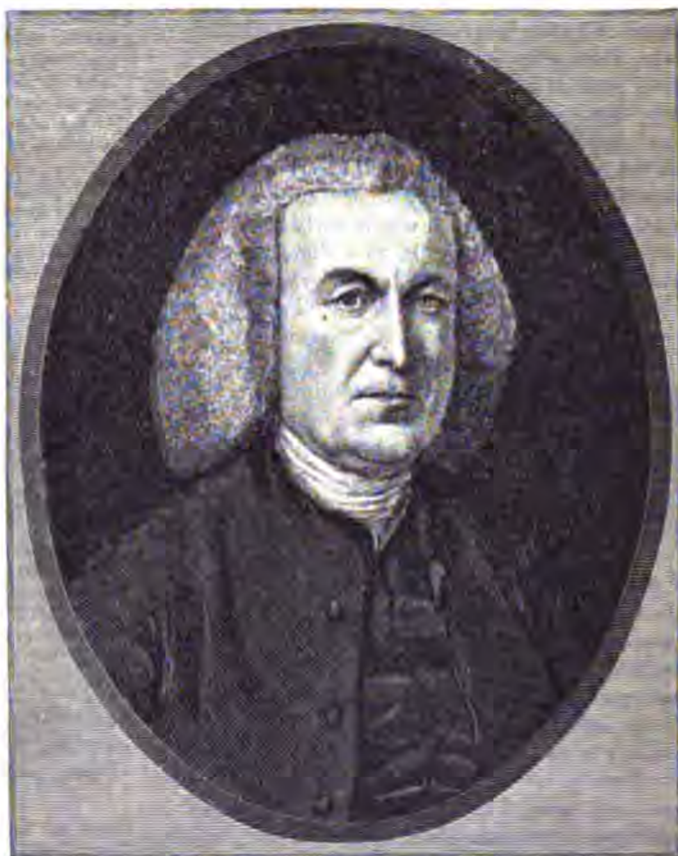
Contemporary with the aforementioned, though somewhat younger, were several men of much ability. Among these was Dr. Thomas Cadwalader, the provincial councilor.

He was the son of John Cadwalader, a member of the Provincial Assembly, who emigrated to Pennsylvania from Pembrokeshire, North Wales, toward the close of the seventeenth century, and on Dec. 29, 1699, married Martha, daughter of Dr. Edward Jones, one of the earliest practitioners of medicine in the province, and granddaughter of Dr. Thomas Wynne, who came over with Penn in the "Welcome." Dr. Cadwalader was born in Philadelphia, and it is believed that after studying at the Friends' public school he began his medical tuition under his uncle, Evan Jones, who was a chemist in this city. He was for some years abroad completing his professional acquirements, and studied anatomy in London a year under the celebrated Chesselden. Returning to Philadelphia about 1731, he began that career as a physician, philanthropist, and man of affairs which made him so highly distinguished. He was one of the original corporators of the Philadelphia Library Company, and a director at various periods from 1731 to 1774. In the winter of 1736–37 he was one of the physicians who inoculated for the smallpox, and in 1745 he published his essay on the West India dry

gripes, a violent colic that was probably introduced into Philadelphia from the sub-tropical islands. In this little volume Dr. Cadwalader demonstrated that he was ahead of his professional colleagues by advocating the employment of mild cathartics in preference to quicksilver and drastic purgatives. The suggestion was so eminently sound that the practice was adopted with success in America and England. It appears that in 1746, Dr. Cadwalader had his home in Trenton, N. J., as when a charter as a borough was granted to it in that year he was chosen first burgess. In the possession of the Young Men's Christian Association are a number of volumes of a public library founded by him at Trenton. He returned to Philadelphia in 1750, and his name appears in the following year as a subscriber to the capital stock of the Pennsylvania Hospital at the time of the charter of the institution, of which he was one of the original physicians and surgeons, and served many years. In 1751 he was also elected a member of the Common Council of Philadelphia, and served until 1774. With Chew and Mifflin he was called to the Provincial Council Nov. 2, 1755, and remained a member up to the time of the Revolution. In 1750 he delivered the first course of medical lectures given in Philadelphia, and in 1753 he was made a trustee of the academic department of the college, now the University of Pennsylvania.

In 1765, upon the organization of the medical department of the University, he was elected one of its trustees. He was a member of the Philosophical Society and the Society for Promoting Useful Knowledge. He was a patriot in the Revolution, signed the non-importation articles, and was one of the commission appointed by the Committee of Safety, July, 1776, to examine candidates for positions in the navy. He was also medical director of the army hospitals. He died at Greenwood, N. J., Nov. 14, 1779, aged seventy-two years, and his remains were interred in the Friends' burying-ground at Trenton. He was married, June 18, 1738, to Hannah, daughter of Thomas Lambert, and their children were Anne, Martha, John, Lambert, Mary, Rebecca, Margaret, and Elizabeth.

John Cadwalader, son of the councilor, became the Gen. John Cadwalader of the Revolutionary war, and was the father of Gen. Thomas Cadwalader, of the war of 1812, and Frances Cadwalader, born June 25, 1771. She married Lord Erskine, British minister to the United States, and son of Lord Chancellor Erskine. Lady Erskine was one of the most remarkable beauties of her time, as shown in her portrait by Gilbert Stuart, a superb example of his skill, which is in possession of the Philadelphia family. It is a curious fact that her descendants, and therefore the descendants of a Revolutionary general, are the present Duke of Portland and the son of Lord Archibald Campbell, prospective Duke of Argyle. The late John Cadwalader, born April 1, 1805, was the great-grandson of Dr. Thomas Cadwalader, and was elected to Congress in 1854. In 1858 he was appointed judge of the United States District Court for the Eastern District of Pennsylvania, a position which he filled with great reputation to the time of his death. A



DR. THOMAS CADWALADER.

brother of Judge Cadwalader was the bold Maj.-Gen. George Cadwalader, distinguished for his services in the Mexican war and the civil war, and especially in connection with the quelling of the Philadelphia riots in 1844. The Gen. Thomas Cadwalader above mentioned was, in 1826, associated with Gen. Scott and Col. (afterward President) Taylor in the revision of the tactics of the United States army. He was the author of numerous articles in various journals, and his residence at Ninth and Arch Streets was the resort of the most accomplished scholars of the country. Col. Lambert Cadwalader, of Revolutionary renown,

Digitized by Google

was also a son of the councilor, and John Dickinson, the celebrated author of "The Farmer's Letters," was a nephew. Dr. Thomas Cadwalader, upon his return home from Europe, rose with marked rapidity into successful practice. He was represented as a man eminently polished in manners, yet equally popular among the humblest of the people. He had the leading practice among the Welsh families, and in 1745 published one of the earliest American medical treatises, in which he recommended a change in the treatment of a then prevalent disorder. He was as generous as he was gifted. While abroad he had paid much attention to the study of anatomy. Not disposed to keep to himself an accomplishment which most of his brethren in the profession had not had opportunities to acquire, he took a house, in which he gave lessons in this science, illustrating its principles by practicing there upon such of his patients as could be removed from their homes. This house is supposed to have been furnished by James Logan.[1] These lectures were attended not only by students, but by men already engaged in practice, and by other leading citizens.

Dr. George Glentworth was an early physician and surgeon. He was born in this city July 22, 1735, and died here Nov. 4, 1792. He graduated at the University of Edinburgh, in 1758, and was surgeon in the British army during the French and Indian war. In 1777 he relinquished his extensive practice in this city and became surgeon of a regiment; afterward senior surgeon in the American army, and subsequently director-general of hospitals for the middle division.

Another physician of note in that day was Cadwalader Evans, a relative of the councilor. He was one of the pupils of Dr. Thomas Bond.

Among the evils that occasionally interrupted the growth and happiness of this otherwise then most favored young community was the smallpox. In the beginning of the century there were those who, having carefully studied and compared the statistics of deaths by this disease and by inoculation, did not hesitate to advise the adoption of the latter as a preventive. It required persistent argument to overcome the fears of the inhabitants; but so disastrous had been the ravages of the disease, and so persistent and able the arguments of Kearsley, Zachary, Cadwalader, Bond, and Shippen, that the hostility was overcome at last about 1730. The first submission was that of J. Growden. It is recorded of Thomas Jefferson that when a lad, he made the journey to Philadelphia for the purpose of receiving inoculation, and persons used to point out, near the bank of the Schuylkill, the house where he lay during his convalescence.

The following extract is interesting in several aspects of the history to which we are devoting this chapter. It is taken from an address by Dr. Caspar Morris, published in the "Memoirs of the Historical Society of Pennsylvania" in 1829:

"The winter of 1740-41 was very severe, and the succeeding summer the city was visited by a disorder which Noah Webster calls the American plague, and Dr. Bond says was yellow fever, but supposes it to have been introduced by a sickly ship-load of convicts from the Dublin jail. Previous to this it had been the practice to distribute sick immigrants among the inhabitants, at whose houses they received that attention their forlorn situation demanded. In this way jail, or ship-fever, was frequently communicated to the families with which they were quartered (or it was so thought at the time), and about this time a 'pest-house' was erected at League Island. In 1747, Webster says, the city again was visited by the 'Bilious Plague,' preceded by influences which very frequently prevailed over the whole continent.

"The citizens frequently suffered from bilious remittent fevers, particularly while the dock remained open. This was a creek, running from near the centre of the city plat to the Delaware, following the course of Dock Street, and was navigable at high tide so far as Chestnut and Fourth Streets. At low water, however, its muddy bed was left exposed to the sun, and emitted a most noxious effluvium, and Dr. Bond asserts that fewer ounces of bark were taken after its closure, than pounds before. As a preventive and cure for miasmatic diseases and their sequelæ, Dr. Bond lauds highly the mild chalybeate waters which abound in the neighborhood of the city, and by his directions they were resorted to both by convalescents and those who wished to escape the 'bleaching ague.' Many facetious stories are told of the impositions that were practiced upon those who, too unwell to walk to the springs out of the city, were directed to particular wells as possessing equal virtues. These springs seem early to have claimed attention, and were thought by the first settlers to equal the most celebrated spas of Europe. So early as the year 1722, the one now known as the Yellow Springs, in the Great Valley, was discovered, and much resorted to. There was one in the neighborhood of the Wind-Gap in the Blue Mountains, which on the early maps of the State was called the Healing Spring, and marked by the representation of a number of tents pitched around it. There was another situated near Bristol, and in the Watson Map one is noticed situate near where the Globe Mill now (1829) stands, which received the patronage of William Penn, who caused accommodations for visitors to be erected, and hoped to see a village collected round it, which, in anticipation, he named Bath."

From some causes the method of inoculation for smallpox did not prove as great a blessing as its advocates had foretold. It is probable that sufficient preliminaries were not observed for putting patients in condition to receive the virus. The indifferent success of its first employment seemed likely after some time to cause its disuse, until Dr. Thompson, about the middle of the century, brought forward a system of practice originated by himself, which made a very strong impression, not only in Philadelphia but in New York and Boston. It was also noticed with favor by the leading physicians abroad. Dr. Thatcher, from whose "American Medical Biography" this information has been obtained, seems to have not known whether to assign Dr. Thompson to Pennsylvania or Maryland.

Much of the information we have of medical events and others in the early history of Philadelphia has been derived from the works of Thomas Story, an English Quaker, who traveled in the colonies of

[1] "Dr. Cadwalader, who had studied anatomy in London, under the guidance of the celebrated Cheselden, gave demonstrations to the physicians of Philadelphia when he himself settled among them. It is interesting to know that the place of delivery of these lectures was in Second Street, above Walnut. The Bank of Pennsylvania subsequently occupied the site. With respect to these lectures Dr. Wistar remarks, 'I suppose that the anatomy of that day, as well as of the present, enjoyed the honorable protection of literature, and that the dissertations were made under the auspices of the most profound scholar of Pennsylvania, the president, James Logan, founder of the Loganian Library.'" —*Watson's Annals.*

North America about the beginning of the eighteenth century. Among other things, he published his "Travels and Labors in the Service of the Gospel." We may have some idea of the degree to which the science and practice of anatomy had risen in 1699 by his account of a surgical operation, claimed to be the first that had taken place in that community:

"The next day, being the 1st of the 10th month, we went over Chester Creek on a boat to the town, and as the Governor landed[1] some young men, officiously and contrary to express command of some of the magistrates, fired two small pieces of cannon, and being ambitious of making three out of two by firing one twice, one of the young men, darting in a cartridge of powder before the piece was sponged, had his left hand and arm shot to pieces, upon which, a surgeon being sent for from on board a ship then riding, an amputation of the member was quickly resolved on by Dr. Griffith Owen (a Friend), the surgeon, and some other skillful persons present. But as the arm was cut off, some spirits in a basin happened to take fire, and being spilt on the surgeon's apron, set his clothes on fire, and there being a great crowd of spectators, some of them were in the way, and in danger of being scalded, as the surgeon was upon his hands and face; but running into the street, the fire was quenched, and so quick was he that the patient lost not very much blood, though left in that open, bleeding condition."

From this it appears that Dr. Owen had quite an extensive practice. Perhaps there was no physician residing at Chester, or perhaps Dr. Owen merely happened to be there to pay his respects to the newly-arrived Proprietary.

It is interesting to contemplate the rapid rise of the medical profession in Philadelphia from this rude beginning. There was promise to be indulged by the sight of the laborious philanthropic lives that were being led by the men comprising that list, from Wynne and Owen to Bond and the elder Shippen; how they devoted their endeavors not only to the attainment of fame and fortune for themselves, but the dissemination among one another and among the people of what they had learned of the principles of the general sanitary condition of mankind. It was to them most specially that Franklin could always appeal with success for co-operation in those great schemes which he was chief in establishing in the city he had made his home. It was to a physician that he was indebted for the leading ideas that resulted in the foundation of the American Philosophical Society.

Dr. Cadwalader Colden, a Scot, educated at the University of Edinburgh, came to Philadelphia in the early part of the century, and there resided for about ten years. Thence, and before the coming of Franklin, he removed to New York. But the distance between did not hinder the formation of an intimate cordial acquaintance. A physician, a botanist, a natural philosopher, he and Franklin were wont to make frequent interchange of notices of new discoveries, and of ideas and suggestions appertaining to general science. Franklin had already founded the Junto, which, limited in membership as it was and maintaining a quasi-secresy as to its operations, he was fond of and even proud to the end of his life to remember. The intercourse with Dr. Colden led him to believe that the Junto was less sufficient for the development of the continually growing interests of Philadelphia than a society based upon a larger fraternity, and public and more extended operations. To this end he issued in 1743 his celebrated "Proposal for Promoting Useful Knowledge among the British Plantations in America." Some account of this institution has been already given, and we notice it in this connection for the sake of those physicians who were prominent in its foundation, and those who subsequently enacted prominent parts in its transactions. Of the nine original founders two were physicians, the two brothers, Thomas and Phineas Bond. The position of honor was assigned to the older as physician, and that of general natural philosophy to the younger. It was but a short time when another society, similar in its aims to the former, was established. This also had been known in its inception by the name of Junto, but afterward assumed that of the "American Society for Promoting and Propagating Useful Knowledge." Among those most prominent in the foundation and conduct of this kindred institution were some of the physicians already mentioned. The rivalry between the two societies was such as it ought to have been between those which were founded upon such enlightened and benign intentions. It seemed a fitting compliment to the aged Dr. Thomas Bond when after twenty years the two institutions were consolidated, and he was chosen as the representative of the older in this generous work.

In this interval between the foundation of the first society and the union of the two, another great institution was begun, if of not greater, certainly of not less importance. This was the Pennsylvania Hospital.

In this great enterprise we observe again that Franklin, its prime mover, looked to the medical faculty mainly for co-operation. The first movement began in 1750, with a memorial addressed to the House of Representatives of the province of Pennsylvania. The petitioners made a strong case before the Assembly. Beginning with the "lunaticks," who are represented to be greatly increasing in the province, and whose going at large was a constant "terrour to their neighbors," a reminder is made of the beneficial influences of the Bethlehem Hospital when it is asserted that "two-thirds of the mad people received therein, and there treated properly, have been perfectly cured." The petitioners call attention to the fact that relief is provided for the poor who are well, and modestly suggest that—

"Something further seems wanting in favor of such whose poverty is made more miserable by the additional weight of a grievous disease, from which they might be relieved if they were not situated at too great a distance from regular advice and assistance, whereby many languish out their lives, tortured, perhaps, with the stone, devoured by the cancer, deprived of sight by cataracts, or gradually decaying by loathsome distempers, who, if the expense in the present manner of nursing and

[1] William Penn, on the occasion of his second visit to his government.

attending them separately when they come to town were not so discouraging, might again, by the judicious assistance of physic and surgery, be enabled to taste the blessings of health, and be made in a few weeks useful members of the community, able to provide for themselves and families."

They conclude by expressing confident assurance that the granting the petition "will be a good work, acceptable to God, and to all the good people they represent."

There was heroism of a high type in the manner in which the objections to the bill founded on the petition were met by the physicians, especially Zachary and the two Bonds. When it was urged that the expenses of surgical and medical aid would probably consume whatever funds might be raised, these men agreed to serve without salary or fees in the hospital for three years. This generous proposal, which, of course, ought never to have been accepted, overcame all opposition, and the bill was passed unanimously. Its chief condition was the raising by voluntary subscription the sum of two thousand pounds sterling, upon the success of which the Speaker of the Assembly would give his warrant on the provincial treasurer or trustees of the loan-office for another two thousand pounds.

The managers, without waiting for the selection of a lot and the erection of buildings, hired a house and agreed upon a set of rules governing the conduct of officers and the reception and disposition of patients. These rules are fifteen in number:

"First, That no patients shall be admitted whose cases are judged incurable, lunatics excepted, nor any whose cases do not require the particular conveniences of a hospital.

"Secondly, That no person having the smallpox, itch, or other infectious distempers, shall be admitted, until there are proper apartments prepared for the reception of such as are afflicted with those diseases; and if any such person should be inadvertently admitted they shall be forthwith discharged.

"Thirdly, That women having young children shall not be received, unless their children are taken care of elsewhere, that the hospital may not be burthened with the maintenance of such children, nor the patients disturbed with their noise.

* * * * * * * * * *

"Eighthly, That at least one bed shall be provided for immediate relief.

* * * * * * * * * *

"Thirteenthly, That no patient go out of the hospital without leave from one of the physicians or surgeons, first signified to the matron; that they do not swear, curse, get drunk, behave rudely or indecently, on pain of expulsion after the first admonition.

"Fourteenthly, That no patient presume to play at cards, dice, or any other game within the hospital, or to beg anywhere in the city of Philadelphia, on pain of being discharged for irregularity.

"Fifteenthly, That such patients as are able shall assist in nursing others, washing and ironing the linen, washing and cleaning the rooms, and such other services as the matron shall require.

"The foregoing rules were agreed to by a board of managers of the Pennsylvania Hospital, the twenty-third day of the first month (January, 1752).

"BENJAMIN FRANKLIN, *Clerk*.

"We do approve of the foregoing rules.

"WILLIAM ALLEN, *Chief Justice*.

"ISAAC NORRIS, *Speaker of the Assembly*.

"TENCH FRANCIS, *Attorney-General*."

A very interesting account of the foundation of the hospital and the earlier regulations for its conduct, was printed at the office of the *United States Gazette*, in Philadelphia, in 1817, from which it appears that the rules regarding the choice and conduct of physicians were suggested mainly by themselves. The following extract will be read with interest.

"About this time all the physicians and surgeons who were contributors were consulted, in order to form some rules relating to the choice, admission, and conduct of the practitioners, and, after sundry meetings, the following were prepared and agreed to, at a general meeting of the contributors:

"Rules to be observed in the choice of the physicians and surgeons of the Pennsylvania Hospital, to limit and appoint their number, authority, and duty, and to raise a fund for supplying the said hospital with medicines.

"*Imprimis*, The managers of the said hospital shall within ten days after their first meeting in the month called May, yearly, choose six practitioners in physick and surgery, to visit and take care of the patients in the said hospital, and the other practitioners (who are at this time members of this corporation), shall have the privilege of attending and observing the practice of those chosen for the service of the year.

"Secondly, The practitioners chosen shall give their attendance at such times, and in such manner, and be classed with each other as shall be concluded and agreed upon by the managers and practitioners.

"Thirdly, Upon extraordinary cases, the practitioners in attendance shall call in two or more of the practitioners chosen for the service of the year, to consult with.

"Fourthly, In all such cases, which will admit of time for deliberation, all the six practitioners chosen for the service of the year shall have timely notice thereof.

"Fifthly, If any practitioner be removed by the managers for neglect of duty, or any other cause, or shall die, in that case the managers shall choose another practitioner (who is a member of the corporation) to supply his place.

"Sixthly, Each apprentice, or other student the practitioners shall introduce to see the practice of the hospital, shall pay an English guinea, or thirty-four shillings current money, per year, to be laid out in medicines, or such manner as the managers think most proper.

"Seventhly, No practitioner, during the term for which he is chosen to serve the hospital, shall act as a manager.

"Eighthly, The practitioners shall keep a fair account (in a book provided for that purpose) of the several patients under their care, of the disorders they labor under, and shall enter in the said book the receipts or prescriptions they make for each of them.

"Ninthly, No person shall be received hereafter as a candidate to be employed in the said hospital, as a physician or surgeon, until he be a member of this corporation, and of the age of twenty-seven years, hath served a regular apprenticeship in this city or suburbs, hath studied physick and surgery seven years or more, and hath undergone an examination of six of the practitioners of the hospital, in the presence of the managers, and is approved of by them. And with respect to strangers, they shall have resided three years or more in this city, and shall be examined and approved of in the manner and under the restrictions aforesaid."

The hospital was ready and received its first patients on Feb. 10, 1752. The physicians elected were Thomas Bond, Phineas Bond, Lloyd Zachary, Thomas Cadwalader, Samuel Preston Moore, and John Redman. For the first year, or until December, 1752, the physicians of the hospital furnished medicines without charge. Then an apothecary-shop was opened in the hospital, and the first stock of medicines was paid for by contributions from "the charitable widows and other good women of the city."[1]

[1] The following is the list, which we take from the pamphlet of 1817:

	£	s.	d.
Mary Allen	24	6	0
Margaret Clymer	1	7	0
Deborah Claypole	5	8	0
Mary Calvert	2	0	0

Old as it was claimed to have been, strange seems to us now the device that was used to obtain, surreptitiously as it were, benefactions for the new charity. It is amusing to read the following:

"About the beginning of this year twelve tin boxes were provided, on which were written these words, in gold letters, 'Charity for the Hospital.' One box for each manager, to be put up at his house, ready to receive casual benefactions, in imitation of a good custom practiced in some foreign countries, where these kind of boxes are frequent in shops, stores, and other places of business, and into which the buyer and seller (when different prices are proposed) often agree to throw the difference, instead of splitting it, in which the successful in trade sometimes piously deposit a part of their extraordinary gains, and magistrates throw their petty fees, a custom worthy of imitation. But these boxes among us have produced but little for the hospital as yet, not through want of charity in our people, but from their being unacquainted with the nature and design of them."

One would not desire to see a more tender excusing of tardiness and reluctance in taking a hint for charitable action.

When the institution was in existence, Dr. Zachary was attacked by paralysis, when the managers chose Dr. William Shippen to supply his place.

If cards, dice, and other games were forbidden to the inmates, not so the things that seemed to remind at least the poorest whence they had come, and whither it was to be hoped they might return in good time. "In the beginning of 1754 spinning-wheels were provided by the managers for the employment of such of the women patients as may be able to use them."

We find that at the annual election of the Fifth month (May), 1755, the same physicians were chosen, soon after which was laid the corner-stone of the first building.

It is remarkable that year after year the same physicians were appointed. The only changes made to 1759 were those occasioned by the paralytic stroke that befell Dr. Zachary, before mentioned, and by the resignation of Dr. Samuel Preston Moore, to whose place Dr. Cadwalader Evans was appointed.[1]

The most distinguished name in the early history of the medical profession in Philadelphia is that of Shippen. In the chapter on the bench and bar we spoke of the frequency with which younger members of the families of the counselors and other distinguished persons went abroad in order to have better opportunities for professional training than could be gotten at home. This was the case yet more often with those who were studying for the practice of medicine and surgery. William Shippen, commonly known as Dr. William Shippen the elder, was for a long time one of the leading physicians of Philadelphia. It is not known where he received his degree, but it is most probable that, according to the usages of the time, he served his apprenticeship under one of the physicians who had come in with William Penn. Although eminently successful, yet he was quick to see and prompt to acknowledge the meagreness of the opportunities afforded in Philadelphia or anywhere else in this country for a young man to qualify himself for all the exigencies of a physician's life. A remark of his has been transmitted that shows him to have been a man entirely sincere, and looking forward for a state of things better than was possible to the existing conditions of his home. On an occasion when he was congratulated upon his eminent success, and the few cases of patients who had died upon his hands, he answered, "Nature does a great deal, and the grave covers up our mistakes." These words show him to have been not only a good, but a true and wise man.

Sundry women, by Isaac Jones	3	10	0

In this list we notice names distinguished in their day. Mary Allen heads it with a good figure. Abigail Griffits and Sarah Logan compete for the next best. We have no doubt there was many a poor widow among the "sundry women" whose mites the undistinguished, yet not wholly unambitious, Isaac Jones brought forth and laid at the bottom of the rest.

[1] In alluding to the proposal of Drs. Zachary and the Bonds to attend gratuitously for three years the patients,—a proposal made in order to secure the passage of the measure before the Assembly,—Dr. Joseph Carson, in his "History of the Medical Department of the University of Pennsylvania," says,—

"This became the settled understanding with the board of physicians and surgeons; nor have we learned that the compact has ever been annulled or abrogated during the period of one hundred and seventeen years (from 1751 to the present date, 1869), an instance of disinterested philanthropy which has generally been followed in the charitable institutions depending on medical attendance not only of this city, but throughout the length and breadth of the land." The author adds: "In this institution was the first clinical instruction given by Dr. Thomas Bond in connection with the collegiate course, and, it may be stated, so close has been the association between the hospital and the medical school that of the twenty-nine professors who have occupied collegiate chairs, eighteen have been attending physicians or surgeons of the hospital, and five of the seven medical men first elected to these positions in the hospital were trustees of the college. The foundation of the medical library dates as far back as 1763. The first medical book possessed by it appears to have been a gift from that warm friend and generous benefactor of the institution, Dr. John Fothergill. It was the 'Materia Medica' of Dr. William Lewis, London, 1761." He quotes the following from Dr. Emil Fischer's preface to the catalogue of the hospital medical library: "When the managers resolved to demand a fee for the privilege of attending the wards of the hospital, and consulted with the physicians in regard to the destination of the sums raised, these gentlemen,—Thomas Bond, Phineas Bond, Cadwalader Evans, and Thomas Cadwalader,—although having claims upon such gratuities, according to the custom of the British hospitals, full of scientific zeal, proposed to apply the money to the foundation of a medical library for the advantage of the pupils of the institution."

Dr. William Shippen was born in this city Oct. 1, 1712, and died here Nov. 4, 1801. He was one of the founders and trustees of the College of New Jersey, a vice-president of the Philosophical Society of Philadelphia, the first physician to the Pennsylvania Hospital, a delegate to the Continental Congress in 1778–80, and one of the founders of the First Presbyterian Church, of which he was a member for seventy years.

He had been an early and interested attendant upon the lectures of Dr. Cadwalader, where, it is probable, he was made to feel specially the inadequacy of the means there provided for medical instruction, and determined that his son should not lack of opportunity to find better elsewhere.

This son, known as Dr. William Shippen the younger, born in this city in 1735, after graduating at Princeton College in 1754, studied with his father for four years, and then went abroad, where he spent four other years. He had developed so extraordinary a talent for oratory that some of his friends advised him to enter upon the ministry, but he chose the profession of his father, and the father was determined that his son should have abundant access to all the facilities that had been denied to himself. While in London he studied with the Hunters, John and William, in the family of the former of whom he resided. He had also the benefit of the society and instructions of Hewson. Under these guides he studied anatomy and surgery, and also attended the lectures on obstetrics of Dr. McKenzie. From London he repaired to Edinburgh, where he graduated in 1761. He afterward spent about a year in Paris, where he devoted himself unremittingly to professional studies. Returning to Philadelphia, in May, 1762, he commenced in the autumn the first course of anatomical lectures ever given in this country. In September, 1765, he was chosen professor of Anatomy and Surgery in the Philadelphia Medical School, of which he was one of the founders. He entered the medical department of the Continental army in 1776, and from April 11, 1777, to January, 1781, was its director-general. He subsequently practiced as accoucheur-surgeon and physician until 1798. He died at Germantown, July 11, 1808.

While abroad Dr. Shippen became intimately acquainted with another young man, who, together with him, was destined to put the medical profession in America on a footing far higher than it had held heretofore. This was Dr. John Morgan, whom we mention in connection with Dr. Shippen because of their being not only contemporary but conjoined in the foundation of what has long been regarded the best-appointed medical institution in the United States. He, too, was a native of Philadelphia, and connected with the best society, having intermarried with Mary, daughter of Thomas Hopkinson, the councilor. He had studied medicine under Dr. John Redman. He served as lieutenant in the French and English war. In 1760 he went abroad to pursue his studies, and was graduated at Edinburgh in 1763. He also, after graduation, repaired to Paris. His reputation as a young man of genius had preceded him from the uncommon proficiency he had made in his studies at Edinburgh, and particularly from some arguments he had advanced regarding the formation of pus in the human system, and his success in the art of injecting organs with wax. He was soon elected a member of the Royal Society of London, licentiate of the College of Physicians of London, member of the College of Physicians of Edinburgh, and of the Society of Belles-Lettres of Rome.

These young men while in London made the acquaintance of the noted Dr. Fothergill, who has been alluded to in another chapter of this work. This gentleman had mentioned to Dr. Shippen his intention of contributing in some way to the Pennsylvania Hospital. Some time after his return to Philadelphia a box of anatomical drawings arrived from Dr. Fothergill.

In a letter to James Pemberton, one of the managers, he says among other things,—

"I need not tell thee that the knowledge of Anatomy is of exceeding great use to practitioners in physic and surgery, and that the means of procuring subjects with you are not easy; some pretty accurate anatomical drawings, about half as big as the life, have fallen into my hands, which I propose to send to your hospital to be under the care of the physicians, and to be by them explained to the students and pupils who may attend the hospital. In the want of real subjects these will have their use, and I have recommended it to Dr. Shippen to give a course of anatomical lectures to such as may attend. He is very well qualified for the subject, and will soon be followed by an able assistant, Dr. Morgan, both of whom, I apprehend, will not only be useful to the Province in their employments, but if suitably countenanced by the Legislature, will be able to erect a school of physic among you, that may draw students from various parts of America and the West Indies, and at least furnish them with a better idea of the rudiments of their profession than they have at present the means of acquiring on your side of the water."

Dr. Shippen had already begun a series of lectures on anatomy. His announcement appeared in the *Pennsylvania Gazette* on Nov. 25, 1762, and ran thus,—

"Dr. Shippen's Anatomical Lectures will begin to-morrow evening, at six o'clock, at his father's house on Fourth Street. Tickets for the course to be had of the doctor, at five pistoles each, and any gentlemen who incline to see the subject prepared for the lectures and learn the art of dissecting, injections, etc., are to pay five pistoles more."[1]

---

[1] Watson, in his "Annals of Philadelphia," thus speaks of these first lectures of Dr. Shippen:

"Who now knows the locality of this first lecture-room? Or does any body care to transfer their respect for the man to the place where he began his career? It was on the premises late Yoke's Hotel, on North Fourth Street, a little above High Street, then sufficiently out of town, with a long back yard leading to the alley opening out upon High Street along the side of Warner's book-store; by this they favored the ingress and egress of students in the shades of night. It was at first a terrific and appalling school to the good citizens. It was expected to fill the town with disguised ghosts, mobbing was talked of, and not a little dreaded. It was, therefore, pretended that they contented themselves with the few criminal subjects they could procure, which was further countenanced by a published permission to him, by authority, to take the bodies of suicides. As the dead tell no tales, the excitement of the day subsided, and the affair was dropped in general parlance, save among the boys, with whom it lingered long,—

The introductory lecture was delivered in the State-House. The class numbered twelve. This was the beginning of the medical college of Philadelphia. The physicians of the hospital unanimously agreed to the request of Dr. Shippen to use the drawings sent by Dr. Fothergill. These had excited quite an interest in the city, outside as well as in the profession. In answer to the demand for that purpose, Dr. Shippen attended at the hospital once a fortnight for their demonstration. Tickets were one dollar each, and the sum raised was turned over to the hospital. He had been engaged in his lectures and practice about two years when Dr. Morgan returned, and then they began that co-operation which had such beneficent results. Of a more ardent temperament than Dr. Shippen, Dr. Morgan, while yet a student, had conceived the plan of a medical college wherein education in the various branches of physic, surgery, and pharmacy might be so conveniently and effectively studied that practitioners would be led in time to separate them from that union in which heretofore they had existed necessarily in a community so young. Heretofore every medical man was a physician, a surgeon, and a pharmacist. Dr. Morgan enlisted in his scheme many distinguished persons in London, as Mr. Hamilton and Richard Peters, then sojourning there, Drs. Fothergill, Cullen, Watson, and Hunter. His most influential friend, however, was Thomas Penn, who wrote a letter in his behalf to the board of trustees of the College of Philadelphia.[1]

Upon his return, when Dr. Morgan entered upon the practice of his profession, he set the example of making the separation he had regarded so important, and confined his practice to visitations of the sick and prescribing for them. At the outset he published a discourse, in the preface to which he put forth his views upon this and other special duties of the physician. Of course, views entirely different, at least from the practice that was universally in vogue, not only in Philadelphia, but in every other city in the colonies, would not be immediately followed.

The College of Pennsylvania had then been in operation about fifteen years. Among the board of trustees at its foundation was Dr. Zachary, and the medical profession had ever held a conspicuous position in that body. When the proposition of Dr. Morgan was submitted, there were among them both the Bonds, Cadwalader, Redman, and the elder Shippen. From some cause physicians ceased for a brief season to be nominated, but this soon passed away, and they have ever since had a fair share in the government. The reputation of the young man, backed by indorsement

---

"'And awful stories chain the wondering ear,
Or fancy led, at midnight's fearful hours,
With startling step we saw the dreaded corse.'

"The tales had not subsided when I was a boy, when, for want of facts, we surmised them. The lonely, desolate house is yet standing by the stone bridge near the Cohocksink, on North Third Street, which all the boys of Philadelphia deemed the receptacle of dead bodies, where their flesh was boiled and their bones roasted down for the use of the faculty. The proofs were apparent enough,—it was always shut up, showed no out-door laborers, had a constant stream of running water to wash off remains, had 'No Admittance' forever grimly forbidding at the door, and from the great chimney, about once a fortnight, issued great volumes of black smoke, filling the atmosphere all the country round with a most noisome odor, offensive, and nearly as yawning as graves themselves. Does nobody remember this? Have none since smiled in their manhood to find it was a place for boiling oil and making hartshorn, took thus far out of town to save the delicate sensations of the citizens by the considerate owner, Christopher Marshall. . . . But more discoveries were afterward made at Dr. Shippen's anatomical theatre in this yard. Time, which demolishes all things, brought at last all his buildings under the fitful change of fashion to 'pull down and build greater,' when, in digging up the yard for cellar foundations, they were surprised to find a graveyard and its materials not in any record of the city."

In all new communities where a medical college has been newly established, professors of anatomy have most to apprehend from prejudice against the dissection of bodies of the dead. This has been the case from Vesalius to Dr. Shippen. The latter was one time near being subjected to the loss of his house and his anatomical materials by a report that he had been robbing some respectable or at least honest graves for his subjects. The outcry was chiefly among the sailors. It required the utmost presence of mind and the interference of several of the citizens to suppress what was afterward known as the "Sailors' mob." He thought it prudent afterward to publish in the *Pennsylvania Gazette* the following card: "It has given Dr. Shippen much pain to hear that, notwithstanding all the caution and care he has taken to preserve the utmost decency in opening and dissecting dead bodies, which he has persevered in chiefly from the motive of being useful to mankind, some evil-minded persons, either wantonly or maliciously, have reported to his disadvantage that he has taken up some persons who are buried in the church burying-ground, which has distressed the minds of his worthy fellow-citizens. The doctor, with much pleasure, improves this opportunity to declare that the report is absolutely false, and to assure them that the bodies he dissected were either of persons who had willfully murdered themselves, or were publicly executed, except now and then one from Potter's-field, whose death was owing to some particular disease, and that he never had one body from the church or any private burial-place."

[1] The following is a copy of this letter:

"GENTLEMEN: Dr. Morgan has laid before me a proposal for introducing new professorships into the academy for the instruction of all such as shall incline to go into the study and practice of physic and surgery, as well as the several occupations attending upon these useful and necessary arts. He thinks his scheme, if patronized by the trustees, will at present give reputation and strength to the institution; and though it may for some time occasion a small expense, yet, after a little while it will gradually support itself, and even make considerable additions to the academy's funds.

"Dr. Morgan has employed his time in an assiduous search after knowledge in all branches necessary for the practice of his profession, and has gained such an esteem and love from persons of the first rank in it that, as they very much approve his system, they will from time to time, as he addresses us, give him their countenance and assistance in the execution of it.

"We are made acquainted with what is proposed to be taught, and how the lectures may be adopted by you, and since the like systems have brought much advantage to every place where they have been received, and such learned and eminent men speak favorably of the doctor's plan, I could not but in the most kind manner recommend Dr. Morgan to you, and desire that he may be well received, and what he has to offer be taken with all becoming respect and expedition into your most serious consideration, and, if it shall be thought necessary to go into it, and thereupon to open professorships, that he may be taken into your service.

"When you have heard him and duly considered what he has to lay before you, you will be best able to judge in what manner you can serve the public, the institution, and the particular design now recommended to you.

"I am, gentlemen, your very affectionate friend

"THOMAS PENN.

"LONDON, Feb. 15, 1765."

from so many and exalted sources, prevailed with the board, and on May 3, 1765, he was elected professor of the Theory and Practice of Physic. This has the honor of being the first medical professorship established in this country.

Few addresses made in this country have acquired such notoriety as that pronounced by this, the first medical professor, at the ensuing commencement of the college at the close of the same month. In anticipation of results, he had prepared the address while sojourning in Paris. Dr. Carson thus speaks of it: "In this address will be found an exposition of the nature and scope of medical science; a sketch of the departments of which it is composed, with the reasons for their special cultivation; an advocacy of classical, literary, and general scientific attainments on the part of the student of medicine, and, what is pertinent to the purpose, the demonstration that to be effectively taught, a coalition is required of able men who would undertake to give complete and regular courses of lectures on the different branches of medicine." In connection with his statements, the author insists especially upon the advantages presented by the city of Philadelphia, to which even the students resorted, attracted as well by the reputation of its practitioners, as by the facilities for clinical instruction afforded them in the hospital. The orator made the bold prediction, since happily verified, that the example thus set would be followed by the rise of other useful institutions "calculated to spread the light of knowledge throughout the whole American continent wherever inhabited."

The appointment of Dr. Shippen, like that of Dr. Morgan, was made after his own personal application. The letter shows that he and Morgan had had the project in view during the period of their studies abroad:

"To the Trustees of the College, etc.:

"The institution of medical schools in this country has been a favorite object of my attention for seven years past, and it is three years since I proposed the expediency and practicability of teaching medicine in all its branches in this city in a public oration read at the State-House, introductory to my first course of anatomy.

"I should long since have sought the patronage of the trustees of the college, but waited to be joined by Dr. Morgan, to whom I first communicated my plan in England, and who promised to unite with me in every scheme we might think necessary for the execution of so important a point. I am pleased, however, to hear that you, gentlemen, on being applied to by Dr. Morgan, have appointed that gentleman professor of medicine. A professorship of anatomy and surgery will be accepted by, gentlemen,

"Your most obedient and very humble servant,

"William Shippen, Jr.

"Philadelphia, 12th September, 1765."

The applicant doubtless foresaw the acceptance of his proposal. About a week afterward, with his colleague, he announced the lectures for the ensuing session of the college upon anatomy and materia medica.

It is pleasant to contemplate the attitudes of the older practitioners of Philadelphia toward these younger and more cultured brethren. The elections were reported to have been unanimous, notwithstanding that among the board of trustees were all of the old leading physicians. It looks well that, after a course of lectures by these two young men, the veteran Dr. Thomas Bond came in from the Pennsylvania Hospital and began his course of clinical lectures.

John Sargent, a member of Parliament, offered, in 1766, a prize medal for the best essay on the reciprocal advantages of a perpetual union between Great Britain and her colonies. From nine competitors for this medal the trustees selected that of Dr. Morgan.[1]

The impulse imparted by these young men soon led to important consequences. The college, fortunately, at that time happened to be under the lead of William Smith, D.D. His cultivated, liberal mind was quick to respond to the ambitious intentions of Shippen and Morgan, and, on counseling with them and Dr. Bond, he formed the plan of organizing a medical department on a justly broad foundation. There were established the terms on which a student might obtain the Bachelor's degree, for which, besides having served an apprenticeship to some reputable practitioner in physic, and obtaining a general knowledge of pharmacy, he should give evidences of satisfactory knowledge of the Latin language and such branches of "mathematics, natural and experimental philosophy, as shall be judged necessary to a medical education," and attended at least one course in "anatomy, materia medica, chemistry, the theory and practice of physic, and the course of clinical lectures, and shall attend the practice of the Pennsylvania Hospital for one year."[2]

The qualifications for a Doctor's degree in physic were very exacting:

"It is required for this degree that at least three years have intervened from the time of taking the Bachelor's degree, and that the candidate be full twenty-four years of age, and that he shall write and defend a thesis publicly in the college, unless he should be beyond seas, or so remote on the continent of America, as not to be able to attend without manifest inconvenience, in which case, on sending a written thesis, such as shall be approved of by the college, the candidate may receive the Doctor's degree, but his thesis shall be printed and published at his own expense."[3]

Auxiliary to the regular lectures of the physicians, Dr. Smith undertook a course on natural and experimental philosophy for the special benefit of the medical students. In his announcement of this, on Dec. 17, 1767, he thus alludes to a gentleman distinguished for his connections with Dr. Franklin in the latter's studies in electricity, Dr. Ebenezer Kinnersley, then professor of Oratory and English Literature in the college:

[1] This essay was entitled "Four Dissertations on the Reciprocal Advantages of a Perpetual Union between Great Britain and her American Colonies, written for Mr. Sargent's prize medal, to which, by desire, is prefixed an eulogium spoken on the delivery of the medal at the public commencement of the College of Philadelphia, May 20, 1766."

[2] From the announcement made by the trustees of the College of Philadelphia, July 27, 1767.

[3] Ibid.

"To the standing use of the large apparatus belonging to the college, Dr. Kinnersley has engaged to add the use of his electrical apparatus, which is fixed there, and to deliver the lectures on electricity himself, as well as to give his occasional assistance in other branches, so that with these advantages, and the many years' experience of the subscriber in conducting lectures of this kind, it is hoped the present course will answer the design of its institution and do credit to the seminary."

It is not only interesting, but it is really most surprising to contemplate the rapid rise of this institution, so happily originating in the minds of two young medical students in Great Britain. In the same year of this announcement of the trustees, another young Pennsylvanian, Adam Kuhn, born Nov. 28, 1741, at Germantown, having studied medicine under his father, and at the University at Upsal in 1762, and botany under Linnæus, graduated at Edinburgh University June 12, 1767. The following year he returned to Philadelphia, bearing the highest testimonials from the great father of botany. Up to this time instructions in botany and materia medica had been given by Dr. Morgan in his general course of the Theory and Practice of Physic, but young Kuhn, immediately upon his return, was cordially received by his predecessors in studying in foreign lands, and in January, 1768, he was installed into the professorship of Botany and Materia Medica, which he held until November, 1789, when he was transferred to that of Practice. In the following year the degree of Bachelor of Medicine, the first in the country, was conferred upon eight candidates.

Dr. Kuhn was professor of the Practice of Physic from the junction of the college and university in January, 1792, to 1797, and physician of the hospital from May, 1775, to January, 1798. He was president of the College of Physicians from July, 1808, until his death, July 5, 1817.

A yet more distinguished person came in for the fourth regular professorship in the college. For Dr. Bond, though continuing his clinical lectures, was never formally made professor. The new accession was Dr. Benjamin Rush. He was born near this city, Dec. 24, 1745. He had conducted his preliminary studies at Nottingham,[1] Md., and afterward, when only sixteen years of age, graduated at Princeton College. For six years thereafter he served his apprenticeship, as it was then called, under Dr. Redman, spending in the mean time a year in attendance upon the lectures of Dr. Shippen. He then went abroad, finishing his course, as his three predecessors, at Edinburgh. While yet an apprentice under Dr. Redman, Benjamin Rush had formed in his mind the intention to rise to the highest reputation possible in his profession. He began at the beginning in medical science, not only reading, but translating from the Greek, the works of Hippocrates. He thus began that habit so useful not only to himself but to science and to history, of keeping a note-book, in which he entered contemporary occurrences that seemed to him specially worthy of being recorded, a practice that was never given up during his life. While at Edinburgh he rendered a service to his academic Alma Mater in the matter of obtaining Dr. Witherspoon as president. The trustees, on the doctor's declination of their first invitation, solicited young Rush to call upon him in person, and urge his acceptance. This he did with success. A very warm friendship at once was started between the two, which continued during their lives. After his graduation at Edinburgh, he studied for some time longer in London, especially in attending the hospitals. It was mainly at the suggestion of Dr. Franklin, then residing there, who advanced him the money for the purpose, that he afterward spent several months in Paris. From 1760 to 1769 he had been exclusively devoted to the study of his art, having had the very best advantages in school and college discipline.

While at Edinburgh, like his predecessors, he had been looking forward with hope to obtain a professorship in the college newly started at Philadelphia, and his wishes were warmly seconded by them.[2] He had the good fortune to be the bearer of a chemical apparatus that had been presented to the college by Thomas Penn. The reports of his wonderful progress, however, had been such that it became generally understood, nearly a year before his return, that his hope would be realized speedily thereafter. Along with the chemical apparatus he also bore a letter of recommendation from Thomas Penn.[3] At the meeting of the trustees, in July, 1769, Dr. Rush was unanimously elected to the chair of Chemistry, a science which had been taught by Dr. Morgan.

There is a similarity, amounting often to entire identity, in the career of these four young men, the founders of the oldest, and, we think we can justly say, the most renowned school of medicine in the United States. Their long period of preliminary studies, their prosecution of them abroad, their grad-

[1] Under Dr. Finley, his uncle by marriage.

[2] The following extracts from his letter to Dr. Morgan, in 1768, evince a beautiful union of lofty ambition with most becoming modesty: "I thank you for the pains you have taken to secure me the Professorship of Chemistry. I think I am now master of the science, and could teach it with confidence and ease. . . . I would not, however, urge your interest too warmly in this affair. Perhaps I may disappoint the expectations of the trustees, and prevent a person better qualified from taking the chair. I should like to teach chemistry as a professor, because I think I could show its application to medicine and philosophy." Then "I should likewise be able more fully, from having a seat in the college, to co-operate with you in advancing the medical sciences generally."

[3] This letter reads thus:

"GENTLEMEN,—Dr. Rush having been recommended to me by Dr. Fothergill, as a very expert Chymist, and the Doctor having further recommended to me a Chymical apparatus to the College, as a thing that will be of great use, particularly in the tryal of ores, I send you such as Dr. Fothergill thought necessary, under the care of Dr. Rush, which I desire your acceptance of. I recommend Dr. Rush to your notice, and humbly wishing success to the College, remain, with great regard,

"Your very affectionate friend,
"THOMAS PENN.

"TO THE TRUSTEES OF THE COLLEGE OF PHILADELPHIA."

The "tryal of ores" was no doubt regarded by the writer as his highest trump.

uation at the same university, their ambition for the places they were to fill, are very striking. They were probably the youngest faculty that ever sat in professors' chairs, their average age being thirty years; Morgan, the oldest, being but thirty-four, while Rush, the youngest, was only twenty-four.

It is not to be wondered that these young men, full of ardent admiration and gratitude, should have modeled their institution upon that of Edinburgh, even as the latter had been modeled upon that of Leyden,

Benjamin Rush

at which so many of the Scotch medical students, before the establishment of their own, were wont to attend.

The one whom Dr. Rush most particularly admired was Dr. Cullen, under whose tuition he had long sat, and whose friendship and confidence he enjoyed. The young man soon obtained a large practice. His success was due not only to the reputation of his extraordinary accomplishments, but to an amenity of manners that was not surpassed by any in his time.

Dr. Rush has already been noticed as an author. He had a fondness and a talent for public discussion. While in London he was a member of a debating club, in which sometimes questions were raised touching the rights of the American colonies. Even then he was an earnest and eloquent defender of those. He early took to writing, and published his thoughts upon various subjects connected more or less closely with his profession. These productions brought him much notoriety, but he became famous in the fifth year of his professorship by the oration pronounced before the Philosophical Society on the history of medicine among the Indians, with a comparison of their diseases and remedies with those of civilized nations. He especially discussed the evils of the intemperate use of intoxicating spirits. This, Dr. Jackson says, was probably the first instance of such a discussion in Philadelphia. The address obtained for him great renown, and did much to make him one of the political leaders in the troublesome times that were to come. One of the most ardent of Whigs, he was elected to the Provincial Conference of Pennsylvania, and afterward elevated to Congress, not long before the passage of the Declaration of Independence, which he signed with his father-in-law, Richard Stockton, of Princeton, whose daughter, Julia, he had married.[1] He shortly afterward received the appointment of surgeon-general of the United States army for the Middle Department. This office he held for about six months, when he was made physician-general. He continued the habit formed in boyhood of regularly jotting notable occurrences in his note-book. Those made during the time in which he held those offices were afterward elaborated into a portion of his "Medical Inquiries," a most valuable dissertation, which he styled "Results of Observations made in the Military Hospitals of the United States."

The misunderstanding between Dr. Rush and Gen. Washington, probably the controlling cause of his resigning his position, belongs not to this chapter. He came out of the army a

[1] The following interesting account of his transfer from the Conference is from the "Medical Biography" of Dr. Gross: "He was a member of the Provincial Conference of Pennsylvania, and chairman of the committee to which was referred the great question whether it had become expedient for Congress to declare independence. The report they made was adopted and sent to Congress the same day. It is a most animating document, most probably written by Rush, as he was chairman of the committee, and ever ready with his pen. The whole committee consisted of himself and Col. James Smith. The report includes

poor man, and henceforth devoted himself with increased assiduity to his professional duties, though he always took an ardent interest in whatever concerned the welfare of the country. He was said to have been mainly instrumental in the founding of Dickinson College, so named in honor of the great political leader John Dickinson. It is wonderful what great and what various resources were in the mind and the spirit of Dr. Rush. His "consideration of the test laws of Pennsylvania," made for the disfranchisement of all Tories of all grades, evinced both his generous courage and his familiarity with the discussion of such subjects on a line with the ablest statesmen of his day. About 1785 the Philadelphia Dispensary, and two years afterward the College of Physicians were established mainly through his influence. His restless public but not less patriotic spirit led him to take part in political action again, and he became a member of the Pennsylvania Convention for the adoption of the Constitution. His career in that field does not, however, belong to this department. In 1789, Dr. Morgan having died, he was elected to the professorship of Theory and Practice of Medicine in his place, and two years afterward when the college became a part of the University he was called to the chair of Institutes and Clinical Medicine, being succeeded in that of Practice by Dr. Kuhn.

Perhaps no portion in the professional life of this eminent physician is as interesting as that which contains the record of his practice during the visitation of the yellow fever in 1793. The heroic practice that his bold genius was led to adopt, the bolder assumption that it was of domestic not foreign origin, raised against him outcries both from the profession and from the property-holders in the city, who were incensed by the publication of opinions which, if accepted abroad, would subtract from the value of their real estate. The struggles made by him during this terrible year were wonderful. In the midst of deaths in his own family and those of his friends, he kept going night and day, sometimes fainting in the streets from exhaustion, yet the while attending more than a hundred patients during the twenty-four hours. The never-forgotten note-book was kept to its work during all this time. When it was over he wrote the history of the plague. Of this work Dr. Trotter said, "It is the best history that was ever written of any epidemic." Upright as he was ardent, having once expressed his opinion that the fever was contagious, and afterwards led to believe that he was mistaken, he made haste to recant, and this at the time when belief in contagion was almost universal.

all that has been so much praised in the Declaration of Independence, of which it might appear to be the protocol. When Congress had decided on this great measure, five members from Pennsylvania, who were in favor of postponing it, withdrew from the House, when the State Convention appointed Rush and four others to fill their places. Thus our patriot went into Congress knowing what he had to do. He did not sign the tremendous parchment because he was a member; he became a member that he might sign it."

The untiring energy of Dr. Rush continued to his old age. He died in 1813, full of Christian faith. Dr. Jackson, writing of this event, says, "The sensation throughout the whole country was intense. Every one had heard of Dr. Rush, and all that were interested in medicine or philosophy, in common humanity or in the honor of their country, felt that they had lost a friend and benefactor." "From one end of the United States to the other," says Dr. Charles Caldwell, "the event was productive of emotions of sorrow, for since the death of Washington no man, perhaps, in America was better known, more sincerely loved, or held in higher admiration and esteem. . . . For nearly three thousand years but few physicians his equal in greatness have appeared in the world, nor is it probable that the number will be materially increased for ages to come." Jefferson, writing to John Adams, said, "Another of our friends of '76 has gone, another of the co-signers of our country's independence, and a better man than Rush could not have left us, more benevolent, more learned, of finer genius, or more honest."

Dr. John Redman, the first president of the College of Physicians and the medical preceptor of Benjamin Rush, was born in this city, Feb. 22, 1722. After finishing his preparatory education in Mr. Tennent's academy, he entered upon the study of physic with John Kearsley, then one of the most eminent physicians of Philadelphia. When he commenced the practice of his profession he went to Bermuda, where he continued for several years. From thence he proceeded to Europe for the purpose of perfecting his acquaintance with medicine. He lived one year in Edinburgh, attended lectures and dissections, and visited the hospitals in Paris, and graduated at Leyden in July, 1748. After passing some time at Guy's Hospital, he returned to America and settled in his native city, where he soon gained great and deserved celebrity. In 1784 he was elected an elder of the Second Presbyterian Church. The death of his youngest daughter, in 1806, was soon followed by the death of his wife, with whom he had lived near sixty years. He died of apoplexy, March 19, 1804, aged eighty-six years.

He was a man of small stature, of good sense and learning, and much respected in his day. He lived for more than half a century in the same house, in Second Street, about one-third of a square from Arch, on the west side, next to Dr. Ustick's Baptist Church, where he died.

He became independent in wealth, and retired from business many years before his death. He used to visit his old friends and acquaintances after he became infirm from age, on a fat pony mare. Dr. James Rush says, "I remember him well hitching her to the turnbuckle of the mansion shutter, so that she always stood on the foot-pavement, when he visited my father, which he made it a point to do once or twice a year. In the rough cutting of his like-

ness, which was given to me by a member of his family, the hat, wig, nose, mouth, chin, eye, dress, person, expression, and character are admirably true. The mare is not so well done. The doctor retired from practice about 1785, and was known to the public as an antiquated-looking old gentleman. He was usually habited in a broad-skirted dark coat, with long pocket-flaps, buttoned across his under dress, and wearing, in strict conformity to the cut of the coat, a pair of Baron Steuben's military-shaped

DR. JOHN REDMAN.
[From a picture in the Ridgway Library.]

boots, coming above the knees." Mr. Watson says, for riding-habit, "his hat flapped before and cocked up smartly behind, covering a full-bottomed powdered wig, in the front of which might be seen an eagle-pointed nose, separating a pair of piercing black eyes, his lips exhibiting, but only now and then, a quick motion, as though at the moment he was endeavoring to extract the essence of a small quid. As thus described in habit and in person, he was to be seen almost daily, in fair weather, mounted on a short, fat, black, switch-tailed mare, and riding for his amusement and exercise, in a brisk racking canter, about the streets and suburbs of the city."

One of the most distinguished of the contemporaries of Dr. Rush was Dr. Samuel Bard, who was born in Philadelphia, April 1, 1742, and died May 24, 1821. He was a skilled botanist, and was mainly educated in the medical profession in the school of Edinburgh, where he received his degree in May, 1765. Returning to America, he went into partnership with his father, and after marrying his cousin, Mary Bard, he formed the plan of the Medical School of New York, in which he was appointed professor of the Practice of Physic. In order to provide for his family, he was obliged to return to New York while the British were in possession of the city. In 1784 he came back to Philadelphia, and was selected by Washington as his family physician. Having formed the purpose of retiring from business, he removed to his country-seat at Hyde Park, but when the yellow fever appeared in Philadelphia he resolutely resumed the post of duty, and but for the faithful care of his wife would have perished from the disease. This was in 1798, and the remaining twenty years of his life were spent in calm and happy retirement.

Barnabas Binney, a surgeon in the Revolutionary war, was born in Boston in 1751, and graduated in 1774 at Rhode Island College, afterward known as Brown University. His medical education was obtained in London and Philadelphia, and he considered himself as belonging to the latter city, having married in 1777 a Philadelphia girl. While in the service of the government an instance of his success as a surgeon occurred in his treatment of one of the sailors of the Pennsylvania vessel "Hyder Ali," who, in the engagement with the British ship "Monk," was pierced by a musket-ball that, entering the left groin, passed through the intestines and lungs, and came out under the right shoulder-blade. Dr. Binney cured the patient, who was so grateful that he visited him annually during his life. Dr. Binney was the discoverer of the sex of the heroic and romantic Deborah Sampson, who enlisted in the army as a man, and served as such until she was disabled by a wound which brought her under his care. In searching for the pulsations of her heart he found that she was a woman, and he concealed her in his house until he could obtain from Gen. Washington her discharge. The tension of army life was too great for his health, and he died in Philadelphia, June 21, 1787, aged thirty-six years. He was the father of Hon. Horace Binney.

Dr. Gerardus Clarkson was an eminent physician of Philadelphia, and was the son of Matthew Clarkson, a New York merchant, who died in 1770. Dr. Clarkson was a popular practitioner as early as 1774, and died Sept. 19, 1790. The Rev. Dr. Finley married his sister in 1761, and John Swanwick wrote a poem on his death.

Dr. William Potts Dewees was born at Pottsgrove, Pa., May 15, 1768. He commenced the practice of medicine in 1789, and in 1793 he removed to Philadelphia. He devoted himself especially to the practice of obstetrics, which was then a novel branch of medicine in the United States. By the year 1812 he had made a fortune by his lectures, which, five years later, had gone to the winds. He was chosen a professor of Midwifery in the University of Pennsylvania, first as an assistant and subsequently as principal, but he resigned in 1835. He died at Philadelphia, May 20, 1841, aged seventy-three years.

After the Revolution George De Benneville was a young physician. He was born in this city, in November, 1760, and commenced the study of medicine in his father's office, and also under Dr. Pfeiffer. He assisted his father's practice for some time, and was also engaged in connection with his brother-in-law, Dr. Jonathan Bertolette. He married Eleanor Roberts, and practiced medicine forty-five years, dying Dec. 17, 1850.

Dr. John Jones was born in Jamaica, L. I., in 1729. After studying physic with Dr. Thomas Cadwalader in Philadelphia, he completed his education in London, Paris, Leyden, and Edinburgh. On

Digitized by Google

his return he settled at New York, and was particularly eminent as a surgeon. He was a surgeon in the Revolutionary army, and attended Deiskau, the French general, when the latter was so terribly wounded by a British bullet. On the establishment of a medical school in New York, he was appointed professor of Surgery. Soon after he settled in this city, the physicians agreed, for their own dignity, to wear their hair in a particular *bob*, and he refusing to concur in the project, they refused to consult with him. But he soon triumphed, and the powers of ridicule compelled the medical men to wear their hair like other gentlemen. In 1780 he settled in Philadelphia, and was the physician of Washington and Franklin. He died June 23, 1791, aged sixty-two years. In his religious views he was a Quaker.

To return to the college, begun under auspices so full of vigor and promise. We have seen the part enacted by Dr. Rush, both in politics and as a physician in the army. Dr. Shippen and Dr. Morgan acted successively as medical director-general. During this time several of the graduates of the college acquired distinction. In June, 1771, four young men, who had received the degree of Bachelor of Physic three years before, were presented with the degree of Doctor. These were Jonathan Potts, James Tilton, Nicholas Way, and Jonathan Elmer. The first two became eminently distinguished for their services rendered during the war. Dr. Potts was medical director of the Northern Department. In the Historical Society of Pennsylvania are the papers of Dr. Potts. Among these is a letter to the director-general of the United States army, written at Fort George. It is painful now to contemplate the deprivations and other sufferings of the Revolution, but it must excite our gratitude to remember the heroic devotion that was paid to them by the few educated physicians then in the country.

The following is an extract dated Aug. 10, 1776:

"The distressing situation of the sick here is not to be described: without clothing, without bedding, or a shelter sufficient to screen them from the weather. I am sure your known humanity will be affected when I tell you we have at present upward of one thousand sick, crowded into sheds, and laboring under the various and cruel disorders of dysentery, bilious, putrid fevers, and the effects of a confluent smallpox. To attend this large number we have four surgeons and four mates, exclusive of myself, and our little shop doth not afford a grain of jalap, ipecacuanha, bark, salts, opium, and sundry other capital articles, and nothing of the kind to be had in this quarter."

We have seen in the chapter on the bench and bar that some of the fathers of leading families in Pennsylvania did not co-operate with the new government formed in 1776. It was partly from this being the case with some of the trustees that the charter of the college was abrogated by the Legislature in 1779, and the College of Philadelphia became merged in the University of Pennsylvania, and Dr. Ewing, who had been lecturing on natural philosophy, was made provost. The professors of the medical faculty were invited to the University, but the invitations were declined by all except Dr. Shippen. The same was the case with Drs. Tilton, Hutchinson, and McClurg. In the embarrassment of the trustees, Dr. Bond consented to accept the chair of Theory and Practice along with his clinical lectures, until it could be filled by another. The contest between the former professors and the new trustees seems to have been occasioned by the demand of the former to be vested with the full rank and privileges of their positions in the college, whereas they, as the other gentlemen who were invited upon their declination, were expected to take only temporary position that was subject to be changed thereafter. It is somewhat singular that this state of things should have continued so long, for it was not until near the beginning of 1784 that, when a new election took place, the former professors were elected upon their old basis, and the appointments were accepted. But the friends of the college, who had not become reconciled to its abolishment, finally prevailed in their efforts to restore the charter in 1789. The college was reinstated with all its former belongings, while the University was to maintain itself from the sales of property that had been confiscated. This result was attributable in great part to the influence of Franklin.

On the reorganization he was made president of the board of trustees, Dr. Smith was restored to the provostship, and for a year all the meetings were held at his house. The new organization of the faculty consisted of Rush, chemistry; Shippen, anatomy; Kuhn, botany and materia medica. Dr. Morgan was to be offered theory and practice of medicine upon his return from the West Indies. A cloud seemed to have fallen upon this most gifted physician, from the fact of his discharge from the post of medical director-general. He was exonerated afterward from the charges alleged against him; but he lost much of the activity he had been wont to employ, and died six months after the reorganization of the college. The same year Dr. Rush was made professor of Theory and Practice, and his chair of Chemistry bestowed upon Dr. Caspar Wistar. Dr. Adam Kuhn left the college and was appointed to Practice in the University, Dr. Samuel Powel Griffitts to Materia Medica and Pharmacy, and Dr. Benjamin Smith Barton to Natural History and Botany. About the same time the professorship of Materia Medica and Chemistry in the University was conferred upon Dr. James Hutchinson.

It had been the earnest wish of Dr. Wistar, before and after taking position in the college, that the two institutions should be consolidated. They, however, continued to battle with each other. It is remarkable that during this rivalry the college determined to abolish altogether the granting of the Bachelor's degree. The experience was that comparatively few Bachelors, after three years of practice, many of them in theatres distant from Philadelphia, ever returned to obtain the doctorate. The first establishment of this degree, indeed, had not been

cordially approved by the parent (so to name the University of Edinburgh), some of the wisest of whose savants had predicted this result. The University, however, continued to confer the two degrees.

In such a struggle it was apparent that the interests both of the community and of the medical sciences were receiving less development by this division of duties among two faculties. Finally, in 1791, hostilities were ended, and the union was made, the consolidation taking the name of the University of Pennsylvania. The union, on the petition of the two

C. Wistar

institutions, was consummated by act of the Legislature in September, 1791.

It was a matter for general congratulation when the two colleges were consolidated. They had not been acrimoniously hostile, for Dr. Shippen occupied the chairs of Anatomy in both. He seems to have been a man as discreet, as he was unquestionably at the head of his special art. Students from both institutions attended his lectures, though the number that came from the college was far in excess of those from the University.

The new University was opened in November, 1791. Dr. Rush made the introductory address, and congratulated all parties upon the fact that "by means of this event, the ancient harmony of the different professors of medicine will be restored, and their united efforts will be devoted, with accumulated force, toward the advancement of our science." The rule heretofore adopted by the college, regarding the Bachelor's degree, was adopted by the new institution, and henceforth only the degree of Doctor of Medicine has been granted.

The man who probably had been most instrumental in effecting this salutary arrangement was Dr. Caspar Wistar, than whom the city of Philadelphia never had a citizen more alive to all its interests, more intelligent and active, and influential in their development. It is really delightful to consider the career of this man, so gifted in the characteristics that make a man an ornament and a blessing in the community wherein he resides. He was an infant at the opening of the first of Dr. Shippen's anatomical courses, having been born in Philadelphia in 1761. As his name indicates, he was of German extraction, his grandfather having emigrated from the Duchy of Baden very early in the century. His ancestry on the mother's side was English, of a family named Wyatt (Quakers), who came over about the time of William Penn. Wistar received his academic education at the Friends' Academy, then on Fourth Street, below Chestnut. After finishing this course he studied medicine under Dr. John Redman, who had already reared several men destined to become pre-eminent in their professions. Afterward he became a student of the University that had been recently founded upon the ruins of the college, and took his degree in 1782.

It is a curious fact that at that time the examination of the students was held in public. The trustees were expected, and all other citizens were permitted to attend. In the funeral oration pronounced on Dr. Wistar, by Chief Justice Tilghman, in alluding to the different theories of professors upon subjects that lay on the border lines of their several professorships, and the natural desire to make his own prominent in the examination, he said,—

> "Each professor examined with an eye to his own system. Of this Wistar was aware, and had the address to answer each to his satisfaction in his own way, with such uncommon promptness and precision as excited the surprise and commanded the admiration of all who heard him."

Digitized by Google

Like his illustrious predecessors, he also went abroad and attended the lectures at Edinburgh. The rapidity of his rise in reputation while a student was most remarkable, especially considering he was a foreigner to most of the students, and citizen of a country with which Great Britain had lately had a war of seven years that had ended to its great discomfiture. He was elected by the students one of the presidents of the Royal Medical Society of Edinburgh, and president of the Society for the further investigation of Natural History. He made intimate acquaintance, not only with the professors of the medical department of the University, some of whom had already attained to great fame, but with several other distinguished men, as Mr. Jeffrey, Mr. Emmet, and Sir James McIntosh. In 1786 he took his degree of Doctor of Physic. Upon his return, in 1787, he was at once appointed to a position in the Philadelphia Dispensary, and was elected one of the fellows in the College of Physicians.

It was well known that while abroad he had not confined his studies to the peculiar branches that he was to practice, but had made himself familiar with quite a number outside of these. At the time of his return the Philadelphia Society had then among its controlling members names whose equals the country has not yet produced,—Thomas Jefferson, David Rittenhouse, and Benjamin Franklin. These men quickly invited him to join in their labors and investigations, and thus, at twenty-five years of age, he became a leading spirit in that famous institution. A personal friendship soon grew up between him and Mr. Jefferson, which continued throughout their joint lives, even to the cordial espousal of the political opinions of that statesman, in which action he differed from his family, all of whom, except himself, were supporters of Mr. Adams.

The union of the two institutions placed the new school incontestably at the head of the medical institutions of the country. The acceptance by Wistar of the adjunct's chair, under Dr. Shippen, evinced the simplicity, the freedom from jealousy, the small desire of reputation, compared with the greater objects of professional endeavor, that are most pleasant to see in a man of genius. A fervent admirer, himself very eminent (Dr. Hosack), pays this generous praise. Alluding to his assuming the duties of his professorship, he says,—

"He at once evinced those great qualifications by which he was afterward distinguished. The same fluency of utterance, the unaffected ease and simplicity of manner, the perspicuity of expression, the animation and earnestness arising from the conviction of the truths he was delivering, as well as from the desire to impress them upon the minds of the pupils, and the readiness with which he summoned and applied the numerous and varied resources of his mind, which many of you now in my hearing have had an opportunity of witnessing, Dr. Wistar displayed in the most remarkable manner in the first lectures he delivered. Such were his fascinating powers of description that even upon those subjects that are usually considered as an uninviting part of a course of anatomical lectures, the attention of his hearers was ever awakened and unremitting. Even in the demonstration of a muscle or a bone, his views were those of a philosopher as well as the anatomist."

It would be well for college professors and college students everywhere if the former would follow the precedent set by Dr. Wistar, who was no less a good man than a learned one, no less a gentleman than a great physician, in his continual endeavors to make happy as possible all with whom he came in contact, brethren of the faculty, students, patients, citizens. Intercourse with Dr. Wistar was simply a delight to all who held it. There is scarcely any praise which a just and gifted man might desire to be said of him after death than the following beautiful tribute from Dr. Caspar Morris:

"Universally known and respected, his daily course through the streets was interrupted by persons of every grade in life, who were permitted to stop him by the way to consult him about their ailments or to testify their gratitude for the benefits received from his skill. His courtesy to all was unbounded; the poorest, equally with the richest, were received with kindness, and their cases treated with respectful consideration. His walks were almost an ovation, and childhood as well as manhood rejoiced at the beaming look and pleasant nod, which gave evidence of his recognition of each token of respect."

As for his intercourse with his students, it was characterized by a patience, a painstaking, and an assiduity that would not have been greater had they been his sons or his younger brothers, in whom he felt the solicitude natural to such affectionate relationships. It became a habit with students at the close of his lectures to approach the platform where he was wont to stand and ply him with questions until the last moment that he could remain before proceeding to other calls. Instead of discouraging, he was pleased with these evidences of the interest he had excited in them, and answered with a ready cheerfulness that imparted universally the sense of ease and freedom. Not only this, but his office and his residence, it was understood, were accessible at all becoming hours to these students, who were wont often to repair there for solutions of difficulties arising from time to time during the course. What was fully equal, if not superior, to such treatment was the habit he began of often inviting parties at different times to supper in his mansion. There were few towns of any considerable size at that period throughout the country. Even Philadelphia, the most important, had a population not far above thirty thousand, and the majority of the young men attending the medical lectures were from country districts. Besides, it was after the close of a long war wherein they had had but scanty opportunities for learning such manners as are always so auxiliary to the practice of a professional man, especially a physician. It is not possible to say how benign are the influences exerted by such a man as Wistar upon such youths. That he employed them for any other purpose than to benefit them not one among them, and not one among any class who knew of them, ever had the smallest suspicion. It was a part of his duties as a trainer of youth for the difficult and often most delicate duties in the careers they were to lead. He had these youths at his board and in his drawing-

room, with the same motives wherewithal he had them daily assembled in the lecture-hall.

Never was a professor who was not only the more effective in his teachings, but the happier in his heart, from every action during his office that brought him and his pupils close together in sympathy and in the interchange of civilities and friendly attentions. It was, doubtless, the observation of the value of these re-unions that led to those more important that he began at his house, wherein were used weekly to resort the most cultured of that society, and gifted visitors from other places who might have happened to be then sojourning in the city. These were the origin of the Wistar Parties, an honorable name that remains to this day a memorial of the founder.

The traditions of Dr. Wistar in his intercourse with the sick under his charge are most pleasant. "He was," says Dr. Morris, "sincere and truthful; and the patient in the hospital, in the wards of which he was a faithful attendant during seventeen years, or the poor sufferer in an alley, received from him the same delicacy of attention as the proudest citizen who claimed his services for a fee."

Mr. Jefferson resigned the presidency of the Philosophical Society in 1815. For twenty years Dr. Wistar had been one of the vice-presidents. He was now made president, and so continued until his death, three years afterward. A physician by profession, yet, as we have seen, his mind discoursed upon other studies. It was to him that the society owed the movement to begin the collection of isolated, fragmentary portions of the history of Pennsylvania and the rest of the States. Although he taught anatomy specially, yet he had become quite familiar with other branches of science, as mineralogy, chemistry, botany,[1] and natural history. The last pursuit he had grown to be particularly fond of, and had his life continued the results of the studies he had projected in this field would, doubtless, have been most important.

It is remarkable that men of such extraordinary culture as Wistar, Morgan, Shippen, and Kuhn should have written so little for the public. This seems, strangely enough, to have been common with the profession everywhere during this period. Besides his contributions to the Philosophical Transactions, he wrote little, except his "Human Anatomy," which was a text-book in the medical schools throughout the country until the advances in anatomical science made necessary new works. The men of that generation seemed to be content with making American editions of the works of foreign authors, instead of producing original. If Wistar had had ambition in that line, or if he had taken from his professional engagements opportunities for that purpose, his reputation would have been among the first in medical literature. He was twice married,—first, to Miss Marshall, and, some years after her early death, to Miss Elizabeth Mifflin, daughter of George, and niece of Governor Thomas Mifflin. Probably the death of no citizen of Philadelphia was ever more generally and sincerely lamented than his, which occurred Jan. 18, 1818.

[1] The botanical name "Wistaria" is for him.

It seemed to be the rule with those young men who sought high rank in the medical profession to employ the best opportunities for qualifying themselves for its behests. It was this mainly that gave to Philadelphia that preponderance in the number of able men in both law and medicine which, so far as the latter is concerned, it can with truth be said she still holds. Dr. James Hutchinson, a native of Bucks County, born in 1752, took the highest honor of his class on graduating at the College of Philadelphia, and having taken the degree of Bachelor of Medicine in 1774, repaired to London, and became a pupil of Dr. Fothergill. This connection was unfortunately interrupted by the war of independence. He necessarily had to leave London; thence he went to Paris. But his studies there were discontinued by the uncertainty consequent upon the great proportions which the war seemed destined to assume. He had already become eminently distinguished, particularly in chemistry, for which, at the attainment of his Bachelor's degree, he had received from the College of Philadelphia a gold medal. He resolved to return to his native country and bear his part in its struggles. At that time, as is known, Dr. Franklin was our minister at the court of France. Upon the young student's return he confided to his care dispatches for the government that were near being lost. The ship on which he sailed was captured by a British man-of-war; but his biographer, Dr. James Hutchinson, his grandson, says, "When near the American coast the ship in which he was a passenger was chased by a British armed vessel, and, being anxious to save the dispatches, he left the vessel in an open boat, under a heavy fire from the enemy, and landed safely. A short time after he left the vessel she was captured by the enemy in sight, and he lost everything he had, including a fine medical library collected in England and France."

Dr. Hutchinson served the government of the United States and of his native State for three years. As one of the trustees of the University founded upon the ruins of the college, while cordially interested in its fortunes, yet he declined the appointment first of professor of Practice, and afterward of Chemistry, in deference to the sympathy that was felt by a majority of the citizens for the parent institution and the men who had mainly supported it. When the college was restored to the rights of which it had been deprived, he consented to serve as professor of Chemistry and Materia Medica in the University. Two years after, in 1791, when the two were consolidated, and the various chairs could be adequately distributed, he took that of Chemistry, while Materia Medica was

assigned to Dr. Griffitts. He survived this appointment only three years; at the same time he was one of the secretaries of the Philosophical Society. Chemistry was then assigned to Dr. John Carson, who was prevented by death from accepting it or from entering upon its work.

Dr. Samuel Powel Griffitts was also a native of Philadelphia, the junior of Dr. Hutchinson by seven years, having been born in 1759. We do not find his name among the descendants of Thomas Griffitts, the councilor, heretofore mentioned, but we have no doubt that he was connected with him. After graduating at the college of his native city, he studied medicine with Dr. Kuhn, and took his degree of Bachelor of Medicine at the University in 1781. Afterward, in pursuance of the precedents of the most eminent men in the profession, he went abroad. On account of the relations between the United States and Great Britain he went first to France. Spending about a year in Paris, he went to Montpellier. Thither he was attracted by Barthez, at once a physician and philosopher. He remained there about a year, and after the achievement of independence by his country, devoted the following year to the prosecution of his studies at London, finishing off his course at Edinburgh.

We have heretofore spoken of the Philadelphia Dispensary, founded mainly by Dr. Rush. Dr. Griffitts warmly co-operated in the scheme upon his return to Philadelphia. It was located in Strawberry Alley, and began its operations in 1786. Dr. Griffitts became one of the secretaries of the board of managers and one of its physicians. His colleagues were Dr. James Hall, Dr. William Clarkson, Dr. John Morris, Dr. John Carson, and Dr. Wistar. On the merging of the college in the University he was made, as we have seen, professor of Materia Medica and Pharmacy. He seemed never to have liked his professorship, although there were never any doubts as to his competency for the discharge of its duties. He retired from it about the year 1797, and devoted himself thereafter to practice, though serving to the last in some capacity in the dispensary. He died in 1826.

Immediately upon his resignation, the professorship devolved upon Dr. Benjamin Smith Barton, who hitherto had held that of Botany and Natural History. This he continued to fill until the death of Dr. Rush, in 1813, when he was placed in the chair of Practice thus made vacant. Dr. Barton was a native of Lancaster, son of the Rev. Mr. Barton, who married a sister of Rittenhouse, the philosopher. His school education was conducted at York under the care of Dr. Andrews, who afterward became provost of the University. His medical studies were had under Dr. Shippen. He also went to the University of Edinburgh, where he stayed two years. Then he left for Göttingen, in Hanover, where he received his degree. While in London, in 1787 a small treatise on Natural History, which was his favorite study. The report of the proficiency made in his studies while abroad led to his being elected a member of the American Philosophical Society. It was said that the professorship of Botany and Natural History, to which he was elected, had been created through the special efforts of Dr. Kuhn, for the purpose of securing for the institution a man so specially gifted in these branches. He thus became the first public teacher of natural history in the United States, botany having been before that time taught, but with comparatively little patronage, by John Bartram.

The services of Dr. Barton were of incalculable value in developing his science. Through various agencies he made extensive collections of the flora of many sections of the country. Both Frederick Pursh and Thomas Nuttall were indebted to him for much of the information embraced in the "Flora Americana Septentrionalis" of the former, and the "Genera of North American Plants" of the latter. The sway of his instructions naturally followed that of his mind, and he imparted to his students much of his own fondness for botany. It was his wont to take them to the Botanic Garden of Bartram, situated on the Schuylkill, below the city. He formed the Linnæan Society, of which he became first president, and was the first in Philadelphia to erect a greenhouse. This was attached to his residence, on Chestnut Street, below Eighth. It afterward became enlarged when the property of George Pepper, father of Professor Pepper. In 1804 he began a periodical, entitled *The Philadelphia Medical and Physical Journal*, which was continued for about five years, when it ceased, probably from want of the business qualifications needed for such an undertaking. The appreciation in which he was universally held was manifested by the honors bestowed upon him at home and abroad. He was one of the vice-presidents of the Philosophical Society, and in the year 1809 was made president of the Philadelphia Medical Society, a position which he continued to hold until his death.

We have thus noticed the leading names in the medical profession in Philadelphia from the earliest times to the union of the college with the University, and the members of the faculty under the new organization. It has been interesting to us to trace the development of medical science in this new community, and we cannot but reflect how fortunate it was in the men who originated and those who conducted this development. It is simply wonderful how many young men of the very best society were willing to undergo the years of apprenticeship and study, to risk the dangers of voyages across the sea, and remain so long absent from home, families, and friends, before entering upon careers in which fame and fortune were ready to be made with the attainments they had already gained long before the period

they had assigned to themselves had ended. There is something akin to romance, especially, in the concerted efforts of Shippen, Morgan, and Rush, mere boys, who projected the great institution that for a century and a third yet remains the first in rank amid so large a number of kindred. As interesting as this, and yet more to be admired, is the cordiality with which these young men were received by the older practitioners, under whom they had studied the rudiments of science, and by whom they had beeu sent abroad for obtaining the benefit of those faculties that had been denied to themselves.

Yet among those who were less distinguished than those we have already mentioned were some of excellent ability and character. Contemporary with Redman were the usual number for such a town, of varying abilities and notoriety. Dr. John Jones, whose office was on Market Street, between Second and Third Streets, was a man of much note and a large practice. He was often referred to with respect and gratitude by some of the more distinguished men whom he had assisted in their studies. Another was Dr. Thomas Say, who lived on Moravian Street, near Arch. Dr. Say was an eminently pious Quaker, so much so that he claimed and was believed to have been honored by special visitations from heaven. He was undoubtedly a good physician, and he sincerely believed himself to be a favored medium between the Divine Being and mankind, and was wont to tell, both with tongue and pen, of what had been revealed to him. Some of his family credited what he said of these revelations, and one of his sons, Benjamin, who was also a physician, wrote, among other things, what he styled "A Short Compilation of the Extraordinary Life and Writings" of his father. The report of his having been thus chosen as a recipient of Divine confidence rendered him an interesting object in old age, especially to the young, who were wont to pause when he was met upon the street and wonder how the strange visions appeared that he had seen.

There was Dr. Abraham Chovet, on Race Street, between Third and Fourth, whose lectures on anatomy were held at his house on Water Street, which was in that day the principal place of residence for the merchants. He was eminently successful, after long trials and experiments, in making preparations in wax. He lingered in active life long after old age had set upon him. Many anecdotes were told of him. He is thus described by Watson:

"This aged gentleman and physician was almost daily to be seen pushing his way, in spite of his feebleness, in a kind of hasty walk or rather shuffle; his aged head and straight white hair, bowed and hanging forward beyond the cape of his black, old-fashioned coat, mounted by a small cocked hat, closely turned upon the crown upward behind, but projectingly, and out of all proportion, cocked before, and seemingly the impelling cause of his anxious, forward movements; his aged lips closely compressed (*sans* teeth) together, were in continual motion, as though he were munching somewhat all the while; his golden-headed Indian cane, not used for his support, but dangling by a knotted black silken string from his wrist; the ferrule of his cane and the heels of his capacious shoes, well lined in winter-time with thick woolen cloth, might be heard jingling and scraping the pavement at every step; he seemed on the street always as one hastening as fast as his aged limbs would permit him to some patient dangerously ill, without looking at any one passing him to the right or left."

In this primal time there were some of the other sex who were not unknown to fame. It must have been a case that threatened to become fatal when a *man* physician was called in at the most critical period of a woman's life. When these began to be resorted to there was great complaint among the nurse sisterhood, and charges of departure from decent usages were made. Mary Broadway was a famous midwife. She lived to be a hundred years old, and served at her profession to the last, even without need of spectacles, as was fondly mentioned in the obituary notice on the day after her departure from this life. It was sad to such women when the science and the business of obstetrics passed from them to the men.

We herewith append a list of all the physicians and dentists of Philadelphia in 1783, with their locations. It will seem strange how some of these locations should ever have been specially favorable:

James Batchelor, Water Street, between Almond and Catharine Streets.
Barnabas Binney, Arch Street, between Fourth and Fifth.
Bond & Wilson, Second Street, between Market and Arch.
John Baker, dentist, Second Street, between Walnut and Spruce.
John Carson, Third Street, between Chestnut and Walnut.
William Clarkson, Front Street, between Union and Pine.
Abraham Chovet, Race Street, between Third and Fourth.
Gerardus Clarkson, Pine Street, between Front and Second.
William Curry, corner Second and Pine.
Benjamin Duffield, Front, between South and Almond.
James Dunlap, Market, between Fifth and Sixth.
Nathan Dorsey, Front, between Walnut and Spruce.
Samuel Duffield, Chestnut, between Second and Third.
John Foulk, Front, between Market and Arch.
George Glentworth, Arch, between Front and Second.
Peter Glentworth, Front, between Market and Arch.
Joseph Goss, Front, between Walnut and Spruce.
Samuel K. Griffith, Union, between Second and Third.
James Gardette, dentist, corner Third and Pear.
James Hutchinson, Second, between Walnut and Spruce.
Robert Harris, Spruce, between Second and Third.
John Jones, Market, between Second and Third.
Michael Jennings, Moravian Alley (Bread Street).
Jackson & Smith, Second, between Market and Chestnut.
John Kehlme, Race, between Second and Third.
Adam Kucher, Second, between Chestnut and Walnut.
George Syle, Front, near Poole's bridge.
John Morgan, corner Second and Spruce.
Peter Peres, North Second, corner Brown Street.
Joseph Phiffer, Second, between Vine and Callowhill.
Thomas Park, Fourth, between Chestnut and Market.
Benjamin Rush, Second, between Chestnut and Walnut.
Frederick Rapp, Third, between Race and Vine.
John Redman, Second, between Market and Arch.
Benjamin Say, Second, between Arch and Race.
William Smith, Arch, between Front and Second.
Samuel Shober, Front, between Almond and South.
Thomas Shaw, corner Front and Callowhill.
William Shippen, Second, between Walnut and Spruce.
Benjamin Vanleer, Water, between Race and Vine.

Before proceeding further with accounts of the men who have been leaders in the medical profession, it seems proper to speak somewhat of diseases, especially those that were epidemic in the earliest settlement of Philadelphia, and the habits of persons not skilled in medical science in making available

for cures or alleviations of sickness the natural productions of the country. In the study of this branch of the subject, we have been impressed by the accuracy with which many traditions of the curative qualities of certain of the indigenous plants of the country have descended to the inhabitants of rural districts wherever we have known them.

The farther we go back in the history of the settlement, the more frequent seem the variations in the degrees of heat in summer and cold in winter. William Penn early noticed this inconstancy, and occasionally alluded to it in his letters to friends. From the mildness of the first winter of his residence, he was at first inclined to suspect that he had settled in the midst of a climate for the greater part of the time salubrious and even delectable. The next year (1683) was not so mild, as the Delaware River during one spell was frozen over. It is certain that as the time elapsed the spring season came on later and later. The native grapes used to green by the last of February, and in the course of thirty or forty years the springs seem to have fallen a couple of weeks or more behind the usual period of their return. So the winters were later in coming as they were in departing. The Delaware used often to freeze by the middle of November. Merchants, counting upon this, were wont to hasten in sending forth their ships, to avoid being ice-bound. By about the middle of the century this necessity was not wont to arise until about a month later. Several winters in that period of half a century were intensely severe. That of 1697–98 was notably so, as that of 1702–3. Loaded wagons traveled across the Delaware at Christmas in the former year, and in the latter such was the case early in October. That of 1704–5 was so severe that during six weeks no mail matter was brought or carried. The snow fell to the average depth of three feet. In 1740–41 it was yet more so. The wild animals, in their stress for food, were wont to make their way to the plantations in search of the means of subsistence, and many of the poorer classes of citizens maintained themselves and their families from these and the carcasses of those who were found nearly perished in the snow. Other winters were as notably mild, as that of 1824–25 and that of 1827–28. In Hazard's "Register" there is much interesting information to be obtained touching this subject, which, however, is too voluminous to be inserted.

The conclusions that have been arrived at by those familiar with the history of meteorological phenomena are that the climate of Pennsylvania underwent considerable changes within a hundred years, and that a greater uniformity was observable in the seasons. The springs became colder and the autumns milder,[1] yet these frequent abrupt variations continued, and produced their natural crops of sickness.

Allusion has been made heretofore to the specially sickly seasons spoken of by Noah Webster and others. The excessive cold of the winter of 1697–98 was productive of much influenza, which, but more so farther north than in Philadelphia, took on the form of typhoid pneumonia. Two years afterward, in August, 1699, the city was visited by a most malignant sickness, to which was given the name of the Barbadoes distemper, though there does not seem to be any evidence that it was directly imported from that island, and it was not until afterward that the epidemic received the name of yellow fever. The summer had been as notably hot as the last, but one winter had been cold. The heat had been so intense that often laborers in the harvest-field had been prostrated, many of them dying. This was a most uncommon occurrence anywhere. The accounts of this epidemic have been gathered from the journals of Thomas Chalkley and Thomas Story, two zealous preachers among the Friends. The latter was then visiting the colony of Pennsylvania, where, however, he settled upon his arrival, and was made master of the rolls, though he afterward returned to London, where he died in 1742. Chalkley had been on a mission to the island of Tortola, and came to Philadelphia in 1701, where he remained during the rest of his life. The historian Proud speaks of him as a man of great virtues. The disease began about the 1st of August, and continued nearly through October. Story tells with great satisfaction that the only season of abatement of the awful malady was during the session of the Friends' Meeting.

"In this distemper," he says, "had died six, seven, and sometimes eight a day, for several weeks, there being few houses, if any, free of the sickness. Great was the majesty and hand of the Lord! Great was the fear that fell on all flesh! I saw no lofty or airy countenances, nor heard any vain jesting to move men to laughter, nor witty repartee to move men to mirth, nor extravagant feasting to excite the lusts and desires of the flesh above measure. But every face gathered paleness,

[1] The following from Watson's "Annals," referring to Hazard's speculations, are interesting: "He thinks the mean temperature may not have changed, but that the climate is altered by heat and cold, being less confined than formerly to their natural seasons. He thinks no facts warrant a belief that the winters were colder before the year 1740 than since that time. He observes that there are seldom more than twenty or thirty days in summer or winter in which the mercury rises above 80° in the former or falls below 30° in the latter season. The higher the mercury rises in hot days the lower it usually falls in the night. Thus, when at 80° by day it falls to 66° at night, or when at only 60° by day it falls only to 56° at night. The greatest disproportion is most apparent in August. The warmest weather is generally in July, but intense warm days are often felt in May, June, August, and September. The variableness of weather in our State, he observes, lies south of 41°, and beyond that the winters are steady and in character with the Eastern and Northern States. Our intense cold seldom sets in till about the 20th or 25th of December, 'As the day lengthens the cold strengthens,' so that the coldest weather is generally in January. The greatest cold he has known in Philadelphia was 5° below zero, and the greatest heat 95°. The standard temperature of the city is 52½°. The month of June is the only month that resembles a spring month in the south countries of Europe. The autumn he deems our most agreeable season. The rains in October are the harbingers of the winter, so that, as the Indians also say, the degrees of cold in winter can be foreknown by the measure of rain preceding it in the autumn. The moisture of the air is greater now than formerly, owing, probably, to its now falling in rain, whereas it before fell in snow. Even the same successive seasons and months differ from each other every year."

and many hearts were humbled, and countenances fallen and sunk, as such that waited every moment to be summoned to the bar, and numbered to the grave."

About two hundred and twenty perished of the disease. Among them were as many as five from the family of Isaac Norris, Sr.[1] The disease was ever thought to have been imported. Dr. Rush, we believe, was the first to assume that it might originate from local causes.

The neighborhood was occasionally beset by fever and ague. The year 1717 was notable for this visitation. The smallpox made its entry into Philadelphia in 1710. It had been on the ship on which Penn came over in 1682, and several of the passengers died while at sea, but we believe there is no record of its having invaded the country at that time. The havoc made in 1710 was great. Afterward some pains were taken, upon its recurrence, to keep those infected away from the rest. Such was the case in 1726, when it was imported by a ship from England. There was a house called Blue-House Tavern, on South Street near Tenth, where infected persons from the ships were carried, and the disease confined there.

This disease was the greater from the ignorance of any means of preventing except by inoculation and the tardiness with which it was resorted to. We have seen that among the physicians of Philadelphia at the time were some of thorough education. These advised inoculation, but the state of public opinion was so hostile to it that it was long before any medical man dared to attempt it. The majority of the inhabitants, in case of the death of any one from this cause, would have regarded it as a case of murder. The *Weekly Mercury*, the first newspaper, published, as we have seen, by Bradford, contained a sermon by a New England divine, in which he styled inoculation as "an unjustifiable act, an infliction of an evil, and a distrust of God's overruling care to procure us a possible future good." It was thirty years before this superstitious prejudice could be overcome. In 1730 the mortality had been appalling. Among the victims were George Claypole and five of his children. In the following year, when inoculation was successfully performed upon James Growden, the example thus set was soon followed. Not all the physicians practiced it, but a majority did as late as 1836. These were Kearsley, Shippen, Zachary, Bond, Hooper, Sommers, and Cadwalader.[2]

In the year 1741 the yellow fever again appeared, this time called the "Palatinate distemper," because of its being brought by some German emigrants. Noah Webster calls it the "American plague;" but Dr. Bond, who seems to have been in advance of his time, if not in learning, at least in judgment, pronounced this yellow fever, and declared that it had been imported along with a shipful of emigrants from Dublin. In 1743 the same disease reappeared, but there being no proof of importation, the apprehension for the first time seemed to be that it owed its origin to local influences.

The years 1747 and 1748 were notable for sickness and the mortality consequent thereupon. That of the first seems to have been what Noah Webster calls "a bilious plague;" that of the second, coming on in February, was known as an "epidemic pleurisy." In 1754–55 the mortality was great. The infection thus received was called the "Dutch distemper." This originated from a disease occurring among the immigrants of vessels from Germany, who, occupying crowded and poorly-ventilated berths, fell ill of a distemper that became so general as to have assigned to it a national name.

Without undertaking to account for the fact, it is certain that among all peoples, however uncultivated, there has ever been a considerable acquaintance with the virtues of various medicinal herbs. Such acquaintance will ever be found most abundant in new communities, as all will testify who have spent much of their time in their midst. The crone with her salves precedes the physician with his books and apothecary materials, and it is long before he can entirely supplant her. Indeed, he never does so entirely, partly because of the intimate acquaintance that those otherwise wholly unlearned have made with the provisions that nature has made in the woods, the field, and the garden. The history of medicine in Philadelphia shows that the fees of the most learned of the early physicians were not large, on account of the use of plants and herbs, which was common, especially among the poorer class. Ordinary cases of sickness were usually treated by the parents or friends, and it must be a case of great danger, or one requiring surgical operation, when a physician or surgeon would be called. As the city grew in population and culture, the knowledge of the efficacies of these various plants became more and more diminished, and the professional man was found to be more and more in demand.

Very many were those plants. Asthmatic persons, for instance, smoked the Jamestown weed; poke-berries were used for chronic sores, sour-dock for the itch, burdock for the reduction of fevers, everlasting for poultices, mullein for vapor-baths, catmint for colic, blackberry-roots and berries for dysentery. Many of

[1] The following is from the papers left by him: "This is quite the Barbadoes distemper. They void and vomit blood. There is not a day nor night has passed for several weeks but we hear the account of the death or sickness of some friend or neighbor. It hath sometimes been very sickly, but I never knew it so mortal as now; nine persons lay dead in one day at the same time; very few recover. All business and trade down. The fall itself was extremely moderate and open."

[2] In volume ix., "Register of Pennsylvania," on the subject of "The early settlement of Columbia, in Pennsylvania," occurs the following: "In the year 1757 a physician (Dr. Moore) came from Philadelphia to inoculate the children who never had had the smallpox. Being all connected, they were taken to one house to make it convenient for the doctor. He had forty patients. One or two that did not take the smallpox by inoculation died; the rest all did well. It was the opinion then that it would be wrong to inoculate the second time, lest the subject should take the disease the natural way, and have a double portion."

these may be found to-day in rural districts remote from cities. "In the woods they also found medicines, much of which knowledge was derived from the Indians, as Gabriel Thomas, in 1689, says, 'There are also many curious and excellent herbs, roots, and drugs of great virtue, which make the Indians, by a right application of them, as able doctors and surgeons as any in Europe.' The inner bark of the oak and of the wild cherry-tree were their tonics. Sassafras roots and flowers were used as purifiers and thinners of the blood. People used the leaves of the beech-tree for steeping the feet in hot water. Grape-vine sap they used to make the hair grow. Of the dogwood-tree (its flowers or bark) they made a great cure for dysentery. The magnolia leaf they used as a tea to produce sweat; the berries, put into brandy, cured consumptions, and was a good bitters; the bark of it was used for dysenteries; it could cure old sores by burning the wood to charcoal and mixing the powder of it with hog's lard. People used the root of the bayberry-bush to cure toothache. The cedar-tree berries were used as a tonic to strengthen a weak spine, to destroy worms, etc. Golden-rod was deemed excellent for dysentery. Boneset, used for consumption and for agues; sweet ferns, for bowel complaints; pennyroyal, excellent to produce sweat for colds; dittany, for cure of a fever; alder-buds made a tea for purging the blood; elderberries were used for purges, and the inner bark to make ointment for burns and sores."[1] It was then customary among the more provident and charitable of the inhabitants to cultivate many of these plants in their gardens, not only for their own use, but that of their neighbors and the sick in general.

Doubtless it was owing in great part to the simple living of these early settlers that made sickness, except in the case of epidemics, easily relievable by such simple remedies. The same Gabriel Thomas' opinions of the wonderful skill of the Indian physicians must be taken with some allowance when we remember his hostility, or at least his prejudice, against professional men, whether physicians or lawyers. Outside of these he was a man ready to praise the most of what he saw in his travels, and some things he said spoke well for those women whose best and favorite doings were in rendering assistance to those who were called upon to aid in the way most natural to the increase of the population.

The attention of leading medical men was early called to the effects upon the health of the habitual use of ardent spirits. The College of Physicians, in 1787, appointed a committee, consisting of Drs. Rush, Jones, and Griffitts, to memorialize the Legislature upon the subject; and afterward another committee, consisting of the two former and Dr. Parke, memorialized Congress upon the subject. Among other things said in the address was the following:

"Your memorialists have beheld with regret the feeble influence of reason and religion in restraining the evils which they have enumerated. They centre their hopes, therefore, of an effectual remedy for them in the wisdom and power of the United States; and in behalf of the interests of humanity, to which their profession is closely allied, they thus publicly entreat the Congress, by their obligation to protect the lives of their constituents, and by their regard to the character of our nation, and to the rank of our species in the scale of beings, to impose such heavy duties upon all distilled spirits as shall be effectual to restrain their intemperate use in our country."

The members present at the adoption of this address were John Redman, president; John Jones, vice-president; Robert Harris, Nicholas B. Waters, Thomas Parke, William Currie, Benjamin S. Barton, Nathan Dorsey, Benjamin Rush, Michael Leib, William W. Smith, Adam Kuhn, and Samuel P. Griffitts, secretary. The names on the adoption of the memorial to the Legislature, and not on the above list, are William Shippen, Jr., George Glentworth, James Hutchinson, Benjamin Duffield, Benjamin Say, John Carson, John R. B. Rogers. Among the diseases consequent upon the use of distilled spirits the memorialists "would only mention the dropsy, epilepsy, palsy, apoplexy, melancholy, and madness, which too seldom yield to the power of medicine;" and they maintain that the "inconveniences arising from excessive labor, heat, or cold are to be removed with much more safety and certainty by the use of cider and malt liquors."

These physicians abstained from the utterance of any other opinions upon the subject than those which lay in the line of their profession. Whatever views may be indulged as to the practicability of the legislation they sought, their action in the premises evinces that they were men who seriously desired whatever means were feasible for the prevention of human suffering and the conservation of the health, physical and intellectual, of the community.

In the above list Dr. William Currie was one of the most gifted, and by his writings became most widely known, both in this country and in Europe. His professional studies were conducted under Dr. Kearsley, in Philadelphia, though after his admission to practice he settled in Chester, and there remained, and it was probably about the time of the memorial to Congress that he removed to Philadelphia. He became specially distinguished by his practice and views of yellow fever. He maintained that it was highly contagious. At first he believed that the disease was wholly of foreign origin, but he afterward gave up this opinion, and while he admitted that it might originate from local causes, he never yielded the question of contagion. He discussed the various questions connected with the disease with many of the leading physicians abroad. This correspondence, however, was lost. He published in 1792 his work, "An Historical Account of the Climate and Diseases of the United States," a most ambitious undertaking for one whose professional engrossments prevented his visitations to the several States whose history in these respects he undertook to give. But he availed him-

[1] Watson's "Annals."

self of all the information he could obtain from every source. His notion appears to have been the collection of all facts possible of ascertainment, with a view some time thereafter to write a more studied and elaborate account, an intention that was postponed for other work, as his "Treatise on Epidemic Bilious Fevers," his "View of the Diseases Most Prevalent in the United States," and his "General View of the Principal Theories or Doctrines which have Prevailed at Different Periods up to the Present Time."

The hostility that had been shown in the matter of inoculation was indulged against vaccination, and Dr. Currie was one of those who were specially active in extending the knowledge and blessing of the latter. He was one of the original founders of the College of Physicians, and an active member of the Philosophical Society. His intention had been to publish another more extensive and carefully elaborated work upon the theory of fever, but his labors had been so arduous, and several domestic afflictions were so grievous, that for several years before his death he was incapacitated for intellectual labor. He died in 1829.

At the death of Dr. James Hutchinson, Dr. John Carson was elected to the chair of Chemistry in the University. Heretofore he had been one of the trustees. He accepted the invitation, but died shortly afterward, and without entering upon the duties. Then Dr. Joseph Priestley was chosen. This is a name quite notable in the history of American literature, though mostly in matters other than those of our present studies. He was an Englishman by birth, educated to the doctrines of the Dissenters, and became one of their leading divines. Several of his sons had gone to America. These he followed, arriving about the year 1794. Soon after his arrival he was offered the professorship, but declined it, and removed to the town of Northumberland, where the rest of his life was spent. He had written quite a number of works before leaving his native country, and many more in this. His publications amounted to more than a hundred, on science, politics, philosophy, morals, and religion. Lord Brougham said of him, that of all voluminous writers he had the fewest readers, though he pays a high compliment to his genius and personal worth:

"That he was a most able, most industrious, most successful student of nature is clear, and that his name will forever be held in grateful remembrance by all who cultivate physical science, and placed among those of its most eminent masters, is unquestionable. That he was a perfectly conscientious man in all the opinions which he embraced, and sincere in all he published respecting other subjects, appears equally beyond dispute. He was also upright and honorable in all his dealings, and justly beloved by his family and friends as a man spotless in all the relations of life."

On the declination of Dr. Priestley, Dr. James Woodhouse was elected, and continued in that professorship until his death, in 1809. He was a native of Philadelphia, and took his degree of A.B. at the University in 1787. Afterward he studied medicine with Dr. Rush, taking his degree in 1792, at the first commencement after the union of the college and University. He had borne some part as medical assistant in the army, and had become so distinguished in chemistry that he was proposed for the chair vacated by Dr. Hutchinson by Dr. Adam Seybert, then one of the most eminent physicians in the country. But in this he was defeated. Woodhouse was represented to be a man unusually felicitous, not only in the delivery of lectures, but in the manipulation of experiments. Dr. Priestley admired him much, and was fond of expressing high praise of him. He became somewhat of a follower of the doctor's theories, particularly that relating to phlogiston. He was succeeded by Dr. J. Redman Coxe.

Dr. Coxe studied medicine under Dr. Rush, and at London, Paris, and Edinburgh. He was born at Trenton, N. J., in 1773, and settled in Philadelphia in 1796, where he died March 22, 1864. He was port physician in 1798, during the yellow-fever visitation; was several years a physician of the Pennsylvania Hospital and of the Philadelphia Dispensary; professor of Chemistry in the University of Pennsylvania in 1809–18, and professor of Materia Medica from 1818 to 1835. He published "On Inflammation," 8vo, 1794; "Importance, Etc., of Medicine," 8vo, 1800; "Vaccination," 8vo, 1800; "Combustion," etc., 8vo, 1811; "American Dispensatory," 8vo, 1827; "Refutation of Harvey's Claim to the Discovery of the Circulation of the Blood," 8vo, 1834; "Female Biography;" "Recognition of Friends in Another World," 12mo, 1845; edited *Philadelphia Medical Museum*, 6 vols. 8vo, 1805, new series, 1811; *Emporium of Arts and Sciences*, 5 vols. 8vo, 1813.

He was regarded as one of the most gifted of the medical fraternity of his time, not only in the profession, but in general literature. He gave up the professorship of Materia Medica in the University in 1835, and was succeeded by Dr. George B. Wood. The same year obstetrics was left by Dr. Dewees, and devolved upon Dr. Hugh L. Hodge.

Dr. George B. Wood was born in Greenwich, N. J., March 13, 1797, and after his graduation at the University of Pennsylvania in 1818, was, in 1822, made professor of Chemistry in the Philadelphia College of Pharmacy, from which he was promoted, in 1831, to the chair of Materia Medica. In 1835 he accepted the chair of Materia Medica and Therapeutics in the University of Pennsylvania, and in 1850 the position of professor of the Theory and Practice of Medicine. In 1860 he resigned this office and retired from professional life. For the preceding twenty-four years he was engaged in medical teaching as attending physician to the Pennsylvania Hospital. He was a voluminous and successful author. The most famous of his productions, the "United States Dispensatory," survives him, and the latest (the fifteenth) edition has had a very large sale. The

Digitized by Google

fourteenth edition, which was published during his lifetime, reached an edition of one hundred and fifty thousand copies. He and Dr. Franklin Bache originally wrote this work for the purpose of creating a uniformity in the practice of pharmacy, and their object was fully accomplished. Dr. Wood's great treatise on the practice of medicine was published in 1847, and rapidly ran through six editions. In 1856 he published a treatise on "Therapeutics and Pharmacology," which reached a third edition. He was also the auther of two volumes of "Memoirs and Addresses and Biographical Memoirs," of the "History of Pennsylvania Hospital," of the "History of the University of Pennsylvania," and of numerous scattered papers and reviews. Acquiring a fortune by marriage, and enjoying for many years a large professional income, Dr. Wood was enabled to give great pecuniary aid to various medical institutions, and was widely known as a public and private benefactor. Leaving no issue, by his last will and testament about one-fourth of his estate was bestowed upon the University of Pennsylvania and much of the remainder upon various other charities.

Heretofore chemistry had been regarded as a science not necessarily connected intimately with the profession of medicine, and the trustees of the University, putting it in the same category with botany and natural history, had adopted a resolution that it should not be considered as appertaining to the medical department, although, of course, they did not exclude physicians from appointment to it. This resolution seemed to the medical faculty to derogate from the repute and the responsibilities of that element of their profession. Chief Justice McKean, a leading member of the board, to whom complaints had been made in this behalf, requested an opinion in writing from such of the medical faculty as felt most concern upon the subject. At that time Dr. Physick was a member, whom we must mention at some length hereafter. He joined with Wistar, Rush, and Barton in a letter that, concise as it was, put the science on the basis to which it was entitled.[1]

Along with anatomy and obstetrics was associated surgery, and it may well be supposed that Dr. William Shippen (Junior) had his hands full of other things besides his favorite study. But even in Edinburgh surgery had not been considered of sufficient individual importance to be taught separately from anatomy. The Medical College of Philadelphia having been founded upon this, the Alma Mater of its first faculty, it was not more than what was to be expected, that the infant might not anticipate the parent institution in new developments. Yet it really did so in this particular. Not that efforts had not been made in Edinburgh to assign a separate chair to surgery. But this was at a time when Dr. Munro was professor of Anatomy there, and he regarded the movement as an interference with his province, and it was many years before a chair of surgery was thought of separately from anatomy. The separation was made sooner in Philadelphia, and mainly through the efforts of one of the most remarkable men that this country has produced in any department of endeavor.

Philip Syng Physick was a native of Philadelphia, born in 1768. His father, Edmund Physick, had emigrated from England some years before, had held office under the provincial government, and was one of the agents for the Penn family. The son received his preliminary education at the Friends' Academy, in Fourth Street, near Chestnut, then kept by Robert Proud, the historian. The family residing out of town, the boy boarded in the family of a Mr. Todd, whose widowed daughter-in-law afterward became the wife of President Madison. He took his degree of Bachelor of Arts in 1785 at the University of Pennsylvania. Within a month afterward he began his medical studies under Dr. Adam Kuhn, the professor of Botany and Materia Medica in the medical college. Here he continued three years and a half.

Dr. Physick was one who seemed to have been driven most reluctantly into the career which he was afterward to adorn. A violent shock to his sensibilities, received when witnessing surgical operations and the setting up a human skeleton in the college, which was on Fifth Street, opposite to Independence Square, led him to ask, and even to beseech, his father to allow him to relinquish a pursuit for which he felt himself to be wholly unfitted. But the parent was unrelenting, and he went back to his work with a diligence that could not have been greater, if he had felt greatest eagerness to learn its principles and practice its behests.

It has been regarded fortunate for Dr. Physick that in youth he had not thought of becoming a practical surgeon, and so a greater portion of his studies was devoted to principles, instead of learning the facile

[1] It runs thus, after getting to the subject of discussion, "It is particularly expedient that the professor of Chemistry should have a full and extensive knowledge of medicine, because very many valuable articles of the materia medica are derived from chemistry; and the nature of these articles can only be understood by a person who has a competent knowledge both of chemistry and medicine. The students, who almost exclusively support the professorship of Chemistry, are induced to do so in consequence of its application to pharmacy and the different branches of medicine, viz.: physiology, pathology, therapeutics, materia medica, and the practice of physic. No man can teach pharmacy unless he has had some knowledge of the practice of medicine, and the application of chemistry to physiology and the other branches of medical science above-mentioned can only be taught by a chemist who understands them.

"The teaching of chemistry in this University has hitherto been confined to the professors of medicine, and the success attending this arrangement appears to us good reason for continuing it."

After calling attention to the fact that the science was taught by medical professors in all the universities of Europe, except in Sweden, where it was most intimately connected with mineralogy, they say, in conclusion,—

"We beg leave to say that our professor of Chemistry has always taken an active part in the business of the medical faculty, judging of the qualifications of the respective candidates in every branch of their profession, and examining inaugural theses on subjects relating to medicine."

use of surgical instruments. He set out to learn thoroughly whatever was to be learned, not only in what might become his special pursuit, but whatever might be thought cognate or ancillary to it. While in Dr. Kuhn's office he attended the latter's lectures on botany and materia medica, and those of the other professors in the college. He might have obtained his degree here; but he determined to study much abroad before setting up in his profession. With this view he went abroad in 1789, and became a pupil and friend of Mr. John Hunter, in London. The latter was then surgeon of St. George's Hospital. There was an anecdote characteristic of the abruptness of this eminent surgeon. When Mr. Physick, the father, asked what text-books it might be necessary for his son to obtain, Hunter, leading both into the dissecting-room, and pointing to the bodies lying ready for the knife, answered, "These are the books your son has to study; the others are fit for very little." The aptness and fidelity evinced by the student led to his being soon taken as assistant in experiments, and when a vacancy occurred in the office of house-surgeon, he was elected to it on the recommendation of his preceptor. This position was of inestimable service. While under the pupilage of Mr. Hunter he became associated on friendly terms with others eminent, or soon to be, in the profession, as Jenner, Grey, Kingston, Sir Everard Howe, Mr. Lynn, and Sir Anthony Carlisle. He remained with Hunter about two years and a half. His progress had been so prodigious, and he had in other ways so commended himself to him, that he was offered a residence in his house and a partnership. He might have obtained a great practice in London, even upon his own separate endeavors, for it had become to be generally said that his action as house-surgeon at St. George's had placed that institution upon a basis quite above what it had rested upon heretofore. But his intention always had been to return to his native city. And yet he desired to qualify himself yet further for the needs of his profession. So, after taking his degree at the College of Surgeons in London, he immediately thereafter repaired to Edinburgh, where, besides attention to the medical lectures, he became habilitated at the Royal Infirmary. In one year he obtained his degree of Doctor of Medicine, and in the fall of 1792, when twenty-four years of age, returned to Philadelphia.

P. Physick

The rapid success of his predecessors was not to be repeated in his case. They were the pioneers who with abundant facilities had gone upon a field ready for their exertions. Philadelphia was now rich in the fame of its physicians and medical institutions. A young man, however gifted and so known, must wait, especially if like Physick, to be above learning the art to talk of his advantages and put forward his claims. He was one of the last to resort to such arts, and so he long remained without practice sufficient for his maintenance. In speaking of his experience in this behalf, he said once, "I walked the pavements of Philadelphia, after my return from Europe, for nearly three years without making as much by my practice as put soles on my shoes, and such were my discouragements and dissatisfaction that I would have sold the fee simple of my profession for a thousand pounds, and never again have felt a pulse in the capacity of a physician."

The next year was 1793, notable in the history of Philadelphia for the scourge of the yellow fever. It made its appearance in August, and disappeared only with the coming of frost. Such was the terror of its ravages that multitudes fled and remained away until it was abated. Some days the deaths were more than one hundred. The mortality amounted to over three thousand, an enormous figure for a town of less than fifty thousand inhabitants. Most of those that could get away did so. One of the gazettes, published during the epidemic, in an issue of about the 1st of October, said that at that writing there were not more than three thousand persons left in the city. This statement, however, was an under-estimate, as statistics pertaining to the plague prepared afterward and published showed. Those who may be inclined to know more extensively of this subject than we can give in a chapter thus limited, are referred to a "statement of the number of houses, deaths, etc., in the respective

Digitized by Google

streets, alleys, and courts in the city of Philadelphia." The number of dead on Market Street and northward was 1178; south of Market Street, 1068; Northern Liberties and Southwark, 541; in all, 2728. Of the inhabitants, 22,929 remained in the city, and 11,906 fled.

Soon after the appearance of the epidemic, the house known as Bush Hill, the property of William Hamilton, was taken by the authorities for a hospital, and Dr. Physick, together with Drs. Cathrall, Leib, and Annan, attended to patients occasionally. The services rendered by Dr. Physick in this trying time, his courage and his skill, served to put him on a better footing than that of the year before, when he was said to have been forced to the necessity for support to agree to practice in several families at a fee of twenty dollars each for the year. He was especially commended by Dr. Rush, with whom he frequently had occasion to consult. Rush wrote an account of the fever, in which he often mentioned the name of the young physician. In the following year he was made one of the surgeons of the Pennsylvania Hospital, and assigned a position in the Dispensary of Philadelphia. After this his rise was easy and rapid.

According to the account of Dr. Rush, there were not very many of the physicians of Philadelphia who, from first to last, remained at their posts. The scourge was so terrific and the mortality so appalling that some of these fled along with the multitudes. Several who remained died while faithfully serving the sick of all conditions. Dr. Physick was one who never left the city, and as a result he could not fail to meet with success. He had been seized with the fever himself, and when restored to health went back to his work. The dread pestilence returned in 1797, and, what is of most rare occurrence, he was seized with it again. Dr. Rush spoke of this as one of the three cases he had known in 1793, and two in a brief visitation of the distemper in 1794. The mortality was very great in 1797, but not equal to that of 1793 in the ratio of the population of the city. It was especially great among the physicians, nine of whom perished. Beside Dr. Physick, Drs. Reynolds, Strong, Boys, Benjamin, Duffield, Hayworth, Church, and Caldwell were stricken, but recovered. Contemporary records speak in the highest language of praise of the profession during this season. Among those physicians who fell victims to the disease was Dr. Annan, an attendant at the Bush Hill Hospital, in 1793. Another, Dr. Pleasants, had retired to the country, but feeling himself called on to confront danger, he returned to the city and gave his life as an evidence of the sincerity of his benevolence. The case of Dr. Thompson was of a still more startling and melancholy nature. "He had been married in the evening, had gone to bed, and within two hours felt the symptoms of the disorder approaching. The family were alarmed. The bridegroom was removed, and died on the third or fourth day, leaving his unfortunate at once a widow and a bride."[1]

The history of the yellow fever in Philadelphia is intensely interesting. During the year 1797 the number of physicians was less than twenty-five. We have seen that eight of this number were carried off by the fever, and a goodly number of the rest lay smitten by it for various periods, leaving only seven or eight to administer to the sick. These had to attend at hospitals and private residences. By this time the hospital at Bush Hill had been fitted up and known as the City Hospital. Through the generosity of several of the citizens, at the head of whom was Stephen Girard, it had been remodeled after the experience of 1793, and rendered far more efficacious for its purposes.[2] It had been only irregularly that Dr. Physick attended there, and it was owing to Girard that it was put in a condition in which it could render greater good.

After all that Stephen Girard did for the poor of his adopted country, this was his noblest work. When he saw the condition of Bush Hill he set to work to reform it. Ready in his assistance was Peter Hilm, another citizen of foreign extraction. They might have fled with the multitudes who were stricken with panic by the dreaded disease, but they remained behind; and it is simply wonderful to read of the unflagging charities they bestowed, both in work and in money, in every emergency. All the world knows of the great institution which bears his name, and which he established for the education of the poor. But few know that he took in hand Bush Hill Hospital in the midst of its unlimited disorder and filth, and, day by day, traveled to it on foot and waited upon its inmates, serving in every office, even the lowest and most loathsome. Great numbers of the sufferers languished and died in his arms. Whatever may have been the disgust and horror he felt, he would only dispose the putrid cases with whatever decency was possible, and without resting, and even without stopping to cleanse himself of the excretions that had been voided upon him, repair to another couch to repeat the *rôle* of horror.

In the experience of this remarkable man, some things must have occurred of a striking character which led to the hostility which later in life he felt

[1] Dr. John Bell's sketch of Dr. Physick.

[2] The following account of this hospital as it was in the early part of the epidemic, in 1793, is from Mathew Cary's "Account of the Malignant Fever lately Prevalent in Philadelphia." A profligate, abandoned set of nurses and attendants—hardly any of good character could at that time be procured—rioted on the provisions and comforts prepared for the sick, who, unless at the hours when the doctors attended, were left entirely destitute of every assistance. The sick, the dying, and the dead were indiscriminately mingled together. The ordure and other evacuations of the sick were allowed to remain in the most offensive state imaginable. Not the smallest appearance of order or regularity existed. It was, in fact, a great human slaughter-house, where numerous victims were immolated at the altar of riot and intemperance. No wonder, then, that a general dread of the place prevailed through the city, and that a removal to it was considered as the seal of death."

toward ministers of the gospel and toward physicians. There seems to have been some difficulty in obtaining regular attendance of physicians at the hospital, especially that so many of them had gone away from the city, and it must have been that some of the clergymen, when so many of their flocks had fled, persuaded themselves that it was a greater duty to go in pursuit of the wanderers than remain and perish among the poor, and so leave the former to roam without shepherds. At all events Stephen Girard, rich as he was, selfish as he might be suspected of being, stayed with the unfortunate, tended them when sick with his own hands, paid for the services of the few physicians he could employ, and buried the dead with whatever decency was possible.

There seems to have been some misunderstanding between the managers of Bush Hill in 1793 and Dr. Physick, with other physicians, whose services were sometimes employed there. Dr. Deveze and Dr. Benjamin Duffield, as it now seems, were most prominent in the professional service which they rendered there. To the former the committee allowed fifteen hundred and to the latter five hundred dollars. As evidence of the exigency of affairs then prevailing, we mention the fact that the house physicians—Morrice, Guisard, and Muliner, and Lefer, the apothecary—only received four dollars a day each for their services.

In the season of 1797 the Bush Hill physicians were Drs. Samuel Duffield and Edward Stevens, assisted by Drs. Sayer, Dobel, John Redman Coxe, Samuel Pleasants, Michael Leib, and John Church. The services rendered by these men were such that the Board of Health voted to such as were alive after the epidemic, and the heirs of those who had fallen, each a share in the Bank of Pennsylvania, valued at five hundred dollars.

In the following year, 1798, the fever again appeared, and with yet more disastrous results. In this season, Dr. Physick, who had now become quite eminent, was physician in charge of the City Hospital, as Bush Hill was now called. His assistant was Dr. Samuel Cooper, who died at his post. From the history of this scourge of 1798, written by Thomas Condy and Richard Folwell, we learn the names of the physicians who remained in the city during its continuance. The list shows from its meagreness that very many must have gone away, for the population was then near seventy thousand. The names given were Physick and Cooper, Rush, Wistar, Griffitts, Gallagher, Moore, Caldwell, Harris, Proudfit, Connover, Leib, Boys, Church, the two Duffields, Stewart, Parke, Strong, Bigelow, Pfeffer, Kincaid, Trixo, Yeatman, Mayer, La Roche, Pascalis, and Devirier. Drs. Dewees, Sayer, and Currie also remained, as appears from other testimony.

What had specially intensified the horror of the disease heretofore had been the idea that it was contagious. By this time, however, from careful study of its spread, both in Philadelphia and in other places where it had appeared, this idea began to be rejected. Dr. Deveze had maintained, as early as 1794, that it was not contagious. To this opinion Dr. Physick now agreed. This knowledge was a great relief to the friends of those who were smitten, when they could tend them upon removal to places of security, without fear of the results of contact.

One of the resorts improvised for the service of the infected was at Master's Place, about two miles out of town, on the Germantown road. There was another at the wigwam, between Race and Vine Streets, near the bank of the Schuylkill. Large numbers were treated in these two receptacles. It is remarkable that in this season, while the mortality among the people should have been greater, that among the physicians was less. Death, however, had a smaller number from whom to select his victims, and the most of that number had already fallen a prey in the war in which they so heroically persisted in contending.

During the several visitations of the epidemics the physicians, especially the ablest among them, studied with unceasing pains in the midst of their ministrations; notably Dr. Physick, particularly by *post-mortem* examinations. He, in conjunction with Dr. Cathrall, agreed in announcing that the black vomit proceeded from inflammation in the vessels of the stomach and intestines, and they gauged their treatment according to this *rationale*. The marked success of Dr. Physick in the treatment enhanced yet higher his already fine reputation, and he received at the abatement of the fever a present of silver plate of great value from the managers of the hospital.

We have seen that surgery heretofore had been united with anatomy and obstetrics. The reputation acquired by Dr. Physick as a surgeon was such as to make him feel justified in starting a class upon his favorite study. This he did in the year 1800. Of course he could expect few, if indeed any, students except among those young men who were already engaged in the study of other branches, with the view to become practicing physicians. The intercourse between him and Dr. Rush had become specially friendly during their services side by side in so many disastrous campaigns. Dr. Rush was one of the professors in the University, and he lent his influence to the project of the young man, who was now only thirty-two years of age. Young men, students of the University, came to his lectures in such numbers that finally the trustees were driven to separate surgery from the branches with which it had heretofore been joined, and make it a separate chair, and invite Physick to occupy it. Before this students had not been specially required to study surgery before getting their degrees. On the election of Physick this was changed, and a resolution was passed by the board rendering attendance upon surgical lectures a necessary preliminary. This action occurred in June, 1805. It was thus that surgery rose to its legitimate position earlier in Philadelphia than in Edinburgh.

Coincident with this event was the election of Dr. Shippen to the presidency of the College of Physicians. He survived this appointment three years, having died in 1808. Two years after this anatomy underwent another subtraction, that of obstetrics. It is probably less curious that the importance of the latter branch should have been so long overlooked than that of surgery. A natural event of such constant recurrence among all classes, with infrequent attendance of death, it was generally believed for a long time, might be left to professional persons in that sex to which such events were confined. Added to this is the sensitive delicacy with which women, no matter of how humble condition, shrink from the approach of men at such times. The professional midwives of those times doubtless knew how to avail themselves of this infirmity, if it can justly be so styled, and none more than physicians know the confidence with which such experts are wont to vaunt their success in this the principal field of their professional endeavors. We have seen somewhere an advertisement of a noted midwife who claimed, in a practice of some thirty years, to have brought twelve hundred children into the world, every one of whom lived and prospered.

From 1765 until 1810 obstetrics had its corner, gradually growing in space, in the house of anatomy, the various physicians getting fees, when possible, in cases where the midwives were suspected to be not wholly adequate for the responsibilities of most trying occasions. Dr. Shippen had done faithful service, courageous and cool, persistent, but prudent in exterminating a prejudice that had so long obtained not only in this country, but abroad. He was familiar with the history of this prejudice in Great Britain, so great as to disqualify those who practiced obstetrics from becoming licentiates in the College of Physicians, and when the few who did were regarded, even by physicians, as condescending from the deportment of gentlemen. If he was the father of medical science in Pennsylvania, he was yet more emphatically the originator of that change in public sentiment everywhere which led, though after a long time, to the conviction that women in the times of greatest peril needed the service of science.[1] It was several years after the beginning of his career in Philadelphia before the practitioners of midwifery were admitted as Fellows in the College at Edinburgh, and it was not until the year 1810, forty-five years after, that the science of obstetrics was assigned a separate chair in the University of Pennsylvania. This chair was occupied for the first time by Dr. Thomas Chalkley James.

It is very interesting to study the history of the medical profession in Philadelphia, for several reasons; among them prominent are the difficulties that were ever in the way of such enlargement, and distribution of professorships as, from time to time, were seen to be necessary by the eminent men who constituted the medical faculty of the University in the early years of its existence. The trustees, for the most part not men of science, were reluctant to make changes when existing things appeared to them quite sufficient for existing needs. It was ever the force of character and the reputation of extraordinary culture and ability in individuals among the profession that wrung consent to such changes. It was the genius of Physick, indorsed by Rush, and constantly increasing attendance upon the former's lectures by students of the University, that led to the separation of surgery and its elevation to independence. So it was when Wistar, at the death of Shippen, was placed in his vacant chair. A man of his strength could not be spared. This, it is to be supposed, he knew well enough. At all events, not long after his installation he made an appeal to the authorities of the University to separate these two branches, and leave to him only anatomy. Such an appeal from such a man was equal, if not to a demand, at least a most serious remonstrance against being expected to discharge a double set of duties, each of which was arduous and important enough to demand the full service of any one man. The request was granted, though not until nearly two years afterward, and then not without a reservation that evinced the reluctance with which they had come even thus far. The resolution was in these words: "That the present establishment of a professor of Anatomy and Midwifery be divided, and that hereafter there shall be a professor of Anatomy and a professor of Midwifery, but that it shall not be necessary, in order to obtain the degree of Doctor of Medicine, that the student shall attend the professor of Midwifery." It is somewhat amusing to speculate upon the debatings in that honorable body during the time in which this resolution was delayed in its birth. Doubtless a large majority, probably every one among them, had come into the world without other aid from science than such as the professional crones had gathered from experience and the traditions of their predecessors in the interesting art, and therefore they believed that future generations might be satisfied to come along in the same safe, old-fashioned way. It is evident that they could not yet be brought to think

---

[1] It required a man of courage to put in the newspaper an advertisement such as the following, that appeared in the *Pennsylvania Gazette* of Jan. 1, 1765: "Dr. Shippen, Jr., having been lately called to the assistance of a number of women in the country, in difficult labors, most of which were made so by the unskillful old women about them, the poor women having suffered extremely, and their innocent little ones being entirely destroyed, whose lives might have been easily saved by proper management, and being informed of several desperate cases in the different neighborhoods which had proved fatal to the mothers as to their infants, and were attended with the most painful circumstances too dismal to be related, he thought it his duty immediately to begin his intended courses in midwifery, and has prepared a proper apparatus for that purpose, in order to instruct those women who have virtue enough to own their ignorance and apply for instruction, as well as those young gentlemen now engaged in the study of that useful and necessary branch of surgery, who are taking pains to qualify themselves to practice in different parts of the country with safety and advantage to their fellow-citizens."

of man-midwifery, even if becoming to gentlemen, as important enough to be put upon a level with other branches. It was important, however, to relieve so necessary a man as Dr. Wistar, and this relief doubtless formed the controlling element of the resolution. They made the new chair, and they invited to it a young man, giving him leave to get as many students as he could from among those who were attending the University for other purposes besides, mainly, that of obtaining the degree of Doctor of Medicine.

It was doubtless a surprise to the board when the deportment of Dr. James was such as to elevate in a short time the science to the rank it was entitled to hold in the curriculum of studies. Thomas Chalkley James was a descendant on one side of Thomas Chalkley, the celebrated Quaker preacher, and on the other of Samuel Hasell, one of the councilors in the proprietary government of the Penns, and master in Chancery of the High Court established by Governor Keith in 1720. His father was Abel James, one of the leading merchants of Philadelphia and a personal friend of Benjamin Franklin. Quaker though he was, he was at the same time a Whig, and intensely devoted to Whig principles. There was an anecdote of an interview between him and Robert Morris at a time when the new government was suffering sorely for money. "Robert Morris, who was at the head of the Committee on Finance, meeting Mr. James on the street, was asked by him, 'What news?' To which he replied, 'The news is that I am in immediate want of a sum of hard money, and that you are the man who must procure it for me, your security to be my note of hand and my honor.' Though a Friend and non-combatant, Mr. James did at once what scarcely any other could have done,—advanced the money and relieved the embarrassment of the country."[1]

Mr. James was a member of the Philosophical Society. He had been elected as a member of the Assembly, and had served upon committees appointed by that body for investigations concerning all matters appertaining to the welfare of the city. After getting all that could be had at the school of the Friends, then presided over by Robert Proud, he studied medicine under Dr. Adam Kuhn. The intention of his family had been that he should get his degree abroad, like many others of the leading physicians of Philadelphia; but the failure of his father's commercial ventures prevented this. He took his degree in 1787 in the University. Determining not to be wholly disappointed in his hopes of obtaining some of the benefits of foreign education, the youth ventured upon a speculation in the trading that Philadelphia had with China. He took the post of surgeon on a ship bound for one of the Chinese ports, and realized enough from his ventures to permit him to go to London, where he became the pupil of the famous Dr. Hunter. His devotion was mainly given to obstetrics, which he studied in a hospital for lying-in women. Here he spent one year. The next he was at Edinburgh, for it seemed as if a Philadelphian must necessarily finish off at that institution. It was not until 1793 that he returned to Philadelphia. This year, as we have seen, was that of the great visitation of the yellow fever. The services he rendered during that fearful time made his fortune. At the public hospitals he was enabled to do good service to sufferers who were natives of Wales, and for this the Welsh Society afterward, in token of his kindness, presented him with a service of plate, which, it is said, is yet among the descendants of this heroic physician.

We have seen in what repute a male practitioner of midwifery had been held heretofore, and we have seen how Dr. William Shippen, Jr., had had the courage to practice this along with anatomy. The leading physician in this branch, however, had been Dr. Dunlap. He had fought his way as well as possible during many years, having been often called in at the last hour, sometimes just in time, often too late, to save women from ruin at the hands of their own sex, to whom, in mistaken modesty, they had intrusted their lives. By this time Philadelphia had advanced so high in culture that the ignorant women who had held so long sway in this important branch of science were made to gradually retire, at least from more genteel circles, and the strange false modesty that had existed so long was fain to be convinced that it was false, and that this feeling had led to the sacrifice of many lives. It was fortunate for Dr. James, and still more fortunate for the women of his native city, that he was a gentleman. Soft in his manners, tender and delicate in his ministrations, the most modest woman, after the agony of her travail, could turn to Dr. James not only without a blush, but with a face beaming with gratitude, as well for the relief he had given as the manful delicacy with which it had been administered. Added to all this was a demeanor that showed that, instead of being ashamed of his art, he regarded it well worthy of all the study he had given to it, and that knowledge of it was competent to put him on a level with those who had made themselves foremost in any other branch of science.

The science of midwifery owed a great deal to Dr. Shippen, who, in the midst of his more special and engrossing duties, had done what he could in the line we have seen. Dr. Dunlap also had come along, gathering what was possible to be gathered from the first bold teachings of Shippen. Then there was Dr. W. P. Dewees, who had made an attempt to lecture upon the principles of midwifery. But the small classes that he could command showed that the community, even the medical part of it, was not yet fully ready for the realization of this branch of science, thereby

[1] Dr. Caspar Morris' sketch of Dr. James in Gross' Medical Biography.

taking it from the crones who, with their incantations and rum-punches, had held it so long.

Even the University was not yet ready for the change. Dr. James therefore set out upon a course of independence. He made application at the city almshouse for the privilege of lecturing therein, and therein he received what pupils he could get. In this laborious work he associated with him Dr. Church, and these two men during three years worked assiduously at the special department, Dr. James meanwhile delivering courses of lectures annually. In the midst of this work his friend and coadjutor, Dr. Church, yielded to the malady that had carried so many thousands away. After his death Dr. James took into partnership another young man who was destined to make a great impression upon the history of medicine at home and abroad. This was Dr. Nathaniel Chapman. These two carried on the work hitherto conducted by Drs. James and Church in the almshouse until the death of Dr. Shippen. It was then, as we have seen, that obstetrics was separated from anatomy at the instance of Dr. Wistar, who had been raised to the chair vacated by the death of Shippen. The new chair of midwifery, then created, was given to Dr. James, with Dr. Chapman as adjunct. This was all done in deference to Dr. Wistar, whose wishes in that regard the trustees well knew that they could not disregard. But the reluctance with which they yielded was plainly evinced by their resolution to make attendance upon the lectures of the new professors voluntary upon the part of students, and acquaintance with that branch of science not necessary to the attainment of degrees. Yet the history of the University shows what may be done by men of real ability in exacting among a prejudiced people whatever is important when they devote themselves ardently to its behests. For two years these young men stood in their places, getting what they could from the voluntary attendance of the numerous students who were in the University. The ability of the lecturers attracted more and more of these. At last, in 1813, the great Dr. Rush, who had held the chair of Practice, died, Dr. Barton was elected to his position, and Materia Medica, thus left vacant by the latter, was filled by Dr. Chapman. Midwifery then was devolved solely upon Dr. James. By this time at least enough of prejudice was removed to have it put upon a level with the rest.

Meanwhile, Dr. Dewees had continued his practice in that line, and had become eminent. The assiduity with which Dr. James had devoted himself to his art eventually impaired his health to the degree that he asked for the services of an assistant. This request was granted, and Dr. Dewees was put into the place.

In all this time, that is, from the date of his becoming well known in the profession, he was one of the attending physicians at the Pennsylvania Hospital, a place that has been the recipient of the voluntary unpaid service of the best talent of the profession since the time of its foundation. A man of his prominence could not fail to belong to the College of Physicians. Eventually he rose to be its president, and so remained until his death.

It is singular, when we consider what extraordinary talents and culture have been possessed by the leading physicians of Philadelphia at every period of its history, how few, especially in the earlier periods, exerted themselves to any considerable extent in original contributions to the branches they severally professed in medicine. The text-books they employed for the most part were foreign, sometimes with, but more often without, American annotations. The favorite text-book of James was "The Principles of Midwifery," by Dr. John Barns, regius professor of Surgery in the University of Glasgow. He worked, however, on a more modest scale for the literature of his profession, being, along with Drs. Otto, Hewson, and Parrish, editor of the *Eclectic Repertory*, which in its day took high rank. In the midst of his professional labors he yet found time for the study of literature. He was a frequent contributor to the *Port-folio*, the leading literary journal of the time. The work he did in that line that has been most highly commended is his translation in verse of the pastorals of Gessner. He died in 1835.

Dr. James has been regarded as the father of midwifery in this country. The way had been pointed out by Dr. Shippen, justly famed as the originator of the teaching of medical science in general, but for whose engrossments in other things doubtless so important a branch would sooner have been elevated to its proper position. We have seen what ignorance and prejudice in both sexes, at home and abroad, it had to fight in order to make its way. It is one of those wonders, not however confined to science, but some of the plainest conditions of ordinary life, that a matter that now seems, even to the rudest society, of essential importance should have been so long kept back by causes apparently so inadequate. Reluctant as it was, the following resolution was wrung from the trustees on the 11th of October, 1843:

"*Resolved*, That hereafter the Professor of Midwifery shall be a member of the medical faculty, and that no person shall be admitted as a candidate for the degree of Doctor of Medicine in this University unless he shall have regularly attended the lectures of said professor for two years."

Commenting upon this event, the biographer of Dr. James, Dr. Hodge, says,—

"This triumph of truth and humanity over ignorance and prejudice may be considered as complete. Obstetrics was confessedly equal to the other branches of medical science, and its practitioners and teachers were authoritatively pronounced on a par with surgery and the practice of medicine. The battle had been fairly fought and won, and Dr. James, who contributed so much to the happy issue, received now the reward so eminently due to modest worth, superior talents and attainments, united with persevering industry."

Dr. Robert Montgomery Bird, born at New Castle, Del., in 1803, and equally famous as a physician and author, spent the major portion of his life in Philadelphia. Of his work done as a playwright, his

tragedy "The Gladiator" and the dramatization of his novel "Nick of the Woods" alone survive. He wrote a number of novels which were popular forty or fifty years ago, and are now nearly forgotten. He died at his residence in Philadelphia Jan. 22, 1854.

Dr. Henry Bond, who died May 4, 1859, though entitled to and receiving high consideration and respect as a physician of more than forty years' practice in Philadelphia, attained his widest reputation as the author of the "Family Memorials," comprising a genealogical history of the settlers of the Bond places in Massachusetts, in one of which, Watertown, he was born. He was a graduate of Dartmouth College, and removed to Philadelphia from Concord, N. H., in 1819.

Dr. Réné La Roche was a native of Santo Domingo, where he was born in 1755, and was educated at the medical school of Montpellier, France. He was one of the Dominican refugees who fled to Philadelphia in 1793, and his successful treatment of the yellow fever gained for him a very extended practice. He was noted for his benevolence, much of his twenty-seven years of professional career in Philadelphia having been given to the uncompensated care of the poor. His death occurred on June 6, 1819.

Dr. George Logan, born at Stenton, near Philadelphia, Sept. 9, 1758, was another graduate of the medical school of Edinburgh. In 1798 he was induced to embark for Europe to conduct negotiations for the prevention of war between France and the United States. At this period Mr. Gerry, the American minister, had departed from Paris, an embargo had been laid on our shipping, and many American seamen had been imprisoned. Dr. Logan persuaded the French government to raise the embargo, and prepared the way for the negotiations that terminated in peace. He emerged from the political quarrel that was coincident with the Franco-American dispute with so much credit that he was elected Senator from Pennsylvania in the Seventh and Eighth Congresses (from 1801 to 1807). He went to England in 1810 on the same peaceful mission which led him to France, but without the same success. He died at Stenton April 9, 1821. He was an active member of the Board of Agriculture and of the Philosophical Society.

Dr. John Armentaire Monges was a Frenchman, who came to Philadelphia in 1793, after having been attached to the French naval force during the war. It was said of him that, in his last illness, even in the days of summer, he could not perspire. He attained the highest standing in his profession. The date of his death was May 20, 1827.

Dr. Samuel George Morton, born in Philadelphia in 1799, and died May 15, 1851, was the author of numerous medical and other works, and began in 1830 his celebrated collection of skulls, one of the chief labors of his life. He adopted what was known in his day as the theory of a diverse origin of the human race, and had an historic controversy with the Rev. John Bachman, of Charleston, S. C.

His father dying when he was quite young, he was placed at a Quaker school. From this he was removed to a counting-house, but manifesting a distaste for business, and selecting the study of medicine for a profession, he passed through the usual course of preliminary study under the guidance of Dr. Joseph Parrish; he received a diploma. Shortly afterward he visited Europe, and passed two winters in attendance on the medical lectures of the Edinburgh school, and one in similar manner at Paris. He returned in 1824 and began practice. Geology was his favorite pursuit. In 1827 he published an "Analysis of Tabular Spar from Bucks County;" in 1834, "A Synopsis of the Organic Remains of the Cretaceous Group of the United States;" in the same year a medical work, "Illustrations of Pulmonary Consumption: its Anatomical Characters, Causes, Symptoms, and Treatment;" and in 1849, "An Illustrated System of Human Anatomy, Special, General, and Microscopic." During this period he was actively engaged in the duties of his profession, having, in addition to a large private practice, filled the professorship of Anatomy in the Pennsylvania College from 1839 to 1843, and served for several years as one of the physicians and clinical teachers of the Almshouse Hospital. In 1839 he published the "Crania Americana," with finely executed lithographic illustrations.

Dr. John C. Otto was a son of Dr. Bodo Otto, and was born in New Jersey in 1775. He was for many years attending physician and clinical lecturer in the Pennsylvania Hospital. He died June 30, 1845.

Dr. Hugh L. Hodge, born in Philadelphia June 27, 1796, was the son of a surgeon in the Continental army. He was an alumnus of Princeton College, and received medical tuition under Dr. Caspar Wistar. In his youth he made a trip to the East Indies as surgeon of a trading-ship, and after returning to this city was physician to the Southern Dispensary and the Philadelphia Dispensary, lecturer on the Principles of Surgery at the Medical Institute, and physician to the Philadelphia Almshouse. He was one of the editors of the *North American Medical and Surgical Journal*, and wrote for other professional publications. From 1835 he took up almost entirely the practice of obstetrics, assuming the lectureship of that branch of practice in the Medical Institute and physician to the lying-in department of the Pennsylvania Hospital. In 1863 he resigned the former chair, and was made emeritus professor by the trustees of the Pennsylvania University, to which he presented his museum, the collection of his professional career. In 1872 the degree of LL.D. was conferred upon him by Princeton College. In 1864 was published his chief literary work, the book on obstetrics. He married, Nov. 12, 1828, Margaret E. Aspinwall, daughter of John Aspinwall, of New York.

Dr. George McClellan was born at Woodstock, Windham Co., Conn., Dec. 28, 1796; he was of Scotch descent, and in 1817 came to Philadelphia to attend the medical lectures in the Pennsylvania University and to study with Dr. John Syng Dorsey. Dr. S. G. Morton said of him that "his restless activity and sleepless vigilance in the pursuit of knowledge were remarked and admired by all, exciting the surprise of his fellow-students and drawing from older heads the presage of future distinction." In 1818, the year following his graduation, he was elected resident physician of the Philadelphia Almshouse. His public career as a lecturer began in 1825, in which year he became one of the founders of the Jefferson Medical College. His lectureship was that of surgery, and he continued his instructions until 1838, when all the professorships of the college were vacated, and a new organization took place, from which Dr. McClellan was excluded. He immediately conceived the idea of forming a third medical school, and, with five associates, organized the medical department of the Pennsylvania College, in connection with that at Gettysburg. He became one of the faculty, and remained so until his death. He read little and wrote little, and the urgent solicitations of his friends were needed to induce him to begin the preparation of his work on the principles of surgery, the first sheet of which was presented to him as he was lying on the bed from which he never again arose. The book, however, was ably edited by his son. On the morning of May 8, 1847, he assisted in the performance of two operations, and he died the next day. He married, in 1820, Elizabeth, daughter of John H. Brinton, and one of their five children became Gen. George B. McClellan.

Dr. Samuel McClellan was born Sept. 21, 1800, at Woodstock, Conn. He graduated at the medical department of Yale College, and, coming to this city, entered the office of his brother, George McClellan. He next removed to Bristol, Pa., where he practiced a few years, but finally settled in this city. About this time he assisted his brother in surgical operations, particularly in ophthalmic surgery. He was identified with him in the foundation and establishment of the Jefferson Medical College, and was appointed demonstrator, and then professor of Anatomy, and afterward professor of Obstetrics, in that institution. Subsequently he was elected professor of Obstetrics in the Pennsylvania Medical College; but, wearied at length with professorships, he resigned, and devoted himself exclusively to private practice, for which he was admirably fitted by a sound judgment, native cheerfulness of manner, great experience, graceful urbanity, and his Christian character. He died Jan. 4, 1853.

The system of examination of students in the University of Pennsylvania had always been most trying. In the earlier periods it was in the presence of the trustees, and the public were admitted. Students were required to write theses upon some subjects connected with their course, and to defend it in public against attacks of whatever kind might be made upon them. The examination was called "defending his thesis." The difficulties growing out of this habit, especially with young men who were easily embarrassed at such trying occasions, led to the adoption of the "green-box" system, in which applicants were examined only in the presence of the dean of the faculty, while the questions were propounded by the various professors behind a screen, not seeing and not seen by the students. This plan was found after trial to be inadequate, and finally one was established making applicants dependent upon the aggregate votes throughout all the branches they had studied.

Contemporary with midwifery, natural philosophy was assigned a separate chair; but, as the former had been, so this was declared not essential to obtaining the degree, and the professor was enjoined from teaching in his lecture-room anything that was embraced regularly in any of the other departments. Dr. Robert Hare was elected to this new chair, but resigned it in 1812, when Dr. Robert M. Patterson was appointed.

Dr. Robert M. Patterson was born in this city, graduated at the University of Pennsylvania in 1804, and received his degree of M.D. in 1808. He was a son of Robert Patterson, director of the United States mint. Dr. Patterson, educated as a chemist under Sir Humphry Davy, returned home in 1812, and, as we have stated, was soon after elected professor of Natural Philosophy, Chemistry, and Mathematics in the University. He was a professor in the University of Virginia in 1828–35, and director of the United States mint from 1835 to 1853. He was elected a member of the Philosophical Society in 1809, and contributed largely to its proceedings. He delivered, May 25, 1843, while its vice-president, a discourse on the early history of the American Philosophical Society, and from 1849 to 1853 he was its president. In 1843 he delivered an address before the Franklin Institute. He died Sept. 5, 1854, aged sixty-eight. He married a daughter of Thomas Leiper.

Professor Henry S. Patterson, who was a member of another family of that name, was born in this city Aug. 15, 1815. His father, John Patterson, a much respected citizen and merchant, was a native of the north of Ireland. Dr. Patterson graduated at the University of Pennsylvania, and in 1839 was appointed one of the resident physicians of the almshouse, where he remained two years. At the expiration of that time he resigned, and resumed general practice. Soon after he was appointed physician to the dispensary. In November, 1843, upon the reorganization of the faculty of the medical department of the Pennsylvania College, he accepted the chair of Materia Medica in that institution, and during the first year he also performed the duties of the chair of Chemistry. In 1846 he was appointed chief physician at the Blockley Almshouse, the duties

of which he continued to discharge for two years, at the same time continuing his medical lectures, and contributing largely to the medical and general literature of the day. In 1852 he sought relief from his pressing duties by a trip to Europe, but he soon returned, and died in April, 1854. Dr. Patterson was a very learned man, and spoke the German, French, Latin, Italian, and Hebrew languages. As a physician he stood very high.

We have seen that at the death of Dr. Rush, in 1813, and the appointment of Dr. Barton to the chair of Practice left vacant by him, Dr. Nathaniel Chapman was taken from Surgical Obstetrics and given the chair of Materia Medica, from which Dr. Barton was at the same time changed to Practice.

The career of Dr. Chapman is one of the most distinguished in the history of medicine. He was a native of the State of Virginia, of one of the best families. The landed estate gotten by his ancestors yet remains in the possession of the family, on the Pamunkey River. Dr. Chapman was born in the county of Fairfax. His academic education was obtained in the town of Alexandria. At seventeen years of age he began the study of medicine, first under Dr. John Weems, of Georgetown, and subsequently under Dr. Dick, of Alexandria. From there he went to the University of Pennsylvania, where, after taking his degree, he settled and began the practice of his profession. Of winning manners, eloquent of tongue, courageous in spirit, he soon won his way to practice. Almost simultaneously with his coming to Philadelphia was that of a young man from still farther south, Dr. Charles Caldwell, of North Carolina. It was thought to have been the defeat of Caldwell by Dr. Chapman for a professorship in the University that drove him away, to seek in the West the exalted fame that he there acquired. In addition to his studies at the University, Chapman became a private pupil of Dr. Rush, then in the zenith of his fame. The veteran physician became warmly attached to his pupil, and was free to predict for him a brilliant career. Upon the subject of hydrophobia Dr. Rush had put forth certain opinions that had been most severely commented upon. When his favorite pupil, Chapman, was graduated in 1800, he chose for his thesis this subject, and defended with marked ability the views of his preceptor regarding its pathology. The thesis was thought to have been inspired by Rush, though there was no doubt that the youth was entitled to all the praise the paper received. Further, like his preceptor, Chapman, during his course at the University, took an interest in matters outside of his profession, and contributed occasionally to the *Portfolio*, which, under the management of Dennie, exerted a controlling influence upon American literature. His contributions were mainly upon foreign, especially French, politics.

N Chapman, M.D.

Like many of his predecessors in Philadelphia, he went abroad in order to accomplish himself yet more. He first repaired to London, where he studied for a year under the charge of the eminent Mr. Abernethy. In 1801 he repaired to Edinburgh, the Alma Mater of the larger number of the eminent physicians in those days in all parts of America.[1]

It was not until 1804 that he returned to Philadelphia, where, as we have seen, his success was rapid and brilliant. A man who, like Chapman, loves with all his heart the profession that he has chosen, who has availed himself faithfully of all the facilities for studying it thoroughly, and who therefore has constant confidence in his abilities to practice it, if he have, besides, the distinguished manners that all tradition says belonged to him, cannot but rise rapidly to fame. As a practitioner of his art he has left behind a reputation probably superior to that of every other physician of his generation. He early

[1] Regarding this matter, Dr. Samuel Jackson, in his eulogy at the death of Dr. Chapman, thus speaks: "The celebrity aquired by the University of Edinburgh from its Munros, Cullen, Brown, and Gregory had not been eclipsed by the Paris or German schools, or rivaled by those of London or Dublin. The medical school of the Scotch metropolis was the cynosure of American physicians during the colonial period, and continued to be so until the last twenty-five years. Most of the eminent men of Philadelphia, New York, and Boston of the latter part of the last century were its alumni. I doubt whether at that time more was known of the European continental schools than the mere existence of two or three of repute. All of the medical doctrines, ideas, principles, and practice of this country were derived from the Edinburgh school or from English writers. Our knowledge of the works, contributions to science, doctrines, theories, and practice of the French, German, and Italian medical schools and profession, with some very limited individual exceptions, does not date beyond twenty-five or thirty years."

Digitized by Google

evinced a notion to become a public teacher, as men are apt to do who are unusually positive in their ideas, and know themselves to be uncommonly well adapted to advance and maintain them. It was the career that he had run in the lectures upon obstetrics with Dr. James that gave him the *éclat* which went far to overcome the reluctance of the trustees of the University to elevate that science to an independent professorship, and assign Dr. James to Obstetrics and Chapman to Materia Medica.

Although the medical profession had yet done but little in the matter of producing original professional literature, yet they had made some beginnings. Chapman wrote his "Elements of Therapeutics and Materia Medica," the basis of which was his lectures during the short time that he held that chair. The medical world everywhere pronounced this the best work upon the subject that thus far had appeared in any country.

It is extremely difficult for a man of ardent temper, who has long maintained a theory of the truth of which he has never a doubt, to publicly withdraw his teachings, even when he has at last been led to suspect that his advocacy has been carried too far. The "solid" theory he had believed in with his whole mind, and taught it with an eloquence rarely heard in the lecture-room of a professor of medicine. Yet as the "humoral" theory, under the reasoning and experiments of several distinguished scientists, was put forth with new and very strong arguments in its favor, he studied it again with the utmost diligence. It was never precisely known to what extent his opinions, theretofore so confident, were modified; but he afterward discouraged the further sale of his own work, although it had already passed through many editions.

It was upon his elevation to the chair of Theory and Practice that his great powers began to develop in a specially eminent degree. This was in 1816. Here he continued in the neighborhood of thirty-five years, during which his reputation, take it all in all, was equal to that of any physician then living. He was said to have possessed remarkable oratorical powers, and these were often exerted to the delight of his hearers. Instead of being a mere physician, his tastes and his talents had been cultivated in other branches of erudition, evidences of which were often seen in the discursions he was wont to make for illustrations of themes in themselves dry and uninteresting. His reputation came soon enough and was great enough for him to enjoy during a long period the consciousness of its value among all classes, without producing the vanity that renders reluctant the bestowal of abundant adulation. The highest offices and honors were given to him while he was in the full possession of ability to discharge, appreciate, and enjoy them. He was president during many years of the Philadelphia Medical Society, and when the American Medical Association, which we shall speak of hereafter, was organized, in 1847, although he was then near the end of a long life, he was unanimously elected its first president. He was also for a time president of the American Philosophical Society, and was so acting at the time of his death, in 1853. *The Philadelphia Journal of the Medical and Physical Sciences* was begun by him in 1820, and edited by him during many years. This was afterward changed to the *American Journal of the Medical Sciences*, now well known throughout the scientific world.

The works of Dr. Chapman have already been enumerated in the chapter on Literature.

Contemporary with the advent of Dr. Chapman to Philadelphia was that of another Virginian, Dr. Joseph Hartshorne. His father was a native of New Jersey, and his mother of Philadelphia. The Hartshornes had long been dwellers in New Jersey, having emigrated from the county of Leicestershire, England, on account of the hardships imposed upon the Friends, of whom they were members. Richard Hartshorne came over in 1669, and was associated with William Penn and the Duke of York in the proprietaryship of East Jersey, and became a man of great wealth and influence. A portion of the estate on the Highlands of Neversink is said to be yet in possession of some of his descendants. William Hartshorne, the father of the physician, was a man of great prominence, an intimate friend of Washington, and president of the Potomac Navigation Company, the first great work of internal improvement in the country. Joseph became incurably lame of foot from an attack of small-pox when he was a child. Like Chapman, he received his education at the Alexandria Academy, after which he spent some time in the business of his father, who was a leading merchant. Determining to become a physician, he began the study of medicine under the superintendence of Dr. James Craik, of Washington. In 1801 a vacancy occurred in the post of resident apprentice and apothecary in the Pennsylvania Hospital. The young student was anxious to obtain this office, and through influential friends and relatives who resided in Philadelphia, some of whom were among the managers, he succeeded. Such a position was of incalculable advantage to him in his general professional studies, which henceforth he prosecuted in the University. He held this office for five years, not only to the satisfaction of the managers, but to their gratitude, as publicly expressed by them, especially for the services he had bestowed upon the library and museum.

During most of this time Dr. Caspar Wistar was professor of Anatomy. Young Hartshorne early showed a strong liking for this branch of science. This was enough with such a man as Wistar to attract special interest. Soon a warm friendship sprang up between the two, to endure during their joint lives. Another great advantage in the position he held was the facility which he enjoyed from long-continued habit in practice, both in surgical and general medical

cases. The many patient years spent by him before applying for his degree were evidences of a true man, who, estimating his profession at its just importance, determined to prepare himself thoroughly before undertaking its various responsibilities. So, after seven years of study, he took his degree. Such was the confidence in his abilities by the managers of the hospital that for a year before his graduation he had the entire charge of the out-patients who were accustomed to receive the benefits of this noble charity. Among other services he rendered at the hospital which made him particularly distinguished was the introduction of a new apparatus for splinting a fractured thigh.

Shortly before the expiration of his term of service at the hospital he took position as surgeon and supercargo of an East India ship about to sail for Batavia. The permission he requested was granted, and he received from the managers a copy of a resolution in the highest degree complimentary to the fidelity and efficiency of his services. This voyage was repeated, and after a brief period, in which he united the drug business with his professional work, he devoted himself wholly to the latter. A position as one of the surgeons of the Pennsylvania Hospital might have been obtained but for his withdrawal from competition in favor of Dr. John Syng Dorsey. The position, however, was unanimously offered to him in 1815. The death of Dr. Wistar in 1818, with whom he had been long known to be familiar, devolved upon him a large increase of practice, and came very near securing him the professorship of Surgery that had just been vacated by Dr. Physick, who, on Wistar's decease, was transferred to the chair of Anatomy. Dr. Evans, the biographer of Dr. Hartshorne, attributes his defeat by Dr. Gibson to the strong desire of the trustees "to transplant from a neighboring and rival school one who promised to contribute much to its rising reputation." This, he added, "was at the time generally understood to have been the principal cause of Dr. Hartshorne's defeat." As a practitioner Dr. Hartshorne ranked among the first and most successful of his time. His practice was equal to that of the greatest, and so were his successes during the yellow fever of 1820, and the next ten years in which a series of epidemics visited the city. His lameness, though this operated no serious hindrance to his practice, and his naturally reticent disposition, kept him somewhat more from society than was the wont of men of his rank; but he was universally respected and esteemed, and held his place with the rest in the Philadelphia Medical Society, the American Philosophical Society, and the College of Physicians. He died in 1850 at Brandywine Springs, Del., whither he had gone in order to obtain some rest from an arduous practice, which, in spite of his long-failing health, he had not relinquished.

Contemporary with Dr. Hartshorne was Dr. Samuel Emlen. He was born in Chester County, March 6, 1789, and was studying in Paris in the eventful year of 1814. He walked the hospitals, and, after the surrender of Paris, he went to London, thence to Holland, and back to the United States as a bearer of dispatches for the government. He was a manager and the secretary of the Philadelphia Dispensary. He married Beulah Valentine, who was, like himself, a member of the Society of Friends. He died April 17, 1828.

In the year 1816, moved by the new impulse given everywhere to the natural sciences, the trustees of the University established a faculty for such study,—of Botany, Dr. William P. C. Barton; of Natural History, Dr. Charles Caldwell; of Mineralogy and Chemistry, Dr. Thomas Cooper; and of Comparative Anatomy, Dr. Thomas T. Hewson.

Dr. Thomas Tickell Hewson, who was born in London, April 9, 1773, spent five months with Dr. Franklin, at Passy, France, in 1784–85, and on the removal of the family to Philadelphia, the next year, became a student in the University of Pennsylvania. After pursuing his medical studies with Dr. John Foulke he went abroad, and was in Edinburgh and London until 1800. He then came back to Philadelphia, and in 1806 was appointed physician to the Walnut Street prison, where he was most courageous in contending against the typhus fever epidemic in the winter of 1817–18. For his heroism he was presented by the inspectors with a silver vase. He was a surgeon of the Philadelphia Almshouse and the Pennsylvania Hospital, and a physician of the Orphan Asylum, where he served for twenty years from January, 1817. He largely contributed to the formation and revision of the National Pharmacopœia, and was president of the Cholera Medical Board in 1832. He filled successively the offices of secretary and censor of the Philadelphia College of Physicians, with the exception of one year, from July, 1802, to April, 1835, when he was chosen vice-president, and in July following he was elected president, which office he continued to hold until his death. He died Feb. 17, 1848.

A pupil of Dr. Thomas T. Hewson was Dr. William Pepper, who was born in Philadelphia, Jan. 21, 1810, and in October, 1828, graduated with the highest honors at Princeton College. In the autumn of 1829 he entered the medical school of the University of Pennsylvania, graduating March 29, 1832, and spending the summer of the latter year at the Bush Hill Hospital, during the prevalence of the cholera. He occupied the ensuing two years in study in Paris and travel through Southern Europe. In 1834 he returned to Philadelphia and took charge of one of the districts under the care of the Philadelphia Dispensary, being also resident physician at the Pennsylvania Hospital. In 1832 he became a member of the Philadelphia Medical Society, in 1837 a member of the Philadelphia Academy of Natural Sciences, and in 1839 Fellow of the College of Physicians, as well as one of the physicians at the Wills Hospital. In 1841–42 he was chosen physician to the Institution for the Instruction of the Blind and visiting physician

to the Pennsylvania Hospital. In April, 1851, he entered into membership of the American Philosophical Society, and on June 5, 1860, he succeeded Professor Wood as professor of the Theory and Practice of Medicine in the University of Pennsylvania, where he remained until his death, which occurred Oct. 15, 1865. In June, 1840, he was married to Miss Sarah Platt, of Philadelphia, and left seven children, one of whom, Dr. William Pepper, is now (1884) the distinguished provost of the University of Pennsylvania, and professor in the medical department.

Dr. Charles Caldwell, who held the chair of Natural History in the University, was the son of an Irish officer who had emigrated to North Carolina. He was born in what is now Caswell County, of that State, May 14, 1772, and in 1792 arrived in Philadelphia, where he entered the medical classes of the University and studied under Shippen, Wistar, and Rush. On the breaking out of the Whiskey Insurrection he was appointed surgeon of a brigade and proceeded with the forces to the neighborhood, when the difficulty was declared to be terminated and the troops retired. In the military banquet which followed, the management of the affair was assigned to Dr. Caldwell, whose address drew forth a liberal compliment from Alexander Hamilton. In 1795 he began his literary career by translating Blumenbach's "Elements of Physiology," and he was thereafter the author or translator of many other medical works. In 1814 he succeeded Nicholas Biddle as editor of the *Portfolio*, writing articles that were chiefly biographical, or reviews of the prominent books of poetry of the day. He was, as we have stated, professor of Natural History in the University of Pennsylvania, but in 1819 removed to Kentucky, where he took charge of the chair of the Institutes of Medicine and Clinical Practice in the Transylvania University, at Lexington. He had to create a prestige for medical education throughout the whole region, and he managed to secure funds from the Kentucky Legislature. In 1820 he went to Europe for the purpose of getting books and materials for the University, from which he withdrew in 1837 to establish the Medical Institute in Louisville, where he died July 9, 1853.

Dr. Isaac Cathrall was a native of Philadelphia, and, after studying in London, Edinburgh, and Paris, he returned home in 1793. In the yellow fever epidemic that ran through the years up to 1799 he was remarkable for his attention to the victims and his close investigation of the disease, concerning which he issued three treatises, one of them being a "Memoir on the Analysis of the Black Vomit," contending that the vomit might be safely tasted. He died Feb. 22, 1819, aged fifty-five years.

On the death of Dr. Wistar, in 1818, the chair of Anatomy was given to Dr. John Syng Dorsey, a nephew of Dr. Physick. He was born in Philadelphia, Dec. 22, 1783, son of Leonard Dorsey, and grandson of Edmund Physick, and, after studying with his uncle, became an M.D. at the age of eighteen. He visited France and England, and returned home in 1804. In 1807 he was elected adjunct professor of Surgery, and succeeded Dr. Wistar as professor of Anatomy. On the evening of the day when he pronounced his eloquent introductory lecture he was attacked with fever, and in a week died, Nov. 12, 1818. As a surgeon he was scarcely rivaled. Besides papers for the periodical journals, and an edition of Cooper's "Surgery" with notes, he published "Elements of Surgery," two volumes, 1818. His death devolved anatomy upon Dr. Physick, with Dr. William E. Horner as adjunct, when Dr. Gibson became professor of Surgery.

The career of Dr. William Gibson is one of the most distinguished in the history of medicine. He was born in Baltimore, March 14, 1788, and was educated at St. John's College, Annapolis, and Princeton College, taking up the study of his profession under Dr. Owen, of Baltimore, in 1803. After a preliminary course at the University of Pennsylvania he became another of the American alumni of Edinburgh, and in London sat under the teachings of Sir Astley Cooper and Mr. Abernethy. In 1812 he was appointed to the chair of Surgery in the University of Maryland, removing to Philadelphia in 1819 to fill the corresponding position in the University of Pennsylvania, which had been vacated by the transfer of Professor Physick. He published in 1824 his "Institutes and Practice of Surgery," of which six editions were issued between that year and 1841. In 1847 he again visited Europe, and died at Savannah, Ga., March 2, 1868.

In the same year that Dr. Dorsey was appointed to the chair of Anatomy, Dr. John Redman Coxe was made professor of Materia Medica and Chemistry; that left by him in the University was bestowed upon Dr. Robert Hare, who filled this chair from 1818 to 1847, and during his long course of research and experimenting accumulated a vast store of instruments and materials. He devoted great labor and skill to the construction of new and improved forms of the voltaic pile, and he invented the deflagrator that was of so much value before the discovery of the constant battery, which has superseded for practical use the old voltaic pile forms. He formulated a theory of whirlwinds and storms upon an electrical hypothesis that since his death has been broadened into the scientific explanation of the causation of cyclones. He was one of the few life-members in his day of the Smithsonian Institution at Washington, to which he gave all his chemical and physical apparatus, which thus became the property of the nation.

Dr. Hare was born in Philadelphia, Jan. 17, 1781, and was associated with Professor Silliman in the invention of the oxyhydrogen blowpipe, which was the earliest and one of the most remarkable of his contributions to science. In later years he constructed

the apparatus on a gigantic scale, with large vessels of wrought iron capable of sustaining the pressure of the Fairmount Water-Works, and with this powerful combination he was able, in May, 1858, to fuse at one operation fifty-three ounces of platinum. The employment of Dr. Hare's jet to illuminate light-houses and signal-reflectors, under the names of the Drummond or calcium light, is only another mode of ignoring the name of the real discoverer or inventor, of which the history of science presents so many parallels. He died May 15, 1858.

Dr. Samuel Jackson, born at New Garden, Chester Co., Pa., Aug. 27, 1788, was the fourth in descent from the Isaac Jackson who came from England in 1725. Dr. Jackson passed through the Friends' Latin Academy in Philadelphia, and on May 12, 1812, was graduated from the medical department of the University of Pennsylvania. After practicing in Philadelphia a year, and being appointed a physician in the Pennsylvania Hospital, he removed to Northumberland County, where he remained until 1837. In that year he returned to Philadelphia and was elected a member of the College of Physicians and Surgeons, in which he was censor for some years. He was a most prolific writer on medical and general topics, and was the author of the life of Dr. Rush, at whose advice he had gone to Northumberland, and also the memoirs of several others of his brother-physicians. In 1852–53 he was president of the Philadelphia County Medical Society, and on retiring delivered, by request, an address on medical education. He died at his home, Pine Street, Philadelphia, Dec. 17, 1869.

Dr. Joseph G. Nancrede, a contemporary of Dr. Gibson, was born in Boston in 1793, and lived with the family in Paris until 1808, when they fled to America to escape Napoleon's conscription. In 1816 he opened an office in Philadelphia, and became the popular physician among the French families. Joseph Bonaparte, the ex-king of Spain, was his patient during his residence in this country. Dr. Nancrede was the first to perform in this country the Cæsarean section, which was so happy in its results that both the mother and child survived. He married a daughter of Commodore Truxton, and died in 1856.

Dr. Franklin Bache, ex-president of the American Philosophical Society, vice-president of the College of Physicians, professor of Chemistry in the Jefferson College, and one of the authors of the "United States Dispensatory," was born in Philadelphia, Oct. 25, 1792, and died March 19, 1864. He graduated as Bachelor of Arts and as M.D. from the University of Pennsylvania, and, after spending three years in the army as surgeon, went into practice in Philadelphia.

From 1824 to 1836 he was physician to the Walnut Street Prison; from 1826 to 1832, professor of Chemistry in the Franklin Institute; from 1829 to 1839, physician to the Eastern Penitentiary; from 1831 to 1841, professor of Chemistry in the Philadelphia College of Pharmacy; and in 1841 was appointed professor of Chemistry in the Jefferson Medical College, a position held by him during the remainder of his life.

Professor Bache contributed largely to the medical literature of the country. He wrote a number of works on medicine and chemistry, of which the "United States Dispensatory," under the joint authorship of Dr. George B. Wood and himself, has a world-wide reputation. As a member of the publishing committee of the "United States Pharmacopœia," he also contributed much of the most valuable matter contained in that work. Besides being a most active Fellow of the College of Physicians of Philadelphia, he was a vice-president of the Medical Society of the State of Pennsylvania, of which he was a permanent member. He assisted in organizing the American Medical Association, of which body he continued a member up to the period of his death, and strongly urged its resuscitation by sending delegates to its proposed meeting at Chicago. He was also a member of the Philadelphia County Medical Society from April, 1849, and was much interested in the promotion of its objects. At the time of his death he was president of the Deaf and Dumb Asylum. He was the eldest son of the eldest grandchild of Benjamin Franklin, a brother of Col. Hartman Bache, of the United States Engineer Corps, and a first cousin of Professor A. D. Bache, superintendent of the coast survey. A daughter and four sons survive him, three of the latter being in the government service.

Dr. Antoine Bournonville, born in Lyons, France, Aug. 6, 1797, was a graduate at Copenhagen, in 1818, of the Royal College of Denmark in medicine. He practiced his profession in that city, and was a surgeon in the Danish navy for several years. After traveling in Siberia and the north of Europe, he remained for a short time in the island of St. Thomas, West Indies, and crossed to Philadelphia in 1825, where he married Charlotte Abadie. He then located himself in Norfolk, but after the birth of his eldest son, Dr. A. C. Bournonville, he took up a permanent residence in Philadelphia. Desirous of having the degree of M.D. conferred upon him by a Philadelphia medical school, he graduated at the Jefferson Medical College in 1848. He was a member of the Philadelphia County Medical Society and of the College of Physicians, consulting physician to the French and German benevolent societies, and one of the trustees of the Girard bequest to the Masons, of which order he was a prominent member, and for two years Grand Master. He was a member also of the order of Odd-Fellows, and belonged to numerous charitable institutions. Notwithstanding Dr. Bournonville had so extensive and varied a knowledge of disease in all its forms, and, from close observation, having great experience, he never left to the profession a record of his opinions or a monograph on any medical subject. Dr. Bournonville was the first (about the year 1859)

to prescribe as an antiseptic and caustic the permanganate of potassium. He retired from professional work in October, 1862, and died Feb. 27, 1863.

Dr. Samuel Henry Dickson, born in Charleston, S. C., in September, 1798, graduated at the University of Pennsylvania in 1819, and forty years later was summoned to Philadelphia to take the chair of Theory and Practice of Medicine in the Jefferson Medical College, which he filled until his death, in 1872. Of him it has been truly said that "his name is identified with the history of medicine in America." "His culture was many-sided: he was scholar, poet, historian, philosopher, as well as physician; and more than one literary journal has spoken of him as remarkable among the authors of the day for his graceful diction. Attracting them by his intelligence and refinement, he had formed warm friendships with many of the most distinguished men of his time; and such was the charm of his society and the pleasing character of his manners that to have been his friend once was to remain his friend. His influence over young men was remarkable; and no teacher influenced his classes more, did more to educate them by his example, was more solicitous of their welfare than was Dr. Dickson. Partly for these reasons, partly from the singular ease of delivery and fluency natural to him, and which he began to exhibit when a young man, he became one of the most celebrated and popular teachers in the United States; and whether as professor in the medical college of Charleston, at the University of New York, or at the Jefferson Medical College in Philadelphia, aided largely in the success of any school to which he was attached, drawing to his lectures many eager listeners. Nor was Dr. Dickson simply the brilliant teacher and accomplished writer. While in Charleston, and before his health began to give way, he enjoyed a large practice, possessing in a remarkable degree the confidence both of the public and his professional brethren. In his many medical writings much of the experience thus gained is referred to, and, as was his wont, commented upon with the acuteness and breadth of view which distinguished him. Whether we regard him as physician or as man, he was an ornament to his country."

Dr. Wilson Jewell was born Nov. 12, 1800, and when the University of Pennsylvania graduated him, in 1824, he made a voyage to China as medical officer of the ship "New Jersey." Thence he sailed to Calcutta and London, and spent a year in travel. In 1828 he located in his native city of Philadelphia, having in 1825 married Miss Rachel Lyon. He was a member of the commission of three that, in 1832, visited Quebec to learn something of the pathology and treatment of the cholera. In 1837 he was induced to go to Illinois in an enterprise that terminated most disastrously for him, and after his return to Philadelphia, in 1839, he was quite satisfied to remain. He held such offices as president of the Board of Health, and in 1857 president of the Quarantine and Sanitary Commission that met in this city; in 1864 president of the Pennsylvania Medical Society, and in 1862 vice-president of the American Medical Association. It was mainly due to his efforts that the law was passed for the collection of vital statistics. His first wife died in May, 1865, and in 1867 he married Miss Charlotte McMullen. While they were traveling in Europe symptoms of disease appeared on him, and he died soon after his return home, Nov. 14, 1867.

Dr. Jonas Preston, a Welshman, who settled in Delaware County, Pa., had a son who was born in that county in 1764, and died in 1836. The son was the second Dr. Jonas Preston, and he amassed the very large fortune—as financial accumulations were considered fifty years ago—of four hundred thousand dollars. He endowed, with a quarter of a million dollars, the Preston Retreat, but a large part of the fund was lost in the collapsed banks of 1857 and in the Schuylkill Navigation Company.

Dr. Adam Seybert, for eight years a member of Congress from Philadelphia, died in Paris May 2, 1825, bequeathing one thousand dollars for educating the deaf and dumb, and five hundred dollars for the Orphan Asylum of Philadelphia. He was particularly skillful as a chemist and mineralogist, and was the author of the "Statistical Annals of the United States from 1789 to 1818."

As early as 1816 pharmacy received a distinct recognition at the hands of the trustees in the person of Dr. James Mease. Dr. Mease was the first vice-president of the Philadelphia Athenæum, and a man of great wealth. He did not largely engage in the practice of his profession. He was a member of the Philosophical Society, and contributed by his writings to many other institutions, scientific and literary. He died May 15, 1846, in the seventy-fifth year of his age.

In 1825, Dr. James, in the chair of Midwifery at the University, finding it necessary to have assistance on account of his age and infirmities, Dr. William P. Dewees was made his adjunct. Two years afterward the University was yet further distinguished by the election of Dr. Samuel Jackson as adjunct in the chair of the Theory and Practice of Medicine.

Dr. Samuel Jackson, born in Philadelphia, March 22, 1787, was the son of Dr. David Jackson, of Chester County, who was one of the first class of graduates upon whom the degree of Bachelor of Medicine was conferred by the College of Philadelphia in 1768, and subsequently became one of the trustees of that institution. The younger Dr. Jackson had the benefit of studies in the offices of Dr. Thomas Hutchinson, Jr., and Professor Wistar, and took his degree of M.D. at the Pennsylvania University in 1808. When war was declared between Great Britain and the United States, in 1812, he enlisted in the First Troop of Philadelphia Cavalry,

and took part in the advanced movements for the protection of the city from invasion. The autumn and early part of the winter of 1814 were spent at Mount Bull, Md., in observing the movements of the enemy, then in the waters of the Chesapeake, or in hiding as a scout between that post and Philadelphia. He was elected president of the Board of Health March 10, 1820, and when Philadelphia was scourged by the yellow fever he exhausted himself in the service of the sorely-stricken community. He has left a graphic and important record of the epidemic which he read before the Academy of Medicine in 1820, and which was a highly valuable scientific investigation of the causes, progress, and cure of the disease. In 1821 he was appointed professor of Materia Medica in the Philadelphia College of Pharmacy, having been chairman of the committee which presented the plan for its foundation. He was also one of the first trustees of the college. The next year he was elected an attending physician of the Philadelphia Almshouse, where he was deeply interested in developing the practical usefulness of auscultation, then a new feature of practice. He lectured weekly at the almshouse from 1822 to 1845, when more pressing duties forced him to retire. He was chosen, in 1827, by Professor Chapman as his assistant in the chair of Theory and Practice of Medicine, Clinical Medicine, and the Institutes of Medicine in the University of Pennsylvania. The delivery of the lectures upon the last-named subject was the especial duty of Professor Jackson. The winter of 1830–31 was remarkable for the interest awakened by the public discussions before the Medical Society of Philadelphia, and the champions of opposing views were frequently Professor Jackson and Dr. Daniel Drake, who, for a season held the chair of Institutes and Practice of Medicine in the Jefferson Medical College. In 1832, Dr. Jackson was a member of the commission of those delegated by City Councils to investigate the Asiatic cholera then prevailing at Quebec and Montreal, and concerning which he published several papers. In 1835 he was made professor of Materia Medica in the University of Pennsylvania, which he resigned in 1863. He died April 4, 1872.

The two Parrishes, Joseph and Isaac, father and son, are prominent figures in the medical history of Philadelphia. Dr. Joseph Parrish, born in this city, Sept. 2, 1779, graduated from the University of Pennsylvania in 1806, and in the beginning of his practice was appointed resident physician in the Yellow Fever Hospital. He was subsequently consulting physician to the Philadelphia Dispensary, surgeon to the Philadelphia Almshouse, and surgeon to the Pennsylvania Hospital. He died March 18, 1840, just after having published his last work upon hernia. His son, Dr. Isaac Parrish, studied under him, and also graduated from the University of Pennsylvania. The younger Parrish spent the last year of his pupilage in the Blockley Hospital, and his experience therein suggested to him the subject of his thesis upon spinal irritation. In 1834 he was elected one of the surgeons of Wills Hospital, to which he was ardently devoted until his death, July 31, 1852.

In 1830, Dr. Horner, by the resignation of Dr. Physick, became full professor of Anatomy. So, in 1834, on the retirement of Dr. James, Dr. Dewees became full professor of Obstetrics. The importance that obstetrics gained under Dr. James was greatly enhanced under Dr. Dewees. He had settled, upon his graduation, at Abington, but the prevalence of yellow fever brought him, in 1793, to Philadelphia, where he remained ever afterward. Having been early devoted to obstetrics, he made that branch of science his special study in the leisure he could find from professional duties. Like Shippen and James, he had had a world of prejudice to encounter, yet he persevered, and he was said to have been the first physician who had ever delivered a full course of lectures, and that upon his own responsibility. He had applied for the professorship in the University when it was first created, but failing in this, became adjunct in 1825, with the reversion that came on afterward. He died in 1841.[1]

The men who came on after the great lights we have sketched were fully up to the standard. Hare had studied chemistry under Woodhouse. His inventions and discoveries in chemistry, and the apparatus needed for its experiments, are known to the whole world. At his death, in 1858, he was succeeded by Dr. James B. Rogers.

Dr. Rogers was born in this city, Feb. 22, 1803, and studied at the University of Pennsylvania, William and Mary College, at Williamsburg, Va., and the University of Maryland, at Baltimore. In 1819 he was appointed professor of Natural Philosophy and Chemistry at William and Mary College, and in 1840 he returned to his native city, where in the next year he succeeded Professor John Kearsley Mitchell as lecturer in the Philadelphia Medical Institute. He was connected with the Franklin College, and when, in 1847, the chair of Chemistry in the University of Pennsylvania became vacant by the resignation of Professor Hare, he became the successor of the same eminent teacher to whom his father had succeeded twenty-eight years previously. Dr. Rogers died June 15, 1852.

When Dr. Hare was brought from William and Mary to the University of Pennsylvania, he was succeeded at the former by Dr. Patrick Kerr Rogers, father of Dr. James B. The latter received his collegiate education at William and Mary, and for some time after his graduation practiced medicine in the

[1] The medical faculty stood thus in 1835: Nathaniel Chapman, Practice of Medicine and Clinical Medicine; Robert Hare, Chemistry; William Gibson, Surgery; William E. Horner, Anatomy; Samuel Jackson, Institutes of Medicine; George B. Wood, Materia Medica and Pharmacy; Hugh L. Hodge, Obstetrics and Diseases of Women and Children.

State of Maryland. In 1841 he took charge of the Medical Institute of Philadelphia, a summer school in connection with the University, that had been established by Dr. Chapman. Like that of Dorsey, his career, so full of promise, was cut off by death in 1852, when he was succeeded by his brother, Dr. Robert E. Rogers.

Dr. John Kearsley Mitchell, who was succeeded in the Philadelphia Medical Institute by Dr. Rogers, was born at Shepherdstown, Va., May 12, 1796, and received his degree at the University of Pennsylvania in 1819. He made three voyages to China as surgeon, and settled in Philadelphia in 1822. In 1824 he lectured on the Institutes of Medicine and Physiology in the Philadelphia Institute. In 1826 he accepted the chair of Chemistry there, and in 1833 lectured in the Franklin Institute on Chemistry applied to the Arts. In 1841 he was called to the chair of the Theory and Practice of Medicine in the Jefferson Medical College. His services during seasons of pestilence and in the City Hospital were twice rewarded by municipal gifts. He was the author of "Indecision and other Poems" (1839), and "Popular Lectures on Scientific Subjects," a work which was translated into several foreign languages. He died April 4, 1858, leaving a work "On the Cryptogamous Origin of Malarious and Epidemical Fevers," and many valuable contributions to the *American Journal of the Medical and Physical Sciences*. A collection of his essays, including a valuable paper on animal magnetism, was published in this city in 1858. His son, Dr. S. Weir Mitchell, was born in this city, Feb. 15, 1829, and received his degree at the Jefferson Medical College in 1850. He is particularly known by his researches respecting the venom of serpents, published in the Smithsonian Contributions, and in the "Memoirs of the Philosophical Society;" also, "Researches on the Physiology of the Cerebellum," in the *American Journal of the Medical Sciences* for April, 1869. He published, with Drs. Keen and Morehouse, "Effects of Gunshot Wounds" (1864), and "Anatomy and Physiology of Respiration in the Chelonia," in Smithsonian Contributions.

Joseph Leidy

Dr. Richard Harlan, a physician and writer on natural history, was born in Philadelphia, Sept. 19, 1796, and died in New Orleans, Sept. 30, 1843. Previous to receiving his medical degree, in 1817, he made a voyage to Calcutta as surgeon of an East India ship. Besides his private practice in this city, he was in 1822 elected professor of Anatomy to the Philadelphia Museum, where he delivered lectures on that science. In 1825 he published his "Fauna Americana;" in 1835, "Medical and Physical Researches;" "Observations on Salamanders," 8vo, 1824; "American Herpetology," 8vo, 1827. In 1838 he visited Europe, and on his return, the following year, established himself in New Orleans.

The career of Dr. William E. Horner is so well known that we may speak of it in brief. Dr. Horner was, like Chapman and Hartshorne, a native of Virginia. He received his academic education at the town of Warrenton in Fauquier County. He entered the service of the United States in the war of 1812, acting throughout as surgeon's mate. After graduation at the University of Pennsylvania, he practiced for two years in Warrenton, and in 1816 had already acquired such reputation for his knowledge of anatomy that he was chosen by Dr. Wistar as his assistant. At the death of Wistar, in 1818, he was to have been in that relation to Dr. Dorsey. At the death of the latter he became assistant to Dr. Physick. The University boasts, and with becoming pride, of the distinguished services rendered by this great anatomist to its museum.

By his death, in 1853, the professorship fell to Dr. Joseph Leidy, who was born in Philadelphia, Sept. 9, 1823, and graduated in 1844 from the medical school of the University. His life was devoted mainly to biological research, and his published works, ranging from pamphlets to elaborate treatises, amount to some eight hundred in number. Of these publications some of the most important are "Flora and Fauna within Living Animals," "Ancient Fauna of Nebraska," "Memoir on the Extinct Sloth Tribe of North America," "Cretaceous Reptiles of the United States," "Extinct Mammalian Fauna

Digitized by Google

of Dakota and Nebraska," together with a "Synopsis of the Mammalian Remains of North America," "Contributions to the Extinct Vertebrate Fauna of the Western Territories," and "Description of Vertebrate Remains from the Phospate Beds of South Carolina." Most of his works have been issued through the Smithsonian Institution, the Philadelphia Academy of Natural Sciences, and Hayden's United States reports of geological surveys of the Territories. In 1846 he was elected demonstrator of anatomy in the Franklin Medical College, and chairman of the curators of the Academy of Natural Sciences. In 1853 he became professor of Anatomy in the medical department of the University of Pennsylvania, and in 1871, professor of Natural History in Swarthmore College. During the late war he was a surgeon in the United States army, and contract surgeon to the Satterlee General Hospital at Philadelphia.

The eminent Robley Dunglison, LL.D., M.D., was born Jan. 4, 1798, at Keswick, a small town in Cumberland, England, and his parents intended to send him to his uncle, Joseph Robley, a wealthy planter in the West Indies, but the design was frustrated by the latter's death, and the young man chose the profession of medicine. His general education was mainly acquired in Green Row Academy, and his medical training at the University of Edinburgh, the Royal College of Surgeons, and the Society of Apothecaries. He began practice in 1819, but also continued his studies at the University of Erlangen, Bavaria, from which he graduated in 1824, and in the same year was appointed physician-accoucheur to the Eastern Dispensary of London. In October, 1824, he came to the United States, in response to an invitation from Thomas Jefferson, to occupy one of the chairs in the medical department of the then newly-founded University of Virginia. Nine years later he accepted the chair of Materia Medica, Therapeutics, Hygiene, and Medical Jurisprudence in the University of Maryland, and removed to Baltimore, where he remained three years. In addition to his labors as a lecturer and author, he had charge of the medical wards of the Baltimore Infirmary. In June, 1836, he was appointed professor of the Institutes of Medicine in Jefferson Medical College, Philadelphia, a chair expressly created for him. He filled it until 1868, when he resigned, and received from the trustees the title of emeritus professor. He contributed largely to various medical periodicals, and translated and edited many volumes on medicine. In 1837 he established the *American Medical Library and Intelligencer*, a monthly magazine that was continued five years. He was the author of the standard work, "Dunglison's Medical Dictionary." In 1825 Yale College conferred on him the degree of M.D. In 1852 Jefferson College, at Cannonsburg, Pa., made him LL.D., and in the same year the same degree was granted him by the Jefferson Medical College of this city. He was vice-president of the American Philosophical Society, vice-president of the Training-School for Idiots, vice-president of the Institute for the Blind, chairman of the faculty of the University of Virginia, and for many years dean of the faculty of Jefferson Medical College. In October, 1824, he married Harriet, daughter of John Leadam. His death occurred in this city, April 1, 1869.

Dr. Thomas D. Mütter was born at Richmond, Va., March 11, 1811, and graduated at Hampden Sidney College. He studied medicine under the tuition of Dr. Sims, at Alexandria, and received his degree at the University of Pennsylvania. In the reorganization of Jefferson College, after the departure of Drs. Patterson and Revere, Dr. Mütter was first made adjunct, or professor of Operative Surgery, while Dr. Randolph, then in Europe, was elected professor of the Principles of Surgery. Dr. Randolph declining the appointment, Dr. Mütter was made professor of the Principles and Practice of Surgery, while Dr. Pancoast took the chair of Anatomy. Dr. Mütter died March 16, 1859, leaving a large endowment and his fine collection of osseous and other preparations to the College of Physicians of this city, for the establishment of a museum.

Among the leading physicians of the past may also be mentioned the late Dr. Joseph Pancoast, who died in this city greatly lamented March 7, 1882. Dr. Pancoast was born in Burlington County, N. J., Nov. 23, 1805. He graduated from the medical department of the University of Pennsylvania in 1828. He immediately began the practice of his profession in this city. In 1831 he commenced teaching practical anatomy and surgery, having determined to make a specialty of surgery in his practice. In 1834 he was chosen one of the physicians of the Philadelphia Hospital, Blockley. Soon afterward he was elected physician-in-chief to the Children's Hospital, in the same institution, and from 1838 to 1845 was one of the visiting surgeons to the same hospital. In 1838 he was called to fill the chair of Surgery in the Jefferson Medical College. On March 27, 1854, he was elected one of the surgeons of the Pennsylvania Hospital, a position which he resigned Feb. 29, 1864. In 1841 he was chosen professor of Anatomy in Jefferson Medical College, from which he resigned in 1874, being succeeded by his son, Dr. William H. Pancoast. For thirty-six consecutive years he occupied two of the most important chairs in that celebrated school. Upon his retirement from the chair last mentioned, he was chosen emeritus professor of Anatomy, as an evidence of the high esteem in which he was held by the trustees of the institution.

During the long and honorable professional career of Dr. Pancoast, he kept pace with the march of progress which has characterized medical science during the past three-quarters of a century. By his devotion to literary pursuits within the sphere of his profession, and his identification with leading philosophical and medical associations, he succeeded in maintaining a

Joseph Pancoast

Digitized by Google

high position as one of the leaders in thought and in practice among American physicians. Of the societies of which he was a member, the following may be enumerated: the American Philosophical Society, the Academy of Natural Sciences, the London Medical Society, the College of Physicians, the College of Pharmacy, the Philadelphia County Medical Society, the Pennsylvania State Medical Society, and the American Medical Association. In fact, any reputable movement looking toward organized effort in promoting the cause of medical science, and the higher interests of the profession, was sure to meet with his support.

As has been intimated, Dr. Pancoast gave much attention to medical literature. In fact, it is as a distinguished author, as well as a successful practitioner, that he won deserved fame, both at home and abroad. One of his earliest literary efforts was the translation from the Latin, in 1831, of a "Treatise on the Structure, Functions, and Diseases of the Human Sympathetic Nerve," by J. Frederick Lobstein, to which he added notes. In 1844 he published his "Treatise on Operative Surgery," which he revised and enlarged in 1852, when it had passed to a third edition. During the first nine years of its existence upward of four thousand copies were sold. He also, in 1844, remodeled the able work,—originally written by Dr. Caspar Wistar, to which the late Professor William E. Horner had made valuable additions,—entitled "A System of Anatomy for the Use of Students." He also edited at various times "Lænnec on the Great Sympathetic Nerve," the "Cerebro-Spinal System in Man," and "Quain's Anatomical Plates." He was also a voluminous contributor to the *American Journal of the Medical Sciences*, the *American Medical Intelligencer*, and the *Medical Examiner*, besides publishing sundry monographs, pathological and surgical.

Dr. Pancoast was, perhaps, chiefly noted for having performed many remarkable surgical operations, some of which were previously entirely unknown to the profession. In many instances during his varied and successful career in the practice of his chosen profession he not only succeeded in saving individual lives where death appeared to be a probable sequence, but he devised convenient appliances, and practically safe plans of procedure, whereby the practice of surgery throughout the world has brought less woe and misery to suffering humanity.

Viewing him as a man and as a physician, as an author and as a practitioner, as a student and as a teacher, it can be truly said that the city of his adoption and the profession of his choice have just cause to be proud of him, and that the world is the better and the happier for his life.

Dr. Jacob Randolph was born in this city Nov. 26, 1796, and died here Feb. 29, 1848. His father was an officer in the Fourth Pennsylvania Regiment in the Revolution. Dr. Randolph graduated at the University of Pennsylvania in 1817, and began practice in this city. He married the daughter of Dr. Physick in 1822, and soon attained eminence as a surgeon. He was surgeon at the city almshouse in 1830, a surgeon of the Pennsylvania Hospital from 1835 to his death, and in 1847, after having been some time lecturer upon clinical surgery in the University of Pennsylvania, was made professor of that branch. He published a memoir of Dr. Physick in 1839, and contributed many valuable papers to medical journals. At the time of his death he was a member of the American Philosophical Society and of the College of Surgeons, and a consulting surgeon to the City Dispensary.

Dr. John Barclay Biddle, born in Philadelphia, Jan. 3, 1815, was educated at St. Mary's College, and before entering the office of Dr. Nathaniel Chapman was a law-student. He received his diploma from the University of Pennsylvania when he was twenty-one years of age, and at once spent a year in Europe for purposes of study. On his return he became associated with Dr. Meredith Clymer in the publication of the *Medical Examiner*, the first number of which was issued Jan. 3, 1838. Early in 1846 Dr. Biddle, with other physicians, obtained a charter of incorporation for the Franklin Medical College, in which he took the chair of Materia Medica. In 1852 he published his "Review of Materia Medica." In June, 1865, he was elected to the chair of Materia Medica and Therapeutics in Jefferson College, vacated by the death of Professor Thomas D. Mitchell, and became dean of the faculty. In 1850 he married Caroline, daughter of William Phillips, and died Jan. 19, 1879.

On the 22d of December, 1811, William Robertson Grant was born at East River, Nova Scotia, and on Dec. 17, 1836, he entered Philadelphia, which was to be his home and the scene of his labors and distinction. In his early years he was especially a student of anatomy, and he assumed the responsibilities of professor of Anatomy in Pennsylvania College when it was apparently on the brink of ruin. A faculty of four members carried through the course of lectures with a class of twenty-three pupils. During the session Dr. Grant labored with untiring zeal and energy, delivering nine lectures weekly and attending assiduously to the duties of the dissecting-room. The faculty completed their labors on March 9, 1844, by holding a public commencement in their own lecture-room on Filbert Street, at which the degree of Doctor of Medicine was conferred on seven pupils. Devoted to the interests of the Pennsylvania College, he did everything that could be done to advance its prosperity, although he was suffering from a most severe pulmonary affection. It was in the discharge of professional duty that his fatal illness was contracted. On March 23, 1852, he was summoned to the aid of a woman who had committed suicide by hanging in the cellar of her own house. The damp and chilling atmosphere of the place and his unsuccessful efforts to revive the woman had a most disastrous effect upon

him, and on the evening of that day he was prostrated at the house of Dr. Henry S. Patterson. Dr. Patterson has written, "On Saturday, the 27th, it was believed that a favorable change had taken place in his condition, but on Sunday it became evident that all human aid was vain and that the end was near." He died March 28, 1852, in the forty-second year of his age.

Perhaps no man was better known as an alienist on this side of the Atlantic than Dr. Kirkbride. For more than forty years his name has been familiar to the medical world as associated with the study of insanity. He was born in Pennsylvania, near Morrisville, Bucks Co., July 31, 1809. He was a descendant of Joseph Kirkbride, of the parish of Kirkbride, in the county of Cumberland, England, who came to America with William Penn. He received his education at Trenton, N. J., whence he came to Philadelphia to pursue his medical studies in the medical department of the University of Pennsylvania, which conferred upon him the degree of Doctor in Medicine in March, 1832. Only one month later he was appointed resident physician to the Friends' Asylum for the Insane, still located near Frankford, where he remained for one year, and in the spring of 1833 was elected to the same position in the Pennsylvania Hospital, which he held for two years, after which he engaged in private practice in the city.

In the autumn of 1840 a new institution for the insane, now well known as the insane department of the Pennsylvania Hospital, perhaps most commonly called "Kirkbride's," was so near its completion that it became necessary to select a superintendent. To this post, in October, 1840, Dr. Kirkbride was elected, almost without his knowledge of such a purpose, certainly without any solicitation by him. This was to be used for the insane then in the hospital at Pine and Eighth Streets. It was opened on the first day of the year 1841, with Dr. Kirkbride in charge, and the fact that he so remained is a grand proof of his eminent fitness for this important and extremely responsible position. By constant improvements and additions to the original building, this establishment, which was then only capable of receiving a little more than one hundred patients, and actually started with ninety-seven, has been made suitable for five hundred, and these divided into separate buildings,—a male and female department. When the improvements were under consideration, Dr. Kirkbride urged the complete separation of the sexes, as though in two distinct institutions, and furthermore recommended that an appeal should be made to the public for the requisite amount of money. Both these plans were adopted, and the appeal proved an entire success, the private contributions aggregating three hundred and fifty-five thousand dollars.

In October, 1859, the new building was formally opened. Each department will accommodate two hundred and fifty patients; each has its own set of physicians and other officers, being in every way separate and distinct from the other, but with the same board of managers and physician-in-chief.

It is greatly to the credit of Dr. Kirkbride that his plans have been extensively copied by similar institutions throughout America. This hospital has been one of the institutions most frequented and studied by visiting medical men and scientists.

Under the promptings of Dr. Kirkbride and kindred spirits an Association of the Medical Superintendents of the Insane Asylums of America was formed in 1866, of which he was president for eight years. He was always active in medical organizations. He was elected a Fellow of the Philadelphia College of Physicians in 1839, and was a member of the Philadelphia County Medical Society, the American Philosophical Society, the American Medical Association, and the Medical Society of the State of Pennsylvania. The two latter bodies were, on several occasions, accorded a special reception at the hospital, and were handsomely entertained by the venerable and much-loved doctor.

Dr. Kirkbride was not a voluminous writer, but gave to his profession a most excellent volume on "The Construction, Organization, and General Arrangements of Hospitals for the Insane," and one on "Rules for the Government of those employed in the Care of the Insane." In addition he contributed a number of valuable monographs and reviews to the *American Journal of Insanity* and other periodicals, while his annual "Hospital Reports" now form forty-two volumes, filled with the history of the Pennsylvania Hospital, and with the valuable results of his long experience and study in the general subject of insanity.

Personally, Dr. Kirkbride was remarkable for his genial temperament, which quickly endeared him to those members of the profession with whom he was thrown in contact. He never appeared more happy than when playing the host, whether for a few personal friends or for the members of a large medical society. He was endowed with a wonderful power over the unfortunates whose mental malady caused them to be consigned to his care, and could, with scarcely any apparent effort, control the most wayward, winning the affections of his patients amid all their mental aberrations, and dealing with all with a patient gentleness, blended with a wise firmness, that enabled him to exert the best influences upon all who came under his care.

In the early part of his career, in 1849, Dr. Kirkbride narrowly escaped death at the hands of a patient named Wylie Williams, who, excited by some insane idea of wrong, escaped from the hospital, procured a gun in the city, and, returning, concealed himself in a tree at the entrance of Dr. Kirkbride's residence. As he passed under the tree the lunatic called to him that he was going to kill him, and a moment later discharged a load of buckshot at the doctor.

Most fortunately his aim was bad, and yet so close that one of the shot wounded Dr. Kirkbride in the scalp, where it remained to the day of his death.

Dr. Kirkbride was a man of modest and retiring character, but exceedingly clear and pronounced in all his social, political, moral, and professional opinions. Trained in the tenets and usages of the Society of Friends, he was accustomed to "bear his testimony" on all suitable occasions without any ambiguity. He was a man of spotless integrity, of the finest domestic virtues, abhorring whatever was mean or wrong, and winning the esteem and affection of a great circle of friends by the grace and goodness of his daily life. Few men are privileged to complete such a long record of devotion to duty and good work done for the benefit of their fellows. He died, after a protracted illness, during the night of Dec. 16, 1883. He was twice married, his first wife being a daughter of Joseph Jenks, and his second wife, who survives him, the daughter of Benjamin Butler, a distinguished member of the New York bar. He left two adult children—Dr. Joseph J. Kirkbride and Mrs. Thomas G. Morton—and four minor children.

Among the many distinguished physicians in this city, we take the liberty of presenting in these pages several of the most prominent, who, we think, are representative in their character of the medical profession of Philadelphia at the present time (1884).

Samuel D. Gross, M.D., D.C.L. Oxon., LL.D. Cantab., was born near Easton, Pa., July 8, 1805. He received a classical education at the Wilkesbarre Academy and the Lawrenceville (New Jersey) High School. Subsequently he began the study of medicine, first under Dr. Joseph K. Swift, of Easton, and afterward with Professor George McClellan, the eminent surgeon, of Philadelphia. He graduated from Jefferson Medical College in 1828, and immediately began practicing his profession in Philadelphia, and during the first year of his novitiate translated several medical works from the French and German. In the following year he published a work on the "Diseases of the Bones and Joints."[1] In 1833 he became Demonstrator of Anatomy in the Medical College of Ohio, at Cincinnati, thus inaugurating a career as a medical instructor, which, in brilliancy and breadth, is excelled by that of no other American physician. Dr. Gross, during his connection with various medical schools, léctured to a larger number of students than any other surgeon in this country. Forty-eight years of the most active period of his life were spent in public teaching, two years as Demonstrator of Anatomy in the Medical College of Ohio, four years as Professor of Pathological Anatomy in the Medical Department of Cincinnati College, and forty-two years as Professor of Surgery, fifteen of these having been passed in the University of Louisville, one in the University of the City of New York, and twenty-six in his Alma Mater, the Jefferson Medical College of Philadelphia. His name is attached to upward of ten thousand diplomas of students, representing every State and Territory of the Union, as well many foreign countries and provinces, including England, France, Germany, Russia, Turkey, Japan, Australia, Canada, Ireland, Cuba, Armenia, and several of the South American nations. As a teacher he was always very popular, highly instructive, and universally beloved. Systematic in the arrangement of his matter, and earnest and forcible in its inculcation, he was one of the most successful lecturers our country has ever produced, and when, in the spring of 1882, in the fullness of his physical and intellectual powers, he retired from the chair of surgery at the Jefferson Medical College, which he had so long adorned by his talents, learning, and experience, universal regret was felt by the many pupils and friends of the school. As a testimonial of the respect and reverence of the faculty and the board of trustees, the latter conferred upon him the title of Emeritus Professor of Surgery, a relation to the institution which he now bears.

If as a didactic teacher Dr. Gross was popular and instructive, he was, if possible, still more so as a clinical teacher. His extensive knowledge of disease, acquired at an early period of his professional life, added to a ready facility in diagnosis, the result of a large private and hospital practice, enabled him to grasp at a glance the leading features of a case and to suggest a proper plan of treatment. One of his strong points as a clinician was the happy elucidation of the symptomatology and diagnosis of the diseases and injuries brought from time to time before his classes, his ready application of remedies to meet their exigencies, and every other expedient calculated to enlighten the minds of the students. He was never satisfied unless his work was done thoroughly. He felt that in every case he had a triple duty to perform: first, and above all, to his patient; secondly, to his pupils; and, lastly, to himself. No man was ever more conscious to the responsibility of the duties of his office, or more determined to perform them with an eye single to the best interests of all concerned. As an operator he did his work well, often brilliantly, never slovenly or recklessly, or for the sake of *éclat*. It is his boast that he never lost a patient on the table. As a lithotomist he enjoys a high reputation. His favorite operation is the lateral, performed with the knife, guided by an ordinary staff. He is always cool and self-possessed. No man ever saw his hand tremble, or his eye express fear. His knowledge of topographical anatomy never fails him, and this knowledge is one of the causes of his self-possession in the use of the knife.

[1] In 1832, Dr. Gross performed a series of experiments on hanging and manual strangulation, the results of which were published in the *Western Journal of Medicine*, and afterward embodied by Dr. T. R. Beck in his great work on medical jurisprudence. He also made numerous observations on the temperature of the blood and on the coagulation of that fluid as influenced by various circumstances.

Dr. Gross has long been a voluminous writer. In 1840 he published "Elements of Pathological Anatomy," 2 vols. 8vo, copiously illustrated; third edition in 1857. This was the first systematic treatise upon the subject ever published in the English language. The work was well received abroad, especially in Prussia and Austria. Professor Virchow, of Berlin, bestowed upon it the highest praise, while the Imperial Royal Medical Society, of Vienna, soon after the publication of the second edition, honored him in acknowledgment of the merits of the work, with its membership. In 1843 he published "An Experimental and Critical Inquiry into the Nature and Treatment of Wounds of the Intestines," 1 vol. 8vo, a work based upon upward of seventy experiments upon dogs, performed with a view of ascertaining the best mode of treating this class of lesions, a labor occupying nearly three years. In 1851 he published "A Practical Treatise on the Diseases, Injuries, and Malformations of the Urinary Bladder, the Prostate Gland, and the Urethra," 1 vol. 8vo; second edition in 1854; a volume of nine hundred and twenty-five pages, well illustrated and thoroughly exhaustive; and a third edition in 1876, edited by Dr. S. W. Gross. In 1854 he published "A Practical Treatise on Foreign Bodies in the Air Passages," 1 vol. 8vo, pp. 468. At the time of its appearance, this was the only work upon the subject in any language. In this work the author gave a full digest of the existing state of this important branch of surgery, and laid down important principles of treatment since universally recognized by the profession. The same year he published a "History of Kentucky Surgery," an elaborate and painstaking report, in which he established upon an immutable basis the claims of Ephraim McDowell to the honor of having been the first to perform ovariotomy until that time erroneously awarded to other surgeons. In 1859 he published his noblest work, "A System of Surgery, Pathological, Diagnostic, Therapeutic, and Operative," 2 vols. 8vo. A sixth edition, thoroughly revised, and brought up to the existing state of the science, in 2 vols. 8vo, pp. 1194, 1174, with upwards of sixteen hundred engravings, was issued in 1882. This work has everywhere been received with great favor, and was, in 1863, translated into the Dutch language. Extracts from it have also been published in China and Japan. At the outbreak of the war he published "A Manual of Military Surgery," which passed through two large editions, and rendered important service in fitting young military surgeons for the better and more efficient discharge of their duties on the field and in the hospital. In 1861 he edited a large volume entitled "Lives of Eminent American Physicians and Surgeons of the Nineteenth Century," of which three were furnished by his own pen. In 1876 he published a "History of American Medical Literature from 1776 to the Present Time," 1 vol. 8vo, pp. 88, and in the same year an elaborate paper, entitled "A Century of American Surgery."

In addition to the comprehensive standard works already mentioned, Dr. Gross has also made many other noteworthy contributions to the literature of the medical profession, chiefly in the form of monographs and miscellaneous papers contained in the current medical press of the country. In 1856 he founded, along with Professor T. G. Richardson, now of New Orleans, and for five years edited, the *North American Medico-Chirurgical Review*, a bi-monthly journal of medicine and surgery, which was conducted with marked ability, and enjoyed a successful career for five years, when, the war of the Rebellion coming on, it was suspended, as many of its subscribers lived in the South.

Dr. Gross has always been actively identified with the leading medical and scientific societies, local, State, and national, as well as with many prominent kindred associations of other countries. Among such have been the following: the American Philosophical Society, the Philadelphia College of Physicians, the New York Academy of Medicine, the Imperial Royal Medical Society of Vienna, the Medical Society of Christiania in Norway, the Royal Medical and Chirurgical Society of London and of Edinburgh, the British Medical Association, the Clinical Society of London, the Medical Society of London, and the following associations, in each of which he has been honored at various times with the office of president, namely: the Kentucky State Medical Society, the Philadelphia Pathological Society, the Philadelphia County Medical Society, the American Medical Association, the Teachers' Medical Convention, which met in April, 1870, at Washington, D. C., to consider the subject of Medical Education, the Pennsylvania State Medical Society, and the International Medical Congress which met at Philadelphia in September, 1876. He was one of the founders of the Kentucky State Medical Society, and the originator of the Pathological Society of Phiadelphia, of the Philadelphia Academy of Surgery, and of the American Surgical Association,—institutions which are now in a highly flourishing condition, and doing good work in the interests of scientific medicine and surgery.

Besides the official distinctions enumerated, Dr. Gross has been the recipient of numerous other honors, fully merited and worthily bestowed. In 1861 he received the degree of LL.D., from Jefferson College of Pennsylvania. In 1872, during his second visit to Europe, the University of Oxford, England, at its one-thousandth commemoration, conferred upon him the honorary degree of D.C.L., the only compliment of the kind ever bestowed upon an American physician. In 1880 the University of Cambridge, England, honored him with the degree of LL.D. His associates upon this occasion were, among others, Brown-Séquard, of Paris, Professor Donders, of Utrecht, and Sir George Burrows, Sir William

S. D. Gross.

Digitized by Google

Jenner, Sir William Gull, Joseph Lister, F.R.S., and William Bowman, F.R.S., of London.

Dr. Gross has always been a warm advocate of a higher grade of medical education than now obtains in our medical schools, and a more prolonged course of study on the part of the student. He has long been an avowed enemy to the unnecessary multiplication of medical colleges and medical journals; and in 1856 he published an elaborate "Report on the Causes which Impede the Progress of American Medical Literature," in which he took strong ground against the then prevalent habit of republishing English works under the editorship of American physicians. Dr. Gross was the first to describe several surgical diseases before unknown or imperfectly understood, and he has devised some useful surgical instruments and surgical operations.

In 1828, Dr. Gross married Louisa Ann Dulaney, of Philadelphia, a highly accomplished lady of English descent, who died in 1876, leaving four children, two daughters, married, the elder to B. F. Horwitz, and the younger to Orville Horwitz, distinguished members of the Baltimore bar; and two sons, Samuel W. Gross, one of his father's successors in the chair of Surgery in the Jefferson Medical College, and Albert Haller Gross, the present member of Select Council from the Eighth Ward.

Dr. Gross can be justly denominated one of Philadelphia's most distinguished citizens, as he is one of America's most famous physicians. Whether as surgeon, author, or lecturer, his individuality has been strongly impressed upon the history of the country's progress and broadening thought. He has not simply kept pace with the advanced stride of scientific research, but he has been the intrepid pioneer into many otherwise unexplored regions. As a result, the technical and general literature of the century has not only been enriched, but the heart of humanity has been made happier. With him science and philanthropy have been handmaidens.

A clinical assistant to Professors Mütter and Pancoast, at the Jefferson College, was Benjamin Howard Rand, who was born in Philadelphia Oct. 1, 1827, the son of Benjamin and Ellen Spurrier Rand. In 1850 he was elected professor of Chemistry in the Franklin Institute, holding that position until his resignation, in 1864. Upon the foundation of the Philadelphia Medical College, an institution which ceased to exist in 1861, he was elected to the chair of Chemistry, and from 1852 to 1864 was secretary to the Academy of Natural Sciences. This latter office, as well as his professorship in the Franklin Institute, he resigned in 1864, in order to accept the chair of Chemistry in Jefferson Medical College, from which he resigned by reason of ill health in May, 1877. He was elected a Fellow of the Philadelphia College of Physicians in 1853, and a member of the American Philosophical Society in 1868, and also a member of the American Medical Association. Besides frequent contributions to scientific periodicals, he wrote "Chemistry for Students" (1855), "Elements of Medical Chemistry" (1863 and 1875), and also edited Metcalfe's "Caloric" (1859). He was married, in 1853, to Hannah M., daughter of Jacob L. Kershow, Esq. His first wife died in 1854, and fifteen years later, Dec. 23, 1869, he married Mary M. Washington, great-grandaughter of Fairfax Washington. He died Feb. 14, 1883.

Dr. Francis Gurney Smith, Jr., born in Philadelphia March 8, 1818, received both his academical and medical education in the University of Pennsylvania, taking his degree of B.A. in 1837, and those of M.A. and M.D. in 1840. For about a year after receiving his diploma he was one of the resident physicians of the Pennsylvania Hospital, giving special attention to the department of the insane. After establishing himself in practice in Philadelphia, he turned his attention specially to midwifery and diseases of women. He was a member of the College of Physicians of Philadelphia, Philadelphia County Medical Society, College of Physicians and Surgeons of Reading, Academy of Natural Sciences, Pathological Society, American Philosophical Society, Colorado State Medical Society, Rocky Mountain Medical Society, and Burlington County Medical Society of New Jersey. He was the first president of the Philadelphia Obstetrical Society, and was vice-president of the meeting of the American Medical Association which was held in Washington in 1870. He was well known in professional literature as one of the authors of the "Compendium of Medicine," which has passed through numerous editions. He also edited several of the American editions of Carpenter's and Marshall's works on physiology and a number of other scientific works, as well as translated for the first American edition Barth & Roger's "Manual of Auscultation and Percussion." For a period of nine years he was one of the editors of the *Philadelphia Medical Examiner*. He is well known as the author of an elaborate series of experiments on the celebrated Canadian, Alexis St. Martin, on the "Physiology of Digestion." In 1842 he was elected lecturer on Physiology by the Philadelphia Medical Association, and ten years later professor of the same branch in the Pennsylvania Medical College. In 1863 he succeeded Professor Samuel Jackson in the chair of the Institutes of Medicine in the medical department of the University of Pennsylvania, which he resigned on account of failing health in May, 1877, when he was elected emeritus professor of the same branch in that institution. He was one of the first medical staff of the Episcopal Hospital, and for six years was one of the attending physicians and clinical lecturer at the Pennsylvania Hospital. During the war he was connected with the medical staff of the army, and was one of the physicians in charge of a military hospital. He founded and established the first physiological laboratory in which physiology was taught experimentally and by demonstration in the Univer-

sity. For several years he held the position of medical director of the National Life Insurance Company, after having organized the medical department in that company.

In 1844 he married Catherine Madeline, daughter of Edmund Dutilh, by whom he had four children, the eldest son being also a member of the medical profession and a prize essayist of his college.

Dr. D. Francis Condie graduated at the University of Pennsylvania in 1818, practiced medicine in Philadelphia, and died in 1876. He was at one time president of the State Medical Society, and in 1855 president of the County Medical Society. He was a voluminous writer and a brilliant speaker, expressing his views on paper or by word of mouth with much clearness and force. He edited "Churchill's Midwifery," and among his original works was one on the diseases of children.

Dr. Benjamin Horner Coates, born in Philadelphia Nov. 14, 1797, was the grandson of Samuel Coates, one of the Pennsylvania Quakers of the seventeenth century. He was a member of the Philadelphia Medical Society, and was for five years a resident physician in the Pennsylvania Hospital. He was a Fellow of the College of Physicians, a member of the Philadelphia County Medical Society (of which he was president in 1859), a permanent member of the Pennsylvania State Medical Society, and senior vice-president of the American Philosophical Society. He was a founder of the *North American Medical Journal*, published from 1826 to 1831. Of his contributions to the literature of the profession may be mentioned his "Report of the Committee on Epidemic Cholera to the Philadelphia College of Physicians," April, 1832; oration on "Certainty in Medicine" before the Philadelphia Medical Society, Feb. 10, 1830; speech before the same society, April 4, 1841, on "The Present State of Evidence in Regard to the Larvæ of the Hessian Fly;" remarks on "The Effects of Secluded and Gloomy Imprisonment on the African Variety of Mankind," May 24, 1843; and lectures, in 1821–22, on "Absorption," "A Machine-Bed for Fractures," "Gangrene of the Mouth in Children," "Delirium Tremens," and the "Origin of the American Indians." He wrote a memoir of Thomas Say, and a description of the hydrostatic balance. He was lecturer in the Philadelphia School of Medicine on the Practice of Medicine and on Bandages. His clinical lectures in the Pennsylvania Hospital were during the years from 1828 to 1841. He was a Quaker, and was never married. He died Oct. 16, 1881.

Dr. D. Hayes Agnew, who was born in Lancaster County, Pa., Nov. 24, 1818, is the son of the late Dr. Robert Agnew, an eminent physician of that section. His classical education was commenced at the Moscow Academy, a flourishing institution located in Chester County, then under the direction of Rev. Francis Latta. Subsequently he was under instruction at Jefferson College, Cannonsburg, Pa. His educational training was finally completed at Newark College, Delaware, where Rev. John Holmes Agnew, a relative, was professor of Languages. Having concluded to adopt the practice of medicine as a profession, he matriculated at the medical department of the University of Pennsylvania, and graduated therefrom in 1838.

After leaving the latter institution he entered upon the practice of his profession in the rural districts. Subsequently he removed to Philadelphia, where he continued his practice, meeting with early and flattering success. Soon after settling in this city he began to deliver a course of lectures in the Philadelphia School of Anatomy, in College Avenue, which were continued for many years. At the outbreak of the Rebellion his class numbered two hundred and sixty-five students, representing every State in the Union. He also established the Philadelphia School of Operative Surgery. In 1854 he was chosen one of the surgeons of the Philadelphia Hospital, in which institution he founded the present Pathological Museum, and for a while acted as its curator. In 1863 he was appointed demonstrator of Anatomy and assistant lecturer on Clinical Surgery in the medical department of the University of Pennsylvania. He was also chosen, about the same time, one of the surgeons of Wills Ophthalmic Hospital. Two years later he was elected to a similar position in the Pennsylvania Hospital, and also in the Orthopædic Hospital. In 1870 he was chosen to fill the chair of Operative Surgery in the University of Pennsylvania, and in the year following he became professor of the Principles and Practice of Surgery in the same institution. The last-named position he holds at the present time, as well as the professorship of Clinical Surgery in the University Hospital. A most skillful and rapid operator in every department of surgery, which is his specialty, his reputation as a surgeon is world-wide. In his capacity as an efficient surgeon, as well as a consulting physician, Dr. Agnew has been called into many cases of extraordinary importance. His greatest prominence to the general public came from his connection with the case of President Garfield, who was shot by Charles J. Guiteau, July 2, 1881. He was called to Washington by the local physicians July 5th, and from that time until the death of the victim of the assassin's bullet, Sept. 19, 1881, he was assiduous in his devotion to the illustrious patient, being in daily communication with the attending surgeons, and visiting the President twice a week. Such surgical operations as were performed were under the immediate direction of Dr. Agnew, his steady hand using the necessary instruments with marked delicacy and skill. The result of the cowardly assault of the assassin has become, of course, a matter of national history. As was believed by many during the course of treatment, and as was proved by the post-mortem examination, the President had been mortally wounded, and no human skill or efficiency

D Hayes Agnew

Digitized by Google

could have saved his life. But that the physicians were able to prolong it for a period of over two months, during which the passions of the nation subsided, and the interests of order and good government triumphed, is largely attributable to the distinguished skill of Dr. Agnew.

During his forty-six years of active practice Dr. Agnew has made many valuable contributions to the literature of the profession. Among such may be enumerated the following: A work on "Practical Anatomy," one on "Lacerations of the Female Perineum and Vesico-Vaginal Fistula," a series of papers —sixty in number—on "Anatomy in its Relations to Medicine and Surgery," an exhaustive work on the "Principles and Practice of Surgery," and numerous contributions to medical journals on various subjects connected with surgery.

Among the prominent living physicians are Drs. Alfred Stillé and Jacob M. Da Costa. Dr. Stillé was born in Philadelphia in 1813, and in 1836, the year of his graduation from the Pennsylvania University, was elected resident physician of the Pennsylvania Hospital, a position which he retained from 1839 to 1841. He then pursued his studies abroad. From 1844 to 1850 he lectured on Pathology and the Practice of Medicine to the Pennsylvania Association for Medical Instruction. In 1849 he was appointed physician to St. Joseph's Hospital. In 1854 he was elected professor of the Theory and Practice of Medicine in the Pennsylvania Medical College, and filled the chair for five years. On June 20, 1864, he was chosen to occupy a similar chair in the University of Pennsylvania. He was president of the American Medical Association in 1871, and of the Philadelphia County Medical Society in 1862. From 1865 to 1871 he was physician and lecturer on Clinical Medicine in the Philadelphia Hospital. The degree of LL.D. he received in 1876 from the Pennsylvania College, Gettysburg. In association with Dr. J. Forsyth Meigs, he translated "Pathological Hæmatology" from the French of G. Andral. His other publications are "Medical Instruction in the United States," "Elements of General Pathology," "Report on Medical Literature," "Unity of Medicine," "Humboldt's Life and Character," "Therapeutics and Materia Medica," "War as an Instrument of Civilization," a new edition of Wharton and Moreton Stillé's "Treatise on Medical Jurisprudence," a work on materia medica, and, with Dr. John M. Maisch, the National Dispensatory.

Dr. Jacob M. Da Costa, born in the island of St. Thomas, West Indies, Feb. 7, 1833, graduated from the Jefferson Medical College in 1852, and in 1854 became a resident of Philadelphia, devoting his attention mainly to diseases of the heart and lungs. He was for some time attending physician at the Episcopal Hospital, and subsequently held the same position at the Philadelphia and Pennsy[illegible] als. In 1864 he was appointed lecturer [illegible] i-cine at the Jefferson Medical College, and in 1872 professor of the Theory and Practice of Medicine. His principal writings have been upon "Medical Diagnosis, with Special Reference to Practical Medicine," "An Inquiry into the Pathological Anatomy of Acute Pneumonia," on "Cancer of the Pancreas," on "Serous Apoplexy," "Inhalation in the Treatment of Diseases of the Respiratory Passages," and the "Physicians of the Last Century."

At the Jefferson Medical School Dr. James Aitken Meigs was matriculated in October, 1848, and graduated in March, 1851. He was born in Philadelphia July 31, 1829, and passed through the Mount Vernon Grammar School and the Central High School. At his graduation at the Jefferson School he received the honorary certificate annually conferred by the lecturers of the Philadelphia Association for Medical Instruction on students who passed examination upon their lectures. The subject of his thesis was the "Hygiene and Therapeutics of Temperament." He began practice in 1851. He was for some years assistant to the professor of Physiology in the Pennsylvania College, and lecturer on Climatology and Physiology at the Franklin Institute. He lectured frequently on physics and ethnology at the different mechanics' institutes in Philadelphia, and before the literary associations of neighboring cities. In 1855 he was elected physician to the department of diseases of the chest in the Howard Hospital and Infirmary for Incurables, a position which he filled thirteen years. In 1856 he became librarian of the Academy of Natural Sciences, and in 1857 accepted the chair of Institutes of Medicine in the Philadelphia College of Medicine, which he occupied until, two years subsequently, he was transferred to the professorship of Institutes in the medical department of Pennsylvania College. Here he delivered two courses of lectures on physiology illustrated by vivisectal demonstrations, which attracted much attention, as no previous attempts to teach physiology experimentally had been made in any of the four medical schools of Philadelphia. In November, 1859, he was chosen consulting physician and clinical lecturer to the Philadelphia Hospital at Blockley, and in 1861 he resigned his positions in the Pennsylvania College. In 1866 he delivered before Jefferson College, in the spring course of lectures, a series upon the physiology and pathology of the blood and circulation.

In June, 1868, on the resignation of the late Professor Robley Dunglison, he was elected professor of the Institutes of Medicine and Medical Jurisprudence in the Jefferson College, his application for the chair having been indorsed by the medical profession of Philadelphia and some of the most distinguished physicians and scientists of America and Europe. In 1871 he was elected president of the Philadelphia County Medical Society. He was a member of the Franklin Institute, the Academy of Natural Sciences, the College of Physicians, the State Medical Society

of Pennsylvania, the American Medical Association, the Wisconsin Historical Society, the biological department of the Academy of Natural Sciences, the American Association for the Advancement of Science, the Medico-Legal Society of New York, the Numismatic and Antiquarian Society of Philadelphia, the New York Lyceum of Natural History, the Linnæan Society of Pennsylvania College at Gettysburg, the Société d'Anthropologie de Paris, the Ethnological Society of London, the Anthropological Society of London, the Societas Medicorum Svecanæ of Stockholm, and the International Congress of Prehistoric Archæology. He also was a delegate to the International Medical Congress held in Philadelphia during the Centennial Exposition. In 1877 he was elected a member of the board of trustees of the Polytechnic College of the State of Pennsylvania.

While a student of medicine, and for some time after his graduation, he contributed to the *Medical Examiner* reports of cases treated at Jefferson College and the Pennsylvania Hospital, discussions of the Medical Society, and papers on the mortuary statistics of Philadelphia. In 1855 he published, in the *Journal of the Franklin Institute*, an article on the "Physiology of Stammering, and its Treatment by Mechanical Means." In the same year he read before the Academy of Natural Sciences a paper on "The Relation of Atomic Heat to Crystalline Form," which was published in the Journal of the academy. In 1856 he prepared an appendix to the first American edition of Carpenter's work on the microscope. The following year, being chairman of the standing committee on anthropology, he arranged and classified the extensive collection of human crania in the Academy of Natural Sciences, and prepared a systematic catalogue of the collection, which was published by the academy. He also contributed during this year to Nott and Gliddon's "Indigenous Races of the Earth," an essay on the "Cranial Characteristics of the Races of Men, presenting a General Survey of Human Skulls in their Ethnical Relation," and edited an American edition of Kirke's "Manual of Physiology." To the Proceedings of the Academy of Natural Sciences, to the Reports of the Smithsonian Institution, and other like publications, he contributed at various times many original articles on craniography. He also contributed numerous articles on a great variety of physiological, medical, and scientific subjects to current publications. In 1868, as introductory to his Jefferson College discourses, he delivered an inaugural address on the "Correlation of the Physical and Vital Forces," of which two editions were printed. He lectured annually in Jefferson College on diseases of the nervous system, on physiology, and also on clinical medicine; having charge, as attending physician, furthermore, of the medical wards of Pennsylvania Hospital from May to August, throughout which period, in addition to his daily visits, he delivered twice a week a series of clinical lectures, which make a part of the course of instruction given for eight months of the year by the faculty, hospital staff, and corps of special lecturers of Jefferson Medical College. He died in 1882.

Before terminating the chapter of this history setting forth the rise and progress of scientific medicine in Philadelphia and the names of its many illustrious teachers and practitioners, it would be injustice to omit a statement of the universally-acknowledged truth that the medical men of this city are steadily increasing its reputation as a great luminous centre of study, experiment, and demonstration, from whence proceed rays of light to all parts of the earth. In the hospitals, schools, and offices they are constantly adding to the sum of medical knowledge by their intelligent and laborious devotion to professional duty. The investigator could scarcely take at random any one of the current medical journals published in our own or foreign languages without happening upon some contribution from a Philadelphia physician from which he must derive profitable information. As some of those most prominent now in solving the vast problems of sanitation, as well as the prevention and cure of disease, there may be mentioned,—

Drs. Harrison Allen, John Ashhurst, Jr., Samuel Ashhurst, Roberts Bartholow, John H. Brinton, Charles H. Burnett, William B. Atkinson, Oscar H. Allis, Thomas M. Drysdale, Henry C. Chapman, J. Solis Cohen, Charles T. Hunter, James H. Hutchinson, William V. Keating, William W. Keen, Peter D. Keyser, Richard J. Levis, Benjamin Lee, Squier Littell, John L. Ludlow, Charles K. Mills, Thomas George Morton, William F. Norris, John H. Packard, William H. Pancoast, William H. Parish, James Paul, Richard A. F. Penrose, William Pepper, William G. Porter, Joseph G. Richardson, S. D. Risley, John B. Roberts, Robert E. Rogers, Lewis Rodman, J. T. Rothrock, W. S. W. Ruschenberger, Edward O. Shakespeare, Edward Shippen, John V. Shoemaker, Alfred Stillé, Henry H. Smith, George Strawbridge, William Thomson, James Tyson, Ellerslie Wallace, James B. Walker, William M. Welch, J. William White, De Forest Willard, Ellwood Wilson, J. C. Wilson, Caspar Wistar, Horatio C. Wood, Theodore G. Wormley, Frank Woodbury, Louis A. Duhring, Richard J. Dunglison, William S. Forbes, H. F. Formad, James E. Garretson, William Goodell, H. E. Goodman, George Hamilton, George C. Harlan, Lewis D. Harlow, Robert P. Harris, Edward Hartshorne, Henry Hartshorne, Nathan L. Hatfield, Frederick P. Henry, Addinell Hewson, Sr., George H. Horne, Samuel B. Howell, J. Gibbons Hunt, William Hunt.

In thus sketching briefly the history of medicine in Philadelphia, from early provincial times to the middle of this century, we cannot well forbear to express the gratification we have felt in the studies that have enabled us to perform this task. We have seen how superior were the bench and bar to those of any other city during a period of many years in the last century. What we have said of those in this regard, we may say with great heartiness of the medical profession. It was fortunate for Philadelphia that its very first physicians were men of genius and culture. The science of the law had to be born anew in a *régime* very different from that which the first settlers of Pennsylvania had left behind. So far from there being things to tempt a lawyer well bred in the inns of London courts, there was everything to discourage to immigrate to a new, thinly-settled province, whose

judges were not only not learned in legal lore, but were prejudiced against those who were. The splendid, though strange, almost unique, career of Andrew Hamilton was but another evidence of what a man of great genius may accomplish, even among a rude people, and thus pave the way for the advent of such as Francis, Kinsey, and Tilghman. But the need of physicians like Zachary, Wynne, and Griffitts was contemporary with every other in the new community. Their examples led the young men of ambition to yearn eagerly, in the want of similar at home, for the advantages these accomplished men had enjoyed abroad. It is indeed surprising to contemplate the number of those who, as they reached maturity, repaired to London, and especially to Edinburgh. And indeed, there is something romantic, we repeat, in the long-nurtured ambitions of such youths as Shippen, Morgan, Rush, and Kuhn, aspirations that were so abundantly realized, to found, upon the model of their Alma Mater, a university in their native city. For a while Shippen alone conducted the enterprise, not waiting for his compeer, Morgan, to finish his course and return to join in that benign work. The Medical School of Philadelphia thus began under one young man; but he was a young man who well comprehended the greatness of the work he had begun, and was in all points competent for its behests. When his colleague came, the impulse thus begun was enhanced, as it must have been, by the co-operation of one of such splendid gifts. When Rush came to join the resources of his splendid intellect, another step upward was attained, and on Kuhn's arrival the medical college was a great accomplished fact.

The history of no scientific or literary institution is more remarkable than that of the medical department of the University of Pennsylvania. From its very inception genius, long, patient study, resulting in full acquaintance with and facility to teach the various branches of medical science, have been prerequisites to professorships. It opened with one man of eminent gifts. Men of similar gifts one after another came and performed the parts they were to enact. As needs, and especially as pecuniary means, were increased, there followed that distribution of labor which was delayed until others came who were well known to be competent for the just exaltation of those branches which had theretofore been auxiliary to those more prominent.

It has been interesting to contemplate how many of these formerly considered subordinate branches were elevated into just recognition through the commanding genius of individuals whom the trustees, often against their will and their prejudices, were compelled to take into the University, and so make the distributions which, in their want of scientific culture, they had not considered necessary, and in their mistaken parsimony, had thitherto opposed. Notably difficult, as well as amusing, was the struggle against midwifery. None other than such as Shippen, young, gifted, ambitious, the scion of a strong old family, with the confidence that courageous, gifted youth has in the future, could have had the audacity to place in the *Pennsylvania Gazette* that advertisement against the "ignorant old women" who were wont to hover around the beds of the younger of their sex in the times of their sorest trials. But we have seen what this great science became under James and Dewees, and so of other branches.

In this sketch, which is necessarily brief, we have had to notice specially those who were connected with the medical schools. These, of course, were leaders. But Philadelphia has ever had physicians, not among the college and university faculty, who were men of decided ability. It must have been so from the exalted tone of the profession from the very earliest times. There was, as it were, an atmosphere of science in this city of which all must necessarily absorb. Men could not live in the same city with such men as Shippen and Morgan and Rush and Wistar and Chapman and James and Dewees and others like them and pursue the same vocation without in some degree being like them.

It was remarkable how late the physicians of Philadelphia were comparatively in the production of original works upon science. The pioneers were for the most part content to use the books of their eminent preceptors in the universities abroad. In time, however, quite a change has been induced in the medical literature of this country, in which Philadelphia has certainly had the most distinguished part. We have made few allusions to their works, having already enumerated them in a former chapter.

The history of epidemics that have visited Philadelphia is exceedingly interesting. We have already spoken of those to which Noah Webster alluded in terms so indistinct, and somewhat of those subsequent. The smallpox was bereft of most of its terrors, first through incoulation, and afterward by vaccination, the latter of which may be regarded as the very greatest achievement in medical science. The most dreaded scourge of this community at an early day was the yellow fever. Most interesting accounts of this epidemic have been published from time to time by Thompson Westcott, whose investigations concerning the early history of Philadelphia entitle him to the praise due for the very many important things he has rescued from oblivion.

The disease had prevailed to a considerable extent before 1741. In this year it reappeared under the name, as we have seen, of the Palatinate distemper. Criminations and recriminations passed between the Governor (Thomas) and the Assembly regarding the carelessness in admitting into port without proper quarantine "sickly vessels." The dispute between them had originated about the appointment of Dr. Graeme as physician of the port by the Governor,

and of Dr. Zachary by the Assembly. The season was a very sickly one. By an account published at the close of the year 1741 it appeared that there had been seven hundred and eighty-five burials in Philadelphia during that year. Upon five hundred and eighty of these the increase over the deaths among persons of the same denominations in the previous year was three hundred and ninety-five. The increase of deaths among the Episcopalians is not given; but at the average of other sects it would have shown an addition of one hundred and ten, making an aggregate increase of five hundred and five deaths beyond the bills of mortality of the previous year. The disease, although in effect the yellow fever, was called the "Palatinate distemper," because it was supposed to have been introduced from ships in which Palatinates, or German emigrants, were passengers. The mortality among these people was great. Two hundred and six Palatinates died of the pestilence during the summer, an increase of one hundred and sixty-six over the previous year; and ninety-four "strangers" were also victims, an increase of fifty-four deaths over the ratio of the preceding twelve months. The manner in which this disease was introduced is not now known. According to an expression of Thomas Penn, in a letter written in 1748, the deduction may be drawn that it was supposed to have been imported from the West Indies. We have already spoken of the plague in the years 1793 and 1794, and the heroic exertions made by the physicians who remained in the city, and many of the citizens[1] in the lead of Stephen Girard and Peter Helm. In this trying time the clergy of the city worked and suffered along with the rest. The number of deaths among them equaled that among the physicians. Those were Revs. Alexander Murray, of the Episcopal Church; F. A. Fleming and Lawrence Graess, of the Roman Catholic; John Winkhouse, of the German Reformed; James Sproat, of the Presbyterian; William Dougherty, of the Methodist; Daniel Offley, Huson Langstreth, Michael Wimer, and Charles Williams, ministers of the Society of Friends.

[1] The following is the list of citizens of the committee of forty-five appointed in 1793:

For the District of the Northern Liberties.—William Peter Spragues, William Gregory, Jacob Witman, James Swaine, Joseph Burns, George Forepaugh, Casper Snyder, Peter Smith.

Vine to Arch Street.—Richard Whitehead, Joseph Kerr, John Ettries.

Race to Arch.—Thomas Willis, Daniel Dawson, Peter Thomson, Thomas Allibone, Lambert Wilmer.

Arch to Market.—William Samson, Justinian Fox, Amos Wickersham.

Market to Chestnut.—Arthur Howell, Alexander Cochran, Thomas Dobson.

Chestnut to Walnut.—Jeremiah Paul, James Cummins, Casper W. Morris, Thomas Castleres.

Walnut to Spruce.—George Rutter, Benjamin W. Morris.

Spruce to Pine.—Samuel Pancoast, Jr., John Woodside, Levi Hollingsworth, William Watkins.

Pine to South.—John Wood, Adam Brittle, William Eckard, Thomas Dicksey, Ferguson McIlvaine.

Southwark.—William Tunis, Richard Moseley, William Robinson, Sr., John Grantham, John Savage, John Pattison.

It is horrible to read the details of suffering in those times, when were wanting the sanitary arrangements and preventives and charitable carings for the destitute which have been provided since. In many instances the adult members of families were carried off by the pestilence, leaving young children without relatives or friends. Such was the general terror that these innocents wandered abroad with none to restrain them. The children of a respectable citizen, in easy circumstances, were found in a blacksmith-shop, squalid, dirty, and in a state of hunger and destitution. Wherever these children went they were shunned, lest they should spread the infection; and their condition was therefore truly deplorable. The committee of citizens deemed it a duty to take measures to shelter the orphans. A house was rented in Fifth Street on the 19th of September, in which thirteen children were placed. This asylum was soon found to be too small, and on the 3d of October the committee procured a house belonging to the Loganian Library, in Little George, now Sansom Street, above Sixth, to which they built a temporary addition. In this shelter there were as many as sixty orphans at one time, forty others being at the same period placed out with wet-nurses. During the pestilence one hundred and ninety children were thus thrown upon the care of the committee.

When the scourge of 1793 was over the Legislature made liberal provision for the orphans who had been left destitute, and provided a general quarantine and health laws.

In spite of the precaution of a quarantine against New York, where the fever raged in 1795, there were about nine hundred deaths from it in Philadelphia during that year. In 1797 it made its appearance again in Philadelphia, the sooner and more virulently, as was supposed, from neglect of the proclamation of Governor Mifflin regarding quarantine. This year it was thought to have been introduced by the ship "Hinde" from Cape Nichola, Mole, and the "Arethusa" from Havana. The Health Office, No. 32 Water Street, among other arrangements made that of removing the sick, when newly stricken, outside of the city. Especially was the disease malignant in Penn and Pine Streets. An additional hospital was opened at the wigwam at Race Street, when about one-third of the inhabitants fled from the city, and one-sixth of the houses were shut. The mortality this year was one thousand two hundred and ninety-two.

In 1798, the health law having been found inadequate for all purposes for which it was intended to provide, the Board of Health was reconstructed. The Marine Hospital of the port of Philadelphia was established on State Island. The City Hospital, on Race Street, was appropriated for the city, Northern Liberties, Southwark, and Moyamensing. The Lazaretto was established on Tinicum Island. The approach of the epidemic was foreboded as heretofore by great mortality among the lesser domestic animals,

as dogs and cats. It was supposed, however, to have been immediately introduced by the armed ship "Deborah," from Port au Prince. The terror of the inhabitants this year was beyond all precedent. Of fifty-five thousand, it is computed that only fifteen thousand remained. The health office was removed from Walnut Street to the City Hall, the Custom-House to Congress Hall, at Chestnut and Sixth Streets, the post-office on Market west of Eleventh. Never had the scourge been so malignant. Five out of six who were seized by it perished. Owing to the prejudices against the City Hospital, provision had to be made for great numbers who could not endure the thought of being carried there. Tents were erected on the Schuylkill between Chestnut and Spruce Streets; another encampment was at Master's Place, on the Germantown road. During the time of the pestilence many awful occurrences took place. Sick persons were found in the streets suffering under the epidemic. Putrefying bodies were discovered in deserted houses in such a state of corruption that it was beyond the power of any one to recognize the remains. Dead bodies were seen upon the commons and lots in the outskirts of the city. People delirious from the fever ran through the streets almost naked; and in some cases the screams of persons who were attacked with the malady were heard at a square's distance from the houses in which the sufferers lay. Imagination cannot picture the terrible reality of the scenes which then transpired.

The number of deaths were three thousand six hundred and forty-five, a far greater mortality than in previous years, considering the immense number of citizens who had fled. In 1793 the per cent. of deaths was twenty-two; in 1788, even with the few who remained, it was twenty-four. The ever-disputed question of the contagiousness of the disease was argued by the faculty with accustomed acrimony. "The controversy was waged with bitterness, but without the establishment of any reliable theory."

The following year (1799) the epidemic again visited the city. A dispute occurred between the College of Physicians and the Academy of Medicine as to the origin of the disease, the former contending that it was caused by importation, and the latter from domestic sources. The government offices were made ready for removal to Trenton; the State prisoners were removed to Norristown. In the midst of the pestilence a bitter political contest was going on between Chief Justice McKean, Republican, and James Ross, of Pittsburgh, Federalist, for Governor. Governor Mifflin, to prevent access to the city of large numbers from the country, partisans of either candidate, changed the places of voting in the city from the State-House to Centre-House Tavern on Market Street, west of Broad, and from the Commissioners' Hall to a place on Love Lane, between Moyamensing and Passyunk roads. The mortality this year was somewhat over one thousand.

The recurrence of the epidemic in 1802 was again generally ascribed to importation. This time by the St. Domingo packet from Cape Français, in spite of its long quarantine at the Lazaretto. The fever began at Vine Street wharf, where she had landed. It continued for some time about Vine and Water Streets, gradually along Front to Callowhill. Though increasing afterward with greater rapidity and malignity than ever before, it had expended the worst of its fury by the middle of August. The Northern Liberties were the most sorely visited. The whole mortality was not above three hundred.

In 1832, Philadelphia, with many other portions of the country, was visited by the Asiatic cholera. The mortality, however, was far less than it had been under the yellow fever, being only seven hundred and eleven. It returned in 1849, and again in 1854, but with much less disastrous results.

The American Medical Association was formed in Philadelphia in 1847. The reputation acquired by the first medical colleges in the country, notably that in Philadelphia, had led to the organization of a large number of others. In the period of fifteen years, from 1830 to 1845, the number had been doubled. Leading men in the profession easily foresaw the evil that would result from such multiplication, in the dereliction of professional excellence on account of the reduction in the standard heretofore required to be reached before the obtainment of degrees. As early as 1835 the Medical College of Georgia, founded mainly by Dr. Anthony, had advocated a convention of delegates from all the medical colleges, with a view of preventing as far as possible the effects of such continued rivalry. After a long time such a convention was agreed to be held, Philadelphia and Boston being the latest to respond to the call. The first (the one called at New York) failed because of a want of representatives from as many as one-half of the United States, and adjourned *sine die*. This was in 1846. Another was called for Philadelphia for May of the following year. The first resolution adopted in the matter of the personal qualifications of young men before being received even as students in physicians' offices, after a long debate, was adopted. It is in the following words:

"*Resolved*, That this convention earnestly recommends to the members of the medical profession throughout the United States to satisfy themselves, either by personal inquiry or written certificate of competent persons, before receiving young men into their offices as students, that they are of good moral character, and that they have acquired a good English education, a knowledge of natural philosophy, and the elementary natural sciences, including geometry and algebra, and such an acquaintance, at least, with the Latin and Greek languages as will enable them to appreciate the technical language of medicine and read and write prescriptions."

The debate upon these resolutions showed how the standard had already been lowered, but they were adopted by a decided majority. After several days' sittings the association was finally established. The following is a list of the first officers, who were chosen unanimously: President, Dr. Nathaniel Chapman, of

Pennsylvania; Vice-Presidents, Drs. Jonathan Knight, of Connecticut, Alexander H. Stevens, of New York, James Moultrie, of South Carolina, and A. H. Buchanan, of Tennessee; Secretaries, Drs. Alfred Stillé, of Philadelphia, and J. R. W. Dunbar, of Baltimore; Treasurer, Dr. Isaaç Hays, of Philadelphia.

It is difficult to overestimate the blessing that the formation of this association has been to the medical profession of the United States. Among all it has done, probably second to none both in importance and benignity is the action at the second annual meeting, in 1849, at Boston, regarding the increased devotion to medical literature and the assistance to be rendered physicians in the publication of their works.

The Clinical Society was organized under the name of the Northern Medical Association of Philadelphia on the 5th of December, 1846, at a meeting held at the Northern Dispensary, No. 603 Spring Garden Street. The first officers were Dr. Benjamin S. Janney, president; Dr. Arnold Naudain, vice-president; Drs. Thomas H. Yardley, N. L. Hatfield, and John Uhler, council; Dr. M. B. Smith, treasurer; Dr. Isaac Remington, recording secretary; and Drs. R. H. Townsend and Joseph R. Bryan, reporting secretaries. The meetings were held at the Northern Dispensary, but when the location of that institution was changed to 608 Fairmount Avenue the association moved with it. The association received its original name from the fact of its being composed of physicians residing in the northern portion of the city. It is the only medical society in the city open to women, Dr. Hannah T. Croasdale and Dr. Ida E. Richardson being the first lady members admitted, on the 22d of April, 1881. The Northern Medical Association was reorganized as the Philadelphia Clinical Society, at a meeting held Jan. 25, 1884, at the College of Physicians, corner of Thirteenth and Locust Streets. The following officers were elected: President, Dr. Henry Beates, Jr.; Vice-President, Dr. E. E. Montgomery; Second Vice-President, Dr. Hannah T. Croasdale; Corresponding Secretary, Dr. Ida E. Richardson; Recording Secretary, Dr. I. G. Heilman; Reporting Secretary, Dr. G. Betton Massey; Treasurer, Dr. L. Brewer Hall; Censors, Drs. A. S. Barton, S. N. Troth, Albert H. Smith, James B. Walker, and Henry Rihl. The number of members after reorganization was about seventy. The society meets at the College of Physicians on the fourth Friday of every month, except July and August. The initiation fee is three dollars and the annual dues two dollars. The society is composed entirely of resident members.

The Philadelphia County Medical Society was organized at a meeting held at the Hall of the College of Pharmacy, on Filbert Street above Seventh, on the 11th of December, 1848, at which Dr. Samuel Jackson was made president, and Dr. D. Francis Condie, secretary. The first stated meeting was held at the same place on the 16th of January, 1849, when Dr. Samuel Jackson was elected president for the ensuing year; Dr. George Fox and Dr. T. F. Betton, vice-presidents; Dr. D. Francis Condie, recording secretary; Dr. Henry S. Patterson, corresponding secretary; Dr. M. M. Reeve, treasurer; and Drs. T. Hobson, Wilson Jewell, J. F. Meigs, Isaac Parrish, and D. Tucker, censors. The successive presidents have been:

Dr. Samuel Jackson, 1849–53; Dr. John F. Lamb, 1853; Dr. Thomas F. Betton, 1854; Dr. D. Francis Condie, 1855; Dr. Wilson Jewell, 1856; Dr. Gouverneur Emerson, 1857; Dr. John Bell, 1858; Dr. Benjamin H. Coates, 1859; Dr. Isaac Remington, 1860; Dr. Joseph Carson, 1861; Dr. Alfred Stillé, 1862; Dr. Samuel D. Gross, 1863; Dr. Lewis B. Gebhard, 1864; Dr. Nathan L. Hatfield, 1865; Dr. William Mayburry, 1866; Dr. Andrew Nebinger, 1867; Dr. George Hamilton, 1868; Dr. William L. Knight, 1869; Dr. William H. Pancoast, 1870; Dr. James Aitken Meigs, 1871; Dr. D. Hayes Agnew, 1872; Dr. William B. Atkinson, 1873; Dr. Washington L. Atlee, 1874; Dr. William Goodell, 1875; Dr. T. M. Drysdale, 1876; Dr. Henry H. Smith, 1877–80; Dr. A. H. Smith, 1880–81; Dr. H. Y. Evans, 1882; Dr. W. M. Welch, 1883–84.

The society was incorporated Oct. 2, 1877. Since 1878 it has issued an annual report of its transactions. The number of members in January, 1884, was four hundred and ten. The society is the only one in this city which is entitled to representation in the American Medical Association or the Medical Society of the State of Pennsylvania. It meets in the building of the College of Physicians, corner of Thirteenth and Locust Streets.

The objects of the society are: "The advancement of knowledge upon all subjects connected with the healing art, thereby lessening human suffering by investigating the diseases and remedies which are peculiar to this country, and enlarging the avenues to knowledge from the discoveries and publications of foreign countires; the organization of the medical profession in connection with the Medical Society of the State of Pennsylvania and the American Medical Association; the elevation of the character and the protection of the rights and interests of those engaged in the practice of medicine, and the study of the means calculated to render the medical profession most useful to the public and subservient to the interests of humanity."

The members of the society must be citizens of the county of Philadelphia, graduates of at least one year's standing from a respectable medical school, and of good moral and professional reputation. A physician removing into this county is not eligible for membership until he has practiced for one year within the county. The admission fee is five dollars, the annual contribution four dollars. Stated meetings are held on the first Wednesday of January, April, June, and October. Conversational meetings are held on the second, third, and fourth Wednesdays of each month from September to June, both inclusive.

The Pathological Society was organized on Oct. 14, 1857, at a meeting held in the picture-house of the Pennsylvania Hospital, on Spruce Street, above Eighth. The first officers were as follows: President,

Professor Samuel D. Gross, M.D.; Vice-Presidents, Dr. René La Roche and Dr. Alfred Stillé; Treasurer, Dr. Addinell Hewson; Secretary, Dr. Jacob M. Da Costa; Assistant Secretary, Dr. T. G. Morton. During the earlier portion of its existence, before the County Society had acquired a great degree of importance, the College of Physicians and the Pathological Society were the two most important medical organizations in Philadelphia. Among its members have been the most prominent physicians of the city. The successive presidents of the society have been as follows: Dr. Samuel D. Gross, 1857; Dr. René La Roche, 1858; Dr. Alfred Stillé, 1859, 1861–62; Dr. Edward Hartshorne, 1860, 1863; Dr. Jacob M. Da Costa, 1864–66; Dr. John H. Packard, 1867–68; Dr. S. Weir Mitchell, 1869; Dr. John Ashhurst, Jr., 1870; Dr. James H. Hutchinson, 1871–72; Dr. William Pepper, 1873; Dr. H. Lenox Hodge, 1876; Dr. Samuel W. Gross, 1879; Dr. James Tyson, 1882. The society meets in the building of the College of Physicians.

The objects are "the cultivation and promotion of the study of pathology, by the exhibition and description of specimens, drawings, and other representations of morbid parts." Its meetings take place on the second and fourth Tuesdays of every month, except July and August. Its membership is composed of residents, non-residents, and correspondents, any respectable physician being eligible. The admission fee to resident members is five dollars, and the annual contribution four dollars. A committee on pathological research, a committee on publication, and a committee on morbid growths are elected annually in October. The committee on pathological research is empowered to aid, from the funds of the society, any member of the society engaged in pathological experiment, upon being satisfied that such research is in actual progress, and that it is so conducted and of such a nature as to benefit the science of pathology. The results of such inquiries must be contributed to the "Proceedings of the Pathological Society." To the committee on morbid growths the specimens exhibited in the meetings of the society may be referred for microscopical examination.

The Obstetrical Society was organized at a meeting held June 6, 1868. Dr. Francis G. Smith was elected the first president. The number of original members was twenty-eight. The successive presidents have been: 1868, 1869, and 1870, Dr. Francis G. Smith; 1871, Dr. Robert P. Harris; 1872 and 1873, Dr. William Goodell; 1874 and 1875, Dr. Albert H. Smith; 1876, Dr. John S. Parry; 1877 and 1878, Dr. John H. Packard; 1879 and 1880, Dr. Lewis D. Harlow; 1881 and 1882, Dr. Edward L. Duer; 1883 and 1884, Dr. Richard A. Cleeman. The society was incorporated April 14, 1877. The number of active members in February, 1884, was ninety-two. The society has always met in the building of the College of Physicians.

The object of the society is the advancement of the study of obstetrics and diseases of women and children. There are four classes of members,—resident, associate, corresponding, and honorary,—all of whom must be practitioners in good standing in the profession, and especially interested in the study of obstetrics or the diseases of women and children. The entrance-fee payable by resident members is five dollars, and the annual dues three dollars. The regular meetings of the society take place upon the first Thursday of every month.

The Medico-Legal Society of Philadelphia was organized as the Northwestern Medical Association at a meeting held in a hall at the corner of Twentieth Street and Ridge Avenue, on the 8th of November, 1877. Dr. George E. Stubbs was temporary chairman. The original design of the society was the protection of physicians against patients who were likely to be delinquent in paying bills, by the preparation of confidential lists containing the names of such persons. The first permanent officers were elected on the 1st of February, 1878, Dr. C. R. Paul being chosen president; Drs. T. S. Butcher and G. M. D. Peltz, vice-presidents; Dr. Richard D. Stretch, recording secretary; Dr. T. V. Crandall, corresponding secretary; Dr. J. D. Nash, treasurer; and Drs. A. S. Gerhard, J. Peltz, and M. Franklin, censors. These officers all retained their positions until April of 1883, except that Dr. Franklin was succeeded, in 1879, by Dr. D. N. Connor. The officers elected April, 1883, are as follows: President, Dr. Thomas B. Butcher; First Vice-President, Dr. T. V. Crandall; Second Vice-President, Dr. F. B. Hazel; Secretary, Dr. Richard G. Stretch; Corresponding Secretary, Dr. George B. Oliver; Librarian, F. L. Weir; Censors, J. Peltz, A. S. Gerhard, and D. N. Connor. The society has held its meetings at the offices of its members. A reorganization took place in 1883, the name of the society being changed to the Medico-Legal Society, and its province widened to include the reading and the discussion of papers upon the subject of medical jurisprudence. Lawyers are admitted as members. Conversational meetings take place monthly, and business meetings quarterly.

The Laryngological Society was organized at a meeting held at the house of Dr. J. Solis Cohen, 1431 Walnut Street, on the 7th of May, 1880, at which Dr. J. Solis Cohen was chosen president; Dr. Carl Seiler, secretary; and Dr. Harrison Allen, Dr. Isaac Barton, and Dr. George Y. McCracken, the executive committee. The first stated meeting was held on the 28th of May following at the house of Dr. Cohen, when the officers elected at the previous meeting were continued for the ensuing year. Dr. Cohen was president for two years, Dr. Harrison Allen succeeded him in 1882, and Dr. Charles S. Turnbull in 1883. Dr. George Y. McCracken is the present secretary.

The object of the society is to promote an interest in the study of diseases of the throat and nose. Members are all specialists in laryngology or in

associated diseases of the head. The initiation fee is five dollars, the annual dues two dollars. The society meets at the houses of members on the last Friday of each month, each member in turn being visited. A paper is read at each meeting, and interesting cases are exhibited.

The Medical Jurisprudence Society originated in the beginning of 1884, Dr. Henry Leffman and Hampton L. Carson being the prime movers in its organization. The preliminary meeting was held on the 18th of January, 1884, in the hall of the College of Physicians, at which Dr. Samuel D. Gross was chosen president, and committees were appointed to prepare for a permanent organization. Meetings are held monthly from October to May, inclusive. The society is to be composed of members of the medical and legal professions and such other persons as may be interested in medical jurisprudence.

The Philadelphia Neurological Society.—The first meeting to organize the Philadelphia Neurological Society was held in the building of the College of Physicians on the evening of the 15th of December, 1883, pursuant to a call issued by Drs. Charles K. Mills, F. X. Dercum, J. T. Eskridge, and Wharton Sinkler. At a second meeting, on Monday, Jan. 28, 1884, the following officers were elected: President, Dr. S. Weir Mitchell; Vice-Presidents, Drs. Charles K. Mills and I. N. Kerlin; Secretary and Treasurer, Dr. James Hendrie Lloyd; Council, Drs. S. Preston Jones, Wharton Sinkler, and J. T. Eskridge; Recorder, Dr. Lewis Brinton.

The object of the society is to promote the study of neurology in all its branches. Members must be engaged in some branch of the study. The society is composed of active, corresponding, and honorary members. The first-named must be regular physicians, residing in the city of Philadelphia or its vicinity. Corresponding members live outside the immediate vicinity of Philadelphia, and are limited to twelve in number. Honorary members are distinguished neurologists or alienists, who are not active or corresponding members. They are limited to six in number. The annual dues are four dollars. The meetings are held on the fourth Monday of every month from October to April, inclusive. The society admits ladies as members.

Homœopathy in Philadelphia.—While the regular schools and practitioners of Philadelphia have justly attained a reputation that is world-wide, the fame of the other great branch of the profession, the homœopaths, is not less enviable. Both in teaching and in practice, as well as in original investigation and the application of discoveries, the roll of their members discloses many most eminent and honored names of men who have conferred lustre upon what has not been inaptly termed the noblest and most beneficent science in which the human intellect can be employed. Their record may not be so voluminous and venerable as that of the regulars, for the distinctive system of Hahnemann only dates back to about the beginning of the present century, and many of its disciples did not become converts to it until they had reached or passed middle age, and been long engaged in the other school. It was not introduced in Philadelphia until 1831, when Dr. George Butt, who was a friend of Dr. Constantine Hering, and had studied homœopathy with him in Paramaibo, South America, opened his office here. The next was the cholera year, and Dr. Butt was very successful in his treatment of the disease. He remained in this city until 1837, when he removed to Nazareth, Pa., dying there in 1875. In 1833 he was joined by Dr. Constantine Hering, a native of Saxony, born in 1800, and one of the ablest champions of homœopathy. Some time after this Dr. Hering opened a school of the new system in Allentown, but it was not a success in the financial sense, and he returned to Philadelphia. He accumulated an extensive practice, and died in 1879. One of his pupils, Dr. Lingen, was a practitioner in 1839, and in 1848 removed from Philadelphia to Mobile, where he died in 1864. Dr. Matlack was probably also a student of Dr. Hering, as he, in 1835, had a homœopathic office on Arch Street, below Seventh. In 1870 he removed to Germantown, and died there five years later. Dr. Gideon Humphrey was, between 1836 and 1840, practicing homœopathy in Philadelphia, and was noted for his zeal in the propagation of its principles, to which he was a convert from the other school. He was a native of Delaware, to which he returned some forty years ago. Dr. Jacob Jean's initiation into homœopathy dates back to 1835, and he remained faithful until his death, in 1879. In 1836, Dr. Jonas Green came over to homœopathy, and about 1860 removed to New Orleans for the remainder of his life. Following closely after him was Dr. Walter Williamson, who opened his office in Philadelphia in 1839. He was one of the organizers of the American Institute of Homœopathy, of which he was president in 1848, and of the Medical College of Pennsylvania, in which he filled a professional chair. As a teacher he had under his charge scores of the later practitioners. He died Dec. 19, 1870. These early Hahnemannians had up-hill work to gain the confidence of the public in their innovations upon the familiar system of medicine, and one of those who did exceedingly effective service was Dr. Samuel Richard Dubs, who practiced for three years after his graduation, in 1836, and in 1839 changed to the new school because it had built up his own health after the other had failed to do so. For the following nineteen years he practiced in Philadelphia, where he was engaged in the foundation of the first homœopathic college in the United States, the American Institute of Homœopathy, and the Provers' Union. He was the first homœopath to employ and advocate, in 1839 and 1840, the preparation of medicines on the decimal scale, and of carrying the attenuations up by that scale instead of by the centennial, as recommended by Hahnemann.

Still another pioneer was Dr. Adolphus Lippe, son of Count Ludwig von Lippe, who learned homœopathy in Dr. Hering's Allentown school. A keen and thorough controversialist, he was always prepared to do battle with his tongue or pen for his opinions. In 1847 he removed from Carlisle to Philadelphia, and from 1863 to 1868 he filled the chair of Materia Medica in the Homœopathic College. Although Dr. Walter Ward left Philadelphia in 1849, it was here that he qualified in his profession, joining the American Institute of Homœopathy at its first session in Philadelphia, and becoming professor of Physiology in the Homœopathic College, where he, with others, had the honor of signing the first diplomas granted by that body. Another graduate of Dr. Hering's school was Dr. Charles Neidhard, who, after 1837, was professor of Clinical Medicine in the Homœopathic Medical College, and participated in the founding of the American Institute. Contemporary with him was James Kitchen, A.M., M.D., who adopted homœopathy in 1839, because the latter treatment had been triumphant in his own case. In 1828 he published a translation of Bouillaud's "Treatise on Rheumatism," and in 1841 a translation of Jahr's "Homœopathic Pharmacy." He relinquished the chair of Clinical Medicine in the Homœopathic College after one term, was placed in charge of the quarantine station in 1831, and was port physician from 1832 to 1836. Dr. W. S. Helmuth studied homœopathy by the advice of Dr. Kitchen, and began the practice of it in 1840. Dr. Joseph Sims was a nephew of Dr. Helmuth, and a student in his office. He died in 1881. Dr. Joseph Berens graduated in medicine in 1841 at the Pennsylvania College, and two years later entered on the practice of homœopathy in Philadelphia. John K. Lee, A.M., M.D., who, from 1861 to 1863, was professor of Materia Medica and the Institutes of Medicine in the Homœopathic College of Philadelphia, had received his degree from it in 1841. He was also United States pension surgeon.

A learned native of Würtemberg who became a convert to the tenets of Hahnemann while serving as surgeon in the army of his country was Dr. Adolphus Fellger, who sailed for America in 1847, and speedily graduated from the Pennsylvania Homœopathic Medical College, making his new home in this city. He was as well known as a scientist as a practicing physician, and much of his time was spent in foreign travel. Dr. Charles Everett Toothaker came of a family that emigrated to America in 1604, and in which, from that time onward, there was an unbroken line of physicians. The date of his graduation from the Homœopathic College of Pennsylvania was 1851, when he was forty-six years of age. The pages of the *Philadelphia Journal of Homœopathy* have been largely enriched by his pen. In 1854 he assisted Dr. A. E. Small in preparing his work on domestic practice, and also wrote upon skin diseases. He claims to have been the first physician who advocated the homœopathicity of hot applications to heated, inflamed surfaces instead of cold, and he has strenuously argued for the most liberal culture for medical practitioners.

It will be seen that even previous to 1850 the Homœopathic Medical College of Pennsylvania, and the Hahnemann Medical College of Philadelphia, were established upon a firm basis. Dr. Richard Gardiner graduated from the former in 1848, and in company with Dr. Gideon Humphrey, his intimate friend, began homœopathic practice, and was a physician in active service for more than sixty years. In the list of those whose connections with these institutions are well known were Dr. Henry Newell Guernsey and Dr. Jabez Dake, the latter one of the editors of the *Philadelphia Journal of Homœopathy*. Dr. Guernsey entered the Pennsylvania College in 1856, and was for a long term professor of Obstetrics and Diseases of Women and Children, as well as dean of the faculty, and was also author of the "Key-Note System." At the centennial celebration, in 1855, of Hahnemann's birthday, Dr. Dake delivered the oration, which was largely instrumental in elevating him to the chair of Materia Medica in the Hahnemann College. Dr. Amos Russell Thomas adopted the new school soon after his settlement here, in 1856, and in 1867 took the chair of Anatomy in the same college, in addition to filling which he held the position of editor of the *American Journal of Homœopathic Materia Medica*. Another organ of the profession is the *Hahnemannian Monthly*, of which the editor is Robert J. McClatchey, who has been in succession demonstrator of Anatomy and professor of Anatomy in the Homœopathic Medical College. He has been secretary of the Philadelphia Homœopathic Medical Society from its institution, and in June, 1871, was elected general secretary of the American Institute of Homœopathy.

Dr. McClatchey's predecessor as editor of the *Hahnemannian Monthly* was Dr. James H. P. Frost, who removed to Philadelphia in 1865, to accept the professorship of Physiology in the Homœopathic College, and retired from the editorial and college chairs in 1868, to recruit his health in the country.

Dr. Henry Noah Martin became a homœopathic physician after the civil war, on account of his belief that the system had saved his life while he was in the Union army. He has been professor of Physiology in the Homœopathic College, and professor of Obstetrics and Diseases of Women and Children, professor of Clinical Medicine, and professor of Practice in the Hahnemann College. His labors in the literature of the profession have partly consisted of assisting in editing the *Journal of Homœopathic Materia Medica*, and especially conducting the department of practice and clinical medicine, and he has also edited the department of gynæcology in the *Medical Investigator*.

Dr. Morgan John Rhees was a Philadelphian by birth, but after adopting homœopathy, in 1846, when he was chosen a member of the American Institute, he removed to New Jersey, and in 1849 to California. He was one of the early Hahnemannians in this vicinity who were entirely educated in that system.

Dr. David James, who became a convert to the Hahnemann school in 1841, and came to Philadelphia fifteen years later, was the father of Bushrod James, and preceptor of Dr. John R. Reading, who, in 1868, was elected from the Fifth District of Pennsylvania to the United States Congress. A pupil of Dr. Reading is Dr. William H. H. Neville, who took his degree in 1865 at the Homœopathic College, and is a member of the County Medical Society of Philadelphia, the State Society, and the American Institute.

To the instrumentality of Bushrod W. James, A.M., M.D., the Homœopathic Medical Society of Pennsylvania is largely indebted for its existence. For seven years he was its recording secretary, and was then promoted to its presidency. He has acquired a high reputation as a surgeon, having given much of his energy to that branch upon his graduation from the Homœopathic College, in 1857, the same year in which Dr. Walter Martin Williamson, son of Dr. Walter Williamson, already spoken of, took his degree. The second Dr. Williamson has been chairman of the Bureau of Organization, Registration, and Statistics of the American Institute, and chairman of the Bureau of Clinical Medicine and Zymosis of the State Association. Dr. Charles G. Rane occupied an office in Philadelphia from 1847 to 1850, and returned to the city in 1859. Between 1864 and 1870 he was professor of Pathology and Diagnosis at the Homœopathic College, and issued a work upon Special Pathology. A Philadelphia homœopathist, who from 1862 to 1865 served as surgeon in the United States army, is Dr. Rufus Sargent, who in 1857 had begun his practice in this city.

Dr. C. Carleton Smith used to study medicine and compare the various systems while employed as a dry-goods clerk, and his decision resulted in his receiving the diploma of the New York Homœopathic Medical College in 1861, he being at that time twenty-eight years of age. His residence in Philadelphia did not commence until nine years later, but shortly after his arrival here he was elected to the chair of Special Pathology and Diagnosis in the Hahnemann College, and in 1872 an honorary member of the Hahnemann Medical Institute. Like many of his professional associates, he has a share in the editorial work of the *Medical Investigator*.

It is, perhaps, an unique incident that a physician should graduate into the ranks of his profession from a nautical life, but such was the experience of Dr. John J. Garvin, who previous to the civil war had commanded a steamer plying between Philadelphia and Savannah, and was chief officer of several government transports during the war. He had always used homœopathic medicines at sea, and when his vessel was laid up, in 1857, he completed a course of study at the Homœopathic College of Philadelphia, where he obtained his degree in 1863. Released from his maritime vocation, he settled down to practice in Philadelphia, where he was born in 1819. Dr. Richard Cox Allen, author of the "Dissector's Guide," an authority on anatomy, and a member of the American Institute, saw in 1865 a remarkable cure of diphtheria by Hahnemannian methods, and at once gave up the old school for the new. He is a graduate of the Homœopathic College of Philadelphia, and selected the Frankford district for his field of labor. Dr. William Henry Smith was in his native England a pupil of Gideon Humphrey, and enjoys the notable distinction of being the first person who applied homœopathic medicine to the diseases of animals, which he did as a repetition of the argument that it is the imagination which effects the cure. He had to practice in this line on analogy alone, as there were then no books to aid him, but he succeeded in making his demonstrations. In 1864, in the fifty-third year of his age, he graduated at the Homœopathic College. The successor to the practice of Dr. Dubs, who retired in 1857, was Dr. G. R. Starkey, who had graduated at the same college two years previously, and at which he was, in 1860, elected to the chair of Anatomy, retiring in 1879 in order that he might uninterruptedly perfect the treatment of disease by compound oxygen gas. He also filled the chair of Surgery for several years.

Among the native-born Germans who were led by Dr. Hering to look to homœopathy as the most meritorious theory of medicine, was Dr. John Michael Weick, a resident of Philadelphia from 1852. Dr. William Henry Keim, a graduate of the Hahnemann Medical College, was, in the winter course of 1872–73, assistant demonstrator of Anatomy in that institution, and since April, 1871, physician to the dispensary of the college.

When Dr. Malcolm Macfarlan was appointed professor of Surgery in the Homœopathic Medical College of this city, in 1867, he had had five years of service in the United States army as hospital steward, druggist, and surgeon, and held a degree from the medical department of Yale College. In Philadelphia he set himself to work to establish a surgical and operative clinic, the first of any account in a homœopathic college. On the union of the Homœopathic College and the Hahnemann Medical College, in 1869, he was appointed professor of Clinical Surgery in the new institution.

Dr. Thomas Moore was appointed surgeon to the Northern Home for Friendless Children soon after homœopathy was introduced into it. In 1857 he was elected professor of Anatomy, and in 1859 professor of Obstetrics in the Homœopathic College of Pennsylvania, a connection which his removal to Germantown, in 1860, obliged him to sever.

A physician who also occupied the chair of Anatomy was Dr. John Coleman Morgan, who was chosen to it in 1865, and afterward to the professorship of Surgery in the Hahnemann College. The inception of the Homœopathic Hospital was a project to which he extended zealous aid. He is associate professor of the *American Journal of Homœopathic Materia Medica.*

The general opposition—at least until quite recently—of the medical profession to the admission of women we do not propose to do more than allude to. But it comes within the duty of the historian to speak of the careers of two women of renown. They are Dr. Sarah Brooks Pettingill and Dr. Emily Ridgway Robbins. Dr. Pettingill was born in Charlestown, Mass., May 16, 1810. She was the daughter of Jacob Felt, and in 1827 she married John Pettingill, and when they removed to Philadelphia, in 1835, she had indulged her innate love of the study of medicine by fairly grounding herself in its rudiments. In 1858 she had been two years regularly engaged in a course of instruction, which she decided to continue a third year if she could graduate honorably from the Pennsylvania Medical University, of which she had become a member. The permission was accorded her, and she gained her diploma; but her convictions were so greatly formed on the Hahnemannian precepts that she applied to the dean of the Homœopathic College for admission. The rules closed the doors against her or any other female, and the utmost concession she could obtain was that she might attend the lectures on practice and Materia Medica if she would sit behind a partition to screen her from the view of the male students. She accepted the conditions, and thus attended two courses of lectures, from which she deduced sufficient of the homœopathic system to apply it in her practice among her own sex. In 1871 the profession had so far progressed in the broadening of its views that she was elected a member of the American Institute of Homœopathy. She was the pioneer woman in the practice of homœopathy in Philadelphia. Her daughter, Ehia Felt Pettingill, graduated from the Woman's Medical College in Philadelphia in 1864, and from the Pennsylvania Medical College in 1865.

Mrs. Emily Ridgway Robbins, M.D., was at first a determined opponent, and subsequently a firm advocate, of homœopathy. She matriculated at the Penn Medical University in 1855 and graduated in 1859. All her skill and energy could not secure for her professional success in the face of the then prevalent antipathy in Philadelphia to women doctors. Locating at Fort Madison, Iowa, the people there gave her a cordial welcome. At that period she was much disposed to deride the "fallacious nonsense," as she termed it, of homœopathy; and even after she married, in 1862, Dr. Charles W. Robbins, of Philadelphia, a homœopathic physician, her views but slowly underwent a change. But when they found themselves back in their native city and he fell sick, she undertook to attend to his practice. As his patients would have nothing but homœopathy, it became compulsory upon her that she should learn its formulæ. She did so, and was always a homœopath from that time on. The many occasions she was twitted for her adoption of a system that she had once so fervently antagonized are noted in numerous anecdotes. Having taken up homœopathic practice perforce, she continued steadfast to it. In 1872 she was admitted a member of the Homœopathic Medical Society of Pennsylvania.

The Homœopathic Medical Society.—The first Homœopathic Medical Society begun in this city, and probably in the United States, was organized in 1833, but it had only a brief existence. Several of its successors met with the same fate, and it was not until the institution of the Homœopathic Society of the County of Philadelphia that a permanent organization was effected. This society originated from an informal meeting held Feb. 10, 1859, at the office of Dr. Richard Gardiner, at which were present, beside Dr. Gardiner, Dr. J. R. Coxe, Jr., Dr. Samuel R. Dubs, Dr. John G. Howard, Dr. Charles E. Toothaker, Dr. J. K. Lee, Dr. G. R. Starkey, Dr. D. Cowley, Dr. C. B. Compton, and Dr. G. Wolf. Dr. Coxe was appointed chairman. At a meeting held on the 10th of March following, a constitution and by-laws were adopted, and twenty-nine members were enrolled. Meetings were held regularly until October, 1860, when, for lack of attention, they were discontinued until Nov. 22, 1865, when one meeting was held. The next meeting was held on the 22d of February, 1866, when a committee was appointed to take measures for the organization of the society as at present constituted. Circulars were issued to all the homœopathic physicians of Philadelphia and vicinity, calling a convention "to devise some acceptable plan of organization whereby all might co-operate in the furtherance of the cause of homœopathy," to meet in the Dental College building, corner of Tenth and Arch Streets, on the evening of March 8, 1866. The meeting was large and enthusiastic. A constitution and by-laws were adopted, and the society was named "The Homœopathic Medical Society of the County of Philadelphia." All persons who assisted in the organization were declared members, and all persons who had obtained the degree of Doctor of Medicine, and were practicing according to the formula *similia similibus curantur*, were declared eligible for membership. At a meeting held April 19, 1866, in the Hahnemann Medical College, Dr. Richard Gardiner was chosen the first president, and Dr. Robert J. McClatchey secretary. The society has since met at the Hahnemann Medical College. Soon after organization effective measures were taken by the society to erect the Homœopathic Hospital. In all matters relating to homœopathy in the State the society has exerted a wide influence. Most of the articles read before the society, and the discussions thereon, have been published in the *Hahnemannian Monthly.*

The successive presidents have been Dr. Richard Gardiner, 1866–70; Dr. Walter Williamson, 1870–71; Dr. Jacob Jeanes, 1871–73; Dr. W. M. Williamson, 1873–74; Dr. P. Dudley, 1874–75; Dr. A. R. Thomas, 1875–77; Dr. R. J. McClatchey, 1877–78; Dr. John K. Lee, 1878–79; Dr. E. A. Farrington, 1879–81; and Dr. William B. Trites, 1881–84. The number of members of the society in February, 1884, was one hundred and fifty-three.

The object of the society is briefly stated in its constitution to be "the advancement of medical science." The officers of the society are a president, a vice-president, a treasurer, a secretary, and three censors, who are chosen at the annual meeting in April. Stated meetings are held on the second Thursday of each month, except July and August. The initiation fee is one dollar, and the annual contribution one dollar.

Dental Surgery is an important branch of the medical profession, and the Philadelphia dentists have not failed to qualify themselves for the proper discharge of the most delicate and difficult labors that they can be called upon to perform. They measure up to the central maxim of their science as it is now taught,—that the business of the dentist is not primarily to pull teeth or fit false teeth, but to preserve the teeth of the patient in every instance where it is possible to do so. They have their Pennsylvania College of Dental Surgery and their Philadelphia Dental College; and when we contrast the present perfection of the science with its rude beginnings, we discover some curious facts relative to its early stages. It seems that some of our ancestors in the last century had teeth which originally grew in the heads of other people. Mr. B. Fendall, a dentist, who was for some time in Philadelphia, advertised in the *Maryland Gazette*, Sept. 24, 1779, that "those who have had the misfortune of losing their teeth may have natural teeth transplanted from one person to another, which will remain as firm in the jaw as if they originally grew there." In his "Annals of Philadelphia," Watson says that he had seen a printed advertisement of the year 1784, wherein Dr. Le Mayeur, dentist, proposed to the citizens of Philadelphia to transplant teeth, stating that he had successfully transplanted one hundred and twenty-three teeth in the preceding six months. At the same time he offered two guineas for every tooth that any person might be disposed to sell to him. Watson adds: "This was quite a novelty in Philadelphia; the present care of the teeth was ill understood then. He had, however, great success in Philadelphia, and went off with a great deal of our patricians' money. Several respectable ladies had them implanted. One of the Meschianza belles had such teeth. They were, in some cases, two months before they could eat with them. One lady told me she knew of sixteen cases of such persons among her acquaintance."

Turning from this picture of the clumsy dentistry of a hundred years ago, we are brought to notice that Philadelphia not only now has three of the best equipped and most efficient dental colleges in existence, and her practitioners are not excelled anywhere, but they have also exerted a potent and widespread influence in the formation of professional associations other than those existing in this city. The Pennsylvania Dental Association was organized at a meeting held in the hall of the Philadelphia Dental College, and the original suggestion for the creation of the American Dental Association came from the pen of the late Dr. McQuillen. A large proportion of the text-books of dental science have been written by Philadelphians, and a still larger proportion have been published here. Stockton's *Dental Intelligencer* was the first periodical in this city devoted to dentistry, and the second in the world. *The Dental News-Letter* was originally issued in October, 1847, as a quarterly pamphlet of sixteen pages, by Jones, White & Co. Its size was increased from year to year until the numbers of the fifth volume comprised sixty-four pages, and J. D. White, D.D.S., M.D., and J. R. McCurdy were appointed its editors.

The Dental Cosmos, a monthly journal, was started under the ownership of Jones & White in 1859, the editors being J. D. White, J. H. McQuillen, and George J. Ziegler. In 1861 Dr. S. S. White became the sole proprietor. In 1865 the editorship of J. D. White ceased, Drs. McQuillen and Ziegler continuing. In 1872 J. W. White, M.D., D.D.S., assumed the editorial charge, in which position he still remains. This journal from the first has been managed with marked ability, and probably has a larger circulation than any other dental journal in the world.

The Dental Times, a quarterly, was issued July, 1868, and ran a course of some ten years. It was published and edited by the faculty of the Pennsylvania College of Dental Surgery.

The Dental Practitioner, a new monthly journal, published by Gideon Sibley, and edited by Charles E. Pike, D.D.S., was begun January, 1883, and gives promise of able management and of usefulness to the profession. The first number of the second volume appeared with an additional number of pages and otherwise greatly improved. The dental profession have also contributed many valuable works to the literature of the country, among which may be mentioned:

A Practical Guide to the Management of the Teeth. By L. S. Parmly, dental professor. Philadelphia, 1819.

Observations upon the Importance of the Teeth. By Samuel Sheldon Fitch,*[1] surgeon dentist. Philadelphia, 1828.

The Anatomy, Physiology, and Pathology of the Human Teeth. By Paul Beck Goddard,* M.D. Philadelphia, 1846.

[1] The * indicates the authors as Philadelphia dentists.

A Practical Treatise on the Operations of Surgical and Mechanical Dentistry. By Samuel C. Harbert,* surgeon dentist. Philadelphia, 1847.

The Medical Student's Guide in Extracting Teeth. By S. S. Horner,* practical dentist. Philadelphia, 1851.

Ether and Chloroform: their Employment in Surgery, Dentistry, etc. By J. F. B. Flagg,* M.D. Philadelphia, 1851.

A Practical Treatise on Dental Medicine. By Thomas E. Bond, A.M., M.D. Philadelphia, 1851.

A Text-Book of Anatomy and Guide in Dissections, for the Use of Students of Medicine and Dental Surgery. By William R. Handy, M.D. Philadelphia, 1853.

Chemistry and Metallurgy as Applied to the Study and Practice of Dental Surgery. By A. Snowden Pigott, M.D. Philadelphia, 1853.

A Treatise on the Use of Adhesive Gold Foil. By Robert Arthur, M.D., D.D.S. Philadelphia, 1857.

A Practical Treatise on Operative Dentistry. By J. Taft, Professor of Operative Dentistry, etc. Philadelphia, 1859.

A Practical Treatise on Mechanical Dentistry. By Joseph Richardson, D.D.S., M.D. Philadelphia, 1860.

Dental Anomalies. By Am. Fouget, M.D., C.L.D. Philadelphia, 1860.

A Manual on Extracting Teeth. By Abraham Robinson, D.D.S., M.D. Philadelphia, 1863.

Instructions in the Manipulations of Hard Rubber or Vulcanite for Dental Purposes. By E. Wildman,* M.D., D.D.S. Philadelphia, 1865.

Odontalgia: Commonly called Toothache. Its Causes, Prevention, and Cure. By S. Parsons Shaw. Philadelphia, 1868.

Register Papers: A Collection of Chemical Essays in Reference to Dental Surgery. By George Watt, M.D., D.D.S. Philadelphia, 1868.

A Treatise on the Diseases and Surgery of the Mouth, Jaws, and Associate Parts. By James E. Garretson,* M.D., D.D.S. Philadelphia, 1869.

Treatment and Prevention of Decay of the Teeth. By Robert Arthur, M.D. Philadelphia, 1871.

Studies in the Facial Region. By Harrison Allen,* M.D. Philadelphia, 1874.

Plasters and Plastic Fillings. By J. Foster Flagg.* Philadelphia, 1881.

The Mouth and Teeth. By J. W. White,* M.D., editor of *Dental Cosmos*.

Notes on Operative Dentistry. By Marshall H. Webb.* Philadelphia, 1883.

Dental Metallurgy: a Manual for the Use of Dental Students. By Charles J. Essig,* 1882.

Dental Medicine. By F. J. S. Gorgas, A.M., M.D., D.D.S. Blakiston, Son & Co., Philadelphia, 1884.

The question as to who was the first regularly educated dentist that practiced in America is answered by the historical evidence that John Woofendale, a pupil of Thomas Berdmore, dentist to King George III., came over from England in 1766, and spent some eighteen months in Philadelphia, making occasional visits to New York for professional purposes. In March, 1768, he returned to England, as his American venture had not been remunerative to him. Within a very few years after that date there was, as related in Watson's "Annals," a Dr. Baker, who had an office for the practice of dentistry on Second Street, between Walnut and Spruce. Like Woofendale, he seems to have left no abiding historical impression.

One of the Frenchmen attracted to America during the Revolutionary war was James Gardette, physician, surgeon, and dentist, who also came to Philadelphia in 1784. He opened an office at the corner of Third and Pear Streets for the practice of dental surgery, which he pursued for a period of forty-five years. Mr. Gardette had received in his native country a systematic and thorough education in medicine and surgery, as well as in the specialty of dentistry, so far as instruction was available at that time. What he lacked in the art and science his inherent genius, close application, and judgment supplied. Much might be said of the improvements he made in dental practice. He was a most estimable man, a skillful dentist, and his name stands as one of the most prominent among the host of American dentists.

Edward Hudson, who came from Dublin, Ireland, to this country in 1802, began the practice of his profession in this city in 1805. At first he was involved in pecuniary embarrassments, and met with many discouragements; but, freeing himself from the perplexities of certain commercial pursuits, he attained to great skill and eminence in his profession. It has been said of him by one who is competent to judge, "We are probably more indebted to his success than to that of any other man for the importance which was attached at that period to operations which were intended to preserve the natural teeth in their natural state. For by the complete success attending the practice of this great man the public were soon convinced that teeth could be saved instead of being extracted."

Leonard Koecker, a native of Bremen, Hanover, came to this country, and began the practice of dentistry in Philadelphia in 1807. His knowledge of dentistry was very meagre when he commenced, and he had much to learn. But his native ability and energy enabled him to overcome his many defects, and in a few years he gained quite a reputation. He practiced some fifteen years in this city, when, his health failing, he went to Europe, and finally settled in London, where he gained an extensive practice and widely-known reputation as a dentist.

A. A. Plantou was one of the early dentists of this city. He was born in France in 1774, and graduated in the Royal Academy of Medicine and Surgery at Paris in 1805. He came to Philadelphia in 1817, and

pursued the practice of his profession up to about the time of his death, which occurred March 16, 1837. To him belongs the credit of introducing porcelain, or mineral, teeth into this country, and also for many improvements that he made in their fabrication. In the same line of work was that versatile genius, Charles W. Peale, who founded the Philadelphia Museum, the first in the United States, and was successively a saddler, silversmith, watch-maker, dentist, and portrait-painter. Peale died Feb. 22, 1827, at the age of eighty-six years. Samuel W. Stockton so improved upon the ideas of Plantou and Peale in regard to the form and quality of porcelain teeth as to make their manufacture of great commercial importance. Among other dentists of high reputation in the first half of the century were Drs. Roper, Harrington, Flagg, Gilliams, Harris, Dillingham, and Elisha M. Neal.

Dr. Elisha Townsend was a most accomplished and skillful practitioner of dentistry. For many years previous to his death, which occurred Oct. 13, 1858, his attainments placed him at the head of his profession, not only in this city, but throughout the entire country. In 1840 a few prominent men determined to form the American Society of Dental Surgeons. In 1851 Dr. Townsend took a leading position as an advocate for separate and independent colleges for instruction in dentistry. He was professor of Operative Dentistry and dean of the Philadelphia College of Dental Surgery, the first dental school established in the city, in 1852. Upon the reorganization of this institution, under the corporate name of the Pennsylvania College of Dental Surgery, he again filled the same chair in 1856–57. His health failing in the autumn of 1857, the honorary degree of emeritus professor was conferred on him by the trustees and faculty of the college. He was president of the American Society of Dental Surgeons, and the originator of the American Dental Convention. His contributions to the various repositories of dental literature consist of introductory and valedictory addresses delivered before collegiate classes, their topics being the means, methods, aims, and duties of professional life and progress, collegiate education in dentistry, the agency and utility of associative effort among practitioners for the advancement of their common interest and honor, and also essays upon professional fees, dental patients, and the minor morals of professional conduct,—enough for a volume of classical miscellanies.

Dr. Elias Wildman, a distinguished dentist of Philadelphia, was a native of Bucks County, Pa., and was born June 8, 1811. He graduated at the University of Pennsylvania, served in hospital practice in New York for some time, studied dentistry, and commenced its practice in Philadelphia in 1836.

He devoted himself with untiring zeal to scientific researches and experiments in various departments of his profession, and his labors were crowned with marked success. He improved the fabrication of mineral teeth, reducing the process to an exact system, giving to them a more natural form and life-like appearance. The dental profession is indebted to him for the discovery of the method of producing the beautiful gum enamel in use at the present time. His experiments in hard rubber and celluloid as a base for artificial dentures were of great value. He was elected professor of Mechanical Dentistry and Metallurgy in the Pennsylvania College of Dental Surgery in 1862, and retained the position up to the time of his death, which occurred July 25, 1876.

Another quite prominent member of the dental profession in Philadelphia was the late George S. Barker, D.D.S. He was born in Poughkeepsie, N.Y., March 26, 1836. He came to this city in 1856, entered the office of Dr. Edward Townsend as a student, attended lectures at the Pennsylvania College of Dental Surgery, and graduated from that institution in 1859.

In 1862 he was elected professor of Dental Pathology and Therapeutics in the same college from which he graduated, and held the position up to the time of his death, Jan. 10, 1878.

Dr. Barker was one of the original editors of the *Dental Times*, was author of a work entitled "Instructions in Nitrous Oxide," was a contributor to the various dental journals, and member of a number of dental societies.

Dr. John Hugh McQuillen was born in Philadelphia, Feb. 12, 1826. His parents were Capt. Hugh McQuillen, who served under Decatur in the war of 1812, and Martha Scattergood McQuillen, whose ancestors came to the western continent with William Penn, one of them, Thomas Scattergood, being a Quaker preacher of historic fame. In 1847, after having been employed for six years in a clerical capacity, he began the study of medicine and dentistry, practicing dentistry in 1849, and continuing his terms at the Jefferson Medical College, from which he was graduated as M.D. in 1852. His degree of Doctor of Dental Surgery was conferred in recognition of his services to the profession. As has been stated, he was the parent of the American Dental Association. The article in which he advocated its organization was published in 1859 in the *Dental News-Letter*, over the signature of "Junius." The same year he became one of the editors of the *Dental Cosmos*. Many of his articles attracted special attention, and were copied into the leading magazines of Europe, and were translated into foreign languages. Dr. McQuillen was a member of several associations and scientific societies in this country and in Europe, to which he contributed numerous papers.

In 1857 he was appointed to the chair of Operative Dentistry and Dental Physiology in the Pennsylvania College of Dental Surgery, which he occupied till 1862, at which time he, in connection with several other members of the dental profession, made applica-

tion to the Legislature of Pennsylvania for a charter for a new college, namely, the Philadelphia Dental College. The charter was obtained and the college organized in the fall of 1863. To the success of this new institution, for the more thorough education and better qualification of the dental practitioner, Dr. McQuillen gave his time, talent, energy, and experience. He was made dean of the faculty and was professor of Physiology, both of which positions he held to the date of his death, March 3, 1879. He was for many years a member of the Academy of Natural Sciences, where he was accustomed to pass the majority of his leisure hours.

Closely associated with Dr. Stockton was his pupil and nephew, Samuel S. White. He was born in Bucks County, and was indentured to his uncle to learn dental surgery and the art of manufacturing artificial teeth. When twenty-one years of age he began practice as a dentist, and looked after that of his uncle. Subsequently he opened an office on Race Street, above Eighth, where he practiced until 1845, when he formed a partnership with Asahel Jones and John R. McCurdy, and in the next year he gave up his practice to devote himself entirely to the manufacture of artificial teeth. In 1848 he purchased a property on Arch below Sixth Street, which was fitted up as a factory and salesroom, and soon afterward bought out the interests of his two partners, paying them one hundred and forty thousand dollars each. In October, 1867, he removed to the present location at the southeast corner of Twelfth and Chestnut Streets, where he erected a five-story marble structure, in which are manufactured artificial teeth and all the various instruments and appliances required by the dental profession. In the adaptation of teeth to the facial expression and the anatomical conformation of his patients, Dr. White was an innovator upon the older system of practice. He received medals and premiums from institutes, associations, and universal expositions. The first which he was awarded was from the American Institute of New York, and the last was the diploma bestowed upon him at the Vienna Exposition of 1873. He died in Paris, Dec. 3, 1879, greatly lamented. Out of the ample fortune which he had earned, he was extremely liberal in his charities.

Marshall H. Webb, D.D.S., who has been identified with the dental practitioners of Philadelphia during the past fifteen years, was born in Chester County, Pa., Oct. 28, 1844, and graduated from the Philadelphia Dental College in 1867, after which date he divided his professional occupation between Philadelphia and Lancaster. His operations in gold fillings were in many cases triumphs of genius, and it is said of him that "they gave him a prominence in his profession excelled by none, and, though dying so young, he was fairly entitled to rank as one of the most eminent of American dentists."

He was a member of the Harris Dental Association of Lancaster County, the Pennsylvania State Dental Society, the American Dental Association, the New York Odontological Society, and the Odontological Society of Pennsylvania. He was lecturer on Operative Dentistry and Dental Histology in the dental department of the University of Pennsylvania. He was honorary member of many dental societies, and was a delegate to the medical congress that assembled in London in 1881. As a clinical teacher he had few equals, and his published notes on operative dentistry will prove a valuable legacy to the younger members of the profession who survive him. After a lingering illness he died Jan. 1, 1882.

Dr. Thomas L. Buckingham was known for several decades as a prominent member of the dental profession in Philadelphia. He was born in the State of Delaware March 9, 1816. He came to Philadelphia in 1845, and engaged in the practice of dentistry in copartnership with Dr. Lee. In 1846 this connection ceased, and he began practice on his own account. He was elected to the chair of Mechanical Dentistry in the Philadelphia College of Dental Surgery, at its first session, in 1852. Subsequently he occupied the same chair in the Pennsylvania College of Dental Surgery, but in 1857 he was transferred to the chair of Chemistry, which he held to the time of his death, which took place Sept. 4, 1883. He was dean of the faculty for some eight years, the duties of the position including also those of secretary and treasurer. He graduated in medicine from the Philadelphia College of Medicine in 1851, and the degree of D.D.S. was conferred upon him by the Baltimore College of Dental Surgery in 1853. He took part in the organization of the Pennsylvania Association of Dental Surgeons, —with one exception, the oldest dental society in America,—was a member of the Odontological Society of Pennsylvania, and other dental societies. He was president of the American Dental Convention in 1860, and of the American Dental Association in 1874. He was a man of superior mechanical abilities, and his talent for invention was shown in various appliances connected with his profession. His talent and skill were devoted chiefly to mechanical dentistry. As a teacher he occupied a high position among the professors and great popularity with the students.

The present number of dental practitioners in this city at present (1884), according to the most authentic information, is about three hundred and fifty. Among these are many of high rank.

The Pennsylvania Association of Dental Surgeons was organized in Philadelphia Dec. 15, 1845, and, with the exception of the Mississippi Valley Dental Society, at Cincinnati, Ohio, is the oldest dental society in the United States. Its first officers were G. A. Plantou, D.D.S., president; Eli Parry, D.D.S., vice-president; Stephen T. Beale, D.D.S., second vice-president; C. C. Williams, D.D.S., recording secretary; R. Arthur, D.D.S., corresponding secretary; and F. Remstein, D.D.S., treasurer. The

society for a long time met at the Pennsylvania College of Dental Surgeons, but since at the houses of members. Since its organization until 1884 the number of members has been one hundred and sixty-nine. The number in January, 1884, was thirty-five. The officers for 1883-84 were as follows: E. H. Neall, president; John Hillings, vice-president; Theodore F. Chupein, recording secretary, corresponding secretary, and reporter; W. H. Truman, treasurer and librarian; Spencer Roberts, M. L. Long, and Amos West, committee on membership.

Members of the society are active and honorary. There are also life-members, who are exempted from the payment of dues, in consequence of their membership having extended over a period of twenty years or more. Meetings are held on the second Tuesday of each month, except in July and August. The annual meeting takes place on the second Tuesday of October. The initiation fee is two dollars, and the annual dues two dollars.

The Odontographic Society of Philadelphia was organized at a meeting held on the 19th of May, 1863, at Concord Hall. The first officers were Jacob Gilliams, president; John McCalla and C. A. Kingsbury, vice-presidents; Louis M. Lusson, recording secretary; J. H. McQuillen, corresponding secretary; Thomas Wardell, treasurer; and William P. Henry, librarian. The successive presidents of the society have been Jacob Gilliams, D.D.S., 1863; C. A. Kingsbury, D.D.S., 1864; James M. Harris, D.D.S., 1865-66; William C. Head, D.D.S., 1867; John H. McQuillen, D.D.S., 1868-70; Thomas C. Stellwagen, D.D.S., 1871-73; Louis Jack, D.D.S., 1874-75; F. M. Dixon, D.D.S., 1876-77; M. Lukens Long, D.D.S., 1878; J. Lehman Eisenbrey, D.D.S., 1879; Alonzo Boice, D.D.S., 1880; Joseph R. C. Ward, D.D.S., 1881; and L. Ashley Faught, 1882-83. The society's place of meeting was at the Philadelphia Dental College, on Tenth Street, near Arch, until about 1882, after which it was unsettled until the adoption of the College of Physicians as the meeting-place, in January, 1884.

The objects of the society are the promotion of professional and social intercourse among dental practitioners, and the encouragement of a disposition for investigation in every direction which relates to the principles and practice of the profession or collateral sciences. Members are active, corresponding, and honorary. The whole number of active members since the institution of the society has been one hundred and twenty-four, and the number in January, 1884, was twenty-seven. The active members must be practitioners of dentistry residing in the State of Pennsylvania. The initiation fee for active membership is three dollars; the annual contribution two dollars. The stated meetings are held on the third Tuesday of each month of the year, except July, August, and September. The annual meeting is held in May.

The Odontological Society of Pennsylvania was organized on the 1st of February, 1879, its first president being Daniel Neall, D.D.S., and its first secretary, Ambler Tees, D.D.S. Its successive presidents have been F. M. Dixon, D.D.S., C. J. Essig, D.D.S., and James Truman, D.D.S. The meetings are held in the offices of members, and are appointed for the first Saturday evening of each month. The number of members in January, 1884, was forty-two. The object of the society is the diffusion of the principles, and the development of the best modes of practice in the art and science of dentistry. Members are active, associate, or honorary. Active members must be practitioners of medicine in the State of Pennsylvania, and graduates in dentistry or in medicine, and must have contributed at least one paper to the published literature of the profession, or have made some other addition to its science or art. The admission fee for active members is three dollars, and the annual dues three dollars. For associate members the admission fee is three dollars, and the annual dues two dollars.

In addition to the medical and dental societies mentioned in this chapter there are numerous clubs, or coteries of medical gentlemen, averaging probably about a dozen members each in the city, having for their object the promotion of social intercourse among their members, but exercising little influence directly in medical matters.

MEDICAL AND DENTAL COLLEGES.

The College of Physicians.—The first medical society organized in Philadelphia, so far as is known, was the Philadelphia Medical Society, which is mentioned as having been in existence in 1768, but which was dissolved during the war of the Revolution. The American Medical Society was organized some time about 1783, but did not exist very long. The College of Physicians of Philadelphia—the subject of this sketch—was the next in succession. It claims to be the oldest existing medical society not only in Philadelphia but in the United States.

The College of Physicians of Philadelphia was organized in the latter part of the year 1786, and held its first stated meeting at the old University building, which was then located on Fourth Street, below Arch, on the second day of January, 1787. At this meeting fourteen physicians appended their signatures to the constitution and two committees were appointed, one of which was to devise a seal for the college, and a diploma or certificate of membership, and the other to prepare by-laws. A charter was not obtained until the 26th of March, 1789, at which time the number of members was twenty-seven. The whole number of physicians in the city in 1783 was only forty-two, and at the time of incorporation was probably not much in excess of fifty, so that about one-half of the practitioners of the city were members of the new organization. The first president of the college was Dr. John Redman, an eminent retired physician.

The other officers mentioned in the charter, who were in all likelihood the first officers of the college, were John Jones, vice-president; William Shippen, Jr., Adam Kuhn, Benjamin Rush, and Samuel Duffield, censors; Samuel Powel Griffitts, secretary; and Gerardus Clarkson, treasurer.

The society held its first meetings in the University building, but in December, 1791, removed to a room in the building of the American Philosophical Society, which had been fitted up for their reception at an expense to the college of £27 6*s.* 8*d.*, and was rented for forty dollars a year. In 1845, the college changed its headquarters to a room in the Mercantile Library building, and in 1854 to the "picture-house" of the Pennsylvania Hospital, afterward occupied by the Pennsylvania Historical Society. Its last transfer was to its present handsome building, corner of Locust and Thirteenth Streets. The society had long desired a building of its own, and as early as December, 1849, had started a building fund, to which were transferred some securities held by the society, and which were increased by degrees by donations from Fellows, by appropriations from the surplus fund, and by the interest from judicious investments. In 1859 the building fund amounted to over $22,000. In 1856, Dr. Thomas Dent Mütter had communicated to the college his willingness to convey to it on certain conditions his extensive collection of pathological specimens, together with a certain sum of money which was to be devoted to their preservation and increase. Negotiations were entered into between Dr. Mütter and the college, which, though interrupted for two years by the illness of Dr. Mütter, resulted in an agreement being reached, which was signed by the president and secretary of the college on the 5th of January, 1859. One of the articles of agreement required that the college should erect within the ensuing five years a fireproof building to contain the specimens. On the 4th of May, 1859, a lot was purchased by a committee of the college at the corner of Thirteenth and Locust Streets for $10,000, having a front on Locust Street of forty-two feet, and a depth of one hundred and ten feet, and subsequently the adjoining lot on the east, having a front of eighteen feet, was purchased for $3500. The college thus became possessed of an advantageous location, having an area of sixty by one hundred and ten feet, for $13,500, which was increased by incidental expenses to $14,408. The plan for a building drawn up by James H. Windrim was accepted, and the contract for its erection was given to M. Errickson. The total cost of the structure when completed was $25,250, and the cost of furniture, such as book-cases, gas-fixtures, and the like, $1100, making a total expenditure on lot and building of $40,858. All the obligations thus incurred by the society were met out of the building fund except $5000, which was raised by mortgage. The building committee in its final report, in 1864, estimating the value of the college library at $15,000, and of the Mütter Museum and endowment at $30,000, felt able to congratulate the society on the possession of property worth nearly one hundred thousand dollars. The building was completed and occupied in 1863, and has been the headquarters of the society ever since. It is a two-story structure of fine pressed brick. The lower story is occupied by the museum, the directory for nurses, which is under the charge of the college, and a number of dwelling-rooms. The second story contains the library and the lecture-room. A number of medical societies meet in the lecture-room, among which may be mentioned the County Medical Society, the Obstetrical Society, and the Pathological Society.

The college rendered efficient aid by its advice to the authorities during the several periods of prevalence of the yellow fever in the city between 1790 and 1800, and has since many times been called on by the Board of Health or the State authorities for suggestions during the prevalence of an epidemic, or for advice in matters relating to the promotion of the public health. In the compilation of a national pharmacopœia the college was active in lending its assistance, and at the first convention for that purpose, at Washington, in January, 1820, Dr. Thomas F. Hewson, afterward president of the college, was appointed secretary of the meeting.

The establishment of a good medical library was a matter of great concern with the founders of the association, and a committee on library, appointed in June, 1788, requested members wishing to donate books to the society to send them in at once. Dr. John Morgan, who has a claim to distinction not only from the fact of his having been a skillful physician, but also because, according to his biographer, he was the first man in the State, and probably in the country, to carry an umbrella, and inaugurated the practice of sending to an apothecary for medicine for his patients, was the first donor to the library. It increased slowly from donations for years afterward, and was open for only a few hours in a month. In 1845, upon removal to the Mercantile Library building, the number of volumes belonging to the society was six hundred, most of them the works of ancient physicians, and in 1855 the number was seventeen hundred. After this time bequests and donations were more numerous. In 1864 and 1865 four thousand five hundred volumes were added to the library, the gift of Dr. Samuel Lewis, and in acknowledgment the college determined to constitute them a distinct portion of the library, to be known as the Lewis Library. At the time of the last report of the librarian, on the 1st of November, 1883, the library contained twenty-six thousand three hundred and fifty-nine volumes, of which six thousand two hundred and eight belonged to the Lewis Library.

The presiding officers of the society since its origin, with dates of election, have been as follows: 1787, Dr. John Redman; 1805, Dr. William Shippen;

1809, Dr. Adam Kuhn; 1818, Dr. Thomas Parke; 1835, Thomas C. James, Dr. Thomas T. Hewson; 1848, Dr. George B. Wood; 1879, Dr. W. S. W. Ruschenberger; 1883, Dr. Alfred Stillé; 1884, Dr. Samuel Lewis. Dr. Thomas C. James, elected president in 1835, died four months after that event. The number of Fellows at the beginning of 1884 was about one hundred and eighty-five.

The objects of the college, as set forth in its charter, are "to advance the science of medicine, and thereby to lessen human misery, by investigating the diseases and remedies which are peculiar to this country, by observing the effects of different seasons, climates, and situations upon the human body, by recording the changes which are produced in disease by the progress of agriculture, arts, population, and manners, by searching for medicines in American woods, waters, and in the bowels of the earth, by enlarging the avenues to knowledge from the discoveries and publications of foreign countries, and by cultivating order and uniformity in the practice of physic."

The college consists of Fellows, Associate Fellows, and corresponding members. The Fellows are physicians of good character and standing, residing in the city of Philadelphia, and over twenty-four years of age. Associate Fellows are distinguished Americans, or foreign physicians, residing beyond the limits of Philadelphia. They must not exceed fifty in number, twenty of whom may be foreigners. The corresponding members are distinguished foreign or American physicians, chosen because of their devotion to medical science. The entrance fee is twenty-five dollars, and the annual contribution fifteen dollars, payable in advance. The officers designated in the charter are a president, a vice-president, four censors, a secretary, and a treasurer; and in addition there are elected annually an honorary librarian, a curator, a recorder, and two councilors, the last named serving for three years. The stated meetings of the society take place on the first Wednesday in each month.

In compliance with one of the articles of agreement between Dr. Mütter and the college, a person is nominated by a committee on lectures to deliver a course of at least ten lectures on some subject connected with surgical pathology. The lectures are delivered in the college building, and the lecturer has the right to charge a fee of five or ten dollars, as he may choose, to persons, other than Fellows, attending the course. The lecturer, however, is required to distribute "ten gratuitous tickets to poor, but well-educated and moral, students of regular medicine, whom he may select at will." For his services the lecturer is paid two hundred dollars.

The library is open daily. Visitors introduced by Fellows are allowed to consult books free of charge. The transactions of the society are published annually in book form.

The Medical Institute.—In 1819, Dr. Nathaniel Chapman, professor of Theory and Practice of Medicine in the University of Pennsylvania, founded the Medical Institute of Philadelphia, for the purpose of giving instruction to students during the summer months. It was not proposed to confer degrees, but merely to grant certificates of attendance. At different periods Drs. Horner, Gibson, Mitchell, Dewees, Jackson, Hodge, and Bell were associated with Professor Chapman as preceptors. Between 1819 and 1847 over seventeen hundred students attended the lectures, and in the latter year the faculty were John Neill, John J. Reese, William Byrd Page, J. F. Frazer, William Pepper, W. Gerhard, G. W. Norris, and Edward Norris. In 1856 the lectures were abandoned, and the institute permanently closed its doors.

Jefferson Medical College.—The Jefferson Medical College stands in the front rank of medical institutions in the country in the number of its students, the completeness of its equipment, and the learning, ability, and reputation of its faculty. Its fame is world-wide, and its alumni are to be found in almost all quarters of the globe. Its history is naturally divided into two periods, the first being one of considerable trouble and frequent changes, owing chiefly to opposition from without and dissensions within, which lasted from the time of its institution until its reorganization in 1841, and the second one of peace and progress, which has continued from the close of the first period up to the present time.

To Dr. George McClellan, more than to any other person, is due the credit of having founded the institution. He it was who obtained the charter for the college, organized the first faculty, and in no small measure, by his personal exertions, brought together the first class. An effort had been made to establish a medical college a number of years previously by Dr. William P. C. Barton and several of his friends, but it resulted in a failure. Dr. McClellan, however, was a man of indomitable energy and enthusiasm, and in his hands the project met with a different result. Attracted by the fame of the University of Pennsylvania, the mother of American medical schools, he came to Philadelphia. Marrying an estimable lady in 1821, he made his residence at the corner of Walnut and Swanwick Streets, opposite Washington Square, and delivered lectures on anatomy and surgery with such success that he was soon obliged to enlarge his quarters. He also associated with himself Dr. John Eberle, the latter taking as his subjects materia medica and the practice of medicine.

Dr. McClellan's ideas had expanded with his success, and he determined to use his best endeavors toward the establishment of a new medical college. The project was bitterly opposed by numbers of members of the medical fraternity, who thought that a new college might work great injury to the medical department of the University of Pennsylvania. Nevertheless, on the 7th of April, 1826, the act for its incorporation was passed by the Legislature.

It received its corporate privileges under the charter of the Jefferson College, a literary institution located at Cannonsburg, in the western portion of the State, and was operated as a branch of that institution. Instruction, however, was begun on the first Monday of November, 1825, the faculty being constituted as follows: Dr. John Eberle, professor of the Theory and Practice of Medicine; Dr. George McClellan, professor of Surgery; Dr. Jacob Green, professor of Chemistry; Dr. Benjamin Rush Rhees, professor of Materia Medica; Dr. Francis S. Beattie, professor of the Institutes of Medicine and Midwifery; and Dr. Nathan Reyno Smith, professor of Anatomy and Physiology. Dr. Smith was dean of the faculty. The opposition to the college was very fierce for a while, and amounted almost to a social ban upon the faculty and students, but as the healthful effects of the rivalry thus established became apparent it gradually died away.

The college continued to be operated as the branch of the Jefferson College at Cannonsburg until April 12, 1838, when the connection was severed by a special act of the Legislature, and the medical college received a separate charter, granting it the same rights and privileges as other medical schools in the United States. The government of the institution was at first intrusted to a board of ten trustees, located in Philadelphia, of whom the Rev. Ashbel Green, D.D., LL.D., formerly president of Princeton College, was the first president. The number of trustees was increased to fifteen upon the separation, but is at present only fourteen.

The faculty were not harmonious among themselves, and during the early history of the college resignations were annoyingly frequent, and sometimes one professor presided over two chairs. Until 1841, the time from which the reorganization of the college is usually dated, the succession in the different chairs, as nearly as can be ascertained, was as follows:

Chair of Surgery: 1825–39, George McClellan; 1839–41, Joseph Pancoast.

Chair of Anatomy: 1825–27, Nathan Reyno Smith; 1827–30, George McClellan; 1830–32, Samuel McClellan; 1832–41, Granville Sharp Pattison.

Chair of the Theory and Practice of Medicine: 1825–30, John Eberle; 1830–31, Daniel Drake; 1831–41, John Revere.

Chair of Materia Medica: 1825–26, Benjamin Rush Rhees; 1826–29, William P. C. Barton; 1830–31, John Eberle; 1831–39, Samuel Colhoun; 1839–41, Robley Dunglison.

Chair of the Institutes of Medicine: 1825–26, Francis S. Beattie; 1826–31, Benjamin Rush Rhees; 1831–36, appears to have been vacant; 1836–68, Robley Dunglison.

Chair of Chemistry: 1825–41, Jacob Green.

Chair of Obstetrics and Diseases of Women and Children: 1825–26, Francis Smith Beattie; 1826–27, John Barnes; 1827–29, John Eberle; 1829–31, Benjamin Rush Rhees; 1831–32, Usher Parsons, of Providence, R. I.; 1832–39, Samuel McClellan; 1838–41, Robert M. Huston.

Dr. George McClellan occupied the chair of Surgery until 1839, when, owing to the internal dissensions, his resignation was given to the board of trustees. From 1827 to 1830 he was also professor of Anatomy, on account of the resignation of the first incumbent in that position. Immediately after the severance of his connection with the Jefferson Medical College he obtained charter privileges for another college, under the title of the Medical Department of the Pennsylvania College at Gettysburg. This new enterprise started in Philadelphia, with about one hundred students, in November, 1839, but financial difficulties terminated its career in the spring of 1843, much to McClellan's disappointment. Afterward he devoted himself to the cares of his large private practice, and died, suddenly, early on the morning of the 9th of May, 1847, after a few hours' illness only, of perforation of the bowel. He was at the time about fifty-one years of age.

Dr. McClellan was one of the most eminent surgeons of his day, and even before he had been engaged in practice ten years he had placed himself in the front rank in his profession. He performed a number of original and daring feats of surgery, having repeatedly exsected the upper and lower jaws, several times extirpated the parotid gland, a feat long regarded as impracticable, ligated most of the great arteries, and performed numerous amputations. He was of a very energetic and enthusiastic disposition. As a lecturer, he did not possess much oratorical power, and lacked in system, but he attracted the attention of his hearers by his earnestness, his force of language, and his knowledge of his subject. He was constantly in motion. He thought rapidly, talked rapidly, worked rapidly, and, in fact, did everything in a high-pressure manner. This restlessness and dash incapacitated him, however, for being a first-class student or a thorough worker. His impulsiveness was in a considerable degree instrumental in producing the troubles that marked the early career of the college. Nevertheless, when the vastness and beneficence of the work performed by him is considered, his faults sink into insignificance, and he must be accorded the credit of having lived a highly honorable, useful, and successful life. He left behind him a son, whose name will live long in history as the distinguished leader of the Army of the Potomac during the Rebellion, Gen. George B. McClellan.

Nathan Reyno Smith, the original professor of Anatomy, was born in New Hampshire in 1797. He was a man of pleasant manners and thorough cultivation, and was clear and accurate in his teaching and demonstrations. He held his chair until 1827, when he resigned to accept the same professorship in the University of Maryland, at Baltimore. He remained in this position until his voluntary resignation, in 1870. He died July 8, 1877.

Dr. John Eberle was descended from an obscure family in Pennsylvania. He was instructor in the Practice of Medicine in the college until 1830, after which he lectured for one year on Materia Medica. In 1831 he removed to Cincinnati, and became a professor in the Ohio Medical College. He died in the fiftieth year of his age, at Lexington, Ky., whither he had gone as professor of medicine shortly before. He was a very studious man, but did not have a large

practice. His works on "Materia Medica" and "The Practice of Medicine" were standard in their day.

Dr. Jacob Green, son of the Rev. Ashbel Green, D.D., and the first professor of Chemistry, was born in Philadelphia in 1790, and was professor of Experimental Philosophy, Natural History, and Chemistry in Princeton College previous to coming to Jefferson College. He retained his professorship in Jefferson College until his death, in 1841. He was not a great man nor a profound chemist, but he was a capable teacher, a good lecturer, and a most estimable Christian gentleman.

Dr. William P. C. Barton, the instructor in Materia Medica from 1826 to 1829, was a nephew of Dr. Benjamin Smith Barton, formerly a professor in the University of Pennsylvania. He was a very learned man, and one of the best botanists in the country. His lectures were plain, conversational, didactic, and often witty, and his success as a teacher was all that could be desired. He was very fastidious in the matter of dress, and rarely wore the same coat, vest, or cravat on two successive days. He excelled as a musician. He remained with the college for three years, when, as he had joined the navy at an early age, he was ordered by the government to New York, and afterward to sea. Subsequently, for a short time, he was chief of the Medical Bureau in Washington. He died at an advanced age, in the service of his country.

Dr. Benjamin Rush Rhees was a graduate of the University of Pennsylvania. He was the first professor of Materia Medica in Jefferson Medical College, but in the second year became instructor in the Institutes of Medicine and Medical Jurisprudence. He was of feeble appearance physically, but possessed qualities of mind and heart that endeared him to the students. He died of phthisis, to which he had an hereditary disposition, in October, 1831, in the thirty-fourth year of his age.

Dr. Samuel McClellan was less noted than his brother George, but was nevertheless one of Philadelphia's eminent physicians in his time. At the instance of his brother he was made adjunct professor of Anatomy in 1829, and in 1830 became professor in full in this branch. In this position he lectured with faithfulness and success until the close of the session of 1831-32, when he was succeeded by Dr. Granville Sharp Pattison, and was himself elected to the chair of Obstetrics. He became disconnected with the college in 1839, and devoted himself to the cares of his large private practice thereafter until his death, which occurred in 1854, from heart-disease. He was almost the opposite in disposition of his brother, George McClellan, being diffident, quiet, and unpretending. He was particularly celebrated as a practitioner of midwifery.

Dr. Granville Sharp Pattison, successor to Dr. Samuel McClellan in the chair of Anatomy in 1832, was born in Glasgow, Scotland, in 1792, and came to this country in 1820 to take a chair in the University of Baltimore. This position he held until his election as a teacher in Jefferson Medical College. He resigned from the college in 1841, and took the chair of Anatomy in the University of New York, which he filled until his death, in 1851. Dr. Pattison occupies a high position among medical celebrities.

The first graduating class, in 1826, numbered 20 pupils. In 1827 there were 34 graduates, and in 1828, 25. In 1829 the attending class numbered 110, the graduating class, 26. In 1832 the number of students was 96; in 1834, 172; in 1836, 364; but in 1840, owing to the intestine quarrels of the college, it had fallen off to 145. It appeared evident to the trustees that unless a radical change could be effected the college might be utterly ruined. Accordingly, at the close of the session of 1838-39 they declared all the chairs in the college vacant, and proceeded to elect the following faculty: Dr. Jacob Green, professor of Chemistry; Dr. Granville Sharp Pattison, professor of Anatomy; Dr. John Revere, professor of the Theory and Practice of Medicine; Dr. Robley Dunglison, professor of the Institutes of Medicine and Materia Medica; Dr. Robert M. Huston, professor of Obstetrics and Diseases of Women and Children; and Dr. Joseph Pancoast, professor of the Principles and Practice of Surgery. Dr. Revere was dean of the faculty. In 1841 the death of Professor Green and the resignations of Professors Pattison and Revere necessitated another reorganization, which resulted in a faculty that will ever be famous in the annals of Jefferson College. It consisted of the following members: Dr. Robley Dunglison, professor of the Institutes of Medicine; Dr. Joseph Pancoast, professor of Anatomy; Dr. Robert M. Huston, professor of Therapeutics and Materia Medica; Dr. John K. Mitchell, professor of the Theory and Practice of Medicine; Dr. Thomas D. Mütter, professor of Surgery; Dr. Charles D. Meigs, professor of Obstetrics and Diseases of Women and Children; and Dr. Franklin Bache, professor of Chemistry.

The new faculty remained unbroken until the withdrawal of Dr. Mütter, in 1856, and during that time they strove with united energy and zeal to promote the common interest and the welfare of the college. Their efforts met with gratifying success. Students began to flock to the college in annually-increasing numbers, and in 1846, when the number of the class had reached four hundred and sixty-nine, the friends of the college were enabled to point with proud satisfaction to the fact that this was the largest class in attendance on any medical school in the United States. This superiority the college has maintained, with scarcely a break, up to the present time. During the war, the number of its students declined materially, as in every medical school in the land, falling from six hundred and thirty-one in 1859, which was as large as any class that ever attended the institution, to two hundred and thirty-eight in 1861. Since the close of the war,

the recovery in this respect has been gradual but steady, and in 1881 the number of matriculates was exactly the same as in 1859.

The members of the faculty of 1841 were all men of eminence in their profession. Dr. Robley Dunglison assumed, in June, 1836, the chair of the Institutes of Medicine in Jefferson College, and continued to serve in that position until 1868, when he resigned and became emeritus professor of the same branch. He died in April of the following year. The experiments which he devised and carried out in the famous Alexis St. Martin case, reported by Dr. Beaumont, resulted in valuable discoveries.

The high standard of professional talent represented in the early professors of the college has been maintained ever since, and they have been in almost every case men of national and in many cases of international reputation. The successors of the faculty of 1841 have been as follows:

In the chair of Surgery, Dr. Mütter was succeeded in 1856 by the eminent Dr. Samuel D. Gross, who left the professorship of Surgery in the University of Louisville, Ky., to assume the same duties in Jefferson College. On his resignation, in 1882, the trustees constituted two chairs of Surgery, Dr. Samuel W. Gross, son of the preceding, being elected professor of the Principles of Surgery, and Dr. John H. Brinton, professor of the Practice of Surgery. The former gentleman was born in Cincinnati, Ohio, and was a graduate of Jefferson Medical College in 1857, since which he has been settled in Philadelphia. Previous to his election as professor he had been a lecturer in Jefferson Medical College on the Diseases of the Genito-urinary Organs, and was a surgeon in Jefferson Medical College Hospital. Dr. John H. Brinton is descended from an old Philadelphia family, was a graduate from Jefferson College in 1852, and was surgeon in the Philadelphia Hospital in 1869.

In the chair of Anatomy, Dr. Joseph Pancoast was succeeded in 1874 by his son, Dr. William H. Pancoast, the present incumbent. Dr. William H. Pancoast was the successor of Dr. Ellerslie Wallace as demonstrator of Anatomy in Jefferson College in 1863.

In the chair of Materia Medica, Dr. Robert M. Huston was succeeded in 1857 by Dr. Thomas D. Mitchell, who had been professor of the same branch of study in the Medical College of Ohio, at Cincinnati, and at other schools. Dr. Mitchell died at the close of the session, in 1865, and was succeeded by Dr. John Barclay Biddle, who had formerly occupied the same chair in the Franklin Medical College, and later in the Pennsylvania Medical College, both of this city. Dr. Biddle died during the session of 1878–79, and was succeeded by Dr. Roberts Bartholow, the present incumbent. Dr. Bartholow was born in Howard County, Md., and was an instructor on Materia Medica in the Ohio Medical College, at Cincinnati, previous to coming to Philadelphia. He has a wide reputation as an author and teacher.

Dr. John K. Mitchell was followed in the chair of the Theory and Practice of Medicine, in 1858, by Dr. Samuel Henry Dickson, who had created for himself distinction as a teacher and authority in the Medical College of the State of South Carolina. Dr. Dickson held his position until his death, on Easter Sunday, in 1872. His successor was Dr. Jacob M. Da Costa, the present incumbent. While possessing a large general practice, Dr. Da Costa's specialty has been diseases of the heart and lungs.

On the retirement of Dr. Robley Dunglison from the chair of the Institutes of Medicine and Medical Jurisprudence, Dr. James Aitken Meigs was elected to fill the vacancy. Dr. Meigs was professor of the Institutes of Medicine in the Philadelphia Medical College in 1857, and later held the same chair in the medical department of the Pennsylvania College, at Gettysburg. In 1866 he was elected as a lecturer in the spring course of lectures at Jefferson Medical College. Dr. Meigs wrote a number of important articles on craniology, and was a prolific contributor to medical magazines. He died during the session of 1879–80, and was succeeded by Dr. Henry C. Chapman, who holds the position at present. Dr. Chapman was born in Philadelphia, Aug. 17, 1845, and graduated from the medical department of the University of Pennsylvania in 1867. He became lecturer on the Physiology of the Nervous System in Jefferson Medical College in 1877. He is the author of "Evolution of Life," and numerous contributions to medical journals.

Dr. Franklin Bache was followed in the chair of Chemistry by Dr. Benjamin Howard Rand, a Philadelphian, born in 1827, and a graduate of Jefferson Medical College in 1848. He resigned the position of professor of Chemistry in the Franklin Institute to accept the chair in Jefferson College. He withdrew from this last position on account of ill health in 1877. He was the author of a book entitled "Chemistry for Students," and another called "Elements of Medical Chemistry." His successor was Dr. Robert E. Rogers, the present incumbent. Dr. Rogers was born in Baltimore, in 1814, and graduated from the medical department of the University of Pennsylvania in 1836. He was professor of Chemistry in the University of Pennsylvania for many years previous to his acceptance of the chair in Jefferson Medical College.

On the resignation of Dr. Charles D. Meigs from the chair of Obstetrics and Diseases of Women and Children, in 1861, Dr. William V. Keating became his successor, but ill health compelled him to resign during the first session thereafter. Dr. Meigs again filled the chair for the remainder of the session. Dr. Ellerslie Wallace was the next incumbent, and held the place until 1883. Dr. Wallace was born in Philadelphia in 1819, and became a graduate of Jefferson College in 1843. He was appointed demonstrator of Anatomy in the college, and filled the posi-

tion until his election to succeed Dr. Meigs. Dr. Wallace's successor is Dr. Theophilus Parvin, born at Buenos Ayres, South America, in 1829, and a teacher successively in the Ohio Medical College in Cincinnati, in the medical department of the University of Louisville, and in the College of Physicians and Surgeons in Indianapolis, from the last of which he was summoned to his present position.

The first president of the college was, of course, the president of Jefferson College at Cannonsburg, but his position was nominal, and the Rev. Ashbel Green, the first president of the Philadelphia board of trustees, was the actual head of the institution. On the separation of the Jefferson Medical College from the parent college, in 1838, Dr. Ashbel Green was still president of the board of trustees, and thus became the nominal executive also. Dr. Green had been president of Princeton College for a number of years subsequent to 1812, and was afterward editor of the *Christian Advocate*, published in Philadelphia. On his death, on May 19, 1848, he was succeeded by the Rev. C. C. Cuyler, who, in 1850, had been succeeded by the Hon. Edward King. In 1873, the Hon. Jesse R. Burden was president. He was succeeded, in 1875, by Dr. E. B. Gardette, the present incumbent.

In 1870 an alumni association was organized, of which Professor Samuel D. Gross was chosen the first president, and has retained the office up to the present time. The fee for membership is one dollar annually, but the payment of five dollars, or of one dollar annually for five years, secures a life membership, after which there are no dues. In the establishment of the Jefferson Medical College Hospital, the Alumni Association played an important part, the first step in that direction being taken at an informal meeting of the association in December, 1872, when the subject was discussed, and fifteen thousand dollars were pledged for the enterprise upon the spot. The history of the hospital, which has been an important agent in securing facilities for clinical demonstrations to students, is given elsewhere.

The original location of Jefferson Medical College was at 518 Prune Street, now Locust Street, where the old Walnut Street prison was in full view on one side, and the paupers' burial-ground, now Washington Square, on another. In 1829 the college was removed to its present location on Tenth Street, where a plain brick building, standing with its gable to the street, was erected. The front portion of the building contained two large lecture-rooms, each capable of seating four hundred and fifty students, with the private apartments of the professors and the janitor. The rear of the building was mainly occupied by two large halls, each over fifty feet in length, the lower of which contained the museum and certain cabinets, while the upper was used for practical anatomy. On the 1st of May, 1845, the building having become too small to accommodate the increasing number of students, alterations were commenced upon it, the plans being furnished by the architect, Le Brun. The building as remodeled had a frontage on Tenth Street of fifty-nine feet. The adjoining lot on the north side, seventy by one hundred feet in area, was purchased, and students entered the building through a gate opening into the lot from Tenth Street. On the rear of the lot, sixty feet back from Tenth Street, was erected an addition, thirty-six feet deep, which contained spacious stairways, and afforded access to the various parts of the college. The front of the building was made to represent a hexastyle, or six-columed portico, the portico being supported by a marble basement, seven feet high, and the whole being crowned with a handsome entablature and pediment. The exterior was then covered with mastic, which was painted a light stone color. This building was an object that attracted the notice of passers-by for many years subsequently, and was represented in a wood-cut on the back of the pamphlets containing the annual announcements of the college. The continued growth of the institution rendered still more space necessary, and accordingly, in the summer of 1881, the main building was remodeled by an extension to the front, taking away the portico and adding a new story, and by constructing new laboratory-rooms. By this extension of the front the seating capacity of each lecture-room has been materially increased. By the addition of another story new and more commodious dissecting-rooms, with every convenient appliance, have been constructed. Large and well-lighted rooms have been provided for practical obstetrics, and for the laboratory of experimental therapeutics and pharmacy, and another with special reference to microscopical work, and for a laboratory of pathological histology and morbid anatomy. In this building are also contained the extensive and valuable Anatomical, Surgical, and Pathological Museums, which are enriched annually by important additions.

The course of instruction extended originally from the beginning of November until the 1st of March. The trustees felt that four months' instruction in the year was not enough, and in 1832 they announced their intention to establish a spring course, to extend from April 1st to June 1st, which would be free to matriculates who should choose to remain after the winter course, but which would not be obligatory. In the establishment of this now general feature of medical instruction Jefferson Medical College claims the precedence. In 1834 the trustees announced that a preliminary course of lectures would be given during the month of October, and that the dissecting-rooms would be kept open during October and March for the benefit of students. The winter term was gradually lengthened to include the month of October, the preliminary lectures being then delivered during the month of September, and in the winter of 1881-82

the further extension of the term was made until the end of March.

It will be perceived that the course of instruction continues through nearly nine months of the year. The important part of the period of study is, of course, the winter session of six months, and this alone is obligatory. As the fees paid for the spring session are remitted to those taking the ensuing winter course, except the registration fee of five dollars, and as the preliminary or fall term is free, the fees paid for the regular term cover almost the whole cost of instruction for nine months.

The winter term, as has been shown above, now lasts about six months. The branches upon which lectures are given are indicated in the list of members of the faculty appended at the close of this article.

Clinical instruction has always been an important feature of the college course, in which, indeed, systematic clinical methods were first inaugurated in this country. While the amphitheatre of the hospital is one of the most commodious in this country, the material of the clinic is most abundant, and represents almost every possible condition of disease or injury. Besides the college clinics, students can attend at the various hospitals and dispensaries, the lectures being so arranged as to afford them the opportunity to do so.

Special instruction is given in clinical medicine, examples being obtained from the abundant material of the daily clinic. A number of hours are devoted also to clinical conferences. During these the advanced student has a case assigned him, which he is required, with the aid of the chief clinical assistant, to examine beforehand, and which, then, with remarks on the diagnosis, prognosis, and treatment, he presents to the class.

All the courses of practical and laboratory instruction are designed for, and obligatory upon, all candidates for the degree who have not taken these courses in other schools, and are free of charge to them, except in the case of practical anatomy, in which the fee for the "dissecting ticket," which is good for the whole scholastic year, is ten dollars.

In the laboratory of practical chemistry the course is made especially one of medical chemistry and toxicology, and includes manipulation, in which students perform for themselves the various experiments set forth in the winter lectures of the professor of Chemistry, qualitative and quantitative analysis, so far as relates to the wants of the medical practitioner, and the examination of normal and abnormal products of the human body.

The laboratory of materia medica and therapeutics contains a complete cabinet of materia medica, preparations, and active principles, for study by each pupil, as the articles are taken up by the professor during the regular term. The room has been also equipped for pharmaceutical instruction, and a systematic course in pharmacy is given.

In the laboratory of histology and physiology demonstrations are given to members of the graduating class, arranged in sections. The course in histology includes the demonstration of the minute anatomy of the alimentary canal and its appendages, the circulatory, respiratory, and excretory apparatus, the general nervous system and special senses, the manner of using the microscope, and the injecting and preparing of tissues.

The physiological teaching embraces the demonstration of the essential phenomena of digestion, absorption, circulation, respiration, excretion, the functions of the nervous system, including the special senses, the reproductive apparatus, and the development of the embryo.

JEFFERSON MEDICAL COLLEGE.

There is also a large room especially designed for the study of practical surgery, in which all the operations are performed by the student upon the cadaver, under the supervision of a demonstrator and his assistants.

The faculty, desirous of affording every facility for promoting higher medical education, and of conforming to the existing demand for instruction of graduates in medical and surgical specialties, have organized a post-graduate course. This is intended to afford to practitioners of medicine an opportunity to familiarize themselves with microscopical, chemical, pharmaceutical, gynæcological, physiological, laryngological, ophthalmological, electrical, and other

Digitized by Google

kinds of manipulations. The classes formed for these courses are entirely separate, and at different hours from those of the undergraduates, but are so arranged that the gentlemen who desire to do so can attend any of the lectures of the regular course.

The post-graduate course of instruction includes five terms of seven weeks each. All the courses are demonstrative, the fees in each branch ranging from ten to twenty dollars.

The candidate for the degree of M.D. must be of good moral character, and at least twenty-one years of age. He must have attended at least two full winter sessions of lectures, of which the last shall have been in this college, and the previous one or more either here or in some regular college (the word *regular* being used in the sense commonly understood by the medical profession) authorized to confer the degree of M.D., and in which anatomy, chemistry, materia medica and therapeutics, physiology, surgery, practice of medicine, and obstetrics are embraced in the curriculum. He must have studied medicine for not less than three years, including private tuition under a regular graduate of medicine or some regular institution, and have attended at least one course of clinical instruction and of practical anatomy. Candidates for graduation will be required to take the dissecting ticket of this college for at least one session. This rule does not apply to those who are already graduates of other recognized schools.

Students who have attended one complete course in a recognized medical school, where attendance on two complete courses is necessary for a degree, and where the same branches are taught as in this, are permitted to become candidates by an attendance here on one full course, the rules of graduation being in other respects observed. They are also exempted from the payment of fees upon attending a second term.

The expenses of instruction are as follows: During the first session, matriculation, paid but once, five dollars; full course of lectures, one hundred and forty dollars; dissection ticket, ten dollars. During the second session, full course of lectures, including laboratory courses, one hundred and forty dollars; graduation fee, thirty dollars,—a total of three hundred and twenty-five dollars for the two years.

A number of prizes are offered to graduates at the annual commencement, those offered for 1884 being as follows:

1. A prize of one hundred dollars, by Henry C. Lea's Son & Co., for the best thesis founded upon original experiments, clinical observation, or superior excellence in scholarship.

2. A gold medal, by R. J. Levis, M.D., one of the surgeons to the Pennsylvania Hospital, for the best report of his surgical clinic by a student of the Jefferson Medical College.

3. A gold medal, by Thomas G. Morton, M.D., one of the surgeons to the Pennsylvania Hospital, for the best report of his surgical clinic by a student of the Jefferson Medical College.

The faculty also offer prizes as follows:

5. A prize of a gold medal or a case of instruments for the best essay on a subject pertaining to obstetrics, etc., or for a specimen well described.

6. The same for the best essay on a subject pertaining to practice of medicine.

7. The same for the best anatomical preparation.

8. The same for the best original research in the chemical laboratory.

9. The same for the best origiual research in the materia medica laboratory.

10. The same for the best essay on a subject pertaining to physiology.

11. The same for the best essay on a subject pertaining to surgery.

12. The same for the best pathological essay or preparation.

All preparations offered to belong to the college museum.

Graduates cannot compete for prizes, and no student can compete for more than one prize.

The faculty is at present constituted as follows:

Professors.—Samuel D. Gross, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab., Institutes and Practice of Surgery (*emeritus*); Ellerslie Wallace, M.D., Obstetrics and Diseases of Women and Children (*emeritus*); J. M. Da Costa, M.D., Practice of Medicine; William H. Pancoast, M.D., General, Descriptive, and Surgical Anatomy; Robert E. Rogers, M.D., LL.D., Medical Chemistry and Toxicology; Roberts Bartholow, M.D., LL.D., dean, Materia Medica and General Therapeutics; Henry C. Chapman, M.D., Institutes of Medicine and Medical Jurisprudence; Samuel W. Gross, A.M., M.D., Principles of Surgery and Clinical Surgery; John H. Brinton, M.D., Practice of Surgery and Clinical Surgery; Theophilus Parvin, M.D., LL.D., Obstetrics and Diseases of Women and Children; William Thompson, M.D., Honorary Professor of Ophthalmology; J. Solis Cohen, M.D., Honorary Professor of Laryngology.

Demonstrators.—William S. Forbes, demonstrator of Anatomy; J. Ewing Mears, M.D., demonstrator of Surgery; G. Mason Ward, M.D., demonstrator of Chemistry; Morris Longstreth, M.D., demonstrator of Pathological Anatomy and curator of the museum; Cochran McClelland, M.D., demonstrator of Obstetrics, etc.; Daniel E. Hughes, M.D., demonstrator of Clinical Medicine; S. Mason McCollin, M.D., demonstrator of Pharmacy and Materia Medica; A. P. Brubaker, M.D., demonstrator of Physiology and Histology.

William S. Leffman, janitor.

The board of trustees at present is as follows:

President, E. B. Gardette, M.D.; Secretary, George W. Fairman; Gen. Charles M. Prevost, Hon. Henry M. Phillips, Hon. James R. Ludlow, Hon. James Campbell, Joseph Patterson, Hon. Joseph Allison, LL.D., Hon. Furman Sheppard, B. B. Comegys, Ellwood Wilson, M.D., Henry C. Gibson, Joseph B. Townsend, Daniel B. Cummins.

Hospital Staff.—Surgeons, R. J. Levis, M.D., O. H. Allis, M.D., Joseph Hearn, M.D., J. M. Barton, M.D.; physicians, James C. Wilson, M.D., Oliver P. Rex, M.D., J. T. Eskridge, M.D., J. S. Neff, M.D.; ophthalmic surgeon, Professor William Thomson, M.D.; gynæcologists, F. H. Getchell, M.D., J. Ewing Mears, M.D.; aural surgeon, L. Turnbull, M.D.; pathologist, Morris Longstreth, M.D.

The Alumni Association of the college has the following officers:

President, S. D. Gross, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab.; Vice-Presidents, Ellwood Wilson, M.D., Addinell Hewson, M.D., R. J. Levis, M.D., W. W. Keen, M.D.; Treasurer, Nathan Hatfield, M.D.; Recording Secretary, Thomas H. Andrews, M.D.; Corresponding Secretary, Richard J. Dunglison, M.D.; Executive Committee, Drs. W. B. Atkinson, F. H. Gross, L. K. Baldwin, Oscar H. Allis, James Graham, Theodore Gruel, J. M. Barton, Frank Woodbury, John B. Roberts, T. H. Bradford, E. E. Montgomery, J. T. Eskridge, R. S. Wharton, William S. Little, H. Augustus Wilson, Addinell Hewson, Jr., L. P. Stone, A. F. Kempton, F. P. De Grandchamp, Charles M. Wilson, W. H. Warder, Henry Leaman, O. P. Rex, Orville Horwitz, John Klemet.

The Pennsylvania Medical College.—In the year 1839, by reason of some disagreement in the administration, all the professorships in the Jefferson Medical College were vacated, and in the reorganization Dr. George McClellan, who had been one of its founders, was assigned no part. In his teeming brain was then conceived the project of forming another medical school. His biographer, Dr. S. G. Morton,

says, "With characteristic buoyancy of spirit and determination of purpose, he went in person, accompanied by a single friend, to solicit a charter from the State Legislature. Corporate privileges were, in consequence, granted to an institution entitled 'The Medical Department of Pennsylvania College at Gettysburg.'" The following were elected professors: S. G. Morton, Anatomy and Physiology; George McClellan, Principles and Practice of Surgery; S. Colhoun, Materia Medica and Pharmacy; William Rush, Theory and Practice of Physic; Samuel McClellan, Obstetrics; Walter R. Johnson, Chemistry. The lectures were delivered in the building on Filbert Street, above Eleventh, now occupied by the Hahnemann College. In 1841, Dr. Robert M. Bird took the chair of Dr. Colhoun, deceased. In 1843 the original faculty was dissolved, and the new one was as follows: William Darrach, Theory and Practice of Medicine and Surgery; H. S. Patterson, Materia Medica and Therapeutics; W. R. Grant, Anatomy and Physiology and Chemistry; John Wiltbank, Obstetrics. In 1844, Dr. Washington L. Atlee was elected professor of Chemistry, and in 1845, Dr. David Gilbert was elected professor of Surgery. In 1849 the college was removed to the building, at Locust and Ninth Streets, that had been erected for its occupancy. In 1852, Professor Atlee was succeeded by Dr. John J. Reese; Dr. J. M. Allen was elected professor of Anatomy, and Dr. F. G. Smith professor of Institutes of Medicine. Dr. Patterson died the next year, and Dr. J. B. Biddle took the vacant chair. By the partial reorganization in 1854, Dr. Gilbert was transferred to the chair of Obstetrics, Dr. John Neill was elected professor of Surgery, and Dr. Alfred Stillé professor of Practice. In 1856, Professor Allen resigned on account of ill health, and his place was filled by Dr. T. G. Richardson, who was succeeded in 1858 by Dr. John H. B. McClellan. In 1859 all the professors resigned in favor of the faculty of the Philadelphia College of Medicine, and the two institutions were merged into the Pennsylvania Medical College. In 1861, on account of the confused state of the country, and the desire of many of the professors to enter the medical staff of the army, the college was closed, and has never been reopened.

The Philadelphia College of Medicine, located at the northwest corner of Fifth and Adelphi Streets, was organized about 1846, and at its first commencement, in 1847, graduated eighteen students. The faculty were Jesse R. Burden, president; James McClintock, dean and professor of Principles and Practice of Surgery; Rush Van Dyke, Materia Medica and General Therapeutics; Thomas D. Mitchell, Theory and Practice of Medicine; James Bryan, Institutes of Medicine and Medical Jurisprudence; Ezra S. Carr, Medical Chemistry; James McClintock, General, Special, and Surgical Anatomy; Frederick A. Fickardt, Obstetrics and Diseases of Women and Children. In 1853, Dr. Bryan was transferred to the chair of Surgery; Dr. Thomas Spencer was elected professor of Materia Medica and Pathology, *vice* Dr. Van Dyke, transferred to the chair of Practice of Medicine; and Dr. Henry Geiger was elected professor of Obstetrics. From 1847 to 1854 about four hundred students were graduated. In the latter year the college was reorganized, and adopted the code of ethics of the American Medical Association. The following were the officers and faculty under the new *régime:* Hon. Ellis Lewis, M.D., LL.D., president; J. R. Tyson, LL.D., secretary; Dr. George Hewston, professor of Anatomy; Dr. B. Howard Rand, dean and professor of Chemistry; Dr. Henry Hartshorne, professor of the Institutes of Medicine; Dr. Isaac A. Pennypacker, professor of Theory and Practice of Medicine; Dr. James L. Tyson, professor of Materia Medica and General Therapeutics; Dr. Joseph Parrish, professor of Obstetrics and Diseases of Women and Children; Dr. Edwin M. Tilden, professor of Surgery. In 1855, Dr. Lewis D. Harlow succeeded Dr. Parrish as professor of Obstetrics. In 1856, Dr. Alfred T. King was elected to the chair of Theory and Practice of Medicine, *vice* Dr. Pennypacker, deceased, and Dr. George Dock to the chair of Surgery. In 1857, Dr. King was elected emeritus professor, and his chair was taken by Dr. Hartshorne; Dr. William S. Halsey was elected professor of Surgery, Dr. William H. Taggart, professor of Materia Medica and Therapeutics, and Dr. James Aitken Meigs, professor of the Institutes of Medicine. In 1858, Dr. William H. Gobrecht was elected professor of Anatomy. In 1859 the college united with the medical department of Pennsylvania College, and the faculty of the Philadelphia College of Medicine became the faculty of the Pennsylvania Medical College, with Dr. Lewis D. Harlow as dean.

The Medico-Chirurgical College was organized as a medical society in the latter part of 1849, at a meeting held at the house of James Bryan, A.M., M.D., at the northeast corner of Tenth and Arch Streets. The society was chartered on the 12th of April, 1850. Its object was stated in its charter to be "the dissemination of medical knowledge, the defense of the rights, and the preservation of the repute and dignity of the medical profession." The number of members at one time aggregated over one hundred. Meetings were discontinued during the late civil war, but on its conclusion were resumed. In accordance with a resolution adopted at the annual meeting of the society in January, 1867, measures were taken to obtain from the Legislature the privilege of appointing or electing professors to lecture on the different branches of medicine, with power to confer the degree of Doctor of Medicine. By an act approved by Governor Geary on the 10th of April, 1877, the charter of the society was amended to grant the privileges asked for. A meeting was held at the house of Dr. George P. Oliver, No. 1430 North Twelfth Street, on the first Saturday in May following, at which the

following faculty for the new college was elected: George P. Oliver, M.D., professor of Surgery; J. Aitken Meigs, M.D., professor of the Institutes of Medicine; J. Solis Cohen, M.D., professor of the Practice of Medicine; Edward Donnelly, M.D., professor of Chemistry; David D. Richardson, professor of Materia Medica; D. D. Clark, M.D., professor of Anatomy; and Samuel Walsh, M.D., professor of Obstetrics. Owing to difficulty in obtaining a suitable building, the college was not opened until the 4th of April, 1881, and in the mean time the faculty underwent great changes owing to withdrawals of some of the professors. The faculty at the opening stood as follows: George P. Oliver, A.M., M.D., president of the college, and professor of the Principles and Practice of Surgery and Clinical Surgery; George E. Stubbs, A.M., M.D., professor of Anatomy and Clinical Surgery; Charles L. Mitchell, Ph.D., M.D., professor of Chemistry, Sanitary Science, and Medical Jurisprudence; William F. Waugh, professor of the Principles and Practice of Medicine and Clinical Medicine; Abraham S. Gerhard, A.M., M.D., professor of Physiology, Pathology, and Clinical Medicine; William Stewart, dean, and professor of Obstetrics, Gynæcology, and Clinical Gynæcology; and Frank O. Nagle, M.D., professor of Materia Medica, Therapeutics, and Clinical Medicine. The faculty remained unchanged until the death of Professor Nagle, in the latter part of January, 1884. The number of students in attendance upon the first session was thirty-one; upon the session of 1882–83, twenty-seven; and upon the session of 1883–84, twenty-four. The college has been located at the southwest corner of Broad and Market Streets ever since opening.

The course of instruction is graded, and extends over three years, known as the Freshman, Junior, and Senior years. Candidates for admission to the college are required to pass a preliminary examination. Attendance of the students at the college is required six hours a day. Examinations are held at the end of each year in the subjects taught in that year, and no student is admitted to the advanced grade until he has passed the preceding one.

The collegiate year embraces a spring or auxiliary literary term of three months, a preliminary or autumn term of one month, and a winter session of six months, the whole comprising a period of ten months.

The auxiliary literary term begins on the first Monday in April, and continues three months, and is designed for those whose qualifications are not sufficient to enable them to rightly comprehend the lectures of the winter session. During this time instruction is given in natural philosophy, botany, physical geography, mental philosophy, principles of English composition, elements of the Greek and Latin languages, mathematics, comparative anatomy and zoology, mineralogy, and geology.

The autumn term begins on the first Monday in September, and continues four weeks, the instruction being preliminary to that of the winter course. The regular winter session begins on the first Monday of October, and continues six months. During this time instruction will be given by didactic lectures on the seven fundamental branches of medicine, together with the various clinics, clinical lectures, and personal instructions. Clinical advantages are abundantly offered to the students, as in the best medical schools in the city. The faculty *personally* conduct daily examinations or "quizzes" of the class, on the subjects of the preceding lectures, thus fixing permanently in the minds of the students the instruction previously given, and at the same time affording them an opportunity of obtaining explanations on any points not thoroughly comprehended. This is considered a very valuable adjunct in the instruction by the faculty.

As an encouragement to diligence, students are allowed to compete for the following prizes: a gold medal, known as the faculty prize, for the best thesis and final examination of all branches; a Beck's histological microscope, awarded by the professor of Chemistry, for the best thesis upon a subject in medical chemistry showing original research; and a gold medal, known as the Oliver Prize, awarded by the professor of Surgery, for the best thesis and final examination in surgery.

The expenses of attendance at the college are as follows: matriculation, paid but once, five dollars; auxiliary literary term (deducted from the fees for the ensuing winter session when tickets for the latter are taken), thirty-five dollars; lecture tickets for the Freshman year, fifty dollars, and for the Junior and Senior years, seventy-five dollars each; tickets for practical pharmacy, in the laboratory, practical chemistry, practical anatomy, histology, pathological histology, and operative surgery (part only being taken each year), each ten dollars.

In order to graduate, the candidate must have attained the age of twenty-one years and be of good moral character. He must have applied himself to the study of medicine for three years, and have attended three regular winter sessions of lectures, the last of which shall have been in this college. He must show the evidence of having taken the different laboratory courses in the college, and of having received practical clinical instruction. He must also show evidence of having dissected two terms, and at least three parts of the body, and of having received instruction in operative surgery and bandaging. He must present to the dean the required evidence of literary proficiency, and of having passed the different examinations of the Freshman and Junior years. He must likewise present a satisfactory thesis on some medical subject, written on one side of thesis paper, and of his own composition and penmanship, and be prepared to defend the same before the faculty.

The Academy of Surgery was organized at a meeting held at the house of Dr. Samuel D. Gross, on the 21st of April, 1879. In addition to Dr. Gross, there were present Dr. D. Hayes Agnew, Dr. Richard J. Levis, Dr. Addinell Hewson, Sr., Dr. T. G. Morton, Dr. William H. Pancoast, Dr. J. H. Brinton, Dr. J. H. Packard, Dr. S. W. Gross, and Dr. J. Ewing Mears. Dr. Hewson was chosen president, and Dr. Mears secretary. A constitution and by-laws, proposed by Dr. Samuel D. Gross, were referred to a committee, and at a subsequent meeting the report of the committee was adopted. A charter was not obtained until the 17th of December, 1879, and permanent officers were not elected until Jan. 5, 1880, as follows:

President, Samuel D. Gross, M.D.; Vice-Presidents, D. Hayes Agnew, M.D., and Richard J. Levis, M.D.; Secretary, J. Ewing Mears, M.D.; Treasurer, William Hunt, M.D.; Recorder, J. B. Roberts, M.D.; Librarian, Oscar H. Allis, M.D.; Corresponding Secretary, Thomas G. Morton, M.D.; Pathological Histologist, Samuel W. Gross, M.D.; Council, John Ashhurst, Jr., M.D., and John H. Brinton, M.D. (with president, secretary, and treasurer as members *ex officio*), and Committee on Publication, John H. Packard, M.D., W. W. Keen, M.D. with the recorder *ex officio*).

The same officers were re-elected in 1883, except that Dr. C. B. Nancrede became recorder in place of Dr. Roberts.

The objects of the academy are "the cultivation and improvement of the art of surgery, the elevation of the medical profession, the promotion of the public health, and such other matters as may come legitimately within its sphere." The society consists of resident, non-resident, corresponding, and honorary fellows. The number of the resident fellows is limited to thirty, of non-resident fellows to fifteen, of native honorary fellows to fifteen, and of correspondent and foreign honorary fellows to ten. Officers are elected by ballot every three years, and are eligible for a re-election. Stated meetings of the society are held on the first Monday of every month except July, August, and September. The council consists of five fellows, including the president, secretary, and treasurer, who report nominations for fellowship, and act as censors. The pathological histologist takes charge of such morbid specimens as may from time to time be presented to the academy, and makes such disposition of them as the academy may direct. An annual address is delivered by a member appointed by the president, embodying an historical sketch of the more important discoveries and improvements in surgery during the previous year, or the subject may be one chosen by the lecturer. Resident fellows pay an initiation fee of ten dollars on admission to the society, and five dollars annual dues thereafter. The academy meets at the College of Physicians.

The Woman's Medical College of Pennsylvania is the oldest college in the world regularly organized for the purpose of training women for the medical profession. It was incorporated by an act of the Legislature passed March 11, 1850, its corporate privileges being the same as were granted to the Franklin Medical College of Philadelphia, Jan. 28, 1846, an institution which had but a brief career. The names of the corporators given in the act of the Legislature are William J. Mullen, Henry Gibbons, M.D., William J. A. Birkey, M.D., Robert P. Kane, and John Longstreth. The first board of trustees consisted of twenty-one gentlemen whose names serve to show the high character and standing of those interested in the establishment of the college. They were as follows: Rev. Albert Barnes, Rev. H. S. Porter, Hon. William D. Kelley, Hon. Thaddeus Stevens, Hon. John Bouvier, Hon. George R. McFarlane, William J. A. Birkey, M.D., William J. Mullen, Charles J. Bleck, Joseph T. Bailey, Ferdinand J. Dreer, John Longstreth, Robert P. Kane, James Flowers, James Mott, Benjamin Naylor, William S. Pierce, John Dainty, Thomas J. Mitchell, John Jackson, and George W. Reed. The board of trustees has since been abolished, and the college is under the management of the corporators only, who are at present nineteen in number.

The first session began on the 12th of October, 1850, in a building back of No. 229 Arch Street (old number), which is at present No. 627. The first faculty consisted of the following gentlemen, all of whom were practitioners in high standing: N. R. Mosely, M.D., professor of Anatomy, general, special, and surgical; James F. X. McCloskey, M.D., dean, and professor of the Institutes and Practice of Medicine; Joseph P. Longshore, M.D., professor of Obstetrics and Diseases of Women and Children; C. W. Gleason, M.D., professor of Physiology and Surgery; W. W. Dickeson, M.D., professor of Materia Medica and Therapeutics; and A. D. Chaloner, M.D., professor of Chemistry. Changes in the faculty for a number of years subsequently were very frequent, and gradually women began to figure in it. Forty students matriculated at the first session of the college, fifty-two at the second, and thirty-one at the third. As the novelty of the innovation wore off the number of students decreased for several years, but there was afterward a recovery and there has since been a steady increase. The number of matriculates for the winter term of 1882–83 was one hundred and twenty-five, and for the spring term following, eighty-five.

The first graduating class numbered eight ladies, whose names were as follows: Susanna H. Ellis, of Pennsylvania; Angenette A. Hunt, of New York; Anna M. Longshore, of Pennsylvania; Hannah E. Longshore, of Pennsylvania; Frances G. Mitchell, of Pennsylvania; Ann Preston, of Pennsylvania; Martha A. Sawin, of Massachusetts; and Phœbe M. Way, of Pennsylvania. The first commencement was held on the 30th of December, 1851, in the Musical Fund Hall.

The session of 1861–62 was omitted by reason of the fact that many of the professors and students were employed in hospitals taking care of sick and wounded soldiers. When the exercises of the college were resumed in the fall of 1862, the location of the institution was changed to rooms in the Woman's

Hospital, on College Avenue, which had been erected but a short time previously. The space thus occupied eventually became needed for hospital purposes, while the increasing number of students required that the college itself should have more room. As the college had received a considerable sum of money by bequest in 1868, and other contributions had also been given, it was determined to erect a separate building for its use on the lot corner of North College Avenue and Twenty-first Street, adjoining that of the Woman's Hospital. The corner-stone of the building was laid on the 1st of October, 1874, and on the 11th of March, 1875, a reception was given within its walls to the friends of the college. On the 15th of March following the building was opened for the instruction of students for the spring term, and it has been occupied ever since. It is a handsome brick edifice, four stories in height, and contains two large lecture-rooms, capable each of seating three hundred students, with large laboratories for chemical and pharmaceutical classes. It has a well-lighted dissecting-room, a museum, and the general equipments of a first-class medical college.

The early days of the college were passed in considerable poverty, but it is now on firm financial standing, and by bequests and gifts has obtained an endowment fund amounting to over one hundred thousand dollars.

An Alumni Association was organized in 1875, and at their third annual meeting the association determined to apply yearly one-half of its surplus funds to the founding of a medical and scientific library for the use of students and alumni of the college, and the other half to the establishment of an educational fund to be used in the interest of the students as the association may at any time direct. The number of alumni up to 1884 was three hundred and fifty.

Instruction is given in the Woman's Medical College in all the branches of study taught in first-class medical institutions. It was among the first colleges in the country to lengthen its winter sessions, and adopt a progressive course of study, with a division of final examinations, and it was the first to make a three years' course of study obligatory,—an innovation that is regarded with much favor. The winter session opens about the 1st of October, and terminates about the middle of March. To this course was added some years ago a spring term, which is mainly devoted to demonstrative and clinical teaching, although lectures are given in special departments of medicine not provided for in the established curriculum of the winter. The spring term is free to every matriculate of the college who has paid for two or more tickets of the preceding winter course. The duration of the spring term is about ten weeks.

Students are given the privilege of being examined at the end of the second winter term in chemistry, anatomy, and physiology, and these examinations, if satisfactory, are final. At the end of the third year they are eligible for examination in their remaining studies.

Students taking a three years' course are expected to attend, during their first year in college, the lectures on chemistry, anatomy, physiology, and histology, with materia medica and general therapeutics, and one other branch, the choice of which may be optional; to take a complete course in practical anatomy, with work in the chemical, pharmaceutical, and physiological laboratories; and to attend the clinics of the Woman's Hospital. During the second winter attendance upon all the required lectures of the course is necessary, with the exception of materia medica and the optional branch, provided these have been included in the studies of the first winter. In the second spring, work in the pathological laboratory is required preparatory to attendance upon lectures on pathology during the following winter; opportunity is also afforded for attendance upon such lectures and special courses of instruction as students may elect. During the third winter, attendance upon all the required lectures of the course is necessary, with the exception of those branches in which the final examinations have been passed.

The faculty, however, earnestly recommend a four years' course of study, with a still further division of the final examinations.

Weekly clinics are given before the students at the Woman's Medical Hospital, where over four thousand patients are treated yearly. Students are also admitted to the clinical lectures in the Pennsylvania and the Philadelphia (Blockley) Hospitals, and by private arrangement classes may obtain instruction in the wards of the latter hospital, which offer rare opportunities for clinical study.

The daily clinics at Wills Hospital for diseases of the eye, at the eye and ear department of the Philadelphia Dispensary, and at the Orthopædic Hospital and Infirmary for nervous diseases are all accessible, and the Philadelphia Lying-in Charity also affords advantages to students.

As a substitute for the supervision of a private preceptor, a student may attend upon the weekly examinations of the winter, upon the spring course, and upon the clinics as provided for in the schedule, each period of attendance upon these courses being considered as equivalent to a year of private preceptorship. There are no additional fees incurred by adopting this plan, and the faculty, after a trial of several years, are inclined to think it is a valuable addition to the educational facilities provided by the college.

A reading-room is open to students at the college at all hours, a tax of fifty cents being charged in order to keep up the supply of periodicals. The college also possesses a library which is composed of standard medical works.

Three scholarships, founded and endowed by Ann

Preston, M.D., Robert J. Dodd, M.D., and Hannah W. Richardson, M.D., friends of the college, are available to well-educated and deserving young women between the ages of twenty and thirty years. The value of the scholarships is two hundred and forty dollars for the first and second years, and one hundred and twenty dollars for the third year.

Advantages are offered to students in the matter of hospital appointments. Four graduates are appointed annually to serve as assistants to the resident physician in the Woman's Hospital. The large out-practice connected with this hospital is mainly in the hands of these assistants. The competitive examination for the position of *interne* in the Blockley Hospital has recently been opened to women, and an alumnus of the class of 1883 has already been a successful candidate. The New England Hospital for Women and Children, in Boston, and the Nursery and Child's Hospital, of Staten Island, also make appointments of female physicians, for which graduates of this college may become candidates.

In order to graduate, candidates must have attained the age of twenty-one years.

They must have been engaged in the study of medicine for three years, and during two years of that time must have been either private pupils of a respectable practitioner of medicine or special students of the college.

The candidate must have attended at least two full courses of lectures on the following subjects: chemistry and toxicology, anatomy, physiology and hygiene, materia medica and general therapeutics, principles and practice of medicine, principles and practice of surgery, obstetrics, gynæcology. At least one full course must have been attended in this college. The candidate must also have taken one course of lectures on histology and on pathology; two courses in practical anatomy, having made at least one creditable dissection of each of the usual divisions of the cadaver; one course in the chemical, the pharmaceutical, and the pathological laboratories, and in the practical use of the microscope. Satisfactory evidence of having attended at least two courses of clinical lectures in the departments of general medicine, surgery, obstetrics, and gynæcology is also required from each candidate for graduation.

The application for the degree must be made six weeks before the close of the session. The candidate, at the time of application, must exhibit to the dean evidence of having complied with the above requirements; she must also present the graduation fee and a thesis of her own composition and penmanship on some subject which has direct application to medicine. Clinical reports in some one department of medicine will be accepted in lieu of a thesis.

The fees are as follows: matriculation, paid but once, five dollars; professors' tickets, each fifteen dollars; practical anatomy ticket, ten dollars; graduation fee, thirty dollars. The whole cost of two or more courses of lectures and graduation, exclusive of laboratory and incidental expenses, is two hundred and sixty-five dollars. A limited number of poor, but deserving, young women are admitted annually on the payment of thirty-five dollars for the session, exclusive of registration, matriculation, and graduation fees. Such arrangements are strictly confidential. All applicants for admission to the college as beneficiaries, or upon the scholarships, are required to undergo an examination of their knowledge of the elements of a fair English education in order to determine their fitness to enter upon the study of medicine.

The present faculty consists of the following professors, lecturers, and demonstrators:

Rachel L. Bodley, M.D., professor of Chemistry and Toxicology; Clara Marshall, M.D., professor of Materia Medica and General Therapeutics; Frances Emily White, M.D., professor of Physiology and Hygiene; Anna E. Broomall, M.D., professor of Obstetrics; James B. Walker, M.D., professor of the Principles and Practice of Medicine; Hannah T. Croasdale, M.D., professor of Diseases of Women and Children; William H. Parrish, M.D., professor of Anatomy; William W. Keen, M.D., professor of the Principles and Practice of Surgery; J. Gibbons Hunt, M.D., professor of Histology and Microscopy; C. Newlin Pierce, D.D.S., professor of Dental Physiology and Pathology; Horatio C. Wood, Jr., M.D., lecturer on special subjects; Edward T. Bruen, M.D., lecturer on Pathology; Charles K. Mills, M.D., lecturer on Nervous Diseases; Louis A. Duhring, M.D., lecturer on Dermatology; Alexander W. MacCoy, M.D., lecturer on Laryngoscopy and Rhinoscopy; Emilie B. Du Bois, M.D., demonstrator of Anatomy and instructor in Materia Medica; Lucius E. Sayre, Ph.G., demonstrator of Pharmacy; Henry F. Formad, M.D., demonstrator of Pathology; Ida E. Richardson, M.D., instructor in Practice of Medicine; Anna M. Fullerton, M.D., instructor in Obstetrics; Lena V. Ingraham, M.D., instructor in Surgery; Rachel L. Bodley, M.D., dean.

The Philadelphia Polyclinic and College for Graduates in Medicine is the result of a number of informal meetings held at the houses of prominent physicians of the city, which had for their object the consideration of the need of establishing an institution where graduates of medicine would be enabled to continue their studies, and where, at the same time, the poor and indigent sick might receive good medical attention free of charge. The charter for the college was obtained on the 19th of March, 1883. The incorporators were fifteen in number, and were mostly the physicians instrumental in promoting the enterprise.

The first location of the college was the four-story building which is occupied at present, at the corner of Locust and Thirteenth Streets. As no difficulty had been anticipated in procuring a charter, the building was rented before the charter received the Governor's signature, and the first clinic was given on the 12th of March, 1883. Since the time of its inception the college has had a high degree of prosperity, and its present class numbers over fifty persons. The teaching is entirely clinical and demonstrative, and members of the class can thus personally examine cases of disease and acquire skill in the use of surgical instruments. They are also given opportunities to perform laboratory work in chemistry, histology, anatomy, surgery, and electro-therapeutics.

The number of cases treated at the college from the first clinic, on the 12th of March, to Dec. 31, 1883, was three thousand three hundred and one. Provision is made for the hospital treatment of operative and emergency cases.

The faculty consists of the following well-known medical gentlemen of the city, all of whom are among the incorporators of the college. The subjects taught in the college are indicated in connection with the names:

Clinical, Operative, and Orthopædic Surgery, Thomas G. Morton, M.D., surgeon to the Pennsylvania Hospital and to the Philadelphia Orthopædic Hospital; Diseases of the Throat and Chest, J. Solis Cohen, M.D., honorary professor of Laryngology in Jefferson Medical College, physician to the German Hospital; Applied Anatomy and Operative Surgery, John B. Roberts, M.D., surgeon to St. Mary's Hospital; Diseases of the Ear, Charles H. Burnett, M.D., aural surgeon to the Presbyterian Hospital; Diseases of the Mind and Nervous System, Charles K. Mills, M.D., neurologist to the Philadelphia Hospital and to the Howard Hospital; Clinical Chemistry and Hygiene, Henry Leffmann, M.D.; Diseases of the Skin, Arthur Van Harlingen, M.D., consulting physician to the Philadelphia Dispensary for Skin Diseases; Obstetrics and Diseases of Women and Children, Edward L. Duer, M.D., obstetrician to the Philadelphia Hospital and gynæcologist to the Presbyterian Hospital; Diseases of the Eye, George C. Harlan, M.D., surgeon to Wills Eye Hospital and eye and ear department of Pennsylvania Hospital; Genito-Urinary and Venereal Diseases, J. Henry C. Simes, M.D., assistant surgeon to the Episcopal Hospital; Pathology and Microscopy, Frederick P. Henry, M.D., physician to the Episcopal Hospital; Obstetrics and Diseases of Women and Children, William H. Parrish, M.D., obstetrician to the Philadelphia Hospital, and professor of Anatomy in the Woman's Medical College of Pennsylvania.

There are also the following assistants:

Clinical, Operative, and Orthopædic Surgery, A. B. Hirsh, M.D., Chief of Clinic, John F. Bower, M.D.; Diseases of the Throat and Nose, A. W. MacCoy, M.D., Chief of Clinic, S. Solis Cohen, M.D., C. Jay Seltzer, M.D., Max J. Stern, registrar; Diseases of the Chest, Caspar Morris, Jr., M.D., Demonstrator of Physical Diagnosis, H. Mifflin, M.D., Chief of Clinic; Applied Anatomy and Operative Surgery, L. W. Steinbach, M.D., Chief of Clinic, A. A. G. Starck, M.D., B. N. Keely, M.D., L. W. Steinbach, M.D., Demonstrator of Anatomy, Surgery, and Fracture Dressings; Diseases of the Ear, Robert H. Hamil, M.D.; Diseases of the Mind and Nervous System, Max H. Bochroch, M.D., Louis Brinton, M.D., William M. Angney, M.D.; Clinical Chemistry and Hygiene, William Beam, B.A., Jul. L. Salinger, Helen D. Abbott; Obstetrics and Diseases of Women and Children, Washington H. Baker, M.D., Chief of Clinic; Diseases of the Eye, H. F. Hansell, M.D., Chief of Clinic, C. F. Clark, M.D.; Genito-Urinary and Venereal Diseases, Thomas R. Neilson, M.D., Chief of Clinic; Pathology and Microscopy, S. Solis Cohen, M.D., Demonstrator; House Physician, J. S. Watt, M.D.

The government of the institution is vested in a board of seven trustees, consisting of the following gentlemen: R. J. Levis, M.D., president; Henry Leffman, M.D., treasurer; John B. Roberts, M.D., secretary; J. Solis Cohen, M.D., Thomas G. Morton, M.D., Charles K. Mills, M.D., and George C. Harlan, M.D. The college is sustained by the tuition fees, which are as follows:

Operative and orthopædic surgery and applied anatomy, $25; diseases of the throat and chest, and general medicine, $25; diseases of the ear and eye, $25; diseases of the mind and nervous system, $15; clinical chemistry, pathology, and microscopy, $25; diseases of the skin, syphilis, and genito-urinary surgery, $25; obstetrics and diseases of women and children, $25; single branches of the double departments, $15; general ticket for all branches during an entire year, $300.

There is no fee for matriculation, nor other extra charges, and any number of branches may be taken. There are six sessions, each six weeks in length, and thirty-six hours of instruction are given in each department during each session. All tickets, however, are good for six consecutive weeks. In 1883–84 the fall session began on the 1st of October, the early winter session on the 12th of November, the mid-winter session on the 7th of January, the late winter session on the 18th of February, the early spring session on the 1st of April, and the late spring session on the 13th of May.

The Hahnemann Medical College was organized in the summer of 1867, but was an offshoot from the Homœopathic Medical College of Philadelphia, and afterward became consolidated with it. It therefore dates its origin from the time of organization of the latter college, and from that fact claims to be the oldest medical college in the world which teaches the distinctive method of medical treatment originated by Samuel Hahnemann. The first college of the kind started in the country was the North American Academy of Homœopathic Medicine, located in Allentown, Lehigh Co., Pa., and organized in the year 1835. Its teaching was conducted in the German language, and consequently it never became a popular institution, and soon ceased to exist. The Homœopathic Medical College of Philadelphia was the next in succession. The question of establishing a homœopathic college had been frequently discussed at the meetings of the Central Bureau of the American Institute of Homœopathy, and at a meeting held at the house of Dr. Jacob Jeans, of this city, in February, 1848, at which Dr. Jeanes, Dr. Constantine Hering, and Dr. Walter Williamson were present, it was determined to petition the Legislature, then in session, for a charter. The charter was passed by the Legislature on the 8th of April, 1848, and granted the proposed college all the powers and privileges of other medical colleges in the State.

The first board of officers consisted of the following gentlemen: President, Hon. Anson V. Parsons; Managers, Stillwell S. Bishop, Henry J. Boller, Edward M. Davis, Daniel Deal, Lawrence Johnson, John M. Kennedy, Francis King, Henry P. Lloyd, Benjamin R. Miller, John Sartain, Isaac S. Waterman, Haworth Wetherald; Recording Secretary, Francis Sims; Corresponding Secretary, Walter Williamson; Treasurer, William Rhoads.

The faculty consisted of the following gentlemen: Jacob Jeans, M.D., professor of the Principles and Practice of Medicine; Caleb B. Matthews, M.D., professor of Materia Medica; Walter Williamson, M.D., dean, professor of Midwifery and Diseases of Women and Children; Francis Sims, M.D., professor of Surgery; Samuel Freedley, M.D., professor of Botany; Matthew Semple, M.D., professor of Chemistry; William A. Gardiner, M.D., professor of Anatomy; Alvan E. Small, M.D., professor of Physiology and Pathology.

A dispensary was opened at the same time in con-

nection with the college, for the purpose of affording the poor of the city an opportunity for homœopathic medical treatment, and for furnishing material for clinics. This was the first homœopathic dispensary started in Philadelphia.

The first course of lectures began on the 15th of October, 1848, in the building in the rear of 627 Arch Street, which subsequently, for several years, was occupied by the Woman's Medical College of Pennsylvania. The first class numbered fifteen students, of whom only six graduated. In 1849 the college removed to Filbert Street, above Eleventh, to a stone building formerly occupied by the Pennsylvania Medical College, and there it has remained up to the present time.

Several reorganizations took place in the faculty, the first being at the close of the session of 1859–60, when the trustees declared all the chairs of the college vacant, and proceeded to the appointment of another corps of teachers, in which some of the old faculty were retained, but in which the majority were new men. One result of this action was the establishment of the New York Homœopathic Medical College, by Dr. Jacob Beakley, one of the members of the deposed faculty, and others. The reorganized faculty consisted of Matthew Semple, M.D., professor of Chemistry and Toxicology; William A. Gardiner, M.D., professor of Surgery; Silas S. Brooks, M.D., professor of Homœopathic Institutes and Practice of Medicine; George R. Starkey, M.D., professor of Anatomy; A. H. Ashton, M.D., professor of Obstetrics and Diseases of Women and Children; J. K. Lee, M.D., professor of Materia Medica and Therapeutics; and O. B. Gause, M.D., professor of Physiology and Pathology.

Resignations from the faculty occurred frequently for various reasons, among them being financial stringency in the affairs of the college, but the vacancies were refilled until the close of the session in 1864. The lectures were delivered to the students up to the close of the term, and they dispersed to their homes without knowing that the college was in danger. The crisis soon followed, and the college was again without a faculty. In 1865 a new charter was obtained, entirely reorganizing the institution and making it a stock company, with permission to increase the capital sixty thousand dollars for hospital purposes. The board of trustees were now elected by the stockholders, and not by the corporators as previously, and these trustees elected the faculty for one year. The first faculty under the new organization commenced their instructions with the session of 1864–65, and consisted of the following gentlemen: Constantine Hering, M.D., professor of Homœopathic Institutes and Practice of Medicine; Ad. Lippe, M.D., professor of Materia Medica and Therapeutics; Charles G. Rane, M.D., professor of Special Pathology and Diagnosis; H. N. Guernsey, M.D., professor of Obstetrics and Diseases of Women and Children; George R. Starkey, M.D., professor of Surgery; Pusey Wilson, M.D., professor of Anatomy; Charles Heerman, M.D., professor of Physiology; Lemuel Stephens, M.D., professor of Chemistry and Toxicology.

At the close of the session of 1866–67 a rupture occurred, which produced important results. The majority of the stock of the company had fallen into the control of one person, whose dictum was at times displeasing to members of the faculty. When a resolution was adopted to abolish the chair of Diagnosis and Special Pathology, Dr. Constantine Hering resigned, and was followed in his course by several others of the professors. Another reorganization ensued upon these withdrawals, and during the summer changes took place which again compelled a reorganization. The last course of lectures delivered under the management of the stock company was in 1868 and 1869, when the faculty stood as follows: Adolph Lippe, M.D., professor of Materia Medica and Therapeutics; A. R. Morgan, M.D., professor of Homœopathic Institutes, Special Pathology, and Practice of Medicine; Henry N. Guernsey, M.D., professor of Obstetrics and Diseases of Women and Children; William L. Arrowsmith, M.D., professor of Physiology and General Pathology; Malcolm Macfarlan, M.D., professor of Surgery and Surgical Pathology; Robert J. McClatchey, M.D., professor of Anatomy; and George G. Percival, A.M., M.D., professor of Chemistry and Toxicology. Thirty-one degrees were conferred at the conclusion of this last course.

In the mean time, in the summer of 1867, the seceders from the old institution had obtained the charter of the Washington Medical College of Philadelphia, chartered May 2, 1853, which had not been organized, and by the act of the Court of Quarter Sessions of Philadelphia, July 17, 1867, the name was altered to the Hahnemann Medical College of Philadelphia. The new college organized with the following faculty: Constantine Hering, M.D., professor of Institutes and Materia Medica; Charles G. Rane, M.D., professor of the Practice of Medicine, Special Pathology, and Diagnosis; John C. Morgan, M.D., professor of Surgery; Henry Noah Martin, M.D., professor of Midwifery, Diseases of Women and Children, and Lecturer on Clinical Medicine; Richard Koch, M.D., professor of Physiology, General Pathology, and Microscopic Anatomy; A. R. Thomas, M.D., professor of Anatomy; Lemuel Stephens, M.D., professor of Natural Philosophy, Chemistry, and Toxicology. During the session Dr. O. B. Gause succeeded Dr. Martin as professor of Midwifery, Dr. Martin becoming professor of Clinical Medicine only.

The board of corporation trustees were Jason L. Fennimore, president; John A. Marshall, secretary; John W. Sexton, treasurer; Edward S. Lawrence, George W. Troutman, John T. Midnight, Augustus W. Koch, M.D., F. E. Boericke, M.D., Howard Malcom, D.D., Byron Woodward, James B. Read, and T. Guilford Smith.

The first location of the college was at 1307 Chestnut Street, where the second and third stories were specially fitted up for the purpose. In the spring of 1868 a removal was made to a building better suited for the requirements of a medical school at 18 North Tenth Street.

HAHNEMANN MEDICAL COLLEGE.

In the spring of 1869 arrangement was made by the trustees of the Hahnemann Medical College by which the charter and building of the Homœopathic Medical College of Pennsylvania were obtained, and by act of the Legislature on April 2, 1869, the two charters were merged and the colleges consolidated, the title of the younger college being retained as the title of the consolidated institutions. Since the time of union the college has been prosperous. In the present year (1884) arrangements have been made for the erection of a new college building on Broad Street above Race, west side, on a lot extending to Fifteenth Street, on which it is also intended to erect the Homœopathic Hospital.

The college derives its support from the fees paid by students. During the twenty-one years of the existence of the old college six hundred and thirty-seven students graduated. The largest class graduated from the consolidated college was in 1881, and numbered eighty-three. No alumni association has yet been organized. Among the alumni of the college are some of the most eminent homœopathic practitioners of the country, and members of the faculty of homœopathic colleges in Cleveland, Chicago, Cincinnati, and other cities.

The present faculty consists of the following gentlemen:

A. R. Thomas, M.D., dean, professor of Anatomy; Lemuel Stephens, M.D., professor of Natural Philosophy, Chemistry, and Toxicology; O. B. Gause, M.D., registrar, professor of Obstetrics, Puerperal Diseases, and Diseases of Infants; E. A. Farrington, M.D., professor of Institutes and Materia Medica; B. F. Betts, M.D., professor of Gynæcology; Pemberton Dudley, M.D., professor of Physiology and Sanitary Science; R. J. McClatchey, M.D., professor of Pathology and the Practice of Medicine; Charles M. Thomas, M.D., professor of Operative and Clinical Surgery and Ophthalmology; John E. James, M.D., professor of Principles of Surgery and Clinical Surgery; Charles Mohr, M.D., lecturer on Clinical Medicine and Physical Diagnosis; R. B. Weaver, M.D., demonstrator of Anatomy and Lecturer on Surgical Anatomy; J. N. Mitchell, M.D., demonstrator of Obstetrics; W. H. Keim, M.D., demonstrator of Surgery; W. C. Goodno, M.D., lecturer on Microscopy, Histology, and Morbid Anatomy; W. S. Boney, A.M., demonstrator of Chemistry and Lecturer on Medical Jurisprudence; William H. Bigler, M.D., lecturer on Diseases of the Eye and Ear (Spring Course); E. M. Howard, M.D., lecturer on Botany and Pharmacy; W. B. Trites, M.D., lecturer on Venereal Diseases (Spring Course).

The Hahnemann Medical College gives instruction in all the lines of study taught in the best medical institutions, but in the courses on the institutes of medicine, materia medica, and the practice of medicine the doctrines peculiar to homœopathy are taught.

The regular winter session opens about the 1st of October, and continues until the beginning of March. In order to become a student, the candidate must present to the dean a certificate signed by his private preceptor, as evidence of qualification for the study of medicine. Graduation is possible at the close of the second year, but the college in 1869 prepared a three years' graded course, which scholars are earnestly recommended to adopt and which the majority of them do pursue. The Hahnemann College claims priority over other medical schools in the establishment of this course, though the Woman's Medical College was the first to make a three years' course obligatory. Students attending on the three years' course have the advantage of special lectures on microscopy, pharmacy, histology, hygiene, physical diagnosis, dermatology, neurology, morbid anatomy, and diseases of children during the winter term, and extended clinical instruction is also afforded. A supplementary course during the spring months embraces all the special lectures of the graded course alluded to above, and is especially recommended to students in the two years' course, as it enables them to complete the full round of studies as given in the three years' course. A post-graduate course has been established for the benefit of physicians of the old school who are anxious to compare the two systems of practice.

Stated medical, gynæcological, surgical, and eye and ear clinics are held throughout the year, and the dispensary and hospital supply abundant material for the same.

The means and facilities for illustrating the lectures are well selected and abundant. The laboratory is well supplied with apparatus and material; the museum contains over 4200 specimens, including a large number of models in wood, wax, and *papier maché*, over 2000 mineralogical and botanical specimens, besides nearly 1000 plates and diagrams. The library comprises about 2000 volumes, and is open to the students, under proper regulations, free of charge. Suitable rooms are provided for the demonstration of anatomy, surgery, gynæcology, midwifery, chemistry, and microscopy.

Students may become candidates for graduation who have attended two full sessions of instruction in

Digitized by Google

this institution; or one full session only, in case they have attended one or more regular sessions in another accredited medical college. The candidate must be at least twenty-one years of age, of good moral character, have applied himself to the study of medicine for three years, have been a private pupil for two years of a respectable practitioner of medicine, and must have attended at least one course each of practical anatomy and practical surgery. When applying for examination, he must exhibit his tickets to the dean of the faculty, or give other satisfactory evidence of having complied with the regulations. He must, by the 1st of February, deliver to the dean of the faculty an essay or thesis on some medical subject in his own handwriting, composed by himself, correctly written, and must be able to defend it during the examination. On the presentation of his thesis the graduation fee must be paid; if he is rejected said fee will be refunded. A student who has attended one or more courses in a medical college in which homœopathy is not taught must attend one full session of instruction in this institution, and, in addition to the general average required for graduation, he must obtain a two-thirds average in the following departments: homœopathic institutes and materia medica, practice of medicine, and clinical medicine.

The fees charged for instructions are as follows: matriculation, $5; one full session of lectures, two years' course, $100; one full session of lectures, three years' graded course, $70; one full session for graduates of other accredited medical colleges, $50; practical anatomy and surgery, each $10; practical obstetrics and chemistry (optional), each $10; spring course, $15; graduation, $30.

Pharmacy.—In the early days of this city every family had its medicine-chest, and if a case of illness was considered too serious for the remedies that it contained, the country doctor was called into service. Our ancestors dosed themselves liberally, and the manufacturers of quack nostrums drove a thriving trade. Physic and surgery were rough and rude, and, especially in the remoter regions, were strangely mingled with superstitions and prejudices. All except the highly-educated people used charms for remedies, and believed in witchcraft and "spells." If the treatment was not scientific, it was at least heroic. In fevers, the patient was sweated with tea of snake-root, purged with a decoction of walnut bark, and his blood purified with drenches of "Indian physic," or blood-root; if a child had worms, he was given salt, copperas, or pewter filings; the croup, known as the "bold hives," and probably very fatal to young children so much exposed, was treated with "wall-ink" (probably "soot-tea") and the juice of roasted onions or garlic. The sufferer from itch was plastered with brimstone ointment. For the very common infliction of rheumatism, custom prescribed sleeping with feet to the fire, and anointing the affected parts with unguents made of rattlesnake-oil or the fat of ground-hogs, raccoons, polecats, wolves, or bears. The erysipelas was supposed to be curable by the application of the blood of a black cat, and consumption released its victims if they took enough of the syrup of elecampane and spikenard. The woodsmen were frequently bitten by snakes, but their lives could always be saved by cutting the snake into pieces and applying the fragments to the wound; a decoction of chestnut leaves and bark must also be laid on, and an infusion of white plantain in milk taken internally. If there was swelling and inflammation the surgeon resorted to cupping and leeching, and if hunters were bitten in the woods they at once scarified the wound and filled the gashes with gunpowder.

The Philadelphia College of Pharmacy was organized in 1821 to correct abuses which had crept into the drug trade, and which were in a large degree owing to the lack of proper knowledge among apothecaries. The immediate cause of action was the adoption by the University of Pennsylvania of a series of resolutions having in view the elevation of the trade, and providing for the conferring of the degree of Master of Pharmacy upon such druggists in the city and liberties of Philadelphia as were desirous and deserving of obtaining it. On certain conditions, apprentices who had served for three years under such druggists were also awarded the degree; but a further resolution required that future candidates should have attended at least two courses of lectures on chemistry, materia medica, and pharmacy at the University.

This attempt to regulate the drug business from the outside was naturally resented by members of the trade, and the hours at which the lectures above referred to were delivered being in the middle of the day rendered them very inconvenient for the attendance of apprentices. In the first or second month of the year 1821, in a conversation between Peter K. Lehman, a druggist doing business on the south side of Market Street, below Tenth, and Henry Troth, a thriving wholesale druggist, in business on Market Street, at what is now known as 630, Mr. Lehman expressed his dissatisfaction with the action of the University. Mr. Troth suggested, in reply, that a better plan for the needed improvement in the trade would be the establishment of an institution by the druggists themselves, where they could train their apprentices and themselves, and supervise the qualifications of those seeking admission to the business. The suggestion struck Mr. Lehman favorably, and the friends resolved to agitate the subject among their brethren in the business. This conversation may be regarded as the first step which led to the foundation of the Philadelphia College of Pharmacy.

The project, when broached, met with a favorable reception among nearly all of the druggists of the city, and as a result a meeting of the trade was held in Carpenters' Hall on the 23d of February, 1821, at

which Stephen North presided, and a committee was appointed to draw up a plan of proceedings. The committee made their report at a meeting held March 13th, following, and recommended the formation of a college of apothecaries, where information of a character beneficial to the trade should be obtained, and the qualities of articles brought into the drug market should be investigated. It was further proposed to start a school of pharmacy in connection, in which lectures should be delivered especially for the instruction of those desiring to become druggists and apothecaries. The report was adopted, and a constitution prepared by the committee was signed by the persons present. At the first stated meeting, held two weeks later, officers were elected, Charles Marshall being chosen president. Mr. Marshall was born in Philadelphia in 1744, and had been engaged in the drug business on the south side of Chestnut Street, above Second Street. He had retired from business previous to his elevation to the presidency of the new college.

On the 12th of December, 1823, he resigned his office on account of old age, and William Lehman was chosen his successor.

The charter for the college received the Governor's signature March 30, 1822, the name of the institution having previously been changed from the College of Apothecaries to the Philadelphia College of Pharmacy.

Instruction was begun in the school in the fall of 1821, the first professors being Gerard Troost, M.D., professor of Chemistry, and Samuel Jackson, professor of Materia Medica. The instructors up to the present time (1884) have been as follows, all those who held positions previous to the present occupants being now deceased:

Gerard Troost, M.D., professor of Chemistry from 1821 to 1822; Samuel Jackson, M.D., professor of Materia Medica from 1821 to 1827; Benjamin Ellis, M.D., professor of Materia Medica from 1827 to 1831; George B. Wood, M.D., professor of Chemistry from 1822 to 1831, when he was elected to the chair of Materia Medica, made vacant by the death of Dr. Ellis, and continued till 1835; Franklin Bache, M.D., professor of Chemistry from 1831 to 1841; R. Eglesfeld Griffith, M.D., professor of Materia Medica from 1835 to 1836; William R. Fisher, professor of Chemistry from 1841 to 1842; Joseph Carson, M.D., professor of Materia Medica from 1836 to 1850; William Procter, Jr., professor of Theory and Practice of Pharmacy from 1846 to 1866, and from 1872 to 1874; Robert P. Thomas, M.D., professor of Materia Medica from 1850 to 1864; Edward Parrish, professor of Materia Medica from 1864 to 1866, and professor of Pharmacy from 1866 to 1872; Robert Bridges, M.D., professor of Chemistry from 1842 to 1879, and emeritus professor of Chemistry from 1879 to 1882; John M. Maisch, Ph.G., professor of Materia Medica and Botany from 1866 to the present time; Joseph P. Remington, Ph.G., professor of the Theory and Practice of Pharmacy from 1874 to the present time; Samuel P. Sadtler, Ph D., F.C.S., professor of Chemistry since 1879.

In addition to the above-mentioned professorships, Frederick P. Power, Ph.G., Ph.D., was appointed professor of Analytical Chemistry several years ago. He was succeeded a short time since by Henry Trimble, Ph.G.

The first location of the college was on Seventh Street, where the gas-offices now stand. It remained there but a few years, when removal was made to a building on Filbert Street, west of Seventh, and adjoining the east side of Lippincott's publishing-house. In 1867 this building was found inadequate to meet the wants of the college, and removal was again made to the present building, at 145 North Tenth Street, which had been erected for the purpose. In 1880 the properties in the rear of the building were purchased, and in 1881 an addition was put up, which nearly doubled the capacity of the college. The new building extends from Tenth Street on the front to Elwyn Street in the rear, and is four stories in height. The first floor contains the library, with over three thousand volumes, the museum, the chemical laboratory, and a number of offices. The second floor is principally occupied by the pharmaceutical lecture-room and the pharmaceutical laboratory, and the third by the materia medica and the chemical lecture-rooms. On the fourth floor the Alumni Association and the Zeta Phi and Zeta Phi Alpha societies have their quarters.

The American Journal of Pharmacy, published since 1825 under the direction of the college, has been one of the leading agencies in developing and improving the profession of pharmacy in the United States, and is regarded throughout the country by druggists as of the highest authority on the subjects on which it treats. Its offices are next door to the college building.

Previous to the year 1840 pharmacists were not recognized in the pharmacopœial conventions, but a resolution adopted in that year requested the co-operation of this college in the final work of revision and publication. In 1850 the Philadelphia College of Pharmacy and other kindred institutions in the country were invited to send delegates to the decennial convention, and in that revision and the revisions of 1860 and 1870 pharmacists were well represented. In the last convention (in 1880) fourteen out of the committee of twenty-five to whom was intrusted the work of revision were pharmacists. In producing this recognition of the claims of educated pharmacists to be equal co-laborers in what may be regarded as among the highest legislative proceedings known to the medical profession, the zealous cultivation of the pharmaceutical science and art by the college has been a chief agent. A direct result of the "Pharmacopœia" has been the "United States Dispensatory," emanating from Drs. Wood and Bache, formerly professors in the college, aided in the pharmaceutical department by a former president, Daniel B. Smith, and, in later editions, in the chemical by a former professor of Pharmacy, Dr. Robert Bridges, and in the pharmaceutical articles by the late Professor William Procter, Jr. The present pharmaceutical and chemical editors of the work are the professors of Pharmacy and Chemistry in the college.

The record which the college has made for itself is one of which it is deservedly proud, and it has become famous as an instructor in its special branches wherever pharmacy is practiced. From the establishment of the college to the close of the term of 1882–83 seven thousand one hundred and nine students had matriculated, and two thousand and forty-nine had received the degree of Graduate in Pharmacy (Ph.G.). Its students are drawn from every State in the Union, and from Canada, Cuba, and various parts of Europe. An alumni association was organized in 1864, the secretary of which has his headquarters in the college building.

The object of the college, as set forth by the charter, is the "cultivating, improving, and making known a knowledge of pharmacy, its collateral branches of science, and the best modes of preparing medicines and their compounds, and the giving of instruction in the same by public lectures."

The officers of the college are a president, two vice-presidents, a corresponding secretary, a recording secretary, and a treasurer, elected annually, who, with sixteen trustees, eight of whom are elected each half-year, constitute a board to control the affairs of the college. The college is maintained by the initiation fees, amounting to five dollars in each case, and the annual dues from members, which are also five dollars each. Members are active, honorary, and corresponding, the last two having the same rights and privileges as the first, except that they are not allowed to vote or hold office. Honorary members are chosen for their superior knowledge of materia medica, pharmacy, and the collateral branches of science. The school of pharmacy in connection with the college is maintained by the fees paid by students.

The course of instruction to students in the school of pharmacy occupies two years. In place of a repetition of the same lectures to the same class, a radical change was begun in 1879, the course being divided into a more elementary first course, called the junior, and a more advanced, called the senior. The fees to be paid by students are: for matriculation, five dollars; for each course of lectures, twelve dollars; and for final examination, fifteen dollars. The term begins with the 1st of October, and lasts until the end of February. The subjects treated of are materia medica and botany, at present under the charge of John M. Maisch, Ph.D., the dean of the faculty; the Theory and Practice of Pharmacy, under Professor Joseph P. Remington, Ph.G.; and Chemistry, under Professor Samuel P. Sadtler, Ph.D., F.C.S. A recently-introduced feature in the instruction is the reviews of the lectures, which are conducted by assistant professors appointed from the alumni, one assistant being granted to each of the three professors. The fee for the review for junior students is two dollars, and for senior students three dollars, in each of the three branches. Practical instruction is given to the student in pharmaceutical manipulations in the new pharmaceutical laboratory, which contains accommodations for over one hundred students, and is supplied with tables, each of which has a gas, water, and steam-bath attachment. Each student is assigned one of these tables. Before proceeding to work a short lecture is delivered by the professor describing the operation to be attempted and the difficulties likely to be encountered, after which the student is expected to make a practical application of his knowledge upon the subject. In the senior year considerable attention is devoted to extemporaneous pharmacy. The fee for the junior course is fifteen dollars, and for the senior twenty dollars, and for special students taking both courses twenty-eight dollars.

Instruction in practical chemical annalysis has been inaugurated for the senior class, and in the more elementary principles of chemical manipulation for the junior, Professor Henry Trimble being in charge. The course for each class comprises twenty lessons, and the fee is twelve dollars for each course. A school of practical chemistry, also under Professor Trimble's direction, is held in the commodious and well-lighted laboratory on the first floor, and students are there given an opportunity to obtain a thorough knowledge of chemical analysis and pursue more advanced scientific research. The fee for daily practice is fifteen dollars for the first month and ten dollars for every month thereafter, and practice during portions of the week is charged at reduced figures, according to the time employed.

As many of the students are so busily engaged in stores as to have but a limited amount of time for study, partial examinations are allowed, which give them the opportunity to pass on two or more studies, leaving the rest for examination at some other time.

Several prizes have been offered to encourage students to diligence in their work at the college. The "Procter prize," founded by Professor William Procter, Jr., deceased, and consisting of a gold medal and certificate, is awarded annually to the most meritorious graduate in pharmacy, provided such a reward is, in accordance with the terms laid down by the founder, thought to be deserved. A prize of one hundred dollars is awarded to the student preparing the best thesis upon graduating, if deserved. An "alumni gold medal," established, as its name implies, by the alumni in 1871, is awarded to the student passing the best examination for the degree of Graduate in Pharmacy. A prize of one hundred dollars has been awarded since 1880 for the best thesis presented by a member of the graduating class, if worthy. A number of other prizes of more or less value have also been offered to the completion of ambitious students. There are two scholarships, known as the Peter Williamson and Robert Bridges scholarships.

A candidate for graduation must be at least twenty-one years of age, have attended two courses of each

of the lectures delivered in the college, or one course in the college and one other in some other respectable school of pharmacy, the last of which, however, must be in the college. He shall have served out an apprenticeship of at least four years with a person engaged in, and qualified to conduct, the drug business. The time actually spent in attendance upon lectures and practical class instruction in pharmacy, and practical class instruction in chemistry in the college will be considered part of the time of apprenticeship required for graduation, it being understood that but two courses in the college shall be counted in nine and a half months. The student must also produce in his own handwriting an original dissertation on some subject in materia medica, pharmacy, chemistry, or one of the related brances of science. He must also be recommended by the committee on examinations and the professors jointly, and if his application be finally approved of by the board of trustees, he shall be entitled to receive the degree of Graduate in Pharmacy (Ph.G.). The degree of Master of Pharmacy is conferred on candidates who are graduates of the college of not less than five years' standing, who have been engaged in the practice of pharmacy for the period named since graduation, and who are of good moral character and professional repute. An original dissertation of a satisfactory character must also be presented to the dean of the faculty by the candidate upon some subject connected with the branches taught in the college, together with suitable specimens of the results of his investigations. The qualifications of the candidate are then passed on, in the same manner as in the case of a student seeking to graduate.

The Pennsylvania College of Dental Surgery was an outgrowth of the Philadelphia College of Dental Surgery, an institution which was chartered in May, 1850, and had its headquarters in a room at the corner of Twelfth and Chestnut Streets, which is now (1884) occupied by S. S. White's dental depot. This college commenced operations in 1852, and completed four sessions, during which time there were sixty-three graduates. A rupture having occurred between the faculty and the trustees, because the latter had conferred honorary degrees on three students who, the faculty thought, were undeserving of the distinction, the faculty resigned and the college ceased to exist. The charter for the Pennsylvania College of Dental Surgery was then obtained, April 3, 1856, mainly through the efforts of the gentlemen composing the old faculty. The first board of corporators contained the following gentlemen: Henry C. Carey (president), William Elder, Washington L. Atlee, Elisha Townsend, George Truman, Benjamin Malone, Alfred Stillé, Daniel Neall, Thomas Wood, William W. Fouché, John R. McCurdy, and T. S. Arthur. At the first meeting of the corporators, held at the house of Elisha Townsend, on the 6th of April, 1856, the following faculty was elected:

Elisha Townsend, D.D.S., M.D., professor of Operative Dental Surgery and Special Dental Pathology; Robert Arthur, D.D.S., M.D., professor of the Principles and Practice of Dental Surgery; J. F. B. Flagg, D.D.S., M.D., professor of Anatomy and Physiology; Ely Parry, D.D.S., M.D., professor of Chemistry, Materia Medica, and Special Therapeutics; Thomas L. Buckingham, D.D.S., M.D., professor of Mechanical Dentistry.

The first location of the college was at 528 Arch Street. In 1863 it was removed to the southeast corner of Tenth and Arch Streets, and about 1868 was established in its present location, at the corner of Twelfth and Filbert Streets. Its career has been prosperous but uneventful. From the time of its commencement to 1883, it has graduated one thousand and thirty-four students. The number of students in attendance annually averages between fifty and sixty. Owing to the development of the dental science, higher educational standards have been adopted from time to time, and many radical changes in the curriculum of the school have been made in the past five years.

The regular session of the college, at first four months in duration, has been lengthened to five months; preparatory spring and fall sessions, four months in all, have been instituted, with daily lectures by the professors of the several branches taught.

The winter session commences about the 1st of October, and continues until the 1st of March. Twenty lectures are delivered during each week, embracing the following branches: chemistry and metallurgy, mechanical dentistry, materia medica and therapeutics, dental physiology, dental pathology and operative dentistry, physiology and general pathology, and anatomy and surgery.

The fall course commences about the 1st of September, and continues until October. It is free of charge to students entering for the regular or winter session. The spring course, which is also free to matriculates, commences on the third Monday in March, and continues until the 1st of June. Practical lectures are given daily in both these courses, and students are enabled to acquire knowledge and skill in the clinic rooms and mechanical and chemical laboratories.

Seven hours are daily spent by the student in actual practice, under the supervision of the professors and demonstrators.

At all times there is a large excess of patients presenting themselves for treatment at the clinics, so that each student has ample opportunity of acquiring practical knowledge and skill in manipulation. The clinics of the college are open and in active operation ten months in the year.

The present large, commodious, and centrally located college building affords more space than any building in the world, perhaps, devoted to the purposes of a dental college.

In addition to the anatomical room and chemical laboratory, it contains a large, light, airy, and fully-equipped dental laboratory and two commodious and

brilliantly-lighted operating-rooms, fitted up with comfortable operating-chairs and all necessary appliances, and also two large, well-lighted, and well-ventilated lecture-rooms.

In order to graduate, the candidate must be twenty-one years of age. He must have studied under a private preceptor at least two years, including his course of instruction at the college. Attendance on two full courses of lectures at the regular, or winter, sessions in this institution is required, but satisfactory evidence of having attended one full course in any respectable dental or medical school is considered equivalent to the first course of lectures in this college. Also, satisfactory evidence of having been in the study and practice of dentistry for five years previous to entering is considered equivalent to the first course of lectures.

The candidate for graduation must prepare a thesis upon some subject connected with the theory or practice of dentistry. This thesis, accompanied by the graduation fee, must be handed to the dean, with his application for the degree, on or before the first day of February. He must treat thoroughly some patient requiring all the usual dental operations, and bring such patient before the professor of Operative Dentistry. He must also take up at least one artificial case, and after it is completed, bring his patient before the professor of Mechanical Dentistry. He must also prepare a specimen case, to be deposited in the the college collection. He must also undergo an examination by the faculty, when, if found qualified, he is recommended to the board of trustees, and, if approved by them, receives the degree of Doctor of Dental Surgery.

The fees are: matriculation, $5; for the course (demonstrators' ticket included), $100; diploma, $30. For the spring and fall courses $50 are charged, which is deducted from the fee for the following regular session.

The present faculty is as follows: Henry Leffman, M.D., professor of Chemistry and Metallurgy; J. Ewing Mears, A.M., M.D., professor of Anatomy and Surgery; C. N. Pierce, D.D.S., professor of Dental Physiology, Dental Pathology, and Operative Dentistry; Henry C. Chapman, M.D., professor of Physiology and General Pathology; Wilbur F. Litch, M.D., D.D.S., professor of Mechanical Dentistry, Materia Medica, and Therapeutics; J. N. Farrar, M.D., D.D.S., lecturer on Operative Dentistry; Eben M. Flagg, D.D.S., lecturer on Mechanical Dentistry.

There is, besides, a large corps of demonstrators and assistant demonstrators, and fifteen clinical instructors. Prof. Samuel D. Gross, M.D., D.C.L., LL.D., is the president of the college.

The Philadelphia Dental College and School of Oral Surgery.—During the winter of 1862 the subject of establishing a dental college in addition to the the one already existing was earnestly and carefully considered by a number of dentists and gentlemen outside of the profession, and it was determined to petition the next Legislature for a charter for such an institution. Accordingly, a bill having this end in view was introduced into the Legislature in the early part of 1863, and, notwithstanding the fact that petitions were brought against its passage by those who feared that such a result might be detrimental to the college then in existence, it passed both houses, and, in April, 1863, received Governor Curtin's signature.

The first session of the new institution began on the first Monday of November following, and continued until the close of the ensuing year. The original location was at 108 North Tenth Street, the same which is occupied at present. The first faculty consisted of the following gentlemen, all of whom, with the exception of the last, were well-known dentists of the city: C. A. Kingsbury, M.D., D.D.S., professor of Dental Physiology and Operative Dentistry; Thomas Wardle, D.D.S., professor of Mechanical Dentistry and Metallurgy; J. H. McQuillen, M.D., D.D.S., dean of the faculty and professor of Anatomy, Physiology, and Hygiene; J. Foster Flagg, D.D.S., professor of the Institutes of Dentistry; and Henry Morton, A.M., professor of Chemistry. George W. Ellis, D.D.S., was demonstrator of Operative Dentistry, and William Gorges demonstrator of Mechanical Dentistry. The first board of trustees was composed of the following gentlemen, who had been active in promoting the establishment of the college: Rev. Richard Newton, D.D., president; R. Shelton Mackenzie, D.C.L., secretary; and Peter F. Rothermel, William Dulty, George J. Ziegler, M.D., George Williams, Robert L. McClellan, D.D.S., Oliver Lund, Colson Heiskell, S. Fisher Corlies, James L. Claghorn, Lewis D. Harlow, M.D., Charles S. Beck, M.D., and Henry Crumsley.

The college was organized without any endowment, and had to rely on the fees received from tuition for its maintenance. During the first session the faculty were compelled to pay seven hundred dollars each for the privilege of delivering a course of lectures to a class of eleven students. This money was cash advanced, and did not include the cost of appliances, valuable specimens, and apparatus belonging to the individual members of the faculty, nor the loss of time from their practice. In the second term they fared better, the assessment being only fifty dollars apiece. Subsequently the college was self-sustaining. From various sources it acquired in each succeeding year specimens and apparatus, and, in anticipation of the eighth session, the faculty made additions and improvements to the institution which cost four thousand dollars. They lectured that year without compensation. A move has lately been made by members of the Alumni Association looking toward the establishment of an endowment fund, which has met with some success.

The number of graduates in 1864, at the end of the

first session, was six; in 1865, fifteen; in 1866, fifteen; in 1867, thirty; and in 1883, fifty-five. The number of students during the session of 1882-83 was one hundred and seventy-nine.

Of the original faculty, only one member, Professor J. Foster Flagg, holds a chair in the college at present. For several years after the school was started changes in the faculty were numerous; but as the institution became fixed on a more solid basis their frequency diminished. On Dr. McQuillen's death, in the spring of 1879, the faculty was reorganized. The corps of demonstrators has been increased from time to time as the college increased in ability to provide for them. The present faculty is as follows:

Henry Morton, A.M., Ph.D., emeritus professor of Chemistry; C. A. Kingsbury, M.D., D.D.S., emeritus professor of Dental Histology and Operative Dentistry; S. H. Guilford, A.M., D.D.S., professor of Operative and Prosthetic Dentistry; J. Foster Flagg, D.D.S., professor of Dental Pathology and Therapeutics; Henry I. Dorr, M.D., D.D.S., professor of Clinical Dentistry; S. B. Howell, M.D., D.D.S., professor of Chemistry and Materia Medica; Thomas C. Stellwagen, M.D., D.D.S., professor of Physiology; James E. Garretson, M.D., D.D.S., professor of Anatomy and Surgery, surgeon to the Oral Clinic; M. H. Cryer, M.D., D.D.S., anatomist, demonstrator of Oral Operations; S. Eldred Gilbert, D.D.S, demonstrator of Clinical Dentistry; Clarence Archer, D.D.S., demonstrator of Clinical Dentistry; John B. Roberts, M.D., demonstrator of Anatomy; S. Parker Cottrell, M.D., D.D.S., assistant surgeon and physician to the Oral Clinic and Dispensary Service; Claude Browning, M.D., second assistant physician to Dispensary Service; L. Greenbaum, D.D.S., demonstrator of Chemistry and Materia Medica.

The manner of instruction in the college is by means of a laboratory and clinical teaching joined with lectures. The laboratory of the college is a great workshop, seventy feet in length, fully equipped with lathes, furnaces, forge, rolling-mill, vulcanizers, celluloid apparatus, and other articles of necessity or convenience in dental work. In the laboratory the student commences his career, and receives instruction and demonstration in every process of value known to mechanical dentistry. The clinical department consists of two large operating-rooms, furnished with forty comfortable chairs, which can be connected, when desired, with batteries for the use of the electro-magnetic engine or mallet. There is also a separate room for the administration of anæsthetics and the extraction of teeth.

In order to obtain a degree, a student must have had two years' private tuition and have attended two winter courses of lectures in a reputable dental or medical college, the last of which shall have been passed in the institution itself. The college provides spring and fall courses of study, which are regarded as equivalent to private tuition. The regular course commences on the 1st of October of each year, and lasts until the end of February of the next. The fees for the spring, fall, and winter courses, including the demonstrations, is one hundred dollars, and for the spring and fall courses alone, fifty dollars. The matriculation fee is five dollars, and a diploma thirty dollars.

A hospital of oral surgery was established in connection with the college three years ago, of which Dr. James E. Garretson became surgeon in charge. It was established with a view to founding a pure specialty in the field of medicine, having as its field the study and treatment of all surgical conditions of the mouth, jaws, face, throat, and associate parts, inclusive of dental diseases. Students who desire to obtain a certificate of graduation in this department are required to attend a three years' course of study and take degrees both in medicine and dentistry. A dispensary service, which is medical and surgical at large, is held in the north lecture-room of the college every day at noon.

HOSPITALS AND DISPENSARIES.

Quarantine Hospitals.—Philadelphia being a place which could only grow up in its earlier years by immigration, the natural increase of the settled population being limited, it was found necessary at an early period to regulate the reception of persons who came in ships. The accommodations for passengers were small. The necessities of storing cargoes were more important than the accommodation for persons brought over. Long voyages, poor ventilation, and improper food produced among the persons closely crowded into the cabins of small vessels fevers and other dangerous sicknesses. The evil made itself appear at a very early period, so that in 1700 the Assembly of the Province of Pennsylvania passed "An act to prevent sickly vessels coming into this government." By this act, among other things, it was directed that unhealthy or sickly vessels or vessels coming from unhealthy or sickly places should not come nearer than one mile to any town or port of this province or territories without bills of health, and that they should not land goods or passengers without license. Under this law no place was provided to which sickly persons could be removed from vessels arriving near the port of Philadelphia. The object seemed to be to quarantine them on board the vessels, and to keep there the healthy, although they were in constant danger of infection from the sick. Therefore there was great temptation to remove sick persons secretly to the shore in order that their fellow-passengers who were well might gain their liberty. Under this practice dangerous diseases were taken into the settled portions of the city and county, and epidemics were assisted. Some provision was made before 1726 for the establishment of a hospital. George Warner, who arrived in 1726, came on board of a vessel in which the smallpox was raging on the arrival at Philadelphia. He says that the people on shore assembled and ordered the vessel off. The ship retired to the legal one mile distance, and the passengers were landed near the Swedes' Church, Gloria Dei. One Barnes, who received them, led them by a circuitous route through swamps and forests and high streets, to the Blue House Tavern, South Street. This was upon the property, at Tenth Street, after-

ward occupied by the Emlens as a country-seat, and called Lebanon, which became the Lebanon Tavern. Here the passengers were kept until they had recovered from the smallpox. Then they were conducted to the Blue Anchor Tavern, afterward the Boatswain and Call, at the corner of Front Street and the Drawbridge. This refuge at the Blue House was temporary, and fell into disuse.

In 1742, Lieutenant-Governor George Thomas sent a message to the Assembly in which he said the most substantial German inhabitants of the province had joined in a petition to him, in which they set forth "that for want of a convenient house for the reception of such of their countrymen as on their arrival here labored under diseases contracted in a long voyage, they were obliged to continue on board the ships which brought them, where they could get neither attendance nor conveniences suitable to their condition, from whence many have lost their lives." The Governor recommended the erecting of a proper building at the public expense, "not only to accommodate such as shall arrive hereafter under the same circumstances, but to prevent the future importation of diseases into this city, which has more than once felt the bad effects of them." Upon this the Assembly resolved that a committee should be appointed to procure a piece of ground suitable for a pest-house. They purchased Fisher's Island, containing three hundred and forty-two acres, with some buildings. Some negroes who belonged to the plantation were also purchased as appurtenant to the tract upon it, costing altogether seventeen hundred dollars. So, probably this was the first occasion upon which the province of Pennsylvania became the owner of slaves. John Fisher was the owner of the island which was originally composed of the Sayamensing and Schuylkill Islands, but which had in effect become one by the dwindling away of the stream which divided them. The purchase was made by Joseph Harvey, Thomas Tatnal, Joseph Trotter, James Morris, and Oswald Peel. They were directed, by a subsequent act of Assembly passed in 1743, to hold the ground in trust for the use of the province of Pennsylvania, and forthwith the name of the island was changed to Province Island.

Some of the buildings already upon the island, and six acres of ground nearest the Delaware, were reserved for immediate use, and for a site for a new hospital or pest-house. The rest of the land was authorized to be leased. Under this act authority was given to the Lieutenant-Governor or any two justices of the peace to order all sick and infectious persons imported into the province to be transported to the island for nursing, physic, maintenance, etc. The cost of such attendance was assessed upon the importer, master, or owner of the vessel in which the sick persons were brought. This was an easy method of collecting the hospital dues from persons of responsibility. The owners or persons paying the charges were granted authority to collect the hospital charges from the effects of the passengers, if they had any. The temporary arrangement by which buildings on Province Island were occupied for hospital purposes were soon found to be insufficient. In 1750 the trustees were ordered to, as soon as conveniently they could, "build pest-houses on that island to the value of one thousand pounds." In 1774 a new act of Assembly "to prevent infectious diseases being brought into this province" was passed. Under this statute provision was made for the appointment of the keeper of the hospital erected on Province Island, whose duty it was also to take care of the sick inmates. Vessels bound to Philadelphia which brought more than forty passengers, or which had on board sick persons, or which came from some infected port, were prohibited from coming nearer to the city than Little Mud Island until after examination and permit by a proper officer. Vessels were to be inspected by this officer and a skillful physician or physicians. There were also provisions as to the number of passengers allowed to a vessel, the space they should occupy, the character of the food that should be supplied them, and other matters of importance, as well as to the health of passengers as in preventing the spread of infectious diseases which they might bring with them. To Province Island, in 1763, were sent the Indians who had fled from the fury of the Paxton "boys." Fears were entertained that they were in danger there, and the Council in the latter part of December ordered that "three flats and three small boats should be sent without delay to the Province Island for the use of the Indians that they might, on any intelligence of the approach of the rioters, make their escape, till more effectual measures should be fallen upon for their protection."

In November, 1775, Dr. Duffield and Dr. Rush made an arrangement on behalf of the crews of the Pennsylvania armed boats, by which it was agreed that the overseer would attend to the sick and wounded, and "furnish them with provisions, drink, and wash for them, at the rate of ten shillings per week for each man, and two shillings for firewood." The two physicians attended at the pest-house every other day. In February, 1777, Fergus Purdon was appointed steward of the Province Island Hospital, upon an allowance of twenty-six dollars per month. After the Declaration of Independence Province Island began to be called State Island. An act was passed March 25, 1780, to authorize the striking of one hundred thousand pounds in bills of credit, for the support of the army, and authority was given to the President of the State and the Council to sell State Island, and to appropriate the money realized toward the redemption of the loan. The sale took place, and the ground was divided into lots.[1] The sales were made out of

[1] The following persons were purchasers in 1781: John Telles (or Selles), for John Holker, consul-general of France, John Bromberger,

the surplus ground upon the island outside of the reservation for the hospitals. Those buildings remained for some years. In September, 1783, the health-officer was notified by Council to secure supplies for the bedding there. Repairs were made in 1783 by Gunning Bedford. In 1790, George Bryan, Samuel Miles, and Peter Dehaven were appointed trustees of "that part of Province Island which belongs to the State, and of the hospitals thereon." In 1794, Governor Mifflin recommended to the Legislature the adoption of a better system for the preservation of the public health than had yet been adopted. The result was the passage of a general health law, the establishment of a health office, with twenty-four inspectors, appointed by the mayor and corporation of the city and justices of the Northern Liberties and Schuylkill. There was a health officer and a consulting physician and a resident physician, who was to remain constantly at the pest-house. These officers composed the Board of Health, and they were specially directed to put the hospitals on State Island in a condition of repair.

The yellow fever of 1797 tested the power of the Board of Health to deal with infectious diseases with such a strain that it was evident that the system was by no means perfect. The authority of the Legislature was again appealed to, and in 1798 the Board of Health was again reconstructed, with more extensive jurisdiction. The buildings at State Island, and others that were authorized to be built, were directed to be used for hospitals and store-houses, to be known as "the Marine Hospital of the Port of Philadelphia." During the fever of the previous year the Wigwam property, on Race Street and Schuylkill Front [now Twenty-second], had been used for a yellow fever hospital, and was known at one time as "the Hospital of the French Republic," and in 1797 was the City Hospital. The old Board of Health was abolished, and in its stead was erected a new corporation, called "the Managers of the Marine and City Hospital." They were to have the general powers of the old board, with authority to levy a hospital tax, regulate the length of quarantine, to borrow money for public use in case of emergency, and to do other needful things. The twelve managers were to be appointed, as the mayor, aldermen, and citizens of Philadelphia, and the justices of the peace of Southwark, Moyamensing, and Northern Liberties. In 1799 these managers bought a piece of ground on Tinicum Island, on the Delaware, north of Darby Creek, about ten miles from the city. The plot was bounded by Darby Creek, Plumb Hook Creek, and the Delaware River, and was in the jurisdiction of the county of Delaware. The original plan was that the buildings should consist of a steward's house, fifty feet square and three stories high, on the right and left of which were to be the lazaretto buildings for the diseased and convalescent, each sixty feet long by twenty-two wide. At convenient distances, on the same line, were apartments for the resident physician, quarantine-master, and other houses. Subsequently other buildings were erected, including a temporary lodging-house for emigrants who were not sick. Adjoining the lazaretto the United States government has established an inspection station, occupying about nine acres of ground, a building for the storage and examination of goods, and warehouses in which property can be placed which is brought in sickly vessels, in case it shall be necessary to detain them. Little Tinicum Island lies in front of the lazaretto, and the channel between is a good place for anchorage, and has the additional advantage of being out of the general course of river traffic, which is east of Little Tinicum. Surrounded by fine shade-trees, and open to the breezes from the Delaware River, the quarantine station is cool and attractive in summer, and by its natural advantages compensates, in some degree, for the detention which passengers by vessels are sometimes compelled to undergo.

The Board of Health was reorganized in 1806. It was to consist of five members, appointed annually by the Governor of Pennsylvania, two of whom might be physicians. It was requisite that three of the members should reside in the city, one in Southwark, and one in Moyamensing. The Governor also appointed a quarantine-master to reside at the lazaretto, a resident physician at the same place, and a consulting and health officer to reside at Philadelphia. This body made a very material change in the system connected with the management of health affairs. By act of Jan. 29, 1818, the Board of Health was reconstructed and directed thereafter to be composed of twelve members. Of this number, City Councils were to elect six, Commissioners of Northern Liberties two, Penn township one, Southwark one, Moyamensing one, and Kensington one, annually. Under this act the Governor of Pennsylvania appointed the lazaretto physician, port physician, health officer, and quarantine-master, who, as to the manner of discharging their duties, were under direction of the Board of Health.

Various changes have been made in the health laws from time to time. In 1882 the power of appointing the principal remained with the Governor, but members of the Board were elected by City Councils.

Horace R. Maneely, in office June 5, 1883

The United States Naval Asylum[1] and the United States Naval Hospital (the latter of quite recent erection) are on the site of the old Pemberton mansion, occupying a tract between the Gray's Ferry road, Bainbridge Street, Sutherland Avenue, and the Schuylkill River. The place was known as the "Plantation," and British officers, under Lord Howe, occupied it, when, in 1777, the owner, James Pemberton, was at Winchester, Va., where he had been banished. James Pemberton left behind him a plucky and loyal wife, Phœbe Pemberton, who wrote several fiery letters to Howe, protesting against the depredations upon her farm by his troops. The property passed out of the hands of the Pembertons into those of the Abbott family, and in 1826, Surgeon Thomas Harris, of the United States navy, was authorized by Mr. Southard, then Secretary of the Navy, to purchase it for seventeen thousand dollars. The house, as we see by the pictures that have been preserved, was then a small and cosey family mansion of the colonial type, the front door reaching to the cornice below the dormer-roof, and the square balustrade above the roof commanding a long vista of the Schuylkill. The money that satisfied the purchase was derived from the naval fund, and an unexpended balance of fifty thousand dollars from the Marine Hospital fund. These moneys were mainly the accumulation of the assessment of twenty cents a month laid upon each person in the naval service. The legislation upon the subject dates back to 1810, when Congress passed the act appointing the Secretaries of the Navy, the Treasury, and of War a board of commissioners of naval hospitals, and gave them large powers of action. During the year 1826 the old hospital at the navy-yard (now all swept away) was abandoned, and the mansion on the Schuylkill was occupied in its place. Of this hospital Dr. Harris had charge, and continued there until 1833, when the asylum building was nearly finished. Among his patients were the late Admiral Farragut, Twiggs (who was afterward killed at the storming of Chapultepec), Bainbridge, Hull, Levy, Izard, Newell, Ogden, Howard, Philip Voorhees, Engle, and Mercer,—some of the greatest naval fighters of the United States. The new asylum building was commenced in 1827, when Dr. Harris and Mr. Strickland were commissioned to superintend it. Dr. Harris was a native of Pennsylvania, and was surgeon of the United States sloop-of-war "Wasp" when she defeated and captured the English ship "Frolic" in the gallant action of Oct. 18, 1812.

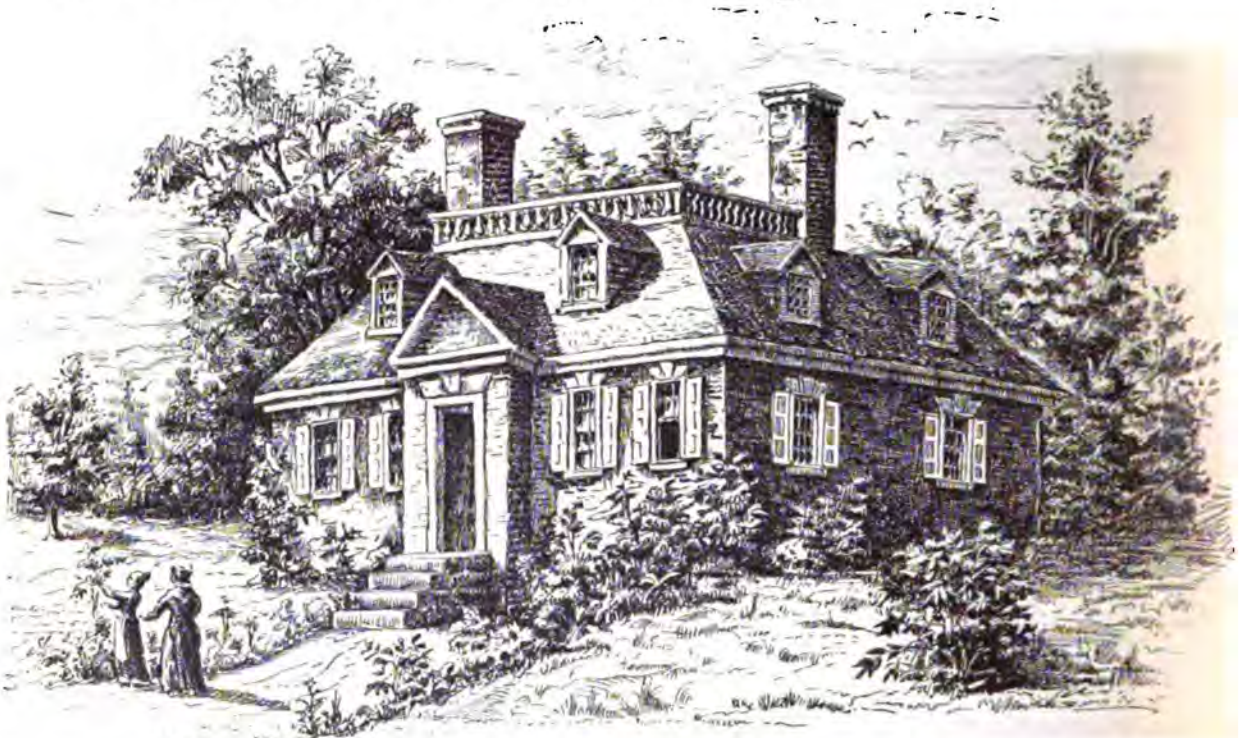
During the cholera period of 1832 he was conspicuous for his active general practice, as well as for his attention to his naval duties. In 1832 the asylum was under roof, and as the hospital fund had been exhausted, Congress made a considerable appropriation to complete it. In 1833 the powers of the commissioners of hospitals were transferred to the Secretary of the Navy, and the asylum building was occupied, although it was by no means completed. The edifice and the land have cost two hundred and twelve thousand six hundred dollars, of which four-ninths were appropriated by Congress, and the rest came from the hospital fund. It faces nearly east, and is constructed of a grayish-white marble, with a granite basement. It is three hundred and eighty feet in length, and consists of a centre, with a high, broad flight of marble steps and imposing abutments and a marble colonnade and pediment in the bastard classic style, which was all the fashion at the period of its

[1] The main facts are derived from "Some Account of the Origin of the Naval Asylum at Philadelphia," by Edward Shippen, medical director United States navy, and published in the *Pennsylvania Magazine of History and Biography*.

erection. The first pensioner or beneficiary received into the asylum after its opening was Daniel Kliess, and the second William Williams. In the winter of 1836-37, which was a very cold one, the fruit-trees surrounding the house were cut down by order of Commodore Barron, to furnish firewood. This act, which was much deprecated at the time, was in the end productive of good, as it led to the planting of the noble trees now adorning the place. On Aug. 1, 1838, Commodore James Biddle was made governor of the asylum, on account of complaints that had been made of its previous administration. Biddle had entered the navy in 1800, and was conspicuous for his gallant services, which included the capture of the British sloop "Penguin," in 1813, by the American sloop "Hornet," of which he was the commander. During his term as governor the classes of midshipmen who were preparing for their examination were placed in the asylum, and remained there until the Naval Academy was established at Annapolis, about 1845.

The various uses to which the building was at this time put, and the quartering there of a number of officers, professors, and employés, and an unfortunate difference between the executive and medical authorities regarding the quantity of room occupied, produced a state of things which led to the division of the building into two parts by a wall of lath and plaster, giving the north half to the beneficiaries and the southern to the hospital proper. It is not necessary to revert further to the causes which led to this curious state of things, but only to state the fact as a part of the history of the institution. The division of the building did take place, but the arrangement did not last very long.

Commodore Barron was ordered to the asylum about this time, but, owing to these difficulties, would not remain. Better counsel at last prevailed, and the arrangement of the building was restored to its former condition, and so remained until the erection of the new hospital gave up the whole establishment to the pensioners.



"The Plantation". Pemberton's. Site of the Naval Asylum.

During the course of the late war the necessity for a separate naval hospital became manifest, and it was therefore determined to remove the bodies of those buried in the cemetery, on the back part of the premises, and to place the hospital there. Medical Director Shippen says that in his opinion it was the very worst of situations for a hospital, but a large and expensive building was erected there that has never been filled to one-half its capacity. He adds,—

"As to the asylum, time prevents me from entering into the anecdotal history of the place, but I may say that many curious characters have been inmates of the institution, while hundreds of old men, who have deserved well of their country, have here passed their declining years in tranquillity and comfort, and many of them have attained a very great age.

Digitized by Google

"At present the number of the beneficiaries ranges from one hundred and twenty to one hundred and thirty, and they die (either from accident or the diseases of old age) about as fast as the new ones come in.

"Under the regulations no one is eligible for the place who has not passed twenty years in the naval service, although there are many exceptions to this rule in cases of serious disability in the line of duty.

"Upon coming into the establishment a beneficiary has to give up to the hospital fund any pension of which he may be in receipt, as is eminently right and proper. The beneficiaries in our asylum have each a separate room and three wholesome meals a day. They have also sufficient clothing and washing, with one dollar per mouth for spending-money and one and a half pounds of tobacco. Many have saved money before they came there, and fit themselves out with much taste, while all are comfortable. Some, indeed, among the prudent are quite capitalists on a small scale. They have quite a fair library and four reading-rooms, with daily and weekly papers, a good open fire in each, and liberty to smoke as much as they please. No restraint is put upon their liberty during reasonable hours, so long as they behave themselves properly. Many who are not past all service, after coming to the house and establishing themselves, obtain formal leave of absence, generally for a year at a time. They are apt to go to sea again, or fishing, or some other congenial employment. If the beneficiary withdraws from the asylum he is allowed to resume any pension to which he may have been entitled before coming there."

Pennsylvania Hospital and Male and Female Hospital for the Insane.—It was towards the close of 1750 that the first step was taken toward the establishment of a hospital in Philadelphia. The credit of originating the movement is due to Dr. Thomas Bond, who began his efforts by endeavoring to obtain subscriptions. He solicited among others his friend Benjamin Franklin, who, highly approving of the project, engaged heartily in furthering his views. Franklin first prepared the public mind by writing in the newspapers, and thus succeeded in increasing the number and amount of the subscriptions; but it was soon ascertained that the enterprise was beyond individual ability, and that legislative aid would be necessary to success. A memorial signed by William Plumstead, Luke Morris, Stephen Armitt, Samuel Rhoads, William Coleman, Edward Cathrall, Samuel Smith, Samuel Shoemaker, Samuel Hazard, Samuel Sansom, Amos Strettell, John Armitt, John Reynell, Charles Norris, William Griffitts, William Attwood, Anthony Morris, Thomas Graeme, William Branson, Israel Pemberton, Joshua Crosby, William Allen, Joshua Fisher, Nathaniel Allen, Reese Meredith, Joseph Richardson, Joseph Sims, A. Morris, Jr., Jonathan Evans, Joseph Shippen, John Inglis, John Mifflin, and George Spafford, was addressed to the Provincial Assembly on the 23rd of January, 1751, setting forth the urgent necessity then existing for a hospital, and asking for a charter to the contributors and for pecuniary assistance. After some objection, especially on the part of the country members, who maintained that the cost of medical attendance would alone be sufficient to consume all the money that could be raised, which was promptly met by an offer on the part of Dr. Lloyd Zachary and of the two brothers Dr. Thomas and Phineas Bond to attend the patients gratuitously for three years, a bill was unanimously passed on the 7th of February, incorporating "the Contributors to the Pennsylvania Hospital." The bill also appropriated two thousand pounds currency toward the building, to be paid when an equal amount should be subscribed by individuals to a permanent fund. The charter further provided that it should be lawful for all who had contributed, or might contribute, ten pounds or more toward the hospital, or any number of them, to meet on the first Monday of May, yearly, forever, to elect twelve managers out of their own number, and a treasurer, and to make rules for the government of the institution, to be obligatory when approved by the chief justice, the Speaker of the Assembly, and the attorney-general.

As soon as the terms of the charter were made known considerable more than the amount required was subscribed, and at a meeting of the contributors, held at the State-House, the following board of managers was chosen: [illegible] Benjamin Franklin,

Google

Thomas Bond, Samuel Hazard, Richard Peters, Israel Pemberton, Jr., Samuel Rhodes, Hugh Roberts, Joseph Morris, John Smith, Evan Morgan, and Charles Norris. John Reynell was elected treasurer.

The managers sent to Thomas and Richard Penn, the proprietaries of the province, in England, an address narrating what had been done, and suggesting that, as the Assembly had granted a charter and a sum of money for the erection of a building, and the people had subscribed and were still subscribing largely toward a permanent fund, it might please the proprietaries to grant a plot of ground on which to erect the hospital. In a letter to Thomas Hyam and Sylvanus Bevan, the managers bespoke their favorable intercession with the proprietaries, and pointed out as a suitable place for the building the unappropriated portion of the square on the south side of Mulberry, between Ninth and Tenth Streets. In reply to this application, the proprietaries sent out an elaborate charter emanating from themselves and an order to their Lieutenant-Governor, James Hamilton, to convey to the corporation, in the same instrument, a lot of ground lying on the north side of Sassafras Street, between Sixth and Seventh Streets, being a portion of the ground afterward known as Franklin Square. These grants did not please the wishes of the managers, and they were both refused.

In the mean time, in order to carry the benevolent design of the subscribers into immediate effect, the mansion and grounds of Judge John Kinsey, situated on the south side of Market, west of Fifth Street, was hired as a temporary hospital at a rental of forty pounds per year. Rules and regulations for the management of the institution were adopted, and the following physicians and surgeons appointed: Drs. Lloyd Zachary, Thomas and Phineas Bond, Thomas Cadwalader, Samuel Preston Moore, and John Redman. The temporary hospital was opened in February, 1752, when two patients were received; and it continued to be occupied for about four years. In December, 1754, the managers purchased, for five hundred pounds, the whole of the square of ground on which the hospital now stands, bounded by Eighth and Ninth, Spruce and Pine Streets, except a depth of sixty feet on Spruce Street, which, eight or ten years later, was granted by the Penns, together with an annuity of forty pounds. On May 28, 1755, the corner-stone of the east wing, facing Eighth Street, was laid, with the following inscription by Franklin:

"In the year of CHRIST
MDCCLV.,
GEORGE the Second happily Reigning
(for he sought the happiness of his people),
Philadelphia Flourishing
(for its inhabitants were public-spirited),
This Building,
By the Bounty of the Government,
And of many private persons,
Was piously founded
For the Relief of the Sick and Miserable.
May the God of Mercies
Bless the undertaking."

The house was so far completed in December, 1756, that patients were admitted, and the first regular meeting of the managers to inspect the wards took place on the 27th of that month.

Medicines were at first furnished gratuitously by the physicians of the hospital; but this was felt to be an unreasonable burden, especially as they were giving their professional services without charge. It was therefore determined to hire an apothecary to attend daily at the house and prepare the medicines, and an allowance of fifteen pounds per annum was made him for his trouble. At this time drugs and medicines had to be imported from London.

From the first the hospital proved a success, and subscriptions poured in for its support both from this country and Europe. Among its early benefactors were Chief Justice William Allen, Matthew Koplin, Dr. John Fothergill, Thomas Hyam, David Barclay, Benjamin Franklin, Dr. Edward Shippen, Samuel Coates, Dr. Lettsom, Samuel Cooper, William West, Charles Nichols, John Keble, Paul Siemen, Stephen Girard. Dr. George B. Wood mentions notable citizens,—Jones, Griffitts, Fox, Roberdeau, Greenleaf, Richardson, Mifflin, Lewis, Wharton, Morris, Logan, and others who acted as managers in the provincial times; Shippen, Evans, Morgan, and Moore, who served as physicians and surgeons; Allen, Crosby, Denny, Emlen, Hamilton, Norris, Neat, Osborne, and Pemberton, who, during the first ten years, contributed most largely to its funds.

Purchases were made at different times, on reasonable terms, of the square of ground lying east and of the half-square lying west of the proper hospital lot. In April, 1776, according to a statement entered on the minutes of the board of managers, the whole capital stock, independently of the buildings and the lot upon which they stood, estimating the real estate at cost, was somewhat over £21,000, or about $56,000, and the annual income from the productive capital was £1318, or about $3500.

The number of patients admitted annually into the hospital increased gradually from 53, in the second year of its operations, to 153 in the year 1760–61, 382 in 1770–71, and 435 in the year preceding the declaration of independence, the average proportion of pay-patients throughout this period being only a little more than one-sixth. The average numbers in the hospital at the same time, in the years mentioned, were, respectively, 17, 45, 117, and 89, the last number indicating some falling off consequent upon the Revolutionary troubles.

So early as 1766, Dr. Thomas Bond proposed to deliver a course of clinical lectures to the students, and, the proposition being approved by the managers, commenced in November with an introductory lecture, which was so highly thought of by the board that it was copied into their minute-book. From that time clinical lectures have been given more or less regularly in the hospital, either in the form of remarks

at the bedside as the students were conducted through the wards, or, when they have been too numerous to be thus conducted, by regular lectures in the amphitheatre, to which the patients were conveyed.

Another interesting event in the early history of the hospital was the establishment of the medical library, at present one of its greatest boasts. This event followed directly from the system of clinical instruction. The managers having referred to the physicians and surgeons for the subject of fees from medical students attending the hospital, the latter met in May, 1763, and agreed to propose that a certain sum should be demanded from every attending student not an apprentice of one of the medical officers of the hospital, to be applied to the establishment of a mediical library. This appropriation met the approval of the board, and thus began that splendid collection of medical books, unequaled probably on this continent, and surpassed by few libraries exclusively medical in the world.

The internal business of the house was superintended by a steward and matron, and the direct care of the patients under the physicians was intrusted to students or apprentices living within the institution, who were supposed to derive from the experience acquired a full compensation for their services.

The British army upon entering Philadelphia during the Revolution took possession of its wards, appropriating the bedding, medicines, instruments, etc., to their own uses, and, though the building was restored by them to the managers, the mischief done was not repaired, and no compensation made for the losses inflicted.

The institution received from time to time pecuniary aid from the Legislature amounting in 1796 to over seventy thousand dollars, applicable to the erection of additional buildings. At a meeting in 1794 it was determined to provide accommodations as soon as possible for the insane, and the western wing, with the wards connecting it with the central portion, was first undertaken. This was so far completed as to be opened for the reception of patients in 1796. In consequence of the great rise in the price of materials and the slow incoming of portions of the legislative grant, the progress with the remainder of the house was less rapid than had been anticipated, and it was not till 1805 that the central portion was finished and the original plan carried into effect.

In January, 1803, a lying-in department for poor and deserving married women went into operation, and in December, 1807, a regular dispensary for outdoor patients was established, and physicians were appointed to attend it at a small salary. Upon the establishment of the Philadelphia Dispensary the hospital dispensary was abandoned in January, 1817.

In September, 1800, the managers wrote to Benjamin West, the celebrated artist, soliciting a contribution from his pencil. This request received a favorable answer from West, who suggested as the subject of the painting the text of Scripture "And the blind and the lame came to Him in the temple, and He healed them." In August, 1810, it was announced that the picture was ready to ship to America, but it excited so much admiration in England that West could not resist the liberal offer made to him to allow the painting to remain. He, however, immediately engaged in the preparation of a copy, which he said should excel the original. This famous picture of "Christ Healing the Sick" reached this country in October, 1817, and was immediately placed in a building which had been specially erected for its reception, upon the hospital lot on Spruce Street. Having been opened for exhibition, at the price of twenty-five cents for admission, it attracted for many years throngs of visitors, which yielded to the institution more than fifteen thousand dollars profit. About 1851 the painting was removed to the Academy of Fine Arts, where it still remains, and the building was leased to the College of Physicians. When the college removed to their new building, the picture-house, as it was called, was leased to the Historical Society.

A marble bust of William Penn, supposed to be the first executed in this country, was presented by James Traquair in June, 1802, and the leaden statue of the same great man, which has long stood in front of the hospital, was received as a gift from his grandson, John Penn, in September, 1804.

The productive capital, which, at the lowest period of its depression, in 1783, was, in round numbers, twenty-seven thousand dollars, gradually increased in the several decades after that year to forty-five thousand in 1793, sixty-two thousand in 1803, one hundred and twenty-four thousand in 1813, one hundred and seventy-two thousand in 1823, and two hundred and sixty thousand in 1833. The income from capital, during about an equal period, rose by corresponding gradations from one thousand dollars, its lowest point, in 1796, to nearly fifteen thousand in 1835. The operations of the charity, of course, corresponded with the means, and the number of annual admissions increased from 78 in 1790 to 176 in 1800, 368 in 1810, 749 in 1820, and to 1130 in 1830, after which the average for several years was somewhat over 1000.

In the first hundred years which elapsed after its foundation the hospital received and treated 51,116 patients, of whom 29,863 were upon the poor list.

For the first ten years after the separation of the two branches, 13,829 were admitted to the City Hospital, of whom 9800 were poor, and 1878 into the Hospital for the Insane, of whom 466 were poor.

In the year ending in May, 1851, the number received into the City Hospital was 1935, of whom 1416 were on the charity list, and the average population of the house was 158, with 120 poor. In the Hospital for the Insane, 206 were admitted during the year, 53 of them poor, and the average population of the

house was 216. From the foundation of the hospital in 1751 to the date of the report, Jan. 1, 1851, 6062 insane patients had been admitted and treated, of whom 1000 were on the charity list.

In the five years from 1851 to 1855, inclusive, the whole number of patients received into the wards was 8845, of which number 6117 were on the free list and 1728 were pay-patients, making a percentage of 72 free. From 1872 to 1876, inclusive, the whole number received was 9250, of which 7088 were free and 2163 pay, or 76 percentage of poor.

At their meeting in May, 1831, it was decided that a separate asylum for the insane was expedient, and in May, 1832, the managers gave authority to sell the vacant grounds east, west, and southwest of the hospital, in order to raise money for the new buildings. These lots had been purchased originally for $8917.27, and were sold for three hundred and twenty-five thousand dollars, and the sum expended upon the Pennsylvania Hospital for the Insane, which was erected on a farm extending from the Haverford to the West Chester road, west of Forty-third Street. The corner-stone of the building was laid June 22, 1830, and the house was opened for the reception of patients upon the first day of the year 1841. In 1851 the west wing of the hospital, which, before 1841, was devoted to the insane patients, was completely remodeled, so as to make two wards,—the lower story devoted to the women's surgical, the upper to the women's medical wards. The centre building was also greatly modified. Among other changes, the new library had been built from what had been previously the women's medical wards. The east wing was being remodeled. The long ward, connecting the centre with the wing fronting on Eighth Street, was taken down, and the two long wards erected as they now stand. These wards have no alcoves like those of the west wing. The east wing was not taken down, but considerable changes were made in it. This part of the house was devoted to the male patients, the lower stories to surgical, and the upper to medical patients. The repairs to, and other changes made in the centre building and the east wing in 1851 and 1852 cost $59,949.59. The cost of repairing the west wing, in 1846–48, was $17,865.28, and that of fitting up the library was $3146.35. The latter expense was paid out of the medical fund.

Another change, made in 1851, was the closing of the lying-in ward, at first for the purpose of making room for the other patients during the repairs to the main buildings. The ward was finally closed by a vote of the board in 1853. It had cost twenty thousand dollars more than its whole fund, principal and interest.

In 1864, at the annual meeting of the contributors in the month of May, the managers applied for, and received authority to "appeal to our fellow-citizens in the endeavor to raise an amount sufficient to cover the encroachment on our capital of previous years (which necessity compelled) of some forty thousand dollars, as well as the probable deficiency of the present year, of at least an equal sum, it being supposed there would be an increased expenditure necessary in the cost of living, and the result has shown the correctness of this opinion."

The appeal was made, and, though the applications for money at this time, in consequence of the war, were innumerable, the managers obtained the sum of $65,055 by contributions. Soon after this a strong appeal was made by the medical and surgical staff, several thousand copies of which were distributed. Aided by this renewed invitation to the charitable, the committee raised $34,948.27 additional. Out of this total, $100,003.27, the indebtedness to the capital of $40,000 was refunded, and, after paying the year's (1865) deficiency of $42,000, the surplus of $18,000 was merged in the capital.

In 1866 the managers were still struggling for the support of the hospital, and, in concert with a committee of the contributors, issued a strong appeal to the public, stating that "the present current expenses of the institution require about fifteen thousand dollars per annum more than its income from investments and pay-patients." The number of patients in the hospital at this time was one hundred and seventy-one, and of these, one hundred and thirty-three were on the free list. The cost of the hospital for the fiscal year (1865) was $57,481.32, while the income from investments and from pay-patients had been $42,122.77.

In the following year, ending May, 1867, under the appeal just referred to, there was received $20,400, to be added to the capital fund, and $136,556, to be paid by instalments running through periods of three, four, and five years, as contributions to the annual expenses.

To afford every facility for instruction to the students of medicine and surgery, a new room for clinical and operating purposes was erected to the north of the centre building, to accommodate about five hundred seats. This room cost $27,072.10, of which $12,742.80 were raised by subscription. It was formally opened on the 9th of January, 1869.

In the autumn of 1869 the dean of the faculty of the Female Medical College applied to the board of managers for the admission of their students to the regular clinical courses. The managers gave their permission on the ground that, by the rules of the hospital then in use, all students of institutions recognized by the State laws were to be admitted to the common benefits of the hospital clinical instruction. The women came to one of the lectures very soon after this, taking their seats in the amphitheatre in the midst of the regular men's class. There was a scene of considerable disorder, both during and after the lecture. The event caused a good deal of agitation in the medical schools of the city and among the medical students, which extended in a slight degree to the general public.

In the following clinical session, 1870–71, the whole number of students in attendance was two hundred and six, and of these thirty-two were women, while in the previous year the number had been five hundred, of which number forty-two were women.

The matter was arranged at the meeting of the contributors in May, 1871, on the plan of having separate clinics for the two sexes, and, accordingly, the staff agreed to give, in addition to their regular semi-weekly lectures to the male students, one lecture a week to the women students. The consequence of this step was that the classes increased at the next session to the number of five hundred and eighty, the men counting five hundred and twenty, and the women sixty.

In 1861 the Pathological Museum was located in the building on Spruce Street, afterward occupied by the Historical Society. In 1869, when the new lecture-room was opened for use, the museum was transferred to the basement room of that building. Under the care of several gentlemen it has became very valuable. In 1875 a course of lectures on pathologicol anatomy, the only one in the city, was given by the pathologist and curator of the hospital. This course was illustrated by specimens in the museum.

About the year 1870 it was thought that many of the slighter surgical cases, which had been hitherto kept in the hospital at a great expense, might be treated as well on the dispensary plan, the patient coming as often as necessary to the hospital for the proper dressing. The rapid growth of this plan induced the managers, in 1873, to make it a separate department, and one physician and one surgeon were assigned to be on duty each day, except Sunday, at a certain hour, to prescribe for all who might apply. Two rooms, those to the north of the gateway in Eighth Street, were assigned to this purpose. During the year the number of applicants had risen to fifteen hundred and fifty-five, of which twelve hundred and thirty were surgical, and three hundred and twenty-five medical.

In 1876 the managers inaugurated for the department of the sick and wounded a plan which had already been introduced into the insane department. This was the institution of a system of free beds for the poor. Any one, by a gift to the hospital of the sum of five thousand dollars, secured a bed in the hospital always to be occupied by a poor patient.

To provide accommodations for the insane, a new building was begun on the 7th of July, 1856, and opened for the reception of patients on the 27th of October, 1859.

"It is situated," says the report of that year, "in full view and on the western side of the buildings previously in use, at a distance in a right line of six hundred and forty-eight yards, and in the midst of fifty acres of pleasure-grounds and gardens, the whole of which are surrounded by a substantial stone wall, covered with flagging, and of an average height of ten and a half feet. The gate of entrance is on Forty-ninth Street (an avenue intended to be one hundred feet wide), between Market and Haverford Streets, and by each of which, by means of horse railroads, easy access to Forty-ninth Street can be had at all seasons.

"This new hospital faces the west, and consists of a centre building, with wings running north and south, making a front of five hundred and twelve feet; of other wings, connected with each of those just referred to, running each a distance of one hundred and sixty-seven feet, all three stories high, and these last having at their extreme ends communications with extensive one-storied buildings. All the exterior walls are of stone, stuccoed, and the interior are of brick.

"The centre building is one hundred and fifteen by seventy-three feet. It has a handsome Doric portico of granite in front, and is surmounted by a dome of good proportions, in which are placed the iron tanks from which the whole building is supplied with water. The lantern on the dome is one hundred and nineteen feet from the pavement, and from it is a beautiful panoramic view of the fertile and highly-improved surrounding country, the Delaware and Schuylkill Rivers, and the city of Philadelphia, with its many prominent objects of interest."

The new building had cost, with its various fixtures and arrangements, up to 1859, $322,542.86, and $30,000 additional were required to meet other liabilities that had been incurred.

The next step taken by the managers was the repair and improvement of the original building, which had now become the department of females. It was put in thorough repair, and cost about twenty-five thousand dollars. In 1867 a new building was commenced, and finished in 1868, for a new ward to the women's department. It was opened for use in December, 1868, and was called the "Fisher Ward," in honor of Joseph Fisher, who died in 1862, leaving to the hospital $57,511.57, to be devoted to this purpose. Some years later, in 1873, when a second building of the same kind was erected from the funds of the same estate, the former was called the "South Fisher Ward," and the latter the "North Fisher Ward." The South Fisher Ward cost $24,850; the North Fisher Ward building $31,250.01.

In 1864 there was erected, by the generous liberality of some friends, for the special benefit and amusement of the patients, a new building, called the Gymnastic Hall, near the north return wing of the department for females.

On the 6th of May, 1882, the Mary Shields Ward in the female department of the insane was opened. It cost $29,058.58, and was named after Mary Shields, a liberal benefactor of the hospital. During 1882 the wards on the second and third floors of the north house, which was rebuilt in 1881, designed for the treatment of offensive surgical cases, was brought into use.

The work of the Pennsylvania Hospital for the year ending April 28, 1883, is shown in the following exhibits taken from the records of the institution:

In the Pine Street Hospital the new cases admitted during the year were	1,967
The number of beds occupied	2,136
The number of recent accidents (or surgical cases brought to the hospital within twenty-four hours after their occurrence)	718

The out-patient department makes the following report of visits, viz.:

Surgical	20,716
Medical	2,735
Eye and Ear	3,846
Gynæcological	88

In the department for the insane the number of patients treated during the forty-second year of organization in its present locality, distinct only as a branch of the institution of the contributors to the Pennsylvania Hospital, was	591
The expenditure of the department for the insane as reported for their last fiscal year ending Jan. 1, 1883, were, for both males and females	$182,313.26
Their receipts were	181,622.40
The number of free patients maintained was forty-four, at a cost of	18,859.50
The Pine Street hospital expenses for surgical, medical, and out-patient wards were	61,732.37

It appears that the large sum of $58,975.21 was expended in gratuitous relief to the sick and wounded, while the whole work of all departments has been performed at a cost of $244,045.63.

Since the foundation of the hospital, in 1751, there have been admitted 108,118 patients, of whom 72,823 were poor persons, supported at the expense of the institution. Of these 108,118 patients there have been

Cured	69,469
Relieved and improved	15,293
Left the hospital without material improvement	8,114
Discharged for misconduct or eloped	2,361
Pregnant women safely delivered	1,338
Infants born and discharged in health	1,258
Died	10,116
Total	107,949
Remaining	169
Grand Total	108,118

William Biddle, the president of the board of managers of Pennsylvania Hospital, was born in Philadelphia, May 17, 1806. He is the son of John and Elizabeth Canby Biddle, and is fifth in descent from William Biddle, of Bishopgate Street, London, who emigrated to West Jersey, and settled at Burlington about the year 1680.

William Biddle took a deep interest in the affairs of the new colony, was a member of the Governor's Council, of the Assembly, and of the Council of Proprietors of West Jersey, of which latter body he was for a long time president. From him is descended the large family of the name of Biddle so well and favorably known in Philadelphia.

In the war of the Revolution, Owen Biddle, grandfather of the subject of this sketch, took an active part, holding among other colonial offices that of a commissary in the army. Owen Biddle was by birth a Friend, and when the war came to a successful close he returned to the faith of his fathers.

William Biddle was educated in the Friends' schools, and from his early manhood has been identified with the educational and benevolent institutions of this city. In 1834 he was elected director, and later controller of the public schools, serving in this capacity for many years. In 1840 he became a manager of the Magdalene Asylum, serving for more than forty years. In 1840 he was elected a director of Girard College, and was among the foremost in the organization of this institution, which was first opened for scholars Jan. 1, 1847. He held this position for fourteen years, and was also a member of the Society for Alleviating the Miseries of Prisons.

In 1849, Mr. Biddle was elected a manager of the Pennsylvania Hospital, a post he has since continued to hold, embracing a period of thirty-five years, the last twelve of which he has been president of the board. In 1855 he was chosen secretary of the Mine Hill and Schuylkill Haven Railroad Company, and in the year 1883 was appointed its president. In 1858, Josiah Dawson, a wealthy citizen of Philadelphia, named as executors of his estate Thomas Williamson, Mordecai L. Dawson, and William Biddle. After devising nearly two hundred thousand dollars in private legacies, the remainder, amounting to two hundred and fifty thousand dollars, was to be distributed at the discretion of the executors among the hospitals and other charitable institutions and the deserving poor of Philadelphia. This distribution was made in the most judicious and catholic manner by Mr. Biddle and his associates. In the religious Society of Friends, of which he is a consistent member, Mr. Biddle holds a prominent place, and has for many years taken an active part in matters connected with the education of its younger members.

The mere enumeration of the various associations with which Mr. Biddle has been and is connected gives but a very imperfect estimate of the public services rendered by him. In each of these he was always very energetic. This was seen in the zeal he displayed in the establishment of the Northwest Public School, in his services upon the committee of instruction and household on which so much devolved in the opening of Girard College, and in the active interest he has so long taken in all departments of the Pennsylvania Hospital.

In private life Mr. Biddle is a delightful friend, full of generous sympathies, yet firm in his convictions and fearless in their maintenance. A life thus spent in public service has been rich in its results, and Mr. Biddle, now in his seventy-eighth year, has lived to see many of the institutions in which he was interested in early life, grown to an extent which he and his associates could hardly have expected. This has been noticeably the case with the Girard College, the Pennsylvania Hospital in both its departments, and in the vast development of the public schools in this city.

Still in vigorous health, Mr. Biddle has in the evening of his life a full reward for his labors in these results, in the gratitude of those whom he has helped, and in the respect and affection with which he is universally regarded by his fellow-citizens.

Officers of the Pennsylvania Hospital.—Managers, William Biddle (president), Samuel Welsh, Wistar Morris, Jacob P. Jones, Benjamin H. Shoemaker (secretary), Alexander Biddle, Joseph B. Townsend, Joseph C. Turnpenny, T. Wistar Brown, John B. Garrett, John T. Lewis, Charles Hartshorne (treasurer), Henry Haines.

Hospital on Pine Street.[1]—Steward, Richard Cadbury; Clerk and Librarian, Benjamin Hoopes; Apothecary, Jacob K. Hecker; Matron, Ade-

[1] William G. Malin, who had been in the service of the hospital for fifty-nine years, resigned March 29, 1883. In 1824 he was elected clerk, in April, 1825, librarian, and January, 1841, steward, which office he continued to hold until his resignation.

laide S. Thomas; Superintendent of Nurses, Annie B. Bunting; Physicians, Jacob M. Da Costa, M.D., James H. Hutchinson, M.D., Morris Longstreth, M.D., Arthur V. Meigs, M.D.; Surgeons, William Hunt, M.D., Thomas George Morton, M.D., Richard J. Levis, M.D., D. Hayes Agnew, M.D.; Resident Physicians, Edward S. McIlvaine, M.D., George T. Lewis, M.D., Charles M. P. Grayson, M.D., William Johnson Taylor, M.D.; Pathologist and Curator, Morris Longstreth, M.D.; Microscopist, Joseph G. Richardson, M.D.

Out-Patient Department.—Physicians, Joseph J. Kirkbride, M.D., Joseph S. Neff, M.D., Henry M. Fisher, M.D., John J. Owen, M.D.; Surgeons, Charles T. Hunter, M.D., William Ashbridge, M.D., William C. Cox, M.D.; William B. Hopkins, M.D.; For the Eye and Ear, George C. Harlan, M.D.; Gynæcological Department, Elliott Richardson, M.D.

Hospital for the Insane.—Physician-in-Chief and Superintendent, Thomas S. Kirkbride, M.D. (elected 1840, died Dec. 16, 1883). Department for Males: First Assistant Physician, J. Preston Jones, M.D.; Second Assistant Physician, William H. Bartles, M.D.; Third Assistant Physician, Henry M. Wetherill, M.D.; Steward, George Jones. Department for Females: First Assistant Physician, William P. Moon, M.D.; Second Assistant Physician, Henry B. Nunemaker, M.D.; Steward, Joseph Jones; Matron, Anne Jones; Solicitors, George Biddle and A. Sydney Biddle.

The following are the names of the gentlemen who have served the institution as physicians and surgeons in the order of their appointment, together with the date of their resignation or death, and their respective periods of service:

Lloyd Zachary, elected 1751; resigned 1753; served one year and five months.
Thomas Bond, elected 1751; resigned 1784; served thirty-two years and six months.
Phineas Bond, elected 1751; died 1773; served twenty-one years and eight months.
Thomas Cadwalader, elected 1751; resigned 1777; served twenty-five years and six months.
Samuel Preston Moore, elected 1751; resigned 1759; served seven years and six months.
John Redman, elected 1751; resigned 1780; served twenty-eight years and six months.
William Shippen, elected 1753; resigned 1778; served twenty-five years and two months.
Cadwalader Evans, elected 1759; died 1773; served fourteen years and one month.
John Morgan, elected 1773, resigned 1777; re-elected 1778, resigned 1783; served eight years and eleven months.
Charles Moore, elected 1773; resigned 1774; served ten months.
Adam Kuhn, elected 1774, resigned 1781; re-elected 1782, resigned 1798; served twenty-two years and six months.
Thomas Parke, elected 1777; resigned 1823; served forty-five years and nine months.
James Hutchinson, elected 1777, resigned 1778; re-elected 1779, resigned 1793; served fifteen years (died).
William Shippen, Jr., elected 1778, resigned 1779; re-elected 1791, resigned 1802; served eleven years and eleven months.
John Jones, elected 1780; died 1791; served eleven years and one month.
Benjamin Rush, elected 1783; died 1813; served twenty-nine years and ten months.
John Foulke, elected 1784; died 1794; served ten years.
Caspar Wistar, elected 1793; resigned 1810; served sixteen years and five months.
Philip Syng Physick, elected 1794; resigned 1816; served twenty-two years and one month.
Benjamin Smith Barton, elected 1798; resigned 1815; served seventeen years and ten months.
John Redman Coxe, elected 1802; resigned 1807; served four years and nine months.
Thomas C. James, elected 1807; resigned 1832; served twenty-five years and ten months.
John Syng Dorsey, elected 1810; died 1818; served eight years and six months.
Joseph Hartshorne, elected 1810; resigned 1821, served eleven years and two months.
John C. Otto, elected 1813; resigned 1835; served twenty-two years and four months.
Samuel Colhoun, elected 1816; resigned 1821; served five years.
Joseph Parrish, elected 1816; resigned 1829; served twelve years and eight months.
Thomas T. Hewson, elected 1818; resigned 1835; served sixteen years and five months.
John Moore, elected 1820; resigned 1829; served nine years.
William Price, elected 1821; resigned 1823; served one year and ten months.
John Wilson Moore, elected 1821; resigned 1827; served five years and three months.
Samuel Emlen, elected 1823; died 1828; served five years.
John Rhea Barton, elected 1823; resigned 1836; served thirteen years and five months.
John K. Mitchell, elected 1827; resigned 1834; served seven years.
Benjamin H. Coates, elected 1828; resigned 1841; served twelve years and nine months.
Thomas Harris, elected 1829; resigned 1840; served eleven years and nine months.
Charles Lukens, elected 1829; resigned 1839; served ten years and three months.
Hugh L. Hodge, elected 1832; resigned 1854; served twenty-one years and three months.
William Rush, elected 1834; resigned 1837; served three years and five months.
George B. Wood, elected 1835; resigned 1859; served twenty-three years and six months.
Jacob Randolph, elected 1835; died 1848; served twelve years and ten months.
George W. Norris, elected 1836; resigned 1863; served twenty-seven years.
Thomas Stewardson, elected 1838; resigned 1845; served seven years.
Charles D. Meigs, elected 1838; resigned 1849; served ten years and ten months.
Edward Peace, elected 1840; resigned 1861; served twenty years and one month.
William Pepper, elected 1842; resigned 1858; served sixteen years and seven months.
William W. Gerhard, elected 1845; resigned 1868; served twenty-three years.
George Fox, elected 1848; resigned 1854; served six years.
Joseph Carson, elected 1849; resigned 1854; served four years and ten months.
John Neill, elected 1852; resigned 1859; served seven years and one month.
Joseph Pancoast, elected 1854; resigned 1864; served nine years and eleven months.
James J. Levick, elected 1856; resigned 1868; served twelve years and five months.
John Forsythe Meigs, elected 1859; died 1882; served twenty-three years.
Edward Hartshorne, elected 1859; resigned 1865; served five years and nine months.
Francis Gurney Smith, elected 1859; resigned 1864; served five years and seven months.
Addinell Hewson, elected 1861; resigned 1877.
William Hunt, elected 1863.
Thomas George Morton, elected 1863.
Jacob M. Da Costa, elected 1865.
D. Hayes Agnew, elected 1865; resigned 1871; served six years and two months.
James H. Hutchinson, elected 1868.
J. Aitken Meigs, elected 1868; died 1881.
Richard J. Levis, elected 1871.
D. Hayes Agnew, elected 1877.
Morris Longstreth, elected 1881.
Arthur V. Meigs, elected 1882.

The successive presidents of the board of managers have been as follows:

	Years.		Years.
Joshua Crosby	4	Samuel Coates	13
Benjamin Franklin	2	Thomas Stewardson	16
John Reynell	23	John Paul	3
Samuel Rhoads	1	Mordecai Lewis	5
Peter Reeve	5	Lawrence Lewis	6½
Samuel Howell	3	Mordecai L. Dawson	16¾
Reynold Keen	1	William Biddle, since 1872.	
Josiah Hewes	22		

The City Hospital.—The Board of Health was organized in 1794, and purchased the Fish Tavern on the west side of the floating bridge at Market Street, on premises now occupied by the Pennsylvania Railroad Company. This was used for hospital purposes. The first hospital established by the city was in 1796 or 1797. This was the Wigwam tavern, a famous resort at the foot of Race Street, on the Schuylkill. This hospital retained the name of the Wigwam Hotel for several years, but in 1805, in consequence of the complaints made by the citizens in the neighborhood against the institution, it was removed to the Wissahickon road, near where the Ridge road and Wallace Street now intersect. This place was occupied two years, when the citizens again rebelled and demanded its removal. For a time the city was without a hospital.

In 1805 the Board of Health was reorganized and given power to erect a new hospital. Under this authority the board, in 1807, purchased a lot of ground on the east side of Schuylkill Fourth [Nineteenth] Street near the intersection of Francis Lane [Coates Street, now Fairmount Avenue]. Here was erected and finished, in 1809, a very complete building for the purposes designed. The hospital extended from east to west, was placed at some distance from the line of Francis Lane, so as not to expose the public to undue danger. The whole front was two hundred and sixty-six feet in extent. In the centre was the mansion house, fifty feet front, forty-two feet deep. The wings were each one hundred and eighty feet long by twenty-two feet deep, and two stories high. There were twenty rooms in the main building and thirty-six in the wings, exclusive of cellars and garrets. A piazza twelve feet broad and two stories high extended along the whole length of the building. It was inclosed by Venetian blinds so that air and light might be excluded from the rooms when necessary, and also that the patients might be screened from public observation. These verandas were so unlike the appendages to American buildings, outside of the West India islands, that they always attracted attention. The grounds were laid out with trees, grass, shrubberies, and flowers. The apartments were well ventilated, and there was accommodation for four or five hundred persons. The principal front was to the south. But as there was no street on the Bush Hill property at that time nearer than Callowhill Street, the principal front seen by the public was on Francis Lane. By the act of 1818, reorganizing the Board of Health, it was directed that this hospital should continue for the use of the city, and the districts and townships of Northern Liberties, Moyamensing, Southwark, and Penn township, for persons residing therein who shall be afflicted with any pestilential or contagious disease, measles excepted. Subsequently the exception in the case of smallpox was repealed.

By the consolidation act of 1854, all the property, real and personal, belonging to the Board of Health, was vested in the city of Philadelphia. The laws governing the board were continued. The members of the board were to be elected annually by citizens, a provision that was afterward changed. The city hospital, under the management of the Board of Health, was city property. By ordinance of May 19, 1866, the board was directed to receive in the Municipal Hospital, which was the new name given to the establishment, all persons afflicted with any contagious or infectious disease who would otherwise be a charge upon the Guardians of the Poor, smallpox patients from the almshouse, and persons afflicted with any contagious or infectious disease sent from the county prison. In time the continuation of the City Hospital at Coates and Schuylkill Fourth [now Nineteenth] Streets became objectionable to the residents of the neighborhood, and finally a new site was chosen, which at that time was supposed to be so far out of town as to be safe from invasion for many years. The place chosen was upon Hart Lane, near Twenty-first Street. Here was erected a substantial structure of brownstone, consisting of a main building and wings, with a front of two hundred and eighty feet, two stories in height, with a mansard roof. The new municipal hospital was opened for patients on the 27th of April, 1865, under the management of the Board of Health, which elects the resident physician and other officers. The present hospital is erected on the square of ground bounded by Lehigh Avenue, Huntingdon, Twenty-first, and Twenty-second Streets.

Christ Church Hospital.—Christ Church Hospital was founded by Dr. John Kearsley, who made provision for it in his will. Dr. Kearsley died Jan. 16, 1772, and this charity was soon after begun. His widow died in 1778, and Christ Church received the remainder of the bequest. It is not a hospital in the now received meaning of the word, but a "home for poor, distressed women" (widows of clergymen being preferred before all others), communicants of the Protestant Episcopal Church. In 1784 eight pensioners were kept in the old building on Arch Street, above Third, which in Dr. Kearsley's lifetime had been fitted up as an infirmary, and twelve others boarded out. In 1785 the hospital was rebuilt on Arch Street. Afterward it was removed to Cherry Street, south side, between Third and Fourth, where a stately, comfortable brick building was erected for the special use of the hospital, and where the institution remained for several years. The fund becoming enlarged by judicious care and by a legacy from Joseph Dobbins, of South Carolina, the trustees purchased a large tract on Belmont Avenue, West Philadelphia, near the park, and erected a new building, with accommodations for one hundred inmates. The corner-stone was laid in 1856, and the building occupied in 1861. It is two hundred and thirty-seven feet long, fifty feet deep, and four stories in height, with a chapel and infirmaries.

Three of the trustees are chosen annually by Christ Church, and the remaining three by St. Peter's Church. The Rev. Edmund Roberts is at present chaplain of the hospital.

The Episcopal Hospital.—The erection of the "Hospital of the Protestant Episcopal Church in Philadelphia" was first decided upon at a meeting of clergy and laity, convened by Bishop Potter, on March 14, 1851. John Welsh was secretary of the meeting. The principles on which this charity has ever been conducted were declared immediately upon its organization, viz., the hospital should be distinguished by religious influence, applied systematically to all its inmates, both patients and attendants, its managers to be communicants, and not less than one-third of them to be clergymen; patients to be received without distinction of creed, country, or color; regular religious ministrations in the hospital by a clergyman of the Protestant Episcopal Church, under the directions of the bishop, with the understanding that the private services of other ministers should not be excluded when conscientiously sought for by patients.

Moved thereto by a sermon preached by Dr. William Bacon Stevens in St. Andrew's Church, Mrs. E. H. L. Stout and Miss Ann Leamy, daughters of Mrs. Elizabeth Leamy, gave to the hospital about five acres of ground near Front Street and Lehigh Avenue, together with the family mansion house thereon. The hospital was opened in this house (which is still standing) and was afterward used as the "Bishop Potter Memorial House") on Dec. 11, 1852. Additional ground was purchased, giving the hospital two entire blocks.

The corner-stone of the present hospital was laid on May 24, 1860, the Diocesan Convention, then in session, taking a recess to attend the ceremonies. Miss Hollingsworth gave ten thousand dollars for the erection of a memorial chapel, and Miss Wilhelmina Smith ten thousand dollars for the endowment of a chaplaincy. The chapel was opened on May 27, 1862. The hospital was opened on July 31, 1862, to receive at once two hundred sick and wounded United States soldiers, and five hundred and seven soldiers were admitted as patients before the government hospitals were prepared to meet the emergencies.

About 1874 the eastern wing was erected, completing the hospital after its original plan. In 1883 a handsome mission building was erected on the hospital grounds, to give accommodations for the extensive missionary work, schools and meetings, carried on in connection with the hospital.

On Thanksgiving day each year an offering is made in all the parishes for the hospital, and averages about fifteen thousand dollars per annum. The annual expenses of the hospital are now about fifty thousand dollars a year. It has a considerable invested fund, and is in receipt of frequent legacies and donations. Among the long list of those who have aided the hospital by devoted labors, magnificent gifts, or bequests, mention can here only be made of Miss Grasby, who endowed the "Hannah Ward;" Bishop Hare, who secured subscriptions of thirty thousand dollars for "incurables;" George Washington Smith, who gave five thousand dollars a year for a considerable time before his death; John Welsh, a continuous and generous friend of this institution; and the Misses Biddle, who have been indefatigable in their Christian labors in the hospital.

The following are the board of managers of the Episcopal Hospital:

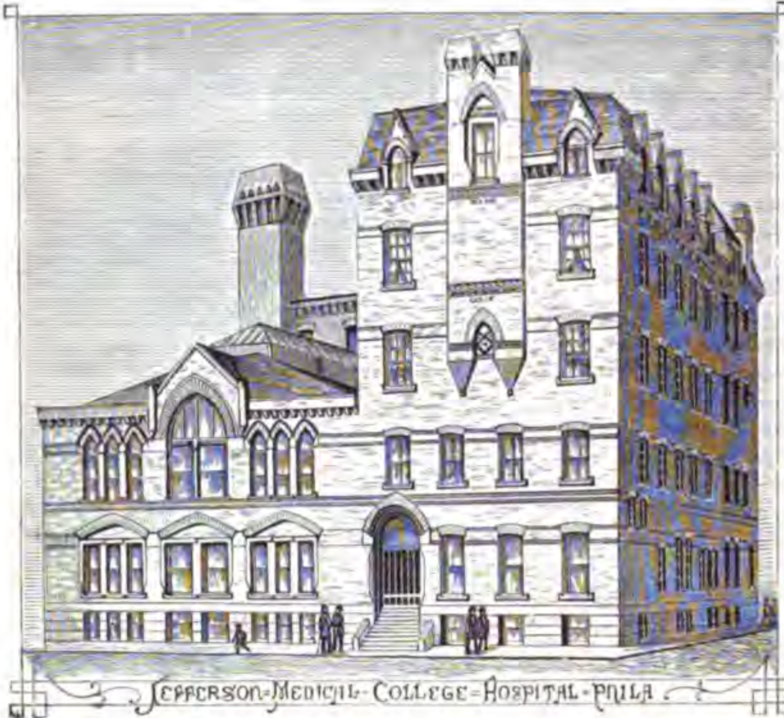
Rt. Rev. William Bacon Stevens, D.D., LL.D., president *ex officio*; term of service expiring January, 1885, Rev. B. Watson, D.D., Rev. Thomas F. Davies, D.D., Rev. E. A. Foggo, D.D., B. G. Godfrey, John C. Browne, Charles C. Harrison, Oliver Landreth, William C. Houston; term of service expiring January, 1886, Rev. Henry J. Morton, D.D., Rev. Daniel S. Miller, D.D., Caspar Morris, M.D., George Blight, William R. Lejée, Andrew H. Miller, Charles Spencer, John Ashhurst, Jr., M.D.; term of service expiring January, 1887, Rev. Richard Newton, D.D., Rev. Edward Y. Buchanan, D.D., Rev. C. George Currie, D.D., Edward Hartshorne, M.D., John Welsh, Alexander Brown, William P. Pepper, J. Vaughan Merrick; Treasurer, W. W. Frazier, Jr.; Secretary, Rev. J. A. Childs, D D.

Medical Board.—Physicians, Dr. Morris J. Lewis, Dr. Frederick P. Henry, Dr. Henry M. Fisher, Dr. Louis Starr; Surgeons, Dr. Charles B. Nancrede, Dr. William S. Forbes, Dr. Charles T. Hunter, Dr. John H. Packard; Ophthalmic and Aural Surgeons, Dr. Albert G. Heyl, Dr. B. Alexander Randall. Dispensary Staff: Physicians, Dr. A. K. Minich, Dr. James M. Anders, Dr. D. J. Milton Miller; Surgeons, Dr. J. Henry C. Simes, Dr. William Barton Hopkins, Dr. Thomas R. Nelson, Dr. Charles M. Seltzer. Resident Physicians, Dr. George M. Boyd, Dr. Charles Claxton, Dr. W. Wharton Hollingsworth, Dr. J. Kearsley Mitchell; Curator of Pathological Museum, J. Henry C. Simes, M.D.; Chaplain, Rev. Alexander B. Crawford; Superintendent, S. R. Knight, M.D.; Matron, Miss E. A. Lehman.

The Friends' Asylum for the Insane is an incorporated institution at Frankford, supported by members of the Society of Friends. It was founded in 1811, and a constitution adopted in June, 1813. The buildings were finished and occupied on the 15th of June, 1817.

Jefferson Medical College Hospital.—Clinical demonstrations have been regarded as one of the most valuable adjuncts of instruction in the Jefferson Medical College from its earliest history. In fact, an infirmary had been established within the walls of the college in May, 1825, in advance of the first session, and on the 9th of that month, Dr. George McClellan performed the first surgical operation in the amphitheatre. The clinical system was further developed after the reorganization of the faculty in 1841, and the clinics came to be considered the "right arm of the college." In addition to the clinics at the college itself, the students were allowed admission to the Pennsylvania Hospital and to Blockley Almshouse. In 1843 or 1844 one or two rooms were rented, located over the shop of a stove-maker, on the southwest corner of Tenth and Sansom Streets, and grave cases operated on before the class were afterward conveyed thither and treated. These accommodations becoming insufficient, two floors were rented in a bottling establishment standing on the ground now occupied by the laboratories of the college. In the course of a few

years this place was remodeled, and a comfortable miniature hospital was created capable of accommodating from fifteen to twenty beds. The hospital thus organized served its purpose for over twenty years. The necessity for larger accommodations for a clinical hospital became more and more apparent as the college increased in size and importance, and in December, 1872, at an informal meeting of the Alumni Association, it was determined to make an effort in this direction. In order to obtain an idea of the success which might be expected from the undertaking subscriptions were called for then and there, and fifteen thousand dollars were promised. This action, on being reported to the trustees, was approved by them, and they determined to seek an appropriation from the Legislature of one hundred thousand dollars. The appropriation was granted, and received the Governor's approval April 9, 1873. The grant was conditioned on the raising of an equal sum from private sources.



JEFFERSON-MEDICAL-COLLEGE-HOSPITAL-PHILA.

As the result of a conference between a joint committee from the faculty and the alumni with a committee from the board of trustees, in April, 1874, Henry M. Phillips, Asa Packer, and James Campbell were appointed a finance committee to receive subscriptions and the payment of subscriptions for the projected hospital, and to invest the funds received in the manner they should deem most advantageous, subject to the further action of the board of trustees. A liberal donation, by I. V. Williamson, of fifty thousand dollars, in October, 1874, on the condition, among others, that the hospital should be finished in three years from the date of his subscription, infused new activity into the work. A committee on site shortly afterward reported in favor of the present location of the hospital, in the rear of the college, and on April 21, 1875, a lot was purchased on the site recommended, having a frontage of eighty-six feet, and a depth of one hundred and seven feet six inches, the price being forty-five thousand dollars. In March, 1876, the adjoining lot, extending east twenty feet to Sansom Street, was bought for eight thousand dollars.

A committee on building and finance, which superseded the old finance committee in June, 1875, adopted the plans for the new building proposed by Messrs. Furness & Hewitt, architects, in the latter part of the same year. On the 4th of November, 1875, the contract for the erection of the building, exclusive of the heating and plumbing arrangements, was let to John Ketchum for $94,787.93. This sum was afterward increased by the adoption of changes in the plans, occasioned principally by the acquisition of the eastern lot bordering on Sansom Street. By the end of November, 1876, the whole building was under roof, and on the 27th of April, 1877, the structure having been entirely completed, was formally transferred by the building and finance committee to the trustees. On the 1st of May it was thrown open to the inspection of the public. The formal opening was deferred until Sept. 17, 1877, when the inaugural address was delivered by Dr. E. B. Gardette, president of the board of trustees of the college, before the trustees, the faculty, members of the alumni, and the invited public, and Dr. Joseph Pancoast, the emeritus professor of Anatomy, also made an address.

The cost of the building, fully equipped and furnished, up to the time when it was occupied by patients was $132,991.83, and the cost of the two lots was $53,000, making a total expenditure of $185,919.83. On the 4th of November, 1875, a request was made for an additional appropriation of $100,000 from the State, and on the 17th of June, 1878, nearly three years afterward, the act appropriating the sum was passed. By the terms of the act the money was to be paid over at the rate of ten thousand dollars a year, and at the present time (1884) the payment is still progressing.

Digitized by Google

Among the large subscriptions from private sources or corporations may be mentioned the following: Henry C. Lea, $5000; Thomas A. Scott, $5000; A. Whitney & Sons, $5000; Asa Packer, $5000; A. J. Drexel, $5000; Joseph Pancoast, M.D., $5000; estate of Jesse George, deceased, $5000, to which was afterward added $2500; Dr. Thomas D. Mütter, $5000; I. V. Williamson, $50,000; the Philadelphia Contributionship for the Insurance of Houses from Losses by by Fire, $5000; the Philadelphia and Reading Railroad Company, $10,000.

The hospital is a fine brick building, immediately west of the college, and is bounded on three sides by streets, and on the fourth side by a private passageway. It is one hundred and seven feet square, five stories in height, and is designed for the easy accommodation of one hundred and twenty-five patients. The amphitheatre, for clinical lectures, is one of the largest and most convenient in the United States. A museum, containing casts and wax models of interesting cases treated in the hospital, was established in the latter part of 1878, and is maintained at an expense of three hundred dollars a year. In connection with the hospital is an out-patient or dispensary department of the college, which furnishes much valuable material for clinical instruction. The hospital building contains a marble bust of Dr. George McClellan, founder of the college, and portraits of many of the members of the different faculties.

During the peried from Sept. 17, 1877, to Sept. 30, 1878, the first year in which the hospital was open, there were four hundred and forty-one patients treated, at an expense of $11,803.95, the receipts from the board of patients and the sale of drugs being $7000.12. From Oct. 1, 1878, to Sept. 30, 1879, there were 639 patients treated, and from Oct. 1, 1879, to Sept. 30, 1880, 943 patients. During 1883 the total number of cases treated was 1193, of whom 607 recovered, 426 improved, 43 did not improve, 71 requested discharge, and 46, or only 3.7 per cent., died.

In the dispensary service, or out-patient department, the total number of visits was twenty-eight thousand eight hundred and twenty, and the number of physicians employed, twenty-one. The officers of the hospital at present are as follows:

Surgeons, Richard J. Levis, M.D., O. H. Allis, M.D., Joseph Hearn, M.D., J. M. Barton, M.D.; Physicians, James C. Wilson, M.D., Oliver P. Rex, M.D., J. T. Eskridge, M.D., Joseph S. Neff, M.D.; Ophthalmic Surgeon, Professor William Thomson, M.D.; Gynecologists, John C. Da Costa, J. Ewing Mears, M.D.; Aural Surgeon, L. Turnbull, M.D.; Pathologist, Morris Longstreth, M.D.; Resident Physicians, Malcom E. Parrott, M.D., surgeon; Orville Horwitz, M.D., physican; John A. Thomson, M.D., physician of the United States Marine Hospital Service; Superintendent, John L. Kite.

Wills Hospital for diseases of the eye, south side of Race Street, between Eighteenth and Nineteenth, opposite Logan Square, owes its foundation to the benevolence of James Wills, a grocer, who died in 1823, and by his last will bequeathed to the city of Philadelphia a sum of money, which at the completion of the building had accumulated to one hundred and twenty-two thousand five hundred and forty-eight dollars. Several other legacies have been added to the fund, which is under control of the Board of Public Trusts. The corner-stone was laid April 2, 1832, and the hospital opened March 3, 1834. The pavilions were dedicated Oct. 11, 1875. The hospital has eighty beds, all free.

It was originally intended for the relief of the indigent blind and lame, but has gradually become the most extensive hospital in the State of Pennsylvania for the treatment of diseases of the eye. During the year 1881 nearly six thousand patients were treated at the Wills Hospital, where they daily receive the gratuitous services of eight of the most skillful eye surgeons of the city.

The surgical staff consists of the following:

Emeritus Surgeons, S. Littell, M.D., T. G. Morton, M.D., R. J. Levis, M.D., W. Thomson, M.D.; Attending Surgeons, H. E. Goodman, M.D., A. D. Hall, M.D., G. C. Harlan, M.D., P. D. Keyser, M.D., W. W. McClure, M.D., W. F. Norris, M.D., G. Strawbridge, M.D., H. S. Schell, M.D.

St. Joseph's Hospital is located on the south side of Girard Avenue from Sixteenth to Seventeenth Streets. The design of establishing a Catholic hospital in Philadelphia originated with the late Bishop Kenrick. On Feb. 11, 1846, he appointed an executive committee to be called the Council of the Hospital of St. Vincent de Paul, to establish an hospital. This effort failed. On Jan. 30, 1848, Rev. F. J. Barbelin, S.J., pastor of St. Joseph's Church, called a meeting of that congregation for that evening to devise means of relieving the distressed emigrants from Ireland, and to establish a hospital. The society was formed,—Father Barbelin, president; Father McMullen, treasurer. Property on Locust Street, above Eleventh, was purchased, but the sale for legal reasons was not consummated. On Nov. 22, 1848, the title for the institution was adopted as St. Joseph's Hospital. On Jan. 9, 1849, a "Ladies' Catholic Hospital Society" was organized to cooperate with the managers. On March 12, 1849, a charter was obtained by the managers. On April 17th, the site now occupied was purchased for fifteen thousand dollars, but additions have been made since to the original purchase. On June 18, 1849, the Sisters of St. Joseph took charge of the hospital. Then the two-story double house which was then on the ground was purchased. In the first year one hundred and eighty-five patients were cared for. In May, 1852, a building for fever patients was erected. On July 19, 1860, Bishop Wood laid the corner-stone of extensive buildings. He and Very Rev. Dr. Moriarty, O.S.A., delivered discourses. On April 27, 1864, an act of incorporation was granted to the Sisters of Charity of St. Joseph's Hospital.

The cost of the buildings at the time of their erection was as follows: West wing, in 1861, cost $24,000; Central wing, in 1867, cost $67,000; East wing, in 1876, cost $56,000.

According to the annual report for 1883, the num-

ber of patients admitted to the medical and surgical wards was 775. Of these 478 were pay patients, and 297 were treated without any charge. The results of the treatment of the cases were as follows: Discharged cured, 597; relieved, 19; removed before any definite result, 15; died, 49; remaining in the hospital, 95. The records of the dispensary attached to the institution show that during the year 1883 the number of persons supplied with gratuitous treatment amounted to 3130. The number of free prescriptions given was 6310. St. Joseph's Hospital is under the care of the Sisters of Charity, who are skillful and well-trained nurses, making a specialty of hospital service. Sister Mary Rose is the sister in charge.

This hospital will favorably compare with any similar institution in the city, being noted for the healthfulness of its location, pleasant surroundings, thorough ventilation, and handsome appointments. The wards, numbering eight, are large, airy, and cheerful, accommodating comfortably one hundred and twenty-eight patients. The private rooms, sixty-four in number, handsomely furnished, some connecting with private baths, and all affording every comfort, are a prominent feature of the house. The hospital is catholic in the broadest acceptation of the term, admitting all without regard to nationality, creed, or color, and according to every one the consolation of his own spiritual adviser, no matter what the religion he may profess. It is also catholic in its charities, giving to all who may apply for relief as far as its means will allow.

Board of Managers.—President, —— ——; Vice-President, Very Rev. Maurice Walsh; Treasurer, Charles A. Repplier; Secretary, Robert B. Cruice, M.D.; Managers, Joseph A. Donnelly, Francis A. Drexel, Henry Preon.

Under the Direction.—The Sisters of Charity of St. Joseph; Sister Cornelia McDonnell, Sister servant.

Medical Board.—Physicians, Dr. William V. Keating, Dr. George Morehouse, Dr. John J. Reese, Dr. J. M. Keating; Surgeons, Dr. John H. Brinton, Dr. John H. Packard, Dr. Charles S. Boker, Dr. Robert B. Cruice; Obstetrician, Dr. A. G. Bournonville; Pathologist, Dr. Joseph Leidy; Physician and Surgeon in Charge, Dr. Robert B. Cruice, Dr. John J. Alexander; Solicitor, Henry P. Coleman, Jr.

Woman's Hospital, corner of North College Avenue and Twenty-second Street, was established in 1861, in connection with the Woman's Medical College, and for the purpose of affording clinical facilities to students of the institution. It occupied until 1874 a portion of the college building, but since the erection of the new building for the latter the premises formerly occupied by the college have been assigned to the hospital. Over four thousand patients are treated annually in this hospital, which is under the supervision of a board of twenty-four managers.

Officers.—President, Mrs. E. C. Griffith; Treasurer, Mrs. Rachel C. Bunting; Corresponding Secretary, Mrs. Sarah T. Price; Recording Secretary, Mrs. E. F. Halloway; Physician in Charge, Anita E. Tyne, M.D.; Matron, Elizabeth T. Evans.

In 1872 the Training School for Nurses was endowed and a course of nursing instituted, to be given by the resident physician in the spring and autumn of each year, to supplement the practical training in the wards. A diet-kitchen was also established for instruction in the preparation of food for the sick. In addition to the regular course of Woman's Hospital lectures on nursing, lectures on special subjects are given by Philadelphia physicians, among whom may be mentioned Drs. S. Weir Mitchell, Albert H. Smith, Harrison Allen, W. W. Keen, James Tyson, James C. Wilson, Edward E. Montgomery, John H. Ashhurst, Jr., Edward T. Bruen, William Pepper, and others.

The Lying-in Charity and Nurse Society (No. 126 North Eleventh Street, corner of Cherry) was founded in 1828. The institution is supported wholly by private subscription. The objects of the society are the instruction of nurses, attendance upon indigent women at their own homes in their confinement, and the treatment of diseases peculiar to women at the bi-weekly clinic, with hospital care where it is required.

Officers.—President, Ellwood Wilson, M.D.; Vice-Presidents, Dillwyn Parrish and Isaac S. Williams; Treasurer, Passmore Williamson; Secretary, John T. Ward; Managers, John Carrow, Henry A. Moore, Henry M. Laing, Samuel L. Fox, Thomas L. Gillespie, T. P. Conard, Thomas T. Child, Louis Dedlow, Margaret Fulton, Anna M. Child, Elizabeth F. A. Cooper, Gulielma M. Jones, Sarah McIlvain, Rebecca Conard, Katherine M. Phillips; Lady Visitors, Mrs. M. Fulton, Mrs. E. F. A. Cooper, Mrs. A. M. Child, Mrs. Sophia M. McElroy, Mrs. Mary E. Carrow, Mrs. Eliza B. Hill, Mrs. Sarah McIlvain, Mrs. Elizabeth S. Haines, Mrs. Katherine M. Phillips, Mrs. Rebecca Conard, Mrs. Gulielma M. Jones, Mrs. Sarah K. Taggart, Mrs. Anna M. Hunt, Mrs. J. Tatum, Mrs. R. Horner, Mrs. M. Bayard, Mrs. Hannah H. Jenks, Miss Elizabeth Baeder, Miss Rebecca Gobrecht.

Medical Staff.—Consulting Physician, Ellwood Wilson, M.D.; Principal Physicians, Joshua G. Allen, M.D., Albert H. Smith, M.D.; Senior Assistant Physicians, Alfred Whelen, M.D., Washington H. Baker, M.D., S. B. McDowell, M.D., John C. Da Costa, M.D.; Junior Assistant Physicians, J. Wilks O'Neil, M.D., Charles F. Wirgman, M.D., Daniel Longacre, M.D., E. W. Holmes, M.D., H. D. Thompson, M.D.

The Preston Retreat (Hamilton Street, between Twentieth and Twenty-first Streets) was founded in 1836. It is supported by income from an estate left by Dr. Jonas Preston, who died in 1836, and is a lying-in charity for married women of good character but in indigent circumstances. The use of the building was for many years allowed to the managers of the Foster Home Association. It was first opened as a lying-in hospital in 1866, and during that year received forty patients.

Officers.—Managers, Crawford Arnold, William C. Biddle, Charles Bullock, Frederick Collins, B. B. Comegys, Frederick Fraley, Joseph C. Fraley, Henry Haines, Charles M. Hill, Jacob P. Jones, Edward H. Ogden, Eli K. Price, Galloway C. Morris, John Rommel, Jr., Samuel R. Shipley, Joseph B. Townsend, Henry C. Townsend, Joseph H. Trotter, George Thomas, M.D., J. Preston Thomas, John C. Uhle, Edward N. Wright, Charles W. Wharton, J. Price Wetherill; President, Eli K. Price; Secretary, John C. Uhle; Treasurer, J. Sergeant Price; Physician in Charge, Dr. William Goodell; Consulting Physicians, Louis Rodman, R. A. F. Penrose, Ellwood Wilson, Edward L. Duer, Ellerslie Wallace, Albert H. Smith.

The German Hospital.—As early as 1850 the citizens of German birth and descent in Philadelphia determined to establish a hospital. On April 2, 1860, a charter was obtained from the Legislature, and the first meeting was held under it on May 12th of the same year. The German Hospital of the City of

Philadelphia was duly organized with the following officers: Joseph M. Reichard,[1] president; Jacob Mueller, vice-president; Francis M. Drexel, treasurer; M. Richards Mucklé, secretary; and Frederick R. Heyer, attorney.

A committee was appointed to select a suitable location for the hospital, which shortly afterward recommended the country residence of the Norris family, corner of Twentieth and Norris Streets, which was bought for twenty thousand dollars, the deed being signed on the 20th of May, 1861. Its extent was nearly three acres, and the building on it seemed well suited for the necessary wants of a hospital. In August, 1864, one hundred and thirty-eight and eight-tenths perches of land were bought of Peter Van Pelt for four thousand dollars, in order to secure an unbroken front on Twentieth Street.

The corporation received at that time its first legacies, namely, from the estate of F. M. Drexel two thousand dollars, F. L. John one thousand dollars, J. H. Ullman two thousand dollars, and a donation from Mary de B. Brown of one thousand dollars. A Ladies' Aid Society was organized in April, 1861, whose efforts were most effectual in assisting in raising a portion of the purchase money. The managers had at that time finished their preparations for throwing doors open to the sick and wounded, when the civil war broke out, and for the purpose of assisting the government in its need for comfortable hospital accommodations, the entire establishment was leased to the United States for a nominal sum, for the duration of the war. The corporation did not get possession of its property until July 31, 1866, and in the same year, on Thanksgiving day, Nov. 29, 1866, its doors were opened to the sick. It soon became apparent that the building, being old, would soon need extensive repairs, and at the same time the locality did not appear to be central enough. It was then thought wise to look out for a better location. The handsome mansion of the Misses Davidson, at the corner of Corinthian and Girard Avenues, being then offered for sale, was purchased in the spring of 1872 for thirty-five thousand dollars.

In October of the same year possession was taken, and over fifty patients were domiciled in the house. It was decided to remodel the house, and at the same time enlarge it very considerably. In May, 1874, the new plans were submitted to the managers and universally approved. Building was soon commenced, and at the end of the year was so far advanced that part of the new building could be utilized. The very extensive outlays for the building and for its improvement were partly defrayed by donations and legacies which the hospital was favored with, among which may be mentioned the very liberal endowments for two beds, presented by Isaiah V. Williamson.

[1] Resigned Jan. 27, 1869, and John D. Lankenau was nominated and elected in his stead.

On the 26th of October, 1875, the formal dedication of the finished buildings took place, and since that time the hospital has been steadily advancing in favor, and anxious and willing to afford relief to the poor and wounded, as far as the limited means of its treasury would allow. The old hospital lot, on the corner of Twentieth and Norris Streets, was sold at auction on the 2d of November, 1879, to the highest bidder, the amount realized being fifty-five thousand dollars, which sum enabled the managers to pay off the mortgages on the new hospital lot, and with the balance of the fifteen thousand dollars to make the first permanent investment.

A considerable piece of ground, bought from the city, has been given to the hospital corporation, and additional buildings are likewise in contemplation, which will also be presented to the corporation.

At the meeting of the corporation on the 11th of January, 1882, it was determined to adopt a new charter, and, after several preliminary meetings, the new charter was duly signed and approved Dec. 2, 1882. This new charter went into effect on the 8th of January, 1883.

Officers for 1883.—President, John D. Lankenau; Vice-President, M. Richards Mucklé; Secretary, William N. Mencke; Treasurer, C. A. Woerwag; Solicitor, Joseph G. Rosengarten; Board of Trustees, Rev. Dr. W. J. Mann, Rev. Dr. A. Spaeth, Rev. F. Wischan, J. C. File, Christian Gross, J. Henry Tilge, John D. Lankenau, William N. Mencke, Charles H. Meyer, M. R. Mucklé, H. D. Justi, Joseph Neumann, G. A. Schwarz, A. Weihenmayer, Anton Winters, John C. Yeager. Medical Board, Physicians, Adam Trau, M.D., J. Solis Cohen, M.D., George W. Vogler, M.D., Frank Woodbury, M.D.; Surgeons, Ferdinand H. Gross, M.D., Marcus Franklin, M.D., James Collins, M D., James M. Barton, M.D.; Oculist and Aurist, Charles S. Turnbull; Resident Physicians, J. S. Miller, M.D., A. B. Hirsch, M.D.; Steward, Richard Naumann; Matron, Henriette Naumann.

The officers of the Ladies' Aid Society of the German Hospital are as follows:

President, Mrs. John Bower; Vice-President, Mrs. C. Benkert; Treasurer, Mrs. M. Hassold; Secretary, Mrs. B. G. Stephan; Assistant Secretary, Mrs. Chr. Ludy; Directors, Mrs. Schwartz, Mrs. Berlinger, Mrs. Newman, Mrs. Dauber, Mrs. Nier, Mrs. Schmidt, Mrs. Kaiser, Mrs. Fischer, Mrs. Maisch, Mrs. Platzer, Mrs. Oppermann, Mrs. Kolb, Mrs. Engel, Mrs. Mann, Mrs. Wolters.

The Philadelphia Hospital (Woodland Avenue [Darby road], below Walnut Street) is a branch of the Blockley Almshouse, and is under the charge of the Board of Guardians for the relief and employment of the poor of the city of Philadelphia. It embraces medical, surgical, and obstetrical wards, together with a children's asylum. The insane hospital is under the charge of a medical superintendent, with assistants.

The appropriation of the Guardians of the Poor for 1882 was as follows:

Hospital department, $29,615; insane department, $13,598; children's asylum, $1467; house generally, $316,069; manufacturing department, $20,730; farm and Blockley estate, $11,527; out-door expenses, $26,410; deficiency bill, 1876–77, $1150; cost of Marston Street sewer, $1552; total, $422,118.

Officers of the Board.—President, Edward F. Hoffman; Treasurer, John Ruhl; Secretary, Robert C. Floyd; Members, Thomas Biddle, M.D., William R. Chapman, Patrick K. Daly, John Huggard, Edward

F. Hoffman, Thomas S. Keyser, William McAleer, Richard C. McMurtrie, Joseph Paxson, James Stewart, John Ruhl, William H. Zeigler. Officers: Superintendent, George H. Smith; Physician-in-Chief, insane department, D. D. Richardson, M.D.; Chief Clerk and Storekeeper, A. F. Randolph; Out-Door Agent, A. D. M. Caldwell; House Agent, Oliver P. Bohler; Apothecary, William F. Bender; Overseer of the Manufactory, John B. Snyder; Hospital Warden, T. N. McLaughlin. Attending Physicians, Surgeons, and Accouchers of the Hospital: Surgeons, Dr. W. H. Pancoast, Dr. N. L. Hatfield, Jr., Dr. J. W. White, Jr., Dr. W. S. Janney, Dr. George McClellan, Dr. A. S. Roberts, Dr. Joseph F. Hearn, Dr. C. H. Thomas, Dr. William G. Porter; Accoucheurs, Dr. E. E. Montgomery, Dr. John B. Keating, Dr. W. H. Parrish, Dr. S. S. Stryker, Dr. M. D. Musser, Dr. Clara Marshall, Dr. W. W. Bernady, Theophilus Parvin; Physicians, Dr. J. L. Ludlow, Dr. William Pepper, Dr. James Tyson, Dr. Edward T. Bruen, Dr. James C. Wilson, Dr. Roland G. Curtin, Dr. J. B. Walker, Joseph Neff; Curator and Pathologist, Dr. E. O. Shakspeare; Dermatologist, Dr. Louis A. Duhring; Neurologist, Dr. Charles K. Mills; Microscopist, Dr. H. T. Formad.

The Howard Hospital and Infirmary for Incurables (No. 1518 and 1520 Lombard Street) was founded May 1, 1853, and incorporated May 8, 1854.

The object of this institution is the medical and surgical treatment of the sick and infirm deserving poor. It is unsectarian, and depends for its support upon the voluntary contributions of the benevolent. It receives no aid from the State.

Its medical department is organized on the specialty system; each physician devoting himself to the treatment of a special class of diseases, and experience has shown the great value of this method.

Officers.—President, William P. Cresson; Treasurer, Henry D. Sherrerd; Secretary, William R. Claxton; Physicians, Drs. Joseph Klapp and B. F. Nicholls, diseases of digestive organs; Drs. T. Hewson Bradford, Robert H. Hamill, T. C. Rich, and John M. Taylor, diseases of chest and throat; Dr. William B. Atkinson, diseases of females; Drs. Alfred T. Livingstone, Charles K. Mills, and J. T. Eskridge, diseases of brain and nerves; Dr. Thomas S. Harper, fevers; Drs. Laurence Turnbull, Charles S. Turnbull, and Franklin D. Castle, diseases of the eye and ear; Drs. H. W. Stellwagon, John W. Barr, and Henry Morris, diseases of skin; Surgeons, Oscar H. Allis, M.D., George McClellan, M.D.; Resident Physician, George W. Miel, M.D.

The Charity Hospital (1832 Hamilton Street) was chartered in 1858, and is supported by private subscription. Daily clinics are held in the hospital, where advice and medicine are given gratuitously to the worthy poor.

The Jewish Hospital (Olney road, near York pike, in the Twenty-second Ward) was organized in 1865, and admits all sufferers from bodily disease, regardless of religious beliefs, sex, or nationality. The institution occupied for many years buildings at Westminster Avenue and Haverford road. The lot of ground now occupied was purchased in 1872, and the corner-stone of a hospital building laid October 9th of the same year. It was ready for patients in 1874. The association also has under its charge and supports a home for aged and infirm Israelites. The cost of the hospital buildings was about one hundred thousand dollars, and is supported by yearly subscribers and voluntary donations. The building is surrounded by fourteen and a half acres of beautiful rolling ground, and is in one of the finest parts of the city. The officers of the association are as follows:

President, William B. Hackenburg; Vice-President, Abraham Goldsmith; Treasurer, August B. Loeb; Secretary, Simon A. Stern; Corresponding Secretary, Simon Pfaelzer; Directors, Mayor Sulzberger, Abraham Wolf, Solomon Gans, Alfred T. Jones, Abraham Sulzberger, Alfred E. Massman, Isaac Kohn, Aaron Lichten, Lucien Moss, Henry S. Frank, Simon Muhr, Louis Saller.

The Presbyterian Hospital (corner of Powelton Avenue and Thirty-ninth Street, West Philadelphia) owes its foundation to the appointment of a committee on hospitals by the Presbyterian Alliance in 1870. At that time Professor Courtland Saunders offered to the institution, if it should be formed, an entire square of ground, upon which were his mansion and the Courtland Saunders Institute. The gift was not absolute, but the offer was so liberal that a valuable property, worth at least fifty thousand dollars, came into the possession of the managers of the hospital for a small sum. In 1871, obtaining a charter, John A. Brown, of this city, made a liberal donation of three hundred thousand dollars to the hospital, the interest to be applied to its support. The hospital was formally opened July 1, 1872. It provides medical and surgical aid and nursing for the sick and disabled, without distinction as to creed, country, or color, and is managed by the following officers:

President, Rev. Charles A. Dickey, D.D.; Treasurer, John D. McCord, Esq.; Secretary, William L. Mactier; Attending Surgeons, Oscar H. Allis, M.D., Thomas B. Reed, M.D., DeForrest Willard, M.D., William G. Porter, M.D.; Attending Physicians, John L. Ludlow, M.D., James V. Patterson, M.D., Joseph G. Richardson, M.D., D. Flavel Woods, M.D., James Markoe, M.D.; Physicians for Diseases peculiar to Women, Robert M. Girvin, M.D., Edward L. Duer, M.D.; Ophthalmic Surgeons, W Wallace McClure, M.D., George Strawbridge, M.D.; Aurist, Charles H. Burnett, M.D.; Pathologists, H. Augustus Wilson, M.D., Carl Seiler, M.D.; Resident Physicians, Alexander Marey, Jr., M.D., J. P. Crozer Griffith, M.D.

Out-Patient Department.—Surgeons, H. M. Perry, M.D., Charles W. Dulles, M.D; Physicians, Abner F. Chase, M.D., W. C. Barrett, M.D.; Apothecary, Charles T. C. Gerhard; Chaplain, Rev. Francis Hendricks; Superintendent, John A. E. Walk; Matron, Mary E. Fondersmith.

St. Mary's Hospital (corner of Frankford Avenue and Palmer Street) is conducted by the Sisters of St. Francis, and is entirely supported by voluntary contributions. It was founded in 1866, and patients of all creeds are received. In connection with the hospital there is a dispensary, which gives relief to outdoor sick.

Officers.—Medical Director, Dr. Andrew Nebinger; Physicians, Dr. W. R. D. Blackwood, Dr. Michael O'Hara, Dr. Napoleon Hickman, Dr. J. Eskridge; Surgeons, Dr. J. H. Grove, Dr. J. E. Mears, Dr. W. W. Keen, Dr. John B. Roberts. Dispensary Department: Surgical Diseases, Dr. Addinell Hewson, Jr.; Eye and Ear Diseases, Dr. Charles A. Oliver; Throat Diseases, Dr. George McCracken; Resident Physicians, Dr. George Seifert, Dr. C. L. Codding, Dr. Richard Wetherill; Sister Superior in Charge, Sister Mary Borromeo; Solicitor, Hon. Benjamin H. Brewster.

Under the care of Sisters of the Third Order of St. Francis.

The Germantown Dispensary and Hospital (Shoemaker Lane, near Chew Street, Germantown) was opened in 1870, for the benefit of the sick poor of Germantown and Chestnut Hill. The hospital has forty beds, and beside the usual cases treated at dispensaries there is a special surgeon for diseases of the eye and ear. It is supported by public contributions.

Officers.—President, James E. Rhoads, M.D.; Secretary, Galloway C. Morris; Treasurer, S. Harvey Thomas; Managers, James E. Rhoads, M.D., John S. Haines, Elliston Perot Morris, Owen J. Wister, M.D., Charles Spencer, F. Mortimer Lewis, Thomas Stewardson, Amos R. Little, S. Harvey Thomas, Galloway C. Morris, Philip C. Garrett, Francis B. Reeves, T. Charlton Henry, William H. Haines, William E. S. Baker; Attending Physicians, Auguste F. Muller, M.D., R. W. Deavor, M.D., Edward F. Garrett, M.D., C. S. Witherstine, M.D.; Resident Physician, McCluny Radcliffe, M.D.

The Orthopædic Hospital and Infirmary for Nervous Diseases was organized in October, 1867, and incorporated in December of the same year. The institution occupies a large building, purchased in 1872, at the northwest corner of Seventeenth and Summer Streets, and at the time of its organization was the only one of the kind in America. The hospital was originally established on South Ninth Street.

Officers.—President, Edward Hopper; Secretary, Alfred Jones; Treasurer, A. B. Williams; Managers, Edward Hopper, Dillwyn Parrish, Joseph C. Turnpenny, Edward B. Green, M.D., Richard K. Betts, Alfred Jones, Franklin Taylor, Enoch Lewis, William C. Smyth, Samuel Fisher Corlies, Robert R. Corson, Edward Hoopes, Albert B. Williams; Attending Surgeons, Thomas G. Morton, M.D., H. Ernest Goodman, M.D., William Hunt, M D.; Attending Physicians, S. Weir Mitchell, M.D., Wharton Sinkler, M.D., Robert H. Alison; Assistant Surgeons, Washington H. Baker, M.D., Joseph M. Fox, M.D., M. Frank Kirkbride, M.D.

The Hospital of the University of Pennsylvania (on the south side of Spruce Street, between Thirty-fourth and Thirty-sixth Streets) was formed at a meeting of the University of Pennsylvania on the 12th of June, 1871. On the 3d of April, 1872, the State Legislature appropriated one hundred thousand dollars for the purpose of constructing the hospital, on condition that two hundred and fifty thousand dollars should be raised by subscription, and that two hundred free beds should always be maintained. The prescribed amount was raised, and on April 9, 1873, one hundred thousand dollars more was appropriated, on condition that the University would give one hundred thousand dollars and support two hundred more free beds. This amount was also raised, and, with two hundred thousand dollars from the State and three hundred thousand dollars from subscriptions, the sums were taken to begin the building. In May, 1872, City Councils granted a lot of ground for the site, and work was soon after begun. On June 4, 1874, the main building and west pavilion, capable of accommodating one hundred and forty-six patients, were completed, and formally dedicated. The hospital occupies a lot of ground fronting seven hundred feet on Spruce and Pine Streets, and three hundred and twenty on Thirty-fourth and Thirty-sixth Streets. It is directly south of the collegiate building of the University. The exterior walls are of green serpentine, with stone of other colors. The hospital is entirely free to all patients needing its services who are residents of Pennsylvania.

The officers of the board of managers are Eli K. Price, president; Samuel R. Shipley, vice-president; Richard Wood, secretary; and Wharton Baker, treasurer. Officers of the contributors: Alfred G. Baker, president; Cadwalader Biddle, treasurer; and Horace T. Evans, secretary.

Hospital Staff.—Alfred Stillé, M.D., LL.D., professor of Clinical Medicine; William Pepper, M.D., LL.D., professor of Clinical Medicine; D. Hayes Agnew, M.D., LL.D., professor of Clinical Surgery; William Goodell, M.D., professor of Clinical Gynæcology; James Tyson, M.D., professor of General Pathology and Morbid Anatomy; John Ashhurst, Jr., M.D., professor of Clinical Surgery; William F. Norris, M.D., clinical professor of Diseases of the Eye; George Strawbridge, M.D., clinical professor of Diseases of the Ear; Horatio C. Wood, M.D., LL.D., clinical professor of Nervous Diseases; Louis A. Duhring, M.D., clinical professor of Skin Diseases; Roland G. Curtin, M.D., Edward T. Bruen, M.D., Louis Starr, M.D., assistant physicians; Charles T. Hunter, M.D., J. William White, M.D., H. R. Wharton, M.D., Richard H. Harte, M.D., assistant surgeons; Frederick C. Sheppard, M.D., assistant gynæcologist; Samuel D. Risley, M.D., assistant ophthalmic surgeon; Walter M. L. Ziegler, M.D., assistant aural surgeon; Henry W. Stelwagon, M.D., assistant dermatologist; Benjamin F. Hamell, M.D., superintendent of the hospital; Charles W. Dulles, M.D., surgical registrar; William E. Hughes, M.D., medical registrar; Henry F. Formad, M.D., pathologist; Judson Daland, M.D., curator; Gwillym G. Davis, M.D., surgical anæsthetizer; B. C. Hirst, M.D., Edward Martin, M.D., Joseph Stokes, M.D., resident physicians; Joseph C. Rogers, apothecary.

Dispensary Service.—Charles T. Hunter, M.D., chief of the Surgical Dispensary; Samuel D. Risley, M.D., chief of the Dispensary for Diseases of the Eye; Walter M. L. Ziegler, M.D., chief of the Dispensary for Diseases of the Ear; Benjamin F. Baer, M.D., chief of the Dispensary for Diseases of Women; De Forrest Willard, M.D., A. Sydney Roberts, M.D., surgeons in the Orthopædic Dispensary; J. William White, M.D., chief of the Dispensary for Venereal Diseases; John H. Musser, M.D., chief of the Medical Dispensary; Louis Starr, M.D., chief of the Dispensary for Diseases of Children; Carl Seiler, M.D., chief of the Dispensary for Diseases of the Throat; Francis X. Dercum, M.D., chief of the Dispensary for Nervous Diseases; H. W. Stelwagon, M.D., chief of the Dispensary for Diseases of the Skin; Lewis H. Kirk, M.D., William E. Hughes, M.D., assistant physicians in the Medical Dispensary; Hollingsworth Neill, M.D., William Barton Hopkins, M.D., Richard H. Harte, M.D., Charles W. Dulles, M.D., assistant surgeons in the Surgical Dispensary; William L. Taylor, M.D., William A. Davis, M.D., assistant physicians in the Dispensary for Diseases of Women; James Wallace, M.D., G. E. De Schweinitz, M.D., assistant physicians in the Dispensary for Diseases of the Eye; James Hendrie Lloyd, M.D., assistant physician in the Dispensary for Nervous Diseases; Robert H. Hamill, M.D., assistant physician in the Dispensary for Diseases of the Ear; J. Madison Taylor, M.D., Thomas R. Nelson, M.D., assistant surgeons in the Dispensary for Venereal Diseases; James Sheets, M.D., W. R. Hoch, M.D., assistant physicians to the Dispensary for Diseases of the Throat.

The Home for Consumptives, designed for the accommodation of the destitute and homeless afflicted with that terrible and fatal malady, consumption, was established by the Philadelphia Protestant Episcopal City Mission in March, 1876, and since that time nearly six hundred patients have been adopted as beneficiaries. The House of Mercy, No. 411 Spruce Street, the greater portion of which is devoted to the purposes of a home, was opened April 1, 1877.

The home is not so much a hospital, confining its beneficence to the inmates actually within its walls, as a central ministering agency, from which, through its system of out-door relief, the poor consumptives in all parts of the city may be properly cared for. The sphere of this good work is thus capable of indefinite expansion, with no limit save of the funds provided it.

No fee is charged for admission to the home, and no discrimination is made by reason of nationality, creed, or color, but it is expected that those who avail themselves of the charity thus bestowed will

conform to the ministrations of the Protestant Episcopal Church. This rule does not apply to patients at their own homes. The superintendent is Rev. Samuel Durborow; Treasurer, William M. Runk.

The Home for Incurables (No. 4700 Woodland Avenue) was incorporated Nov. 14, 1877, to provide a home for that class of sufferers whose diseases are pronounced incurable. It was opened Nov. 8, 1877, and is managed by the following officers:

Officers.—Board of Managers: President, Mrs. Seth B. Stitt; First Vice-President, Mrs. C. K. Inglis; Second Vice-President, Mrs. Israel Maule; Treasurer, Mrs. Henry C. Townsend; Secretary, Mrs. Edward R. Fell; Mrs. M. B. Trevor, Mrs. G. Albert Lewis, Mrs. Benjamin Griffith, Mrs. Nathan H. Sharpless, Mrs. John A. Lewis, Mrs. Samuel A. Harrison, Mrs. Edward H. Ogden, Mrs. J. Eastburn Mitchell, Miss Augusta Taber, Miss Susan Gorgas, Miss Helen V. Wriggins, Mrs. Samuel B. Shipley, Mrs. Benjamin J. Crew, Mrs. Horatio Gates Jones, Mrs. J. Lewis Crozer, Mrs. Charles H. Caldwell, Mrs. C. G. Hunsworth, Mrs. H. S. Hoffman, Mrs. C. A. Dickey, Mrs. W. A. Griswold, Mrs. Thomas Roberts, Mrs. T. G. Wormley, Mrs. Gideon Stoddart, Mrs. H. M. Dechert, Mrs. J. F. Keen, Miss E. C. Egner; Board of Advisors, William S. Peirce, Horatio Gates Jones, S. Weir Lewis, Benjamin J. Crew, J. Eastburn Mitchell, J. E. Gillingham, Daniel M. Fox, John Baird, Henry C. Townsend, John M. Collins, Caleb J. Milne; Medical Advisers, W. W. Keen, M.D., Thomas G. Morton, M.D., Charles P. Turner, M.D., W. C. Dixon, M.D.; Attending Physicians, H. B. Rockwell, M.D., J. P. Crozer Griffith, M.D.

Children's Hospital (Twenty-second Street, above Locust) was founded in 1855. This institution is supported by voluntary contributions of the benevolent, by legacies, and to a small extent by board of patients. Children under twelve years of age, suffering from non-contagious diseases or from accidental injuries, are admitted on application to the attending physicians and surgeons, who visit the hospital daily at 11 A.M. Since its opening in November, 1855, three thousand four hundred and fifty-four in-door cases have been admitted into the wards, and ninety-six thousand two hundred and fifty-nine out-patients prescribed for at the dispensary. The expense for their maintenance and treatment has been $159,090.58, exclusive of repairs and improvements to the hospital building.

Officers.—President, F. Mortimer Lewis; Vice-President, W. R. Lejee; Treasurer, Robert W. Ryerss; Secretary, Francis W. Lewis, M.D.; Managers, W. Heyward Drayton, Richard Wood, Francis W. Lewis, M.D., William R. Lejee, Morton P. Henry, Henry Winsor, T. H. Bache, M.D., G. A. Wood, Edward S. Clarke, F. M. Lewis, Emlen Hutchinson, N. Burt, Robert Ryerss, John S. Newbold, Thomas Stewardson, Jr., W. Brockie, O. A. Judson, M.D., Clarence H. Clark. Officers elected by the Managers: Attending Physicians, James H. Hutchinson, M.D., D. Murray Cheston, M.D., Louis Starr, M.D., Arthur V. Meigs, M.D.; Attending Surgeons, John Ashhurst, Jr., M.D., H. Wharton, M.D., Samuel Ashhurst, M.D., H. S. Schell, M.D., ophthalmic and aural surgeon; Consulting Physicians, J. Forsyth Meigs, M.D., J. M. Da Costa, M.D.

St. Christopher's Hospital for Children (No. 132 Diamond Street, opposite Norris Square) was incorporated in November, 1875. It is intended for the treatment of sick and injured children of the poor, without regard to creed, color, or nationality, and is supported by voluntary contributions. The dispensary for children is at 552 East Dauphin Street.

Officers.—Physician-in-Charge, Dr. W. H. Bennett; Secretary, James S. Whitney; President, J. Shipley Newlin; Treasurer, Edward A. Sibley.

The Sanitarium Association.—The object of the association is to provide a place where fresh air, wholesome food, and cleanly surroundings may be enjoyed by the very poorest class of sick and helpless children. The Sanitarium buildings are situated on Windmill Island, Delaware River, and are open during the summer months for the reception of destitute children. During the season of 1882 there were received and cared for 46,124 persons; of these there were 9471 infants, 12,620 children under five years of age, 9893 between five and ten years, 4874 over ten years, and 9266 adults. The average cost of maintenance has not exceeded six cents per day for each person.

Officers.—President, Daniel Baugh; Vice-President, Dr. William B. Atkinson; Secretary and Treasurer, Dr. Eugene Wiley; Managers of Sanitarium, Dr. William H. Ford, George C. Thomas, Francis R. Abbott, William H. Hart, Jr., George D. McCreary, William Barnett, John T. Bailey, Samuel M. Bines; Solicitor, Joseph R. Rhoads, Esq.

German Eye and Ear Infirmary (No. 441 North Fifth Street) was founded July 3, 1876. Its objects are the gratuitous treatment of patients in indigent circumstances suffering from diseases of the eye and ear, and the advancement of medical science, in particular the branches of ophthalmology and otology.

The Homœopathic Hospital (1116 Cuthbert Street, in the rear of Hahnemann Medical College) was incorporated in 1873, and is supported by voluntary contributions. It is open for the reception of the sick and suffering requiring medical or surgical aid. The dispensary is open daily. W. Hobart Brown, president; Dr. John E. James, secretary.

The Children's Homœopathic Hospital (No. 914 North Broad Street) is open for sick children between the ages of two and fourteen and those suffering from non-contagious diseases. The dispensary for the treatment of children and adults is open daily.

Officers.—President, Capt. Enoch Turley; Vice-President, Thomas F. Brock; Treasurer, William H. Allen; Secretary, M. S. Williamson, M.D.; Resident Physician, J. T. Ridge, M.D.; Board of Directors besides Officers, S. L. Kirk, C. S. Middleton, M.D., J. E. James, M.D., B. W. James, M.D., W. H. H. Neville, M.D., Pemberton M. Dudley, M.D., Aug. Korndoefer, M.D., T. F. Brock, J. B. Roney, D. A. Waters, W. M. Shoemaker.

Pennsylvania Homœopathic Hospital for Children (southwest corner of Forty-third Street and Oregon Avenue, West Philadelphia) receives infants and children with acute and chronic diseases other than contagious. Special provisions are made for the reception of surgical cases. A dispensary for the treatment of children is open daily.

Officers.—Board of Counsel: William H. Furness, D.D., president; Enoch Lewis, treasurer. Board of Directors: Mrs. William H. Furness, president; Mrs. William E. London, secretary; Resident Physician, Edward Everett Davis, M.D.

Maternity Hospital (No. 734 South Tenth Street), formerly the "State Hospital for Women and Infants," was established for "the care, nurture, and maintenance of destitute women, married or single, during childbirth."

Officers.—Board of Governors and Medical Staff: President, J. W. White, M.D.; Treasurer, W. H. Ingham; Secretary, W. H. Staake. Board of Governors, J. W. White, M.D., W. H. Ingham, W. H. Staake,

R. W. Clay, John P. Verree, J. V. Watson, C. C. Febiger, Andrew Gray, Charles M. Lea, William B. Robins, L. Clarke Davis, J. V. Ingham, M.D., T. Morris Perot, Charles Bullock, N. C. Mitchell; Obstetricians, W. H. Baker, M.D., B. F. Baer, M.D., John B. Deaver, M.D., Robert H. Hamill, M.D.; Surgeons, Edward L. Duer, M.D., John A. McArthur, M.D., J. William White, M.D., John M. Keating, M.D.; Consulting Obstetricians, R. A. F. Penrose, M.D., Ellerslie Wallace, M.D.; Consulting Physicians, Alfred Stillé, M.D., S. Weir Mitchell, M.D.; Consulting Surgeons, H. Earnest Goodman, M.D.; D. Hayes Agnew, M.D.

The Church Dispensary of Southwark (at No. 1719 South Ninth Street) was incorporated in 1873. It was established to afford medical assistance to the sick poor living in the southern part of Philadelphia.

The Southern Sick-Diet Kitchen is located in this building, enabling the sick to be supplied with the necessary food, under the direction of a physician.

The results of the work at the dispensary since its establishment, in 1872, by the Philadelphia Protestant Episcopal City Mission, have been very encouraging.

Officers.—President, Henry R. Edmunds; Secretary, Rev. Thomas L. Franklin, D.D.; Treasurer, Rev. A. D. Heffern; Executive Committee, Henry R. Edmunds, Rev. Thomas L. Franklin, D.D., Rev. A. D. Heffern; Medical Director, B. F. Nicholls, M.D.

The Franklin Reformatory Home for Inebriates (on Locust Street, between Ninth and Tenth) was organized and incorporated in 1872. The object of this institution is the thorough and permanent reformation of inebriates, and in it are combined church privileges and home comforts.

Officers.—Board of Directors: President, Samuel P. Godwin; Vice-Presidents, Richard Wood, Isaac Welsh, William G. Warden; Treasurer, Isaac Welsh; Secretary, Thomas N. Boyd; Attending Physician, James Graham, M.D.; Solicitor, Hon. John K. Valentine.

The Philadelphia Dispensary for the medical and surgical relief of the worthy poor was founded in 1786, and is the oldest dispensary in the United States. It is located at 127 South Fifth Street, between Library and Walnut, and is supported by private contributions, and by income from investments. It has in connection with it an obstetrical and eye and ear department, at the corner of Thirteenth and Chestnut Streets. The managers are Rev. H. J. Morton, D.D. (president), T. Wistar Brown, George Harrison Fisher, Joseph P. Smith, Dr. Thomas Wistar (secretary), William Hacker, A. E. Harvey, C. W. Trotter, Lewis Rodman, M.D., John Hockley, Jr., Richard Wood, Henry Bettle.

The benefits of the dispensary are bestowed upon all applicants whose circumstances do not admit of their employing a physician, except those suffering from delirium tremens or venereal disease, and mere paupers. All medicines are furnished gratuitously.

Twenty-five thousand and twenty-six patients were treated in 1882, as follows: House and district cases, 21,115; obstetrical, 727; eye and ear, 3184.

The Northern Dispensary (at 608 Fairmount Avenue) was instituted Oct. 1, 1816, and chartered March 26, 1817, amended June 4, 1855, and Sept. 21, 1868. It has a lying-in department.

The Southern Dispensary (318 Bainbridge Street) was founded March 24, 1817.

The Episcopal Hospital Dispensary.—This is a department of the Episcopal Hospital, which affords medical relief to an immense number of out-door patients.

The Episcopal Hospital Training-School for Nurses.—This department of the Episcopal Hospital is a part of its original design. It has been quite useful, and plans are laid for its development on a more extended scale.

The Dispensary for Skin Diseases (216 South Eleventh Street) was incorporated in January, 1871, and has for its object the gratuitous relief of the sick poor afflicted with diseases of the skin.

Pennsylvania Free Dispensary for Skin Diseases (No. 923 Locust Street) was established in November, 1876. The daily clinics are open to graduates and medical students.

CHAPTER XLI.

PROMINENT WOMEN IN PHILADELPHIA HISTORY.[1]

EXACTLY when the first woman of European birth came to the Delaware River cannot be certainly known. It might have been when the Dutch reached Fort Nassau, in 1623, or at the settlement of Swanendall as early as 1631, or in Ployden's strange territory of Albion. In the Epistle and Dedication of Beauchamp Plantagenet, after describing the great advantages of the Albion settlement, he speaks of "The Lady Winefrid, Baroness of Uvedale, the pattern of mildness and modesty," also of "The Lady Barbara, Baroness of Ritchneck, the mirror of wit and beauty," and also of a Lady Baroness whose title is unfortunately lost by a break in the page, but who was expected to come to America, as Plantagenet hopes, "to get them, as they promised to goe with us." There can be little doubt that when the Swedes came, in 1638, women came with them. It was to be a colony permanent in character. A settlement of men only, without women to take care of their domestic interests, would have been a failure. That John Printz, the Swedish Governor, brought his wife with him in 1642, can scarcely be doubted; and in 1660, Mrs. Printz made complaint—the account of which is contained in the Albany records—that she could not vacate her residence (at Tinicum) without much inconvenience. Armgard Printz, daughter of Governor John, married John Pappegoya, who came over with letters of introduction in 1643. Madame Armgard Pappegoya was living under the Dutch rule in 1656, and she appeared as plaintiff in a law-suit before Upland Court in 1672. Among the English who came early were the women of the family of William Crispin and Nathaniel

[1] This chapter was prepared for this work by Miss May Forney.

Allen and Thomas Holme, who arrived some time before Penn's arrival. Among the women who came over with Penn, Watson[1] mentions Elizabeth Hard. Her story is told to us in the will by which Mrs. Deborah Morris, a Quakeress, who died early in the present century, bequeathed a silver tankard to her heirs. Watson's "Annals" says that Mrs. Morris came into possession of the tankard as a legacy from Elizabeth Hard, who was the aunt of her mother. In the bequeathing document she speaks of Elizabeth Hard as

"a worthy, good woman, she being the first orphan ever left in charge of George Fox's Society of Friends, whose sweet, innocent deportment used to give me high esteem and regard for the ancient people. She came from England with William Penn and other Friends. My grandfather and wife came two years before her, and settled in the Jerseys; but when she heard her sister designed moving to Philadelphia they removed thither also, and just got settled in a cave on the banks of the river, where is now called the Crooked Billet Wharf (so named from an ancient tavern on the wharf, about one hundred feet northward of Chestnut Street, having a crooked billet of wood for its sign), when my dear aunt (Hard) arrived, which she esteemed a divine providence thus to find her sister, whom she had not seen for some years, thus ready to receive her in the cave. There they dwelt together until they could build."

Mrs. Morris continues with a very realistic pen-picture of the work of the new colonists in providing themselves with dwellings. "They lovingly helped each other," and "the women set themselves to work they had not been used to before, for few of our first settlers were of the laborious class, and help of that sort was scarce." Elizabeth Hard seems to have been an energetic and muscular woman. She "thought it expedient to help her husband at one end of the saw, and to fetch all such water to make mortar of as they then had to build their chimney." She was not easily discouraged. The construction-work was going on, and her husband rebuked her one day for excessive labor. "Thou hadst better," he said, "think of dinner." She was willing enough to think of dinner, but there was nothing in the larder but a little bread and cheese. The dolefulness of Mistress Hard's reflections is put into sombre language by the writer in the "Annals:"

"Thus she walked on toward her tent (happy time when each one's treasure lay safe therein), but was a little too desponding in her mind, for which she felt herself closely reproved and as if queried with 'didst thou not come for liberty of conscience? hast thou not got it? also been provided for beyond thy expectation?' which so humbled her, she on her knees begged forgiveness and preservation in future, and never repined afterward. When she arose, and was going to seek for other food than what she had, her cat came into the tent, and had caught a fine large rabbit, which she thankfully received, and dressed as an English hare. When her husband came into dinner, being informed of the facts, they both wept with reverential joy, and ate their meal, which was thus seasonably provided for them, in singleness of heart."

The cat and the rabbit were not forgotten in the family, and among the pieces of silver bequeathed by Deborah Morris to her uncle, Luke Morris, was a curious tureen, on which was a device representing a cat bearing off a plump rabbit.

In December, 1699, when William Penn made his second visit to Pennsylvania, he brought with him his second wife, Hannah Callowhill Penn, and Letitia Penn, his daughter by his first wife. Hannah Penn was so gracious and pleasant in her manners that she at once became a social favorite, and the liking of the people became all the stronger when she gave birth to John Penn, son of the proprietary, and the only one of his children born in this country. To her social qualities she united a keen intellect and a dominating will. After the proprietary returned to England in broken health, and Sir William Keith intrigued to get the government of Pennsylvania into his own hands, she wrote a letter in defense of her husband's rights, that was nearly contemporaneous with the defeat of Keith. Mrs. Penn died about the year 1727.

Her step-daughter, Letitia Penn, was, so far as history tells us, a sober, quiet, and admirable Quakeress. Her mother was Gulielma Maria Penn, who died Dec. 23, 1693. More than a hundred and eighty years ago, on July 7, 1701, the women members of the Friends' Meeting in Philadelphia gave to Mistress Letitia a certificate, in which occurs the subjoined language:

"These may certify that Letitia Penn, etc., has, for good order sake, desired a certificate from us, and we can freely certify to all whom it may concern, that she hath well behaved herself here, very soberly and according to the good instructions which she hath received in the way of truth, being well inclined, courteously carriaged, and sweetly tempered in her conversation among us, and also a diligent comer to meetings, and hope hath plentifully received of the dew which hath fallen upon God's people, to her settlement and establishment in the same."

When William Penn came to Philadelphia, in 1699, with his wife Hannah and his daughter Letitia, "they went to live in the Slate-Roof House, corner of Second Street and Norris Alley," a brick building erected by Samuel Carpenter. While they were residents there the proprietary made over to his daughter a deed for "all that half-square laying on High Street," between Front and Second Streets, including thereon the little cottage, the first brick house built in Philadelphia, which has recently been removed to Fairmount Park. As the court grew, that being the most conspicuous house standing in it, it was given the name of Letitia Court.

Neither Hannah nor Letitia Penn found themselves altogether at home in the colonies, and in 1701 the husband and father wrote to his friend, James Logan, that, "I cannot prevail on my wife to stay, and still less with Tishe." Surely there was not much attraction in Philadelphia at that time for women who had grown up among English luxuries. Gabriel Thomas, writing of the state of society in the first decade of the last century, says that "women's wages were particularly high for two reasons,—the sex was not numerous, which tended to make them in demand, and therefore to raise the price, besides as these married by the time they were twenty years of age, they sought to procure a maid-servant for themselves in time. Old maids were not to be met with, neither jealousy of husbands. The children were generally

[1] Watson's "Annals," 47. It is necessary to add that the name of Elizabeth Hard does not appear in Edward Armstrong's list of passengers by the "Welcome." She might have come in some other early vessel.

well-favored and beautiful to behold." Thomas was speaking of the Swedish population of the inchoate city, and in the same line of conviction is the judgment of Penn, who noted, on his arrival, that in the houses of the Dutch and the Swedes he found a "lusty and fine-looking race of children."

Although Hannah and Letitia Penn seem to have regarded themselves as unfortunate exiles during their sojourn on American shores, it is not to be judged that there was no society worthy of the name. Austere as were the Friends, they were men and women of decided culture and knowledge, and they were somewhat fairly matched in both respects by the higher class of the German and Swede pioneers. Now as the burden of making society falls upon the women, it is a worthy tribute to the matrons and maidens of Philadelphia in its early days that they were entirely equal to the demands made upon them. A ripple on the current was made evident when, in the year 1707, Sarah Eckley, a Quakeress, and heiress to a great estate, eloped with Col. Coxe. They were married in the Jersey woods, with the pine torches blazing around them, and the chaplain of Lord Cornbury, then Governor of New Jersey, as the officiating minister. Margaret Preston wrote of the wedding that "The news of Sarah Eckley's marriage is both sorrowful and surprising."

The first challenge to a duel known to have been sent in Philadelphia was traceable to an affair in which a lady was concerned. In the year 1715, Peter Evans, gentleman, challenged the Rev. Francis Phillips, and wrote in his missive belligerent that "you have basely scandalized a gentlewoman that I have profound respect for." No duel occurred, and a few years afterward Mr. Phillips was dismissed from his church. Five years later Martha Hunt was, with her husband, put to death on the charge of making and passing counterfeit coin,—the first instance in the American colonies in which the extreme penalty was required and exacted for such an offense.

Witchcraft and other phases of superstition appear to have been nearly as rife on the shores of the Delaware as on the banks of Boston Bay in the eighteenth century. In 1683, Margaret Mattson and Yeshro Henderson, two Swedish emigrants, were tried for witchcraft, and, although their lives were saved, the jury brought in the verdict "that Margaret Mattson was guilty of having the common fame of a witch, but not guilty in the manner and form as she stands indicted." The woman went to the jail instead of to the gallows.

It is not doubtful that the ancient English tradition in regard to the marriage of a widow was carried into practice in Philadelphia in or about the year 1734. The tradition runs that the lady, clad in a single and most intimate garment, was stationed behind the door of her room; her arm was protruded through an opening in the door, and the minister officiated with that barrier between the bride and the groom. The arrangement was in consonance with the vulgar idea that a widow could only be held responsible for the debts of her deceased husband to the extent of what she carried upon her person when she was married a second time,—hence grew the custom of "marrying in the shift." Kalm, writing in 1748, cites an instance of a widow affecting to leave all to her husband's creditors, and "going from her former house to that of her second husband in her chemise." Her new husband met her upon the way, and throwing his cloak about her, cried out, "I have lent her the garments." The ceremony was most curiously like the marriage investiture that prevails to the present time in the eastern provinces of Hindostan.

"Peggy" Mullen was a woman who in the colonial period was the proprietress of the "Beef-Steak House," on the east side of Water Street, at the corner of Wilcox's Alley. Governor Hamilton and many of the political magnates of the time met there, and the house was used as a rendezvous by the Masons and other societies.

Mrs. Jones kept the "Three Crowns," the house where Richard Penn and his friends frequently met. A famous boarding-house was kept by Mrs. Graydon in the year 1768, at the corner of Front Street and Drinker's Alley, and she was at one time mistress of the Slate-Roof House. Her house was a favorite resort for the British and other foreign officers, and among her guests were the Baron de Kalb, Lady Moore, Lady Susan O'Brien, and Sir William Draper, the last of whom was the noted opponent of Junius.

After the year 1742 the Widow Roberts, the Widow Lawrence, the Widow Martin, and Mrs. Jenkins kept coffee-houses and restaurants. Mrs. Jenkins made a tremendously bold move "up-town" when she located in the neighborhood of Market and Fourth Streets. Mrs. Lawrence and Mrs. Martin owned handsome private coaches in 1761, and it is quite probable that their equipages were swallowed up in the confiscation during the *régime* of Lord Howe.

It has been represented that a certain Mr. Horton was the first daring innovator upon the rule that boys and girls should be taught together, and Poor's Academy for Young Ladies, on Cherry Street, was the first female school of celebrity.

In the middle of the eighteenth century the Quakers, the descendants of Penn and his companions, were the sober and quiet element of society; the opposition was composed of the later settlers from England. Among the staid and sombre Quakers were these families: the Shippens, Lloyds, Logans, Morrises, Walns, Norrises, Pembertons, and Benezets. The other and, socially, more prominent class surrounded within its circle the Chews, the Allens, the Hamiltons, the Lawrences, the Conynghams, the Tilghmans, the Inglises, the Simmses, the Bonds, and the Plumsteds. Later on, when the spirit of the Revolution brought in another class, the names of Biddle, Butler, Bradford, Reed, Mifflin, Boudinot, and McKean became

familiar. In each of these families there was at least one representative woman.

When the City Dancing Assembly was organized, in 1748, an acknowledged leader of society was Mrs. Jeykell, the wife of a brother of Sir Joseph Jeykell, and, on her father's side, a granddaughter of the first Edward Shippen. The Jeykell house was on Second Street, just south of Edward Shippen's great mansion, and Mrs. Jeykell made it a nucleus of the social world. She was the grandmother of George Chalmers. The Assembly demonstrated its exclusiveness by refusing admission to its meetings to a daughter of Esquire Hillegas, who had married "in trade," that is to say, that she had been wedded to a jeweler. Two dancing assemblies were in existence during Washington's presidency, and it is related that, when invited to both balls, he chose the humbler one, and danced with the pretty daughter of a mechanic.

Sarah Franklin, the only daughter of Benjamin Franklin, was a stellar light in Philadelphia a hundred years ago. She was born in 1744, and although there is no record of her education, the letters that she wrote to her father when he went abroad in 1764 are evidence of her wit, her observation, and her literary industry. Sarah was intensely incensed when some of the parishioners of Christ Church condemned the appointment of her father as the colonial agent of the province, and wrote to her father that she would leave the church. He was then on his way to Europe, and when he received at Reedy Island his daughter's letters, he rebuked her intention, and instructed her: "Go constantly to church, whoever preaches. The act of devotion in the Common Prayer-Book is your principal business there, and, if properly attended to, will do more toward amending the heart than sermons generally can do, for they were composed by men of much greater piety and wisdom than our common composers of sermons can pretend to be, and therefore I wish you would never miss the prayer days. Yet I do not mean that you should despise sermons, even of the preachers you dislike, for the discourse is often much better than the man, as sweet and clear waters come through very dirty earth." Mr. Franklin was very much of a skeptic in his religious views, but he had a liberal regard for all pulpits.

Sarah Franklin was twenty-three years old when, in 1767, she married Richard Bache, an Englishman, who had gone into business in Philadelphia. The young couple lived with Mrs. Franklin while Benjamin Franklin was in Europe, and the domicile was comfortable, even luxurious. The war and the approach of the British army exiled them, and in October, 1778, Mrs. Bache was back in Philadelphia, and wrote a doleful narrative to her father,—"There is," she said, "hardly such a thing as living in town. If I was to mention the prices of the common necessaries of life it would astonish you."

As the war of the Revolution progressed Mrs. Bache and other patriotic women formed an association for the relief of the American soldiers. When the Marquis de Chastelleux saw her he wrote that he had paid her a visit in the morning, "according to the Philadelphia custom," and that "she was simple in her manners, like her respected father." Mrs. Bache died in October, 1808, and was interred in the burial-ground of Christ Church.

Deborah Logan was born in October, 1761, at the handsome residence of the Norris family, on Chestnut Street, near Fifth, where the Custom-House now stands, and by birth a Norris, by marriage a Logan, she united two streams of the best blood in the colony. She was a child fifteen years of age when the Declaration of Independence was read in the State-House yard, and she heard the reading. These are her own recollections of the eventful morning:

"How a little time spreads the mantle of oblivion over the manner of the most important events. It is now a matter of doubt at what hour or how the Declaration was given to the people. Perhaps few remain who heard it read on that day. Of those few I am one, being in the lot adjoining to our old mansion on Chestnut Street, that then extended to Fifth. I distinctly heard the words of that instrument read to the people."

Sally Wister, another piquant and demure Quakeress, was an intimate friend of Deborah Norris, and kept her informed of events in the city after the Norris family had sought refuge and seclusion away from peril and alarm. Miss Wister lived, it might almost be said, among the troops; and the diary that she made from day to day for her "Saucy Debby Norris" is a naïve confession of the likings of the girls for the soldiers. "I feel," she writes, "in good spirits, though surrounded by an army, the house full of soldiers, the yard alive with soldiers. Very peaceable sort of people though. They eat like other folks, talk like them, and behave themselves with elegance, so I will not be afraid of them, that I won't. Adieu. I am going to my chamber to dream, I suppose, of bayonets and swords, sashes, guns and epaulets." After Deborah Norris' marriage to Dr. Logan they returned to the ancestral home, as the Logan family at "Stenton," in the neighborhood of Fisher's and Nicetown Lanes. Among her guests were Kosciusko and the Abbe Correa, the witty Portuguese monk, many of whose sayings have become proverbs. We are indebted to him for the apt designation of Washington as "a city of magnificent distances." Dr. Franklin was occasionally Mrs. Logan's guest, so in later years was Robert Walsh, the editor of the *National Gazette*, who published her anonymous poems. But the visitor whom Mrs. Logan mentions with most pride is "the father of his country," then in Philadelphia, officiating as president of the Federal Convention. Returning from Mount Vernon, Dr. Logan and his wife stopped at Fredericksburg, to call upon the mother of Gen. Washington.

"She received us," Mrs. Logan says, "with great kindness, in her humble, decayed-looking dwelling, within which she appeared to have things comfortable. She was quite old, but of a fine majestic presence,

and polite manners, and the general so much resembling her that she might be known for his mother. She did not live apart for want of an invitation to live with him at Mount Vernon, as both himself and Mrs. Washington informed us, but she preferred her humbler home. She spoke of his kindness, and of her hope that things would continue to go well with him, but not the least exultation was apparent in having such a son. For the general himself never did feel such veneration and respect for any one clothed with mortality as I felt for his person and character."

Mrs. Logan developed considerable literary activity, and after being widowed, in 1821, she devoted most of her time to collecting or writing events of the past. She died at Stenton in 1838 or 1839.

Esther De Berdt, who in 1770 became the wife of Joseph Reed, was of English birth, but her patriotism was not surpassed by any of the natives of America. She met her future husband while he was a student of the Temple (London), and they were married at St. Luke's Church in that city. The next year they made their home in Philadelphia. She maintained a regular correspondence with her brother in England, and her letters are a most graphic delineation of the Philadelphia of her day.

In June, 1771, Mrs. Reed's first child, a delicate and sickly daughter, was born, and thus the ties were strengthened that bound her to her new home. Her husband being a lawyer, she was very thankful in 1772 that—

"out of the four greatest lawyers in this city three have resigned practice. Mr. Galloway being a good deal advanced in life, and having a very large fortune, cares very little about it. Mr. Dickinson, also, married a wife worth thirty thousand pounds, is improving and building on his estate, and Mr. Waln, whom you may remember in the Temple 56 with Mr. Reed, is, on a sudden, turned Quaker preacher. He had very great business, they say nearly two thousand pounds a year, but he has resigned on principle, as he says no good man can practice law. However wrong these sentiments, I cannot say I am sorry they influence him just at this time. Mr. Chew has recovered his health perfectly and practices as usual, but he cannot be on both sides of a question."

Mrs. Reed's sympathies were entirely with the Americans, and she noted with clear judgment the approach of the troubles with the mother-country. In 1775 she wrote to her brother that "civil war with all its horrors stains this land, and whatever our fellow-subjects may think, the people here are determined to die or be free. Indeed everything in this city wears a warlike aspect. Two thousand men in the field, all in uniform, make a very military appearance." When Washington was appointed commander-in-chief of the army, Joseph Reed was one of the Philadelphia citizens who accompanied him part of the distance to Boston, and from New York he wrote to his wife that Washington had prevailed upon him to accept service upon his staff as aid and military secretary. This sudden decision caused his wife much suffering, and to her brother she lamented the separation. She says,—

"I wrote, my dear Dennis, about a fortnight ago, since which an event has taken place which I little thought of, and which I assure you my dear Mr. Reed as little suspected when he went from home,—that is, his appointment as secretary to the general, in which station he stays at Cambridge till a fixed appointment is made, as he does not intend to take upon himself the constant business. However, I don't expect him home for two months at least. I confess it is a trial I never thought I should have experienced, and therefore am the less prepared to bear it; but I am happy that his character does not expose him to personal danger, and he is as secure as he can be amid so much war. What do you think—what do the people in general think—of our distresses and conduct? The whole continent is so engaged now that they will never give up. Georgia has joined the Congress; every heart and every hand almost is warm and active in the cause. Certainly, my dear brother, it is a glorious one. You see every person willing to sacrifice his private interest in this glorious contest. Virtue, honor, unanimity, bravery, all conspire to carry it on, and sure it has at least a chance to be victorious. I believe it *will* at last, whatever difficulties and discouragements it may meet with at first."

Mrs. Reed was mistaken as to her husband's office being a temporary one. She accepts, however, the fact that he was to remain with the general philosophically, and writes,—

"His service has proved of so much consequence in the camp that he has devoted himself to the service of the public, and I doubt not it will give him as much pleasure in the recollection as any occurrence in his life. Indeed, my dear Dennis, the cause in which he is engaged is the cause of liberty and virtue, how much soever it may be branded by the names of rebellion and treason. But I need not vindicate or explain the motives of our conduct to you. I think it must be plain to every person who thinks justly and is unprejudiced. We have a powerful enemy to contend with, if they are united heartily against us, which I fear is but too likely."

As the enemy gathered around Philadelphia, Mrs. Reed, with her children, took refuge first at Burlington, and afterward at Evesham. The wife of a prominent and trusted member of Washington's military household could scarcely live at peace among British soldiers and Pennsylvania Tories. Her life in the New Jersey retreats was a severe trial. Her physical health was broken down, and the perils to which her husband was subjected were a constant source of mental perturbation. She appears to have occasionally met Col. Reed in or near Philadelphia whenever his duties allowed him to absent himself from headquarters, and of the risks of these meetings she speaks thus in a letter to a friend:

"It has already become too dangerous for Mr. Reed to be at home more than one day at a time, and that seldom and uncertain. Indeed, I am easier when he is away from home, as his being here brings danger with it. There are so many disaffected as to the cause of their country that they lie in wait for those who are active, but I trust that the same kind presiding Power which has preserved him from the hands of his enemies will still do it."

In 1777, Mrs. Reed, with her mother and little children, went to Flemington, in the upper part of New Jersey, and there they remained until after the evacuation of Philadelphia and the battle of Monmouth, in 1778. It was there that a new calamity befell her. Smallpox broke out in the family, and one of the children died of it; a bereavement which the mother's sensitive heart, in its loneliness, traced to her own failure of duty:

"Surely," she writes, "my affliction has its aggravation, and I cannot help reflecting on my neglect of my dear lost child. For, thoughtful and attentive to my own situation, I did not take the necessary precaution to prevent that fatal disorder when it was in my power. Surely I ought to blame myself. I would not do it to aggravate my sorrow, but to learn a lesson of humility and more caution and prudence in the future. Would to God I could learn every lesson intended by the stroke! I think sometimes of my loss with composure acknowledging the wis-

dom, right, and even the kindness of the dispensation. Again, I felt it overcome me and strike the very bottom of my heart, and tell me *the work is not yet finished.*"

In 1778, Joseph Reed was chosen President, or, as we should now say, Governor of Pennsylvania, and when the family returned to Philadelphia, Mrs. Reed was indefatigable in the work of supplying clothing for the troops and in other relief measures. She was at the head of the Ladies' Association, formed in May, 1780, and her husband writing to Washington said,—

"The ladies have caught the happy contagion, and in a few days Mrs. Reed will have the honor of writing to you on the subject. It is expected she will have a sum equal to one hundred thousand pounds, to be laid out according to your Excellency's direction, in such a way as may be thought most honorable and gratifying to the brave old soldiers who have borne so great a share of the burden of this war. I thought it best to mention it, in this way, to your Excellency for your consideration, as it may tend to forward the benevolent scheme of the donors with dispatch. I must observe that the ladies have excepted such articles of necessity as clothing which the States are bound to provide."

And now we have Esther Reed's promised letter to Washington, and such a brave and devout act of writing it is:

"PHILADELPHIA, July 4, 1780.

"SIR,—The subscription set on foot by the ladies of this city for the use of the soldiery is so far completed as to induce me to transmit to your Excellency an account of the money I have received, and which, although it has answered our expectations, does not equal our wishes, but I am persuaded will be received as a proof of our zeal for the great cause of America, and our esteem and gratitude for those who so bravely defend it. The amount of the subscription is $200,580, and £625 6s. 8d. in specie, which makes, in the whole, in paper money, $300,634.

"The ladies are anxious for the soldiers to receive the benefit of it, and wait your directions how it can best be disposed of. We expect some considerable addition from the country, and have also wrote to other States in hopes the ladies there will adopt similar plans, to render it more general and beneficial.

"With the utmost pleasure I offer any further attention and care in my power to complete the execution of the design, and shall be happy to accomplish it agreeable to the intention of the donors, and your wishes on the subject.

"The ladies of my family join me in their respectful compliments and sincerest prayer for your health, safety, and success.

"I have the honor to be,
"With the highest respect,
"Your humble servant,
"E. REED."

The number of the contributors, of whom Mrs. Reed speaks, was 1645, thus apportioned: the city, 1099; Southwark, 152; Northern Liberties, 171; Germantown, 152; and Bristol, 13. All ranks of society seem to have united. The extremes were gauged by Phillis, a colored woman, who subscribed seven shillings and sixpence, and the Marchioness de Lafayette, who contributed one hundred guineas in specie. The offer of the Countess de Luzerne was six thousand dollars in Continental money, worth one hundred and fifty dollars at a gold valuation. In a late edition of the "Life of Washington," Judge Marshall said that "this instance of patriotism on the part of our fair and amiable countrywomen is far from being single. Their conduct throughout the war was uniform. They shared with cheerfulness and gayety the privations and sufferings to which the distress of the times exposed their country. With a ready acquiescence, with a firmness always cheerful, and a constancy never lamenting the sacrifices that were made, they not only yielded up all the elegancies, delicacies, and even conveniences to be furnished by wealth and commerce, relying on their farms and on domestic industry for every article of food and raiment, but consenting to share the produce of their own labor, they gave up without regret a considerable portion of the covering designed for their own families to supply the wants of the distressed soldiers, and heroically suppressed the involuntary sigh which the departure of their brothers, their sons, and their husbands for the camp rended from their bosoms."

On July 20, 1780, Washington wrote to Mrs. Reed that it might be better to deposit the money in bank and receive bank-notes for it, to be distributed among the soldiers. She replied to him, July 31st, that the ladies had proposed that the sum should "be changed into hard dollars," of which each soldier should be given two. His answer, August 10th, was that the generous bounty of two hard dollars in specie would be the means of bringing punishment on soldiers "whose propensity to drinking, overcoming all other considerations, too frequently leads them into irregularities and disorder, which must be corrected." The eventual disposition of the fund was the employment of the major portion of it in the manner suggested by Washington, as is evidenced by Mrs. Reed's letter of August 10th to him, saying that "the ladies had not the most distant wish that their donation should be bestowed in any manner that did not perfectly accord with your opinion."

Many of the loyal American women sold their jewelry and used the money for the good of the cause. When Sally Franklin Bache wanted a contribution from Mrs. Meredith, of Trenton, she claimed the latter as a Philadelphian, and insisted that as such she must make a donation. Esther Reed died in September, 1780, in the full tide of her labors, and her remains were laid to rest in the Arch Street Presbyterian burial-ground. On her tomb was placed this epitaph:

"In memory of Esther, the beloved wife of Joseph Reed, president of this State, who departed this life on the 18th of September, A.D. 1780, aged thirty-four years.

"Reader! If the possession of those virtues of the heart which make life valuable, or those personal endowments which command esteem and love, may claim respectful and affectionate remembrance, venerate the ashes here entombed. If to have the cup of temporal blessings dashed in the period and stations of life in which blessings may be best enjoyed demands our sorrow, drop a tear, and think how slender is that thread on which the joys and hopes of life depend."

Upon Mrs. Reed's death the control of the Ladies' Association passed into the hands of an executive committee, comprising Mrs. Sally Bache, Mrs. Francis, Mrs. Clarkson, Mrs. Blair, and Mrs. Hillegas.

The Widow Mifflin was a contemporary with the women mentioned, but she was scarcely so prominent in social or public circles. Born Sarah Fishbourne, daughter of William Fishbourne, mayor of Philadel-

phia from 1718 to 1722, she spent a large proportion of her girlhood at West River, Md., with her stepfather, John Galloway, her mother's second husband. In 1745 she was back in Philadelphia, and at school, where she had placed herself and her young stepsister, Jane Galloway, who became the wife of Joseph Shippen. Mrs. Mifflin sold the handsome mansion at the corner of Chestnut and Front Streets, bequeathed her by her husband, and resided with her son, John F. Mifflin, and her stepson, Thomas Mifflin, in a house on Union Street that she inherited from her father. There she devoted herself to the education of the two boys; but she was not so entirely occupied with them but that she could spare some time to a select social coterie that included Mrs. Ann Penn, Miss Allen, Mrs. Benjamin Chew, Mrs. Hester White, and the Cadwalladers, the Clymers, and the Shippens. Very many of her associates were Quakers, but she persistently refused to join the faith, and when they implored her to wear the Quaker cap, because it was "so becoming," she silenced them with the reply that "for that reason I ought not to put it on." In October, 1776, she was married by Bishop White to John Beale Bordley, who had made her acquaintance in visiting Philadelphia to see his daughter Henrietta Maria, then at school under the care of Mrs. John Cadwallader. They spent their winters in Philadelphia and their summers at Wye Island, a charming rural home, on the Eastern Shore of Maryland. Their only child, Elizabeth, was born at Annapolis in 1777. When Philadelphia was made the seat of the general government, they permanently established themselves in the city, where a quaint biographical notice says of them that "their house became one of the favorite places of friendly resort to some among the excellent of all descriptions."

Mr. Bordley's daughter Henrietta Maria, by his first wife, had married Maj. David Ross, of the Western Shore of Maryland. They had an interesting family of children, and in 1800 removed from their home at Bladensburg, and came to live in Chambersburg, Pa., from whence they frequently visited the homestead in Philadelphia, the presence of the children brightening the declining years of their grandparents.

The old Carpenter mansion on Chestnut Street was occupied during the war as a hospital, and there the members of the Ladies' Association tended with untiring care the sick and wounded soldiers. Elizabeth Graeme, daughter of Dr. Thomas Graeme and Anne Keith Graeme, grew into maturity in the Carpenter house. Born in 1739, she was perhaps the most scholarly woman of her epoch. She was scarcely more than a girl when she translated Telemachus into English verse, and she afterward spent a year in Europe under the guardianship of Rev. Dr. Richard Peters, of Philadelphia. On her return home she met Hugh Henry Ferguson, a young gentleman lately arrived from Scotland, and a wedding was the result, although she was some ten years his senior. They resided upon a country-seat in Montgomery County, a legacy from her father, until the opening of the war, when Mr. Ferguson went into the British service, and she consequently fell into disfavor with her American friends, although it seems that she was at heart a loyal American, and appearances to the contrary were simply caused by her devotion to her husband. While the British were in possession of Philadelphia, Mrs. Ferguson is said to have gone to Gen. Washington with a letter from Rev. Mr. Duché, the purport of which displeased the commander-in-chief, and provoked him to reprimand her for the intercourse she appeared to have had with the writer. Yet Washington granted her a pass to Philadelphia when she proposed to bid farewell to her husband, and it was while she was in the city that she met Governor Johnstone, the British Peace Commissioner, who suggested to her that if the influence of such a leader as Gen. Joseph Reed, for instance, could be secured there might be an end to the shedding of blood. But Johnstone was foolish enough to believe that Reed, the right-hand man of Washington, could be bribed to betray his country.

"If you could see Gen. Reed," he said to Mrs. Ferguson, "and, conformably to his conscience and his view of things, get him to exert his influence to settle the dispute, he might command ten thousand guineas and the best post in the government." Mrs. Ferguson did communicate with Gen. Reed three days after Philadelphia had been evacuated by the British, and his answer to Johnstone's proposal was, "I am not worth purchasing, but such as I am the king of Great Britain is not rich enough to do it." Gen. Reed laid the question before Congress; suspicion was directed toward Mrs. Ferguson as the emissary of Johnstone, and the Executive Council of Pennsylvania demanded her name. Mrs. Ferguson's indignation was growing, and it rose to its climax when she was denounced in an article in Towne's *Evening Post*. Taking it for granted that Gen. Reed had exposed her, she wrote him a scorching letter. "I own I find it hard," she said, "knowing the uncorruptness of my heart, to be held out to the public as a tool to the commissioners, but the impression is now made, and it is too late to recall it. How far at this juncture of time this affair may interfere with my property is uncertain; that, I assure you, is but a secondary thought." There is no actual proof that Mrs. Ferguson was disloyal to the republic, but she was undoubtedly the victim of circumstances. It is extremely improbable that if her husband had not been a British soldier she would have been a participant in these covert and not precisely honorable negotiations. Johnstone exonerated her from all blame in a speech that he made before the British House of Commons, and endeavored to clear her fame by accusing Gen. Reed of misrepresentation. She then published, under oath, a statement affirming the

purity of her own motives, and challenging Johnstone to sustain or deny her. From this time onward Mrs. Ferguson led a quiet and uneventful life. She grew in religion as she grew in years, and she is credited with making a manuscript of the Bible in order to impress it upon her memory. She died at Graeme Park, Feb. 23, 1801, leaving a nephew and niece, her adopted children.

Society was only lively by fits and starts in Philadelphia in the war days, and the fifty American maidens and matrons who accepted invitations to Lord Howe's Meschianza fête, May 18, 1778, may be excused for seeking almost any relief from the prevailing monotony. But they would have escaped much hostile comment if they had absented themselves from that memorable festival,—a comment

MRS. BENEDICT ARNOLD (MARGARET SHIPPEN).

which they resented by appearing at the ball to the French and American officers in the high powdered head-dresses of the extreme of the British fashion. Margaret Shippen, who was the youngest daughter of Edward Shippen and became the wife of Benedict Arnold, was at this time one of the finest women in society, and a standing toast with the British officers. Miss Vining was another beauty, and was so highly praised by the French officers in their letters home, that Queen Marie Antoinette expressed to Mr. Jefferson a wish that she might see her at the Tuileries. Miss Vining entertained and corresponded with Lafayette, the Duke of Orleans, and the Duke de Liancourt. Before her death in seclusion and poverty she wrote to Governor Dickinson "that the removal of Congress had taken away from the gayety of Philadelphia."

Rebecca Franks, the beautiful daughter of David Franks, a wealthy Jewish merchant, was the sister of Abigail, the wife of Andrew Hamilton, and niece of Phila Franks, who married Gen. Oliver De Lancey, of the British army. During the war Rebecca spent some time on Long Island, from whence she wrote some caustic observations on New York women and New York society. Speaking of the former, she said that "I don't know a woman or girl who can chat above half an hour, and that on the form of a cap, the color of a ribbon, or the set of a hoop, stay, or jupon. I will do our ladies—that is, the Philadelphians—the justice to say that they have more clearness in the turn of an eye than those of New York have in their whole composition." Miss Rebecca goes on to say that in New York it might be always leap year, judging from the forwardness of the young women in courting the young men, and she adds, "Indeed, scandal says that in the cases of most who have been married the first advances came from the lady's side, or she got a male friend to introduce the intended victim." Miss Rebecca had much more to say concerning the vanity of the officers, who imagined "that a red coat and smart epaulette is sufficient to secure a female heart." But, for all her sprightly sarcasm at the expense of the soldiers, she was captured in matrimony by Lieut.-Gen. Sir Henry Johnson, of the British army. She was one of the belles of the Meschianza, and never made any concealment of her Toryism, which she most prominently displayed at the ball which celebrated the alliance of France and the United States. She was daring enough to fasten the emblematic white and black cockades around the neck of a dog and turn it loose in the ball-room. She was becoming an old woman when Gen. Scott saw her in England, in 1816. The story of their meeting is pathetic. "Is this," she asked, "the young rebel?" And then she hastily added, "Yes, it is he. And so you have taken the liberty to beat his Majesty's troops?" Then her hand crept into his, and in a quavering voice she exclaimed, "I have gloried in my rebel countrymen; would to God I, too, had been a patriot!" But she remembered that her husband was present, and she turned to him with the earnestness of truth and affection. "No," she ejaculated, "I do not. I have never regretted my marriage. No woman was ever blessed with a kinder or better husband. But I ought to have been a patriot before marriage." When Gen. Scott related this incident, as he often did, he said Lady Johnson's eyes were the only ones undimmed by tears. She died in 1823.

Israel Israel and Joseph Israel were two brothers, who resided in Philadelphia at the outbreak of the war, and the latter entered the American army. They unexpectedly met at the family mansion during the British occupation, and Israel Israel foiled the search of a party of the enemy, led by a burly Hessian sergeant, for his brother. But the soldiers seated themselves at the supper-table of the family, where they compelled the ladies to join them and listen to their brutal jests. Mr. Israel was about to provoke a con-

Digitized by Google

flict with them, when his youngest sister fell into his arms in a swoon, and bloodshed was thus prevented. On his way to his home, outside the lines, he and his wife's brother were arrested and imprisoned on the British frigate "Roebuck" on the charge of being spies. From her position on the lookout his wife, a delicate but courageous woman, saw a British detachment marching toward their meadows to seize the cattle of the Israel farm. She drove the animals off with a hail of British bullets falling around her, and the foraging party returned disappointed to the ship. Her husband was released by Masonic influence. Mrs. Israel's maiden name was Hannah Erwin, and her ancestors came over with William Penn.

Mary Redmond, a Philadelphia girl, whom some of the British officers had christened "the little black-eyed rebel," taught a boy who carried provisions into market to also exchange letters between American soldiers and their wives and sweethearts in Philadelphia. The letters were sewed up in the back of his jacket, and one day, when Miss Redmond had reason to believe that he was suspected, she sought him in the market and, pretending to romp with him, filched his jacket, and so saved the precious missives from confiscation.

Toward the close of the last century the women of Philadelphia acquired a fame in two continents for their personal graces and mental accomplishments. Mrs. William Bingham, born Anne Willing, was one of the fairest. The Marquis de Chastellux, writing of a ball in Philadelphia, said,—

"Strangers have generally the privilege of being complimented with the handsomest women. The Comte de Dumas had Mrs. Bingham for his partner, and the Vicomte de Noailles Miss Shippen. Both of them, like true philosophers, testified a great respect for the manners of the country by not quitting their handsome partners the whole evening. In other respects they were the admiration of all the assembly from the grace and nobleness with which they danced. The ball was suspended toward midnight by a supper, served in the manner of coffee on several different tables. On passing into the dining-room the Chevalier de la Luzerne presented his hand to Mrs. Morris, and gave her the precedence, an honor pretty generally bestowed on her, as she is the richest woman in the city, and, all ranks here being equal, men follow their natural bent by giving the preference to riches."

Mrs. Bingham was unquestionably at the head of American society, because the style in which she lived illustrated the highest refinement and splendor known in the country. Her beauty, her influence, the elegance of her house, the taste and aristocratic distinction of the assemblages which frequently adorned it, were as household words in this city at the time of her dazzling career, and are now historical of the higher social life of America. "Her beauty," says Mr. Griswold, "was splendid. Her figure, which was somewhat above the middle size, was well made. Her carriage was light and elegant, while ever marked by dignity and air. Her manners were a gift. Sprightly, easy, winning are terms which describe the manners of many women, but while truly describing hers, they would describe them imperfectly, unless they gave the idea that they won from all who knew her a special measure of personal interest and relation. Her entertainments were distinguished not more for their superior style and frequency than for the happy and discreet selection of her guests, and her own costume abroad was always marked by that propriety and grace which, while uniting costliness, rarity, and an ex-

MRS. WILLIAM BINGHAM (ANNE WILLING).

quisite refinement, subordinates the effect of them in a way which never invites comparisons. In all this she had had the advantage of a wise and courtly and affectionate education. She owed much, however, to the command of great wealth, and to a combination of friendly and family advantages, which her wealth enabled her to illustrate and profit by." As a child she had been much at home in the family of Washington.

Her father, Thomas Willing, and his associate in commerce, Robert Morris, as well as his brother-in-law, Mr. Clymer, were all members of the Congress of 1776. During a part of the war the headquarters of the general were in a house built on Mr. Willing's estate for his son-in-law, Col. Byrd, of Westover, in Virginia, and only separated from his own by the intervening grounds of his garden. In this way, as well as from her domestic relations and immediate connections with the families of Clymer, Francis, Powell, McCall, Shippen, and others, forming in that day, with the Chews, Allens, and two or three more, a large portion of the only society with which the chief was intimate, Miss Willing, even as a young girl, was very frequently an object of Washington's notice and regard. On Oct. 26, 1780, she was married by Rev. William White to William Bingham, who possessed larger estates than any other person in the colony.

Mrs. Bingham, with her husband, went to Europe in 1784, and remained abroad five years. As the representative of American beauty, grace, and elegance, she was the cynosure of all eyes. She received marked attentions at the court of Louis XVI., and was welcomed with delight by her old French acquaintances of Revolutionary war days. Miss Adams, who was in Paris at the time with her father, makes frequent mention of Mrs. Bingham in her diary. She says, "Mrs. Bingham gains my love and admiration more and more every time I see her; she is possessed of greater ease and politeness in her behavior than any person I have met." She thus describes the dress worn by Mrs. Bingham at a dinner given by Gen. Lafayette: "Her dress was of black velvet, with pink satin sleeves and stomacher, a pink satin petticoat, and over it a skirt of white crape spotted all over with gray fur; the sides of the gown open in front, and the bottom of the coat trimmed with taste. It was superb, and the gracefulness of the person made it appear to peculiar advantage."

The Binghams went to London, and the Philadelphia beauty created quite a sensation there. The "lady from America" was much talked of and admired. The London hair-dresser, who attended to the ladies' *coiffures* on court days, speaking of her and of Miss Hamilton, said to Mrs. Adams, "with a twirl of his comb, 'Well, it does not signify, but the American ladies do beat the English all to nothing.'" Miss Adams, who tells this story, enters in her journal, in 1787, after an interview with Mrs. Stewart, "I think, from the observation I have made upon those ladies from Philadelphia whom I have been acquainted with, that they are more easy in their manners, and discover a greater desire to render themselves acceptable, than the women of Boston, where education appears to be better, and they seem to be sensible of their consequence in society. I have seen some good specimens of their brilliancy, first in Mrs. Bingham, and now in Mrs. Stewart."[1]

While abroad, Mrs. Bingham was everywhere admired, and the immense wealth at her command enabled her to maintain a style of life without which beauty stood only a slight chance of recognition. Soon after their return home the Binghams built their palatial residence, on Third Street, above Spruce. Its width was spacious, its height not extended above a third story, and it stood perhaps forty feet from the ordinary line of the street, being approached by a circular carriage-way of gravel, the access upon both ends of which opened by swinging gates of iron with open tracery. A low wall, with an elegant course of baluster upon it, defended the immediate front, and connected the gates which gave admission. The grounds about the house, beautifully diversified with walks, statuary, shade, and parterres, covered not less than three acres. The entrance to the house was not raised, but it brought the visitor by a single step upon the wide pave of tessellated marble. Its self-supporting, broad stairway of fine white marble,—the first of that description probably ever known in America,—leading to the second story, gave a truly Roman elegance to the passage. On the left hand, as the visitor entered, were parlors; on the right, a room designed for a study; and opposite, separated by a lateral hall, a library. In the second story, on the the south, were a drawing-room and card-rooms, the windows of which, looking down on an extensive conservatory, adjacent to the lower parlors on the same side, revealed a delicious prospect. Various and extensive domestic offices adjoined the house on the west. Much of the furniture, including the carpets, which were remarkable for their elegant richness, had been made in France. The halls were hung with pictures, of which the greater number had been selected in Italy, and the library was filled with the best authors of the day.

In addition to this town establishment, Mrs. Bingham possessed the elegant retreat of Lansdowne, on the west bank of the Schuylkill, formerly belonging to the Penns, a place which she laid out with great taste, and at which she passed her summers. At both places, particularly at Lansdowne, Washington was a frequent visitor. In both she lived with an elegant hospitality. Her youth, beauty, rank, and wealth, with the frequency, rarity, and tasteful richness of her entertainments, made her acquaintance highly desirable; and her husband's public character as a

[1] Griswold's "Republican Court."

member of the United States Senate, her father's long and honorable career in the service of the country, her connection, Maj. Jackson's, intimate associations as one of the private and confidential secretaries of the President, and her own residence in France, England, and other parts of Europe, conspired to draw around her a circle of men and women of the very first class in rank, elegance, and accomplishment. Louis Philippe d'Orleans was intimate with Mr. Bingham's family, and offered himself to one of his daughters. The senator declined the royal alliance. "Should you ever be restored to your hereditary position," he said to the duke, "you will be too great a match for her; if not, she is too great a match for you." Mrs. Bingham was a patron of Wignell's Theatre, which was opened in 1794, and where the principal actresses were Mrs. Oldmixon, Mrs. Whitlock, Mrs. Morris, and Mrs. Marshall. Mrs. Oldmixon was the wife of Sir John Oldmixon, known in England as the "Bath beau," and of equal stamp with Nash and Brummel. Mrs. Whitlock was a sister of Sarah Siddons, and Harwood, one of the actors, was the husband of Miss Bache, a granddaughter of Benjamin Franklin. Wignell's Theatre was eminently fashionable until he affronted Mrs. Bingham by refusing to permit her to furnish her own private box and keep the key, whereupon she placed it under a social ban.

THE MARCHIONESS D'YRUJO (SALLY McKEAN.)

Mrs. Bingham, while on a visit to the Bermuda Islands for the benefit of her health, died there on the 11th of May, 1801, aged thirty-seven years. Her husband, overwhelmed with the loss of such a wife, went afterward to England, and died at Bath about the year 1804. His monument, in the abbey church there, attracts the notice of the American traveler. Mrs. Bingham left three children.[1]

One of her dearest friends was Mrs. Robert Morris, wife of the great financier and sister of Bishop White. At Mrs. Washington's receptions she usually occupied the seat of honor at her right hand, and she was a society queen until misfortunes overwhelmed Robert Morris. The pretty young Quakeresses were seen everywhere, and the Duke De Liancourt wrote of them that ribbons pleased them as well as others, and were the great enemies of the sect.

At Mrs. Washington's first levee in Philadelphia the Misses Allen were "among the constellation of beauties." Of the Allen sisters, the eldest, who became Mrs. Greenleaf, is historically renowned as "one of the most splendid beauties this country ever produced." Miss Sally McKean wrote to a New York friend of this reception: "You never could have had such a drawing-room. It was brilliant beyond anything you can imagine, and though there was a great deal of extravagance, there was so much of Philadelphia taste in everything that it must have been confessed the most delightful occasion of the kind ever known in this country."

Miss Sally McKean was remarkable for her great beauty. She was the daughter of the chief justice of Pennsylvania, and married Don Carlos Martinez, Marquis D'Yrujo. Her son, the Duke of Sotomayer, who was born in Philadelphia, became prime minister of Spain.

Dolly Payne was a young Quakeress, whose first husband was John Todd. Left a widow when quite young, she married in 1794, being then twenty-four years of age, James Madison, who was at that time a member of Congress from Virginia. They lived at his homestead of Montpelier most of the time until he was elected President of the United States. Her aim, in which she was thoroughly successful, was to make her husband's administration a socially brilliant one, and when the war of 1812 occurred she evinced indomitable courage amid peculiarly trying complications. As she advanced in years she was described by one of her old Philadelphia friends as—

"a very gay lady, with much rouge on her cheeks, and always appearing in her turban. She was fond of bright colors and the elegancies of the toilet, yet she generally wore inexpensive clothing, preserving always the simplicity of a Quaker with the elegance of a Southerner."

Dolly Madison used snuff, and carried a box about wherever she went. She once tendered it to Henry Clay, and when he accepted she first drew from her pocket a bandanna that she said was for "rough work," and next a fine lace handkerchief which she called her "polisher." She survived the President thirteen years, dying in Washington, July 12, 1849.

[1] Griswold's "Republican Court."

Margaret, Sophia, and Harriet Chew were the daughters of Benjamin Chew, chief justice of Pennsylvania. Margaret married John Eager Howard, of Maryland, Harriet married Charles Carroll, Jr., also of Maryland, and Sophia became Mrs. Henry Phillips. Gen. Washington treated these young ladies almost as if they were his children. Harriet accompanied him several times when he sat to Gilbert Stuart for his portrait, and the commander was wont to say that the agreeable expression on his face was due to her interesting conversation. She and Mrs. Hamilton and Mrs. Bradford were the last surviving ladies of the Republican court. Mrs. Bradford, the wife of the attorney-general of the United States, outlived the others. Richard Rush wrote of her when she was over eighty years of age, that her years had "not impaired the courtesy, the grace, the habitual suavity or kindness, or even that disciplined carriage of the person, all made part of her nature by her early intercourse and the school in which she was reared." Susan Wallace, the sister of Horace Binney, wife of John Bradford Wallace, and mother of Horace Binney Wallace, was the niece of Mrs. Bradford. It was of Susan Wallace that Rev. Dr. Herman Hooker said, "Her virtues were so numerous and so marked that any just mention of them will seem to border on exaggeration." She died July 8, 1849.

MRS. CHARLES CARROLL, JR. (HARRIET CHEW).

Mrs. Knox, daughter of Thomas Flucken, the last secretary of the province of Massachusetts Bay, was another of Mrs. Washington's close friends. When she married Henry Knox he was captain of the Boston Grenadier Guards, and when he afterward rose to the proud position of Gen. Knox, of the Revolutionary army, she was nearly as well known as he was in the camp. They resided for a while in Philadelphia, and she was another of the county dames whom De Liancourt has so pleasantly gossiped of. Talleyrand was her guest, and Lafayette was the godfather of her son. In 1795, Gen. Knox retired from the office of Secretary of War, and they moved to their rural home at Thomaston, at the head of the St. George's River, in Maine. Among their visitors were Louis Philippe and his exiled brothers, the Duke de Montpensier and the Comte de Beaujolais.

Martha Jefferson, the eldest daughter of Thomas Jefferson, was educated partly in Philadelphia and partly in Europe. John Randolph called her "the sweetest young creature in Virginia." In 1783, while she was at school in Philadelphia, and residing with Mrs. Trist, her father wrote her from Annapolis a touching and tender letter, in which he instructed her to consider Mrs. Trist as her mother, and laid out for her a routine of study. She married Thomas Mann Randolph, of Virginia. Her youngest sister became the wife of John W. Eppes, and their daughter married Nicholas P. Trist, a grandson of the very Mrs. Trist in whose family Martha Jefferson had lived. Mrs. Graydon, Mrs. Peters, and the other McCall sisters are mentioned in the local annals for their loveliness. Miss Moore, a sister of Col. Thomas Lloyd Moore, married, in 1784, the Marquis De Marbois, who was secretary of the French Legation. Their daughter became the Duchess De Plaisance, being married to a son of Le Brun, a colleague of Napoleon in the consulate.

In speaking of Mrs. Dr. James Rush, we seem to be turning the pages of a story of to-day. Many intimate friends of this remarkable woman still survive, and a sister, Mrs. Dr. Barton, is still living in her house on South Broad Street. Every one who passes by what is now the Aldine Hotel, on West Chestnut Street, knows something of the woman whose residence it once was. A miniature portrait of Mrs. Rush, evidently taken when she was in her teens, hangs in the Ridgway Library, and shows a face of rare beauty; but it is quite well known that in later years she was more noted for her personal magnetism than for her good looks. She delighted to assemble around her men and women of genius and intellect. Grisi and Mario were once her guests. In Europe, Dr. Rush and his wife were shown the most flattering attention by Lord Lansdowne, Lord Bathurst, Sir Astley Cooper, and others of the nobility. All reports to the contrary, it would appear from the correspondence between Mrs. Rush and her husband that their domestic relations were most amicable. Most of these letters have been preserved, and, although their tastes differed, it is not doubtful that Dr. Rush had the most profound respect and tender affection for his accom-

Digitized by Google

plished wife. In the will by which he founded the Ridgway Branch of the Philadelphia Library, he states that one of his objects was to express his respect and regard for Jacob Ridgway, and for Jacob Ridgway's daughter, Phebe Ann Rush. Her eventful life came to an end in a Saratoga hotel Oct. 28, 1857, and the remains of herself and her husband are entombed in a vault in the Ridgway Library.

During the late civil war the women of Philadelphia did enormous and glorious work in the Sanitary Commission, the women's branch of the Freedmen's Commission, the refreshment saloons, the soldiers' homes, and the hospitals. Mrs. John Harris, corresponding secretary of the Ladies' Aid Society, spent much of her time with the troops in the field. Mrs. Clara J. Moore, corresponding secretary of the Sanitary Commission, was such an indefatigable laborer in the hospitals that when ill health compelled her to seek a respite, nine young ladies found their time fully occupied in filling her place. Other ladies whose services were given in the Pennsylvania branch of the Sanitary Commission were the president, Mrs. Maria C. Grier, and Mrs. E. D. Gillespie, Mrs. W. H. Furness, Mrs. A. D. Jessup, Mrs. Joseph Parrish, and the two Misses Blanchard. The Ladies' Aid Society, and the Penn Relief Association, which was organized in 1862 by members of the Society of Friends, to contradict the current talk that because of their peace principles they would do nothing for the soldiers, were both managed by leading ladies of Philadelphia. In the same year the Soldiers' Aid Association was formed mainly through the efforts of its president, Mrs. Mary A. Brady. She went again and again to the hospitals in the field, and her death on May 27, 1864, was directly due to her labors there after the great battles that Grant had just fought in Virginia. She was as truly a martyr to the Union as any soldier or officer who was killed in the ranks.

LUCRETIA MOTT.

One of the women prominent in the Union Volunteer Refreshment Saloon of Philadelphia, an institution which fed four hundred thousand men as they passed to and from the battle-fields, was Mrs. Mary W. Lee, and among her co-workers were Mrs. Eliza G. Plummer, Mrs. Mary B. Wade, Mrs. Margaret Boyer, Mrs. Priscilla Grover, Mrs. Mary Grover, Mrs. Ellen P. Barrows, and Mrs. Eliza J. Smith. The Cooper-Shop Refreshment Saloon, which also fed many thousands of troops, was managed by Mrs. William M. Cooper, Mrs. Grace Nichols, Mrs. Sarah Emory, Mrs. Elizabeth Vansdale, Miss Catherine Vansdale, Mrs. John Coward, Mrs. Susan Turner, Mrs. Sarah Mellen, Miss Catherine Alexander, Mrs. James D. Grover, and Mrs. James M. Moore. The mother of the lamented Lieut. Greble, who fell at the battle of Big Bethel, was one of the unceasing workers in the national cause, and gave both of her sons to the army. An earnest friend of the Union refugees from the South was Mrs. M. M. Hallowell, who, with a committee of ladies, visited Nashville, Knoxville, Chattanooga, and Huntsville, distributing money and provisions among them. When the great Sanitary Fair was held, there was a ladies' committee working in conjunction with the gentlemen in each important branch.

The name of Lucretia Mott is one widely respected and beloved. She was a Coffin by birth, and was born of Quaker parents on the island of Nantucket in 1793. In her eighteenth year she married James Mott, the son of the superintendent of the school in Dutchess County, N. Y., where she was being educated. They came to live in Philadelphia, where her parents had removed previously, and she was about twenty-five years of age when she began to preach in meeting, soon becoming a regular preacher of the Society of Friends. She was one of the original members of the Anti-Slavery Society, founded in 1833. To such an extreme did she and her husband carry their views that they refused to use any of the products of slave labor, and Mr. Mott, who was engaged in a remunerative cotton business, relinquished it on that account. At one time Mrs. Mott made a journey into the South as far as Virginia, preaching against slavery in each meeting that she attended. Next to this subject, that which most interested her, was the granting of suffrage and equal rights to women. As an evidence of her advanced opinions she would write in albums, when asked for her autograph, this sentiment, "In the true marriage relation the independence of the husband and wife is equal, their dependence mutual, and their obligations reciprocal." Another move-

Google

ment in which she participated was that of the Peace Society, an organization of which she was an active member until the close of her life. She was nearly eighty-seven years of age when she died, on Nov. 11, 1880, and she retained to the end her mental and physical powers. To extreme benevolence and kindness of heart she united remarkable intellectual gifts and a rare sweetness of disposition. She denied herself many of the comforts that belonged to her station in life in order that she might be able to extend her charities. Her eloquence and the vigor of her writings are memorable.

Anna Maria Ross was prominently identified with the Cooper-Shop Hospital, a branch of the Cooper-Shop Refreshment Saloon. Night and day she nursed the suffering soldiers. In the spring of 1863, seeing the necessity of a permanent home for discharged soldiers, she canvassed Philadelphia and the counties of Pennsylvania and New Jersey to raise funds for the establishment of the Soldiers' Home. She died on the day of its dedication, Dec. 22, 1863, while the people were praising and blessing her name. On her tomb, in Monument Cemetery, a tablet bears the figure of a woman ministering to a sick soldier. In reviewing the list of Philadelphia women who did such noble service in the hospitals at home and at the front we find the names of Mrs. Abigail Horner, Miss Cornelia Hancock, Miss Hetty A. Jones, and Mrs. Mary Morris Husband (a granddaughter of Robert Morris). Mrs. Husband was on one of McClellan's transports at Harrison's Landing, on the James River, in July, 1861, and stood the Confederate fire with all the coolness of a veteran. In the army hospitals the boys knew her as "Mother Husband," and as the troops marched through Richmond, after Lee's surrender, she stood upon the sidewalk, and a cheer for "Mother Husband" ran along the line. President Lincoln would grant almost any request that she made, and she once obtained from him the pardon of a soldier whom she believed to have been unjustly condemned to death.

The now prosperous School of Design was founded by Mrs. Sarah Peter, daughter of Hon. Thomas Worthington, of Ohio, and wife of William Peter, British consul at Philadelphia. Particularly fond of art, and a firm friend of her own sex, she conceived the idea of forming classes for young girls, in which they might be instructed in the useful branches. These classes steadily increased, and developed into the School of Design, which was opened Dec. 2, 1850.

At Miss Mary McHenry's home, No. 1902 Chestnut Street, there was organized, in February, 1856, the Church Home for Children, in 1866 the Lincoln Institute, and in 1871 the Educational Home. The leading spirit in all these undertakings was Miss McHenry, whose entire life has been devoted to the care of friendless children. The greatest of her works is perhaps the Lincoln Institute, which was established to provide a home for the orphans of soldiers. These having grown to manhood and womanhood, the institute is now training some seventy Indian girls, under an arrangement with the government of the United States. Miss McHenry is the sister of James McHenry, well known as associated with railroad interests in this country and England, and lately married John Bellangee Cox. During the Sanitary Fair she was chairman of the restaurant department, which she managed so efficiently that it cleared thirty thousand dollars.

Caroline Earle was the daughter of Thomas Earle, who was one of the first members of the Anti-Slavery Society, and the dominating instincts of her life are hatred of the "peculiar institution" of the South and an intense love for animals. The day she was twenty-one years of age she was married to Richard P. White, and two years later she was received into the Catholic Church. When the women's branch of the Freedmen's Society, an organization for the aid of the emancipated slaves, was formed, in 1863, she was elected its secretary, in which position she remained five years. She was the leading spirit in the founding of the Philadelphia Society for the Prevention of Cruelty to Animals, having previously consulted with Henry Bergh upon the subject, and received encouragement from him, and was chosen president of the women's branch. When the Woman's Centennial Committee was called together by the wish of the parent organization, Mrs. White was one of the thirteen ladies selected in commemoration of the thirteen original States, and was its treasurer for a year. Included in her philanthropic efforts are also the foundation of the Society for the Prevention of Cruelty to Children, and the American Anti-Vivisection Society, of which latter she is president.

Mrs. Henry Cohen, who, by birth, was Matilda Samuels, a native of Liverpool, England, was a Jewish lady, and an earnest laborer in public enterprises. In 1844 she married Henry Cohen, and was an official of the Female Hebrew Benevolent Society, the Jewish Foster Home and Orphan Asylum, and the Hebrew Sunday-school Society. Her connection with the Foster Home continued for almost a quarter of a century, and for many years she was its president. In 1862 she was appointed delegate from the Portuguese Jewish Congregation Mikve Israel to the United States Sanitary Commission, and at once formed a "Hebrew Women's Aid" to the commission. As a musician and reader she was unstinted in the employment of her talents for the cause of the Union. She was a member of the Women's Centennial Executive Committee, and is still one of the vice-presidents of the New Century Club, an organization for the advancement of women, without the distinction of race or creed.

It is difficult to compress within these limits the life of Anna Dickinson. Born of Quaker ancestors, who were early settlers in Pennsylvania and Maryland, she exhibited in her girlhood days the mental

power and radicalism with which all Americans are acquainted. One Sunday, in January, 1860, when she was a young school-teacher, she attended a meeting of the Association of Progressive Friends, when the subject of discussion was "Women's Rights and Wrongs," and there she made her first speech in public. She spoke frequently afterward at these same meetings, and in controversial argument she subdued all her antagonists. She was only eighteen years old when she attacked slavery in the speech that she delivered at Kennett Square in 1861. The reporter of the *Press* said of her, that she was "handsome, of an expressive countenance, and eloquent beyond her years." "Those who did not sympathize with her remarks were silenced by her simplicity and solemnity." She secured a position in the mint, and lost it because of a bold speech made after the battle of Ball's Bluff. Thenceforth she continued her career as a lecturer. Her lecture upon Abraham Lincoln earned a thousand dollars, which she gave to the committee that erected in Fairmount Park the statue of the martyred President, but she was never accorded the proper recognition due to her generosity. At the first meeting called to enlist colored troops in Philadelphia, she and Frederick Douglass and William D. Kelley were the speakers who succeeded in putting blue coats upon thousands of the faithful and courageous blacks. In campaign after campaign she threw her splendid energies into the service of the Union Republican party, and from the rostrum captivated her audiences with the music of her voice, the charm of her diction, and the noble elevation of her ideas. It is frequently enough said that she was and is impracticable in many of her views, but that is the common complaint against those daring spirits who are so much in advance of their time.

In 1876, Miss Dickinson first appeared on the stage in her own play of "Anne Boleyn." She seems to have mistaken her vocation in attempting the work of either actress or playwright. After writing "Anne Boleyn," she composed "Aurelian," and although both plays are remarkable for their scholarship and literary polish, they are not technically adapted to the requirements of the stage. Miss Dickinson has earned very large amounts of money, but her charitable disposition forbids that she could acquire a fortune. She has given away fully fifty thousand dollars of the income that accrued from her hard work.

Mrs. John Drew, the present proprietress and manager of the Arch Street Theatre, is also the most impressive personator in this country of the old comedy parts. Born in London, Jan. 10, 1820, she was on the stage when three years old, as Louisa Lane, and in 1827 she came to America with her mother (Mrs. Kinloch), and played at the Walnut Street Theatre as the *Duke of York* to the elder Booth's *Richard III.* In Baltimore, New York, and elsewhere she was starred as a "theatrical prodigy," and in the former city Edwin Forrest presented the child with a large gold medal for her performance of *Albert* in "William Tell." She played also in Kingston, Jamaica, after having been wrecked on the shores of that island, where Mr. Kinloch died. She and her mother then filled engagements in all the principal theatres of the Eastern and Southern cities, and in 1836 she married Henry Hunt, who died shortly afterward. Three years later, when she came back to the Walnut Street Theatre, she was one of the three members of the company who could command as liberal a salary for those days as twenty-five dollars per week. In 1850 she married, in Albany, John Drew, and in 1852 they were at the Chestnut Street Theatre, from whence in a few months they transferred themselves to the Arch Street Theatre. At the close of the season of 1852, Mr. Drew and William Wheatley leased the Arch Street Theatre, with a capital that was very diminutive. But their administration of the house was marked with so much tact and knowledge that their accounts at the box-office soon enabled each of them to buy a comfortable residence. Mrs. David P. Bowers, then in the flush of her lovely youth, was the leading lady, and Mrs. Drew was the comedienne. Mrs. Drew and her husband were unfortunate in 1855–56 with their starring ventures, and to clear themselves of debt they were obliged to sell their home, after which their financial resources amounted to but fifteen dollars. In 1860, Mr. Drew having meanwhile gone abroad, Mrs. Drew became the sole lessee of the Arch Street Theatre. For several years it was a most difficult task for her, and when she finally enlarged the theatre, and engaged for the company a number of the best American actors and actresses, her friends predicted that what they styled her rashness could only eventuate in failure. Still she overcame all difficulties, and in 1863 the owners rebuilt the house for her, and she remains at this date (1884) its sole lessee. John Drew died in Philadelphia May 21, 1862.

Mrs. Annis Lee Wister, whose German translations are so popular, is the daughter of Rev. Dr. Furness, and sister of the portrait-painter, William Furness, of the Shakespearian commentator, Horace Howard Furness, and of the architect, Frank Furness. She has translated into English about twenty-five of the German classics of fiction. She is married to Dr. Caspar Wister, and is one of the managers of the School of Art Needlework, in which enterprise are also interested Mrs. J. Dundas Lippincott, Miss F. Clark, Mrs. W. H. Fraley, Mrs. C. H. Hart, Mrs. Thomas Hockley, Miss L. T. Merrick, Miss F. Roberts, Mrs. Thomas A. Scott, Mrs. F. R. Shelton, and Mrs. Charles Wheeler. Mrs. Wister's sister-in-law, Helen Kate Furness (Miss Rogers), the wife of Horace Howard Furness, published a concordance of the poems and sonnets of Shakespeare. Mrs. Furness died in 1883.

The Women's Executive Committee of the Centennial Exhibition contributed largely to its success. As originally constituted the committee was as follows:

Mrs. E. D. Gillespie, president; Mrs. John Saunders, vice-president; Mrs. J. Edgar Thomson, treasurer; Mrs. Aubrey H. Smith, secretary; and Miss McHenry, Mrs. Charles J. Stillé, Miss Elizabeth Gratz, Mrs. John W. Forney, Mrs. Emily R. Buckman, Mrs. Richard P. White, Mrs. Henry Cohen, Mrs. Matthew Simpson, and Mrs. A. H. Franciscus. Many of these ladies have recently formed themselves into the Associate Committee of Women of the Trustees of the Pennsylvania Museum and School of Industrial Art, of which Mrs. Gillespie is chairman. She is descended from Revolutionary stock, and began her work for the soldiers of the late civil war in the old Christian Street Hospital. She and Mrs. William C. Patterson were the matrons of that hospital, and afterward were transferred to the hospital at Broad and Cherry Streets. Mrs. Gillespie was also chairman of the committee organized for the purpose of caring for the widows and mothers of the dead soldiers. She was at the head of the post-office department of the Sanitary Fair, and returned a net profit of one thousand and sixty dollars to the general fund.

One incident among many illustrative of the energy of the women who took part in the hard work of the Centennial Exposition may be recalled. Mrs. Gillespie and Mrs. Frank M. Etting were in Washington in February, 1874, and were summoned back to Philadelphia, to be told by members of the Board of Finance that the project might fail unless they could show Congress an appropriation of a million dollars from the City Councils of Philadelphia. By telegraph Mrs. Gillespie at once assembled the chairmen of the women's wards, to whom were distributed the petitions for the appropriation, and in forty-eight hours the papers were returned with the signatures of so many citizens that Councils granted the money. Senator Allison, of Iowa, met Mrs. Gillespie a few days after this occurrence, and told her that the Exposition would scarcely get an appropriation from Congress unless they could prove an interest in it by all the people of the United States. She went to Washington with representative women from fourteen States, and took them before the Senate Committee on Appropriations to prove that the whole country had an interest in the Exposition. As the committee was about to adjourn, Senator Morrill said, "Ladies, it is due to you to tell you that after the proofs which you have brought us the international feature of the exhibition will not be taken away by the committee."

Outside the ladies found awaiting them the agent from the Board of Finance, who came to ask what success they had met with. "All success," replied Mrs. Gillespie: "the international feature of our exhibition will be allowed to remain." His answer was, "I have been here for weeks, trying to get that assurance, and a parcel of women get it in ten minutes." That was a proud moment for the women of Philadelphia.

Mrs. Mary Rose Smith, wife of Aubrey H. Smith, and daughter of Justice Robert C. Grier, of the Supreme Court of the United States, was chairman of the industrial committee of the Sanitary Association, and organized three societies of colored people for the relief of the soldiers. She was a member of the executive and amusement committees of the Sanitary Fair, and superintended many of the dramatic representations that were given in the Amateur Drawing-Room, on Seventeenth Street. From 1866 to 1873 she was chairman of the Women's Branch of the Pennsylvania Freedmen's Commission, and she has also been concerned with the Newsboys' Home, the Bridgwater Home for Colored Soldiers' Orphans, the Centennial Executive Committee, and the committee on charities, of which last named she is chairman at the present time. It was through her that the Empress of Germany sent the album containing views of the charitable institutions of Berlin to the committee. She is also vice-regent of the Valley Forge Centennial Association, a member of the board of directors of the New Century Club, vice-president of the women's visiting committee of the University Hospital, chairman of a sub-committee for the organization of a training-school for nurses in connection with the hospital, and is interested in the Indian Commission, the object of which is the education of Indian children.

Mrs. Matthew Simpson, the wife of Bishop Simpson, is one of the most esteemed women in Philadelphia. She has been for many years president of the Ladies' and Pastors' Christian Union, a Methodist association which has a membership numbering several thousand, and she is also on the board of managers of the Reformatory Home. Through the efforts of Mrs. Simpson has been established the Philadelphia Home for the Aged and Infirm, under the auspices of the Methodist Episcopal Church, a charitable organization that is steadily increasing in influence. The Woman's Foreign Missionary Society and the Christian Temperance Union also engross much of Mrs. Simpson's time and attention. She was one of the Women's Centennial Executive Committee, and has recently organized an orphanage, under the patronage of the Methodist Episcopal Church. She is actively engaged in furthering the interests of the "Silk Culture Association," and, notwithstanding these many outside industries, Mrs. Simpson is essentially a "home woman."

To Mrs. Emmeline Claridge, daughter of William Fisher and wife of Dr. William Claridge, must be given the credit of organizing the Old Ladies' Home of Philadelphia. She had previously been president of the Pennsylvania Widows' Asylum, for which she secured from the State an appropriation of five thousand dollars and an annual gift of two thousand dollars. She represented the Eighteenth Ward in the Sanitary and Centennial Commissions, and has been for nine years president of the Old Ladies' Home. One of her colleagues is Mrs. Seth B. Stitt, who is,

however, better known in connection with the Philadelphia Home for Incurables, of which Mrs. C. K. Inglis and Mrs. Israel Maule are vice-presidents; Mrs. Henry C. Townsend, treasurer; and Mrs. Charles H. Caldwell, secretary. Another noble institution recently established is the Nivison Home, at Hammonton, N. J., a sanitarium for children, organized by the benevolence of Miss S. S. Nivison, a graduate of the Philadelphia Women's Medical College.

In the roll of Philadelphia artists who have raised themselves to distinction are Miss Emily Sartain, Miss Ida Waugh, Martha Dunbar Ramsey, Edith Loring Pierce, Mrs. E. O. Hoyt, and Sarah Dodson. Miss Waugh is the only female member of the Philadelphia Society of Artists. The city possesses many ladies whose work on the newspapers and magazines has been and is of the most praiseworthy kind. Mrs. Lucy M. Hooper, wife of the American vice-consul at Paris, and Miss Anna H. Brewster, sister of the Attorney-General of the United States, are two of the brightest writers that Philadelphia has sent abroad. Mrs. Sarah J. Hale, author of "The Woman's Record," was another Philadelphia woman of literary fame.

Noted for her business, as well as her social qualities, is Mrs. Sarah Catharine Hallowell, daughter of Hon. Frederick Fraley, and wife of Joshua L. Hallowell. By her marriage she was closely identified with the anti-slavery propaganda, and became a manager of the Woman's Hospital, and chairman of the Training-School for Nurses. Before the Constitutional Convention, in 1872–73, Mrs. Hallowell joined with the ladies of Philadelphia and Pittsburgh in asking full representation for women in the commonwealth,—that they might have equal property rights before the law, equal voice in the management of schools, and choose their own representatives whenever they were taxpayers. She is a member of the Women's Congress, and a corporator of the Woman's Medical College, organized in 1850, and the oldest and foremost medical school for women in the world. In the centennial work Mrs. Hallowell was unceasing in her efforts. She was a member of the Centennial Ward Committees, and accepted the invitation of the "Woman's Executive" to take charge of the newspaper printed in their building, and which was one of their most striking exhibits. The whole staff of the paper, which was called *The New Century*, editors, reporters, compositors, and correspondents, were women.

It was during the centennial year that Mrs. Hallowell combined with other prominent women in forming the New Century Club, an organization of ladies that has its rooms on Girard Street. Outgrowths of the club are the cooking-school and the evening classes for teaching working-girls practical branches of industry. The committee of legal protection for working-women is one of its important features, and it has a large staff of volunteer counsel in the junior bar. Mrs. Hallowell has written and published many works of fiction, and is now a member of the staff of the *Philadelphia Ledger*.

Miss Lily Macalester, daughter of Charles Macalester, was appointed vice-regent for Pennsylvania of the Mount Vernon Association, when it was organized by Miss Cunningham, for the purchase of the home of Washington. Miss Macalester was very young at the time, but she raised ten thousand dollars for the association. She became Madame Bergmanns by marriage, and in 1873, Miss Cunningham having resigned, was elected regent of the association by its Grand Council. She made a suggestion to some of her friends in the Senate and House of Representatives, which has borne fruit in the passage by Congress of the resolution making Washington's birthday a national holiday. She conducted the visit of the emperor and empress of Brazil to Mount Vernon, in the summer of 1876, when Dom Pedro planted a tree at the tomb. Madame Bergmanns, after being a widow for several years, was married to Mr. J. Scott Laughton, and was soon after widowed a second time. She spends her summers at the beautiful Macalester estate at Torresdale, near Philadelphia, and her winters in Washington, where, by reason of her culture, intelligence, and personal attractions, she is a great social favorite.

Mrs. Robert K. Wright was descended on the paternal (Price) side and the maternal (Fisher) side from the colonists who came over with William Penn. The Prices settled, in 1682, upon some thousands of acres of land on the west of the Schuylkill, the title of which is to this day in the family. On Feb. 19, 1846, she married Robert K. Wright, a grandson of Peter Wright, and in the civil war she was chairman of the Field Hospital Association of Germantown. The organization was supported by contributions from the ladies of the city, and from this fund were paid living prices to the women who manufactured clothing for the troops. In the centennial, Mrs. Wright was chairman of the committee on machinery, and in that capacity formed the department of silk, carpet, shawl, and stuff-looms. It was in accordance with her views that the engine which ran that department had a woman engineer.

Mrs. John Lucas is the president of the Woman's Silk Culture Association, which was incorporated May 31, 1880. She was first attracted to the work by the fact that it appeared, and has since been demonstrated, that in silk culture there was profitable employment for the women of the rural districts. Mrs. Lucas is assisted in this work by a committee of ladies, composed of Mrs. Bishop Simpson, Mrs. C. D. Thum, Mrs. W. B. Eltonhead, Mrs. Phœbe Horne, Mrs. W. T. Reynolds, and Mrs. S. G. Flagg, vice-presidents; Miss E. T. Van Rensselaer, recording secretary; Miss S. Gibbons and Mrs. V. C. Haven, corresponding secretaries; and Mrs. H. P. Taylor, treasurer.

In 1882, Mrs. Lucas organized the first class of Chinese for instruction in the Episcopal Church, and several other classes have since been started under the impetus of her influence. She has also been engaged in the Infants' Home, the Newsboys' Home, the reformation of inebriate women, and the establishment of a general Homœopathic Hospital, which is to be connected with the management of the Children's Homœopathic Hospital of West Philadelphia. Mrs. Lucas is chairman of the building committee, and preparatory to the opening of the permanent edifice two private houses have been rented, at a merely nominal rent, by Miss Jeanes, of Philadelphia.

It was known during the lifetime of Mrs. Frank Drexel, the wife of the banker, that her charitable works were numerous, but it was not until her death that the extent of her labors could be even guessed at. Mrs. Drexel died less than a year ago, and it was then found that she had been paying the rent of more than a hundred houses for poor people, and at a rough estimate it is thought that she expended more than forty thousand dollars annually in charity.

Although married to an Englishman, and living abroad for the past few years, Mrs. Hughes-Hallett, better known in Philadelphia as Miss Emilie Schaumburg, is not to be omitted. To know Miss Schaumburg was to cease to marvel at her social success, attained both in this country and in Europe. Her beauty is of a rare order, added to which her natural talents are numerous, and they have been subjected to the highest degree of cultivation. Mrs. Hughes-Hallett is a remarkable linguist, a brilliant conversationalist, and an accomplished musician and actress. The little Amateurs' Drawing-Room, on Seventeenth Street (now no more), was the scene of many of Miss Schaumburg's triumphs. Here she would give amateur representations,—French and English comedies and bright operettas of the highest order,—and distribute cards of invitation to them among her friends.

In other parts of this work will be found in greater detail mention of many of the more prominent women who have taken part in the leading public charities of the city. Among them we may instance Mrs. Elizabeth E. Hutter, who by her ministrations to the Union soldiers during the civil war, her untiring labors in the hospitals, and her connection with local benevolent institutions, has become so widely known and honored.

It is of course not to be inferred that the writer has been able to bring within the limits of this chapter even the names, much less the achievements, of all the distinguished women of Philadelphia. The subject has so grown upon the writer that she has been restricted to the selection of a comparatively few of the most eminent representatives of the highly honored classes as illustrations of all. The women who dignified the earlier history of the city, and were conspicuous in all the good works of their days, have innumerable and worthy successors in their daughters of our own times. In this concluding quarter of the nineteenth century, we may view with gratification and pride the pre-eminence of the mothers and daughters, wives, and sisters of Philadelphia in a cultured and admirable society, in art and literature, and in those missions of ministry to the poor, the sick, and the distressed, where women's gentleness and piety meets the most exacting demands.

END OF VOLUME II.
